USF), and *Psicologia em Estudo* (Psychology in Study)]. In addition, he has published 36 book chapters and has published several books. His texts, in general, addresses theoretical and technical aspects concerning the area of measures in Psychology, having devoted special attention to the process of construction and adaptation of psychological instruments to the Brazilian context. Many of the instruments created by him and his team are references for other professionals, which denotes their technical quality [for example, *Teste Não-Verbal de Raciocínio para Crianças* (Non-Verbal Test of Reasoning for Children), *Escala de Autenticidade, Agressividade e Inibição* (Authenticity Scale Aggressiveness and Inhibition), and *Inventário dos Seis Fatores de Personalidade* (Inventory of the Six Personality Factors)]. He mentored more than 70 graduate students, between master's and doctorate degrees, some of whom have become a reference in their areas of professional practice. He taught several courses that ranged from broader aspects related to Psychological Assessment to the teaching of specific instruments. He participated in several events, having been honored in countless of them. For all these contributions, Luiz Pasquali is one of the main names in Brazilian Psychology, especially in the area of Psychometry, being revered by all those who had the opportunity to learn from him, either in person or through his writings.

Paternostro, José Novaes

Born *in Cruzeiro (São Paulo, Brazil) on January 16, 1918*

Died *in São Paulo (Brazil) on May 29, 1997*

Filipe Degani-Carneiro

State University of Rio de Janeiro [UERJ], Rio de Janeiro, Brazil

Keywords

Brazil · Psychological assessment · Organizational psychology · Psychology of religion

José Novaes Paternostro had a remarkable performance in the field of psychotechnics, organizational psychology, and in the teaching of psychology. At the age of 14, he began to work in the administrative office of *Estrada de Ferro Sorocabana* (Sorocabana Railway) (Morais, 1999). Later, when the Swiss engineer Roberto

Mange was asked to create an applied psychology service in the Railway, Paternostro was selected to be part of his team. In order to take this job, he went to study Political and Social Sciences at the *Escola de Sociologia e Política da Universidade de São Paulo* (School of Sociology and Politics at the University of São Paulo, USP), majoring in applied psychology (1943–1947). After graduating, Paternostro worked as a technical assistant (1947–1949) and later became the director of the selection service (1949–1965).

His experience in the psychotechnical field involved working in several public and private institutions (Custodio, 2008). A great example is the *Departamento de Trânsito* (Traffic Department) of São Paulo (1952) where he organized the psychotechnical office for the selection of drivers. Also, he directed the *Instituto de Psicologia Aplicada ao Trabalho da Faculdade de Filosofia Sedes Sapientiae* (Institute of Psychology Applied to Work at the *Sedes Sapientiae* College of Philosophy) (1967–1969) and of the *Serviço de Psicologia Aplicada do Instituto Municipal de Ensino Superior de São Caetano* (Service of Applied Psychology at the Municipal Institute of Higher Education of São Caetano) (1970–1971).

Paternostro was also very much dedicated to teaching Psychology. His professional curriculum (Paternostro, 1979) registers that in the decades of 1950–1970, he taught courses related to Work Psychology, Psychotechnics and Psychology Applied to Administration, Statistics, Selection and Professional Guidance, and Psychology of Human Relations in the following institutions: *Escola Livre de Sociologia e Política de São Paulo* (Free School of Sociology and Politics of São Paulo), *Instituto de Organização Racional do Trabalho* (Institute of Rational Organization of Labor, IDORT), *Pontifícia Universidade Católica de São Paulo* (Pontifical Catholic University of São Paulo), *Universidade de São Paulo* [University of São Paulo], *Faculdade de Filosofia Sedes Sapientiae* (*Sedes Sapientiae* College of Philosophy), *Instituto Municipal de Ensino Superior de São Caetano* (Municipal Institute of Higher Education of São Caetano), and *Escola Paulista de Enfermagem* (Paulista School of Nursing).

In the end of the 1950s, Paternostro was a member of the Baptist Church of Vila Mariana, in São Paulo. Working as a volunteer, he provided psychotechnical, psychodiagnostic, and professional selection services for religious institutions. Among his activities, Paternostro applied psychological tests for vocational guidance and personality evaluation on candidates to the *Seminário Teológico Batista do Sul do Brasil* (Brazilian Southern Baptist Theological Seminary, STBSB) and the *Instituto Batista de Educação Religiosa* (Baptist Institute for Religious Education, IBER): respectively, a seminary for the training of pastors and an institute for the training of religious educators, both linked to Baptist churches and based in Rio de Janeiro. Every year, he met the candidates in order to give them the test and conduct the feedback interviews. This evaluation had a double objective: (a) help future pastors and educators know their psychological profiles or characteristics, in order to support them in their personal development; (b) identify possible characteristics that would make a candidate not recommended for the ecclesiastical career. The test battery included vocabulary, intelligence, logical reasoning, and aptitude tests; the Bemreuter Personality Inventory; the Rorschach Psychodiagnosis; and the Allport-Vernon Study of Values, which evaluated, among others, the religious value.

In addition to his volunteer work for the STBSB and IBER, Paternostro taught in theological colleges in São Paulo state, namely: *Faculdade Teológica Batista de São Paulo* (Baptist Institute for Religious Education, IBER); *Faculdades Teológicas da Igreja Metodista Livre* (Theological College of the Free Methodist Church), of São Paulo; *Seminário Teológico da Igreja Presbiteriana Independente* (Theological College of The Independent Presbyterian Church) of São Paulo; *Universidade Metodista de Piracicaba* (Methodist University of Piracicaba); *Seminário Teológico Presbiteriano de Campinas* (Presbyterian Theological Seminary of Campinas) (São Paulo section). In these denominational institutions, he offered several courses, such as Psychology of Religion, Pastoral Psychology, General Psychology, and Vocational Guidance.

Still in the Baptist field, he held lectures, offered workshops, and wrote booklets and pamphlets (Carelli, 1997).

Paternostro's trajectory as a Psychologist who offered his "collaborative" work (Berry & Berry, 1986, p.37) to religious institutions is what makes him stand out. Moreover, it allows us to understand that the phenomenon of the *evangelical psychologists* is not as recent as one would think.

In 1979, as a recognition of his professional achievements, Paternostro received the Wilhelm Wundt Medal, awarded by the *Conselho Regional de Psicologia de São Paulo* (Regional Council of Psychology of São Paulo). The medal is given to "pioneers of Experimental Psychology" in the region (Carelli, 1997). In 1980, he was nominated to the *Academia Paulista de Psicologia* [São Paulo Academy of Psychology], occupying the chair n° 22, whose patron is Joao Carvalhaes.

Keywords

Brazil · Psychiatry · Criminology · Education

Afrânio Peixoto received a doctorate from the Faculty of Medicine of Bahia in 1897, with the defense of the thesis *Epilepsy and Crime*, republished in 1898, with a preface by Raimundo Nina Rodrigues (1862–1906), of whom he was a disciple, and by Juliano Moreira (1872–1933), with whom he worked at the National Hospital for the Alienated. He is also recognized as a writer, politician, historian, and educator. He was a member of the Brazilian Academy of Letters, the National Academy of Medicine, and participated in the Brazilian League of Mental Hygiene. He was one of the signatories of the *Manifesto of the Pioneers of New Education*, of 1932 (1991).

His thesis is cited by several authors, such as Manuel Bergström Lourenço Filho (1897–1970), for whom “[the thesis] had repercussions inside and outside the country” (1955/2004, p. 77), and by Pessotti (1933-), who states that the theses produced at the Faculty of Medicine of Bahia “(...) were oriented towards Criminology, Forensic Psychiatry, Mental Hygiene and the social application of Psychology. It is in this second orientation that the monumental work of Júlio Afrânio Peixoto is placed, which appeared in 1897, and which had great repercussion in Brazil and abroad: *Epilepsy and Crime*” (1975/2004, p. 123). The thesis of Peixoto is part of a set of works, including theses and books, which focus on the relationship between psychological characteristics and criminality, based on conceptions of hygiene and eugenics, which were linked to

scientific racism; thus, it is shown that the psyche was the focus of study from the perspective of Legal Medicine, with the purpose of social intervention (Antunes, 1991, 2001).

Peixoto settled in Rio de Janeiro, where he worked in various fields of health and education. He was inspector of Public Health (1902), director of the National Hospital for the Alienated (1904), professor of Legal Medicine at the National Faculty of Medicine of Rio de Janeiro (1907–1910), director of the Escola Normal of Rio de Janeiro (1915), director of Public Instruction of Rio de Janeiro (1916), professor of History of Education from the Institute of Education, and rector of the Federal District University – UDF (1932), created by Anísio Teixeira (1900–1971) (Antunes, 1991, 2001).

He had a significant role in the Brazilian Academy of Letters, having participated in several commissions. His literary work is extensive, including novels, literary criticism, biographies, and essays. In the field of medicine, he published several works in psychiatry and forensic medicine, addressing topics related to psychology, such as criminology, psychopathology, hygiene, and sexology; published works in the field of education, addressing pedagogical issues and female education, works whose contents are closer to what would later be typical of educational psychology. He also wrote about the *History of Brazilian Education*. References to Afrânio Peixoto are marked by a greater emphasis on his literary career, given his status as a member and president of the Brazilian Academy of Letters.

In the thematic range present in Peixoto’s vast work, there are writings on education that refer to psychological phenomena, such as Eunice or the education of women (1944), which establish behavioral and attitudinal goals for women to fulfill their role as mother and wife, with a view to building a hygienic family (Abrantes, 2010). Another work by the author is *Teaching to Teach: essays on pedagogy applied to national education* (1923), which can be included in the list of pioneering publications in the field of educational psychology in Brazil and with a New School influence, a concept that has psychology as one of its foundations, scientific.

Pellegrino, Hélio

Born *Belo Horizonte, Minas Gerais (Brazil), January 5, 1924*

Died *Rio de Janeiro (Brazil), on March 23, 1988*

Juberto Antonio Massud Souza
Universidade do Estado do Rio de Janeiro
(UERJ), Rio de Janeiro, Brazil

Keywords

Brazil · Psychoanalysis · Brazilian Socialist Party

Hélio Pellegrino was a psychoanalyst doctor born in the city of Belo Horizonte. He graduated in medicine in 1947 and chose psychiatry. He stayed until 1952 in Belo Horizonte, then moving to Rio de Janeiro, where he remained until his death. In 1953, he participated in the first group of the *Instituto de Medicina Psicológica (IMP)* (Institute of Psychological Medicine), a psychoanalytic formation institution founded by the psychiatrist Iracy Doyle (1911–1956) (Rudge, 2011). He became a psychoanalyst in 1963. Initially, his didactic analysis was carried out by Iracy Doyle, later with Anna Katrin Kemper (1905–1978).

He had an intense participation with poems, poetry, and articles in newspapers and magazines throughout his life, including the following: *O Globo (The Globe)*, *Correio da Manhã (The Morning Post)*, *O Pasquim (The Pasquim)*, and

Folha de São Paulo (*The São Paulo Newspaper*), among others. In the field of arts and culture, he stands out as a poet, and he sustained relationships with relevant Brazilian artists such as Fernando Sabino (1923–2004), Mário de Andrade (1893–1945), Lya Luft (1938–), Nelson Rodrigues (1912–1980), etc. One of the main marks of his activity was the articulation between psychoanalysis and politics: “Hélio was able to balance two apparently opposing subjects, Politics and Psychoanalysis” (Mira y Lopez Filho, 2011, p. 258). In addition to being a psychoanalyst, he was a Christian Marxist, a supporter of Liberation Theology, of which he once wrote: “God is on the left, beside the poor people” (Pellegrino, 1988, p. 124). He had an active political life. In 1945, he tried to become a federal deputy for the Democratic Left wing of the UDN. In 1947, the Democratic Left created the Brazilian Socialist Party (PSB), where he is one of its founders. In 1967, he was sought by the group of Dominican friars sympathetic to the group of Carlos Marighella (1911–1969) that invited him to support the armed resistance against Brazilian dictatorship. He refused. In 1968, he made a speech at the “*Passeata dos Cem Mil*” (*March of the Hundred Thousand People*) that took place in Cinelândia, Rio de Janeiro. In it, he is elected representative of intellectuals to negotiate the release of imprisoned students with the President of the Republic, General Costa e Silva (1899–1969), who ruled the country between 1967 and 1969 in the military dictatorship, although unsuccessfully (Ventura, 2008). In 1969, he is framed by the National Security Law, and he became a fugitive from justice for a few weeks. After that, he is jailed for 2 months. As an associate member of the *Sociedade Psicanalítica do Rio de Janeiro* (SPRJ) (Psychoanalytic Society of Rio de Janeiro), he asks for a document that shows that his patients could have some problem resulting from the interruption of the therapeutic follow-up caused by his absence. SPRJ replies that: “Society could not meddle in political matters” (Vianna, 1994).

In 1971, together with Anna Kattrin Kemper, he was one of the idealizers of the *Clínica Social de Psicanálise* (Social Clinic of Psychoanalysis), which was founded in 1973, in which members of the Rio de Janeiro Psychoanalytic Circle had already been participating (Lannes, 2011; Ibrahim, 2011). The clinic was maintained financially with what each analysand could pay. Still in 1973, on the day of the bombing at the Palacio de la Moneda in Chile, he took to the streets with his son to spray paint: “Out with murderous dictatorship! Viva Allende!” (Mira y Lopez Filho, 2011).

In 1978, he assumed the direction of the Social Clinic of Psychoanalysis in Morro dos Cabritos, a slum in Rio de Janeiro, for 4 years. In the same year, he published *The dialectics of torture*. In 1980, with Eduardo Mascarenhas (1942–1997) and Wilson Chebabi (?–2008), in the debate cycle promoted by the Social Clinic of Psychoanalysis held at PUC-Rio, under the generic title of Psychoanalysis and Politics, he denounced the “Barons of Psychoanalysis” (Rodrigues, 2011), and the apolitical positions of SPRJ.

These same questions were part of an article published in *Jornal do Brasil* (Brazil Newspaper – sept. 23, 1980), and culminated in his expulsion (Ibrahim, 2011). There is an intense controversy about the nondemocratic forms utilized by the Psychoanalysis Society. He is one of those responsible to publicize the participation of Amílcar Lobo (1939–1997), candidate for SPRJ, in tortures at the DOI-CODI in Rio de Janeiro under the military dictatorship (Facchinetti, 2011). He supported the psychoanalyst Helena Besserman Viana who made the first complaint and was therefore intensely persecuted for reporting. He was one of the leaders, with her, of the *Fórum*, an opposition group within SPRJ in which former political prisoners, in 1986, narrated the participation of Amílcar Lobo in torture (Coimbra, 2005).

In 1980, he returned to participate in the union opposition movement in *Renovação Médica – Movimento Autônomo, Independente Sindical* (REME-MAIS) (Medical Renovation – Autonomous Movement, Independent Union). Together

with several intellectuals, he is one of the signatories of the founding manifesto of the Worker's Party. In 1985, he participates in the discussion at the 1st Seminar of *Grupo Tortura Nunca Mais* (Group "Torture Never Again"), with a mother of a forced disappeared person in the *Guerrilha do Araguaia* (Brazilian guerrilla), and with human rights defenders (Pellegrino, 1987). In the same year, he traveled to Cuba, with Frei Betto (1944–), and met Fidel Castro (1926–2016). He still maintained close relations with intellectuals and artists of his time, including his visit to Gabriel García Márquez's home. He was one of the leaders, with Helena Besserman Vianna, of the *Fórum*, an opposition group within SPRJ in which former political prisoners, in 1986, narrated the participation of Amílcar Lobo in torture (Coimbra, 2005).

Except for contributions in newspapers, his publications were few during his lifetime. At the time of his death, he maintained several incomplete writings. But, between 1988 and 2004, many of his works were published. Among them, a book of texts and testimonies from people close to him that was based on his concern about the relationship between psychoanalysis and religion; a box with letters, poems, texts, and paintings made by the author; some of his articles published in the press; and part of his poetry and a collection organized by his granddaughter that gathers letters, texts, and interviews.

Regarding the importance, he showed that the concern of a psychoanalysis aligned with a left-wing policy is possible. In this sense, it helped to widen the narrow limits of Brazilian psychoanalysis, operated until then in a purely individual sphere and reproduced in apolitical and undemocratic practices within the Psychoanalytic Society, which culminated with his expulsion. He brought concerns about broader social issues beyond those individual ones, as demonstrated in the practice of the Social Clinic of Psychoanalysis in Rio de Janeiro. Still, he took care of the persecuted and tortured of the Brazilian civil-military dictatorship.

Rómulo José Peña Maturana, also known as Rómulo Peña, was born on September 10, 1866, in Molina, a village in the Maule region. As a child, he already stood out because of his intellectual capacities. Although he studied at the primary school of his village, he traveled to Santiago for studying in the “*Escuela de Preceptores*” (The Preceptors School). In this place, Peña Maturana became a schoolteacher. When he finished his studies in 1885, he received the highest

qualification because of his outstanding academic performance (Laborda & Quezada, 2010; Salas & Lizama, 2009).

After having worked 4 years as a primary schoolteacher, and as a result of the merits obtained while working as a teacher, the government of José Manuel Balmaceda (1886–1891) gave him a scholarship to study in Germany. There he had the chance to study at three prestigious higher education institutions from 1885 to 1893: the “*Königlichen Lehrerseminar zu Dresden*” (The Royal Seminary of Teachers of Dresden), the “*Königlich-Sächsisches Polytechnikum Dresden*” (Royal Saxon Polytechnic Dresden), and the “*Universität Leipzig*” (University of Leipzig). In the latter, specifically at the “*Institut für Experimentelle Psychologie*” (Institute of Experimental Psychology), Peña learnt about the main concepts and methodologies of experimental psychology with Wundt (1832–1920) (Figuroa, 1932). Besides, Peña thoroughly studied here the pedagogical doctrines of Johann Friedrich Herbart (1776–1841), author of the “formal steps” of Herbartian pedagogy and methodology prevailing in Chile at that time.

Halfway 1893, at the age of 27, Peña Maturana returned to Chile. Upon his arrival, he was appointed extraordinary visitor of the secondary schools of the north zone of the country. In this function, in 1894, he wrote an extensive report about the state and needs of the educational institutions placed in that zone. That same year, he was assigned teacher of the German module at the “*Liceo de Hombres de Copiapó*” (Men's High School of Copiapó) (Figuroa, 1932; Gutiérrez, 1941). In 1904, he also taught Natural Sciences at the “*Liceo de Niñas de Copiapó*” (Girls' High School of Copiapó) (Abarca-Brown & Winkler Müller, 2013). The production and dissemination of scientific knowledge was a priority in the life of Peña. In the General Congress of Public Education of 1902, he and Juan Serapio Lois presented the paper entitled “*Fines de la Enseñanza Secundaria*” (High School's Teaching Goals). At this congress, he argued that secondary education constitutes the broadest exercise of mental abilities and provides the individual with relevant knowledge to all industries or professions, and

educates feeling, intelligence, and will, as psychological phenomena in which the educator should have an active role in teaching (Salas & Lizama, 2009).

Following the request of the Ministry of Public Education of the Germán Riesco's government (1901–1906), Peña Maturana created the “*Escuela Normal de Preceptores de Copiapó*” (Copiapó Normal School of Preceptors) on July 10, 1905. The “*Escuela Normal*” (The Normal School) was the only teachers' training institution in the north of Chile. In its first generation, the Normal School had 49 students coming from cities such as Copiapó, Vallenar, Freirina, La Serena, Elqui, and Ovalle (Abarca-Brown & Winkler Müller, 2013).

In the Normal School, Peña Maturana developed different educational programs such as “The School Republic” (with its constitution), “Scouting,” and “The School-Workshop” where students learnt carpentry, mineralogy, and electricity, among others (Abarca-Brown & Winkler Müller, 2013). His colleagues valued the experience that he gained during his stay in Germany. Particularly, they recognized tools that he learnt regarding pedagogical innovation and new teacher training strategies. Despite the strong discipline of the German teaching tradition, Peña Maturana was considered to be a “kind” teacher by his students, as he managed to “soften” the practices that were commonly carried out in educational establishments (Ávalos, 1998).

In this context, Peña Maturana became the first Chilean psychologist. He founded the first Experimental Psychology Laboratory within the Normal School in 1905. He sought to assess students scientifically (Salas & Lizama, 2009). He built, together with his students, more than 200 psychology, physics, and chemistry devices, using normal and easily obtained elements which showed his practical and handicraft skills (Ávalos, 1998). The building of these devices led them, in 1910, to winning the gold medal in the National Exposition carried out because of the country's centenary (Salas & Lizama, 2009). Luis Valenzuela, Peña Maturana's colleague, stated during a conference held in the University of Chile in 1964: “Such small things –seemingly invisible- came out of his hands, and so easily, such as a Leiden jar,

that would complete the not well-stocked Classroom of Physics, or the brilliant Ergograph that would be used as illustration, through patient observations, for their Experimental Psychology classes” (Valenzuela Hermosilla, 1964, paragraph 3). With the creation of the laboratory, Peña Maturana put in practice the knowledge acquired in Leipzig as well as managed to situate psychological know-how within the educational environment, thus promoting innovation in teacher training (Luco, 2010; Parra, 2015).

Peña Maturana took great pains in passing on the recently known subject of pedagogical psychology at the Normal School. He taught psychology applied to education at the pedagogic seminary of schoolteachers, where they studied modern teaching methods in an innovative way (Figueroa, 1932). Peña Maturana also threw himself into translating books that became compulsory consulting material both for teachers and students of the different teacher colleges in the country. Some of those books were the following: *Social Pedagogy* by Paul Natorp; *Pedagogical Psychology* by Artur Stössner; *The New Method to Study the Child's intelligence* by Ernst Neumann; and finally, *Pedagogic and Didactic Elements* by the German Paul Barth. With this latter book, he got the first prize in the Centenary's pedagogic competition held in Santiago in 1910 (Ávalos, 1998).

Until his retirement in 1926, Peña Maturana transmitted knowledge and values to the new schoolteachers in the north of Chile. After this, he worked as an advisor to the Ministry of Education until 1931. On February 14, 1938, he died in La Serena. Years later, on September 10, 1966, a solemn ceremony was held in memory of his centenary in Copiapó. His family, colleagues, and former students deposited his mortal remains in a tomb located at the *Universidad de Atacama* (University of Atacama).

Keywords

Ecuador · Psychodiagnostic · Founder of
psychology programs

Gerardo Leopoldo Peñaherrera, commonly known as Leopoldo Peñaherrera, was born in Girón (Azuay, Ecuador). His parents were Leopoldo Peñaherrera Chico and Rosa Mosquera Alvear. He studied at the *Escuela San José* (San José School) of the *Hermanos Cristianos* (Christian Brothers, 1939–1944) in Cuenca and, in 1945, entered the Salesian Aspirancy and studied at the *Colegio Normal Orientalista Salesiano* (Salesian Orientalist Normal School) and graduated from it as a *Bachiller en Ciencias de la Educación* (High School Degree in Educational Sciences), in Quito in 1954. Then he studied at the *Instituto Salesiano de Filosofía y Pedagogía* (Salesian Institute of Philosophy and Pedagogy) in Quito (1955–1957) and obtained the degree of *Profesor de Segunda Enseñanza en Ciencias Sociales* (Professor of Second Education in Social Sciences, 1965) (Peñaherrera, 1976).

He studied at the *Instituto Internacioal de Teología* (International Institute of Theology) of the Salesians in Bogotá, Colombia (1957–1961), and in addition to studying theology, he took courses in pedagogy, sociology, and psychology and had as a professor José Rosario Vaccaro, Italian Salesian author of *Adolescencia, mundo desconocido* (Adolescence, unknown world,

Vaccaro, 1959). Peñaherrera was ordained as a Salesian priest in 1961 (Leopoldo Peñaherrera, personal communication, September 10, 2020).

He worked in different Salesian institutions, in Ecuador, and was professor of psychology and vocational counselor in various institutions: *Colegio Santo Tomas Apóstol* (Saint Thomas the Apostle School, Riobamba, 1961–1962), *Colegio Salesiano Cristóbal Colón* (Christopher Columbus Salesian School, Guayaquil, 1963–1965), *Colegio Salesiano Sánchez y Cifuentes* (Sánchez y Cifuentes Salesian School, Ibarra, 1965), *Colegio Don Bosco* (Don Bosco School, Quito, 1967–1968), and *Colegio Salesiano Cardenal Spellman* (Cardinal Spellman Salesian School, Quito, 1968) (Peñaherrera, 1976). In 1968, having requested his reduction to the lay state in accordance with the Code of Canon Law, he withdrew from the Salesian Community (Leopoldo Peñaherrera, personal communication, September 10, 2020).

In Cuenca, he was founder and rector in charge of the *Colegio Nacional Santa Isabel* (Santa Isabel National School, 1969–1971) and professor at the *Colegio Alejandro Andrade de Girón* (Alejandro Andrade de Girón School, 1971). He was a professor at the *Facultad de Pedagogía y Psicología* (Faculty of Pedagogy and Psychology) of the *Universidad Católica de Cuenca* (Catholic University of Cuenca, 1971–1988) where he was also dean (1976–1981). In this faculty, he obtained his Doctoral Degree in Educational Psychology (1976).

In the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Humanities and Educational Sciences) of the *Universidad de Cuenca* (University of Cuenca), he obtained a *Licenciatura en Humanidades* (Degree in Humanities, 1972) and that of *Profesor de Segunda Enseñanza en la especialidad de Filosofía, Pedagogía, Orientación Vocacional y Asociación de Clases* (Professor of Secondary Education in the specialty of Philosophy, Pedagogy, Vocational Guidance and Association of Classes, 1973) (Peñaherrera, 1976). He joined

the Faculty as a professor in 1973 and retired in 1994; he worked in the courses of developmental psychology, general psychology, psychotechnics, and psychodiagnosis.

His contribution to the psychology of Ecuador is mainly with the creation of the first undergraduate programs in psychology in the universities of the city. At the Faculty of Philosophy, Letters and Education Sciences of the University of Cuenca, he directed the first *Centro Académico de Pedagogía y Psicología* (Academic Center of Pedagogy and Psychology) and developed the first curriculum in Educational Psychology and Vocational Guidance in 1977 (Universidad de Cuenca, 1976–1978), with which he began training in psychology at this university. Furthermore, he promoted the creation of the *Escuela de Pedagogía y Psicología* (School of Pedagogy and Psychology) and was its first director (1989 to 1991). In this university, as a professor of psychodiagnosis, he acquired in other countries the first instruments for a rudimentary psychology laboratory (López-Calle et al., 2020). Also in 1977, as dean of the Faculty of Pedagogy and Psychology of the Catholic University of Cuenca, he created the first program in clinical psychology, which was the first specialization in the city; he also managed the purchase in Japan (Takei House) of the first psychology laboratory (Leopoldo Peñaherrera, personal communication, September 10, 2020).

Antonio Gomes Penna holds a Bachelor's degree in law from the Faculdade Nacional de Direito (National College of Law) (1944) and a degree in philosophy from the Faculdade Nacional de Filosofia (National College of Philosophy) (1948), both colleges of the Universidade do Brasil (University of Brazil) (UB), now Universidade Federal do Rio de Janeiro (Federal University of Rio de Janeiro) (UFRJ). He began his studies in psychology at the College of Philosophy, in a period when psychology was configured as a specialization. He was a student of the psychiatrist Nilton Campos (disciple of Waclaw Radecki), who was responsible for the psychology course of the Department of Philosophy at UB. In 1948, he began his activities as a professor in psychology at UB and taught, for 15 years, the discipline history of psychology, dedicating himself to areas that involved learning, perception, intelligence, Gestalt, and phenomenology, among others (Figueiredo, 2002).

In 1953, there was interest in the introduction of psychology in military training courses of the General Staff, and Nilton Campos was invited to teach a course. Since he was ill, between 1953 and

1968, Antonio Gomes Penna was professor of psychology applied to the armed forces at the Escola do Comando e Estado Maior da Aeronáutica (School of command and General Staff of Aeronautics) (Ferreira, 2007). These classes marked the relationship between the Instituto de Psicologia (Institute of Psychology) and the Escola da Aeronáutica (School of Aeronautics). The course taught by Penna included the use of his Manual of Applied Psychology at work, which included a course in social psychology with themes such as leadership, discipline, propaganda, and selection (Penna, 1997).

He also taught at the Universidade do Distrito Federal (University of the Federal District), later the Universidade do Estado da Guanabara (University of the State of Guanabara), and the Universidade do Estado do Rio de Janeiro (University of the State of Rio de Janeiro), from 1950 to 1970, participating in the first group of teachers when the psychology course of this institution was created in 1964. At the Faculdade Nacional de Filosofia (National College of Philosophy) of the then UB, he was head of the Department of Psychology between 1964 and 1967, having been one of the creators of The Psychology Course UB (Krüger, 2001). In the context of the military dictatorship (1964–1985), despite his indications to take over the direction of the Instituto de Psicologia (Institute of psychology), he had his name approved only in 1979. In fact, during the dictatorship, Penna suffered persecution for not standing against student movements at the UB. Thus, critical of the university education offered, he pointed out that he could not punish students who refused to attend classes of low quality (Penna, 1997). On the other hand, an undercover security agent accused his phenomenology classes, as well as those of Gestaltism, of being a cover for the dissemination of Marxist ideas. Despite this, after investigations, the accusations were not proven.

Throughout his career, Antonio Gomes Penna has published several books in cognitive psychology, work psychology, and phenomenology, among others. Such studies were made possible

due to his habit of preparing scripts for the subjects taught (Penna, 1997). At UFRJ, Penna created the Boletim do Instituto de Psicologia (Bulletin of the Institute of Psychology) with Eliezer Schneider (Ferreira, 2007).

When observing Penna's work and trajectory, the variety of themes worked by him stand out, who, throughout his life, published more than 26 books and had pioneering actions in the teaching of psychology and in the field of institutionalization of Brazilian Psychology (Jacó-Vilela, 2010).

Brazil, Psychoanalysis · Scientific dissemination

Gastão Pereira da Silva was one of the first and main promoters of psychoanalysis to the general public in Brazil. However, the few sources of biographical information on him are often contradictory, beginning with his memoirs, published in 1959, and the book written by his son Helius (H. Silva, 1993), which contain little chronological data of a precise nature and are narrated in a romanticized style. The difficulty begins with the details of his birth, about which different sources disagree. Some say that he was born in São José do Norte, in the state of Rio Grande do Sul, and others that he was born in Rio de Janeiro. Similarly, both 1896 and 1898 are given as his birth year.

Pereira da Silva said he obtained his medical degree in Rio de Janeiro in the late 1910s. However, no evidence has been found to confirm this. From the late 1910s to the early 1920s, he practiced medicine “on the back of a donkey” in small cities in the countryside of the states of Rio de Janeiro and Minas Gerais. Beginning in the second half of the 1920s, his articles began to appear in Rio de Janeiro newspapers; in addition to some texts on psychiatry, he published literary

narratives and articles on other cultural topics. In 1928, he published a novel entitled *Sangue* [Blood] and sent a copy to critic Medeiros e Albuquerque, who said that the author had no literary talent, but was “a latent psychoanalyst.” From that period on, Pereira da Silva, already established in the city of Rio de Janeiro, turned to psychoanalysis and began to publish a series of books for the general public, beginning with a book about Freud in 1931.

His books dealt with a variety of subjects, always in combination with psychoanalysis: for example, criminology (*Crime e psicanálise* [Crime and psychoanalysis], 1932), education and childcare (*Conheça seu filho* [Understand your child], 1942), animal psychology (*Os bichos amam assim* [This is how animals love], 1944), and religion (*O ateísmo de Freud* [Freud’s atheism], 1966). However, the most famous books among his many publications, referred in selected works, involved pedagogical, accessible explanations for the general public of Freud’s theories.

Although he began his dissemination work by publishing books, Pereira da Silva soon diversified in order to reach the general public. In 1935, he began publishing a column in the weekly magazine *Carioca*, entitled *Psicanálise dos sonhos* [Psychoanalysis of dreams]. In the column, he analyzed dreams sent via letter by people from all over Brazil. The column lasted almost 2 years and published more than 2000 responses to letters. In 1936 and 1937, the author published a series of ten columns in the magazine *O Malho* entitled *As curiosidades da psicanálise* [The curiosities of psychoanalysis] (Marcondes, 2015), and from 1939 through 1943, he published several columns in the magazine *Vamos Lêr!*, such as *Uma página para as mães* [A page for mothers], *Psicologia da vida cotidiana* [Psychology in daily life], *Doentes célebres* [Famous patients], and *Criminosos célebres* [Famous criminals]. He also published in other magazines such as *Dom Casmurro* and *Seleções sexuais*, the latter in the 1950s.

Beginning in the 1930s, Silva also participated in radio programs, and beginning in the 1940s, he presented a program on National Radio entitled “In the World of Dreams”; at the same time, according to Silva himself in an interview in 1985, he wrote “100+ scripts on National Radio,

all with a psychoanalytic basis” (Silva, 1985). He also wrote plays that were staged by the company of actor Procópio Ferreira (1898–1979), and he wrote a psychoanalytic biography of the actor in 1934. In the 1950s, he began offering a psychoanalysis course via correspondence.

All of this activity to disseminate psychoanalysis was done outside official institutions, such as medical schools and academies linked to psychoanalysis or psychology. According to Silva himself, he refused to take exams in order to be considered a psychoanalyst, which began to be a requirement of candidates at the psychoanalysis institutions recognized by the International Psychoanalytical Association (IPA). Consequently, he always adopted a discourse that valued independent learning and his personal reading of Freud, in addition to a letter he received from Freud in 1934, as his principal sources of legitimacy. Nevertheless, in 1978, near the end of his life, he was a founding member and the first president of an institute of psychoanalysts, the *Associação Profissional dos Psicanalistas do Estado do Rio de Janeiro* (APPERJ) [Professional Association of Psychoanalysts of the State of Rio de Janeiro]. Also due to his career outside official institutions, the name Gastão Pereira da Silva has been little cited by Brazilian historians of psychoanalysis, with the exception of the work by Elisabete Mokrejs (1993) and Jane Russo (2002, 2007).

Claudio Alfredo de la Rosa Munar
Universidad El Bosque, Bogotá, Colombia

Keywords

Colombia · Experimental psychology

Francisco Pereira Manrique graduated from the Colegio San Ignacio de Loyola [San Ignacio de Loyola School], Bogotá, in 1969. Through his

early school years, he was always interested in medical sciences, which resulted in many charitable activities, serving as a volunteer for the Cruz Roja Colombiana (Colombian Red Cross). Those activities shaped his interest in the biological and medical field and sciences and his later interest in psychology as a science. In 1970, he was accepted as a student at the Faculty of Psychology at Pontificia Universidad Javeriana (Pontifical Javeriana University). There, he discovered the all-important connection between philosophy and psychology. He also met Jose Antonio Sánchez, dean of the Faculty, and Rubén Ardila, a professor at the Universidad Javeriana, sharing an interest in experimental psychology (Flórez, 2003). As a student, Pereira was always promoting academic activities and was very active in playing a role in the foundation of different academic groups, such as the Asociación Latinoamericana de Análisis y Modificación del Comportamiento (ALAMOC, Latin American Association of Behavior Analysis and Modification). During that time, he also served as a teaching assistant for José Antonio Sánchez at the then renewed Laboratory of Psychology, where he shaped his later career pathway and increased his interest in the foundations of psychology as a science and its connection with the development of the psychology laboratories. Under Rubén Ardila's direction, Pereira did an experimental thesis as a requisite for graduation (Pereira & Pardo, 1975).

Also, along with Rubén Ardila, he founded the *Distribuidora de Tests y Aparatos Psicológicos (DISTAP Ltda.)* (Psychological Apparatus and Tests Distributor, DISTAP Ltd), a privately held company that developed, produced, and distributed some of the first Colombian-made psychological apparatuses, along with imported ones. This achievement constituted a milestone in the Latin American development of psychological science and technology, being one of the initiators of this field in the region. Their equipment still lasts in some laboratories in Colombia, as referenced by Raúl Oyuela in his historical book about Colombian psychology laboratories (Oyuela, 2008) as a testimony of Pereira and his colleagues' work placed in such endeavor.

In 1975, he married Nydia Pardo, who was also studying in the same Faculty and later fathered Francisco and Maria Gabriela. During that year, he graduated from the Universidad Javeriana as a psychologist and formally started his professional career. Soon after, he started teaching at the Universidad de Los Andes (Los Andes University), Universidad Jorge Tadeo Lozano (Jorge Tadeo Lozano University), and Universidad Católica de Colombia (Catholic University of Colombia), showing a vocational inclination toward teaching and research in psychology.

Between 1978 and 1995, Pereira moved to Venezuela, where he taught psychology at the Universidad Nacional Abierta de Caracas (UNA) (National Open University of Caracas, UNA), where he influenced psychology teaching on a distance learning setting and was the author and editor of diverse productions on that area. During that period, he taught a seminar on Scientific Research Methodology that influenced several students at the UNA, a course in Experimental Psychology, and an introductory course to psychology at the Universidad Católica Andrés Bello (Andrés Bello Catholic University). He also served as a consultant for the Federal District of Caracas Government.

Shortly after his return to Colombia, in 1995, he joined the Universidad Nacional Abierta y a Distancia (UNAD) (National Open and at Distance University, UNAD). The psychology program's orientation was greatly influenced by his previous work in Venezuela and his personal view of psychology as tied with basic research. During his tenure at the UNAD, between 1995 and 2003, he published numerous materials about distance learning. He was also the editor of the *Revista Informe de Investigaciones Educativas* (Journal of Reports on Educational Research).

In 1998, he joined the recently founded Escuela Colombiana de Medicina, later Universidad El Bosque (Colombian School of Medicine, later El Bosque University). From there on, he developed most of his career in that university. Given his experimental psychology background, he was appointed as the director of the Laboratory of Experimental Psychology at the Faculty of Psychology. In 2010, he co-founded the Instituto de Neurociencias (Neuroscience Institute) at the

Universidad El Bosque and served as vice-president of the Institute from 2010 until 2021. He was also director of the psychosocial area at the Faculty of Odontology in the same university. He remained in those two last positions until his passing in January of 2021.

As director of the Laboratory of Experimental Psychology at the Universidad El Bosque, Pereira organized the first meeting of psychology laboratory directors of programs associated with the Asociación Colombiana de Facultades de Psicología (ASCOFAPSI) (Colombian Association of Psychology Faculties, ASCOFAPSI) a meeting held at the Universidad El Bosque in 2004. As a result, he and other colleagues created the first Grupo de Laboratorios de Psicología (GRUPLAB) (Group of Colombian Laboratories of Psychology, GRUPLAB), later, Red Colombiana de Laboratorios de Psicología (REDLAB) (Colombian Network of Laboratories of Psychology, REDLAB). The formation of this group promoted the unity of the field in the country and served as an influence for the later creation of the Red Latinoamericana de Ciencias del Comportamiento (REDLACC) (Latin American Network of Behavioral Sciences, REDLAC). Pereira was appointed as the first director of GRUPLAB and served in that position until 2005. During his presidency, he served as a consultant for many institutions and helped with the formation of new laboratories of psychology and the renewal of others around the country, including the Universidad de Pamplona (University of Pamplona), Universidad del Sinú (University of Sinú), and Universidad del Magdalena (University of Magdalena).

The development of experimental psychology in Colombia and generally in Latin America has often been controversial. During the 1940s, under the influence of international psychology and Mercedes Rodrigo Bellido's arrival at the Universidad Nacional de Colombia (National University of Colombia), an empirical view of psychology prevailed. However, this view was replaced by a nonempirical one, provided by the new program directors, whose approach was a medical one. One decade later, following the influence of social movements in Latin America, psychological science was viewed as

“positivistic” in nature and a “psychology of imperialism” (Gutiérrez, 1999). Psychology programs pulled back from experimental psychology until the 1970s, when the field regained importance under the leadership of Rubén Ardila, Alfredo Ardila, and Juan Alberto Aragón, among others. They published textbooks and research papers in Spanish, promoted a renewal of the field, created new psychology programs, and promoted behavior analysis and other experimental psychology areas (Ardila, 1976; Flórez, 2003). A deliberated series of attacks by some students without the disapproval of some faculty members, on the animals used as models at the Laboratory of Animal Learning at the National University of Colombia carried out by the mid-1980s, are a testimony of the turmoil of that era of science in Colombia and also in Latin America and a measurement of the climate toward science at that time, as accounted by the then director of the Learning Laboratory, Aristóbulo Pérez (Pérez, 1999).

This “stormy” climate toward empirical psychology extended until the last portion of the 1980s, and the growth of an experimental psychological science in the region continued at a relatively slow pace until the first part of the 1990s decade and regained high importance from then and toward the first decades of the twenty-first century.

Pereira’s contributions must be understood within this context. As the experimental psychologist he was, with the rigor and methodology expected for the area, the development of a psychological science based upon the experimental foundation proved difficult. He promoted the consolidation of laboratories as pillars of psychology teaching in Colombia, the generation of new research, and the strong connection between psychology and its scientific bases. He greatly influenced the development of new laboratories in new psychology programs between 1990 and 2010. His books, *Manual de prácticas de laboratorio de condicionamiento operante* (Pereira, 1980) (Manual of Practices of Operant Conditioning Laboratory) and *Senso percepción: Manual de demostraciones, ejercicios y prácticas experimentales* (Pereira, 2000) (Sensation and

Perception: Manual of Experimental Demonstrations, Exercises, and Practices), have greatly influenced the area of basic psychological process research in Colombia and Venezuela and have become a reference for Latin America, the latter being a regular textbook in the teaching of those areas in many universities in the region.

Pereira, Carlos

Born *Bogotá (Colombia), 13 October 1942*

Arturo Clavijo
Universidad Nacional de Colombia, Bogotá,
Colombia

Keywords

Colombia · Behavior analysis · Behavioral economics

Carlos Hernando Pereira Vargas is a Colombian psychologist and psychology professor born in

Bogotá (Colombia), where he has spent most of his life. He was the only child of Carlos Arturo Pereira Ortega, who died when Carlos was 5 years old, and Ana Rosa Vargas Guzmán, who raised him as a single mother. Both of his parents were born and lived in Bogotá. In 1967, Carlos Pereira married Martha Restrepo (1947-), who has also played a significant role in Colombian psychology history. They had a daughter, Ana Carolina Pereira-Restrepo, and a son, Sebastian Pereira-Restrepo.

Pereira's academic history began in Bogota. In 1966 at the Colegio Miguel Antonio Caro, he obtained his high school diploma, where he demonstrated such proficiency in math and science even to help his classmates. Once he had finished his high school studies, he applied to the Universidad Nacional de Colombia [National University of Colombia], the largest and most important public university in the country, to study a 5-year psychology program as a professional career. For different reasons, in the 1960s and 1970s, Colombian students always took more than 5 years to obtain their first degree. At the time, the Colombian higher education system was terminal, which means that students received professional degrees such as physicians, teachers, engineers, and, of course, psychologists. No Colombian university offered master's or Ph.D. programs in psychology. As it was a terminal degree and few students pursued graduate studies abroad, Colombian higher education students had to write, submit, and defend a final thesis to obtain their degree.

In comparison to today's standards, those theses could have, in most cases, the length, breadth, and quality of a current North American University Master thesis. Carlos wrote, presented, and defended the second thesis written from a behavior analysis perspective in Colombia. The title was: *Teaching Machines and Token Economy Systems as Instruments for the Individualization of Teaching*, which, because of its quality and originality, received a meritorious mention by the university. His thesis' subject also reflected what would be his academic interests throughout his life.

Carlos Pereira obtained his degree as a psychologist in July 1975. He enrolled 1 month later in the Experimental Analysis of Behavior Master's program at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico). He dropped 1 year later after establishing a fruitful and long-lasting academic relationship with professor Florente López with whom he kept collaborating for a long time. In 1993, Carlos enrolled in the master's program in analytic philosophy at the National University of Colombia. In 1993, he enrolled in a course on consumer psychology. He earned a diploma as a specialist the same year at the Fundación Universitaria Konrad Lorenz (Konrad Lorenz University Foundation), which, by the way, financed his studies.

Pereira started to work while he was pursuing his undergraduate degree as he had to support himself. In 1970, he collaborated with the malnutrition and mental development project, funded by the Universities of Harvard and Cornell. Afterward, Pereira worked for the reeducation school for minors Antonio Ricaurte at Cajica, administered by the Instituto Colombiano de Bienestar Familiar (Colombian Institute for Family Well-Being), a national public institution created mainly to protect underage children and family rights. Later, he would dedicate most of his professional life to psychologists and educators' academic training. From 1971 to his retirement, Pereira gave courses and lectures mostly on subjects related to learning, motivation, teaching, and behavior analysis at several universities in Colombia, such as the Universidad Católica de Colombia (Catholic University of Colombia), Pontificia Universidad Javeriana (Pontifical Javeriana University), Universidad Santo Tomás (Saint Thomas University), and Universidad de Los Andes [University of the Andes]. At the Catholic University of Colombia, Carlos Pereira trained a whole generation of psychologists who devoted themselves to teaching and researching within the experimental analysis of behavior tradition, to apply the experimental analysis of behavior principles to solve socially relevant problems or to do both. He was a full-time faculty member of the Universidad Pedagógica Nacional (National

Pedagogical University), the largest University for Colombian teachers and educators training, where he led a research program on motivation applied to higher education teaching and learning. Pereira was also a full-time professor for the Konrad Lorenz University Foundation, from which he is currently a member of its governing board. In 1993, the Konrad Lorenz University Foundation appointed him an honorary member and in 2011 awarded him the title of distinguished teacher, acknowledging his long contribution to their Psychology Faculty. Carlos introduced innovative courses in their curriculum and, on different occasions, coordinated teachers' teams in the learning, experimental, and motivational areas.

Pereira contributed in many ways to the dissemination of psychology from the behavior analysis perspective in Colombia. He was a founding member of the Asociación Colombiana de Análisis y Modificación del Comportamiento (Colombian Association for Behavior Analysis and Modification), and member of the editorial board of the Association's journal. He also made significant contributions to disseminating an experimental approach to Colombian psychology when behaviorist and empirical conceptions were not taught in most psychology programs and were frequently misrepresented and openly rejected. Carlos also promoted basic psychological research in a period in which people regarded psychology as a professional career oriented to solve applied problems mostly in the traditional fields of clinical, organizational, and educational psychology. Because of his influence, Premack's reinforcement theory, reinforcement regulatory theories, the matching law, and other quantitative approaches to studying behavior became part of several psychology programs' study plans.

Among his leading publications, there is a paper published together with Florente López in the journal *Behavioural Processes* on how conjunctive fixed ratio and fixed time schedules affect the post-reinforcement pause López and Pereira (1985). He wrote along with some of his former students, who later became prominent Colombian psychologists, two influential papers in the Colombian context about reinforcement theory Pereira et al (1983, 1984) and a conceptual one

on self-reinforcement Castro and Pereira (1985). He also edited the *Colombian Association for Behavior Analysis and Modification* journal and the journal *Suma Psicológica*. He is still a member of its editorial board.

Carlos Pereira's main contribution to Colombian psychology has been in psychologists' and educators' academic training, mostly in the experimental analysis of behavior. Virtually all of his closest students are now professors and researchers themselves hired by different universities in Colombia or abroad. Some of them were not students at the universities for which Carlos worked. He voluntarily guided independent study groups on behavior analysis, analytic philosophy, and reinforcement theory for periods spanning almost 10 years. At the time, some public and private universities advocated a kind of anti-experimental psychology, which spurned topics such as the quantitative analysis of behavior or comparative psychology. In the same spirit, he oriented numerous undergraduate theses awarded meritorious mentions at the National University of Colombia and other universities. He was the first psychology professor in Colombia to introduce the behavioral economics' emerging area by orienting the first thesis and creating the first course on the subject. The first program in Colombia in consumer psychology greatly benefited from his work. Many Colombian researchers working in the country and abroad acknowledge Carlos Pereira's influence on their work. Behavior analysis and scientific psychology in Colombia owe much to his generous contributions as a teacher, both inside and outside the classroom. Most of those who worked with him as his students, on any of his study groups, at the same university team, or just in a friendly relationship, recognize his extraordinary sense of humor, intelligent remarks, and gentle personality.

In 1976, Maria Solange Felix earned a licentiate in psychology and in 1977 a degree in psychology from the Universidade Estadual Paulista (São Paulo State University). Throughout the 1980's,

she completed nondegree courses in various fields of psychology, such as educational psychology and social psychology. Her focus was mainly the relationship between psychology, traffic, and education. She developed countless activities related to traffic education until her passing. Solange believed psychology could contribute in the dissemination of a culture of peace in traffic, of respect toward citizenship and solidarity among people. In 1978, she served as a psychologist for the Departamento Estadual de Trânsito de São Paulo (São Paulo Traffic Department, DETRAN/SP). Once she moved to Campo Grande, in 1979, Solange joined DETRAN/MS, the Traffic Department of the state of Mato Grosso do Sul, where she served as one of the first psychologists. In this institution, she was an expert examiner psychologist, chief of the Traffic Psychology Division, and technical director of the Engineer and Traffic Operation, Education and Traffic Fiscalization Services. Between 1992 and 1998, she was scientific director of the Associação Brasileira de Educadores do Trânsito (Brazilian Association for Traffic Educators, ABETRAN).

Solange liked to be called “militant” (Homenageado 2010). This denomination seems to be a characteristic of the first women psychologists working in Campo Grande during the 1970s. Other psychologists of her generation also call themselves “militants” (Curado 2015), even now. This seems to be related to two factors: (1) These women had a striking cooperation with orientation boards’ movements; and (2) their belief in psychology’s social commitment, specially through traffic education, to reduce accidents and deaths. Solange was a representative in the board of psychologists in the state of mato grosso do sul from 1980 to 1986. Between the years of 1994 and 1997, she was a member of the Commission of Nonmotorized Vehicles, Citizenship and Education for Traffic in the Departamento Nacional de Trânsito (National Traffic Department, DENATRAN) assisting in the elaboration of the Brazilian Traffic Code, which came into effect in 1998. In the Conselho Federal de Psicologia (Federal Council of Psychology, CFP), she occupied various positions, e.g., member of the Commissions for Traffic Psychology policies and actions, Representative of

the CFP in the Thematic Chamber of Health and Environment along with the DENATRAN from 2001 to 2007, in a crucial point that redirected the practice of psychological evaluation in the context of traffic while the then new Brazilian Traffic Code was in effect (Silva 2012). In her conception, traffic is a field of social relationship. Thus, social psychology was a way to think about the psychosocial practices of drivers. Therefore, Solange (2005a,b) analyzed the culture of driving and how people, besides being socially influenced to use automobiles due to the impoverishment of collective transportation in the country, exercised this activity as a power relation, the property and usage of the automobile being the highest expression of this. In 1996, she obtained the title of Master in social psychology with the dissertation “The representation of drivers’ actions on driving skills” in the Pontifícia Universidade Católica de São Paulo (PUC – SP) guided by Dr. Peter Kevin SpinkPereira.

The relation between psychology and traffic was also present in her practice as teacher. Her influence on traffic education was recognize by her history in different Brazilian institutions between 1990 and 2000. Solange was visiting professor in Faculdade de Medicina of the Universidade de São Paulo (School of Medicine of the São Paulo University, FMUSP), membership of Pontifícia Universidade Católica do Paraná (Pontifical Catholic University of Paraná, PUC-PR) and at the Certification and Studies in Traffic and Transport (ICETRAN). At the Universidade Católica Dom Bosco (Dom Bosco Catholic University, UCDB) located at Campo Grande, she was one of the first professors of psychology’s undergraduate degree, teaching multiple disciplines. Solange was coordinator of Psychology’s Program twice, between 1980 and 1984, also in 2000 until 2006. She was, also, responsible for coordinating several nondegree courses in traffic at UCDB specific of psychology and other disciplines like traffic management and traffic education, etc. She was one of the pioneers with the Graduate Program in Multidisciplinary Studies of Traffic in 1993 at Faculdade Unidas Católicas de Mato Grosso (United Catholic College of Mato Grosso, FUCMT), currently UCDB, teaching Traffic Education: A Citizen Perspective,

in partnership with Renier Johannes Rozestraten (1924–2008). She was his student and since the second half of 1980 was a contributor. Together, they produced congresses and meetings on Traffic area and also papers and projects on traffic education including honor participation in writing the IV, V, and VI chapters of the currently Brazilian Traffic Code (CTB) that mention about pedestrian, citizen, and traffic education, besides the creation of Studies and Research Core at Traffic and Transport at UCDB.

Her work collaborated with the expansion of the Psychology Act at the interface of traffic besides others materials in Conductors Psychology Evaluation. She was coresponsible for the foundation of ABETRAN and also for the National Movement for the Democratization of Traffic (MNDT). She was also education director of education for the State Traffic Department of Mato Grosso do Sul (DETRAN/MS) creating in this organ a career of traffic psychology connecting to traffic education, which was new in the country. In 2012 at the occasion of 50 years of psychology as a profession in Brazil, she received a tribute from the Conselho Regional de Psicologia at 14th region (Regional Council of Psychology, CRP-14), with the creation of the Maria Solange Felix Pereira Library at organ. Since 2016 in tribute made by Municipal Chamber of Campo Grande, she lends her name to the Legislative Medal granted annually to psychologists with honor in the capital from Mato Grosso do Sul state.

Pérez Enciso, Guillermo

Born in *Barcelona, Spain in 1917*

Died in *Caracas, Venezuela in February 2007*

Eduardo Santoro
Universidad Central de Venezuela (UCV),
Caracas, Venezuela

Keywords

Venezuela · Applied psychology · Academia

Guillermo Pérez Enciso was the son of Francisco Pérez Castro and Dolores Enciso Amat. He studied and graduated at a young age in Psychology at the Universidad de Barcelona (University of Barcelona), Spain (1939). In 1940, he actively participated in the political struggles with the Federación Nacional de Estudiantes de Cataluña (National Federation of Students of Catalonia) against the dictatorship of Francisco Franco. He ended up in a refugee camp in France, where he was sought by his older sister María Dolores Pérez Enciso (1908–1949). With the death of his sister in Mexico (1949), he was left in the care of his niece, Rosa del Olmo. Initially, he moved to France, but later, together with a group of prestigious intellectuals he moved to Chile, emigrating to Venezuela in the mid-1940s.

Once in the country, he began his activity as a teacher at the Instituto Pedagógico Nacional (IPN) (National Pedagogical Institute) (1946). In 1956, he joined the Philosophy Section of the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the Universidad Central de Venezuela (UCV) (Central University of Venezuela), where he taught Psychology for the next 2 years. He married the Caracas writer and historian Gisela Morazzani, and they had no children.

During that time, the Instituto de Psicología y Psicotecnia (Institute of Psychology and Psychotechnics) was created, which emphasized research in psychometry, topics related to education, and applied research in general. Guillermo Pérez Enciso was appointed by the decision of the dean as Director of the Institute (1957). Professor Perez decided to reorganize the institute, for which he requested the collaboration of the Catalan psychologist Emilio Mira y Lopez (1896–1964), who was in Venezuela collaborating with the Faculty of Medicine of the UCV. In 1957, parallel to his teaching work, he developed research and service activities, which led to the creation of the Psychology Section, which consisted of a 2-year study plan in common with other sections.

In 1958, with the fall of the dictatorship of Pérez Jiménez (1914–2001), a transition project was elaborated to transform the Section into a School, which was approved, appointing Pérez Enciso as Director of the School of Psychology

(1958–1961). The challenge was evident, to stop being a course in Psychology to become an undergraduate program, constituted a radical change, which brought with it the development and application of strategies that made possible such implementation.

During his tenure as Director of the School of Psychology, Professor Guillermo Pérez Enciso maintained academic quality as his main value. This vision implied for the Director of the School, to incorporate specialized teaching staff for each of the applied courses, to identify the centers for the realization of the practices: schools, high schools, hospitals, and organizations. In addition to the incorporation of professionals with post-graduate degrees and experience in the applied areas, the student took all the courses to educate him or her as an integral graduate. Agreements were made with institutions to create Psychology Services where internships could be carried out, fulfilling a double function: assistance and teaching (Cadenas, 1981).

At the end of his term as Director (August 10, 1961), he left a rigorously selected teaching staff, thus guaranteeing the quality of graduate training. He returned to teaching General Psychology, Developmental Psychology, and, in the final stage before his retirement, Psychological Theories (Cadenas, 1981).

In 1958, he published his textbook *Elementos de Psicología* (Elements of Psychology) for high school, which was widely distributed and replaced the first psychology textbook published in the country, *Apuntes de Psicología, para la educación secundaria y normal* (Psychology Notes Psychology notes, for high school and normal education) by Luis Beltrán Prieto (1902–1993), also dedicated to special Education (Prieto, 1940).

Dr. Guillermo Pérez Enciso also served as Director of the Instituto de Psicología (Institute of Psychology) of the UCV (1973–1977), during which time the Laboratorio de Análisis Experimental de la Conducta (Laboratory of Experimental Behavior Analysis) was created (1976), opening a new and productive line of research.

He was honored during the 50th anniversary of the school, where a bust was unveiled in respect to the role he played in the creation of psychology studies at the undergraduate level, creator of the first graduate degree in Psychology and for having laid the foundations for the academic and professional development of the school.

Valentín Pérez Pastorini was the son of Valentín Pérez Pérez and Dolores Aniceta Pastorini. They

lived in Florida until 1904, year in which they moved to Vigo, Spain. Valentín Pérez attended school in Vigo and Pontevedra and attained his secondary education diploma in arts and science.

He returned to Uruguay at the beginning of the 1910s and took the Uruguayan high school exam in order to enter the Facultad de Medicina (Faculty of Medicine). He entered the faculty in 1912, and received the title of Doctor in Medicine and Surgery in 1920. He dedicated his first 2 years of professional practice to Health Clinic and Home Care tasks.

In 1923 he began his training in psychiatry at the Hospital Vilardebó (Vilardebó Hospital), the only hospital that existed for patients with psychiatric pathologies at the moment. His trainer was Bernardo Etchepare (1873–1925), first holder of the 1908-inaugurated psychiatry chair. In the 1920s, psychoanalytic ideas had as their main critics two of the most renowned psychiatrists in the local medical environment, the aforementioned Bernardo Etchepare and Dr. Santín Carlos Rossi (1884–1936), who published virulent texts against psychoanalysis (Etchepare, 1926; Rossi, 1926). Bernardo Etchepare considered that “Freud was a great suggestive” (Etchepare, 1926, p. 78), “dreamer of dreams, of nightmares” (p. 79), whose doctrine “must fall at its base” (p. 80). Santín Carlos Rossi, likewise, considered Freudian theory to be dogmatic, pansexualist whose etiology and therapy were inefficient. This did not prevent the physicians of the time from considering and starting to visualize an incorporation of Freud’s ideas in a partial and fragmentary way.

Valentín Pérez Pastorini held the position of Deputy Head of Clinic and Assistant of the Clínica Psiquiátrica (Psychiatric Clinic) at Vilardebó Hospital. In 1927 he obtained the position of Alienist through contest at the Colonias de Alienados (Alienated Colonies). He was also a founding member of the Sociedad de Psiquiatría del Uruguay (Uruguayan Society of Psychiatry) in 1923, part of the collaborators committee of the *Revista de Neurología* (Journal of Neurology), *Psiquiatría y Medicina Legal de Uruguay* (Psychiatry and Legal Medicine of Uruguay) in 1927, head psychiatrist of one women room at the

Vilardebó Hospital in the 1940s, and president of the Uruguayan Society of Psychiatry in 1946.

In the 1930s Valentín Pérez Pastorini began to study psychoanalysis rigorously (Korovsky, 1985) and practice it. In the section “Protective Doctors of the Journal of Psychiatry” of the *Revista de Psiquiatría del Uruguay* (Uruguayan Journal of Psychiatry) in 1930, he was introduced as “Alienist at the Dr. Bernardo Etchepare Colony, specialist in the nervous and mental” (1930), while in 1936 he was introduced as “Psychiatrist and psychoanalyst” (1936, p. 32).

In 1936, the *Uruguayan Journal of Psychiatry* published a note made by Valentín Pérez Pastorini (Payssé, 1936) that can be considered as initiatory. Valentín Pérez Pastorini criticizes a partial use of psychoanalysis, emphasizing that by using traditional psychology it is not possible to reach the unconscious conflict level and “that psychoanalysis has its own technique, and that it is essential to use it (. . .) if one wants to reach that unconscious conflict level” (1936, pp. 69–70). He concluded that: “with a rationalist and conscious spirit it is not possible to judge the phenomena of the unconscious” (1936, p. 70). This comment discussed not only an exposition made by a contemporary physician, but the fragmentary use of psychoanalysis prevalent at the time. Likewise, it is of particular importance since it linked psychoanalytic theory with its method and demonstrated a concern to give psychoanalysis a specificity within the medical field.

In the 1940s, Pérez Pastorini maintained an assiduous link with various psychoanalysts from Buenos Aires. Psychoanalysis was institutionalized in the capital of Argentina with the formation of the Asociación Psicoanalítica Argentina (APA) (Argentine Psychoanalytic Association) in 1942. His friend and teacher Enrique Pichón Riviere (1907–1977) and Angel Garma (1904–1993), a Spanish physician and Pérez Pastorini’s analyst, were both part of that institution.

In Montevideo during the 1940s, psychoanalysis found diffusion in medical and nonmedical magazines, and Valentín Pérez Pastorini was the first psychoanalyst to gain acceptance and create a

following (Pérez Gambini, 1999). Among his psychoanalytic patients there were Rodolfo Agorio (1903–1990), Gilberto Koolhaas (1912–1994), and Héctor Garbarino (1918–2001), three of the founders of the Asociación Psicoanalítica del Uruguay (Uruguayan Psychoanalytic Association) in 1955.

In 1945 he published a text on psychosomatics in the *Revista de Psicoanálisis* (Journal of Psychoanalysis) edited by the Argentine Psychoanalytic Association, “Value of associative anamnesis in psychosomatic medicine” (Pérez Pastorini, 1945), which was published a year later in the *Journal of Psychiatry of Uruguay* (1946). This text proposed the use of a method that, based on free association, aims to “diagnosing the structure of personality and conflicts, which are deeper than what usual techniques can reach” (Pérez Pastorini, 1945, p. 44). He attended the Primer Congreso Inter-Americano de Medicina (First Inter-American Congress of Medicine) held in Rio de Janeiro in 1946, along with a group of psychoanalysts from APA, where he presented a paper called “Psychoanalytic Considerations on a Respiratory Disorder.” His psychoanalytic works were influenced by psychosomatic theories. In Uruguay, he disclosed the usefulness of psychoanalysis in child psycho-prophylaxis of neuroses in radio programs, carried out study groups, and used psychoanalytic tools when conducting expert reports and medical-legal reports.

The International Psychoanalytical Association (IPA) required that there be a training analyst to form a group that could count on the legitimacy of this institution. Pérez Pastorini was exercising this function given that he was the only training analyst in Uruguay who was authorized by the Argentine Psychoanalytic Association.

He passed away on October 13, 1948, at the age of 52, “in his law, working” (Freire, 1988, p. 4) at the Vilardebó Hospital (Freire, 1988; Korovsky, 1985) as a consequence of a cerebrovascular accident. His death left the “incipient psychoanalytic movement (. . .) plunged into despair, loneliness and hostility” (Korovsky, 1985, p. 32).

Colombia · Animal behavior · Psychology of learning · Experimental analysis of behavior

Aristóbulo Pérez-González is the eighth child of Carlos Julio Pérez and María del Carmen González; he was born in Gámeza, Boyacá, a small town located 220 km northeast of Bogotá. Pérez-González's father was a farmer, and, due to this, Aristóbulo spent his childhood surrounded by animals and shared his daily life with chickens, sheep, and cows. Growing up in this context awoke in him much interest in the behavior of these and other species. By 1962, he graduated from the José Joaquín Ortiz High School in Tunja, Boyacá. Then he moved to Bogotá and started psychology studies at the Universidad Nacional de Colombia (National University of Colombia), where he graduated in 1975. His undergraduate thesis on the effects of maternal deprivation on the feeding behavior of chickens, done in collaboration with Alvaro Benavides (1945–2017) and under the supervision of Carlos Moreno (1941–), received a Laureate Award. Their research was one of the first experimental studies carried out in Colombia in the emerging field of animal psychology.

A few days after receiving his degree, Pérez-González was hired as an instructor in the Department of Psychology of the National University of Colombia, where he conducted various administrative and teaching functions. Among the courses he taught were ethology, psychology of learning, and experimental analysis of behavior. Convinced that the theories and concepts seen in these

courses should have a practice that allowed students to apply what they learned in the classroom, in 1976, Pérez-González began efforts to acquire laboratory space for the development of these activities.

The career of Pérez-González as a researcher and as a professor was continuously intertwined with his pioneer work in the laboratory using animal models; he was the director of the Learning Laboratory (now Animal Learning and Behavior Laboratory) from 1976 to 1999, and it was there that he built his legacy for psychology in Colombia.

On August 25, 1977, Pérez and his colleague Alvaro Benavides were granted access and permission to use a rusty building in a facility near the laboratories of the Faculty of Veterinary Medicine and Zootechnics. There, students experimented with animals by training arbitrary responses in subjects of different species, such as rats, monkeys, horses, ducks, and chickens, using operant techniques (Gutiérrez 2006; Pérez-González 1999). Since the laboratory did not have standardized equipment such as operant chambers, the trained responses were somewhat peculiar, like climbing stairs, discriminating geometric figures, and even “dancing.”

The first goal of Pérez-González in the laboratory was to demonstrate basic principles and replicate classic learning studies. At the time, the resources for research were nonexistent; thus, most of the apparatus used in the laboratory were constructed by students with discarded materials from the university or purchased with their own resources. Pérez-González supervised and encouraged hands-on training in experimental psychology; he incentivized his students' curiosity and was very interested in developing their observational competencies as a fundamental part of the scientific repertoire of any psychologist.

Rather than imposing research questions on his students, Pérez-González encouraged them to formulate a question of their own interest and an adequate method to answer it. In this sense, the equipment created in the laboratory was oriented to answer a specific inquiry, more than trying to simply replicate an existing experimental

paradigm. This approach began a long tradition of the Learning Laboratory at the National University of Colombia to work on a variety of research problems using innovative methodological and instrumental approaches (A. Segura, personal communication, November 23, 2019).

By 1994, despite the various difficulties that Pérez-González and many of his students had to face, he achieved some remarkable goals such as the publication of *Psychology of Learning: A Laboratory Handbook*, in which he presented an organized set of activities conducted as part of the psychology of learning course. This handbook became an important reference for activities at many other laboratories in Colombia and other Latin-American countries (Gutiérrez 2006). Among the works published by Pérez-González, there are several undergraduate theses supervised by him, which implies that the main goal of the laboratory had grown from teaching to the production of new knowledge in the area of animal learning (J. Roza, personal communication, November 16, 2019).

In 2015, he published *Animal Play*, and, in 2018, he published *Handbook of Observational Research of Behavior*, an updated version of his handbook, but directed at training psychologists and other behavioral scientists in observation skills (A. M. Pérez-Acosta, personal communication, November 16, 2019).

Another important accomplishment of Professor Pérez-González is the publication, in 1998, of three issues of a bulletin called *Leipzig* in collaboration with Andrés M. Pérez-Acosta (1970–) and the editorial support of students of the Learning Laboratory. Later (2000), Pérez-González and Germán Gutiérrez (1965–) founded a journal edited by students under the title *Laberinto (Labyrinth)*, aiming at publishing experimental research conducted by psychology students in Colombia and the Latin-American region. Nowadays, this publication has reached over 20 volumes and offers an important opportunity for students to publish their first papers in animal behavior studies, often in collaboration with their supervising professors (see selected works in this chapter).

Pérez-González has received many acknowledgments during his career. In 1992, 1995, 1998,

and 1999, he was recognized as an outstanding teacher by the Consejo Superior Universitario (Board of Directors) of the National University. In 1999, he held the title of professor emeritus. In 2016, when the laboratory celebrated 40 years since its foundation, Pérez-González was honored, and the building where the laboratory has been located since 1983 was named after him (G. Gutiérrez, personal communication, November 15, 2019).

Pérez-González was a teacher at the National University of Colombia for 25 years, where he taught many generations of psychologists and, as acknowledged by most of them, he gave them their first glimpse of experimental psychology and animal behavior as fields of study in psychology. He is fondly remembered by his former students for his openness and generosity, for seeding in them an interest in research and for promoting their vocations for the behavioral sciences.

Full Professor Dr. Aidyl Macedo de Queiroz Pérez-Ramos, scholar in clinical psychology, special education, and history of psychology, with experience in Latin America, North America, Africa, and Europe.

Aidyl has a degree in Education from the Faculdade de Filosofia da Universidade de São Paulo (Faculty of Philosophy of the University of São Paulo, USP-SP, Br. 1943–1948). She had attended specialization courses in psychology at the University of Chile (Chile, 1948 and 1950), at the Sorbonne (Paris, 1951), and at American universities (Harvard, Ohio, and Columbia, 1960). She took part in the 1st Congress on Psychiatry and Criminology in Paris (1950), attended by Ana Freud and Melanie Klein (Pérez-Ramos, 2006). She graduated in Psychology from Columbia University (USA, 1956). She earned her doctorate in Clinical Psychology at the Pontifícia Universidade Católica de São Paulo (Pontifical Catholic University of Saint Paul, PUC-SP, 1956–1960) with a thesis (Queiroz, 1960) that still surprises for its depth, clinical, and theoretical-methodological rigor. She did post-doctoral studies at Columbia University (USA, 1968) and medical residency at the Student Services Center of Northern Illinois University (USA, 1978).

She has contributed as a professor in Brazilian universities [Pontifícia Universidade Católica de São Paulo – PUCSP (Pontifical Catholic University of Saint Paul); Universidade Estadual Paulista-UNESP, Assis campus (Paulista State University); and Universidade de São Paulo – USP (University of Saint Paul)] and in special missions in Brazil; abroad, as Visiting Professor at the Central University of Venezuela (UCV, Venezuela, in 1963, 1973, and 1979–1986) and at La Laguna University (Spain, 1978); in research-intervention with support of scientific organizations (FAPESP, CAPES, and CNPq in Brazil) and publications that exceed one hundred.

Pioneer in pediatric hospital psychology. Expert in national and international projects in psychoeducation. She has advised governments in Brazil (Paraná, 1963–1983) and abroad on the creation of integral care centers for people with disabilities. She was the first Brazilian psychologist to work in the ONU (UNO, 1970; Leal, 2006),

acting in the following projects: “SPA-70” (UNO: Canary Islands, Spain, and Western Sahara, Africa); Multinational Education (OUS: Brazil, Paraguay, and Uruguay); and Family Project (UNICEF: Venezuela). Co-founder of the Academia Paulista de Psicologia (APP – The Psychology Academy of Saint Paul, Saint Paul, 1979), holder of Chair (number 30) Geraldo Horácio Paula de Souza (1889–1951), currently in the honorific position of Past President. Aidyl pushed forward the scientific journal of this APP, the *Boletim Academia Paulista de Psicologia (Bulletin of the Psychology Academy of Saint Paul)*, the second oldest in psychology in Brazil; she was its first Editor and composes its editorial board.

She married (1964) the psychologist, academic, and professor Juan Pérez-Ramos, PhD (1918–2006), who was also her scientific partner.

Aidyl was one of the pioneers in the use of the transactional system of psychological assessment-intervention integrating these phases. She supervised dozens of theses, especially in the Clinical Psychology post-graduate program at the Instituto de Psicologia da Universidade de São Paulo (Institute of Psychology of the University of Saint Paul, IP-USP, from 1979). She supervised the first doctorate in cotutela (IP-USP and Sorbonne, Paris V, 1993–1997) in clinical psychology (Peçanha, 2015), in partnership with another pioneer in psychosomatics, Rosine Debray (?–2012).

She has won honors for her services as a plaque from the children’s centers in the oil fields of Venezuela and a vase inlaid with arabesques made by the Berber tribes assisted by Aidyl in Africa (1970s). Another honor was what Aidyl calls of *jameo del agua* (“jameo” of water, Lanzarote, Spain, 1973), a representation of a blind crab from this volcanic lake, for his work on behalf of people with disabilities.

A pioneer in interdisciplinary work with medicine, Aidyl contributed to the scientific foundations of psychosomatics in Brazil (Queiroz & Strauss, 1958), highlighting the role of colleagues such as Dr. Pedro de Alcântara Machado (1901–1979), then Director of the Clínica Pediátrica da Faculdade de Medicina – USP, Hospital das Clínicas, SP. (Pediatric Clinic of the

School of Medicine, USP, Hospital of the Clinics, SP), patron of Chair number 19 of the Academia Paulista de Psicologia (*Psychology Academy of Saint Paul*). He launched the bases for pediatric hospital psychology (1956–1961), including the family context. The “sociobiopsychological” vision (Pérez-Ramos, 2006, p. 38) and the integrated evaluation-intervention that already guided Aidyl’s work were decisive for the extension of her clinic to other patients of that Hospital. She participated in the creation of the first specialization courses in psychology in Brazil at the Faculdade São Bento, SP, 1959 (Saint Benedict Faculty, SP, 1959), being one of the founders of the Psychological Clinic (PUC-SP, 1959) along with Ana Maria Poppovic, Enzo Azzi, and Aniela Ginsberg. This Psychological Clinic of PUC-SP (1959), innovative for its openness to the community, also resulted from the efforts of those professors. Aidyl received the “Founders’ Trophy” at the 40th anniversary of that Clinic (1999).

Member of several associations: Associação de Psicologia de São Paulo, former Sociedade de Psicologia de São Paulo (the Association of Psychology of Saint Paul, former Saint Paul Psychology Society), American Psychological Association, Interamerican Society of Psychology, and lifetime membership in the New York Academy of Sciences (1994). Her name appears in *The world who’s who of women* (Kay, 1988). She stimulated the creation of the first associations in special education in Latin America (“Associação de Pais e Amigos dos Excepcionais,” “Association of Parents and Friends of the Exceptional” – APAEs in São Paulo, Paraná, and Venezuela) and implemented the first program of integral attention to the mentally deficient in Spain, bequeathing to this country model centers in psychopedagogy.

In the Associação Nacional de Pesquisa e Pós-graduação em Psicologia (ANPEPP - National Association for Research and Post-graduation in Psychology), she participated in the first Working Group on “Toy, Learning and Health.” In the aspect of preservation of the memory of psychology in Brazil (Pérez-Ramos, 2012), Aidyl, in partnership with the coordination of the Virtual Health Library – Psychology Brazil (BVS-Psi

Brasil), was one of the members of the module History of Psychology (Pérez-Ramos, 2006).

She contributed with case studies and projective techniques (Queiroz, 1955) throughout her career and developed scales on child development. She participated in the first Brazilian version (Peçanha, 2006) of the Inventory of coping with stress at work (Moos & Schaefer, 1993) whose general form was translated and validated worldwide. He has produced extensive material for the stimulation of child development, including blind children.

Aidyl, nearly a century old, remains productive and, in her words, believes in professional practice, grounded in ethics, and solid training. “Always have as a priority the welfare of the human being in the most varied contexts” (Pérez-Ramos, 2006, p. 42).

Ulysses Pernambuco de Melo Sobrinho graduated in 1912 at the Faculdade de Medicina do Rio de Janeiro (Faculty of Medicine of Rio de Janeiro), with the final work *Some Nervous Mani-festations of Herêdo-Syphilis*. Between 1913 and 1917, he worked as a general practitioner in the counties of Lapa, in Paraná, and then in Vitória de Santo Antão, in Pernambuco. In 1917, he returned to Recife, starting to work at the Hospital for nervous and mental diseases, known as Hospital de Alienados da Tamarineira (Tamarineira's Asylum of Alienated) current Psychiatric Hospital Ulysses Pernambuco. The following year, he took first place in the contest for professor of psychology at the Escola Normal Oficial do Estado de

Pernambuco (Official Normal School of the State of Pernambuco), with the work *Classification of Abnormal Children*. However, it was passed over, and the second place was indicated for the function. In the same year, he obtained the chair of psychology at Ginásio Pernambucano (a Pernambuco's School). As we can see, since the beginning of his career, Ulysses Pernambucano showed interest in psychological issues (Rosas, 2001) and in the works of three areas: psychiatry, education, and psychology.

In 1919, an extremely striking fact touched his personal life and medical career: a charity hospital admitted three orphans at the Tamarineira's Asylum of Alienated (Hospital for Nervous and Mental Diseases). The young women had disagreed with the methods used by the nuns, and hospitalization would be a form of punishment. Ulysses Pernambucano opposed the admission and denounced the fact in the city's newspapers. This event had great repercussion and was fundamental for him, in 1923, to assume the direction of the Official Normal School and, in 1924, the direction of the Hospital for Nervous and Mental Diseases. In both institutions, he promoted important reforms: in education, based on the principles of Escola Nova (New School), and in psychiatry, based on the anthropology of Gilberto Freyre (1900–1987) and on the conceptions of Amaury de Medeiros (1893–1928) for public health. Thus, he moved away from purely biological proposals and cast the distinctive mark of his work: establishing connections between individual problems and the collectivity. In this way, he positioned as activist for the defense of public and free education, regardless of gender, as well as establishing the first pole of social psychiatry in the country (Cerqueira, 1984).

In the field of education, in 1925, he founded the first Psychology Institute in Brazil, with support from the state government of Pernambuco. The initial objective was to measure the population's intellectual capability. For this purpose, for 10 years, with the collaboration of Anita Paes Barreto (1934), he revised the Binet-Simon metric scale, validating it then for the local reality. The Institute of Psychology was annexed in 1929 to the Secretaria de Justiça e Instrução (Secretariat

of Justice and Education) and was renamed the Instituto de Seleção e Orientação Profissional (Institute for Selection and Professional Guidance). This was exactly the year of the arrival of Helena Antipoff in Brazil, invited by Francisco Campos (1891–1968), then Secretary of the Interior of the state government of Antônio Carlos Ribeiro de Andrada (1870–1946), to effect the educational reform in Minas Gerais. The exchange between Ulysses Pernambucano and Helena Antipoff began, as the Russian researcher was interested in standardizing intelligence tests for the Brazilian context. Taking his educational ideas forward, Ulysses Pernambucano directed, between 1926 and 1928, the (Pernambuco Gymnasium) (Medeiros, 2001).

In the field of psychiatry, he returned to direct the Tamarineira's Asylum of Alienated in 1931 and, in 1933, founded the Liga de Higiene Mental de Pernambuco (LHMP – League of Mental Hygiene of Pernambuco), with independent status of the Liga Brasileira de Higiene Mental (LBHM – Brazilian League of Mental Hygiene). The latter's activities begun in 1923, founded in Rio de Janeiro by Gustavo Riedel, with the intention of transforming psychiatric care. However, in 1926, changes were made to the institution's statute, aimed to preventive, educational, and eugenicist work. The members of LBHM considered that the country's small development rate had its reasons in two aspects: the unfavorable climate and the mixture of races. The focus then became the control of social factors for improving the breed. So, racism started to guide the so-called scientific assumptions. And in 1931, Renato Kehl (1889–1974) founded the Comissão Central Brasileira de Eugenia (Central Brazilian Commission of Eugenia), proposing, for example, the sterilization of people undergoing psychiatric treatment as a form of prevention. These conceptions interfered directly in the LBHM which, in 1934, started to openly defend racist propositions. In the first year of activities, the LHMP followed the guidelines of the LBHM in relation to actions against alcoholism, but it was not in line with the eugenicist theses. The following year, in 1934, the LHMP became autonomous.

Diverging from the eugenic assumptions, through the LHMP, Ulysses Pernambucano started calling the population for mental health actions, jointly with the medical crew. Ulysses Pernambucano's social psychiatry is characterized as a participative mode of health actions and also as a political position. Following Helena Antipoff's proposals, LHMP gathered funds for the creation of the Escola para Excepcionais (School for the Exceptional). And, in collaboration with Gilberto Freyre, he implemented studies in candomblé houses. Thus, he removed the African religion from the persecution of the police. In 1934, they both organized the 1st Afro-Brazilian Congress, positively qualifying the black race (Freyre, 1941).

Also in 1934, the director of the National Health Department, Adauto Botelho (1895–1963), designed the Mental Hygiene Service project, based on the reforms promoted by Ulysses Pernambucano over the years. In 1935, Ulysses Pernambucano developed, in partnership with Luiz Cerqueira (1911–1984), a socioeconomic investigation to ascertain the living conditions of sugar mill workers. In addition to this research, which presented data that showed the subordination of the working class to the interests of the oligarchies, he refused to give information about a hospital inpatient, suspected of practices considered subversive. As consequence, Ulysses Pernambucano was arrested for 40 days and then forced to retired.

In the following year, he founded a private institution focused on mental health care: Sanatório Recife (Recife Sanatorium). In 1938, he founded the Sociedade de Neurologia, Psiquiatria e Higiene Mental do Nordeste (Society of Neurology, Psychiatry and Mental Hygiene of the Northeast) later called of the Brazil and began the publication of its scientific dissemination body, *Revista Neurobiologia* (Journal of Neurobiology). Ulysses Pernambucano participated in the first three congresses organized by this society: in 1938, in João Pessoa, Paraíba; in 1940, in Aracaju, Sergipe; and, in 1943, in Natal, Rio Grande do Norte. That same year, Ulysses Pernambucano passed away, leaving as a legacy

the conceptions of social psychiatry that are imprinted in some aspects of the Brazilian Psychiatric Reform, carried forward from 1978 (Melo, 2004).

Argentina · Professional and union organizations · Federación de Psicólogos de la República Argentina (FePRA · Federation of Psychologists of the Argentine Republic) · Asociación de Psicólogos de Buenos Aires (APBA · Association of Psychologists of Buenos Aires)

Beatriz Perosio was born in the city of Buenos Aires on August 18, 1947. Her home was typical of the middle class, and her first school education took place in religious institutions. Her family consisted of her two parents, both deceased, and her younger sister Graciela Perosio, herself a well-known literary critic and poet with several publications.

She studied psychology at the Facultad de Psicología (Faculty of Psychology) at the Universidad del Salvador (University of Salvador, USAL) from which she graduated in 1973.

Her professional career was oriented in three areas: as an institutional psychologist in different schools; as a market researcher in groups in the company Lautrec (Buenos Aires, Argentina); and as a clinical psychologist, psychoanalytically oriented, in the city of Buenos Aires. It is appropriate to consider that in Argentina, psychotherapy, and

especially the clinical practice of psychoanalysis, was the most common form of professional work for the vast majority of Argentine psychologists. It was so in those years (Ardila, 1979; Litvinoff & de Gómel, 1973), and it is still so today (Alonso et al., 2018).

Although they may seem dissimilar tasks, the common denominator was her interest in listening and understanding human subjects, in different areas and moments of everyday life. Therefore, as well as being a dedicated professional, she was also an outstanding political, labor, professional, and cultural activist and leader.

Her professional, union, and cultural development were parallel, and her political practice was developed in the field of professional and union associations of mental health and education.

It is not possible to understand her trajectory outside the social and political framework experienced in Latin America and throughout the world in the 1970s (Ardila, 1979; Biagini, 2000; Hobsbawm, 1995). Many young people, coming from the middle sectors, turned to political activism. Beatriz Perosio was no exception, and early on she became linked to the revolutionary left, even though she did not abandon her religious beliefs, which she maintained until the last moment. She was both Catholic and communist, and the common point was her interest in the people and the creation of more humane and equitable conditions for everyone.

In relation to her professional and institutional practice in the educational field, she basically worked in the city of Ascensión (Province of Buenos Aires, approximately three hours away from the city of Buenos Aires), in a school run by French nuns who proposed a liberating education (Garaventa, 2020; Sevilla, 2005). Recommended by a colleague who was already working there, she was then in charge of listening to and guiding the young students, not so much in their personal problems but in issues related to their schooling and their professional orientation. A small fruit of that task was that some of her students decided to study psychology.

The community of Ascensión has always recognized her and on March 23, 2018, a street was inaugurated with her name. That day was

chosen because on March 24 Argentina celebrates the day of memory, in remembrance of the terrible crimes committed by the last civil-military dictatorship, which began on March 24, 1976, and lasted until December 1983.

Both in her work as a market researcher in groups and in her psychotherapeutic practice, she stood out for her interest in listening to and understanding others, as well as for her healthy curiosity to know what the other person was thinking and wanting in whatever environment. Her activism in professional and union organizations was brief but of tremendous impact. She began in the Asociación de Psicólogos de Buenos Aires (Association of Psychologists of Buenos Aires, APBA), where she held various positions, all with determined commitment and deep gratitude from her peers and colleagues. Between 1975 and 1977, she was Secretaria de Asuntos Profesionales (Secretary of Professional Affairs), and in the last year, by democratic majority election, she was elected President of the organization.

As Secretary of Professional Affairs, Beatriz Perosio was responsible for APBA's union activities, and for this reason she visited most of the hospitals in the city of Buenos Aires where psychologists worked. In all of them, she showed interest and pride in the profession of psychology and in the role that psychologists should and could play. In the same way, she always emphasized the defense of professional rights, at a time when legislation was in force that still subordinated psychologists to mere "auxiliaries" of psychiatry and when there were numerous limitations to the full professional practice of psychology in almost all the country (Avelluto, 1983). She also emphasized the institutional growth from the incorporation of recently graduated psychologists. Some quantitative data are eloquent in this respect. In 1975, the APBA had 434 new members, the following year 491, and between March and the end of May 1977 alone, 170 new colleagues joined (Perosio, 1977a).

Perosio assumed the position of President of the APBA under the harsh conditions imposed by the dictatorship. In spite of them, she remained firm in her guidelines, trying to take advantage

of every space to continue defending the interests of psychologists, always within the framework of community welfare. This was translated into the axes that were the backbone of its union and professional activity: respect and hierarchy of the psychologist's profession, defense of public health, and defense of the needs and interests of the popular majorities.

In 1974, the APBA, together with other associations and boards of psychologists from all over the country, had organized the Confederación de Psicólogos de la República Argentina (Confederation of Psychologists of the Argentine Republic, CoPRA). However, by the time Perosio assumed the presidency of the institution, CoPRA had almost ceased to exist. One of the first tasks taken on by Beatriz Perosio was the "national reorganization of psychologists," with the aim of raising the legal status of the profession in different parts of the country and generating teaching and research teams that would travel from the more developed centers to the more peripheral ones (Perosio, 1977b).

Months later, in December 1977, this reorganization was achieved, the Federación de Psicólogos de la República Argentina (Federación de Psicólogos de la Republica Argentina, FePRA) was organized, and Perosio was elected as its first President. Also as the highest representative of the national entity, and despite the short time of her mandate for the reasons previously mentioned, she gave a great impulse to it, which became recognized by colleagues as the representative entity of psychologists throughout the country, a recognition that lasts until today.

Perosio was unable to produce a great academic work, first because of the needs of practical life and later because of her kidnapping, issues that made it impossible to verify the scope that she would surely have achieved in that field. One of her research works questions the separation of mental health from public health in general and highlights her update on the problems of public health in the country (Perosio, 1974).

On August 8, 1978, she was kidnapped at her workplace. In illegal captivity, on August 18, she

turned 31 years old. On August 9, the Secretary of Professional Affairs of the Association of Psychologists of Buenos Aires, Alfredo Smith, one of the authors of this biography, and his wife Celia Kriado were also kidnapped. From several testimonies, among them that of Alfredo Smith, in those days it is known that she was taken to the illegal detention center called “El Vesubio,” in the Province of Buenos Aires where she was repeatedly tortured (di Biase, 2004). Up to date, she is still missing.

In her tribute, August 8, the day of her kidnapping, is commemorated in Argentina as the “Day of the psychologist detained and disappeared by state terrorism” (Smith & Codina, 2017). The institutions to which she belonged, the APBA, the FePRA, and human rights organizations, continue to demand truth and justice for her memory.

Pessotti, Isaias

Born in São Bernardo do Campo, (São Paulo), Brazil, on September 28, 1933

Vera Regina Lignelli Otero¹ and Ana Maria Le Sénéchal Machado²

¹Clínica de Psicologia ORTEC, Brazil (ORTEC Psychology Clinic, Brazil), Ribeirão Preto, Brazil

²Universidade Federal de Minas Gerais (UFMG), Brazil, Belo Horizonte, Brazil

Keywords

Brazil · Experimental analysis of behavior · History of psychology and science · Learning in bees

Isaias Pessotti studied in a public elementary school in São Bernardo do Campo. Then, in 1944, he went on as an internal student at the Seminário Seráfico São Fidelis (St. Phidelis Seraphic Seminar), in the city of Piracicaba that is located in the countryside of the state of São Paulo, Brazil. There, he has acquired solid and fundamental bases of the Greek and Latin languages, taught by the Franciscan priests who, at

the same time, stimulated and prepared him for the constant search for expertise in different areas of knowledge. He graduated in Philosophy in 1955 at Faculdade de Filosofia, Ciências e Letras da Universidade São Paulo – USP (School of Philosophy, Sciences and Letters of the University of São Paulo – USP), which was originally known as *Maria Antônia* since it was located in a street with this name. From 1956 to 1961, he worked as an assistant professor at this same university and as a researcher at the Centro de Pesquisas Regionais de Educação – CPRE (Regional Center of Education Research).

In 1959, he got the title of Specialist in Education by the Universidad de Chile (University of Chile) in a course offered by the Organização das Nações Unidas para a Educação, Ciência e Cultura – UNESCO (United Nations Educational, Scientific and Cultural Organization). In 1961, the dean of USP (University of São Paulo), wishing to create a “scientific Psychology” to be taught by the university, invited Professor Fred Keller (1899–1996), a North American psychologist, to come to Brazil. Professor Keller then gave the first Experimental Psychology course in Brazil, and this was Isaías’ first contact with the Experimental Analysis of Behavior.

In the early 1960s, he was invited by Professor Carolina Bori from USP (University of São Paulo) to be a professor at the Faculdade de Filosofia, Ciências e Letras de Rio Claro (School of Philosophy, Sciences and Letters of Rio Claro) in the countryside of the state of São Paulo, where he has worked from 1961 to 1964. In this last year, he got a 6-month scholarship at the Istituto Agostini Gemelli di Milano (Agostini Gemelli Institute of Milan) in Italy. In early 1965, he was hired by Universidade de Brasília – UNB (University of Brasília), where he taught until October in that same year, the month in which the dean dismissed 200 professors from different departments due to the military dictatorship that was taking place in Brazil then (and which lasted until 1985). In the years to come, 1966/1967, without having any employee connection whatsoever with any Brazilian institutions, he went to Italy where he has worked as a researcher and visiting professor in

Animal Psychology and Experimental Psychology at Scuola di Specializzazione in Psicologia (School of Specialization in Psychology) in the Istituto di Psicologia della Facoltà Medica, Università di Milano (Psychology Institute of the Medical School, University of Milan). Back to Brazil at the end of the year 1967, he got approved in a public contest and was hired as a professor at USP (Universidade de São Paulo). In the years of 1969/1970, USP (University of São Paulo) granted him a sabbatical period which allowed Isaías to return to Italy to resume his researches in Milan and also, as a visiting professor, to teach General Psychology at Istituto di Psicologia Sperimentale dell’ Università di Padova Italia (Institute of Experimental Psychology, University of Padova Italy) in 1972/1973.

In 1969, he got his PhD in Sciences with distinction from USP (University of São Paulo), having Carolina Bori as his advisor. His academic career was centered in the Departamento de Neurologia, Psiquiatria e Psicologia Médica da Faculdade de Medicina de Ribeirão Preto – USP (Department of Neurology, Psychiatry and Medical Psychology from the Medical School of Ribeirão Preto – USP), where he joined in 1967. He became a faculty member in 1977, an Associate Professor in 1981, and a Full Professor in 1984, always under assessments of qualification by examination boards.

Parallel to his research and teaching career at USP (University of São Paulo), and also conquered through assessments of qualification, Isaías got the following titles: Full Professor at the Centro de Educação e Ciências Humanas at Universidade Federal de São Carlos – UFSCar (Center for Education and Human Sciences of the Federal University of São Carlos) in 1982; Full Professor of Educational Psychology at Faculdade de Filosofia, Ciências e Letras de Ribeirão Preto, USP (School of Philosophy, Sciences and Letters of the University of São Paulo, campi Ribeirão Preto) in 1983; and Full Professor of the Chair of Scientific Methodology in Psychology at Università degli Studi di Urbino – ITC (Urbino Studies University, Italy) in 1997. Note: this last title was obtained by “notorious

knowledge” (*chiara fame* in Italian), recognized not only by the collegiate deliberative body of the University, but also by the Consiglio Universitario Nazionale CUN (National University Council) and by Ministero dell’ Università and della Ricerca Scientifica e Tecnologica (Italian Ministry of University and Scientific Research and Technology) in Italy. In 2004, he also got a Master degree in Philosophy and Methodology of Sciences at UFSCar (Federal University of São Carlos).

In the years 1972/1973, Isaias has taught classes as an inviting professor at Scuola di Specializzazione in Psicoterapia e Cognitiva (Specialization School in Behavioral and Cognitive Psychotherapy) connected to Psychology and Medicine courses at the following universities in Italy: Università de Urbino ITC (University of Urbino), Università degli Studi di Padova (University of Studies of Padova), and Università degli Studi di Palermo (University of Studies of Palermo).

He was the vice president in 1976 and the president in 1977 of Sociedade de Psicologia de Ribeirão Preto – SPRP (Psychological Society of Ribeirão Preto), currently Associação Brasileira de Psicologia – SBP (Brazilian Psychological Association). During a long time in his presidential terms, he has coordinated the History of Psychology Division.

Professor Isaias has also participated in the creation of Undergraduate Specialization and Graduation Courses in Brazil, i.e., the Master Course on Special Education for the Mentally Disabled of the Universidade Federal de São Carlos UFSCar (University of São Carlos) in 1979. In 1983, he has also offered advisory work to the Secretaria de Educação do Estado de São Paulo (São Paulo State Department of Education) in the creation and establishment of educational policies for the care of people with special needs in the State.

Isaias was an advisor to the Fundação de Amparo à Pesquisa do Estado de São Paulo – FAPESP (State of São Paulo Research Foundation) from 1982 to 1987. He was also an advisor to different scientific magazines and publishers throughout his entire academic career, citing

only as an example EDUSP (publisher of the University of São Paulo) and *Ciência e Cultura* (Science and Culture Journal) of the Sociedade Brasileira para o Progresso da Ciência – SBPC (Brazilian Society for the Advancement of Science).

Professor Isaias has more than 70 papers published in national and international scientific journals. Due to his pioneering research on learning in bees, he was on the cover of the Italian version of the Scientific American Magazine, *Le Scienze* (The Sciences), version number 33, May 1971. This work led him to his doctoral thesis: *Conditional Discrimination in Melipona Semi-nigra Merrillae*. Until then, researches about operating behavior were basically performed with rats and mice confined in experimental boxes. In this context, only some selected variables were manipulated by the researcher. By using bees as the subject of the studies, Isaias brought up a new methodological vision and has initiated a line of research introducing the use of experimental subjects in open environments without having to confine them into cages or experimental boxes, using sugar as reinforcement. In the new condition of the research, the “experimental situation” had to compete with the diversity of flowers and fruits and its available sugar in nature. His research asked which variable would control the processes of learning, reinforcement, extinction, or punishment of an answer. It was necessary to be able to bring each bee, which used to live freely in nature, inside the laboratory where the experimental equipment was placed. For the researcher to have the freedom to choose where to go, either to the fields or to the experimental room, made all the difference in the obtained results since they were more “pure” and closer to the occurrence condition of the human behavior. Once the procedures of training and maintenance of bees in open experimental situation were patterned, various studies were accomplished by young researches under the supervision of Professor Isaias. The experiments of color discrimination with different species of bees allowed classifying the bees in the evolution scale.

Another great emphasis of Professor Pessotti has been the study of historical facts in general,

especially those related to Psychology. In a 1976 book, he talks about the achievements and theories of physiologists who had for centuries studied the nervous system, reflex behavior, among other aspects, and were the precursors of what later came to be known as operant conditioning. Also mental disability was studied and historically discussed in a 1984 book where he reviews the concepts and the different ways in which its carriers were treated. In the 1990s, Isaias has published books where he analyzes how madness was seen in different historical moments, presenting the evolution of the concept and the history of madness since ancient Greece until the nineteenth century, mentioning the conflicts of medical practices when dealing with madness, especially in the eighteenth century.

In 1993, Professor Pessotti received the Prêmio Jabuti de Literatura (Jabuti Literature Award), one of the most important literature awards in Brazil, with his first novel: *Those Damned Dogs of Arquelau*. It is a science fiction book, immersed with investigations of historical data, filled with the discovery of a text about Euripides, and sprinkled with the seductions of a romance. This was followed by the books *The Mediavilla Manuscript* and *The Moon of Truth*. In the year of 2020, he published the book *The Concept of Schizophrenia*.

Petrželová de Serrano, Jana

Born *Vracov, Czechoslovakia (Czech Republic), October 6, 1943*

Joel Zapata Salazar

Autonomous University of Coahuila, Saltillo, Coahuila, Mexico

Keywords

Czechoslovakia · Mexico · Clinical psychology · Psychopathology · Child and adolescent psychology · Deficit of attention and hyperactivity disorder

Petrželová is originally from the Czech Republic. Permanent resident in the city of Saltillo, Coahuila, Mexico, since 1983, where she constantly practiced her professional activity. In her native country, she did her higher studies; first, in the area of Economics between 1966 and 1970, developing in the field until 1975. This year she decided to study a degree in Psychology at the Univerzita Palackého v Olomouci (Palacký Olomuc University), the oldest in Moravia, province of the 1975s Czechoslovakia. At the same

time, she developed her studies of German and Russian languages.

During her time as a university student, she became interested in the care of children and adolescents, working as a psychology assistant in the Regional Office of Children and Adolescents, a government entity oriented to the care of the mentioned before population. Upon graduation, she joined the same institution as a professional psychologist. In it, she had a privileged space for the study and approach of childhood emotional disorders and particularly, deficit of attention and hyperactivity disorder (ADHD), which at that time was called minimal brain dysfunction, disorder that would occupy an important part of her work as a psychologist. The approach model that was practiced with child patients was comprehensive, covering the following aspects: medical, emotional, cognitive, behavioral, family, social, clinical hypnosis, and interaction with the environment and nature.

During this period, she began her studies in clinical (classical) hypnosis, forming part of the Czech society of hypnosis, subsequently obtaining the state exam. Likewise, she also began with the professional training workshops in Gestalt Psychotherapy under the tutelage of the Dr. Ivo Plaňava (1934-), disciple of the American psychotherapist Virginia Satir (1916–1988).

In 1981, she started her doctorate in psychology with orientation in Clinical Psychology, in her “Alma Mater.” During this period, she did her clinical practices at the Kroměříž Psychiatric Hospital, in the departments of emotional disorders in childhood, neurosis, schizophrenia, and addictions.

In 1983, she married a Mexican citizen, reason why she settled in Mexico permanently. This change motivated her to learn the country’s language. In a different professional environment, in 1985, she started her life as an academic, an activity that she continues to cultivate to this day. In the 1980s, psychology as a profession and as a discipline were incipient in the state of Coahuila. The psychology program was taught primarily in two institutions, one private, Universidad Autónoma del Noreste (Autonomous University of the Northeast) (UANE) and other, public, the

Universidad Autónoma de Coahuila (Autonomous University of Coahuila) (UAdeC). UAdeC had trained psychologists since 1965; however, the development of the discipline and the profession in particular spaces, such as: clinical intervention, research and development, innovation; specific areas of application, such as educational and social, in terms of development, were far from the reality of the universities in the center of the country and foreign universities.

Furthermore, Petrželová joined first as a professor at the UANE Coordination of Psychology (1985) and then as a full-time professor at the then Escuela de Psicología (School of Psychology) of the UAdeC (1996), positioning herself as the only professor with a doctorate in the area of Social Sciences in the mentioned before school. Her experience and work promoted her as Coordinator of the Department of Child Psychology, where she was able to consistently train psychologists, in accordance with current techniques that were applied in Europe, both for the attention of emotional, behavioral, and learning problems.

In this way, she began the first works in the state in the field of research on the subject of ADHD, presenting her results in national and Latin America congresses. This served to link her research activity with the training of basic education teachers in the state, through a collaboration agreement with the Secretaría de Educación Pública (Ministry of Public Education) (SEP), resulting in an informative manual for detection, channeling, and care in educational contexts.

As a student, she was a pioneer in the publication of the results and advances of her research on issues related to child psychology and mental health, both in various national and foreign journals, for which the University entrusted her with the task of forming the first Cuerpo Académico de Psicología (Academic Group of Psychology) in the state of Coahuila, Mexico (1997), which still works until today with her as the current leader, changing its status to full-time professor-researcher. This was the consequence of becoming the first full-time teacher to join the then Programa de Mejoramiento del Profesorado (Teacher Improvement Program) (PROMEP), in the Perfil Preferente (Preferred Profile) category

(1996), today the Programa para el Desarrollo Profesional Docente (Teacher Professional Development Program) (PRODEP), same which has been renewed to date.

It is worth mentioning that Petrželová did not abandon her interests in clinical hypnosis, continuing between 2016 and 2017, her training in Strategic Ericksonian Hypnotherapy at the Facultad de Estudios Superiores Iztacala (Iztacala Faculty of Higher Education) (FES) of the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), in coordination with the Centro de Estudios Superiores de Hipnosis Clínica, S.C. (Center for Higher Studies of Clinical Hypnosis C.S.) and the Milton H. Erickson Institute in Mexico City. To this, a robust list of continuing training courses and workshops were added, highlighting those of supervision of cases of the therapeutic process, training in cognitive-behavioral psychotherapy, formulation of clinical cases and various courses in the area of teaching and tutoring. Likewise, she has designed and taught a variety of extracurricular courses and workshops to various institutions with related topics.

Within the academic management processes, she has distinguished herself by being part of the Núcleo Académico Básico (Basic Academic Core) of the Master's Degree in Clinical Psychology with cognitive-behavioral orientation, recognized for its quality by the Programa Nacional de Posgrados de Calidad (National Quality Postgraduate Program) (PNPC) of the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACyT) and the doctorate program in Health Psychology, both unique for their orientation and nature in the northeast of the country. Likewise, she has served as President of the Academy of Psychology, member of the Curricular Reform and Curricular Monitoring and Evaluation commissions of the degree program in Psychology, member of the Accreditation Commission of the degree program in Psychology by the Accreditation Committee (CA) of the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP), evaluator of the CA and, on various occasions, member of the

Consejo Directivo de la Facultad de Psicología (Board of Directors of the Faculty of Psychology) and of the Consejo Universitario (University Council) of the UAdeC; academic coordinator of the XI Cátedra de Investigación en Psicología (Chair of Research in Psychology) “Dra. Julieta Heres Pulido” of the Consorcio de Universidades Mexicanas (Consortium of Mexican Universities) (CUMex), member of the scientific committee of various national and international congresses, director and advisor of undergraduate and graduate thesis, among others.

Her research work has been based on three lines: ADHD, suicide, and sexual abuse of minors. All three, substantive problems in the state, to which it has responded through the generation of knowledge in indexed articles, book chapters, and books, among which the following stand out: “Sexual abuse of minors and the silence that surrounds them” (2013) where it explores the vulnerability of the patient in the family context and presents an evaluation and care proposal based on the child's age. In the study of suicide, Petrželová's contributions have been able to establish an emotional and personality profile of people with a suicide attempt in the state of Coahuila and of the committed suicide in the state of Nuevo León from the analysis of posthumous letters. Therefore, she has been invited to participate as a keynote speaker in various Latin American countries. Part of it has been disclosed in: “Why and how do you get to despair?” (2007) and “Analysis of posthumous letters” (2012).

Among the main awards and distinctions, she received: recognition as a professor with a preferential profile by the SEP (2006), the Medalla Miguel Ramos Arizpe (Miguel Ramos Arizpe Medal) for her distinguished academic work (UAdeC, 2006), the only professor of the Faculty of Psychology and the third at the university level to obtain the Medalla al Mérito Académico “Dr. Mariano Narváez González” (Medal of Academic Merit) through a competition and evaluation of merits by the University Council.

August Pi Sunyer was born into a family of physicians and politicians. His father, Jaume Pi Sunyer (1851–1897), professor of Pathology at the University of Barcelona, is considered one of the founders of Catalan scientific medicine. His friendship with Ramón Turró (1854–1926) passed on to his son and influenced the founding of the School of Physiology and the School of Psychology of Barcelona.

August Pi Sunyer obtained an M.D. in 1899, with the thesis *The anaerobic life*, where he posed important problems for experimental work. In 1904, he obtained the position of Professor of Physiology at the Facultad de Medicina [Faculty of Medicine] of Seville.

In 1908, he resigned his chair in Seville to stay in Barcelona, occupying the chair of General Physiology on an honorary basis. He explained to his students that the simplicity of an experiment reduced the chances of error. To carry out the practices, he commissioned the construction of the apparatus used in the laboratory to the artisans of Barcelona. These experiments were highly appreciated by the students since such teaching practically did not exist. One of these students was Emilio Mira y López (1896–1964).

In 1919, he published *La Unidad funcional* [The functional unit] and *Los mecanismos de correlación fisiológica* [The physiological correlation mechanisms], with a very original biological vision. It states that the nervous mechanism is basically associative in nature. Within the associative mechanisms, reflexes have a complex character. The brain influences the viscera and vice versa.

In 1920, the Instituto de Fisiología [Institute of Physiology] was officially created, thanks to the contribution of the *Societat Catalana de Biologia* (Catalanian Society of Biology), a subsidiary of the *Institut d'Estudis Catalans*. The Institute was officially inaugurated on April 11, 1921, as an annex to Pi Sunyer's chair of Physiology. Pi Sunyer's research was aimed at giving experimental support to the so-called doctrine of "trophic sensitivity" proposed by his teacher Turró. This doctrine is based on the ability of various organic tissues to perceive slight changes in the chemical constitution and in the physical situation of the body or blood. These perceptions would trigger nervous mechanisms, which directly or through chemical processes would allow the conservation or restoration of physiological normality.

Díaz Moreno (2016) points out that scientific psychology found in the Institute of Physiology a space to disseminate its research. Emilio Mira y López and George Dwelshauvers (1866–1937) published works in the journal *Treballs* of the *Societat Catalana de Biologia*.

For Pi Sunyer, the mind is given by adaptability. The opening to the outside is based on the processes of conservation of the individual. These processes are trophic in nature, since the individual needs to feed to maintain a stable structure.

This individuality has an inherited factor, the received chemical base, and another acquired one, the experiences. The metabolism is adjusted to the conditions of the environment and the needs of the organism.

Pi Sunyer's thesis is that adaptation occurs first, then intelligence, and finally consciousness. The psychic is biological. There is no separation between physiology and psychology. The reflexes, habits, and memory make the psychic individuality be constituted. Our life shapes our psyche.

Trophic experience occupies a basic position. The organism, when it begins to live, begins to require food. The first perceptions are trophic and the others originate from them. The unconscious is important, but it rejects the identification of the psychic with consciousness. Subjective processes represent a new dimension, parallel to the physiological one, within adaptive activity. Pi Sunyer defends the continuity between physiology and psychology. The psychic is a dimension within the organic.

For Carpintero (2004), Pi Sunyer outlines the biological framework in which to place psychology studies conceived as an analysis of the most complex form of adaptation to the environment.

Pi Sunyer's research represents a great advance towards the construction of an objective psychology. Homeostasis, reflexes, trophism, and adaptation could be the last concepts of this psychological vision, from physiology, which was to be dominant in the School of Psychology of Barcelona.

The concept of *functional unit* developed by Pi Sunyer, derived from the theory on the trophic origin elaborated by Turró, acquires a fundamental significance and significance in the psychological thought of the School of Psychology of Barcelona. The acceptance of this theory by Mira y López culminates in the holistic conception of the person.

At the end of the Civil War in Spain, in 1939, Pi Sunyer went into exile with his family in Paris. In 1940, he received an invitation from the Venezuelan Education Minister Enrique Tejera Guevara (1889–1980) to work as a professor of physiology at the Faculty of Medicine of the Universidad

Central de Venezuela [UCV, Central University of Venezuela]. Since 1942, he was a professor of biology and biochemistry at the National Pedagogical Institute of Caracas. He founded (1940) and directed the Institute of Experimental Medicine, where he founded a school of physiology like the one in Barcelona.

Pi Sunyer's work in Venezuela, similar to the one he had previously developed in Barcelona, was extraordinary. In addition to the Faculty of Medicine, he taught at the Faculty of Dentistry [Facultad de Odontología] and the Facultad de Medicina Veterinaria [Faculty of Veterinary Medicine] of the UCV, as well as in the Biology and Chemistry Section of the Pedagogical Institute [Sección de Biología y Química, Instituto Pedagógico].

In November 1948, a coup d'état overthrew Venezuelan President Rómulo Gallegos (1884–1969). The UCV was closed and hundreds of professors and students were expelled. Then Pi Sunyer applied for the retirement (1951).

While in Venezuela, he published a dozen books, two novels, essays, and monographs, which earned him the Kalinga Prize, awarded by UNESCO in 1955, for his work presenting scientific theories and facts to the lay public. In 1963, he moved to Mexico, where he died in 1965.

Pichon-Rivière, Enrique José

Born *Geneva, Switzerland, 25 June 1907*

Died *Buenos Aires, Argentina, 21 July 1977*

Fernando Adrián Fabris

Primera Escuela Privada de Psicología Social fundada por E. Pichon-Rivière, Ciudad Autónoma de Buenos Aires, Argentina

Keywords

Argentina · Social psychology · Psychoanalysis · Psychiatry · Social psychiatry

Physician graduated from the Universidad de Buenos Aires (1936), psychiatrist, psychoanalyst, and social psychologist. Member of the Sociedad de Neurología y Psiquiatría de Buenos Aires (Society of Neurology and Psychiatry of Buenos Aires), the Sociedad Argentina de Psicología (Argentine Society of Psychology) and the Sociedad de Psicología Médica, Psicoanálisis y Medicina Psicosomática de la Asociación Médica Argentina (Society of Medical Psychology, Psychoanalysis, and Psychosomatic Medicine of the Argentine Medical Association), of which he was president in 1950. He also was the President of the

Asociación Psicoanalítica Argentina (APA), in 1946, 1950, and 1951, and President of the Segundo Congreso Argentino de Psiquiatría (1960).

He worked at the Asilo de Torres (Torres Asylum), first, and then at the Hospicio de la Mercedes (Hospice of the Mercedes), now known as Hospital Borda (Borda Hospital), from 1932 to 1947. At the hospice, he worked professionally in the admission offices and then in the Servicio de la Edad Juvenil [Adolescence Service], of which he was its founder. He was Professor in the chair of Psychiatry at the School of Medicine, directed by Gonzalo Bosch (1885–1967).

Together with Arnaldo Rascovsky (1907–1995), Ángel Garma (1904–1993), Celes Cárcamo (1903–1990), Guillermo Ferrari Hardoy (1907–2002), and Marie Langer (1910–1987), Pichon-Rivière promoted and founded the Asociación Psicoanalítica Argentina (APA) (Argentine Psychoanalytic Association), which began operating in 1942 and became official in 1949, with the recognition of the International Psychoanalytical Association (IPA).

After quitting his job at the psychiatric hospital, due to political pressures, he founded in 1948 the Instituto Privado de Asistencia, Docencia e Investigación (Private Institute of Assistance, Teaching, and Research), also called the Instituto de la Calle Copérnico (the Copérnico street Institute) or Instituto Pichon-Rivière (Pichon-Rivière Institute). He pioneered several fields of mental health, particularly in the treatment of psychosis, family groups, and the use of the Grupos Operativos (Operative Groups) as an instrument of therapy, learning, and social intervention, as well as, in psychosocial research in organizational and community fields.

After working within the framework of dynamic psychiatry (neo-Jacksonian orientation) and Freudian and Kleinian psychoanalysis, he created institutions that supported his discoveries (Pichon-Rivière, 1970; Fabris, 2007, 2012). Among them, Instituto Argentino de Estudios Sociales (Argentine Institute of Social Studies) (IADES) in 1955, the Primera Escuela Privada de Psiquiatría (First Private School of Psychiatry) (1959), the Primera Escuela Privada de Psiquiatría Social (First Private School of Social Psychiatry)

(1963), and the Primera Escuela Privada de Psicología Social (First Private School of Social Psychology) (1967). (Pichon-Rivière, 1969).

The formulation of his own psychological theory, differentiated from Freudian and Kleinian psychoanalysis, which he had cultivated with enthusiasm for several years, had great repercussions in Argentina and throughout Latin America (Pichon-Rivière, 1975, 1976, Fabris, 2014).

He published about 150 articles in journals such as the *Índex de Neurología y Psiquiatría* (Neurology and Psychiatry Index), the *Revista Argentina de Psicoanálisis* (Argentine Journal of Psychoanalysis), the *Acta Neuropsiquiátrica Argentina* (Argentine Neuropsychiatric Journal), *Acta Psiquiátrica y Psicológica de América Latina* (Psychiatric and Psychological Journal of Latin America), *Revista Argentina de Psicología* (Argentine Journal of Psychology), *Actualidad Psicológica* (Psychological Newsletter), and cultural magazines such as *Nervio* (Nerve), *Ciclo* (Cycle), *Mundo Deportivo* (Sports News), *Primera Plana* (Front Page), *Crisis* (Crisis), and *Los Libros* (The Books), among others.

His papers were grouped in 1970 and 1971, into two volumes, entitled *Del psicoanálisis a la psicología social I y II* (From psychoanalysis to social psychology I and II). Another book, *Psicología de la Vida cotidiana* (Psychology of Everyday Life), brought together newspaper articles written during the years 1966 and 1967, in collaboration with Ana Pampliega de Quiroga. His work was reorganized, starting in 1975, into books whose titles are: *El proceso grupal* (The group process), *La psiquiatría una nueva problemática* (Psychiatry, a new issue), *El proceso creador* (The creative process) – all of them, respectively, included in *Del psicoanálisis a la psicología social I, II y III* (From Psychoanalysis to Social Psychology, volume I, II and III) – *Psicología de la vida cotidiana* (Psychology of Everyday Life), *Teoría del Vínculo* (Attachment Theory), *Psicoanálisis del conde de Lautréamont* (Psychoanalysis of the Count of Lautréamont), and *Conversaciones con Pichon-Rivière sobre el arte y la locura* (Conversations with Pichon-Rivière on Art and Madness), by Vicente Zito-Lema.

Among his main disciples are José Bleger (1922–1972), David Liberman (1920–1983), Horacio Etchegoyen (1919–2016), Ricardo Avenburg (1933), Ángel Fiasché (falleció 2011), Fernando Ulloa (1925–2009), Armando Bauleo (1932–2008), Abelardo Gilabert, Alfredo Moffatt (1934), Hernán Kesselman (1933–2019) and Ana Pampliega de Quiroga (1937).

Pichon-Rivière's contribution to the psychology of Argentina and Latin America was the elaboration of an original theoretical framework, which he called Esquema Conceptual Referencial Operativo, ECRO (The Conceptual Referential Operative Scheme or CROS). At the core of this new theory, are concepts such as bound, emergent and spokesman, task and pre-task, single disease theory [Teoría de la enfermedad única], internal group, mobility of structures, convergent epistemology, and active adaptation to reality.

The theoretical framework formulated by this author, corresponds to a mode of clinical practice and psychosocial intervention, which is based on dialectical thinking (Quiroga, 1986) and is conveyed through a framing and technique that he called operative, this it is, focused on change, from the perspective of philosophy of the praxis.

Its most characteristic feature can be defined as the systematic analysis of the contradictions that intervene in the text and the context of the task, being its specific content, learning, cure, clarification of conflicts, as well as, capacity development, at the individual, bound, group, organizational, institutional, and community levels.

Understanding that the mental patient is a spokesman of his group and the social-historical order, meant a remarkable change in the understanding of the mental illness, similar and simultaneous to the generator by Gregory Bateson (1904–1980), with his theory of the double bond, in the United States. (Pichon-Rivière, 1967, 1978). For Pichon-Rivière, what the patient tries to repair is not only his inner world but also his family and social group, of which he is emerging and spokesman. The conflict that expresses him as suffering is referred to his own contradictions, but also to the contradictions of the social structure and the historical time in which he lives.

Arturo Piga Dacchena, son of Catalina Dacchena and José Piga, was born at the end of the nineteenth century in the city of Talca. He attended high school at the *Liceo de Aplicación* (Application High School) in the city of Santiago. He continued his education as a teacher of mathematics and physics and obtained the certificate

that guaranteed his competence to work as a teacher of philosophy and began to establish links with psychology (Núñez, 1979).

Throughout his working life, he worked in various educational institutions, such as the *Escuela Normal José Abelardo Núñez* (José Abelardo Núñez Normal School), the *Application High School*, and the *Instituto Pedagógico* (Pedagogical Institute). The curriculum that he began to forge propelled his career in ministerial management positions, among them the position of head of the *Sección Técnico-Pedagógico* (Technical-Pedagogical Section) of the *Dirección General de la Educación Media General* (Directorate of Secondary Education) belonging to the *Ministerio de Educación* (Ministry of Education).

Piga's foray into psychology is understood within the framework of adolescent psychology, in a period when young people were considered adults. Indeed, he framed adolescence or youth as the period beginning between the ages of 11 and 13 and ending between the ages of 18 and 21 (Piga, 1931). This age demarcation had an important effect at the time because, in much of Chile, people in this age range were considered capable of working. Thus, the adolescent stage was invisible for decades, an issue that Piga strove to amend through theory and practice, attending to the understanding of phenomena related to young people. He began to develop these contributions mainly in the academic world in the *curso de Psicología del adolescente* (Psychology of Adolescence course) at the *Pedagogical Institute*, which he taught based on theory from leading authors in the field, as well as the knowledge he acquired through experience and research. His works *Escuela para la adolescencia: Ensayo de psicopedagogía juvenil* [School for adolescence: Essay on youth psychopedagogy] (Piga, 1931), *Adolescencia y cultura* [Adolescence and culture] (Piga, 1946), *La juventud de un mundo en crisis* (The youth of a world in crisis) (Piga, 1966), and *¿Por qué se rebelan los jóvenes?* (Why do young people rebel?) (Piga, 1972) dealt with different topics related to adolescents, such as rebelliousness, discipline, and integral development. However, he paid more attention to the psychological

characteristics of adolescents to differentiate them from those in other stages of development (Piga, 1946). Through his writings, he provided important guidelines for teaching that considered the particular needs of young people, in addition to promoting the importance of psycho-pedagogy in the school environment. He saw the school space as a social institution in which people of different socioeconomic levels coexisted and displayed different abilities and needs. For this reason, he addressed issues such as problems or concerns about sexuality in adolescence, discipline, and the rebelliousness usually associated with this stage.

Piga, together with Abelardo Iturriaga (1907–1964), Egidio Orellana (1903–1962), and Carlos Nassar (1912–2010), elaborated the project for the creation of the *Curso Especial de Psicología* (Special Course in Psychology) at the *Pedagogical Institute*, which for the first time in Chile had the purpose of starting the training of psychologists who could respond to the different demands beginning to emerge in this area (Salas, 2014; Salas & Lizama, 2013). It should be noted that this team had traveled to Europe and the United States, where they trained with prominent psychologists, who were referents for the theories, courses, and implementations needed to promote the course starting in 1947 (Ligüeno et al., 2010).

From a totally different perspective and toward the end of his outstanding career, he ventured into parapsychology without neglecting the rigorosity he had maintained in his times of greater scientific-literary production. Thus, in *La Parapsicología, un enigma* [Parapsychology, an enigma] (Piga, 1976), a wide range of concepts, ideas, methodologies, and interrelations with other disciplines can be appreciated, showing his expertise to approach a diversity of fields with lucidity and depth.

It is interesting to note the perseverance and courage of Piga, who, despite having another profession, contributed to several areas in developmental psychology, particularly adolescent psychology in the school context. These contributions were not easy, considering that, according to historical records of the second half of the twentieth century, there was a constant debate between

teachers who were psychologists by profession and those who worked and taught psychology but were not trained in this scientific field (Ligüeno & Parra, 2007).

Piga was considered an intellectual who maintained an important dialogue with the scientific and academic community, presenting papers at important national, Latin American, and European congresses. For example, he was invited by Maria Montessori (1870–1952) through the *Ministerio de Relaciones Exteriores* (Ministry of Foreign Affairs) to attend an international course led by the aforementioned pedagogue in Italy in 1931. Without neglecting his academic ties, he also maintained a constant dialogue with the rest of society through his columns in newspapers and articles in mass magazines.

Son of Ismael Ignacio Piñero and Fortunata Olivera, he had several brothers. He married Hersilia Rubio y Otamendi and they had a daughter, María Hersilia Piñero y Rubio, who later married Jorge Otaño. He completed his high education studies at the Colegio Nacional Central (Central National High School) of Buenos Aires and was later admitted to the Facultad de Medicina de la Universidad de Buenos Aires (Faculty of Medicine at the University of Buenos Aires). He graduated in 1892 with a thesis on Clinical Observations, a practical study of semiology and diagnosis, which was directed by Ignacio Pirovano (1844–1895) and had as jurors the renowned professors Abel Ayerza (1861–1918), Gregorio Chaves (1855–1905), and Enrique del Arca (1854–1911) (Piñero,

1892). In 1893, he began collaborating with Gregorio Araoz Alfaro (1870–1955) in the Servicio de Pediatría del Hospital San Roque (Pediatric Department of the San Roque Hospital) until he was appointed in the same year at the Hospital Rawson (Rawson Hospital) (Araoz Alfaro, 1938). In 1896, he made a trip to Europe, visiting Paris, Italy, and Berlin, for which he studied German at night (Araoz Alfaro, 1938).

On his return, he specialized in teaching physiology. In 1897, he was appointed Chief of the Laboratory, the following year he won by public competition the position of Substitute Professor and in 1904 that of Full Professor at the Faculty of Medicine of the University of Buenos Aires (Mouchet, 1965).

At the same time, he began to specialize in psychology. In 1899, he organized the Laboratorio de Psicología Experimental (Laboratory of Experimental Psychology) at the Colegio Nacional Central (Central National High School) and in 1901 at the Facultad de Filosofía y Letras de la Universidad de Buenos Aires (Faculty of Philosophy and Humanities at the University of Buenos Aires) (Klappenbach, 1996). In March 1902, he was appointed professor at that institution, and in 1904, he was appointed Professor of General Experimental Psychology and Special Child Psychology at the Escuela Normal de Profesores de la Capital, with the task of also organizing there a Gabinete de Psicología Experimental y de Antropometría Escolar (Laboratory of Experimental Psychology and School Anthropometry) (Piñero, 1904/1916a).

He studied psychology in Paris with Janet (1859–1947), Dumas (1866–1946), Richet (1850–1935), and Joffroy (1844–1908). In 1903, he was invited by the Societé de Psychologie de Paris (Society of Psychology of Paris) to speak on the development of psychology in Argentina, where he gave a famous lecture at the Institute Général Psychologique (General Psychological Institute) (Piñero, 1903). This lecture was first published in the *Bulletin de l'Institute Général Psychologique* (Bulletin of the General Psychological Institute) and was reprinted three times in Argentina, always in the original French (Klappenbach, 1996).

In addition to physiology and psychology, Horacio Piñero excelled in other fields: clinics, university teaching, hygiene, and public assistance, becoming the Director de la Asistencia Pública (Director of Public Assistance) in the city of Buenos Aires. This breadth of interests justified the testimony of Araoz Alfaro, “of all the doctors who received our degree in 1892, Piñero was undoubtedly the most brilliant” (Araoz Alfaro, 1938, p. 141; translation is mine).

Piñero recognized the importance of the *new psychology* emerging in Europe. In particular, he highlighted the contributions of Wundt (1832–1920), Charcot (1825–1893), and Ribot (1839–1916), since “from this trio emerged: clinical observation, experimental research and scientific dissemination” (Piñero, 1902a, p. 117; translation is mine).

His conception of psychology was based on the analogy between the inorganic and organic worlds, on the one hand, and the continuity between the physiological and psychological worlds, on the other one (Piñero, 1904a). In this way, he rejected dualistic theories, in particular those of Descartes (1596–1650) and Leibniz (1646–1716). Piñero emphasized that psychology should only admit and investigate facts, since, “for psychology, for our investigations, there are no schools, there is neither materialism nor spiritualism; life does not arise from matter nor from spirit; for us, it is only a *manifestation*” (Piñero, 1904a, p. 327, emphasis original).

On the other hand, Piñero adopted the *polygonal scheme* of Joseph Grasset (1849–1918), for whom the phenomena of personality disaggregation could be analyzed physiologically on the basis of the disturbances between the lower automatic or lower mental centers and the higher mental center or O-center, responsible for the conscious personality and the responsible self (Grasset, 1903). Piñero’s own evolutionary diagram of psychological phenomena, starting from the sensory receptor organs and ending in higher consciousness and personality, evoked Grasset’s polygonal scheme (Anargyros, 1916).

Nor did Piñero differentiate between “mind” and “brain,” neither considered there were any mediation mechanisms between the two phenomena. On the contrary, he considered that “*mental*

tonism, cerebral tonicity, is the physiological state of the brain which seems to correspond to consciousness” (Piñero, 1902b, p. 514, emphasis original). He also interrogated “whether these physiological processes described correspondence to the psychological phenomena called consciousness and attention” (Piñero, 1902b, p. 517; translation is mine). For this reason, there was no *correspondence* between consciousness as a psychological phenomenon and brain tonicity as a physiological phenomenon. Piñero simply considered the identity between both phenomena: *consciousness was brain tonicity*. Consequently, in the case of pathology, this made it possible to affirm that “the illness of our subject, which seriously compromises the *anatomical integrity* of the cerebral cortex, makes it difficult if not impossible to achieve *attention, which is mental accommodation*, and *consciousness, which is nothing other than cerebral tonicity*” (Piñero, 1902b, p. 521, emphasis original; translation is mine).

In one of his more mature works, he stated that “mental function is an organic function and its study is and will be a problem of pure physiology” (Piñero, 1910a, p. 512; translation is mine). Piñero considered that the phenomenon of attention was located in the mental cortex and was, “first of all, a phenomenon of nervous activity, of central origin, which is initiated by a period of inhibitory concentration, followed by another of *invisible* activity, and which constitutes attention itself” (Piñero, 1910a, p. 512, emphasis in original; translation is mine). In other words, all higher mental processes are nothing more than modifications of the reflex act.

Nevertheless, when he closed the Psychological Sciences sessions of the American International Scientific Congress held in Buenos Aires from 10 to 25 July 1910, he declared himself in favor of “the mental-physical parallelism that determines the acquisitive aptitudes of each subject” (Piñero, 1910b, p. 393; translation is mine). He also recognized that psychology “is confused at its base with physiology and receives the effective influx of all the sciences of man” (Piñero, 1910b, p. 394; translation is mine). This seemed to affirm the existence of *another psychology* or another level in psychology, which did not correspond to that of its *physiological basis*.

Such a position of Piñero was consistent with a report he presented in 1904, related to the teaching of psychology. Piñero considered that the teaching of psychology “is solidly based on brain-muscular physiology,” but that a second course was needed to cover the domains of philosophical, metaphysical, or higher psychology (Piñero, 1904b, p. 391; translation is mine). Piñero advanced in this report by proposing the contents of both psychology courses. The first, called the “general experimental psychology” course, would cover the physiology of the nervous system and of simple feelings, attention, movements, and motives, and would be based on information provided by “the laboratory, in nervous and mental pathology and in the biological sciences” (Piñero, 1904b, p.393; translation is mine). The “second course,” which he called “Philosophical, metaphysical or pure psychology,” was based on the study of the previous course, and taking advantage of “the historical-social sources of information,” it reached “the critical study of psychological systems and doctrines” (Piñero, 1904b, p. 394; translation is mine). In this report, then, Horacio Piñero adopted a Wundtian position, describing two levels in psychology, based on an evolutionary criterion: an *experimental psychology* and a *philosophical or metaphysical or pure psychology*. A few years later, in 1907, the Faculty of Philosophy and Humanities of the University of Buenos Aires adopted Piñero’s criteria and organized a Second Psychology Course, which continued for 50 years (Klappenbach, 1994).

Continuing with the *teaching of psychology*, its characteristics can already be seen in two of his early lectures (Piñero, 1902a, 1903). First, Piñero emphasized the role of the laboratory, above all as a pedagogical instance suitable for the training of students in the basic course of psychology, rather than as an instance intended for the original production of knowledge. Secondly, the importance of the psychopathological clinic, in the conviction that pathology carried out a natural experimentation of normal physiological and psychological processes, as Claude Bernard (1813–1878) had established in his classic *Introduction a l’Étude de la Médecine Expérimentale* (Introduction to the Study of Experimental Medicine). For this

reason, he set aside 1 day a week to present clinical cases (Foradori, 1944; Piñero, 1903). And thirdly, the emphasis on a teaching that covered the whole range of psychological problems, from methodological to psycho-physiological questions and from affectivity, judgments, and consciousness to psychopathology, in accordance with the vast program outlined by Théodule Ribot in the classic Foreword form *Psychologie Anglaise Contemporaine* (Contemporary English Psychology).

Gregorio Aráoz Alfaro, recalled that Piñero’s outstanding disciples in the physiological field, Soler, and above all Houssay, future Nobel Prize for Medicine in 1947, had been trained by Piñero (Aráoz Alfaro, 1938). Horacio Piñero’s course on Experimental Physiology, which was first published in different issues of the *Revista del Centro de Estudiantes de Medicina* (Journal of the Medical Students’ Centre) in 1908, stated “Cátedra de Fisiología Experimental. Conferencias del Profesor Dr. Horacio G. Piñero” (Chair of Experimental Physiology. Lectures by Professor Dr. Horacio G. Piñero) extracted by Bernardo A. Houssay, assistant” (Piñero, 1908, p. 3; translation is mine).

In 1908–1909, Piñero was President of the Sociedad de Psicología (Society of Psychology), which he himself had helped to organize together with José Ingenieros (1877–1925), Francisco de Veyga (1866–1942) and Víctor Mercante (1870–1934), among others. And a year later, he was also the President of the Psychological Sciences Section at the American International Scientific Congress (Foradori, 1944).

At the same congress, Piñero gave the closing address of the Psychological Sciences Section (Piñero, 1910b) and presented the paper “The medical concept of mental retardation,” in which he proposed that children with mental retardation should be examined by means of a triple examination: medical, psychological, and pedagogical. He also pointed out that some retarded children were healthy people who had not had the means to develop their aptitudes. For this reason, he proposed an *eclectic classification* of “inferior types into backward, abnormal and physiological retarded, physiological abnormal, feeble-minded, degenerate and pathological abnormal” (Sociedad

Científica Argentina, 1910, p. 447; translation is mine). When the paper was published, Piñero further detailed the causes of some of these types, established subdivisions within each of them and suggested the educational regime that corresponded to each of them (Piñero, 1910/1916b). This classification was one of the recommendations voted unanimously at the closing session of the Congress, as proposed by Víctor Mercante (Sociedad Científica Argentina, 1910). For its part, the Consejo Nacional de Educación (National Council of Education) appointed a commission to study its application, composed of José Ingenieros, Luis Morzone (1874–1956), and Piñero himself (Piñero, 1910/1916b).

In 1916, Piñero edited in two volumes the works produced in the Laboratory of Experimental Psychology of the Faculty of Philosophy and Humanities at the University of Buenos Aires in one of the most important books on early twentieth century Argentine psychology, *Trabajos de psicología normal y patológica* (Works on normal and pathological psychology). The first volume included works produced between 1905 and 1910 and the second one from 1911 to 1915 (Piñero, 1916c).

In short, Piñero was one of the most prominent pioneers of psychological studies and the organization of psychological institutions in Argentina (Aráoz Alfaro, 1938; Foradori, 1944; Mouchet, 1965).

Mexico · Organizational psychology ·
Training · Human resources · Administration

Graduated in Business Administration from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) in 1970, with specialization studies in industrial psychology, management, and andragogy.

His contribution to the development of psychology and administration in Mexico and specifically to the field of organizational psychology and the administration of training extends to different spheres.

He was the founder and from 1985 to 2004 the CEO of Capinte S.C., one of the first large independent consulting firms that directly offered private training services to some of the most important Mexican companies becoming the groundbreaking leader for other business consultants and for a large number of trainers throughout the country. In 2001 his business activity increased, and he rebranded his office as Grupo Capinte, which allowed him to expand his training services to a broader area of knowledge. More recently, its consultancy was renewed and now works under a new corporate image under the name Efectus. Through Capinte S.C., he participated in the training of thousands of workers, managers, and training and human resources specialists in Europe, Mexico, and Central and South America. He actively participated in national and international conferences in his field of expertise; especially he participated as a speaker at the Universidad de San Carlos (University of San Carlos) (Guatemala), speaking about the current training situation in Mexico (2010); at the Ibero-American Training and Development Congress in Lisbon, Portugal (1998); at the Ibero-American Training and Development Congress organized by FIACYD-ACHECYD in Santiago, Chile (1997); at the International Training and Development Congress organized by IFTDO-ABTD, in Fortaleza, Brazil (1996); at the IFTDO International Training and Development Congress in Hamburg, Germany (1995); and at the National Training and Development Congress AFIDE in Madrid, Spain (1990).

He participated in the creation of human resources specialized in training administration by offering courses independently and in several higher education institutions. In the 1980s he was

a professor in the División de Estudios de Posgrado (Graduate Studies Division) at the Facultad de Contaduría y Administración (Accounting and Administration Faculty) (FCyA) of the UNAM, as well as at the Instituto Tecnológico Autónomo de México (Autonomous Technological Institute of Mexico) (ITAM) and the Universidad Hispanoamericana (Hispanic-American University) (now the Centro de Estudios Profesionales de Chiapas [Chiapas Center for Professional Studies]), of which he is a founding associate. Additionally, he participated as an instructor and consultant for 30 years (1980–2010) for the Instituto de Administración Científica de las Empresas (Institute of Scientific Business Administration) of Confederación Patronal de la República Mexicana (Patronal Confederation of the Mexican Republic) (COPARMEX).

He worked to systematize and shape this field of knowledge by publishing a series of books that has allowed the professionalization of specialists; among the most important are *Training Process* (Pinto, 1990) and *Strategic Planning of Business Training: How to Align Business Training to Critical Business Processes* (Pinto, 2000).

He was involved in labor regulation by participating in groups that developed technical standards applicable nationwide. He collaborated as a counterpart for Mexico in the chapter of Labor Education of the Puebla-Panama Plan (2000–2001) “Demand System and Training Services for Mesoamerica” – SIDCAM (Diagnosis of the Labor Training Market in the Mesoamerican Region) and most importantly in the Consejo Nacional de Normalización y Certificación de Competencias Laborales (National Council for Standardization and Certification of Labor Competencies) (CONOCER) especially on the Technical Standards of Labor Competencies developed for the administration of training and the training of instructors from 2007 to 2012.

He actively participated in the trade union organization of professionals in the area, founding and managing civil associations that bring together professionals in the field. In his union activity, he participated as Vice President of the Colegio Nacional de Licenciados en Administración, A.C. (National College of Administration Graduates) (CONLA), President of the Asociación Mexicana de Capacitación de Personal y

Empresarial, A.C. (Mexican Association of Personnel and Business Training) (AMECAP), management 2006–2009, as well as President of the Federación Iberoamericana de Capacitación y Desarrollo (Ibero-American Federation of Training and Development) (FIACYD), management 1990–1992, and this last management allowed his work to have an important influence in Latin America and especially in Brazil.

In addition, he served as a Human Resources Training and Development Manager for public and private companies and participated in the planning and execution of various business projects. From 1969 to 1979, his participation as Gerente de Entrenamiento y Desarrollo (Manager of Training and Development) of Fertilizantes Mexicanos (Mexican Fertilizers) (FERTIMEX) and of the Dirección General del Impuesto sobre la Renta (General Management of Income Tax) for the Secretaría de Hacienda y Crédito Público (Ministry of Finance and Public Credit) (SHCP).

In general, Roberto Pinto Villatoro is one of the main builders of the foundations that currently support training management in Mexico; reading his works is essential to understand the history of this field of application. His influence has been remarkable for many generations of professionals. His work is an example of entrepreneurship, teaching, research, systematization, and professional solidarity. His professional practice has modeled the processes in which these professional tasks are executed in companies throughout the country, and his contributions are constantly referred by the community that is part of organizational psychology and by consultants in the field of training administration.

Chile · Physiological psychology · Experimental psychology · Learning and memory

María Teresa Pinto Santa Cruz was born on April 5, 1921, in Pochay, an estate in the locality of La Cruz, Valparaíso Region, Chile. Her father, Anibal Pinto del Río, was a rancher and the grandson of Anibal Pinto Garmendía, who was the president of Chile from 1876–1881. Her mother was Inés Santa Cruz, a housewife who practiced social work and was fond of lyrical singing. Teresa, as she liked to be called, was the fourth of five siblings. She studied in the Colegio Sagrados Corazones Monjas Francesas (Sacred Hearts of French Nuns School) in Santiago, Chile. With the support of her mother and some resistance from her father, she studied medicine in the Universidad de Chile (University of Chile), at

a time when there were few vacancies for women (T. Hamuy, personal communication, March 23, 2020). She received the title of surgeon and a master's degree in biology and medical sciences from the Universidad de Chile in 1947. She worked as a researcher in neuropsychology in the USA, in Johns Hopkins University and Wisconsin University (1947–1951) and later on in Stanford University (1961–1962). She was influenced by prominent neuroscientists of the time such as Phillip Bard, Clinton Woolsey, Karl Lashley, Harry Harlow, and Jerzy Rose (Robles et al., 2008). Before leaving for the USA she met the sociologist Eduardo Hamuy Berr, director of the Instituto de Sociología (Sociology Institute) and founder of sociology degree program at Universidad de Chile between 1952 and 1961. They married in the USA in 1948; they had two children: Teresa Hamuy, who was born in 1951 and became an architect specialized in the evaluation of public policy, and Eduardo Hamuy, who was born in 1958, is a designer and M. Ed. in educational technology. He is currently a professor at the Department of Education of the Universidad de Chile.

Dr. Pinto-Hamuy had an important and unexpected influence in the development of psychology in Chile (Lira et al., 2016; Laborda et al., 2019). She was director of the Laboratorio de Psicología Fisiológica (Laboratory of Physiological Psychology) at the Departamento de Fisiología y Biofísica (Department of Physiology and Biophysics) from the Facultad de Medicina (Faculty of Medicine) at Universidad de Chile, which was founded in 1958. She trained medical students in research and undergraduates in psychology who were interested in experimental psychology and psychobiology (Robles et al., 2008). Her laboratory was soon recognized as one of the most respected and productive in Chile (Poblete, 1980). She promoted the development of new experimental psychology laboratories at the Universidad de Chile, including the Laboratorio de Análisis Experimental de la Conducta ANEXCO (Laboratory of Experimental Behavior Analysis), which functioned in 1977–1978 in Instituto Pedagógico (Education Institute) of the Universidad de Chile (Miguez, 2015), the

Laboratorio de Psicobiología (Psychobiology Laboratory), and the Laboratorio de Psicología del Aprendizaje (Laboratory of Learning Psychology) at the Facultad de Ciencias Sociales (Faculty of Social Sciences) (Miguez et al., 2010). The latter continues to function until today and was renamed in 2015 as Laboratorio de Psicología Experimental: Prof. Ronald Betancourt Mainhard (Prof. Ronald Betancourt Mainhard Laboratory of Experimental Psychology).

During the 1960s, she organized the first *Psicología Fisiológica* (Physiological Psychology) semester course at the School of Psychology of the Universidad de Chile. Teresa Pinto was visiting professor at prestigious universities, including the University of Rochester (1974), University of Wisconsin (1977), University of California S.F. (1985), and Harvard University (1988). She was awarded several national and international grants and she published in the best journals of her field of knowledge. She was awarded a Guggenheim Foundation scholarship to work at Stanford University (1961). In Chile she received the Amanda Labarca award (1990), which is destined to highlight the personality and work of university women who stand out exceptionally in their professional area.

Dr. Pinto-Hamuy's research interests and publications were mainly devoted to studying the role of several areas of the brain in learning and memory. In the first stage these studies dealt on the function of the neocortex in avoidance learning in mice (Saavedra & Pinto-Hamuy, 1963), and on the temporal cortex in visual discrimination in monkeys. After that, the exploration of the motor cortex in monkeys during an instrumental response (Moneta et al., 1974). These studies were followed by others on visual discrimination learning in mice (Aronsohn et al., 1987), the cerebral basis of visual-somatic conditioned responses, and on visual-spatial discrimination (e.g., Guic-Robles et al., 1982). Studies on the effect of environmental enrichment in learning were particularly relevant and on memory and spatial cognition (see selected works).

Her contribution and legacy are visible at the special edition of the journal of the Sociedad de Biología de Chile (Biological Society of Chile),

Biological Research, volume 41, issue 4, published in her honor in which invited editors asked colleagues and disciples of Dr. Pinto to contribute with articles which denoted her research lines or continued with her scientific contribution. The editorial of this special number summarizes well who María Teresa Pinto was:

She was a woman who lived ahead of her times. She studied medicine at a time when this was an unusual profession for women and, moved by her intellectual curiosity, she decided to dedicate her life to scientific research, which was still more unusual (Robles et al., 2008, p. 367).

She died on November 13, 2004, at the age of 84 years. She spent her last days at her home.

Keywords

Brazil · Psychological assessment · Psychology applied to work · Professional entities

He graduated as an elementary school teacher at the Escola Normal Oficial de Botucatu (Secondary Official Teaching Training School of Botucatu) in 1940, where he began teaching. He

was interested in Psychology and had the opportunity to study this subject attending the Pedagogy and Didactics courses at the Universidade de São Paulo (University of São Paulo) (USP). He had classes given by Noemy da Silveira Rudolfer, Annita de Castilho, and Marcondes Cabral, who were in charge of teaching psychology at the Faculdade de Filosofia, Ciências e Letras (Faculty of Philosophy, Science and Letters) of USP and teachers who were members of the French Mission (Queirós, 2005), who were hired when the USP was opened, in 1934, aiming at offering new courses and strengthening the cultural and scientific policy in Latin America (Brasil, 2009).

He started working for the Serviço Nacional de Aprendizagem Industrial (National Service for Industrial Learning) (SENAI) in São Paulo, where he was hired as a technical aid and, later, as a technical assistant. At SENAI, he took care of the application of Psychology and the organization of the first courses in the vocational field, in the Divisão de Seleção e Orientação Profissional (Selection and Professional Guidance Department), collaborating for the development of the Psychotechnical Laboratory organized and directed by Roberto Mange, the vocational courses and the department in charge of selection and school and professional guidance (Queirós, 2005; Morais, 1999; CRPSP, Timeline).

He was granted a scholarship from the French government and SENAI in 1947. He traveled to France and studied Occupational Psychology and Professional Guidance at the National Institute for Labor Studies and Professional Guidance, directed by Henri Piéron (1881–1964) (Queirós, 2005; Morais, 1999).

Between 1955 and 1967, Nelson de Campos Pires worked at the Instituto de Psicologia (Institute of Psychology) of the Pontifícia Universidade de São Paulo (Pontifical University of São Paulo) (PUC-SP), joining the team of Dr. Enzo Azzi, founder and head chief of that Institute. He was responsible for the sector of assessment of specific occupational skills, developing studies and research at the Laboratório de Psicologia Experimental (Experimental Psychology Laboratory) of the same Institute (Pires, 1999; Macedo, 2019).

In the 1960s, a period of expansion of psychology in the areas of professional selection and guidance, due to industrial development and the growth of the railway network in the State of São Paulo, tests were considered essential for selection procedures.

Nelson de Campos was responsible for the Experimental Psychology Laboratory of the Psychology Institute of PUC-SP for 15 years (Pires, 1999).

Sponsored by the Fundação de Amparo à Pesquisa do Estado de São Paulo (Foundation for Research Support of the State of São Paulo) (FAPESP), he, Aniela Ginsberg, and Enzo Azzi carried out the research: Comparison between projective and experimental methods in the study of some aspects of personality. This study used the following instruments: the R. Bernreuter Personality Inventory; Rorschach's Psychodiagnostic, PMK and Berg's Thinking Flexibility Test, in addition to tests: mirror image, visual perception, diffuse attention, among others (Ginsberg et al., 1968).

Still at PUC-SP, he took part of the editorial board of the *Revista de Psicologia Normal e Patológica* (Journal of Normal and Pathological Psychology), published quarterly from 1955 on, which was a source of exchange collaboration with other research institutions and recognized as an important journal for the dissemination of scientific articles on mental health (Azevedo, 1994). Upon leaving the Institute of Psychology at PUC-SP, Nelson de Campos Pires joined the undergraduate courses at the Faculdade de Filosofia São Bento (São Bento Faculty of Philosophy) and at the Faculdade de Filosofia, Ciências e Letras *Sedes Sapientae* (Sedes Sapientae Faculty of Philosophy, Science and Letters), precursor courses incorporated into PUC/SP, in the early 1970s (Queirós, 2005).

While working for the Instituto de Psicologia da PUC-SP (Psychology Institute of PUC-SP), Nelson Pires was approved in a public contest in 1958, and admitted to the Departamento Estadual de Administração (DEA) (State Department of Administration), in São Paulo, keeping his activities related to Occupational Psychology (Morais, 1999). After leaving this position in 1961, he joined the Faculdade de Higiene e Saúde Pública

da USP (Faculty of Hygiene and Public Health of USP), to teach Occupational Psychology in the course Occupational Medicine and Hygiene (Queirós, 2005). He started the assistance service for university students, collaborating with the direction of the Conjunto Residencial da USP (USP Residential Complex) (CRUSP) and with social workers in the establishment of criteria for selection of residents. He also helped the Coordenadoria de Saúde e Assistência Social da USP (USP Health and Social Assistance Coordination) (COSEAS) to provide psychological care. He took part of the selection and exam committees for positions in the institutions where he worked (Queirós, 2005; Morais, 1999).

With the regulation of the profession of psychologist in Brazil in 1962, Nelson de Campos Pires obtained the professional registration number 167, at the Conselho Regional de Psicologia 6ª Região (Regional Council of Psychology 6th Region), São Paulo (Morais, 1999).

He was a founding member of the Academia Paulista de Psicologia (São Paulo Psychology Academy), opened in 1979, with the objective of spreading the work carried out in the area, via the Academy Bulletin and seminars, symposiums, and other scientific events. He was the head chief of the Academy in 1990 and 1991, a period considered to be of effective growth and organization of the institution archives (Queirós, 2005). He was editor of the Academy Bulletin and held the chair number 40, whose patron is Professor Walther Barioni (1900–1978).

He participated in the Associação de Psicologia de São Paulo (São Paulo Psychology Association), formerly the Sociedade de Psicologia de São Paulo (São Paulo Psychology Society), founded in 1945, aiming at collaborating with the development of Psychology as a science and profession. At that institution, he was a member of several boards, including the position of head chief. In 1980, he was honored by the Federal Council of Psychology for his dedication to teaching, scientific production, and for his professional activity (Queirós, 2005; Morais, 1999).

Nelson de Campos Pires is recognized for having committed himself to the study, research, and

professional activity of psychology in Brazil, linked to the themes of mental skills, occupations, studies of personality characteristics and psychological assistance for university students, among others. These themes were also the focus of his published works in the following journals: *Revista de Psicologia Normal e Patológica* (Journal of Normal and Pathological Psychology), *Arquivos Brasileiros de Psicotécnica* (Brazilian Archives of Psychotechnics), *Boletim da Sociedade de Psicologia de São Paulo* (Bulletin of the Society of Psychology of São Paulo), and *Boletim da Clínica Psiquiátrica da Faculdade de Medicina de São Paulo* (Bulletin of the Psychiatric Clinic of the Faculty of Medicine of São Paulo) (Queirós, 2005).

Pittaluga Fattorini, Gustavo

Born *Florence (Italy)*, 10 November 1876.

Died *La Habana (Cuba)*, 27 April 1956.

Virgilio Ibarz

Universidad Ramon Lull, Barcelona, Spain

Keywords

Cuba · Spain · Personality · Temperament · Character

Gustavo Pittaluga Fattorini studied medicine at the Sapienza Università di Roma (University of Rome), obtaining his MD in 1902 with a thesis on acromegalia. Later he was assistant of Giovanni Battista Grassi (1854–1925), a physician and zoologist who demonstrated the transmission of malaria by anopheles mosquitoes. Interested in

epidemics, he visited Spain on several occasions. In 1904, he became a Spanish citizen and in 1905 was appointed head of the Disinfection Service of the Instituto Nacional de Higiene de Alfonso XIII (Alfonso XIII Hygiene Institute), led by Santiago Ramón y Cajal (1852–1934), who invited him to work in the service. In 1911 he was appointed professor of parasitology and tropical pathology at the University of Madrid, and in 1915 entered the Royal Academy of Medicine. From 1920 he took charge of the fight against malaria in Spain. In 1922 he published *Enfermedades de la sangre (Diseases of the blood)*, with several editions. About this topic he published *La patología de la sangre y el sistema reticulo-endotelial (Fisiología, semiología y terapéutica) (The pathology of blood and the reticulo-endothelial system. Physiology, semiology and therapeutics)*, when he was living in Cuba (Pittaluga, 1943).

With great interest in Spanish politics, he participated (1924) as a delegate of the Hygiene Committee of the League of Nations on a trip to the Balkans and Soviet Russia, and in 1931 was elected deputy of the Constituent Cortes attached to the Republican Liberal Right. In 1935 he was appointed director of the National Institute of Health. In July 1936, the Civil War began in Spain, and in December Pittaluga was dismissed from this position.

The purge as a professor took place in 1939, along with other professors. At the end of the Civil War he had to go into exile first in Paris, then in Biarritz, and finally in Cuba, thanks to Professor Domingo F. Ramos (1884–1928), a doctor who was at that time Minister of Defense of the Caribbean country. At the Havana University, he was a visiting professor to give courses at the recently created Institute for Scientific Research. Despite the difficulties and uncertainties of exile, he continued his scientific work giving to the press books on hematology, and was appointed editor-in-chief of the *Bulletin of the Instituto Nacional de Hidrología y Climatología Médicas (National Institute of Medical Hydrology and Climatology)*, which allowed him to publish many of his works.

Pittaluga, nationalized Cuban, had an official recognition in Cuba. Since 1948 he was appointed correspondent of the Academy of History and the

National Academy of Arts and Letters of Cuba. However, his popularity was due, more than to the writings of historical, social, or psychological subjects, to the broadcasting that he himself did from the so-called “University of the Air” (Bosch-González et al., 2014).

He had a permanent interest for psychological topics and psychiatry. In 1939 he published *Seis ensayos sobre la conducta* (Six essays on behavior), where he showed his interest in the analysis of temperament and character. In 1948 he gave his entrance speech at the Academy of History with *Ensayo para un análisis de los sentimientos* (Essay for an analysis of feelings) and in 1950 he published *Sangre y sexo* (Blood and Sex). In 1954 he published *Personalidad, carácter y temperamento* (Personality, character and temperament), his most influential work in psychology and psychiatry, which was well received in Spain and Latin America.

For Pittaluga, humans are born with a temperament; humans are not born with a character. Later, circumstances, more or less dominated by intelligence and will, will give the person, endowed with character, the values of personality. He states that the problems posed by the study of temperament, character, and personality are nourished by physiological, psychological, and sociological factors and pointed out that the most valuable contributions are due to Kretschmer (1888–1964) and Jung (1875–1961), and considered psychotechnics as an auxiliary technique.

Pittaluga was a very appreciated author among Latin American psychology students and his *Personality, character, and temperament* was used in the courses on personality at the universities in Latin America.

Ugo Pizzoli received his doctorate, as a scholarship holder, at the *Facoltà di Medicina e Chirurgia dell'Università di Bologna* (College of Medicine and Surgery of the University of Bologna) in 1888, with the thesis *Lo scleroma dei neonati* (The scleroma of newborns). At the University of Modena, he became an associate professor in Experimental Psychology. He was a student of Giuseppe Sergi (1841–1936), Pietro Loreta (1831–1889), Pietro Albertoni

(1849–1933), Francesco Roncati (1832–1906), and Augusto Murri (1841–1932), who taught pedagogy, Pizzoli's area of interest after graduation. At the institutes of Rome and Florence, he learned experimental techniques in psychology and anthropology. He is defined by Centofanti (2006, p. 32) "as a pedagogical physician or as a specialist in scientific pedagogy and, truly, as a representative of a given psychology, through which he intended to edify the science of Education."

He deepened his studies in the scientific foundations of pedagogy, becoming one of the main representatives of Italian pedagogical positivism. Says Centofanti (2002, p. 77), that "the need [for Pizzoli] for this form of constitution of Pedagogy [Scientific] had as a reason the fact that the child is a "bio-psychic organism in formation" in their relationship with the school and the teacher. (Pizzoli, 1900, p. 6), a developing organism.

In 1899, he created, in Crevalcore, with the scientific support of Augusto Tamburini (1848–1919), the Scientific Pedagogy Laboratory, the first pedagogical anthropology office in Italy and headquarters, in 1902, of the first scientific pedagogy course, aimed elementary schools' teachers. The second edition of the course had at its opening, the only woman on the faculty, Maria Tecla Artemisia Montessori (1870–1936).

In 1910, Pizzoli founded the *Scuola Normale Maschile (Male Normal School)* in Bologna, which he directed until 1920. Between 1919 and 1920, he created a popular arts and crafts school and an occupational psychotechnics office. He became, in those years, director of the *Scuola Popolare Operaia "Fermo Corni" (Popular Workers' School "Fermo Corni")*.

Pizzoli, according to Centofanti (2002), was given great importance in the context of the history of didactics, in Educational Psychology and in the school reform that took place in Italy. He valued the use, by the physician, of instruments that made it possible to carry out anthropological examinations – which "served the subsequent record of the general morphological characters of the individual organism of the student, such as height, weight, constitution, sex, age, general harmony in proportion to the body" (p. 78), physiological – which "aimed at the registration of organic functions and the functions of senses and

movements" (p. 78), and psychological – which proposed to "decompose the content of consciousness into its elements, study the qualitative and quantitative of these elements and discover exactly the relationships of consistency and succession" (p. 78).

One of the devices, called by Pizzoli the "portable psychometric cabinet," made it possible to carry out different tests and promote the development of skills.

Despite Pizzoli's many publications, there are few theoretical-conceptual elaborations. Noteworthy are *Il fato educativo è fatto biologico e sociale (The educational fate is a biological and social fact)* and *Il substrato scientifico della Pedagogia (The scientific substratum of Pedagogy)*, both from 1899. Also important is the volume titled *Pedagogia Scientifica (Scientific Pedagogy)*, from 1910, contained in the *Trattato di medicina sociale (Treatise on social medicine)*, edited by Angelo Celli (1857–1914) and Augusto Tamburini (1848–1919).

The ideas of Pizzoli's Scientific Pedagogy arrived in Brazil, specifically in São Paulo, through Clemente Quaglio (1872–1948), an Italian elementary school teacher who lived in the city of Amparo.

In 1913, São Paulo state governments invited Pizzoli to visit the *Laboratório de Pedagogia Científica (Scientific Pedagogy Laboratory)* at *Escola Normal Secundária de São Paulo (São Paulo Secondary Normal School)*, in *Praça da República (Republic Square)*. The invitation was probably due to the difficulties faced by experimental psychology professors in Brazil in carrying out their activity with resources and instruments that they did not know how to use. In addition, the presence of Italian educator would give visibility and credibility to the Brazilian project. Pizzoli remained in São Paulo for 6 months, during 1914. An implication of his Scientific Pedagogy in the activity of teachers took place, in 1915, in public schools in the state of São Paulo. It was mandatory to use the so-called School Biographical Card, in which students' psychological, physiological, and anthropological data were recorded.

Pizzoli spent the last years of his life in Bologna. In his trajectory, he marked the history of

Italian and, also, Brazilian education. With their ideas, normalist teachers from São Paulo schools began the exercise of psychometrics. By observing, recording, and measuring student data, they began to reflect on their educational practice. It is recognized at this juncture, some evidence that determined the establishment of psychology in Brazil, as a science and profession.

A Belgian educator graduated from the École Normale de Virton (Virton Normal School) and specialized in Educational Manual Work, Isidore Poiry arrived in Peru integrating a mission of Belgian educators specially hired to reform public education in this country.

Between 1905 and 1909, he was, successively, deputy director of the Colegio Nacional Nuestra Señora de Guadalupe (Our Lady of Guadalupe National College, one of the most important state schools in Lima) and director of the Escuela Normal de Varones (Normal School for Men, predecessor of the current Universidad Nacional de Educación Enrique Guzmán y Valle (National University of Education Enrique Guzmán y Valle), in Chosica, east of the Peruvian capital), in Lima, being in charge of methodology, pedagogy, sociology, paidology, and teaching practice (Galván, 1966).

By assuming the leadership of the newly founded Normal School for Men in 1905, Poiry gave a modern direction to this institution, especially in educational sciences and psychology (Encinas, 1932). During his tenure, the first child psychology and psychology courses were introduced for Peruvian teachers. At the level of pedagogy, he spread the New School, based on

the ideas of Jean Jacques Rousseau (1712–1778), Johann Heinrich Pestalozzi (1746–1827), Maria Montessori (1870–1952), John Dewey (1859–1952), and Ovide Decroly (1871–1932). In the Normal School, Poiry inaugurated the use of observation and experimentation in the classroom.

He returned to Belgium and in 1910 he was professor at the École Supérieure de Commerce (Higher School of Commercial Studies) in Liege. During the 1930s, he served as Honorary Consul of Peru in Belgium and in 1945 as technical advisor of the Ministry of Education of Peru.

Although he was a pedagogue by profession, Poiry recognized the great importance of psychology in the training of educators. His work in Peru disseminated the latest advances in European pedagogy and psychology, as well as the modern pedagogical theories and methods that emerged in Belgium, the leading country in education in those years (Encinas, 1932). Although psychology as a profession did not exist at the beginning of the twentieth century in Peru, Poiry's contribution to the dissemination of psychological science in that country was considerable (Orbegoso, 2016; Poiry, 1903, 1906, 1923, 1931, 1940).

Pollitt-Burga, Ernesto

Born *Lima, (Peru)*, 12 April 1938

Died *Lima, (Peru)*, 5 January 2016

Walter Arias

Universidad Católica San Pablo, Arequipa, Peru

Keywords

Peru · Developmental psychology · Nutrition and behavior

Ernesto Pollitt-Burga studied at the Pontificia Universidad Católica del Perú (Pontifical Catholic University of Peru, PUCP, Lima), being a member of the first group of Psychology students at the PUCP (Arias, 2016). After his studies, he worked in the United States in the Psychoendocrinology Unit directed by John Money (1921–2006), at the Johns Hopkins Hospital (Baltimore), publishing with him some works in American journals of pediatrics and psychiatry (e.g., Pollitt & Money, 1964; Money & Pollitt, 1964). He did his Ph.D. studies in evolutionary psychology at Cornell University in Ithaca (New York, Ph.D., 1968) and worked as an assistant professor in the Department of Pediatrics at Yale University and at the Child Study Center. He then traveled to Europe where he obtained an appointment at the United Nations Research Institute for Social Development (UNRISD) in Geneva.

Pollitt was an associate professor in the Department of Nutrition and Food Sciences at the Massachusetts Institute of Technology (MIT) in Boston and later at the University of California at Davis. During those years, Pollitt executed

several research projects in Egypt, Guatemala, India, and Indonesia, experimentally studying the effects of functional or fortified foods that governments provide to combat malnutrition (Arias, 2016).

In 1967, he published his first paper on malnutrition (Pollitt & Granoff, 1967). Another work carried out with children from impoverished areas of Peru (Pollitt & Ricciuti, 1969) is important because it was one of the first investigations that suggest that the characteristics of the mother have a great influence on the nutritional status of infants, a topic that would be addressed in various later studies.

In the 1980s, he studied the effects of an experimental school breakfast program in boys and girls from Huaraz (Peru) on cognitive processes such as attention and memory, and school performance, showing that government nutrition programs were beneficial and should be strengthened from the corresponding political strata. Likewise, he identified in protein-energy malnutrition and iron and iodine deficiencies, some of the main causes of retardation in intellectual functioning and low academic performance, within the framework of the conditions of poverty and cultural deprivation in which rural populations live or from marginal urban areas of Peru.

In 2009, he found that motor development milestones are an excellent indicator of the general development of children under 2 years of age (Pollitt & Bacallao, 2009). This idea was also explained in previous works in which he proposed a probabilistic theory of child psychological development, so that the motor milestones that emerge as a natural behavior during the first 24 months of life constitute a valuable predictor of intellectual development and the future academic performance, above the emotional or social areas of the development scales (Pollitt, 1999; Pollitt & Caycho, 2010). Likewise, Pollitt was one of the first authors to investigate the effects of the interaction of the mother and the child on the psychobiological development of the latter, as well as the importance of breastfeeding and breast milk in the nutrition and cognitive development of infants (Arias & Núñez, 2018).

His work has contributed to various sciences such as psychology, nutrition, psychiatry, and education. His research topics have focused on the consequences of malnutrition on the psychological development and academic performance of children from various countries around the world, generating intervention policies that have benefited thousands of children living in poverty.

Anibal Ponce was a leftist intellectual and referent in Argentine psychology well known in the 1920s and 1930s. He studied at the *Colegio Nacional Central* (Central National College, currently, National School of Buenos Aires) and then studied Medicine at the University of Buenos Aires. He discontinued his formal university studies in its third year and started to research on psychology issues, publishing various works such as *Fisiología funcional* (Functional Physiology) (1921), *Los problemas de la herencia psicológica* (The problems of psychological inheritance) (1922), or *Psicología y clínica* (Clinical Psychology) (1924); all framed in the naturalistic scientism of the time.

Early, he wrote and participated in the creation of cultural and scientific journals. He published in *Revista de Filosofía* (Philosophy Journal), which he co-directed with José Ingenieros (1877–1925) between 1923 and 1925 and whom he had met personally in 1920. When Ingenieros died in 1925, Ponce assumed the direction of that Journal until 1929. Around 1917, he also wrote as a literary critic for the magazine *Nosotros* (We) and in the monthly newspaper *Renovación* (Renewal) where he signed his articles with the pseudonym Luis Campos Aguirre. He also wrote for the journals *Cursos y Conferencias: Revista de la Escuela Libre de Estudios Superiores* (Courses and Conferences: *Journal of the Free School of Higher Studies*) and *Nueva Revista* (New Journal) (in 1934). In 1936 he created the journal and the publishing house named *Dialéctica* (Dialectics).

In 1918, he actively participated in a student movement to democratize the university that started in the city of Córdoba known as University Reform. This had an impact on him as big as the Russian Revolution in 1917. As a teacher, he taught Psychology at the *Instituto Nacional de Profesorado Secundario* (National Institute of High School Professorship), at the *Colegio Libre de Estudios Superiores* (CLES) [Free College of Higher Studies], and studied clinical psychology and worked with alienated at the *Hospicio de las Mercedes* (Hospice of the Mercedes) located in the city of Buenos Aires.

Around 1930, he was part of the Argentine antifascist intellectual front and his theoretical thinking and texts showed the incorporation of Marxism to which he fully adhered from 1933 (Wanschelbaum, 2018). In 1935, he participated in the creation of the *Asociación de Intelectuales, Artistas, Periodistas y Escritores* [Association of Intellectuals, Artists, Journalists and Writers] (AIAPE), an institution that organized conferences and exhibitions and published the magazine *Unidad por la defensa de la cultura* (Unity for the defense of culture) (1936–1939) and that intended to defend the culture against the fascist offensive (Petra, 2013). In 1936, Ponce was removed from his positions in the chair of Psychology at the *Instituto Nacional de Profesorado Secundario* (National High School Teachers Institute) by Jorge de la Torre (1875–1953), the Minister of

Justice and Public Instruction in the National Administration. This happened during the *Infamous Decade*, a period marked by electoral fraud and corruption in particular during the presidency of General Agustín P. Justo (1932–1938). There were two arguments for dismissing Ponce. The first one, that Ponce was a communist intellectual (the same type of argument had been used at the National University of Córdoba to remove Gregorio Bermann and Jorge Orgaz from their positions because of their antifascist militancy). The second argument was based on a moral disqualification because Ponce had prescribed hospitalization orders at the mental health hospital, *Hospicio de las Mercedes*, without the corresponding medical license (Pasolini, 2013).

Given this situation and the impossibility to publish due to the prevailing climate of censorship in Argentina, he moved to Mexico in 1937 during the government of Lázaro Cárdenas del Río (1934–1940), which was characterized, among other actions, by the economic intervention of the State, the Socialist education, the agricultural distribution, and the nationalization of the oil industry and railways. There Ponce continued teaching, collaborating with the Ministry of Instruction and writing for magazines such as *Futuro*, *Mensual de Cultura Popular*, *Frente a Frente*, *CEN* (Future, Monthly of Popular Culture, Face to Face, CEN), *Órgano mensual del Consejo Estudiantil Nicolaita* (monthly organ of the Nicolaita Student Council) and others, in addition to having a permanent literary column in the newspaper *El Nacional* (the National).

He taught Psychology, Sociology, Ethics, and Marxism at the *Universidad Nacional Autónoma de México* (National Autonomous University of Mexico), the *Escuela Normal de Maestros* (Normal School of Teachers), the *Universidad Michoacana de San Nicolás de Hidalgo* (Michoacan University of San Nicolás de Hidalgo) in Morelia, and the *Universidad Obrera de México* (University of Workers of Mexico). He was part of the *Liga de Escritores y Artistas Revolucionarios* (League of Revolutionary Writers and Artists) that fought against fascism and imperialism (Rivera-Mir, 2019). He died in May in a car accident, when he was travelling to Mexico City to give a lecture to commemorate the

55th anniversary of Marx's death. From the analysis of Ponce's work, it may be noticed that his contribution is inescapable as a Marxist and a referent in the conformation of the Argentine Left. However, his specifically psychological work, which continued until the 1930s, was addressed less frequently. His interest in Psychology can be explained by his belief in the potential of science for interpretation and intervention on social problems. Among the influences of Poncean thought, positivism, the generation of the 1880s (a conservative ruling elite between 1880 and 1916), the generation of the 1837s (a group of Argentine intellectuals of the mid-nineteenth century who defended the ideas of freedom, progress and democracy), and the ideas of freedom of Mariano Moreno (1778–1811) and the May Revolution of 1810 can be recognized (Agosti, 1974). Domingo Faustino Sarmiento (1811–1888) and José Ingenieros (1877–1925) have been two key authors in their developments: From Sarmiento, he revisited the approach of national history as the evolution of civilization-barbaric tension based on a liberal perspective (Arpini, 2006). The relevance of Ingenieros' ideas was key through *La evolución de las ideas argentinas* (The evolution of Argentine ideas, 1918) and *Principios de Psicología* (Principles of Psychology, 1919), where he proposed a Genetic Psychology.

Grounded in these ideas, Ponce's Psychology had a materialistic approach and based on the postulates of Haeckel and Lamarck on the relationship between the organism and the environment. In the 1920s and from his experience at the *Hospicio de las Mercedes*, he became interested in the psychological processes of the intellect and its physiological and pathological alterations. Afterwards, he addressed child and adolescent development and published, for example, *Gramática de los sentimientos* (Grammar of Feelings) (Ponce, 1929) and *Problemas de psicología infantil* (Problems of Child Psychology) (Ponce, 1931) where he incorporated the developments of Lucien Lévy-Bruhl (1857–1939) and Jean Piaget (1896–1980). Between 1931 and 1933, his courses in the CLES focused on adolescence and socialization, where he highlighted the role of socio-political aspects in mental functioning and

incorporated the ideas of Alfred Adler (1870–1937) and Félix Le Dantec (1869–1917) (García, 2014). Then, he no longer wrote works specifically on Psychology, although his teaching, including in Mexico, remained linked to this discipline. While it is true that in those years Ponce neither appealed directly to psychology nor had an explicit objective to inquire about those issues, some of their works such as *Educación y lucha de clases* (Education and class struggle, 1936) admit a psychological interpretation that highlights the contribution of this science to the education as a specific psychosocial problem (Grassi, 2013a, 2013b).

Brazil · Educational psychology

Ana Maria Poppovic, from Buenos Aires, arrived in Brazil at the age of six. When she married Pedro Poppovic, she stopped using her baptism surname, Belotti. She was graduated in pedagogy (1949) and specialized in clinical psychology at the Faculdade de Filosofia Sedes Sapientiae (College of Philosophy Sedes Sapientiae), in São Paulo, in 1954.

Her interest in the education of culturally needy children goes back to the beginning of her career, from 1954–1957, when she worked as a psychologist in the Serviço Social de Menores do Estado de São Paulo (Social Service of Minors of the State of São Paulo).

In 1953, together with Enzo Azzi (1921–1986) and Helena Antipoff (1892–1974), she organized and founded the Sociedade Pestalozzi de São Paulo (Pestalozzi Society of São Paulo), to attend and support exceptional children. In the following year, she established the Psychological Clinic of this institution, which she ran for four years.

Five years later, in 1958, she accepted the invitation of Dr. Azzi to create and direct the Psychological Clinic of the Faculdade de Filosofia, Ciências e Letras São Bento (Faculty of Philosophy, Sciences, and Letters of São Bento). In 1963, this Clinic was incorporated into the Instituto de Psicologia da Pontifícia Universidade Católica de São Paulo (IPPUC-SP) (Institute of Psychology of the Pontifical Catholic University of São Paulo – IPPUC-SP), the current Faculty of Psychology of this University.

Shortly after the Clinic's inauguration (in 1959), it was already a reference institution for its pioneering work with the diagnosis and treatment of minimal brain dysfunction (MBD). It also stood out for its equipment, being considered the first Brazilian clinic to have a mirror for observing appointments – whose prototype was designed by Poppovic – a resource that, until then, only existed in the USA.

In 1962, during the process of regulation of the profession of psychologist in Brazil and the respective definition of the minimum training curriculum, Poppovic participated in the organization of the psychology course at Pontifícia Universidade Católica de São Paulo (PUC-SP) (Pontifical Catholic University of São Paulo – PCU-SP), which began its activities in 1964 (Wuo, 2009), and, at the same time, headed the Departamento de Psicologia Aplicada à Educação (Department of Psychology Applied to Education), performing the function until 1971, when she left this university.

From 1963 to 1966, between the various activities carried out, the highlights were the visits, in Buenos Aires, to the speech therapy service of Professor Júlio Bernaldo de Quirós (1922–1994), one of the precursors of this field of work in South America. Based on these experiences, Poppovic established the area of psychoneurology at IPPUC-SP (IPPCU-SP), counting on Quirós himself as one of the invited professors.

The researches of the period culminated in the publication of the “Metropolitan Test of Readiness,” in 1966, which replaced the “Teste ABC para Verificação da Maturidade da Leitura e da Escrita” (ABC Test for Verification of Reading and Writing Maturity) – by Lourenço Filho (1897–1970) – as a literacy measuring instrument.

According to Poppovic, her test would make it possible to differentiate children whose learning difficulties were not a result from disorders such as MBD, dyslexia, auditory disorders, or psychomotor syndromes, but difficulties arising from the learning conditions offered to children, “. . . problems unrelated to mental disabilities, sensory difficulties and other clinical conditions, . . . that transcended the scope of psychological clinics”

(Pimentel, 1997, p. 53), therefore issues of the educational and social spheres.

The work with “Metropolitan Test of Readiness,” besides resulting in the doctoral thesis defended in 1967, titled “Psychoneurological Disorders of Learning to Read and Write,” denoted a clear change of interest, leaving the Clinic to get closer to education, as the author herself points out in the book derived from the thesis in 1968, “Literacy: psychoneurological disorders”: putting the Clinic at the service of society, through actions focusing on education.

In the words of her advisor, “IPPUC-SP [IPPCU-SP], a natural refuge for non-conformists, . . . is proud of this original and stimulating work, directly focused on the real problems of our country” (Azzi as cited in Poppovic, 1968, p. 6). Azzi also indicated that Poppovic’s research brought a methodological innovation, for the interdisciplinary treatment of data collection and analysis as well as for being based on case studies, a method that diverged from the usual standards of the time, based on quantitative samples and statistical precepts.

From this work, Poppovic began to focus on the educational needs of “culturally marginalized” children, which led her to question educational decisions based on psychological tests, putting her previous convictions into question and opposing the hegemonic thinking of those years.

In fact, the production made before leaving PUC-SP (PCU-SP), in 1971, constituted the three pillars of Poppovic’s career continuity: (a) the concern with a certain age group, that is, the period before the beginning of literacy; (b) the relationships between cultural environment and psychoneurological functions; and (c) a sociocultural position related to school failure that first based studies on cultural marginalization and, later, became reference for the early childhood education and teacher training.

Still in 1971, Poppovic assumed the position of senior researcher at the recently opened Departamento de Pesquisas Educacionais da Fundação Carlos Chagas (Department of Educational Research at the Carlos Chagas Foundation).

With her team at this Foundation, she formulated and implemented a major literacy project – the “Alpha Program” – focused on teaching children from the first 3 years of school and, at the same time, on training in-service teachers.

The Alpha Program was established in 1977 (reaching 20 Brazilian states), with the mission of promoting school success by overcoming the process of cultural marginalization, a central theme of the investigations developed between 1971 and 1975, in which Lev Semenovitch Vygotsky (1896–1934) was among the reference authors.

According to Alpha’s four guiding principles, the program articulated: (1) greater appreciation in the learning processes than in contents; (2) the importance of language in the development of psychoneurological functions and cognitive operations; (3) the relationship between self-concept development and school success; and (4) respect for sociocultural differences (Alfa, 1987).

The Alpha results drove a new project. Thus, in 1979, Thought and Language Program was born, containing a proposal for the continuation of the education of early elementary school teachers, based on the following topics: the cognitive processes and the psychoneurological mechanisms necessary for literacy; the decisive role of language in the development of thought; the learning process involving three types of cognitive operations (concepts, principles, and problem-solving); and the positivity of self-concept as inherent in the learning process.

Beyond Poppovic’s legacy – theoretical-methodological formulations and concrete proposals – throughout her work, “doing research” only made sense if it generated new practical developments. Conversely, the concerns about reality guided the production of new theoretical knowledge.

Júlio Pires Porto-Carrero was born in Pernambuco in 1887, the son of a traditional family of educators, and died in Rio de Janeiro in December 1937. His father, professor Carlos Porto-Carrero, owned a school in Recife, the capital of Pernambuco, where Júlio taught since he was 15 years old. He studied medicine at the Faculty of Medicine of Rio de Janeiro, having defended the doctoral thesis “Early diagnosis of tuberculosis by the rays of Roentgen” in 1910. The following year, he began to work as a doctor at the Brazilian Navy, as corvette captain. He wrote poetry until the age of 25, when he got married.

In 1929 he became full professor of the chair of Forensic Medicine (Medicina Legal) at the Faculty of Law of the University of Rio de Janeiro. He was a prominent member of the Brazilian League of Mental Hygiene (having created in 1926 the Psychoanalysis Clinic at the League) and an honorary member of the National Academy of Medicine. He actively participated in the Brazilian Education Association, since it was founded in 1924. He participated as a speaker at several congresses, and worked with the most prominent Brazilian psychiatrists at that time, such as Juliano Moreira (1873–1933) and Afrânio Peixoto (1876–1947). He was undoubtedly one of the greatest enthusiasts and disseminators of psychoanalysis at the beginning of the last century. Before devoting his work to psychoanalysis he worked with syphilography, medical specialty dedicated to the study and treatment of syphilis.

At least two of his works prior to the 1920s deal with this theme: “Anti-venereal prophylaxis in the navy,” presented at the 1st Dermatology Congress in 1918 and “Legal Consequences of Syphilis,” also from 1918 (both appear in a list of “others author’s works” published in his *Psychoanalysis Essays*). In addition to propagating psychoanalytic theory, he claimed to practice psychoanalytic therapy in his office and in the institutions where he worked, calling himself a psychoanalyst. In 1928, he was a founding member of the Rio section of the Brazilian Society of Psychoanalysis, created in São Paulo by Durval Marcondes (1899–1981) and Franco da Rocha (1864–1933). (This society never became a proper training institution.) In the Rio Section he assumed the position of Secretary General. In order to spread the new doctrine, he gave numerous public conferences for lay people, gave interviews to newspapers, and participated in radio programs.

He learned German as an autodidact to read Freud in the original, even translating *The Future of an Illusion* into Portuguese (which was published in 1934). His various writings demonstrate in fact a very broad knowledge of Freudian theory and a reasonable care with the manipulation of concepts. He spoke with ease about the changes undergone by the theory over time, about the splits and ruptures that occurred in the psychoanalytic movement, as well as about the theoretical disagreements underlying them. It can be said that Porto-Carrero was, in Brazil, one of the great authorities in Freud of the time.

He published nine books on psychoanalysis or on topics analyzed in light of psychoanalysis. The first of them, *Essays on Psychoanalysis*, from 1929, is a collection of sparse articles, most of them with the clear objective of disseminating the new doctrine, aimed either at specialists or the lay public. Also in 1929 he published *Psychoanalysis and Forensic (Medico-Legal) Applications*. In 1932 he published two other books related to Forensic Medicine, a discipline of which he was a professor – *Criminology and Psychoanalysis* and *Juridical Psychology* – the second consisted in a series of eight lectures given in a university

extension course on criminology held in the same year. Still in 1932 he published *Deep Psychology or Psychoanalysis*. In the following two years, he published two books successively – *Psychoanalysis of a Civilization* and *Greatnesses and Misery of Sex* – in which he intensely developed a theme that had already appeared in his previous writings: how the State should control the reproduction of individuals aiming to improve the species, a eugenic proposition par excellence. This reorientation of his writings coincides with eugenic-oriented psychiatrists’ dominance in the Brazilian League of Mental Hygiene, which occurred in the 1930s.

He had controversial opinions for his time. He criticized machismo and the consequent oppression of women, opposing the taboo of virginity and the dual morality, which requires different behaviors from men and women. Such criticisms, however, did not lead him to affirm equality between the sexes. Women and men must be at the same height, but within the specificity of their feminine or masculine condition. According to Porto-Carrero, women should be valued in their condition as women, which means, first of all, the ability to be a mother. It is motherhood that puts women on Eros’ side and, therefore, on the species side. In view of this, feminism is an aberration to be fought. Both sexes must “grow at the same height,” but never be the same. He was also critical of the excessive paternal authority over his children, therefore calling for greater freedom within the family. At the same time, he favored a strong State, with power centralized in the hands of competent technicians and specialists, guided, not by popular will, but by science.

His criticism of democracy was coupled with a declared sympathy for the Soviet Union, seen as the future of humanity. The Soviet Union, due to its distance from the liberal conception of democracy, would be a kind of achievement, albeit incomplete, of the long-awaited government of specialists, based on the inescapable fact of difference. Equality, according to Porto-Carrero, is the “death certificate of civilization.” To each one according to his ability or aptitude. Therefore,

despite his sympathy for the Soviet Union, he was against the equality advocated by communism.

From the 1930s onwards, relying on eugenic theses, Porto-Carrero unfurled the flag of eugenic abortion – which was intended to “avoid imperfect offspring” – and the sterilization of the incapacitated. He considered that it would be up to the State to control the reproduction of individuals, since the interests of the species should override individual interests. Based on the Darwinian theory of natural selection, he asserted that the progress of mankind had the undesirable result of preventing the beneficial effects of selection, that is, the survival of the fittest. On the contrary, it protects those who would not be able to survive on their own, thereby allowing their vices or defects to be perpetuated (and even worsen) through their offspring. In 1931, he publicly defended eugenic abortion at the 1st Brazilian Medical-Unionist Congress, in which he was tasked with presenting a report on the Medical Code of Ethics draft. He defended not only eugenic abortion but also the prophylactic, the therapeutic, and the economic abortion (all three also having the eugenic purpose of avoiding imperfect offspring). He also considered justifiable the performance of moral abortion (of the “deflorated virgin” and of the “adulterous wife”), of aesthetic abortion (in the case, for example, of great dance artists) and of professional abortion, when “collective interests – police, political-international, scientific – may be at stake.” His report caused quite a stir and provoked intense debates at the National Academy of Medicine (GMS, pp. 31 ff.).

He shared with the Brazilian intellectuals of the time a Lamarckian view of eugenics. This view, embraced by intellectuals in Latin America, gave rise to a more optimistic conception of human nature, capable of enhancement as the improvements acquired by the individual could be transmitted genetically to their offspring, allowing for a combination of eugenics and hygienic prophylaxis. Distancing himself from the most radical eugenicists, Porto-Carrero affirmed that the ideal would not be so much “to limit the right of sexual conjunction,” but “to obtain that everyone could breed in health.” In this sense, “eugenic

procreation” was, for him, a matter of hygiene, assistance, and education.

Porto-Carrero died in late 1937, when the first certified psychoanalyst – Adelheid Koch (1886, Berlim – 1980, São Paulo) – arrived in São Paulo to start psychoanalytic training in Brazil. In Rio de Janeiro, the two societies that were formed – Sociedade Psicanalítica do Rio de Janeiro (Psychoanalytic Society of Rio de Janeiro – SPRJ) and Sociedade Brasileira de Psicanálise do Rio de Janeiro (Brazilian Society of Psychoanalysis of Rio de Janeiro – SBPRJ) – also started with the arrival of two European psychoanalysts in charge of training new followers in the subsequent decade. It is difficult to imagine what role a character like Júlio Porto-Carrero would play in this new “officialized” scenario. His “savage psychoanalysis,” which was mixed with eugenics and hygiene, was perhaps a long way from Freud’s orthodoxy. But it said a lot about the social and political context in which it flourished.

Mexico · Mental health · Psychoanalysis

Prado Huante was born in Mexico City, in the farm “Los Alcanfores,” in Iztacalco, a country house of his paternal grandparents, where the family took refuge due to the insecurity that prevailed in those times after the Mexican Revolution (1910–1917). The family, in the face of severe socioeconomic instability, as a result of the Revolution, remained around the traditions and idealized figures of the grandparents. This affective relationship is seen in the influence it has on the professional choice of Dr. Prado, and the presence of his grandfather Ramón N. Prado, who as a doctor had traveled to Paris at the time when Jean-Martin Charcot (1825–1893) performed hypnotic healing practices, made a big impact on him. On one occasion, his grandfather, through hypnotic inductions, cured him of the hiccups that afflicted him with some frequency; this incident may have defined his inclination toward the study of the human mind. Undoubtedly, this background was decisive in his vocational training and interest in human groups (Prado Huante, 1976).

He studied at Escuela Primaria Benito Juárez (Benito Juárez Elementary School), the Secundaria Número Tres (Secondary School Number Three), and Escuela Nacional Preparatoria (National Preparatory School). His first professional career was at the Facultad de Medicina of the Universidad Nacional Autónoma de México (Faculty of Medicine of the National Autonomous University of Mexico) (UNAM) (1937–1943). Since then, he planned to specialize

in psychiatry so, in parallel, he began studying psychology at the Facultad de Filosofía y Letras of the UNAM (Faculty of Philosophy and Humanities of the UNAM) (1940–1942; 1953–1955), where he met his future wife, Sumie Arai Espinosa.

His father’s death forced him to work as a practitioner in the medical service of the Instituto Politécnico Nacional (National Polytechnic Institute) (IPN) (1942–1943), just as he was in his fourth year of medicine and the first year of psychology.

The social service was held in Bacobampo, Sonora (1943–1944), where he founded the Sociedad Médica del Río Mayo (Rio Mayo Medical Society). In Los Angeles, California, he took a course in individual Adlerian psychology at the University of Southern California (1946).

He returned to Mexico City to get the medical degree (1944) and, later, to get married. He began working in the Unidad de Neuropsiquiatría del Instituto Mexicano del Seguro Social (Neuropsychiatry Unit of the Mexican Social Security Institute) (IMSS), where he was a founding member of the Grupo de Estudios Sigmund Freud (Sigmund Freud Study Group) (1947). Also, at that time, he began as an adjunct professor of clinical psychiatry at the Facultad de Medicina of the UNAM (Faculty of Medicine of the UNAM) and at the Escuela Superior de Medicina del IPN (High School of Medicine of the IPN). He was professor and the chair of mental hygiene at the Escuela de Trabajo Social de la Secretaría de Educación Pública (School of Social Work of the Ministry of Public Education) (SEP) (1947–1948), founder of the journal *Higiene Mental (Mental Hygiene)* (1947), and member of the Liga Mexicana de Higiene Mental (Mexican League of Mental Hygiene) (1947–1956).

He obtained a scholarship from the French government to study at the Université de Paris *La Sorbonne* and in the hospitals of *Sante Anne* and *La Salpêtrière* (1948–1952). He obtained a degree of specialization in neuropsychiatry, nervous system diseases, brain diseases, and aphasia; he also obtained a diploma as foreign professor assistant.

After almost five years in Paris, accompanied by his wife, he returned and resumed his previous

occupations at the Instituto Mexicano del Seguro Social (Mexican Institute of Social Security) and at the Secretaría de Educación Pública (Ministry of Education), where he worked until 1964. He was reinstated to his professorships at the Facultad de Medicina (Faculty of Medicine), as holder of the chair of clinical psychiatry at the UNAM (1953–1982) and at the Escuela Superior de Medicina (High School of Medicine), and as holder of the chair of clinical psychiatry at the Instituto Politécnico Nacional (National Polytechnic Institute) (1953–1993). He began his teaching work at the Facultad de Psicología (Faculty of Psychology) (UNAM), where he worked until his death (1953–2005) (UNAM, 2005).

He contributed to the founding of the Epilepsy Service at the Hospital Juárez (Juarez Hospital) and to the Departamento de Neurología, Psiquiatría y Salud Mental at the Secretaría de Salubridad y Asistencia (Department of Neurology, Psychiatry and Mental Health in the Ministry of Health and Assistance) (SSA) (1958). He became a member of the Asociación Médica Franco-Mexicana (Franco-Mexican Medical Association) (1948) and was a psychiatric consultant in the Cruz Roja Mexicana (Mexican Red Cross) (1947–1960). He participated as an expert and dictator in the case of the notorious criminal “Goyo Cardenas” by the SSA (1952) (Quiroz Cuarón, 1952). He was a founding member of the Sociedad Mexicana de Neurología y Psiquiatría (Mexican Society of Neurology and Psychiatry) (1948–2005), the Sociedad Mexicana de Psicología Profesional (Mexican Society of Professional Psychology) (1957–1961), and the Liga Mexicana contra la Epilepsia (Mexican League against Epilepsy) (1953–1964) and certified member of the Consejo Mexicano de Psiquiatría (Mexican Council of Psychiatry) (1974–2005).

He approached colleagues who had trained as psychoanalysts abroad and joined the newly integrated Asociación Psicoanalítica Mexicana (Mexican Psychoanalytic Association) (1956–1962), where he was professor and didactic psychoanalyst (1968–2000) and director of the institute of the Asociación Psicoanalítica Mexicana (Mexican Psychoanalytic Association) (1982–1984).

He studied psychoanalysis applied to groups and was a founding member of the Asociación Mexicana de Psicoterapia Analítica de Grupo (Mexican Association of Analytical Psychotherapy of Group) (1962–1966), where he was professor and didactic psychoanalyst (1968–2005) (Almazán et al, 2000; González Nuñez, 1999, 2000).

He worked in various mental health institutions, private consultation, and teaching. In 1993, he received the medal Ignacio M. Altamirano, for his high performance in teaching at the Secretaría de Educación Pública (Ministry of Education); in 1997, he got the University Merit medal from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico); and in 1989, the Ciudad de México (Mexico City), gave him the medal of Citizen Merit Jesús Silva Herzog. As well, he received many distinctions and recognitions at the psychoanalytic institutes.

He also belonged to various scientific and professional associations, both national and foreign: Sociedad Interamericana de Psicología (Interamerican Society of Psychology), International Psychoanalytical Association, American Association for the Advancement of Science, Confederación de Organizaciones Psicoanalíticas de América Latina (Confederation of Latin American Psychoanalytic Organizations), Federación Latinoamericana de Psicoterapia Analítica de Grupo (Latin American Federation of Analytic Group Psychotherapy), Group Analytic Society of London, American Group Psychotherapy Association, American Orthopsychiatric Association, and International Association for Group Psychotherapy.

He attended and participated in countless congresses and published articles in national and international journals (King, 1960; McLaughlin, 1978). In 2000, at the age of eighty, the Universidad Nacional Autónoma de México (National Autonomous University of México) and Instituto Politécnico Nacional (National Polytechnic Institute) paid tribute to him for his academic work and published a book containing much of his writings: *Corrientes Posmodernistas de la Psicología. Homenaje al Dr. Héctor Prado*

Huante (De Laroz-Sánchez, A., Lopátegui Martínez, M., Prado Arai, S. 2000).

His academic and professional training allowed him to develop a recognized work in the field of neurology, psychiatry, psychology, and psychoanalysis (Vitaver, 1988; UNAM, 2000; Fiorini, 2012). Dr. Héctor Prado Huante, in his writings, leaves a legacy; the result of his scientific research; his clinical experience; and, as a teacher, over more than 60 years of uninterrupted work in favor of mental health.

Puig Arvelo, Héctor

Born on December 1, 1933, in Puerto Rico

Ivonne Moreno-Velázquez

University of Puerto Rico, San Juan, Puerto Rico

Keywords

Puerto Rico · Work Psychology · Human Resources · Clinical Psychology

Héctor Puig Arvelo is the son of Consuelo Arvelo de Puig and Mr. Puig. He was raised in his grandmother's house María Santiago, widow of Arvelo, with his mother and his three aunts. He spent his youth in Lares, a small town in the mountains in the center of Puerto Rico.

Héctor Puig Arvelo obtained a bachelor's degree from the University of Puerto Rico, Río Piedras Campus (UPR-RP) in 1953, a master's degree in Industrial Psychology from the University of Toronto (1954), Canada, and a doctorate in Clinical Psychology from the University of Michigan (1960), becoming the first Puerto Rican to hold a graduate degree in industrial psychology. For his dissertation he combined his interest in Industrial Psychology with his clinical degree by studying job satisfaction in the United States, Italy, and Puerto Rico (Puig Arvelo, 1960). It is interesting to note that the University of Michigan at Ann Arbor initiated its graduate program in Industrial Psychology in 1958 (Lowman et al., 2014), probably when Héctor Puig was already a student there. After his graduation he returned to Puerto Rico to establish his office and work in private practice and as a university professor (Moreno Velázquez et al., 2006).

Upon his arrival to Puerto Rico, he worked as an adjunct professor at UPR-RP (1953–1955; 1960–1962), the Puerto Rico Institute of Psychiatry (1953–1955), and the Polytechnic Institute of Puerto Rico (today, the Inter-American University). He was director of the Department of Psychology of the Polytechnic Institute at San Germán, from 1955 to 1957 (Asencio Toro, 2006). He developed and taught a course on Industrial Psychology, several seminars on Supervision and Management, and served as a consultant to multiple industrial, commercial, educational, federal, and governmental organizations. He has lectured and participated in radio and television programs and written various articles in the press and in professional journals.

Dr. Puig Arvelo explained to his students that the first thing in dealing with people is to recognize the differences and similarities in the human beings: “there are different people and there are

people who are alike” (Moreno Velázquez, et al., 2006, p.400). He considers it important to recognize the work of Industrial Organizational Psychologists to intervene in the diversity of scenarios found in the world of work.

Dr. Puig Arvelo has been member of the American Psychological Association, the Puerto Rico Psychology Association, the Chamber of Commerce, the National Rehabilitation Association, the Association of Vocational Experts, and other professional organizations. He has received various distinctions, among them, being the first Puerto Rican to receive the *Rotary Foundation Fellowship* and the *John Hay Whitney Foundation Recognition*, grants that allowed him to pursue his graduate degrees. Dr. Puig Arvelo has been recognized as a forerunner of Industrial/Organizational Psychology in Puerto Rico by the Society of Organizational Industrial Psychology of Puerto Rico.

Dr. Puig Arvelo's contributions to the development of Psychology in Puerto Rico include several publications. Among them are a book about his experiences and professional work and one about characteristics of successful managers. Moreover, he was among the first group of psychologists offering clinical services from his private office and especially industrial organizational services to companies and enterprises.

Son of Heliodoro de Paula Ferreira Rabello (1855–1934), merchant, and Joaquina Gomes de Lyra (1862–1945), teacher, he finished his studies at the German School of Ponte d’Uchoa and the Pernambucano Gymnasium in 1918, and later entered the Law School of Recife, whose bachelor’s degree in Legal and Social Sciences concluded in 1922. He worked as a student in a representative office and taught Portuguese in private schools. He joined the Recife newspaper *A Notícia*, was a public prosecutor in Petrolina, Pernambuco, and collaborated with *A Província*, a newspaper directed by Gilberto Freyre (1900–1987) at the time (Gaspar, 2020).

He held several positions, such as professor of Psychology at the Institute of Education of Pernambuco (1926) and at the Faculty of Philosophy

of the University of Recife, now the Federal University of Pernambuco (1950). He was Director of the Department of Education of Pernambuco (1948), Secretary of Education and Culture of Pernambuco (1949–1950), Director of the Department of Social Psychology of the Joaquim Nabuco Institute, current Joaquim Nabuco Foundation (1966–1972), Director General of the Regional Department of the National Service of Commercial Learning (SENAC) in Pernambuco from 1947 to 1962. He has developed a professional career dedicated mainly to the areas of education and psychology. In the 1960s, he was a permanent member of the Tropicologia Seminar, as a social psychologist. He also expressed in his works the culture of his native Pernambuco, described in detail in his work over 40 years.

His scientific production in the period from 1931 to 1940 was mainly focused on issues of child development, education, cognitive processes, and child psychology. His work, focused on the theme of human development in childhood, characterized investigations focused on the methodological aspects of psychology, children’s drawing, the use of instruments, processes of temporal elaboration and visual perception. Such diversity of interests focused on child development, thus supporting educational practices.

The interest in methodology and use of tests can be observed in *Psychology of children’s drawing* (1935), where it is possible to verify the sequence of chapters characterizing the methodological, transcultural, developmental, and

analytical aspects, in an exhibition based on relevant references, in an active posture justified by the author to contribute to the psychological study of Brazilian children.

Under the title *The Child Psychology* (1937), Rabello presented a development work based at the time on the most current understandings of the children's evolutionary plan in a clear exhibition aimed at supporting educational processes, as it was addressed to parents, judges of minors, pediatricians, directors of shelters, day care centers, orphanages, and schools and all those who intend to start in the study of the educational sciences (Rabello, 1937a). In this work, the author made a presentation that covered topics such as conceptual aspects, methods of investigation, physical development, neurobiology of development, psychic development, sensory processes, psychomotor, emotional reactions, perceptual, verbal, graphic, playful construction, creativity, learning, abstract reasoning, logical and social development.

The Representation of Time in the Child (1938) evidences the scientific basis of the use of methods and instruments in psychological work in Brazil. Based on the studies of Antônio de Sena Faria de Vasconcelos (1880–1939) in Portugal, it is an essay about the characteristics of drawings through ages analyzing the reasons that led children to draw spontaneously. It presents an extensive description from the historical, conceptual, methodological aspects of the investigations conducted at the time, integrating theoretical and philosophical lines. The proposition of investigating the mental processes concerning the idea of time leads him to create his own method of verification (Cronometria), employed together with the interrogation “detailed and conducted in the research gradually expanding the understanding of the construction of the notion of time. It aimed to outline the mental physiognomy of children from Pernambuco encompassing the influences of their social inheritances.”

Rabello's contributions have supported investigations into educational processes in the national context. The wide dissemination of his works with journals such as *Neurobiology* and books at

Companhia Editora Nacional, among others, allowed the dissemination of interest in the evolutionary aspects of childhood with educators from all over the country.

In addition to Psychology, Rabello presented in other publications an interest in culture, mainly northeastern, in productions for almost three decades such *Itinerary of Silvio Romero* (1944), *Euclides da Cunha* (1948), *Paths of the province* (1965b), *Hairy here comes* (1965a), and *The artisans of Father Cicero* (1967).

His work demonstrates a critical and original thought for a psychology with autoctonic characteristics, enabling the collection of information and construction of knowledge from the object of study.

Radecka, Halina

Born *Warsaw/Poland, 5 July 1897*

Died *Argentina, 1980*

Rogério Centofanti

Autonomous Researcher, São Paulo, Brazil

Keywords

Brazil · Poland · Uruguay · Argentina · Child psychology · Social psychology · Experimental psychology · Affective discriminationism

Halina Peplowska attended secondary school at the Emilia Plater Gymnasium between 1906 and 1913, the Higher Pedagogical Course between 1913 and 1915, then the Faculty of Human Sciences (1915 and 1918), and Psychology (1919 and 1920) at the Faculty of Psychology of the Free University of Warsaw, having defended the theses *Legal approach of emancipation* (1917) and *The functional psychic characteristics of progressive paralysis* (1920). She was a teacher of the gymnasium between 1916 and 1919, and of higher classes at the Free University of Warsaw between 1918 and 1920. She became Halina Radecka because of her marriage with the psychologist Waclaw Radecki (Centofanti, 2001).

At the beginning of 1923 she migrated with her husband to Brazil and they settled in Curitiba, in the state of Paraná, where her brother, the municipal veterinarian Adolpho Peplowski, resided. Curitiba, at the time, had a great Polish colony, a factor that must have influenced the choice of that city as a point of arrival. The Radeckis were welcomed by the Consul of Poland and the Paraná press was informed that the reason for their departure from Europe had been the difficulties of that continent in the post-war period, particularly in Eastern Europe.

During the first months of 1924 the Radecki couple moved to Rio de Janeiro. Halina worked at the newly created Laboratório de Psicologia Experimental na Colonia de Psychopathas (Laboratory of Experimental Psychology at the Colonia de Psychopathas in Engenho de Dentro), as secretary and assistant to Waclaw Radecki, who was appointed head of the Laboratory (Centofanti, 1982). Along with another assistant at the Laboratory, the municipal teacher Lucília Tavares, she dedicated herself to research and social activities in the fields of child psychology and school, publishing papers on this subject. She collaborated, for example, with research by Lourenco Filho on ABC Tests, created in 1928.

In 1932, as a professor at the newly created Instituto de Psicologia do Rio de Janeiro (Institute of Psychology of Rio de Janeiro), which incorporated the Laboratory and its staff, Halina was in charge of the classes on Psychology Applied to Education, which would start in the school year of 1933, as part of the training program of Brazilian psychologists idealized by Radecki. This, however, did not happen, because the Institute was dissolved in 1932, the same year it was created. Still, she published two articles: *Bases psicológicas da escola moderna (Psychological bases of modern school)* and *A deformação das representações perceptivas pela atualização dos complexos afetivos (The deformation of perceptive representations by updating affective complexes)*, the latter being guided by Radecki's Affective Discriminationism Theory.

With the closing of the Institute of Psychology, the Radecki couple moved in early 1933 to Buenos Aires, Argentina, alternating their activities in this city and in Montevideo, Uruguay. In 1936, Halina worked at the newly created Centro de Estudios Psicológicos de Buenos Aires (Center of Psychological Studies of Buenos Aires), later called Instituto de Psicologia de Buenos Aires (Institute of Psychology of Buenos Aires). In 1941, at the Congreso Americano de Enseñanza Especial (American Congress of Special Education), in Montevideo, she presented the work entitled *Procedimientos psicologicos en la profilaxia de la histeria infantil (Psychological procedures in the prophylaxis of child hysteria)*.

In 1944, she worked at the Centro de Estudios Psicológicos (Center of Psychological Studies) in Montevideo, in partnership with the homonymous Center, in Buenos Aires. In 1947, this Center was transformed into the Facultad Libre de Psicología (Free College of Psychology). During this period, she published not only about childhood, but also about other topics, such as visual impairment.

She turned to the area of social psychology and, in 1950, wrote the article *Algunos factores psicopatogenos en la sociedad actual* (*Some psychopathogenic factors in today's society*), presented at the First Latin American Congress of Psychology, which took place in Montevideo in the same year. In this paper, Halina proposes to demonstrate how social life of the time became an enabling ground for psychopathy, considering the society's psychopathology as a mirror of individuals, based on the same criteria used by Radecki in his characterology.

In 1960, she published her best-known work, *Psicología Social* (*Social Psychology*), at the Institute of Psychology of Buenos Aires, which was part of the program of the Institute's first course on social psychology, in the academic year of 1957. She defined herself as a supporter of the Systematized Biological Psychology and inserted social psychology as a new application field of criteria that governs general, individual, and psychopathology psychology. She lectured on functional social psychology and considered Wilhelm Wundt (1832–1920), Gabriel Tarde (1843–1904), and Radecki alike, concerning this concept. In her opinion, differently from sociology, social psychology should be pluricausal and functional, correlative, and hierarchical, like all psychological sciences.

For Radecka, all men, as individuals and as an organized set of individuals or not, are biosocial beings. In the book *Psicología Social* (*Social Psychology*), Radecki's theory of Affective Discriminationism permeated the idea of the emergence of a psychology-unity, oriented toward the intellectual, affective, and active aspects of societies, in a similar way to that presented in the individual, as she had already been outlining in her text from 1950. With this understanding, she set out to establish characterological classes

within societies and characterological classes of societies themselves, open to analyses and classifications of psychopathological typology. She attributed to Waclaw Radecki the creation of a functional Psychological System, through which she would have guided her scientific training.

In Brazil, she had contributed to the development of measures of a psychological nature, especially in the areas related to Education and Child Psychology. In Uruguay, and especially in Argentina, she emerges as a psychologist who stands out for the elaboration and teaching of a Social Psychology with an original character.

Rogério Centofanti

Autonomous Researcher, São Paulo, Brazil

Keywords

Uruguay · Brazil · Argentina · Poland · Switzerland · Psychology laboratory · Experimental laboratory · Affective discriminationism

He developed his studies at the 4th Philological Gymnasium of Warsaw between 1896 and 1905, attending the Faculty of Philosophy of the University of Kraków in 1905 and 1906, the University of Munich's Medical School in 1906, the University of Florence's School of Natural Sciences in 1908 and 1911, where he obtained the title of Doctor in Natural Sciences with his dissertation *Os fenômenos psicoelétricos (The Psychoelectric phenomena)* (1911). He also attended the Faculty of Medicine of the same city between 1910 and 1912, where he obtained the degree of bachelor in medical sciences. During his passage through Florence, he became a trained cello player and an orchestra conductor at the local conservatory.

In 1913, he became an assistant to Édouard Claparède (1873–1940) at the Laboratory of Psychology at the School of Sciences of the

University of Geneva and a professor of Psychology at the same school. Returning to his hometown, in 1914, he taught Psychology at the Faculty of Sciences of the University of Kraków and became the head of the Psychology Laboratory at the Psychiatric Clinic of the Faculty of Medicine in Kraków. From 1914 until 1922, he was a professor of Psychology at the Faculty of Human Sciences at the Free University of Warsaw, and the director of the Psychology Laboratory of the same institution.

Due to the difficulties experienced by Europe, particularly Eastern Europe, after the First World War, he emigrated to Brazil, living in Curitiba, in the state of Paraná, in the beginning of 1923 accompanied by his wife, Halina Radecka. They remained there throughout the rest of that year. Before getting to know the psychologist, people from Curitiba knew Radecki, the musician, who performed to the artistic and economic elite with his cello in several chamber music concerts. In August, he directed the classes of an optional course on Experimental Psychology carried out as an initiative of the Law School of Universidade do Paraná (University of Paraná). From this month until the end of December, he worked as a psychologist at Hospício Nossa Senhora da Luz (Hospice Nossa Senhora da Luz), maintained by the sisterhood of Santa Casa de Misericórdia de Curitiba (Holy House of Mercy of Curitiba). Curitiba in 1923 served as a reference from which Radecki disseminated Psychology in general and his Psychology in particular with the audiences who demonstrated interest in this new science. Thus, he carried out several lectures for physicians and educators in São Paulo and Rio de Janeiro, and after these lectures he received an invitation to direct the recently created Laboratório de Psicologia Experimental na Colônia de Psicopatas em Engenho de Dentro (Laboratory of Experimental Psychology at the Colony of Psychopaths in Engenho de Dentro), in Rio de Janeiro.

He took over the direction of the Laboratory in the beginning of 1924 (Guimarães, 1928), moving to Rio de Janeiro. Leading this institution, he set the following goals related to its functioning: to be an auxiliary medical institution, an auxiliary of the

social and practical needs, a scientific group and didactic center to train Brazilian technicians, as the case of physicians Nilton Campos, Jayme Grabois, Gustavo de Rezende (?-?), Agnello Ubirajara da Rocha (1896–1984), Arauld da Silva Bretas (1881–1971), Alberto Guilherme Moore (1850–1968), Antônio de Bulhões Pedreira (?-?), Flávio Rodrigues Dias (1899–1994), Oswaldo N. de Souza Guimarães (?-?), the municipal teacher Lucília Tavares and the lawyers Edgard Ribeiro Sanches (1891–1972) and Euryalo Vianna Cannabrava (1909–1978). Between 1928 and 1929, his assistants published papers on *Annaes da Colônia de Psychopatas (Anals of the Colony of Psychopaths)*, which were also published separately and organized by Radecki, composing two volumes called *Trabalhos de Psicologia (Psychology Works)*. Also, between 1928 and 1929, he taught Psychology classes at Escola de Aplicação do Serviço de Saúde do Exército (Application School for the Health Care Service of the Army), which resulted in 17 issues gathered and bound together by the Military Press, a work that contains the methodological, theoretical, and conceptual framework of his psychology (Penna, 1992, 2001).

Using his contacts, he managed, in 1932, to approve the Decree 21,173, from March 19th, 1932, which converted the Laboratório de Psicologia da Colônia dos Psicopatas (Laboratory of Psychology at the Colony of Psychopaths) into the Instituto de Psicologia (Institute of Psychology), an institution that maintained the purposes of the Laboratory, but introduced a new section: the Escola Superior de Psicologia (Superior School of Psychology), focused on the training of Brazilian psychologists during a regular course of two to four years. Radecki became the dean, and some of his assistants became professors: Lucília Tavares and Halina Radecka coordinated Psychology Applied to Education; Agnello Ubirajara da Rocha and Arauld da Silva Bretas, Psychology Applied to Professional Selection; Jayme Grabois, Psychology Applied to Medicine; and Edgard Ribeiro Sanches and Euryalo Vianna Cannabrava, Psychology Applied to Law. However, the classes did not start in 1933 as predicted, because the Institute was closed in

the same year of its creation by the Decree 21,999, from October 24th, 1932. The Radeckis, then, left Brazil and moved to Buenos Aires (Argentina), and later to Montevideo (Uruguay) (Campos, 1953; Centofanti, 1982; Roxo, 1932).

In 1933, Radecki was invited by Dr. Alfredo Cáceres to teach courses on General Psychology at Facultad de Medicina da Universidad de la República (School of Medicine of the University of the Republic).

He organized the Laboratório de Psicología de la Aviación Militar (Laboratory of Psychology of the Military Aviation) and translated his *Tratado de Psicología (Essay on Psychology)* into Spanish, with the support of Prof. Dr. Victor Delfino and Dr. Camilo Payssé (1879–1955), which was published in Argentina. He continued with his publications and simultaneous activities, from 1933 to 1939, between Uruguay and Argentina.

In 1936, he founded, in Buenos Aires, the Centro de Estudios Psicopedagógicos (Center of Psychopedagogical Studies), where he promoted regular courses on psychology and created a laboratory dedicated to practical courses on experimental psychology techniques and a psychology office. In 1944, this Center was transformed into Centro de Estudios Psicológicos (Center of Psychological Studies), with systematic studies on General, Individual Psychology and Social Psychology. On January 29th, 1945, he founded the Centro de Estudios Psicológicos de Montevideo (Center of Psychological Studies of Montevideo), a brother center to the one in Buenos Aires, besides the Escuela Profesional de Psicólogos (Professional School of Psychologists), transformed, in 1951, into the Facultad Libre de Psicología de Montevideo (Free School of Psychology of Buenos Aires), which, in turn, became the Instituto de Psicología (Institute of Psychology) in 1948.

In Uruguay and Argentina, following the example of what he did in Brazil, he surrounded himself with regular partners, among renowned experts and especially psychiatrists.

Radecki dedicated himself to the creation and organization of laboratories, courses, and congresses until very close to his death, when he was taking care of the preparations for the 2nd

Latin American Congress of Psychology, as he did in 1950 with the 1st Latin American Congress of Psychology, held in Montevideo. The Psychology created by him and explained in his *Tratado de Psicologia (Essay on Psychology)* from 1928/29, besides being original, contains a theoretical and methodological framework that suggests that it was conceived before his arrival in Brazil, since many of his elements were exposed during the lectures he gave in 1923. It is a synthesis of his own training. His anchorage in determinism and naturalism points to a Psychology as an empirical science, even if defined as a science of subjective facts. Even with roots in Biology and approached with the functional perspective, this Psychology cannot be treated as a mere imitation of methods and techniques taken from other biological sciences, since it included the idea of the individual, a biological unit in which a biography is developed, a story of one's own life, as a product of the dialectics that is processed in the relationship between topographic realism and the behavioral realism. Therefore, we have a Psychology permeated by epiphenomenalism. Finally, Radecki adds the affection to Psychology, presenting the individual on the plan of its three-dimensional nature. From such perspective, his *Tratado (Essay)* speaks about the Psychology of the Intellectual Life, the Affectionate Life, and the Active Life. The man who thinks, feels, and acts. To this wholesome psychology, Radecki gave the name of Affective Discriminationism, even though with different meanings in different moments. For example, in the *Tratado (Essay)* of 1928/29, Affective Discriminationism (Centofanti, 2003) appears as a study method that conducts to the elaboration of a characterology, understood by Radecki as the ultimate end to individual Psychology. Since there are many functional variants present in the organisms' psychic processes, Radecki indicates the choice of discrimination and affectivity as primary functional variants and, from them, he establishes correlations with the other variants, now understood as secondary. As a result, discrimination and affectivity were taken as essential variants for any individual therapeutic process. Given this wholesome character, in the Argentine edition of the *Tratado*, Affective Discriminationism appears as a system that is

proposed as capable of including, absorbing, and surpassing all others. Affective Discriminationism is, therefore, Waclaw Radecki's psychological system. However, his system was forgotten, as none of his assistants followed this guideline. Radecki's memory remains for his contribution to the institutionalization of Psychology in Uruguay, Argentina, and Brazil.

Ramírez Collazos, Luis Hernando

Born *in Dagua (Colombia) on June 15, 1928*

Died *in Cali (Colombia) on December 12, 1987*

Stefano Vinaccia Alpi
Universidad del Sinú, Montería, Colombia

Keywords

Colombia · Behavior modification · Special education

Luis Hernando Ramírez Collazos was born in the bosom of a family of eight children of peasant ancestry dedicated to the cultivation of the land, especially to the sowing of coffee.

He did primary studies at El Peñón School in Cali and secondary studies at the Conciliar Seminary in the same city. There, the seed of priesthood sprouted in him, being ordained in 1950. At that time, he founded in Darién (Valle) the Calima School; also, in Darién, he created the Calima Broadcasting Station.

As for his ecclesiastical career, between 1951 and 1960, he worked as chaplain in Roldanillo and as parish priest in the municipalities of Águila and Darién. Later, between the years 1961 and 1964, he worked as chaplain of the Instituto Del Seguro Social (Institute of Social Security), Valle del Cauca Section, in the city of Cali.

In 1965, he traveled to Bogotá and began studies of sociology at the Universidad Nacional de Colombia (National University of Colombia), but the bishop of Cali demanded that he return to this city, having to stop his studies.

Then, he decided to go to Mexico City, in the year 1967, to study psychology, at the Universidad Iberoamericana [Iberoamerican

University] and later on a master of science – experimental psychology, at the Universidad Veracruzana de Xalapa (Veracruzana University at Xalapa), state of Veracruz, Mexico.

In 1968, he asked the Holy See for a dispensation from his priestly vows, which was favorably resolved by Pope Paul VI. Later, in 1971, Luis Ramírez married Mercedes Patiño and returned to Colombia that same year, establishing himself in the city of Bogotá. From this union, two daughters were born.

When Luis Ramírez returned to Colombia, he became a professor at the National University, later at the Pontificia Universidad Javeriana (Pontifical Javeriana University) and Universidad de los Andes (University of Los Andes), and after that at the Instituto Colombiano de Pedagogía (ICOLPE) (Colombian Institute of Pedagogy), a part of the Universidad Pedagógica Nacional (National Pedagogical University), being one of the pioneers in the dissemination and teaching of psychology, fundamentally in the experimental analysis of behavior and in the modification of behavior. Ramírez's teaching contributed to the experimental approach of some of the faculties of psychology of Colombia.

In 1973, he founded the Centro de Educación Especial Skinner (Skinner Special Education Center) with the purpose of serving children and young people with intellectual disabilities. In this center, in addition to clinical attention to children and young people with developmental retardation, the first courses of behavior modification principles for psychology students were carried out. It is important to highlight the importance of these courses in a period of Colombian psychology history where it was being discussed whether psychologists could develop clinical interventions.

He also continued some research projects initiated with his teacher Emilio Ribes Iñesta (1944–) and with Florente López (1940–), at the Veracruzana University at Xalapa in Mexico.

Toward the year of 1976, in the company of his wife Mercedes Patiño, Luis Ramírez presented to the Ministry of National Education the project of the Instituto de Pedagogía Infantil (INPI) (Institute of Child Pedagogy). After being

approved in August of 1979, the INPI began its work with 38 students enrolled in the technical careers of special education and preschool education. A few years later, in 1984, the Corporación Universitaria Iberoamericana (Iberoamerican University Corporation) would emerge from this project.

In 1987, Luis Ramírez received the Simón Bolívar Award from the Ministry of National Education for his work as a teacher, researcher, and author in the field of behavioral sciences. He died the same year. His imprint as a transparent, frank, and direct man was so solid that he left as a legacy a work team consolidated and committed to the mission and the institutional vision of what is today the Iberoamerican University.

Luis H. Ramirez's contribution to Colombian psychology was seen in several fronts: he was the first Colombian psychologist who created a special education center where the principles derived from learning theory were used in a clinical context; he was also a pioneer in the country in teaching behavior modification courses at the higher education level. In addition, he founded two centers of higher education, INPI and the Iberoamerican University Corporation, centers that had an emphasis on the training of professionals in behavioral and health sciences.

Puerto Rico · Educational psychology · Psychological testing · Education administration

Ramón Gerónimo was the seventh child born to Mr. Abad Ramírez Bonilla and Mrs. Alejandrina López, after the birth of six girls in a row. Eight more siblings were born after him, five boys and three more girls, in a parental reproductive career span of 20 years. The family, composed of 17 members, lived in the suburban area of Miradero, Cabo Rojo, famous for its beaches, fishing spots, and beautiful scenery. The mother was a housekeeper and the father, a landlord, had business in the field of agriculture. Mr. Ramírez was also a political leader. The ancestors of the family were the Ramírez de Arellano and the López de Victoria, two of the most known and wealthy families of Western Puerto Rico in past times, originally from the Spanish royalty lineage who arrived into Puerto Rico by the sixteenth century. Both family names were shortened with the pass of the years.

After his primary years of education, Ramón enrolled in the *Instituto Politécnico de Puerto Rico* (Polytechnic Institute of Puerto Rico), a small religious institute opened in 1912 as a school, in the neighboring town of San Germán. In the *Instituto Politécnico*, he earned the BA degree in 1934, the eighth graduating class. Just after graduation, when he was 23 years old, he married to Patria Armida Tió, who happened to work on campus as secretary and treasurer of the

institution. The wedding ceremony took place in the chapel of the *Politécnico*, and it was officiated by the Reverend John Will Harris, founder and president of the institution. The couple established their household in San Germán for 3 years, having with them Patria's mother and a servant.

In 1935, Ramón moved to New York in order to pursue his first graduate degree, an MA in Psychology from New York University, which he completed in 1937. A year after, his only child, Diana Armida, was born. When Ramón returned to Puerto Rico in 1937, he was appointed to teach in the College of Education at the University of Puerto Rico, a position he held until his retirement in the early 1970s. He moved to live in San Juan in an extended family arrangement, consisting of the couple, their daughter, the mother-in-law, a 23-year-old niece who was a teacher, and a maid. In 1941, his mother died in Ramón's house in San Juan. Considered a worthy matriarch in their hometown, all political, social, and cultural activities were suspended in respect to her memory; even flags were at half-mast for 3 days in sign of mourning (Avilés, 1941). To that extent was the family respected in Cabo Rojo. Years later, Ramón became widowed.

Ramón's leadership in the field of higher education and psychology was evidenced from his achievements as an administrator, professor, researcher, and author and in his professional endeavors outside the academia. From 1946 to 1956, he was the chairperson of the General Education Department at the UPR College of Education. In that period of time he was actively involved publishing about values and testing, among other topics, and delivering invited lectures to diverse audiences, in topics such as mental hygiene, family relations, child rearing, and so forth. He translated into Spanish the following tests: Bells Adjustment School Inventory (Bells, 1934), Pintner Aspects of Personality Inventory (Pintner et al., 1937), and the Lee-Thorpe Occupational Inventory (Lee-Thorpe, 1940 in Ramírez-López, 1956). Measurement, evaluation, and testing were the core components of the courses that he taught at the College of Education (Álvarez, 2006). In 1957, he finished his EdD degree from the University of Texas at Austin,

presenting his dissertation *A comparative study of the values of teachers, students of education, and other university students in Puerto Rico*. His major field of study was Educational Psychology.

Doctor Ramírez joined Efraín Sánchez Hidalgo and other colleagues in the foundation in 1954 of the Puerto Rico Psychology Association (APPR, in Spanish). He was a member of the first Board of Directors. Around that time, he married for the second occasion with a fellow colleague doctor, Marion García Castillo. In 1959, he became the sixth president of the Association of Psychologists. As such, he represented this professional class in different international meetings, especially in Latin American countries. During his presidency of the APPR, he was very vocal on the local newspapers about the profession of psychologists and their responsibilities in modern society (Ramírez López, 1959). As a matter of fact, the 1960 annual meeting of the APPR, the convention under his presidency, was dedicated to the psychologist's functions in modern society (Roca de Torres, 2006). He also served as editor of *El Psicólogo* [*The Psychologist*], the official newsletter of the APPR during the 1960s. Dr. Ramírez was a visiting professor at the University of Wisconsin, Milwaukee (1965–1966), and the University of Maryland (1968).

Ramón Ramírez López passed away at the age of 81 years. He was survived by his wife, Marion García de Ramírez; his daughter, Diana Ramírez de Sotomayor; and his four grandchildren (Antonio, David, Ramón, and Brenda) and a great grandchild, Paulina.

Santiago Ramírez Ruiz or Santiago Ramírez Ruiz Sandoval, as he also appears in some official documents, was the son of the renowned neurologist Santiago Ramírez and Margarita Ruiz Sandoval. In the years he entered college, México was a country that was in ways of consolidating his process of institutionalization and political stability, two decades after the ending of the Mexican Revolution. His enrollment in the career of medicine in the Universidad Nacional Autónoma de México (UNAM), (National Autonomous University of México) happened in 1938, setting of development of the social politics in favor of the working and dispossessed classes. He got his degree in the Facultad de Medicina [Faculty of Medicine] (FM) in 1945 with the Medical Surgeon thesis, *Estandarización del psicodiagnóstico de Rorschach (Rorschach's psychodiagnosis standardisation)*.

The attachment of Ramírez Sandoval with psychoanalysis was in the psychiatric specialty in the FM of the UNAM. His specialization in Freudian theory was held outside México, in Buenos Aires, Argentina, where he studied at the Psychoanalytic Institute during 1948 and 1952. He carried out his didactic analysis with Dr. Arnold Rascovsky and afterward with Dra. Marie Langer.

He was a professor at the UNAM at the College of Psychology from 1945 to 1984 (in 1945, it was part of the Facultad de Filosofía y Letras [Faculty of Philosophy and Literature], FFyL; in 1973, the

Faculty of Psychology was founded). He was a coordinator of clinical psychology (1966–1984); head of a laboratory at the Institute of Professional Orientation, position he held for two decades (1945–1965); tribune from which his academic contributions started under the psychoanalytic influence. During his career as a teacher, he taught Mexican culture, history, and personality; culture, psychoanalysis, and philosophy (with Ricardo Guerra); as well as seminars on psychoanalytic techniques and readings from Freud.

He evolved as the counselor for the College of Psychology from 1973 and for the Faculty of Philosophy and Literature of the same university, from 1988. In 1984 he was rewarded with the acknowledgment of Emeritus Professor at this university.

Santiago Ramírez had an outstanding participation as a member and in some cases as a founder and executive of several groups related to his expertise areas. He was a founder member of the Sociedad Mexicana de Neurología y Psiquiatría (Mexican Society of Neurology and Psychiatry). In 1952 he was part of the founders of the Grupo Mexicano de Estudios Psicoanalíticos (Mexican Group of Psychoanalytic Studies) which in 1978 changed its name to Sociedad Psicoanalítica de México (Mexican Psychoanalytic Society) (SPM). In that same year, he founded and directed the Psychoanalysis of the Cultural Expressions of the Mexican Seminar, benchmark for his relevant contributions about the psychology of the Mexican. In 1957 he joined the Asociación Psicoanalítica Mexicana (Psychoanalytical Mexican Association) (APM), in which he was also a founder and occupied several directorial positions, among those was the presidency in 1960. In 1971 he resigned from this Association. Afterward he took part and was a director and honorary member of the Asociación Mexicana de Psicoterapia Psicoanalítica (Mexican Association of Psychoanalytic Psychotherapy) as well. He was also distinguished as a member of the Asociación Mexicana de Sexología (Mexican Sexology Association) (1969).

During his facet as author, two books are noted reaching a remarkable international recognition: *The Mexican, psychology of his motivations* and *Childhood is Destiny*; publications which set

marked a universal input to the field of cultural psychology, since these helped understand the personality, philosophy, and psychic motivations either consciously and unconsciously of the Mexican in the middle of the twentieth century.

The book *A homosexual, his dreams*, in collaboration with Enrique Guarner and Isabel Díaz Portillo (1978), delved into a complex and controversial topic for the Mexican society at that time and set the basis to make “observable” sexual diversity, facing the living and dominant homophobic machismo of the Mexican culture, leaving at plain sight homosexuality as a common condition in numerous Mexican families, but commonly disregarded, censored, and repressed under the dominant Catholicism which rules the lives of Mexican people and determines their public and private behavior.

In his last book, *Reckoning* (1979), in co-authorship with Roberto Escudero and Santiago Ramírez Castañeda (his son 1945–1997), he makes a self-evaluation of his scientific work and the environment around the practice of psychoanalysis in México (Ocampo 2004).

As a lecturer he kept a formative and progressive profile for the career of psychology of the UNAM, as a true advocate of the theory and practice of psychoanalysis reaching an interdisciplinary status with his psychoanalytical, historical, and anthropological integrated approaches to the service of the understanding of the Mexican culture.

An important part of the contribution and discussion about cultural psychology of the Mexican carried out by Santiago Ramírez was his method of construction of knowledge based on his splendid work on social research through a vast collection of data, analysis, and interpretation. This established a substantial difference regarding the critical perception of the Mexican culture made by his predecessors like Samuel Ramos and Octavio Paz, with whom he discussed and debated and, in some ways, influenced his methods of understanding and explaining the psychology of the Mexican.

Some critics of his work have pointed that, despite he was not entirely aware of the complexity of the psychological and social diversity of the mentalities and cultures of México regarding the

regional and local variety which characterizes this nation, they acknowledge that his contributions determined new methodological basis, for example, how to build an intrinsic construction of the conduct and behavior of people identified with a specific culture and nationality. The view of Ramírez Sandoval about “traumas” and “signs” which bestow identity to Mexicans, surpassed the boundaries of the discipline of psychology, included as compulsory texts in the schools of social psychology, anthropology, sociology, cultural history, and philosophy.

His great input to the psychology in Mexico was constituted by diffusing into his lectures and writings the ideas and texts of Sigmund Freud (Sigismund Schlomo Freud 1856–1939) in México, as well as the introduction, teaching, and administration of projective tests like the Rorschach in the clinical and work environments. His instruction to cultural psychology to understand the personality, the unconscious, and the philosophy of the Mexican in the middle of the twentieth century is invaluable, reason why they have transcended Mexican frontiers, granting him international recognition.

Ramos de Araújo Pereira, Arthur

Born *Pilar (Alagoas, Brazil), 7 July 1903*

Died *Paris (France), 31 October 1949*

Fernando A. Figueira do Nascimento
University of São Paulo, São Paulo, Brazil

Keywords

Brazil · Social psychology · Psychoanalysis · Psychiatry · Anthropology

Arthur Ramos de Araújo Pereira was born in 1903, in Pilar, Alagoas. Between 1920 and 1949, he published some of the first works on psychoanalysis in the country and played an important role in the constitution of social psychology and in the studies on ethnic-racial relations in Brazil (Barros, 2005).

Despite his untimely death, at age of 46, he wrote an extensive work that reflected the important themes of his time. The criticism of biological determinism and the notion of racial inferiority, as well as the criticism of the authoritarian elements present in the country – especially after the establishment of the Estado Novo (New State) dictatorship (1937–1945), were linked to his analysis on the psychic dynamism in individuals and in specific social groups. In this way, he characterized himself as an intellectual who devoted his work not only to interpreting Brazil but to finding ways to overcome its main problems.

Arthur Ramos joined the Faculty of Medicine of Bahia in 1921, and 5 years later, he received the

title of Doctor in Medical-Surgical Sciences defending the thesis entitled *Primitivo e loucura* (*Primitive and madness*, 1926), published by the Official Press of the State of Bahia. While still at graduation, he presented to his colleagues the letters received from Sigmund Freud (1856–1939), Lucien Lévy-Bruhl (1857–1939), Eugen Bleuler (1857–1939), among others, and was recognized by his colleagues as a dedicated scientist and a modern intellectual (Barros, 2005).

In his thesis, he starts from a broad research project whose object is the relationship between the psychiatry and the folklore; therefore, he elaborated the concept of primitive of folkloric unconscious: a synthesis between the interpsychic and ancestral unconscious. Following these elaborations, he defended the hypothesis that neurotic and psychotic symptoms had a transgenerational and phylogenetic basis (Ramos, 1926). In this perspective, the psychotic symptoms would return the magical-animist ancestral elements that constitute personality (Pereira & Gutman, 2007).

At the end of the Medicine course, he took on the position of assistant physician at the Hospital São João de Deus, a psychiatric asylum in Salvador, Bahia, where he carried out studies on the psychopathologies that helped him write his thesis on *A sordice dos Alienados: ensaio de uma patologia da imundice* (*The sordidness of the Alienated: an essay on a pathology of filth*, 1928) (Ramos, 1928). In this text, starting from the reading of Freud and Karl Abraham (1877–1925), he resumed the idea that the primitive aspects of the psyche found representation in cultural formations such as folklore, and that the psychopathological symptoms, like the eschatology of the alienated, would correspond to fixation points in the psychosexual development (Ramos, 1928).

Still in 1928, he became a coroner of the Medico-Legal Institute of Bahia (Instituto Médico Legal da Bahia), which was later named after Nina Rodrigues (1862–1906), a physician from the state of Maranhão, Brazil. Under the influence of reading the texts from Nina Rodrigues and Professor Estácio de Lima (1862–1906) – his successor in the chair of Legal Medicine, in the Faculty of Medicine of Bahia, he began his research on black population and African religions, as well as

his studies on forensic psychopathology and psychoanalysis.

In 1934, he published *O negro brasileiro: etnografia religiosa* (*The Black Brazilian: religious ethnography*, 2001), where he analyzed the psychological mechanisms at work in supposedly primitive cultures, in children, and in psychopathological processes. He explained that the notions of “primitive” and “archaic” did not refer to a supposedly racial inferiority, but to psychological phenomena related to historical-cultural and educational processes in the formation of population (Ramos, 2001). His elaborations was again opposed to biological determinism, although, according to Dante Moreira Leite (1927–1976), it did not escape the racism of his time, as he understood religions of African origin and non-monotheists as primitive expressions of prelogical thought.

In that same year, at the invitation of Anísio Teixeira (1900–1971), director of the Public Instruction of the Federal District, Ramos moved to Rio de Janeiro, capital of the country at that time, and began to direct the Service of Orthophrenia and Mental Hygiene [SOHM] (Serviço de Ortofrenia e Higiene Mental – SOHM), an institution linked to the Department of Education and Culture of the Federal District (Departamento de Educação e Cultura do Distrito Federal), which aimed to diagnose and correct students’ maladjustments. The SOHM was characterized as a space for the application of child psychoanalysis in conjunction with mental hygiene (Mercadante, 2015).

In *A criança problema* (*The Problem Child*, 1949), he presented a set of clinical observations from the period he was at SOHM. Social maladjustment became a fundamental concept to the notion of problem child in contrast to the previous notion of abnormal child, which meant a shift from the role of the heredity to the role of social and family conditions as determinants for the study of personality and its maladjustment (Ramos, 1949). Ramos reaffirmed his distance from the racist conceptions by expressing to a certain extent the racial prejudice of his time in the analysis of the supposed inferiority complex of the proletariat or even in the cultural and

religious hierarchy based on psychological aspects (Mercadante, 2015).

Ramos joined the Brazilian League of Mental Hygiene (Liga Brasileira de Higiene Mental), founded in 1923 by Gustavo Köhler Riedel (1887–1934), in September 1933. In the Brazilian Files of Mental Hygiene (Arquivos Brasileiros de Higiene Mental), a periodical maintained by the League, he published three articles, between 1933 and 1935, referring to psychoanalytical theory and techniques that deal with the principles of mental hygiene. In these articles, in addition to considering therapeutic and corrective actions in the childhood as fundamental for the prevention of mental illness, he outlined the intersections, potentialities, and limits between mental hygiene, psychoanalysis, and education. More than that, as a whole, he presented the possibility that the guidance of teachers on psychoanalytical theories could facilitate the identification of children's maladjustments and the correction of mild cases in the school environment.

In 1935, he analyzed African myths and states that they could only be fully understood in light of psychoanalytical theories, especially from the point of view of family romance. The doctor from Alagoas reaffirmed the idea of an ancestral element in the constitution of the collective and individual psyche and also that the role of Social Psychology would be to present the ideological aspects that expressed the racial prejudice presented in the studies that took black population as an object.

In that same year, with the creation of the University of the Federal District (Universidade do Distrito Federal), he was invited by Anísio Teixeira and Afrânio Peixoto (1876–1947), a direct disciple of Nina Rodrigues and also a member of Nina Rodrigues School, to which Ramos was also affiliated, to take on the chair of Social Psychology. Between the months of July and December, he taught the discipline of Social Psychology at the School of Economics and Law and, in the next year, he published a book resulting from his course – one of the first books published in the country that aimed to systematize the discipline of Social Psychology within the social sciences.

Social maladjustment became the main object of the psycho-sociologist's work and, when considering the collective and individual factors, the author established different perspectives for its causality: hereditary aspects, social conflicts, as elaborated by Floyd Henry Allport (1890–1978), regression and fixation to primitive stages of development, inferiority complexes, the permanence in the psyche of ancestral images, psychic atavism, in addition to educational and affective factors. Thus, Ramos defined the approaches of his social psychology: psychiatry should deal with the studies of psychopathological processes, while psychoanalysis and the scientific foundations of psychology would make it possible to identify the psychic dynamism of social groups and individuals; finally, it would be a form of applied mental hygiene.

With the closing of the University of the Federal District (Universidade do Distrito Federal), which already had the participation of social scientists who gained prominence at the time, such as Gilberto Freyre (1900–1987) and Sergio Buarque de Hollanda (1902–1982), Ramos became professor of Anthropology and Ethnography at the National Faculty of Philosophy (FNFi) (Faculdade Nacional de Filosofia) at the University of Brazil (Universidade do Brasil), where he remained between 1939 and 1949 (Barros, 2005).

In 1939, Ramos received an invitation from the head of the Department of Sociology at the Louisiana State University, Thomas Lynn Smith (1903–1976), to teach a course and seminar on the relations between race and culture in Brazil. During this period, he established contact with several anthropologists, such as Franz Boas (1858–1942) and Melville Herskovits (1895–1963), and gave lectures and courses at the Universities of Yale, Minnesota, Harvard, Utah, and Columbia (Tamano, 2013).

In the 1940s, in addition to reevaluating his works, Ramos became closer to the cultural anthropology of Boas, who was Gilberto Freyre's teacher, "(...) although he maintained the use of social psychology and psychoanalysis in his analyses" (Tamano, 2013, p. 59). It is also during this period that he maintains close relations with Abdias Nascimento (1914–2011), the Black Brazilian Front (Frente Negra Brasileira), Black

Brazilian Union (União Negra Brasileira), and the Black Club of Social Culture (Club Negro de Cultura Social).

In 1949, with the collaboration of Paulo Carneiro (1901–1982), ambassador of Brazil in the United Nations between 1946 and 1958, and the Mexican intellectual James Torres Bodet (1902–1974), Director-General of UNESCO between 1948 and 1952, he was invited to direct the Department of Social Sciences [DSS]. In that same year, in Oslo, he chaired the Conference of the International Association of Sociology on behalf of the Director-General and, in UNESCO's General Conference, defended the program of the Department of Social Sciences for the following years, which affirmed the scope of his international prestige. It was in his short period as Director of the DSS that UNESCO created the UNESCO Project, a research project on ethnic-racial relations in Brazil that in the 1950s brought together Brazilian, American, and French sociologists and anthropologists, such as Roger Bastide (1898–1974) and Florestan Fernandes (1920–1995) (Maio, 2015).

In that same year, on a Sunday night, between the 30th and the 31st of October, Ramos passed away in Paris.

Keywords

Mexico · Social psychology · Mexican psychoanalysis

In 1909 he entered the Colegio de San Nicolás (Saint Nicholas College) in Hidalgo where he published his first works entitled “El Crepúsculo” (“The Twilight”) and “La Fotografía” (“The Photography”) in the magazine *Flor de Loto*. He began to study philosophy at the Michoacán school, leaving his studies unfinished due to political disturbances of the time due to the conspiracies of the Mexican Revolution and the death of his father in 1917. He returned to Mexico City where he began his studies in the area of Military Medicine, of which he gave up to return to the philosophical sciences at the Escuela de Altos Estudios de la Universidad Nacional de México (School of Higher Studies of the National University of Mexico) (Martínez, 2014).

Between 1919 and 1922, he taught Introduction to Philosophy (1919), Philosophical Problems (1921), and Ethics (1922) at the *Escuela Nacional Preparatoria* (National Preparatory School). In the *Normal de Maestros* (Normal School of Teachers), he taught the subjects of Logic and Ethics. He began to collaborate in the “New National Education Project” with the Mexican politician, thinker, and writer José Vasconcelos Calderón (1882–1959) who founded the *Antorcha* magazine, in which Ramos collaborated. Later he directed the magazine, before the exile of Vasconcelos from the country, being this the project where he developed his inclination for the Philosophy of Mexican Culture. Later Samuel

Ramos wrote the texts “*El caso Strawinsky*” (The Strawinsky Affair) (1929) and “*Filosofía de la vida artística*” (Philosophy of Artistic Life) (1950) in which he described the experience of meeting Salomón Kahan (1885–1965), a Polish pianist and music critic. He also collaborated with Benedetto Croce (1866–1952), who was an Italian writer, philosopher, historian, and politician, in the preparation of the translation of his *Breviary of Aesthetics* (Martínez, 2014).

Subsequently, in 1926 he made a trip to France where he studied the philosophy of Nicolai Hartmann, Max Scheler, Wilhelm Dilthey, Edmund Husserl, Martin Heidegger, and especially José Ortega y Gasset, in addition to learning German with the intention of a deeper study of German philosophy (Magallón, 2007). Upon returning, he was appointed Oficial Mayor de la Secretaría de Educación Pública (Senior Officer of the Ministry of Public Education) and, finally, Jefe del Departamento de Cooperación Intelectual (Head of the Department of Intellectual Cooperation) in 1940.

In 1927 he made an essay on Antonio Caso (1883–1946), a Christian Mexican philosopher, who would be rector of the Universidad Nacional de México (National University of Mexico) from 1921 to 1923, and a year later (1928), he published *Hipótesis* (Hypothesis) book in which his articles published between 1924 and 1927 were compiled; hence he wrote “La Cultura Criolla” (The Creolo Culture) (1931). In the course of 1932, he published *Psicoanálisis del mexicano* (Psychoanalysis of the Mexican) and *Motivos para una investigación del mexicano* (Motives for an investigation of the Mexican) (Martínez, 2014).

In 1934 he published one of the texts that defined specific characteristics about the profile and culture in Mexico, where Ramos is given the task of interpreting Mexican history and behavior since under his analysis culture is strongly influenced by the mental structure (psychic) and historical errors. That, for him, basically hides a feeling of inferiority rooted from the moment of the conquest, where the indigenous people allowed themselves to be conquered because of this “passive” nature, although it does not exactly

mean a real inferiority. Also, it portrays the passage through independence, where the Mexican people sought to imitate the European model, forgetting the true needs of this society.

For 1920 after the Mexican revolution, it is when the Mexican begins to be interested in himself and by his own means; however, the search towards the unknown and a hostile nationalism without objectives and isolated to the rest of the world begins. Ramos describes a type of Mexican whom he calls *El Pelado* (macho) to refer to a distrustful Mexican closed off from criticism and paralyzed to self-criticism due to his high susceptibility, since to strengthen his self-perception it is necessary to convince himself of inferiority of others to him, which increases his thirst for power (Zabludovsky, 1991).

In 1945 he represented the Mexican Government in the UNESCO Constituent Conference, in the first general assembly of UNESCO in 1946 and in 1951 in the first meeting of the Inter-American Council. In 1940 he published *Hacia un nuevo humanismo* (Towards a new humanism) and in 1941 *Veinte años de educación en México* (Twenty years of education in Mexico), where it submits to a critical review the educational projects that had been launched during the previous years. In this same year, he created the chair of History of Philosophy in Mexico at the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters) of the Universidad Nacional Autónoma de México (UNAM), where he entered in 1941. In 1943 he published *Historia de la Filosofía en México* (History of Philosophy in Mexico). In 1958 he produced a compilation of Esthetics Studies from an analytical perspective, which would be published posthumously. He began his studies in the area of ontology of the Mexican, which has earned him the title of initiator in the current called *Filosofía del mexicano* (Philosophy of the Mexican) (El Colegio Nacional, 2019).

In 1944 he obtained his Ph.D. in Philosophy from the UNAM. He directed the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters) from 1944 to 1952. In 1954 he was appointed Coordinator of Humanities at UNAM, a position that he would hold until his death. Between 1954 and 1959 he participated with Eli

de Gortari and Guillermo Haro (1955) in the formation of the *Seminario de Problemas Científicos y Filosóficos* (Seminar on Scientific and Philosophical Problems); the first publication of this seminar is his own contribution entitled *Relaciones entre la filosofía y la ciencia* (Relations between Philosophy and Science). One year later (1956), he traveled to Puerto Rico as a UNAM delegate to the *Primer Seminario sobre la Historia de las Ideas en América* (First Seminar on the History of Ideas in America), and in 1957 he made a visit as an assistant to a Conference in Washington and the XII World Congress of Philosophy in Venice, in September 1958 (Martínez, 2014).

In conclusion, the writings of Samuel Ramos contribute to psychology by understanding what is “to be Mexican,” the problem of the inferiority complex, and the “feelings of inferiority” of the Mexican, who expresses himself, in the desire to disguise himself as “foreigner” and not accepting him as he is. This is understood as not being “oneself” but a “strange” other.

Argentina

Luis María Ravagnan was a leading figure in the field of psychology and philosophy in Argentina during the 1950 and 1960 decades. Ravagnan played an important role in the reception and diffusion of authors of French philosophy, particularly about the existential phenomenology, which contributed to the construction of the discourses of psychology in the 1960s (Dagfal, 2012). Likewise, his work and influence in the creation of the Psychology Program at the Universidad Nacional de La Plata (National University of La Plata) (UNLP) was highlighted.

In 1940, he obtained the degree of Professor of Philosophy from the Instituto Nacional del Profesorado (National Institute of Professorship), and, according to Dagfal (2009), in 1947 he graduated as a doctor in odontology at the Facultad de Medicina de la Universidad de Buenos Aires

(School of Medicine of the University of Buenos Aires). His education in these two different fields probably shaped his performance.

His deep commitment to university life was reflected in his prolific publications, in his teaching work, and in his contributions from management tasks. His passion in education and transmission of knowledge, as well as the ability to motivate his students, has left a vivid impression: “. . . his classes were crowded, we waited on time to listen to his words” (Laría, 2015, p. 16).

In 1957, he was a professor at the Facultad de Humanidades y Ciencias de la Educación de la Universidad Nacional de La Plata (Faculty of Humanities and Educational Sciences of the National University of La Plata), teaching introductory courses on Psychology and Contemporary Psychology. In 1964, he was appointed Head of the Department of Psychology of the UNLP, and during his management the *Revista de Psicología* (Journal of Psychology) was created. Between 1956 and 1958, he was in charge of the Dirección de Psicología Educacional y Asistencia Social Escolar de la Provincia de Buenos Aires (Educational Psychology and School Social Assistance Direction of Buenos Aires Province) (González, 2012).

Ravagnan’s role in the creation of the undergraduate Psychology Program at UNLP deserves certainly particular consideration.

In 1906 at the UNLP, the Pedagogical Section of the Faculty of Legal Sciences was created, directed by Víctor Mercante (1870–1934). This one attracted the interest in an experimental psychology applied to educational problems, which combined laboratory experiments with the use of statistical methods (Dagfal, 2014). This characteristic, which defined the beginning of the psychological studies at UNLP, was one of the factors that shaped the characteristics of the beginning of the professionalization of psychology at this university and the context in which Ravagnan began his influence.

In fact, experimental psychology was gradually occupying a less prominent place in scientific pedagogy. The Pedagogical Section became the Faculty of Educational Sciences in 1914 (Dagfal, 2014). The introduction of new professors in the

1920s and 1930s defined a more humanistic than scientific vocation, linked to more philosophical positions, and in the 1940s it seemed to be related to a “religious humanism” where Catholic existentialism syncretized Sartre with Saint Thomas Aquinas (Dagfal, 2014). During this period, the presence of important professors stood out, and they became prominent references for that time.

In May 1957, the Dean of the Faculty of Humanities and Education Sciences appointed a commission dedicated to draw up the first curriculum for the Psychology Higher Teacher Program. Such commission was integrated by some of the most prominent professors at that Faculty: Ravagnan, Fernanda Monasterio (1920–2006), Juan Cuatrecasas (1899–1990), and Angel Garma (1904–1933) (Dagfal, 2012; Vadura & Fernández, 2013). What seems to be undoubted (Dagfal, 2014) is that both the Faculty of Humanities and Education Sciences and the Educational Psychology and School Social Assistance Direction of Buenos Aires Province came together to demand the creation of a university program in psychology. This project was achieved in 1958 (González, 2008).

It is to highlight that the organization of the Psychology Program at UNLP was intended “to contribute to the characterization and solution of the large number of problems that arise in all the activities and conflicts inherent to man” (Monasterio et al., 1961, p. 247; translation is mine). Considering that the country needed psychologists, universities should “be in charge of educating them because they are the highest centres of cultural activity” (Monasterio et al., 1961, p. 248; translation is mine).

Ravagnan played a prominent role in the beginnings of the Psychology Program at the UNLP and in the teaching of the first courses. His teaching of the courses of Psychology I, Introduction to Psychology, and Contemporary Psychology showed theoretical plurality and the richness of his imprint in the field of philosophy. This was possible due to his extensive knowledge of French culture and authors, such as Bergson and Merleau Ponty, as well as the scientific and

humanist project and also his interpretation of psychoanalysis, which was biased by his adscription to existentialism and phenomenology. He integrated all these approaches in the comprehension of the behavior, which he proposed to be an “I-You” experience (Klappenbach, 2009; Dagfal, 2014).

From the very beginnings of the UNLP Psychology Program, it was provided a balanced and comprehensive training in the knowledge of the “individual being,” with the aim of helping in the realization of the person (Monasterio et al., 1961).

Ravagnan’s intellectual trajectory, with his contribution to the field of philosophy and psychology, was of great relevance. Perhaps one of the distinctive characteristics of Ravagnan was the relationship and importance that he gave to philosophy in the general framework of science, and particularly in the framework of psychology, considering the close relationship between science and philosophy both in its contents and its methods, as he stated in his works (Ravagnan, 1948, 1965).

Ravagnan’s psychological approach, enriched by the speculative contributions of an anti-positivist philosophy (Vilanova, 2003), was opposed to any conceptual reductionism, in the attempt to understand man and his behavior. His anthropological conception recognized the biopsychological totality in relation to the world (Ravagnan, 1952). From this point of view, he proposed to reintegrate aspects of psychology, which until that moment had been disaggregated because they presented segmented aspects of the human being.

Luis María Ravagnan, was a man of great trajectory and prolific in actions committed to the field in which he worked.

Reca, Telma

Born **Buenos Aires, (Argentina), 8 January 1904**

Died **Buenos Aires, (Argentina), 16 June 1979**

Ana Briolotti

Consejo Nacional de Investigaciones Científicas y Técnicas, Buenos Aires, Argentina

Keywords

Argentina · Psychiatry · Psychology · Mental hygiene · Child guidance

Argentine physician, specialized in child and adolescent psychiatry. In contrast to early twentieth-century psychiatry, she emphasized the influence of environmental conditions on psychological development and on the potential for adaptation to social life. She developed a psychotherapeutic model inspired by the principles of Mental Hygiene, which in turn incorporated consideration of the subject's inner conflicts. She planned to integrate medicine, psychology, and psychoanalysis under a single conception of scientific knowledge based on plurality of approaches and theories, progress, and critical perspective.

She had an initial interest in arts and philosophy but then she studied medicine at Universidad de Buenos Aires (UBA) [University of Buenos Aires] at a time when women's access to and success in a medical program was almost unheard of (Ramacciotti & Valobra, 2011; Reca, 1979). She graduated in 1928 and between 1929 and

1937 was a physician at the UBA's Hospital de Clínicas [Clinical Hospital] in the Chair of Paediatrics under Professor Mamerto Acuña (1875–1957). Her interest in psychology and child and adolescent psychiatry allowed her to link her humanistic leanings with her medical training. In 1930, she travelled to the United States on a scholarship from the Institute of International Education and Vassar College, New York, where she obtained a Master of Arts in 1931. There she researched juvenile delinquency and visited Juvenile Courts and Child Guidance Clinics based on those experiences she completed her doctoral dissertation, "Juvenile Delinquency in the United States and Argentina," submitted to the UBA in 1932. The supervisor of her PhD was the psychiatrist Nerio Rojas (1890–1971) and it enabled her to earn the Eduardo Wilde Prize. Her thesis expounded a conception of juvenile delinquency as a socio-medical problem linked to the living conditions of the poorest sectors and proposed solutions based on social and educational reforms (Reca, 1963; Stewart de Costa et al., 1992).

Reca showed from the beginnings a certain social concern that led her to approach the problem of child development based on the ideas and practices of the Mental Hygiene Movement (Borinsky, 2009). Between 1932 and 1937, she taught on the Hygiene Visitors course of the Institute of Hygiene in the UBA's Faculty of Medical Sciences and eventually became the Institute's deputy director. In 1934, she opened the Mental Hygiene Clinic of the Chair of Paediatrics, located at the Clinical Hospital. The Clinic was a pioneering initiative in outpatient care for a wide range of behavioral disorders (enuresis, learning difficulties, eating disorders) that could not be classified as cognitive deficits (retardation, mental debility, idiocy) or serious breaches of the law. In its early days, the clinic's work followed the model of the United States' Child Guidance Clinics. It proposed treatment focusing on prevention of and intervention in environmental factors through prescriptions and counseling. In 1937, Reca published *Personality and behaviour in the child: The principles of mental hygiene as*

guidelines for education in childhood, her first parent-oriented work to be widely disseminated.

Between 1937 and 1948, she headed the Abandoned, Sick and Abnormal Children Division (later referred to as the Second Childhood Division) of the Dirección de Maternidad e Infancia [Directorate of Maternity and Childhood] of the Departamento Nacional de Higiene [National Department of Hygiene] (Foradori, 1939). In such position, she promoted the development of technical reports on the situation of child protection institutions and conducted research into the neuropsychological development of children attending them in order to plan far-reaching social policies (Briolotti, 2015; Ramacciotti, 2018).

Her training in the United States continued in the following decades. Between December 1942 and April 1943, with Rockefeller Foundation support, she visited the Judge Baker Guidance Center in Boston, the Philadelphia Child Guidance Clinic, the Department of Paediatrics at New Haven General Hospital in Yale University, the Cornell Medical Center, and the Department of Paediatrics of Johns Hopkins University in Baltimore, directed by child psychiatrist Leo Kanner (1894–1981).

In 1942, the Mental Hygiene Clinic expanded its facilities and was renamed the Centre for Psychology and Psychiatry. Reca received Rockefeller Foundation funding to research the findings of the psychotherapeutic treatments performed there. She published results of this work in 1951 in the book *Psychotherapy in Childhood*, which expounded a psychotherapy aimed at releasing affective obstacles, conflicts, and blocks, while, at the same time, educating and re-educating parents (Reca, 1943). The progressive incorporation of psychoanalytical ideas into her model accentuated Reca's interest in child personality and the way children processed external influences. The focus was thus placed on children's inner worlds in order to transform their relations with the outside world. In any case, this idea of transforming the subject's inner world coexisted in Reca's model with the need to introduce environmental changes (family, school, social life, and so on) (Borinsky, 2009).

In 1955, Reca again visited the United States, where she worked as a supervising psychiatrist at St. Luke's Hospital in Columbia University and the Northside Center for Child Development in New York. After her return to Argentina in 1957, she joined the committee of professors responsible for developing the project to set up the undergraduate Psychology program at the UBA. Between 1957 and 1966, she was the Full Professor in the chairs of Childhood and Adolescent Psychology and Clinical Child Psychology. In those years, the Centre for Psychology and Psychiatry separated from the Chair of Paediatrics to become the UBA's Department of Development Age Psychology and Psychopathology, home to the chairs of Child Psychiatry in the postgraduate Specialization in Psychiatry and of Clinical Child and Adolescent Psychology in the undergraduate Psychology program. In 1966, Reca and other colleagues left the university after the military coup led by General Juan Carlos Onganía (1914–1995). In 1967, she founded the Centro de Estudios Médico-Psicológicos de la Niñez y Adolescencia [Child and Adolescent Medico-Psychological Study Centre] (CEAM) in order to continue privately her care, teaching, and research activities started at the university, interrupted by the military regime (Reca, 1963; Stewart de Costa et al., 1992).

During the 1960s, she developed a theoretical approach which she characterized as *genético-dinámico-profundo* [genetic-dynamic-deep] and systematized in her work, *Psychology, Psychopathology, Psychotherapy* (1973). In such approach, *genetic* referred to the total development which, unlike in psychoanalysis, did not focus exclusively on psychosexual development and the first 5 years of life. The *dynamic* dimension postulated the existence of an interplay of forces in three areas: the outside world, the child's inner world, and the inter-relationship of both of them. Last, *deep* referred to the consideration of lesser-known, difficult-to-access aspects of the mind. From such a perspective, Reca characterized the therapeutic relationship as a corrective and constructive emotional experience intended to promote the expression of deep conflicts (Stewart de Costa et al., 1992).

Telma Reca promoted the development of psychiatry and child and adolescent psychology in Argentina. She made fundamental contributions to the study and treatment of psychopathological problems in children and adolescents, which, until the 1930s, had been almost exclusively interpreted in terms of antisocial behavior or mental impairment. She introduced and disseminated the concept of dynamic psychopathology in Argentina, combining psychoanalytic, experimental, and genetic approaches. Under her administration, the Centre for Psychology and Psychiatry became a sought-after training locus for those interested in child psychiatry and its in-take included students from Chile, Brazil, and Colombia. It also became one of the professional spaces for the training and practice of the first generations of undergraduate psychology program students and young graduated psychologists from the UBA.

She began her undergraduate studies in Psychology in 1963, at the then Colegio de Psicología (College of Psychology) of the Facultad de Filosofía y Letras, FFyL (Faculty of Philosophy and Humanities) at the Universidad Nacional Autónoma de México, UNAM (National Autonomous University of Mexico). In addition to a bachelor's degree (1969), she obtained a master's degree in Social Psychology (1985) and a doctorate in Psychology (2002) at the Facultad de Psicología (Faculty of Psychology) (UNAM), where she received the Medalla “Alfonso Caso” [“Alfonso Caso” Medal] for her brilliant performance as the most distinguished graduate. All these studies were obtained with an Honorable Mention and a Suma Cum Laude Bachelor's Degree.

She has distinguished herself for her extensive academic and scientific career at UNAM,

developed particularly in Social Psychology, in which she has worked tirelessly for more than 50 years.

Reidl began her teaching career in 1969 as a temporary teacher; later in 1970 he was a part-time teacher. And from 1971 she was a full-time professor, becoming Professor C of the División de Estudios Profesionales (Division of Professional Studies) of the Facultad de Psicología (Faculty of Psychology) of the UNAM, from 1990. Since 2005, she was distinguished with the D level in the Programa de Primas al Desempeño del Personal Académico de Tiempo Completo (Premium Program to the Performance of Full-Time Academic Staff, PRIDE). Her high level of productivity and the quality of her research work made her a creditor of level II in the Sistema Nacional de Investigadores (National System of Researchers, SNI) of the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology, CONACYT), since 2004.

She has received several awards and recognitions, among them Premio Dr. Rogelio Díaz Guerrero (Dr. Rogelio Díaz Guerrero Award) for Psychosocial Research and Ethnopsychology (2010) (granted by the Asociación Mexicana de Psicología Social (Mexican Association of Social Psychology, AMEPSO), Distinción de la Cátedra Extraordinaria “Maestro Ezequiel A. Chávez” (Distinction of the Extraordinary Chair “Maestro Ezequiel A. Chávez”) from the Universidad Latina de México (Latin University of Mexico), Celaya, Guanajuato, 2009; Recognition for the outstanding work as president of the Asociación de Facultades, Escuelas e Institutos de Psicología de América Latina (Association of Psychology Faculties, Schools and Institutes of Latin America), Cuba, 2009, and Premio Nacional de Psicología (National Award of Psychology) by the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for the Teaching and Research in Psychology, CNEIP) in 2007.

Diversification in different fields and paradigms has allowed her to be an excellent high-level teacher and researcher who has been able to articulate evaluation, research, and dissemination. Reidl began her work in General Psychology in

high school and then continued in social psychology and in cognitivism, having, as lines of research, emotions and culture, measurement and evaluation, and health psychology.

She has made fundamental contributions to the three substantive functions of UNAM: teaching, research, and dissemination of culture. In teaching, her career at UNAM began in 1969; subjects were taught at the Colegio de Psicología (College of Psychology) of the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) of the UNAM until 1990. As of September 27, 1990, she changed her assignment to the División de Estudios de Posgrado (Division of Postgraduate Studies) at the Facultad de Psicología (Faculty of Psychology), UNAM. Up to now, she has taught more than 240 curricular courses at the undergraduate; master’s degree levels in the social, clinical and health areas; and in the doctorate both at the Facultad de Psicología (Faculty of Psychology) and at the Facultad de Medicina (Faculty of Psychology) at UNAM on very diverse topics related to the Methodology and Statistics areas, with an emphasis on measurement and evaluation, research methodology, and multivariate designs.

Her vocation for teaching and research has allowed her to train high-level human resources and work independence; she has directed 147 theses of which 91 are for bachelor’s degrees, 44 for masters, and 12 for doctorates, many of which have received honorable mention. She has participated in more than 122 postgraduate thesis committees and as synodal in numerous undergraduate (222) and postgraduate (142) exams.

She is fluent in several languages, Danish, English, and Russian which led her from an early age to translate and technically revise books that were necessary to promote Psychology in Mexico [e.g., she translated the book *Conceptual Approach to Behavioral Research* by Fred Nichols Kerlinger (1910–1991; Kerlinger, 1981) and did the technical revision of the book *Fundamentals and Techniques of Attitude Measurement* by Robyn Mason Dawes (1936–2010; Dawes, 1975)].

Her strong background in psychology met many of the expectations of a high standard psychologist. In the area of dissemination, she has presented more than 200 lectures at national and international conferences, which have had an impact on the training of undergraduate and graduate students within the different fields of psychology.

The training of human resources that have spread psychology as a science and profession also stands out. With this work in the training of human resources, she has been a reference in Psychology in different national and international institutions and in the field of training and research in the area, positioning herself as a high-level researcher in the country and internationally.

Regarding the contribution in research, she has trained, advised, and collaborated in the creation of research teams that now work independently and successfully in various national and international universities. Her vocation for research and teaching has borne many fruits. To date, she has developed 16 research projects funded by PAPIIT, CONACYT, and the Fundación UNAM (UNAM Foundation), in which she has worked alongside undergraduate, master's, and doctoral students, who have been incorporated into them and have had a great social impact.

Her outstanding career in research and teaching is also reflected in her numerous publications. She is the author of 70 articles and 55 book chapters and has published 64 books, as well as 60 extensive abstracts. Her books include *Juventud, cultura y consumo de sustancias en contextos escolares* (Youth, culture and substance use in school contexts) (Reidl & González, 2011), *Celos y Envidia: emociones humanas* (Jealousy and Envy: human emotions) (Reidl, 2005), and *Teorías de la Personalidad* (Theories of Personality) (Cueli & Reidl, 1972/Cueli, Reidl, Martí, Lartigue & Michaca, 1999, Fifth reprint). Many of them are currently classic textbooks in psychology and marked a milestone in the history and teaching of Psychology in Mexico.

Her outstanding work also includes her participation in numerous collegiate bodies of the University, such as the academic committees at the

Facultad de Psicología (Faculty of Psychology), Facultad de Estudios Superiores Zaragoza (Faculty of Higher Studies Zaragoza, FES-Zaragoza), Comisiones Programa de Primas al Desempeño del Personal Académico de Tiempo Completo (Commissions for the Performance Bonus Program for Academic Time Staff Complete, PRIDE), Programa de Apoyo a Proyectos de Investigación e Innovación Tecnológica (Support Program for Research and Technological Innovation Projects, PAPIIT), National Council of Science and Technology, CONACYT, Fondo Sectorial de Investigación en Salud y Seguridad Social (Sectorial Fund for Research in Health and Social Security), Secretaría del Trabajo y Previsión Social (Ministry of Labor and Social Welfare), Programa de Apoyo a Proyectos Institucionales para el Mejoramiento de la Enseñanza (Project Support Program Institutions for the Improvement of Teaching, PAPIME), and Programa de Apoyo a la Incorporación del Personal Académico de Tiempo Completo (Support Program for the Incorporation of Full-Time Academic Staff, PAIPA). She has been a member of various ruling commissions, both in the Faculty of Psychology and in other entities of the UNAM, within these collegiate bodies. She has also been representing the Faculty of Psychology, as a jury for various awards and committees, and has been part of editorial committees in various magazines and has collaborated in the organization of national and international academic meetings.

She has also actively participated in the review of study plans and programs at the Faculty of Psychology, both undergraduate and graduate. Note that during her tenure the new study plan (2008) for the Facultad de Psicología [Faculty of Psychology] was approved. She served as a Member of the Comisión del Cambio Curricular (Curriculum Change Commission) (2008). She participated in the process of reviewing the Operational Norms of the Programa de la Coordinación del Programa de Maestría y Doctorado en Psicología (Coordination Program of the Master's and Doctoral Program in Psychology) (2008). She developed the program of nine subjects in the field of Clinical and Health Psychology (2008), participated in the process of Adaptation of the Study

Plans of the Coordination Program of the Master and Doctoral Program in Psychology (2008), and participated in the Commission for Expanded Curriculum Change Faculty of Psychology, at National Autonomous University of Mexico (2006). This commitment to the institution and her contributions to programs based on her vast experience have led to the spread of Psychology in Mexico nationally and internationally.

Reidl has actively participated in different academic societies, such as the Sociedad Mexicana de Psicología AC (Mexican Society of Psychology, SMP), the American Psychological Association (APA), the Asociación Mexicana de Psicología Social (Mexican Association of Social Psychology, AMEPSO) (President 2008–2010), the Colegio de Psicólogos Sociales (College of Social Psychologists) of the Faculty of Psychology of the UNAM, the Colegio Nacional de Psicólogos (National Board of Psychologists, CONAPSI) (President, 2003–2005, and founding member), and the Sociedad Interamericana de Psicología Interamerican Society of Psychology, SIP).

She has held various academic-administrative positions, with a high commitment and responsibility for the UNAM in general and for the Faculty of Psychology in particular, such as Secretaria del Profesorado del Colegio de Psicología de la Facultad de Filosofía y Letras (Secretary of the Faculty of the College of Psychology of the Faculty of Philosophy and Humanities) (1970–1972); Secretaria Auxiliar de la Coordinación del Colegio de Psicología (Assistant Secretary of the Coordination of the College of Psychology) at the Faculty of Philosophy and Humanities (1972–1973); Secretaria Escolar (School Secretary) of the Faculty of Psychology (1978–1979); Jefe del Departamento de Psicología Social de la División de Estudios Profesionales (Head of the Department of Social Psychology of the Division of Professional Studies) (1979–1982); Coordinadora de Investigación del Departamento de Psicología Social. Facultad de Psicología. División de Estudios Profesionales (Research Coordinator of the Department of Social Psychology. Faculty of Psychology. Professional Studies Division) (1986–1990);

Secretaria General (General Secretary) of the Faculty of Psychology, UNAM (1990); Directora (Director) of the Faculty of Psychology, UNAM (2001–2009); and Coordinadora del Consejo Académico de Ciencias Sociales (Coordinator of the Academic Council of Social Sciences, CAACS), UNAM (2011–2016).

Her constant work in teaching and research was not only limited to the work itself but also left a personal and close mark on each of her students, for her human and maternal treatment and she knew how to amalgamate work and personal relationships between peers.

In 2020, she retired from UNAM, where her work left a legacy and a deep mark on the life and academic work and research of Psychology, which has transcended nationally and internationally.

Reidl has stood out for her work in psychology, the influence of her thought and work, and research and activities that contributed to the beginning and development of psychology, whose current social impact is standing.

Rey Álvarez, Sara

Born *in Uruguay, July 20, 1894*

Died *in Uruguay, August 20, 1949*

Santiago Andrés Navarro
Universidad de la República, Montevideo,
Uruguay

Keywords

Uruguay · Feminism · Pedagogy ·
Psychoanalysis · Literature

Sara Rey Álvarez studied philosophy at the Institut de Hautes Études (Institute of Advanced Studies) from Brussels and psychology at the London University in the second half of the 1920s. In 1928 she returned to Uruguay. These first years since her return would be the ones in which she would have the most public visibility, due to her participation in the suffragist movement, becoming the general secretary of the Alianza Nacional de Mujeres (Women National Alliance), hereditary organization of the Consejo Nacional de la Mujer (Women's National Council). Her education allowed her to occupy a relevant position in the State as a member of the Patronato de Delincuentes y Menores (Patronage of Criminals and Minors) between 1929 and 1933 (Scarone, 1937).

She was very close to the leader Dr. Paulina Luisi (1875–1950), who found in Sara Rey a spokesperson in the different discussions in the feminist movements. In 1932, when the feminine vote was approved Luisi, undisputed leader of Uruguayan feminism, was in Europe, and Sara Rey was one of the women that subrogated her leadership in Uruguay. In the same year she founded the Partido Independiente Demócrata Feminista, PIDF (Independent Democratic Feminist Party), strongly linked to the magazine *Ideas y Acción* (Ideas and Action), instrument in which Sara Rey deployed through good part of her political positions. The creation of the party distanced her from Paulina Luisi's positions, who prioritized other strategies in order to continue with women's political conquests. The PIDF in the beginning was close to the then President and later Dictator Gabriel Terra (1873–1942) through the personality of Sofia Álvarez Vignoli de Micheli (1899–1986) who participated in the beginning of the party. Nevertheless, both in Sara Rey's resignation to the Patronage of Criminals and Minors three months after the putsch in 1933, and in the nonappearance of Sofia Álvarez Vignoli in the lists of PIDF in the elections of 1938, a distancing between Terra and the PIDF can be observed (Lavrin, 1995). The party presented lists in the provinces of Montevideo and Canelones in the elections of 1938, obtaining a meager vocation being the end of the party and

also of the public participation of Sara Rey in the partisan political terrain. Her participation in feminist movements has been mainly resumed by historians since then (Bonansea-Aguirre, 2017; Cuadro-Cawen, 2016; Lavrin, 1995).

In the psychology field she published about ten articles in education and pedagogy journals throughout her life. Already in her first publication of 1925 titled *Psychologie différentielle des sexes* (Differential psychology of sexes), she presents an essayist style based on putting different authors in tension around a subject. Such strategy can be found in all her academic work. In the three lectures she gave at the Universidad de la República (University of Republic) in 1928 upon her return to Montevideo it is possible to find an interest in incorporating psychological knowledge and practices into different institutions within the public administration, fundamentally in the education field.

Both her manual entitled *Introducción a la Psicología* (Introduction to Psychology) (1932) and *Curso Elemental de Filosofía* (Philosophy Elemental Course) (1947) showed an intellectual who was in contact with the theoretical and conceptual developments of her time in the fields of psychology, philosophy, and pedagogy. Such updated knowledge on her fields seemed to come from her early education in Europe. William James (1842–1910), Henri Bergson (1859–1941), William McDougall (1871–1938), Théodule-Armand Ribot (1839–1916), Alfred Binet (1857–1911), Edward Titchener (1867–1927), and Sigmund Freud (1856–1939) are a few of the most referenced authors in her published work and her lectures, demonstrating a deep knowledge of their works. Sara Rey Álvarez emphasized the tensions and differences in the different approaches, and sometimes offering its own synthesis.

In the case of her reading of Sigmund Freud, at least two aspects were original. On one side, her essay *El freudismo en la literatura contemporánea* (Freudism in contemporary literature) (Rey Álvarez, 1929) would probably be the first national publication in which ties between psychoanalysis and literature are established, without resorting to the enforcement of

psychoanalytic theories to literature characters or authors. Her focus is observing the influence of Freud's work in European literature in the beginning of the twentieth century. On the other hand, unlike medicine and psychiatry at the time which mainly incorporated or discussed psychoanalysis as a psychological knowledge isolated from its method, Sara Rey Álvarez emphasized in 1932 that the greatest accomplishment that Freud made was developing a therapeutic and investigation method for the knowledge of unconscious processes.

Despite the complexity of her works and the consistency and breadth of her education, she did not play a leading role in the institutionalization of psychology in Uruguay, and her work was not taken up again in the field of psychology until the present day.

Her position contrary to dogmatism, especially in the area of religion and knowledge, along with some positions initially contrary to the decriminalization of abortion, could lead to categorize her work inside of liberal feminism. Nevertheless, in her last work *Antinomias de la convivencia humana* (Antinomies of human coexistence) (1944), a commitment to cooperativism and a distrust toward the market and political organizations under the form of parties can be found, which could introduce nuances in such categorization.

She published two realistic novels *Proyecciones* (Projections) (1936) and *Refugio en el bullicio* (Refuge in the bustle) (1942), both awarded by the Ministerio de Educación Pública (Public Instruction Ministry). In them she explored from a realistic and psychological point of view the life of women in the first half of the twentieth century, paying special attention to the topics of education, erotism, and power in relationships. Both novels included aspects strongly linked to her own biography, such as discussions with the Catholic Church and with men within political parties.

She served as a philosophy and psychology teacher in high school education and in the training of teachers.

Sara Rey Álvarez collaborated significantly in the psychology discussion in different areas of

society. In her specific work in the field of psychology, in her participations in the first line of public debate about women's place, in her academic work and political participation in the field of education, in her literary review essays, and in her fiction works, she promoted the validation and incorporation of psychological knowledge in multiple settings of Uruguayan society on a par with other scientific knowledge.

Son of Armand C. Rey (?-?) and Amélie L. Egly (?-?), married to Brazilian educator Teresinha Rey-Pinto (1929-), founder of the Instituto Pestalozzi de Goiânia (Pestalozzi Institute of Goiânia), in the State of Goiás, Brazil. André Rey's mother, an educator, was interested in the ideas of the German pedagogue Friedrich Froebel (1782–1852), and encouraged her children, André and his sister Annie, to interact with nature from an early age. As a child, Rey practiced mountaineering and cultivated nature observation, having set up a laboratory in his home for dissecting small animals.

André Rey obtained a professor's diploma from the *École Normale Vaudoise* in 1926, and subsequently licentiates in the Social Sciences – emphasis on Pedagogical Sciences (1929) and Sociology and History (1930) from the *Université de Lausanne*, Switzerland. Between 1929 and 1935, he became a volunteer assistant of Édouard Claparède (1873–1940) at the *Institut Jean-Jacques Rousseau*, at the time already part of the *Université de Genève*, substituting Helena Antipoff (1892–1974), who had withdrawn to take up professional positions in Brazil. At that time, he collaborated with the master in the publication of the periodical *Archives de Psychologie* and deepened his studies and research in experimental

psychology taking on different themes such as the illusion of weight in abnormal subjects and the maternal instinct in Guinea pigs. From 1933 on, he led the medical-psychological consulting section of the *Institut Jean-Jacques Rousseau*. He defended his doctoral thesis in 1934 at the *Université de Genève*, having adapted tests utilized on primates to study practical intelligence in children. The thesis was published in Paris by Alcan Publishers, in 1935, with a preface by Jean Piaget. The methods of study of the cognitive processes developed in it were also utilized in the study of cranial traumas at the *Hôpital Cantonal de Genève* (Geneva Canton Hospital). He then became a *privat-docent* at the *Faculté de Lettres, Université de Genève*, charged with the courses on psychological techniques at the *Institut Rousseau*, through recommendations from Édouard Claparède and Pierre Bovet (1878–1965).

In 1937, he did an internship at the physiological psychological laboratory directed by Karl Lashley (1890–1958), at Harvard University, with a scholarship from the Rockefeller Foundation for Medical Sciences. Returning to Geneva, he continued to collaborate at the clinical psychological laboratory of the neurological service of the *Hôpital Cantonal de Genève* (Geneva Canton Hospital), having succeeded Claparède in the direction of this Laboratory after 1940. He then dedicated himself to clinical psychology, to applied psychology and to professional guidance, and built up a series of instruments and an original methodology for psychological examination, a sort of “fine neurology,” in his own words (Rey, 1958, 1990). As a member of the faculty of the *Institut Rousseau*, he contributed to the establishment of a new program at the University, entitled “Psychology applied to the clinical treatment of children,” focused on professionalization in applied psychology, offering disciplines in the fields of techniques of psychological examination, psychology of the child, and clinical psychology. At that time psychology was set apart from pedagogy in the ambit of the *Université de Genève*, initiating the process of the building of the profession of psychologist, in view of the scientific evolution of the area, social demands, and the need to legitimize the work of professionals

(Hofstetter, 2010). Rey then published, in the first issue of the *Revue suisse de psychologie et de psychologie appliquée*, an article in defense of the formation of psychologists at university level, and of the legal recognition of the profession.

In 1943, he became Secretary of the *Société Suisse de Psychologie*, under the presidency of Jean Piaget (1896–1980). Following that, he published in 1947 the two volumes of his studies on psychological insufficiency – *Études des insuffisances psychologiques* (Vol. 1: *Méthodes et problèmes*, Vol. II: *Le diagnostic psychologique*). His leadership of the movement for the professionalization and qualification in psychology was responsible, in 1949, for Rey being appointed professor of Applied Psychology at the *Université de Genève*, and successively associate professor at the Faculty of Science (1955) and titular professor of Physiological Psychology at the Faculty of Medicine at the same university. He also acted as counsellor at several non-university institutions, such as the Geneva *Office de Formation et d’Orientation Professionnelle* (Professional Guidance and Training Office) and the *Association Genevoise de Parents d’Enfants Mentalement Déficients* (Genevan Association of Parents of Mentally Deficient Children) (Hofstetter et al., 2012).

Among his international activities, his visit to Brazil in 1956 stands out, at the invitation of Helena Antipoff, to give a course of Psychology of Learning promoted by the Psychology Laboratory of the Higher Institute of Rural Education, located in Ibirité, Minas Gerais. The course, organized as a specialization, contributed to the formation of one of the first groups of Brazilian professionals legally recognized as psychologists, when the profession was recognized and regulated in Brazil in 1962. The course dealt with the General and Comparative Psychology of Learning, covering aspects of genetic psychology, mental development and differential psychology, the psychology and psychopathology of learning. On this occasion, in a talk given to teachers on courses for primary-teacher training (*Normal School*), Rey defined psychology as the science of behavior and suggested that its teaching in teacher education courses should cover the organic and social

conditioning factors, processes of acquisition, conservation and regulation, and evolutionary forms and anomalies of behavior. Behavior should be broken down into exteriorized or interiorized behavior, introspection being the proper method for the study of this latter while the study of exteriorized behavior should be done using experimental methods. Also in Minas Gerais, Rey participated in the foundation of the Psychological Society of Minas Gerais, in 1956, having suggested carrying out studies on psychosocial questions of interest for the country (racial questions, popular religions, slum populations), experimental studies utilizing native animals as Guinea pigs – armadillo, snake, local birds – and the professionalization of psychologists in specialties such as orthophonology, reading disorders, psychomotor re-education, clinical psychology, psychotechnics, and professional guidance (Campos & Lourenço, 2001).

On his return to Europe, he also lectured at the Université de Lyon, where he was awarded the title of *Doctor Honoris Causa* in 1961. Between 1930 and 1965, he published more than 170 works in the areas of clinical psychology, neuropsychology, experimental, and compared psychology.

His book on psychological deficiencies was translated into Portuguese in 1960 by Maria Antonieta Bianchi (Rey, 1960). Centered on the etiology and diagnosis of psychological disorders, the work covers psychological and psychophysiological aspects of these anomalies, stages in their analysis, the available psychological and psychometric methods, and their ranges and limitations.

Recently the works of André Rey have aroused renewed interest for their contribution to psychological evaluation and neuroscience, with translations in countries in Eastern Europe (Hungary, Poland, Czechoslovakia, and Romania), in the United States (through the Psychological Assessment Resources, Inc.) and in Brazil, where the publisher *Casa do Psicólogo* published, in 1998, the test “Complex Figures of Rey”. In 2014 the test was published again, with a Brazilian adaptation by Margareth da Silva Oliveira and Maisa dos Santos Rigoni, valid until 2025. In Paris, in 1998,

the book *La Figure de Rey: Une approche de la complexité* (The Rey Figure: an approach to complexity), organized by Philippe Wallon and Claude Mesmin, came out, published by Les Pluriels de la Psyché, containing commentaries on Rey’s work and a bibliography of more than 300 titles related to it. The psychologist’s collection was donated by his wife to the *Université de Genève* in 2002 and currently constitutes the *Fonds André Rey* (<https://www.unige.ch/archives/aijtr/fonds/reyl/>), under the guardianship of the *Archives de l’Institut J.-J. Rousseau*.

The academic work and legacy of Lucina Isabel Reyes Lagunes are an essential portion of psychology in Mexico. Teacher, professional, and researcher describe her full and productive contribution to the field.

Isa, as she was known to her friends, strived diligently to train generations of very successful practitioners and researchers with whom she shared knowledge, experiences, and conceptual and methodological competence. Dozens of students became capable, sensitive, relevant, and original professionals and researchers as a result of her teachings. As for her research, she made important contributions to the fields of ethno-psychometrics, cross-cultural psychology, social psychology, personality psychology, educational psychology, and political psychology. Her work is an inevitable reference in the psychological literature.

Her basic education takes place in the north of the Mexican Republic, to later continue with the baccalaureate school in Mexico City. In 1961, she entered and completed her undergraduate studies in psychology at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), in the College of Psychology of the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters). She was part of the second generation of the career in Mexico, receiving the bachelor's degree with honorable mention in 1965. Starting as an undergraduate student, she was already a teaching assistant and taught psychometrics. She was also able to collaborate and be influenced by great professors and researchers, among them Dr. Rogelio Diaz Guerrero (1918–2004) of the UNAM and Dr. Wayne Holtzman (1923–2019) from the University of Texas at Austin, to name just a few. Some years later, she rounded up her training by earning a PhD in social psychology in 1982 from UNAM, along with postdoctoral studies at the University of Texas at Austin and San Antonio in the United States of America. As part of her doctoral thesis, the role of field independence-dependence on the capacity of rural primary school teachers became deeply clear. The result indicates that more than 90% of the teachers in these schools were deeply field dependent, giving them competence to

instruct the subjects of history, geography, and Spanish, which require a holistic perspective. However, field dependence is also closely related to the difficulty involved in teaching subjects related to mathematics which requires an analytic perspective that considers the components of a whole rather than the integrated whole.

Every time Isabel Reyes Lagunes was asked what her greatest passion is in life was, her unequivocal and constant response was to be a teacher. Her teaching and research career was characterized by the affection, commitment, and dedication with which she trained her students. After her work as an assistant professor, in 1968, she attained the position of assistant professor at the Colegio de Psicología (College of Psychology) of the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the UNAM.

After 52 years, and after teaching more than 35 different subjects at the bachelors, masters, and doctoral programs, and after having directed more than 100 theses at all 3 levels, she became the second female Emeritus Professor of Faculty of Psychology of the UNAM. In fact, 46 undergraduates, 65 masters, and 49 doctoral students have completed their thesis under her direction. Most of her students successfully carry out management, teaching, research, and professional position throughout Latin America. In addition, her theoretical and methodological sapience has led her to create and advise successful autonomous research groups in various universities.

The pillars of her teaching focused on psychometrics. Thus, the curricula about measurement theory and psychometrics always went through her diligent advice. At the same time, not only did she create the relevant curriculum, she trained the teachers that then taught the subjects. As for the conceptual framework, her orientation always led to the promotion and recognition of sociocultural variables that made psychological theories relevant and coherent in the contextualized reality of indigenous populations.

Her research interests focus on two major areas. On the one hand, she was a relentless researcher on the impact of culture on individuals and society. On the other hand, her interests in methodology and psychometrics led her to innovate methods for the development of culturally

sensitive and relevant psychological tests, in a new technique she called ethno-psychometrics. She participated in projects funded by the Ford Foundation, Yale University, Consejo Nacional de Ciencia y Tecnología (the National Council for Research and Technology) (CONACYT) and the Graduate Studies Division Support Program at the National Autonomous University of Mexico, among others.

Among her most relevant publications and collaborations are “The development of personality in two cultures: Mexico and the United States”; “The Impact of Educational Television on Child Development; Evaluation of Sesame Street in Mexico”; “The Personality of the Mexican”; “The other self of the Mexican”; and “The measurement of personality in Mexico.” In recent years she has made important contributions in the field of political and health psychology. She published 141 book chapters and 124 articles in journals, and participated in 11 books as coordinator and/or co-author. She also participated on editorial boards of *Psychological Research Records*, *Journal of Psychological Research*, *Inter-American Journal of Psychology*, *Journal of Cross-Cultural Psychology*, *International Journal of Intercultural Relations*, *Spanish Language Psychology*, and *Revista de Psicología Social y Personalidad (Journal of Personality and Social Psychology)*, among others.

She was elected to hold positions in several associations. Isa was the first woman to become president of the Interamerican Psychological Society (1983–1985). She was president and co-founder of the Asociación Mexicana de Psicología Social (Mexican Association of Social Psychology) (AMEPSO); president of the Asociación Iberoamericana de Diagnostico Evaluación Psicológica (Ibero-American Association for Psychological Evaluation and Diagnostics) (AIDEP), and the Colegio Nacional de Psicólogos (National Board of Psychologists) (CONAPSI). She was also a member of the National Accreditation System of Higher Education of San José, Costa Rica. She was the president and organizer of the Cross-Cultural Psychology Congress held in Acapulco, Mexico, in 1984, the only time the International Association for Cross-Cultural Psychology has had a congress in a Latin-American country.

Dr. Reyes Lagunes received many awards and recognitions in her lifetime. Some of the most significant ones for her were the National Award from the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP) in 1997, Premio a Creadores de Psicología Social de la Asociación Mexicana de Psicología Social (the Award to Creators of Social Psychology from the Mexican Association of Social Psychology) (AMEPSO) in 2002, and the Inter-American Society of Psychology Award she received in 2007. In 2009 she was awarded the Premio Mexicano de Psicología de la Federación Nacional de Colegios, Sociedades y Asociaciones de Psicólogos de México (Mexican Prize for Psychology from the National Federation of Boards Societies and Associations of Psychologists of Mexico) (FENAPSIME). She was named Emeritus Professor of the National Autonomous University of Mexico in 2015.

On March 4, 2020, we learned of the departure of our dear colleague Lucina Isabel Reyes Lagunes. Her legacy and teachings remain in our consciousness, and her passion and fervor for teaching is a constant reminder of the path we should always follow.

His father was a Greek physician and writer, and his mother was of Austrian descent. His father participated in the Greece's war of independence against Turkey (1821–1829); however, he died before Greece was recognized as sovereign by the London Conference in 1830. His mother took him to Vienna to leave him in the care of his maternal grandparents, who were in a comfortable economic situation (Illades, 1998).

In 1848 he began his medical studies at the Universität Wien. Around 1848 he moved to Berlin, where he apparently finished his degree (Valadés, 1970). In 1849 he was part of the uprising against Franz Joseph I of Austria (1830–1916), which resulted in the proclamation of the Republic led by Lajos (Louis) Kossuth (1802–1894) and the abolition of feudalism. In 1850, he traveled to Paris to personally meet Pierre-Joseph Proudhon (1809–1865). Between 1850 and 1857, he lived in Berlin and became interested in political philosophy, particularly in Friedrich Hegel (1770–1831) and Baruch Spinoza (1632–1677). In 1857, he moved permanently to Paris where he focused on his studies in philosophy and learned several languages, including Spanish. In France, he learned about the work of Charles Fourier (1772–1837). This journey marked a strong intellectual influence that would crystallize in his mature thinking: romanticism and the first socialism (Illades, 2019). In Paris, he published his first philosophical essay (1860) called “De la Natureza” (On Nature). It is certain that it is in Paris where he learned of the decree issued by Ignacio Comonfort (acting president of Mexico, 1855–1857) that promoted the establishment of agrarian colonies and encouraged foreigners to migrate to Mexico by granting them naturalization (Illades, 1998). Motivated by the issuance of this decree, at the end of 1860, he moved to Barcelona where he embarked for Mexico (Illades, 1998).

Upon his arrival in Mexico in February 1861, he found an intellectual environment in which some ideas of the French socialists were already known, coupled with a heated debate between liberals and conservatives. This meant an opportunity to introduce the ideals of libertarian socialism, mainly from Henri de Saint-Simon (1760–1825), Jean-

Baptiste Joseph Fourier (1768–1830), Pierre-Joseph Proudhon (1806–1865), and Mikhail Bakunin (1814–1876), to “ensure that the new agricultural communities were organized and developed as communes based on socialist utopian concepts” (Hart, 1980, p. 29) in a young and optimistic country that was discussing and rehearsing its Project of Nation (González Loyola Pérez, 2013).

In 1881, Rhodakanaty began to work at the Escuela Nacional Preparatoria (National Preparatory School) (ENP) at the expense of José Ezequiel Montes Ledesma (1820–1883), then entonces Ministro de Justicia e Instrucción Pública (Minister of Justice and Public Instruction), who asked Rhodakanaty to propose a psychology course to the then director of this Preparatory School, Alfonso Herrera Fernández (1838–1901). Herrera did not accept the proposal and decided that psychology should be taught within the course of Logic.

The relevance of Rhodakanaty for psychology in Mexico is centered on the fact that he was the first to promote the formal teaching of psychology in the ENP as a new discipline of modern thought, putting a distance between it and philosophy and theology, which implied the abandonment or displacement of scholastic thought and its replacement with real logic based on true “metaphysics” (Rodríguez Preciado, 2014).

He sought to promote the development of his School of Transcendental Philosophy, based on French rationalism (Descartes, Pascal), German philosophy (particularly romanticism) (Kant, Fichte, Schelling, Hegel, Feuerbach, Schopenhauer, and Hartmann) and metaphysics, as well as Spinozian pantheism in open opposition to positivism. In this context, he promoted the “incorporation of the text of logic by Guillaume Tiberghien (1819–1901) with which he promoted the development of a transcendental spiritualist psychology as a critique of positivist thought, so popular in those years in Mexico in education and science” (Illades, 2002, p. 31).

It is common to find in his work a permanent criticism of the precepts of positivism of a time in which psychology was conceived as a minor branch of physiology. Thus, he considers that the spirit does not have a life of its own outside the body, so

behavior can be explained if the physiology is known. Under this argument, Rhodakanaty found a serious problem in positivism, being based on an epistemology of the senses, it was limited by a methodological monism and a restrictive language with which it tried to impose analytical and experimental procedures limited to the intellectual and moral sciences, which was misleading, since each discipline requires a special method (Illades, 2002).

From this epistemological perspective, Rhodakanaty translated some passages from the work *Philosophy of the Unconscious* (1869) by Eduard von Hartmann (1840–1906) through a serialized essay published in *El Socialista* (The Socialist) in 1894, in which he wanted to make palpable that the development of German metaphysics was being followed from Mexico. This conception of Hartmann would later influence Freudian theoretical formulations on the unconscious. In this essay, as Illades (2008) points out, Rhodakanaty conceptualized the unconscious “as a universal and omnipotent will that governs the human psyche, an immanent rationality that acts intentionally and consciously (. . .) although without self-awareness, like the Hegelian spirit, (. . .) An absolute substance that constituted all things” (p. 140).

Plotino Constantino Rhodakanaty died in Mexico City on February 2, 1890, at the age of 61, as recorded in the death certificate found in the Civil Registry of Mexico City (Wikimedia, 2019; Illades, 2019).

Rhodakanaty’s work was prolific and diverse. Among the newspapers in which he published various essays and/or participated as editor-in-chief are *El Socialista* (1871–1888), *La Internacional* (July–September, 1878), *El Hijo del Trabajo* (1876–1884), *La Comuna Internacional* (1875), *El Combate* (1877), *El Cranioscopio* (April–June 1874), *La Democracia* (1872), *El Correo de los Estados* (1877), and religious publications such as *La Verdad* (1878) and *La Voz del Desierto* (s/f). However, as Illades (1998) points out, there are very few brochures of the original publications of his texts, some incomplete, others only in reviews; some more are in personal or private libraries, which makes it difficult to access them. Some images of

some brochures are preserved in Wikimedia Commons (2019).

Ribeiro da Silva, Athayde

Born *Minas Gerais (Brazil)*, January 30, 1915

Date and Place of Death Unknown

Adriana Amaral do Espírito Santo
Estácio de Sá University, Rio de Janeiro, Brazil

Keywords

Brazil · Sport psychology · Football

Before entering the field of psychology, Athayde Ribeiro da Silva had a comprehensive training in several areas of knowledge. In 1938, he was admitted through a selection process in the *Instituto de Aposentadoria e Pensões dos*

Industriários (I.A.P.I.) (Institute of Retirement and Pensions of Industry Workers), filling the position of clerk. In this same Institute, he filled several other positions: 1939 – Administrative officer; 1945 – Head of the Recruitment and Improvement Section; 1949 – Assistant at the Recruitment and Assistance Division; 1950 – Mediator; and 1951 – Head of the Service of Analyses and Information and Head of the Recruitment and Assistance Division (Espírito Santo 2017).

From 1936, he worked as an English, geography, and history teacher. In 1939, he finished his bachelor's degree in law, at the National School of Law of the former University of Brazil, current Federal University of Rio de Janeiro (UFRJ), in Rio de Janeiro. He also taught at the *Escola de Formação de Juizes de Futebol* (Training School for Football Referees), besides having given conferences at the *Curso de Treinamento Total da Divisão de Educação Física* (Full Training Course of the Physical Education Division) of the Ministry of Education and Culture, to physical education professionals and others. From 1938 to 1944, he worked as an actor (in theater and radio) and as a professor of theater history and psychology applied to drama (Espírito Santo 2017).

He gave lectures on sport psychology at *Escola de Educação Física do Exército* (Army Physical Education School) (EsEFEx) and *Universidade do Ar* (Air University) (Unar) – the latter was a distance learning course created by the *Sistema Nacional de Aprendizagem Comercial* (National System of Commercial Learning) (SENAC) of the city of São Paulo, in the period between 1947 and 1961, which used the radio for teaching (Espírito Santo 2017).

In 1953, he entered the *Instituto de Seleção e Orientação Profissional* (Institute of Selection and Professional Orientation) (ISOP) of Fundação Getúlio Vargas (Getúlio Vargas Foundation) (FGV), an important Brazilian institution headquartered in Rio de Janeiro, which worked mainly with activities of personnel recruiting and selection and professional orientation. He was the head of the *Centro de Informação e Pesquisa Ocupacional* (Center of Information and Occupational Research) (CIPO), coordinator of the adult

section, employee in charge and then coordinator of the employment section, secretary of the magazine *Arquivos Brasileiros de Psicotécnica* (Brazilian Archives of Psychotechnics), and editor in chief of the magazine *Arquivos Brasileiros de Psicologia Aplicada* (Brazilian Archives of Applied Psychology). He became an important member, occupying positions on the board, especially as a temporary substitute of directors, among them Emilio Mira y López (Espírito Santo 2017). He was responsible for the nomination of Athayde Ribeiro da Silva to collaborate in the evaluation of the Brazilian national football team that would compete for the FIFA World Cup in Chile, in 1962, in response to a request of the former *Confederação Brasileira de Desportos* (Brazilian Confederation of Sports) (CBD) (Confederação Brasileira de Desportos 1962).

In 1964, in the occasion of Mira y López' passing (who had been a director of ISOP for many years), Ribeiro da Silva was the official representative of Fundação Getúlio Vargas during the ceremony carried out at the *Universidade de São Paulo* (University of São Paulo) (USP), on March 31. Still as a posthumous tribute, he integrated the project elaboration commission for establishing the Mira y López Award, granted by FGV to research projects in theoretical or applied psychology (Espírito Santo 2017). In that same year, he published his book *Futebol e Psicologia* (whose first section is composed of texts by Mira y López and the second is written by Ribeiro da Silva), where he narrates his experience with the Brazilian national football team in 1962 and 1963 (Mira y López and Ribeiro da Silva 1964).

He obtained his degree in psychology in 1962, after the publication of the law 4119/62, which regulated the profession in Brazil, having integrated the commission that monitored the development of the bill of law in the House of Representatives.

He took part in several international events on sport psychology. At the 1st and the 2nd International Congresses, carried out in Rome (1964) and Washington (1968), respectively, he was elected to be part of the Board of the International Society of Sport Psychology (ISSP), representing Portuguese-speaking countries (Arquivos Brasileiros de Psicologia Aplicada 1969). In

Washington, he cochaired, with J. Yovanovic, from Chile, the Interim Organizational Committee to create a South American Federation of Sport Psychology (Arquivos Brasileiros de Psicologia Aplicada 1969). In 1970, during the 1st South American Congress of Sport Psychology, in Antofagasta, Chile, he was elected as one of the honorary chairs of the definitive board of the already created federation (Arquivos Brasileiros de Psicologia Aplicada 1970b). On the 3rd International Congress of Sport Psychology, held in Madrid in 1973, he paid a posthumous tribute to Emilio Mira y López (Arquivos Brasileiros de Psicologia Aplicada 1973).

In 1965, according to Athayde Ribeiro da Silva himself, he was the psychologist of the Brazilian military pentathlon team (specific sport for military athletes, composed of five modalities: shooting, obstacle swimming, cross-country running, grenade throwing, and obstacle run) and became a member of the Academy of the International Military Sports Council (CISM). Probably for this reason, at the aforementioned 1st International Congress of Sport Psychology, he represented the Armed Forces Sports Commission (CDFA). In his second book, *Psicologia esportiva e preparo do atleta* (Sport Psychology and Athlete Preparation), published by FGV in 1967, he included an appendix only on military sports: *Notas sobre aspectos psicológicos do esporte militar* (Notes on the Psychological Aspects of Military Sports) (Ribeiro da Silva 1967).

He was namely requested by the Brazilian Confederation of Sports for the 1966 FIFA World Cup in England, being released by the director of ISOP at the time, Elim Pedro (1907–1975), to conduct the psycho-technical exams of the players who would compete in the World Cup (Confederação Brasileira de Desportos 1966; Brasil 1968). Ribeiro da Silva achieved, then, a feat that his predecessor, João Carvalhaes, who was considered the pioneer of sport psychology in Brazil, could not. He repeated his participation in the psychological preparation of Brazil's national football team players for a World Cup.

He considered that the work with athletes consists of three stages: psychological interview; application and interpretation of psychological tests; and

preparation itself. He reports the creation of a test entitled “My feet,” inspired by Helena Antipoff’s “My hands” test, but he never published it. He used “My feet” tests in the evaluation of line players and “My hands” tests in the evaluation of goalkeepers (Ribeiro da Silva, 1965).

In 1968, he joined the Brazilian delegation at the Olympic Games in Mexico. The mission, led and coordinated by the Physical Education Division of the Ministry of Education and Culture, was intended only to gather information about the physical and psychological preparation methods of athletes around the world, so Ribeiro da Silva did not participate directly in the preparation of athletes (Espírito Santo 2017).

In 1970, he participated in the creation of the *Associação Brasileira de Psicologia Esportiva e Atividade Física* (Brazilian Association of Sport Psychology and Physical Activity), with headquarters in ISOP, integrating its provisional Board of Directors together with Ernesto dos Santos, Lamartine Pereira da Costa, Alice Madeleine Galland de Mira, Catarina de Carvalho Ribeiro, Luiz dos Santos, Gualter Portela Filho, and David Ferreira (also known as Duque) (Arquivos Brasileiros de Psicologia Aplicada 1970a).

In addition to two books published in the sports field, he had a vast literary production on a wide range of subjects. In 1968, he published three chapters on psychology in a pioneering book about physical education (Da Costa, 1968), a milestone in the field, introducing the concept of total training, including psychology and nutrition.

In the Brazilian Archives of Psychotechnics, Brazilian Archives of Applied Psychology, and *Arquivos Brasileiros de Psicologia* (Brazilian Archives of Psychology) (basically the same journal on psychology, which has changed its name over the years), between 1957 and 1984, he published nine original articles, including four about sports. Between 1959 and 1988, he published 95 bibliographical reviews, 19 on sports, including reviews of relevant books, such as João Carvalhaes’ *Um psicólogo no futebol: relatos e pesquisas* (A Psychologist in Football: Reports and Research), 1974. He also had 17 case studies published in this journal, mostly on clinical psychology subjects; five editorials, between 1971 and 1973; four obituaries, including that of

João Carvalhaes; and a small testimony that preceded the lecture of Eliezer Schneider (presented by ISOP, the Brazilian Association of Psychology, and the Brazilian Association of Applied Psychology), at the opening of the Seminar on Educational Reevaluation, the Labor Market and Interdisciplinary Relations of the Psychologist, held in 1987, and published in the journal in 1988 (Espírito Santo 2017).

Ribeiro da Silva was a professional who was extremely concerned about the future, and his publications showed the effort to leave a legacy to the next generations, in order for sport psychology to continue developing. He proved to be a professional attentive to his time. It was not the current globalized times, but, even so, he participated in international events and entities – speaking English and French, also understanding Spanish and Italian – always updated with the ideas circulating in the intellectual environment. Despite his great relevance to the sport psychology in Brazil, the final part of his trajectory is still unknown.

Ribera González, Julio César

R

Born *on March 4, 1954 in San Juan, Puerto Rico (PR)*

Died *on June 2, 2017 in San Juan*

Beatriz D. Rivera Urrutia
VA Caribbean Healthcare System, San Juan,
Puerto Rico

Keywords

Puerto Rico · Clinical psychology ·
Counseling psychology · Research · Services
administration

Julio C. Ribera's parents were Awilda Ribera González, a housewife, and Julio Rivera López, a businessman. When he was 11 years old, his parents divorced, and he was adopted by his grandparents. Julio's grandfather, José Joaquín Ribera Chevremont, was a poet and a journalist who inspired on Julio an appreciation for poetry and art as well as his critical thinking. He was raised in a neighborhood in San Juan enriched by cultural and social diversity. When growing up, he enjoyed learning, but also sharing with adult neighbors and children. He was a sociable, a well-behaved student, good learner, and critical thinker. Julio's elementary, intermediate, and high school education was in the Puerto Rico public school system. He developed love for math and science and graduated with honors.

In 1973, he was admitted to the University of Puerto Rico, Río Piedras Campus (UPR-RP) to major in psychology. He completed his undergraduate degree in 1975, magna cum laude, and was awarded the Leonardo Rodríguez Medal as the most distinguished student for his dedication to humanistic values in psychology. In 1978, he obtained his Master of Art degree in clinical psychology at the UPR-RP. His thesis was on *Decision-Making Process in Normal, Maladjusted, and Schizophrenic Families*.

In 1977, Julio married Beatriz D. Rivera Urrutia, also a psychologist. In 1990 his beloved daughter, Alejandra B. Ribera Rivera, was born. Alejandra developed Julio's love for art and became a graphic and interior designer, and a photographer.

In 1978, Julio was admitted to the Doctoral Program in Counseling Psychology at Temple University. He was awarded the APA Minority Fellowship (1979–1983). His internship was completed at Coatesville Veterans Administration Hospital in Pennsylvania, an APA Clinical/Counseling Psychology Internship. His dissertation was on *Family Environment Correlates of Vocational Identity*. In 1983 he completed his PhD.

Julio C. Ribera's experience in research began early in college and continued all through his career. He was a research assistant in the Psychology Graduate Program at the UPR-RP

(1973–1975). He was also research assistant in a project entitled *Acculturation, sex role values, and mental health among Puerto Rican in the mainland United States* (1978). After completing his doctorate, he became research project director in a Child Psychiatry Epidemiology Study in Puerto Rico (1985–1986) under the Psychiatry Department, UPR Medical Sciences Campus. Then he was co-investigator for the Psychiatric Epidemiology of Mental Disorders in Puerto Rico (1987–1989) and for the Child Psychiatry Epidemiological Collaborative Study (1989–1995). From 1996–2004, he was co-investigator in the research *Mental Health Service Use Among Puerto Rican Children and Adolescents* sponsored by the Behavioral Sciences Research Institute. He presented the results of some of these research projects in Puerto Rico and in North and South America.

His experience in education was broad. Julio was a teaching assistant at the Behavioral Sciences Division of the Public Health School in Puerto Rico (1975–1976). He was appointed junior faculty at College of Allied Health Professions, Hahnemann College and Hospital, Philadelphia (1977–1980). While in his doctoral program, he was teaching assistant in the Department of Counseling Psychology at Temple University (1979–1980). Julio was assistant professor at the Department of Psychology, University of Puerto Rico, initially part time (1983–1985) and then full time (1985–1987). He was the first Graduate Program Coordinator of the Doctoral Program in Psychology at the University of Puerto Rico (1986–1987) and contributed to make operational a complex program with four specialty areas. Then he was adjunct faculty at the Department of Psychiatry, UPR Medical Sciences Campus (1987–1999).

Julio C. Ribera started working as staff psychologist at Veterans Administration Hospital (VAH) in San Juan in 1988 and in 2006 was named Chief of Psychology Service and worked until his retirement in 2017. His clinical work was comprehensive in his service to veterans and their families at the VAH, actually known as Veteran's Administration Caribbean Health Care System (VACHS). He was well appreciated for his work

by his patients, their family, his employees, and the hospital administration. Julio was a clinician that went beyond his office to help veterans. At times he did home visits to help veterans with post-traumatic stress disorder (PTSD) to return to the hospital for services.

As a professional, Julio C. Rivera always wanted to contribute to the advancement of the psychologists' career within the Veterans Administration system. He became a leader in the Psychology Service and always looked after his peers and/or supervisees for their professional development and well-being. In 2000, he established the first APA doctoral internship in Puerto Rico, which facilitated APA-approved doctoral programs in the Island to have a training site of excellence providing skills in clinical psychology, family therapy, and knowledge about the impact of physical illnesses on psychological functioning. The creation of the internship also contributed to the employment opportunities of psychologists in the VACHS, by expanding its services to rehabilitation programs (Spinal Cord Injury, Blind Rehabilitation Program, and Pain Clinic) and to ambulatory services (Day Hospital, Primary Care, Health Psychology, Mental Health Care Intensive Management Unit, Trauma Clinic, Intensive Out-patient Program, Primary Care, and Substance Abuse Unit).

In 2006, Julio became the chief of the Psychology Service of VACHS. As chief, he thrived to broaden the services provided by the psychologists at the Veterans Administration (VA). He was well respected by his coworkers, and had a holistic perspective in management. During his tenure, over 65 new positions were opened. On 2008, he became the chairperson for the Mental Health Executive Council of the Veterans Administration Hospital. As an administrator, his major goals and challenges were to protect the cultural perspective and needs of his employees and consumers (veterans and their families), to recover and strengthen the clinical privileges of psychologists (like hospitalizations), and to develop innovative local solutions adapted to Puerto Rican cultural nuances without necessarily relying on trends in other VA Hospitals. He felt very satisfied with the outcome of his journey at VA.

In 2008, the Puerto Psychology Association recognized him as *Psychology of the Year*, one of the most prestigious awards it bestows.

Julio B. Ribera retired at 63 on March 2017. He passed away on June 2, 2017, after a long battle with lung cancer. His employees and the administration commended him for his achievements at VACHS.

Ribes Iñesta, Emilio

Born *in Barcelona, Spain, on June 24, 1944*

Julio C. Penagos-Corzo and Michelle Cosio van Hasselt
Department of Psychology, Universidad de las Américas Puebla, Puebla, Mexico

Keywords

Mexico · Experimental psychology · Behavior analysis

At only 15 years of age, Emilio Ribes enrolled at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) to study psychology (1960–1963). Even though the main focus of his thesis was on the psychology of the self, he integrated psychoanalysis into experimental psychology (Santacreu, 1996). He graduated with honors from the bachelor's degree program in 1966. The next year, he began his master's degree studies at the University of Toronto. In 1968, he defended his thesis *Reinforcement Value and Pleasingness of Visual Figures in Human Operant Behavior*. Between 1980 and 1981, Emilio decided to study a doctorate in philosophy at the UNAM. He graduated with honors in 1995 with his thesis *The Concept of Reflection: An Analysis of the Paradigmatic Influence of Cartesian Mechanics on the Theory of Conditioning, with Special Emphasis on the Case of Language*.

The interest of Ribes Iñesta in experimental psychology can be observed from his early training. In an interview, Dr. Rogelio Díaz Guerrero (1918–2014) recalled that a young Emilio approached him to express his interest in experimental psychology and its relationship with learning, and his belief that it was the future of psychology (Carrascoza, 2003). Throughout his college years, Ribes Iñesta, along with his fellow students Víctor Manuel Alcaraz Romero (born, 1939), Serafin Joel Mercado Doménech (1939–2017), and Renato Ravelo Lecuona (1934–2007), actively engaged in the improvement of the study plan. Around this time, Emilio first came into contact with experimental psychology. He was involved in a project with Serafin Mercado (coordinated by Riley Gardner) about concept formation in children (Ribes, 2010).

In 1963, Víctor Alcaraz took a teaching position in the Clínica de Conducta (Behavioral Clinic) at the Facultad de Pedagogía y Filosofía y Letras (Faculty of Education and Philosophy and Humanities) of the Universidad Veracruzana (Veracruz University) (UV). Emilio Ribes had always been a close colleague and friend of Alcaraz, so he decided to come on board as part of that project. A year later, Dr. Ribes started teaching undergraduate courses at the UV. In his own words, this entailed a “self-training discipline, which would enable them to carry out our plan” (Ribes, 2010, p. 36). Later that year, together with Victor Alcaraz, he founded and designed the curriculum for the BA in psychology at the UV. This was one of the first degrees in this discipline in Latin America that integrated basic science and applied knowledge, with service centers that facilitated teaching, research, and application of knowledge to community problems.

Three years later, in 1967, shortly before leaving for the University of Toronto to study his master's degree, he organized with Rogelio Díaz Guerrero the first Mexican Congress of Psychology. Great personalities participated in this congress: Teodoro Ayllon (born, 1929), Harry Frederick Harlow (1905–1981), Daniel Erlyne Berlyne (1924–1976), Orval Hobart Mowrer (1907–1982), and Sidney William Bijou (1908–2009), to mention a few. On his way to

Toronto, he visited Mowrer and Bijou. This short stay was enough for Ribes Iñesta to develop a significant interest in Burrhus Frederic Skinner (1904–1990) and Clark Leonard Hull (1884–1952) (Carrascoza et al., 2017). After he finished his master's studies, he returned to Xalapa with the intention of consolidating everything that he had learned (Carrascoza et al., 2017).

Emilio Ribes is an Emeritus Researcher of the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACYT), whose scientific work includes more than 300 articles for scientific journals and more than 20 published books (Pérez-Almonacid & Gómez, 2014). His most notable publications include his first book *Behavior Modification Techniques: Their Application to Developmental Delay* (Ribes, 1976), and what is perhaps his most influential book *Behavior Theory: A Parametric Field Analysis* (Ribes & López, 1985). In the former, he describes his work and discoveries in the Centro de Entretenimiento y Educación Especial (Center for Entertainment and Special Education) (CEEE). This is practically a manual of behavior modification, complete with a theoretical support and detailed information for the programming of basic, social, and academic behaviors. Additionally, it includes a step-by-step guide for behavior modification in people with developmental delay, as well as case examples and technical support for behavior programming. In the latter, Emilio Ribes, in his continuous search for making sense of psychology, describes his theory of behavior based on interconnectedness proposed by Jacob Robert Kantor (1888–1984). However, in 2018 he reformulates his theoretical approaches (Ribes, 2018; Sandoval, 2018) in a new book entitled *El estudio científico de la conducta individual: una introducción a la teoría de la psicología (The Scientific Study of Individual Behavior: An Introduction to the Theory of Psychology)*.

Ribes Iñesta has dedicated his life to the promotion of experimental psychology in Mexico and other Latin American countries. Upon his return from his master's degree studies, he was in charge of designing the Behavior Modification Postgraduate Course at the University of

Veracruz. He also founded the CEEE. His contributions to the academic training strengthened over the years. In 1973 he was responsible for organizing the postgraduate program in experimental behavior analysis in an external headquarters of University City (Ciudad Universitaria) at the UNAM (Ribes, 2010). In 1975, he led the creation and design of the curricular model of the Psychology Degree at the Escuela Nacional de Estudios Profesionales Iztacala (National School of Higher Studies – Iztacala) at the UNAM (Martínez, 2006; Parra et al., 2017). Seven years later, in 1991, he transferred to the Universidad de Guadalajara (University of Guadalajara), where he founded the Centro de Estudios e Investigaciones en Comportamiento (Center for Studies and Research in Behavior) and the postgraduate program in behavioral science. After a 20-year stay, he returned to Xalapa where he created the Centro de Estudios e Investigaciones en Conocimiento y Aprendizaje Humano (Center for Studies and Research in Knowledge and Human Learning).

Ribes Iñesta is a founding member of academic societies such as the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP), the Sociedad Mexicana de Análisis de la Conducta (Mexican Society of Behavior Analysis) (SMAC), and the Sistema Mexicano de Investigación en Psicología (Mexican System of Research in Psychology) (which he resigned from in 2020). He also stands out for his role as founder of the scientific journals *Revista Mexicana del Análisis de Conducta (Mexican Journal of Behavior Analysis)* (1975) and *Acta Comportamental (Behavioural Act)* (1992). In addition, he has organized and managed important events for the growth of psychology, such as the International Symposium on Behavior Modification and the Biennial Symposium on Behavior Modification, the renowned International Congress on Behaviorism and Science of Behavior, as well as other congresses on behavior analysis.

The life and work of Emilio Ribes have been the object of multiple acknowledgments and awards, including the Interamerican Award of Psychology, granted by the Interamerican Society

of Psychology; the International Award to the Dissemination of Behavior Analysis, granted by the Society for the Advancement of Behavior Analysis; Doctorate Honoris Causa, granted by the UV; the Premio al Mérito (Merit Award) of the CNEIP (1999) for the foundation of this council; the Recognition tribute to his contribution to Psychology, granted by the University of the Americas Puebla (Universidad de las Américas Puebla); and the appointment as National Researcher Emeritus, by CONACYT.

Dr. Emilio Ribes Iñesta continues to provide valuable input to the study of psychology based on scientific and experimental research. His key contributions in elucidating the object of study of psychology, as well as in the scientific training in behavior analysis, are undoubtedly part of his legacy.

Gustavo Kohler Riedel was the son of Henrique Riedel (1859–1910), dental surgeon and professor of pathology, therapy, and dental hygiene at the Curso de Odontologia, Faculdade de Medicina e Farmácia de Porto Alegre (Dentistry Course at the Faculty of Medicine and Pharmacy of Porto Alegre), and Hermínia Kohler. He married Edith Hasch Riedel and had two children, Lia and Leo.

He took his humanities course in the city of Porto Alegre and joined, in 1903, the Faculty of Medicine and Pharmacy of Porto Alegre, where he studied the first 4 years. In 1907, he came to Rio de Janeiro and concluded his medical course at the Faculty of Medicine of Rio de Janeiro, where he came to obtain a degree, in 1908, with the thesis about epilepsy.

On June 1, 1907, he was appointed permanent resident of the Hospício Nacional de Alienados (HNA) (National Hospice for the Alienated), a hospital that had been created on July 18, 1841, to treat the alienated. In this same institution, he became, in 1908, assistant to the anatomopathological laboratory and later deputy alienist, on April 28, 1910. In the HNA, he was appointed effective alienist by the decree of July 26, 1911, served as assistant alienist of the Colônia de Alienados (Alienated Colony), in Ilha do Governador (Rio de Janeiro), and was chief alienist of the services of the biological

chemistry laboratory and interim director of the anatomopathological laboratory (1911).

Riedel organized the Biological Chemistry Laboratory, at HNA, with the objective of putting the Abderhalden Reaction into practice. Riedel commented that, after the scientific acquisition of the Abderhalden test, he obtained the support of Juliano Moreira, then general director of Assistência aos Alienados (Assistance to the Alienated), to develop, at HNA, his investigation on the topic, which enabled him to present his studies at the HNA itself, and in 1915, at a session at the Sociedade Brasileira de Neurologia, Psiquiatria e Medicina Legal (Brazilian Society of Neurology, Psychiatry and Legal Medicine).

Riedel took a competition, in 1911, for freedom of the chair of medical chemistry at the Faculty of Medicine of Rio de Janeiro with his thesis. In early 1919, he was appointed to the post of chief assistant of the laboratory of the first chair of clinical medicine at that institution.

In 1915, he became professor of the first chair of veterinary medicine at the Escola Superior de Agricultura e Medicina Veterinária (Superior School of Agriculture and Veterinary Medicine), installed at Rua General Canabarro n° 338, in the city of Rio de Janeiro.

According to Academia Nacional de Medicina (1916) (National Academy of Medicine), in a solemn session on July 14, 1916, was granted to Riedel the “Alvarenga Award”, with the memory “New research method for Abderhalden proteolytic ferments”.

In the context of the epidemic crisis surrounding the Spanish flu (Spanish influenza) in 1918, when around 66% of the population in Rio de Janeiro fell ill, the city’s hospitals and health departments were insufficient and in precarious conditions. In this scenario, other institutions, such as the Colônia de Psychopathas (Alienated Women Colony), opened their facilities to serve many of these patients. On this occasion, Riedel was appointed to replace the physician Simplicio de Lemos Braule Pinto (1865–1918), director of the Alienated Women Colony in Engenho de Dentro, who died on September 19 of that year, having been appointed on October 9, 1918, when

he sought to reform the institution in order to improve the assistance provided. He remained in the direction of that institution until 1932.

In 1919, Riedel created, at the Alienated Women Colony, the Rivadavia Correia Ambulatory, with the objective of carrying out preventive actions in psychiatry and other medical specialties, an initiative considered to be relevant for having transformed that establishment into one of the assistance institutions best viewed by the population. Considered a model outpatient clinic, it was named Rivadavia Corrêa in honor of the minister who had been responsible for the founding of the Alienated Women Colony in 1911.

Since 1920, he was responsible, together with Mario Pinheiro de Andrade (?–1943) and Eduardo Marques, for the scientific direction of the Laboratório de Biologia Clínica Limitada (Clinical Biology Laboratory), established at Largo da Carioca ns.16–18, in the center of city of Rio de Janeiro.

Riedel founded in the Alienated Women Colony a female section of the Escola Profissional de Enfermeiros e Enfermeiras (School of Males Nurses and Nurses), a school that had been created in 1890, later called Escola de Enfermagem Alfredo Pinto (Nurse School Alfredo Pinto), of which he was director in 1921. At the Alienated Women Colony, in 1923, he created the Mental Hygiene outpatient clinic, thus enabling the formation of “mental hygiene monitors” by the Escola Profissional de Enfermeiros e Enfermeiras (School of Males Nurses and Nurses), and in 1925 the Psychological Research Laboratory, having invited the Polish psychologist Waclaw Radecki (1887–1953) to direct it.

Under the direction of Riedel, the Liga Brasileira de Higiene Mental (Brazilian League of Mental Hygiene) was founded in November 1922, with the aim of promoting the modernization of psychiatric care and the improvement of care for the mentally ill. Riedel was its first president, member of the Executive Council, and president of honor. He participated, as a member of the Sponsoring Committee, in the Pro-Higiene

Mental Campaign, undertaken by the Brazilian League of Mental Hygiene in October 1933.

In 1929, he was appointed alienist of the Assistência a Psicopatas do Distrito Federal (Federal District Psychiatric Care Assistance to Psychopaths); on October 29, 1931, he was appointed director, in commission, of the Assistência Hospitalar do Brasil (Hospital Assistance in Brazil); and on October 10, 1932, he became general director of the Assistência a Psicopatas (Assistance to Psychopaths).

He participated as an editor and contributor to numerous journals in the area of mental hygiene, having been a secretary writer, member of the board and the Advisory Council of the *Archivos Brasileiros de Higiene Mental* (Brazilian Archives of Mental Hygiene), official body of the Brazilian League of Mental Hygiene, launched in March 1925. He was also one of the founders of the *Archivos Brasileiros de Medicina* (Brazilian Archives of Medicine), launched in 1911 and directed by Juliano Moreira and Antônio Austregesilo Rodrigues Lima, editor of the *Annaes da Colonia de Psychopathas* (Annals of Colony of Psychopaths), collaborator of the *Archivos Brasileiros de Psychiatria, Neurologia e Medicina Legal* (Brazilian Archives of Psychiatry, Neurology and Legal Medicine), and editor of the *Arquivos Brasileiros de Neuriatria e Psiquiatria* (Brazilian Archives of Neuriatrics and Psychiatry).

Gustavo Kohler has integrated several scientific societies, national and foreign, such as the Royal Medico-Psychological Association, which had been founded in 1841, in London (England). On April 4, 1909, he was accepted as a member of the Sociedade Brasileira de Psychiatria, Neurologia e Medicina Legal (Brazilian Society of Neurology, Psychiatry and Legal Medicine Brazilian Society of Psychiatics, Neurology and Legal Medicine), founded in 1907, and then chaired by Juliano Moreira. In this society, he joined the psychiatry and neurology section, became first vice president (1925), and was a member of the neurology committee and chairman of the Comissão de Psicologia e Biologia

Aplicadas à Neuro-Psiquiatria (Commission for Psychology and Biology Applied to Neuro-Psiquiatria) (1928). He was elected, on August 30, 1917, a member of the National Academy of Medicine, in the section of applied sciences, with the presentation of the memory “The proteolytic wounds of Abderhalden. Its importance in pathology and biology. New research methods.”

He participated in numerous national events, having presented a communication at the IV Congresso Médico Latino-Americano (IV Latin American Medical Congress) (Rio de Janeiro, 1909), as part of the steering committee of the psychiatry section of the Primeiro Congresso Brasileiro de Neurologia, Psiquiatria e Medicina Legal (First Brazilian Congress of Neurology, Psychiatry and Forensic Medicine) (Rio de Janeiro, 23 / 08/1916), member of the psychiatry section of the 2° Congresso Brasileiro de Neurologia, Psiquiatria e Medicina Legal (2nd Brazilian Congress of Neurology, Psychiatry and Forensic Medicine) (Distrito Federal, 1922), and president of psychiatry section of the Congresso Inter-estadual de Neurologia, Psiquiatria e Medicina Legal (Interstate Congress of Neurology, Psychiatry and Forensic Medicine) (Rio de Janeiro, 3/09–3/10/1931), and a communication was presented at the Primeiro Congresso Brasileiro de Eugenia (First Brazilian Congress of Eugenia) (Rio de Janeiro, 30/06 to 07/07/1929).

On the international stage, he represented Brazil at the Sexto Congresso Médico Latino Americano (Sixth Latin American Medical Congress) (Havana, Cuba, November 1922) and was part of the Brazilian delegation that participated in the Congrès International de Propagande d’Hygiène Sociale et d’Éducation Prophylactique Sanitaire et Morale (Congrès International de Propagande d’Hygiène Sociale et d’Éducation Prophylactique Sanitaire et Morale) (Paris, 24–27/05/1923), and the Exposition Internationale du Centenaire de Pasteur – Hygiène Scientifique et Appliquée (Exposition Internationale du Centenaire de Pasteur – Hygiène Scientifique et Appliquée) (Strasbourg, France, 06/06/10 / 10/1923), both commemorating Pasteur’s centenary. He was a Brazilian delegate at the First

International Congress on Mental Hygiene (First International Congress on Mental Hygiene) (Washington, 5–10/05/1930), an event in which Clifford Whittingham Beers (1876–1943), honorary president of the World Federation for Mental Health, was elected secretary-general. Riedel represented Brazil on the International Committee for Mental Hygiene, which had been organized for the first time in 1919 by Clifford Whittingham Beers, and reorganized on the occasion of the First International Congress on Mental Hygiene, when he was elected one of the six Honorary Presidents of that Committee and South American representative in the new entity.

On the 14th anniversary of the Alienated Women Colony, by Engenho de Dentro, on July 11, 1925, Plínio Olinto (1886–1956), interim director of the institution, paid tribute to the effective director, Gustavo Riedel, who was away for health reasons, noting that, during his term of office, he had performed in that Hospital-Colony what the efforts of other specialists in earlier countries had failed to accomplish, such as the creation of numerous pavilions.

On May 10, 1934, a session was held in honor of Gustavo Kohler Riedel, at the Alienated Women Colony, on the occasion of his retirement from the position of general director of Assistência a Psicopatas (Assistance to Psychopaths). Gustavo Augusto de Rezende (1889–1966), on this occasion, pointed out that Riedel was a follower of Philippe Pinel (1745–1826) and Francis Galton (1822–1911), the implementer in Brazil of Clifford Whittingham Beers’ ideas and that he had always impressed his actions with a stamp of originality.

Also on this occasion of the tribute session, the clinical staff and the technical and administrative personnel of the Alienated Women Colony sent a memorial to the then President of the Republic, Getúlio Vargas (1882–1954), highlighting the importance of Riedel and claiming that that colony started to receive its name, “Colônia Gustavo Riedel” (“Colony Gustavo Riedel”), this longing that was realized that same year.

In relation to psychology, it can be said that it had a relative influence. Its clinical aspect was very marked by the conception of the physical

and psychic stigmas of degeneration and by the ideal of the working man and the docile woman. In the laboratory, he focused on madness, above all on the notion of metabolic deviations resulting from nutritional dysfunctions. In the context of mental hygiene, on the other hand, it introduced the problem of pauperism in relation to health, a theme that was absent, for example, in clinical histories. Riedel sought to apply his theoretical assumptions about the etiopathogenesis of mental disorders to a hygienist polyclinic, and the creation of the Laboratory of Psychology.

The theoretical production of Gustavo Kohler Riedel can be divided into two phases, the first, from 1908 to 1918, marked by degenerationist thinking, in the search for the etiology of mental illnesses, especially for his work in the biological chemistry laboratory. The HNA was the major field of observation for his clinical and experimental work. The second phase, from 1921 to 1931, is characterized by the author's transition to medical-social conceptions, specifically hygienists.

Rimoldi, Horacio José Ambrosio

Born *in Buenos Aires, Argentina on April 11, 1913*

Died *in Buenos Aires on January 19, 2006*

María Cristina Richaud
Consejo Nacional de Investigaciones Científicas y Técnicas, Ciudad Autónoma de Buenos Aires, República Argentina

Keywords

Argentina · USA · Uruguay · Psychometrics · Problem solving

Horacio Rimoldi studied in Buenos Aires and received a gold medal from the University of Buenos Aires as a physician in 1938.

Bernardo Houssay (1887–1971), an eminent physiologist and Nobel laureate, guided Rimoldi in a new research methodological direction in psychology: psychometrics. In 1939, Rimoldi

moved to England on a scholarship from the British Council to learn psychometrics.

Rimoldi made an initial stay at the Maudsley Hospital in London where he continued his studies on fatigue, and in 1941, he published with Eric Guttman (1896–1948) *Fatigue and the Effort Syndrome*, based on the study of soldiers evacuated from Dunkirk (Guttman & Rimoldi, 1941).

Later, he was accepted as an advanced student at Oxford-Corpus Christi College, under the direction of William Stephenson (1902–1989). At the Institute of Experimental Psychology Rimoldi began his research on rhythm. Stephenson, a direct disciple of Spearman, taught him factor analysis.

Before finishing his doctoral studies at Oxford, he was required to return to Argentina by Bernardo Houssay, who had recommended him to join the recently created Universidad Nacional de Cuyo (National University of Cuyo), in Mendoza. Rimoldi was appointed Professor of Biology and Psychology II and organized the Instituto de Psicología Experimental (Institute of Experimental Psychology) in 1941. There, the first foreign version of the Raven Progressive Matrices Test was applied to factory and school populations in the Province of Mendoza. The publications of the Instituto de Psicología Experimental (Institute of Experimental Psychology) of the Universidad de Cuyo (University of Cuyo) began, which, among other topics, included the first norms for Argentina of the Raven Test (Rimoldi, 1948). During his time at the Universidad Nacional de Cuyo (National University of Cuyo) between 1941 and 1946, in addition to being a researcher, professor, and director of the Instituto de Psicología Experimental (Institute of Experimental Psychology), he fulfilled a fruitful teaching task by giving courses and conferences in Argentina and other South American countries (Calabresi, 2010). He also began an international exchange task, receiving students and professionals “mainly from the United States and South America who saw in the Instituto de Psicología Experimental (Institute of Experimental Psychology) a center to consider in relation to updating psychological research and methodology in the social sciences” (Rimoldi, 1996, p.277).

It was during this period that he continued with his studies on Rhythm and Fatigue, the subject on which he wrote his doctoral dissertation in Medicine, which was awarded the Thesis Award and gold medal in 1945 (Rimoldi, 1995).

Rimoldi referred psychological fatigue to the depletion of mental energy, which leads to the paralysis of the soldiers because of the traumatic event (today post-traumatic stress) and to depersonalization and lack of performance at work (today work stress and burnout). Rimoldi's innovative contribution can be appreciated there: the drastic mutation of the experimental psychology's design from physiological criteria to psychological-psychometric criteria (Rossi & Richaud, 2011).

In August 1946, Rimoldi traveled to the United States to work under the direction of Louis Leon Thurstone (1887–1955), at the Psychometric Laboratory of the University of Chicago, where he investigated stimulus scaling and multifactor analysis.

In 1947 and in use of a Guggenheim fellowship obtained in 1946, Rimoldi worked at Harvard University under the direction of Gordon Allport (1897–1967) and Edwin Boring (1886–1968) dedicating himself to the study of Personal Tempo (Rimoldi, 1951a).

In 1948, he returned to Chicago to rejoin the Psychometric Laboratory. There he presented himself as a candidate for the PhD, specialty Psychology, under the direction of Thurstone and Stephenson, at that time in Chicago. In 1949, he obtained his PhD degree, with a dissertation on the central intellectual factor, reconciling the theories of Spearman and Thurstone, which led to the paper "The central intellectual factor" published in 1951 in *Psychometrika* (Rimoldi, 1951b).

Until 1951, he remained at the University of Chicago as a Special Research Fellow of the US Department of Public Health, at the medical school (Billings Hospital), and at the Department of Psychology. It is at that time that he was appointed consultant and professor of psychometrics at the National University of Colombia.

Between January 1951 and the end of 1952, he was hired as a professor by the Facultad de Humanidades y Ciencias (Faculty of Humanities and Sciences) at the Universidad de la República

(University of the Republic) in Uruguay. There he organized his second Laboratorio de Psicología (Psychology Laboratory), in which he did teaching and research. He started a modern library and contributed to the formation of a group of young researchers, who would later participate in the creation of the undergraduate program in psychology. As a result of the investigations carried out there, Thurstone's Primary Mental Skills were typified (Rimoldi, 1996).

Between 1952 and 1955, again in the United States, he was invited to join the Educational Testing Service at Princeton University, New Jersey. His curiosity about processes led him to his first discoveries in cognitive psychology, creating a new problem-solving technique.

Back in Chicago in 1955, he joined the Committee on Behavioral Sciences as a Research Associate Professor. There he designed the Problem Solving and Information Apparatus which was a concrete application of the principles and ideas that founded the Test of Diagnostic Skills. His principles on medical education were applied, among other university institutions, at Jefferson Medical College in Philadelphia, and made him an international reference in the field.

Invited by Loyola University in Chicago, he joined as Associate Professor. In 1957 he became Professor and in 1965 Distinguished Professor and Director of the Measurement Program. It is in this period that he organized his third laboratory: the Loyola Psychometric Laboratory (1955–1970).

In 1957, Rimoldi was appointed Extraordinary Professor at the Facultad de Filosofía y Humanidades de la Universidad Nacional de Córdoba (Faculty of Philosophy and Humanities of the National University of Córdoba), Argentina. Between 1957 and 1965, during summer vacations in the United States, he taught different courses in psycho-statistics and theory of mental tests, through which he formed a group of psychologists, some of whom obtained scholarships to study a doctoral program in United States under his leadership. In this way, he contributed to the development of the undergraduate Psychology Program at the aforementioned Argentine university (Piñeda, 2020; Rimoldi, 1996).

When Bernardo Houssay founded the Consejo Nacional de Investigaciones Científicas y Técnicas (National Council for Scientific and Technical Research) (CONICET) of Argentina in 1957, he invited him to return, and it was only in 1970 that he returned to organize the Centro Interdisciplinario de Investigaciones en Psicología Matemática y Experimental (Interdisciplinary Center for Research in Mathematical and Experimental Psychology) (CIIPME) through which psychology entered into the Argentine scientific system through the big door. As its name indicates, in this Center the interdisciplinary approach to research was prioritized, which cuts as unpublished topics to address, the problem of psychological measurement, stimulus scaling, the study of cognitive processes, and problem solving. This vocation for interdiscipline was shown in the formation of research teams made up of psychologists, sociologists, doctors, and mathematicians.

He developed his own style of relationship both with respect to the configuration of research networks, which included fellows from CONICET and from different parts of Argentina and the world, doctoral students and researchers, as well as in reference to the search for collaboration through agreements and exchanges with different academic institutions (Richaud, 2017).

In 1980, Dr. Rimoldi created *Interdisciplinaria: Revista de Psicología y Ciencias Afines* (*Interdisciplinary: Journal of Psychology and Related Sciences*), which became one of the most important psychology journals in Latin America.

In 1987 the Asociación Argentina de Ciencias del Comportamiento (Argentine Association of Behavioral Sciences) (AACC) was created – currently an Argentine member of the International Union of Psychological Sciences (IUPsyS) – which Rimoldi enthusiastically supported, for which years later he was named Honorary President.

He received numerous awards and distinctions among which are: UBA Thesis Award, Lyon Civil Hospital Award, France Silver Medal (1964), Emeritus Professor of the University of Buenos Aires, Honorary Professor of many universities,

among them, National University of Cuyo, National University of San Luis, National University of Tucumán, and National University of Córdoba. He was also honored as Doctor *Honoris Causa* from the Universidad del Salvador, Dean's Medal from the Jefferson Medical College, Prize for Scientific Merit from the Secretariat of Science and Technology of the Argentine Nation, and many others.

Ríofrío González, Luis Aníbal

Born *Tisaleo (Ecuador), July 13, 1922*

Died *Quito, (Ecuador), June 28, 2014*

Ana León-Tapia

Universidad Central del Ecuador, Quito, Ecuador

Keywords

Ecuador · Dialectical materialist psychology · Institution building

Luis Aníbal Ríofrío González was born in Tisaleo, in the province of Tungurahua. His parents were José Ríofrío Rodríguez and Ermelinda González Villalba. When he was 25 years old he married with Rosario Mora Rivera and they had five children: Vilma, Luis Aníbal, Iván, Guadalupe, and Linda (Facultad de Ciencias Psicológicas, 1974).

He studied elementary school in his province, at the *Escuela Mariano Castillo* (Mariano Castillo School), and the high school in Quito, in two

institutions at the same time, at the *Colegio Juan Montalvo* (Juan Montalvo School) and the *Colegio Nacional Mejía* (Mejía National School). He obtained the title of *Normalista* (Normalist), in the first, and *Bachiller en Ciencias Biológicas* (Bachelor in Biological Sciences), in the second.

He entered the *Universidad Central del Ecuador* (Central University of Ecuador) in the forties. He studied at the same time in the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Letters and Education Sciences) and in the *Facultad de Medicina* (Faculty of Medicine). In 1950 he obtained the title of Professor of Secondary Teaching, and, in 1951, he graduated as a Doctor of Medicine. He was the student with the highest score of his program, so he is awarded a First Prize Diploma of Honor and an economic recognition.

In 1945, at 23, while studying at the university, he assumed the position of ad-honorem Professor of Applied Psychology at the *Escuela Nacional de Educación Física* (National School of Physical Education) of the Central University of Ecuador. He also dictated several courses related to psychology, such as General Psychology, Biological Bases of Psychology, Psychiatry, and other courses related to medicine and obstetrics.

In the fifties he completed his specialty in Psychiatry at the Central University of Ecuador. He worked as a psychiatrist in several places. He was medical secretary of the Assistance Department of the *Junta Central de Asistencia Pública* (Central Public Assistance Board); physician at the *Hospital San Lázaro* (San Lázaro Hospital) and the *Hospital Psiquiátrico de Conocoto* (Conocoto Psychiatric Hospital); medical psychologist at the *Escuela de Educación Especial* (School of Special Education); chief physician of the Psychiatry Service in the Medical Department of the *Hospital Carlos Andrade Marín* (Carlos Andrade Marín Hospital). He was the main vocal of the *Honorable Consejo Directivo* (Honorable Directing Council) of the Faculty of Medicine and the Faculty of Philosophy, Letters and Education Sciences; Director of the *Escuela de Psicología* (School of Psychology) of the latter from 1966 to 1968 and director of the *Departamento de Psiquiatría* (Department of

Psychiatry) of the Faculty of Medicine from 1972 to 1974. He was also vice-rector and rector in charge of the Central University of Ecuador on several occasions (Facultad de Ciencias Psicológicas, 1983).

In 1962, he received the Central University Award for his books: *Scientific Foundations and Biological Bases of Psychology* (1980) and *General Psychology* (1980). The books were used as reference texts of the Faculty of Medicine and other faculties. The Ecuadorian government granted him the National Award for Teaching Merit.

In 1950, as a student and together with other colleagues from the Faculty of Philosophy, Letters and Education Sciences, he supported the creation of the first *Instituto de Psicología* (Institute of Psychology). Later he also supported the creation of the School of Psychology. By order of the dean of that time, he collaborated with the development of the first Curriculum for the undergraduate program of the School of Psychology. However, when the curriculum was approved, he did not agree with the dynamic-psychoanalytic orientation, because of his medical training, he always leaned toward the orientation of dialectical materialistic psychology.

Since he was director of the School of Psychology, he sought to make independent the psychology of the Faculty of Philosophy, Letters and Education Sciences that educated teachers. Finally, the Faculty of Psychology (later called Psychological Sciences) was created on December 7, 1972, being rector Gonzalo Luzuriaga and dean of the Faculty of Philosophy, Letters and Education Sciences, Rafael Almeida. Luis Riofrío was designated as the first dean of the new faculty for being the oldest professor in the School of Psychology. He continued as dean until 1987 (Facultad de Ciencias Psicológicas, 1988).

As dean, Luis Riofrío implemented the training of psychologists based on science, breaking the dualistic and idealistic conception of that moment. Over time, there was resistance to the exclusively biological approach to psychologist training; the medical and psychiatric influence on the curriculum was very strong. The first Faculty of

Psychology in Ecuador trained psychologists in the principles of the Russian School, understanding the human being as a functional organic unit and including research as an unequivocal path for science.

Riquelme, Manuel

Born *Asunción, (Paraguay), 5 May 1885*

Died *Asunción, (Paraguay), 2 February 1961*

José E. García

Universidad Católica, Asunción, Paraguay

Keywords

Paraguay · Lessons of psychology · Education

Manuel Riquelme carried out his elementary studies in the city of Asunción, to later continue his teaching career at the Escuela Normal (Normal School) of the same city, and later at the Escuela Normal de Profesores de Paraná (Normal School of Teachers of Paraná), Argentina. At that time, this institution represented a fundamental reference for the training of Argentine educators, as well as foreign ones, among whom were some Paraguayans. It was also a very important center of radiation for positivist ideas. In Paraná, Riquelme obtained the titles of normal teacher and high school teacher. Although he returned to the country, intended to study laws at the Universidad Nacional de Asunción (National University of Asunción), he did not complete his training as a lawyer (López Moreira, 2000).

Riquelme's involvement in the public service began with his entry as secretary to the Ministerio de Justicia, Culto e Instrucción Pública (Ministry of Justice, Worship and Public Instruction). In 1915, he received the appointment as Director General de Escuelas (General Director of Schools) (Centurión, 1948), a position that also allowed him to jointly preside over the Consejo Nacional de Educación (National Council of Education). In compliance with these functions, he drew up a new Plan de Estudios y Programas Sintéticos (Synthetic Curriculum and Programs) for the elementary schools of the Republic. Between 1915 and 1916, he served as editor of *Letters* (Letras), a cultural magazine that historian Efraim Cardozo conceptualized as a platform for the Paraguayan intelligentsia (Cardozo, 1985). The content of the magazine was also made up of some articles of a psychological nature (García, 2015). In its pages, authors of relevance to Paraguayan psychology such as Cecilio Báez (1862–1941) and Manuel Domínguez (1868–1935), as well as foreign authors such as the Argentines José Ingenieros (1877–1925) and Víctor Mercante (1870–1934) wrote at some time. Riquelme was affiliated with the Partido Liberal (Liberal Party) and in that character he entered the parliamentary scene, winning a seat as a deputy in 1918, representing that political party.

Riquelme suffered the consequences caused by the instability that characterized the Paraguayan politics at the time. In particular, he was a victim of the intolerance that unleashed the civil war of 1922, which lasted until 1923, and that forced him to go into exile in neighboring Argentina (Montefilpo Carvallo, n.d.). In that country, he devoted himself to university teaching, between 1922 and 1931. He was able to perform functions as a professor of pedagogy at the Facultad de Ciencias de la Educación (Faculty of Educational Sciences) at Universidad Nacional del Litoral (National University of Litoral), campus Paraná, Entre Ríos, and of History of Education in Buenos Aires (López Moreira, 2000). His return to the country took place in 1932 (Foradori, 1954), and he dealt with the teaching of Psychology and Philosophy of Education at the Escuela Normal de Profesores (Normal School of Teachers) of Asunción, as well as logic and pedagogy at the Colegio Nacional (National High School). He also gave lectures on psychology at the Escuela Superior del Estado Mayor del Ejército (Superior School of the Army General Staff College) (Beebe-Center & McFarland, 1941).

From that time dates the publication of his *Lecciones de Psicología* (Lessons of Psychology), a text printed in Argentina, for the first time in 1936, having had some subsequent reprints. The book has a great historical relevance as it was the first general introduction to psychology that was published by a Paraguayan author (García, 2006). Its pages are focused on topics such as consciousness, attention, memory, association, and the subconscious, in addition to the definition of psychology, the explanation of its methods, and the study of sensation, perception, space and the time, imagination, intelligence, concept, judgment, and language, as well as affectivity, feelings, will, and personality. In the work a spiritualist orientation is perceived, and in many passages, a critical position to experimentation is recognized. Riquelme considered that the method par excellence of psychology continued to be introspection (García, 2006). A characteristic of the book is that it had attached chapters, and in the first of them, Riquelme essayed a history of psychology, although conceived as the evolution of

the different notions of the human soul. In this sense, Riquelme was also the first to refer to this issue in Paraguay (García, 2008).

Riquelme's bibliographical production also includes works on some topics other than psychology, including his *Educación romántica. La pedagogía del romanticismo alemán* (Romantic education. The Pedagogy of German Romanticism). He was the architect for the creation of a Facultad Libre de Humanidades (Free Faculty of Humanities) in Asunción, which began operating in 1942 (Centurión, 1948). Among the hobbies and interests that he maintained during his life, poetry also stood out, producing some important pieces. Today, Riquelme continues to be remembered as one of the most outstanding educators in the history of Paraguayan education. In his time, his work also transcended the borders of the country. The mentions he received from authors such as Beebe-Center and McFarland (1941) or Foradori (1954) are an objective proof of this.

Venezuela · Analytical psychology · Critical psychology · Creator of psychology course

Fernando Rísquez Iribarren was a psychiatrist, professor, and founding member of the Escuela

de Psicología (School of Psychology) at the Universidad Católica Andrés Bello (UCAB) (Andrés Bello Catholic University). He completed his high school studies at the Colegio San Ignacio de Loyola (San Ignacio de Loyola High School) (Caracas, 1941). He graduated as a Surgeon and Doctor in Medical Sciences at the age of 21 from the Universidad Central de Venezuela (UCV) (Central University of Venezuela) (1947).

He studied and trained in the city of Montreal, Canada, in Psychoanalysis with Dr. Theodore Chentrier (1887–1965), in Depth Psychology in Zurich with Dr. Frank Riklin (1878–1938), and in Psychodrama with Dr. Levy Moreno (1899–1974) in Madrid (1947–1952). He received a diploma in Psychiatry from McGill University, City of Montreal, Province of Quebec in Canada in 1950, where he was an instructor in Psychopathology.

He joined the Sociedad de Neurología y Psiquiatría (Society of Neurology and Psychiatry) (1952). He was a founding member of the Sociedad Venezolana de Medicina Interna (Venezuelan Society of Internal Medicine) (1952) and the American Psychiatric Association (1957). He founded the study of homeopathy in Venezuela.

Along with his career as a psychiatrist, he served as an assimilated military for 30 years (1946–1976), retiring with the rank of Colonel of the Army (1976). He was Chief of Service at the Hospital Psiquiátrico de Caracas (Psychiatric Hospital of Caracas) (1952–1959) and worked as a free professor of psychotherapy at the Central University of Venezuela (UCV).

In 1960, he was called to UCAB by the Jesuit Fathers Luis Arismendi (1920–2010) and Luis Azagra (1928–2007) and founded the Chair of *Crítica a los sistemas psicológicos* (Criticism of Psychological Systems), a course he taught for more than 40 years. The title of the chair, as indicated by Rísquez, comes from the terms “Critique” (search for the truth, goodness, and beauty of something); “System” (related set of concepts people or things that function as a unit); and “Psychological” (treatise of the psyche) (Rísquez, 2017, pag.12).

He received the appointment of full professor at both UCV and UCAB (1974). He was

incorporated in position #32 in the Academia Nacional de Medicina (National Academy of Medicine) and the Academia de Medicina del Estado Zulia (Academy of Medicine of the State of Zulia) (1983), and that same year, he joined as an individual full member of the International Association of Analytical Psychology in Zurich. Subsequently, he chaired the chair of psychiatry at the Escuela de Medicina Luis Razetti (Luis Razetti School of Medicine) of the UCV (1984) and was Chief of the Servicio de Psiquiatría (Psychiatry Service) of the Hospital Universitario de Caracas (University Hospital of Caracas). He had a great academic contribution, with more than 160 publications.

Among his awards and honors are: Orden Francisco de Miranda (Order Francisco de Miranda), Orden Libertador (Liberator Order), Orden General Rafael Urdaneta (General Rafael Urdaneta Order), Cruz de las Fuerzas Terrestres y de las Fuerzas Armadas de Cooperación (Cross of the Land Forces, and the Armed Forces of Cooperation). Member of the Asociación Venezolana de Psicología Analítica (Venezuelan Association of Analytical Psychology) and the Instituto Venezolano de Psicología Analítica (Venezuelan Institute of Analytical Psychology). Order Francisco de Miranda, Liberator Order, General Rafael Urdaneta Order, Cross of the Land Forces, and the Armed Forces of Cooperation.

Dr. Rísquez exalted the search for intimacy as one of the fundamental pillars for the exercise of health and helping professions. His contribution as a professional psychiatrist, chief of service, and head of the professorship has been a valuable contribution to the development of Venezuelan Psychology; he was one of the main promoters of opening the door to clinical psychologists in hospitals as well as to the integration of depth psychology to the hospital clinic.

The Venezuelan Association of Analytical Psychology published a special issue of the journal *Aletheia* dedicated to honoring Dr. Rísquez (Asociación Venezolana de Psicología Analítica, 2019), as well as the book entitled *Polyphony* (Himiod, 2019) becoming a reference reading for those who wish to delve into the human and professional side of this doctor-psychiatrist,

promoter of the training of psychologists in Venezuela.

His son, Dr. Francisco Alejandro Rísquez indicated, “He leaves a long legacy on theories and practices in mental health; he conceptualized psychosomatic diseases, exalted and deepened femininity, introduced hospital clinical psychology” (Francisco (Rísquez, 2021), n.p.).

Robles Ochoa, Oswaldo

Born in *Monterrey, Nuevo León, Mexico, on 8 March 1905*

Died in *Mexico City, Mexico, in 1969*

Ana María Méndez Puga
Universidad Michoacana de San Nicolás de Hidalgo, Morelia, México

Keywords

Mexico · Thomist philosophy · Clinical psychology

Robles Ochoa was raised during the Mexican Revolution (1910–1920) by his mother, Guadalupe Ochoa, and his father, Juvencio Robles, who served in the federal army under the command of President Porfirio Díaz (1830–1915, rule 1876–1880 and 1884–1911). The revolutionary conflict in Mexico forced Robles Ochoa and his family to leave the country, settling in San Antonio, Texas (United States). There he enrolled at St Mary’s College, a Marist-run educational institution (Gallegos & Colotla, 1991; Aceves, 2014). When his father died, in 1917, he returned to Mexico, where he continued his studies at the Colegio Francés (French College) and then enrolled at the National School of Medicine to become a physician. He was forced to interrupt his studies, however, and fled to the United States, where he concluded his medical training at the Catholic University of Nebraska in 1929. His exile might have been related to a possible involvement in an illegal activity, given his association with groups opposed to the anti-clerical policies of Plutarco Elías Calles (president from 1924 to 1928) (Gallegos & Colotla, 1991; Aceves, 2014). It seems that Robles Ochoa was detained at the Santiago Tlatelolco military prison and escaped, although it is not known for how long he was imprisoned or whether his “escape” implies that someone saved him or released him.

On his return to Mexico, probably in 1930, he studied philosophy in the Department of

Philosophy and Advanced Studies at the Universidad Nacional Autónoma de México (UNAM or National Autonomous University of Mexico). In 1935, he obtained his master's degree with a thesis entitled "The Body and the Soul," and then obtained his doctorate in philosophy in 1936 with the dissertation "The theory of the idea in Malebranche, in the philosophical tradition." (Robles, 1937). That year he also began working at UNAM, teaching courses related to epistemology and logic and advocating Thomist philosophy. He became the director of UNAM's Department of Philosophy in 1942 (Gallegos & Colotla, 1991; Aceves, 2014).

From 1938 onward, Robles taught Experimental Psychology at the Department of Psychology, in the UNAM's Facultad de Filosofía y Letras (FFL). He also worked as a professor at the Colegio Francés, the Motolinía University, and the Escuela Nacional Preparatoria (ENP or National Preparatory School) (Aceves, 2014). It seems that he was one of the first to teach new subjects, such as psychobiography, sex psychology, and psycho-endocrinology. Years later, in the 1960s, he taught both adolescent psychology and the clinical psychology seminar, from 1958 to 1964.

It should be noted that, in 1952, he was appointed tenured professor and was one of the first designated to this category in the Department of Psychology at UNAM's FFL (UNAM, 1954), in light of the need to consolidate the department. However, health problems forced him to withdraw somewhat from academic activities (Aceves, 2014). In spite of these difficulties, he was able to obtain his master's degree in psychology (at the time, a master's degree was the equivalent to a contemporary undergraduate degree) in 1956 with the thesis "Symbol and Desire." He also obtained a doctorate in psychology, in 1958, with a thesis on "The problem of anguish in the psychopathology of Jaspers" (Gallegos & Colotla, 1991; Aceves, 2014).

In 1954, Robles was awarded an honorary doctorate in social sciences by the Autonomous University of Guadalajara (which also published a book in his honor) and participated in congresses in the areas of philosophy, psychology, education,

and mental health. He is recognized as the First General Secretary of the Inter-American Society of Psychology and organizer of the First Inter-American Congress of Psychology in 1953 (Gallegos, 2012), although it appears that he did not form part of the first group that designed the Congress's statutes (Colotla & Urra, 2006). He was a member of the International Society for the Study of Völkerpsychologie, the Institute of Psychosynthesis and Human Relations of the University of the Andes (Mérida, Venezuela), and the American Catholic Philosophical Association. He also served as a corresponding member of various philosophy societies (in Peru and the Dominican Republic, among others). Although he was associated with various researchers and, as a psychologist, was the guest speaker at the Inter-American Conference on Education held in Ecuador, and appeared as a delegate at conferences in Peru, Venezuela, and other countries in Latin America (UNAM, 1954), he was not able to attract followers to his school of thought. No obituary was published when he died (Gallegos & Colotla, 1991).

Robles Ochoa wrote books and articles on both philosophy and psychology. He was also a translator of texts, on various subjects, from both English and French. He conducted research on a variety of disciplines such as anthropology, axiology, ontology, the theory of knowledge, psychology, the history of philosophy, and the history of psychology in Mexico. He also translated from Latin and wrote commentaries on the *Libros del alma* by Fray Alonso de la Veracruz (1509–1584), published by UNAM in 1942 (Robles, 1942; Rovira, 1998). Notable among his work is the thesis he produced for his master's degree in philosophy on the soul and the body, which he expanded on and published under the title *Esquema de antropología filosófica* (or *Outline of Philosophical Anthropology*). Given his academic trajectory, his training of students, and the subjects dealt in his publications, he is considered a philosopher and a psychologist (Gallegos & Colotla, 1991).

His *Introducción a la psicología científica* (Robles, 1948) (*Introduction to Scientific Psychology*) was published in various editions

(1945, 1948, 1959, 1961, and 1963). His publications appeared mainly on the *Revista de Filosofía y Letras* journal, most of which are related to the history of clinical psychology and about his reflections on Freud.

It should be noted that Robles's academic production, his role as a reader of prominent authors in psychology, and the manner in which he translated and organized their writings contributed to promoting psychological theory in Mexico at the beginning of the twentieth century. Most of his academic work, however, is dedicated to philosophy, a perspective that can be observed in his texts on psychology. There is no doubt as to the significance of the role he played, for three decades, as a promoter of Thomist philosophy, especially during the period of Manuel Gómez Morín (1897–1972) as Rector of UNAM (1933–1934).

Gallegos and Colotla's (1991) biography of Robles Ochoa describes how he was incarcerated for participating in actions taken against the post-revolutionary anti-clerical laws of the Calles presidency, but the authors do not provide details about his involvement. Writing on the creation of clerical and non-clerical societies in twentieth-century Mexico, Ramírez (2018) relates how Oswaldo Robles participated in the so-called Unión del Espíritu Santo (Union of the Holy Spirit), also known as the "U," for which he drafted the organization's general plans. Robles's political activism goes beyond these two experiences as he is also identified as the founder of a group known as *Los Conejos* (The Rabbits), which was dedicated to promoting conservative ideology in Mexico (González, 2005, and Contreras, 2002, as cited in Ramírez, 2018). It seems that these groups, organized into "cells" or subgroups (Contreras, 2002) and, acting in secret, dedicated themselves to activities similar to the U, which employed radical and violent actions to defend Catholicism.

Finally, his contributions to psychology can be summarized in his involvement in guiding the formation of the discipline via his pedagogy and the publication of his book *Introduction to Scientific Psychology*. As Gallegos and Colotla (1991)

argue, from his university days onward, Robles contributed to the formation of psychological thought and theory, incorporating elements established during that era, in a search of an epistemological and organizational basis that would earn scientific status for the discipline of psychology.

Roca de León, Pablo

Born on May 16, 1907, at Quebradillas, Puerto Rico

Died on February 10, 1999, at Coral Gables, Florida, United States

Irma Roca de Torres

University of Puerto Rico, Río Piedras, San Juan, Puerto Rico

Keywords

Puerto Rico United States · Tests and measurements · Education

Pablo Roca de León was the third son born to Pablo José Roca Díaz and Isidora de León Rodríguez, farmers who grew coffee and minor fruits. He had six brothers and just one sister. Like most children of his time, Pablo Roca de León studied his elementary grades at the public school of his town in the northern coast of Puerto Rico, but he moved to Río Piedras, near the capital city, to enroll in secondary school, at University High School, a semipublic school administered by the University of Puerto Rico at Río Piedras (UPR-RP). He obtained his High School Diploma in 1924 and was the First Honor (*Valedictorian*) of his graduating class.

Pablo Roca de León registered at the *Escuela Normal* (School for Teachers that certified a person as a teacher in 2 years) at the College of Pedagogy, UPR-RP. He obtained his Diploma in 1926 and a commission as Second Lieutenant of the US Army. His first professional years were devoted to teaching children in the rural schools of Quebradillas. This experience was essential to him in his posterior development as a psychologist specialized in testing (P. Roca de León, personal communication, June 1, 1993). Although his students obtained the second highest average in their punctuation at the standardized achievement test given by the Assistant Superintendent of

his School District, he questioned the methods followed in the evaluation because the norms used had not included students from rural schools. At the end of these experiences at rural schools, he was promoted to School Principal with functions as Assistant School Superintendent (Roca de Torres, 1993–1994).

His experience as School Principal was just a year, at the end of which he started working as Statistic Officer at the central offices of the Department of Public Instruction (DPI) of the Government of Puerto Rico in San Juan. Realizing the importance of furthering his education, he registered as a night student at UPR-RP and in 1933 finished his bachelor in education, *magna cum laude*, with a concentration in mathematics and English.

In 1940, while working as a General Supervisor at the DPI, he was invited to participate in a research project to study the teaching of English as a second language, sponsored by the American Council on Education and directed by Hershell T. Manuel (1887–1976) of the University of Texas. He moved to Texas by ship and was accompanied by Teobaldo Casanova, Ismael Rodríguez Bou, and Abigaíl Díaz Alfaro from UPR-RP, who had also been invited to participate. This research implied the construction of bilingual instruments to measure general ability, reading, and language, in both English and Spanish. The selected sample of students included children from Texas, México, and Puerto Rico. This collaboration was interrupted by his being called to serve as Lieutenant Commander of the US Navy during World War II.

After the war he returned to finish his collaboration in the aforementioned research project and also registered in the graduate program at the University of Texas. He obtained a Master's in Education (MEd) with a specialization in Supervision and Administration in 1948. His master's thesis, *A study of a Test of Word-Relations for Spanish-speaking children*, tried two-word relation tests in a sample of 250 students from 4th to 12th grade in the public schools of Isabela and Quebradillas in Puerto Rico.

Pablo Roca de León obtained his doctoral degree (PhD) in Psychology with a specialization

in Testing and Guidance in 1952. Most of his doctoral work is in the development of measurement instruments, area to which he devoted most of his professional life. His dissertation, *The construction of an Interest Inventory for students of different linguistic and cultural backgrounds*, develops parallel tests to measure interests for both Spanish- and English-speaking high school students using a sample (N=2607) of high school students from Puerto Rico and Texas. This instrument was published and used for many years.

After his graduation, Pablo Roca de León, as Director of the Division of Research and Evaluation at the DIP in Puerto Rico, master minded the development of many tests to measure the general abilities, intelligence, interests, personality, and achievement of Puerto Rican school children (Herrans, 2000). Some of these tests were translations and adaptations of foreign tests, like the WISC (1951) and the Stanford-Binet (1953), but many were specially constructed for the Puerto Rican population.

Dr. Roca de León, in collaboration with Miguelina Nazario de Hernández, developed in 1950 and 1956 the *Pruebas Cooperativas Interamericanas* (Interamerican Cooperative Tests), with parallel forms in Spanish and English and norms for Puerto Rican children. These tests measured general ability. In 1961, they were revised, renormed, and renamed as *Pruebas Interamericanas* (Interamerican Tests) by Dr. Roca de León and his collaborators. Dr. Roca de León also led the development of *Prueba Colectiva Puertorriqueña de Capacidad Mental* (Collective Puerto Rican Test of Mental Capacity) in 1954, a pictoric test to measure cognitive abilities of children from first to third grade, and *Prueba Puertorriqueña de Habilidad Mental* (Puerto Rican Test of Mental Ability) in 1960, to measure cognitive abilities of students from fourth to twelve grade (Roca de Torres, 1991). These tests were used as screening instruments to identify students that were behind and to lead them to proper teaching programs to develop their skills (División de Evaluación, 1966). The DIP used to normalize their instruments every 3 years (Nazario de Hernández, n.d.). To get an idea of the samples used to normalize these instruments,

in the 1967 renormalization of *Prueba Colectiva Puertorriqueña de Capacidad Mental*, more than 70,000 elementary school students were used (Roca de Torres, 2000; División de Evaluación, 1968).

During the 1950s, Dr. Roca de León participated in educational meetings organized by the Caribbean Commission of the Progress Alliance and celebrated in Trinidad, was visiting professor at the University of Maine, and offered lectures about the problems encountered when adapting intelligence tests to other cultures. He also prepared items for an Army test of reading that was to be offered to Puerto Rican soldiers.

The office he directed was so well appointed in psychometric developments that it was in this office in Puerto Rico that a machine to correct tests developed by IBM was first used in the United States (P. Roca de León, personal communication, June 1, 1993). Although Dr. Roca de León developed and published many psychological tests, he insisted that his major contribution to this field was to eliminate the secretiveness of the evaluation process and making it a crucial part of the administration of an educational system. Another contribution he emphasized was his insistence that all tests must have reliability and validity in order to be useful. At the DIP he was also crucial in the development of Night School, for adult learners, and an afternoon alphabetization program for children who were not attending school.

He retired from his position at the DPI in 1963 and devoted his time to teaching at Interamerican University-Metro and at directing their Program for Adult Education. Later on, he moved to Washington DC and worked at the United Nations Education, Scientific and Cultural Organization (UNESCO), Organization of American States (OAS), and World Bank of Reconstruction and traveled to all Latin America countries as an educational consultant (Roca de Torres, 2006). Before his death in 1999, he lived with his wife of many years, Zulma, in a quiet neighborhood in Coral Gables in Florida. He was survived by his brother, who was my father, and several nieces and nephews.

Irma Roca de Torres is the eldest daughter of Fernando Roca de León, an educator, and Angelina Saavedra Amador, a sociologist. She had four siblings, three brothers and a sister. She married Francisco Torres-Santos, endocrinologist, and is the mother of four children – Javier Francisco, Irmaylis, Leilaní, and Ilianai – and grandmother to five: Sofia Isabel, Diego Enrique, Armando André, Mateo Enrique and Camila Angelina.

Her close-knit family was connected with the University of Puerto Rico (UPR) and the Puerto

Rico Department of Education, where her parents served as professors and researchers. She mentions the university campus in Río Piedras, a section of the capital city of San Juan, as her playground since childhood (Roca de Torres, 2018). Irma Roca de Torres completed the Bachelor's degree in 1962 at Universidad de Puerto Rico, Recinto de Río Piedras (UPR-RP) (University of Puerto Rico, Río Piedras Campus), and earned a Master's in Clinical Psychology at the University of Minnesota in 1964. She has a PhD degree in School Psychology from Temple University in Philadelphia, Pennsylvania. Her Doctoral Dissertation completed in 1987 was entitled *The Psychological Impact of Handicapped Children on their Siblings: A Comparative Study*. Temple University recognized Dr. Roca de Torres with the College of Education Distinguished Alumni Award in 1995.

Irma Roca de Torres was a faculty member at UPR-Río Piedras since 1964, where she taught courses in social sciences and psychology and participated in many faculty committees. She also served as Academic Counselor, Associate Dean, and Acting Dean of Social Sciences. When she retired in the year 2001, she was a full professor at the Psychology Department. She has continued to serve in Dissertation Committees at Interamerican University of Puerto Rico as adjunct faculty in the Graduate Programs of the Department of Psychology.

Dr. Roca de Torres has published many articles in professional journals, written book chapters, edited special issues for journals and has been a contributing editor for several books. She was on the Editorial Board for the *Revista Puertorriqueña de Psicología* (Puerto Rican Journal of Psychology) and the *Interamerican Journal of Psychology*. She has presented at hundreds of professional meetings in Puerto Rico, Latin America, the United States, and Canada. Her research interests include children with disabilities, school psychology, psychological tests and measurements, history of psychology, and women with AIDS, among others.

Irma Roca de Torres describes as significant achievements in her career the opportunity to contribute to the professional development of

psychologists and other graduates of universities in Puerto Rico who have become leaders in their fields (Roca de Torres, 2018). Many professors of Psychology, directors of Psychology programs, and practicing psychologists who were her students recognize the impact she had on their successful careers. Another important contribution is promoting awareness of the needs of persons in disabilities and stimulating students to be sensitive towards this population. She supervised practicum courses in which students assisted children with cognitive and physical conditions such as learning disabilities, sight and hearing impairments, autism spectrum disorders, and other serious cognitive and behavioral conditions. This hands-on experience was unique for many students and contributed to their choice of professions serving these populations. She also promoted support for families who cared for persons with disabilities, especially siblings, and the impact on their social and emotional development.

Dr. Irma Roca de Torres has contributed to the area of psychological testing in Puerto Rico through research and publications. In collaboration with Dr. Margarita Rodríguez-Aponte (born 1949), she translated the Piers Harris Self Concept Scale and developed reliability and validity measures for this test. She also created a scale for exploring relationships among siblings, *Escala Roca de Relaciones entre Hermanos* (Roca Scale for Measuring Relationships among Siblings), that has excellent reliability indexes. She belonged to the team of researchers which standardized the Escala de Inteligencia Wechsler para Niños-EIWN-R PR (Wechsler Intelligence Scale for Children-Revised for Puerto Rico). She edited a special volume of the *Puerto Rican Journal of Psychology* [Vol. 19, 2008] that focused on psychological testing in Puerto Rico, with the intention of recognizing work in this area that was little known. The volume includes contributions to testing in the early years of the twentieth century that had not been published before, biographies of pioneers in the testing movement, and current research carried out in different universities and research centers.

Since very early in her career, Dr. Roca de Torres became active in the Puerto Rico Psychological Association (APPR), in the Interamerican Society of Psychology (SIP), and, later, in the American Psychological Association (APA). She has occupied important positions in all of them: president of APPR (2003) and representative from Puerto Rico at SIP (1993–1997) and at APA (2003–2008), among other governance roles. Her leadership roles in APPR span over 50 years and include responsibilities in the Board of Directors and coordinating numerous committees. In 2005, she was the first person to receive the Lifetime Achievement Award by PR Psychological Association, the year this award was established. In 2020, she is still active in the International Relations Committee and the Interest group for Persons with Disabilities of APPR.

As a representative of APPR in the Council of Representatives of American Psychological Association, Irma Roca de Torres was instrumental in ensuring that needs of psychologists in Puerto Rico were considered as well as stimulating participation of colleagues from her country in APA activities. She held leadership roles in groups related to her interests such as children's issues. An avid traveler, she attends international conferences regularly and has shared information about history, research, and other achievements related to psychology in Puerto Rico, in several countries. She was inspired to explore and present the history of psychology in Puerto Rico when attending a conference in Cuba about Latin American Psychology, in 1987, and there was no mention of any activities related to psychology in Puerto Rico. That conference was sponsored by Interamerican Society of Psychology, and after that, presentations about Puerto Rican psychology and the growth of the profession have been a constant presence. In 2006, she edited an extraordinary volume of the *Puerto Rican Journal of Psychology* about the History of Puerto Rican Psychology [Vol. 17], which was a continuation of a section she had edited for that journal in 1994.

Irma Roca de Torres has volunteered for community work in Puerto Rico and abroad. Some

salient events in which she offered services to assist communities in need are the World Trade Center disaster of September 11, 2001, the Aids Quilt project, and spiritual support for hospitalized children with disabilities in Puerto Rico. Since 2002, she has represented APPR in the Puerto Rico Mental Health and Addictions Council, an advisory group for the Department of Health of Puerto Rico, thus contributing to improving services for persons with mental disorders and disabilities.

Dr. Roca de Torres continues active in academia, professional organizations, community service groups, and writing and editing scientific publications. She has mentored generations of professional and academic leaders in psychology and other disciplines that contribute to mental health services and training of psychologists in Puerto Rico. Her international activities include leadership roles in organizations, collaboration in publications, and presenter at meetings in several countries. She also continues in a lifelong quest in favor of persons with disabilities and their families, which contributes to the quality of life of hundreds of Puerto Ricans and residents of her native land.

 Psychology

Recognized as the first female Spanish psychologist (see Herrero González, 2003) and the founder of the first university training program in psychology in South America, María de las Mercedes Rodrigo y Bellido was an academic of great importance in Spain, Colombia, and Puerto Rico. She lived in Colombia for 10 years and is considered one of the most emblematic figures of psychology in the country.

Mercedes Rodrigo was born in Madrid, Spain, where she lived during her childhood and most of her youth. She studied at the *Escuela Normal de Maestras (School for Female Teachers)*, where she obtained her degree as a superior teacher in 1911. At the time, higher studies in teaching were the most common and accessible for Spanish women (Herrero González, 2000, p. 114). Later, she continued her studies in special education for the deaf and blind. She worked for a year in the Colegio para Ciegos de Madrid (Madrid's School for the Blind). In 1920, she received a scholarship to study psychopedagogy, in Geneva, Switzerland.

The time she spent at *l'Ecole des Sciences de l'Education*, attached to the *Rousseau Institute* of the University of Geneva, under the direction of Édouard Claparède (1873–1940), was decisive in Rodrigo's approach to psychology. She attended seminars and classes, including *experimental*

psychology with Claparède, *psychological technique* with Jean Piaget (1886–1980), *psychology and pedagogy of moral feelings* with Pierre Bovet (1878–1965), *educational psychoanalysis* with Sabina Spielrein (1885–1942), and *experimental pedagogy* with Marjorie Duvillard (1911–2004). During her stay in Switzerland, besides collaborating with Claparède in the Psychology Laboratory, she carried out practices in education for abnormal people and worked in the Vocational Guidance Office. Together with Pedro Rosselló (1897–1970), a close collaborator of Piaget and recognized theorist in comparative education, Rodrigo participated in some of Jean Piaget's studies. She also participated in Piaget's research on children's ideas about dreams and meteorology and took part in his research on child causality, which was later published in the book *La causalité physique chez l'enfant* (Piaget, 1927). Rodrigo is acknowledged in the book edition by her contributions to some of the research presented in the book. In addition, she created a scale of the perception of colors in children and adults, *Echantillons de couleurs (Color samples)*, and a professional orientation test; these works were published in Claparède's book *Comment diagnostiquer les aptitudes chez les écoliers (How to diagnose aptitudes in schoolchildren)* (Claparède, 1924). Additionally, she translated into Spanish some of the works written by the representatives of the Geneva School, such as Audemar and Lafendel's text (1926) entitled *La Maison des Petits (The house of children)* and some of Claparède's other works (Herrero González, 2000).

After her return to Spain, in 1923, in collaboration with Roselló, Rodrigo published the Spanish revision of Claparède's test. In this work, Rodrigo and Roselló explicitly reject genetic and geographical explanations on the observed differences among groups of children. They also recognized the effects of socioeconomic conditions in the performance to tests and recommended the construction of different scales for different socio-cultural and geographical contexts.

Moreover, Rodrigo started to work at the Instituto de Reeducción de Inválidos del Trabajo (Institute of Reeduction of Invalid People at

Work), which was created to offer a rehabilitation and orientation service for injured workers. She worked with José Germain (1897–1986) in the technical section of the institute and was part of the team of professional orientation and the programs of reeducation. The psychotechnics laboratory at the institute allowed her to articulate two of her main interests: the professional guidance with a clear emphasis on the development of strategies for the evaluation of individual differences and the prevention of accidents at work with a psychoeducational approach in school. The development of her work in those fields continued in the National Institute of Psychotechnics of Madrid where Mercedes Rodrigo worked as the assistant of José Germain, who was appointed as director in 1927; she was later appointed as director of the Institute between 1936 and 1939 (Monteagudo Soto & Chisvert Perales, 2007).

In his autobiography, Germain recognized the role of Rodrigo as his colleague and described the time they worked together as a period of very intense activity in the preparation of materials for exploration and test, such as the adaptation of the Ballard test in 1925. They also studied and protocolized tests of memory, personality, knowledge, attention, aptitudes, and manual skills. One of the most successful was the adaptation of the Lewis Terman system, the first adaptation of the Binet-Simon test, originally published in 1928. A big part of the material produced in these works, including some unprocessed data, was lost or destroyed during the Spanish Civil War (Germain, 1980).

Although Mercedes Rodrigo's contribution in the fields of professional guidance and education for the prevention of occupational accidents is recognized (Herrero González, 2000, 2003; Monteagudo & Chisvert, 2007), her thoughts about women's role in this process are less known, as well as her sensitivity to children's living conditions. Regarding the female role in society, Rodrigo herself was an example of empowerment in a moment when women still experienced limitations in the professional field. For example, Rodrigo was the only woman lecturer at the VI Congress of Basque Studies. She presented a speech about the professional guidance of women. She also participated in an

international congress on women's professional guidance in Bordeaux. The beginning of her first lecture was a statement of principles for her time: "...that women can aspire to occupy positions reserved so far only for men; that female intelligence is not inferior to males; that the so-called 'weak sex' can face difficult situations..." (Rodrigo, 1927, p. 147). She defended the role of women in professional guidance for men and women and challenged her male colleagues to think about the reasons for the "fear of the educated woman."

Her interest in childhood development, especially during times of war, can be appreciated in one of Rodrigo's earlier works in which she studied the perception of Spanish children on war (Rodrigo & Roselló, 1922, cited by Herrero González, 2000) and also in the reports of her performance as a psychologist of the Juvenile Court of the Superior Council for Child Protection.

Due to the persecution of republicans and democrats at the end of the Spanish Civil War by Franco's regime, Mercedes left her country and traveled for a short time to Switzerland before moving to Colombia. Mercedes arrived in Colombia in August 1939 together with her sister María and, a good friend of both, José García Madrid. María Rodrigo (1888–1967) is considered the first Spanish woman composer; during her stay in Colombia, she was a professor at the National Conservatory and choir director of the Gimnasio Moderno [Modern Gymnasium] and Gimnasio Femenino (Feminine Gymnasium). García Madrid had been Mercedes Rodrigo's assistant at the Institute of Psychotechnics of Madrid and continued helping her with the new projects in Colombia where he also obtained his degree as a physician at the Universidad Nacional de Colombia (National University of Colombia).

It was an auspicious moment for working in Colombia. The liberal regime that ruled the country at that time (the Liberal Republic, as it was called the period when the liberals were at the government, lasted from 1930 to 1946) had supported the Spanish Republic during the war, and after the republican's defeat, it welcomed some of the citizens that left Spain fleeing from the dictatorship as well as from other fascist

regimes in Europe. Mercedes Rodrigo was invited to Colombia by Agustín Nieto Caballero, the rector of the National University of Colombia, to organize the psychotechnical services for student selection at the university.

When Mercedes Rodrigo arrived in Colombia, there was still no psychology degree at the university level. However, the discipline was growing and gaining institutional spaces, especially from the field of pedagogy at the Education Faculty of the National University of Colombia and later in the Escuela Normal Superior (Superior Teacher Training College) where an institute of experimental psychology had been founded. That was how, in a mature moment of her professional career, at the age of 49, Rodrigo found an ideal niche for her new contributions to psychology, discipline that she helped consolidate in Colombia.

Rodrigo's first job was to build mental tests to classify candidates at the Faculty of Medicine of the National University of Colombia. This work was led from the psychotechnics section, created in 1939 and directed by Rodrigo, with García Madrid as her closest assistant. Rodrigo and García Madrid adapted a number of tests such as the *Yerkes Test*, the *Army Alpha Test*, the *Scholastic Aptitude Test for Medical School*, and the *Attention Test of Toulouse-Pieron* (Hernández-Vargas et al., 2002). The results of this work were published in Rodrigo's 1940–1941 report and made it possible to organize processes of student's selection in different faculties at National University of Colombia as well as in other institutions such as the Superior Teacher Training College, the Modern Gymnasium, the Escuela Industrial (Industrial School), the National Police, and the Municipal Tram (Ardila, 1997; Hernández-Vargas et al., 2002).

By 1947, the psychotechnics section had another function: to provide psychological and psychiatric services for students with adaptation or orientation problems. After recognizing the need to expand and strengthen the activities of the psychotechnics section, the University Board decided to create, that same year, an Institute of Applied Psychology, independent from any university department.

The *Institute of Applied Psychology* was formally opened in 1948, and Rodrigo was in charge. She proposed the creation of the first university program in psychology and its curriculum, based on the North American model. The first group of students entered in February 1949 and graduated in November 28, 1952. This was the event that gave Rodrigo the title of being the pioneer in the institutionalization of psychology in Colombia and one of the pioneers in Latin America.

Unfortunately, Rodrigo couldn't be in charge of the whole training for the first generation of psychologists in Colombia. Changes in the political situation in Colombia gave rise to the conservative party to the government in 1946. Then, there began one of the darkest periods of intense political violence in Colombia and the turn to the right in the educational and labor policy, making things difficult for European immigrants. Rodrigo, in particular, was unfairly accused of favoring communist applicants at the National University, and she, as well as other Spanish immigrants, were subject to suspicion and hostility by the conservative regime (Hernández-Vargas et al., 2002). Minded of the threat this political winds meant and facing open hostility from the government, Rodrigo, together with her sister María and their friend García Madrid, was forced to emigrate again, this time to Puerto Rico (Ana María García Blanco, personal communication, October 9, 2020; José Rodríguez-Valderrama, personal communication, September 8, 2020).

Mercedes arrived in San Juan at the age of 60, and she started working as a teacher of education at the University of Puerto Rico. Later, she dedicated herself to clinical psychology and first worked in the *Clinic Juliá of San Juan*. Rodrigo was one of the founders of the Association of Psychologists of Puerto Rico and its president (1958–1959). She worked as a clinical psychologist at Veterans Administration Hospital until her retirement in 1972 (Ardila, 2019). Her sister, María, continued composing and teaching at the Universidad de Puerto Rico in Río Piedras (University of Puerto Rico at Río Piedras). After María's death in 1967, Mercedes moved to live with the family of García Madrid until her death in 1982.

Rodrigo had a broad conception of psychology, as is evident in her book *Introduction to the Study of Psychology*, published in 1949. It is clear in this work that her understanding of psychology was influenced by her training in education and her interest in psychological testing. Rodrigo reconciles the methodological rigor of empirical psychology and psychometrics with a sensitivity to the people's needs, particularly children, women, and youngsters. Her contributions to the discipline in three different countries place her among a select group of highly relevant female psychologists of the twentieth century. Furthermore, not only her awareness and sensitivity of the importance of psychological knowledge but also the difficulties that the profession of psychology has had for the past century are very enlightening for the history of psychology, as she said the following:

Almost the same [as Don Quixote] could psychologists have said in the heroic times when we started this profession: *out of time, out of their time* as was the case with the immortal dreamer of La Mancha. [...] Old people like me, and several times transplanted to different landscapes and cultures, we also made the profession of faith in the knight-errantry's order of psychology. Without the fear of adventures and difficulties that we could find along the way. Always with the firm decision to offer our efforts and our scant knowledge to help the *skinny and needy*, and those who suffer from *evil melancholy* [...] (Rodrigo, 1955).

Rodrigué, Emilio Marcus

Born *in Buenos Aires, Argentina, January 9, 1923*

Died *in Salvador de Bahía, Brazil, February 21, 2008*

Hernán Scholten
Universidad de Buenos Aires, Buenos Aires,
Argentina

Keywords

Argentina · Brazil · Psychoanalysis ·
Kleinism · Group therapy

Raised in a large and wealthy family in the city of Buenos Aires, after finishing high school, Emilio Marcus Rodrigué studied medicine between 1940 and 1947 at the Universidad de Buenos Aires (University of Buenos Aires).

His interest in psychoanalysis arose initially from his youthful readings of Freudian works, but especially from *La mujer frígida* (*The Frigid Woman*) by Austrian psychoanalyst Wilhelm Stekel (1868–1940) (Rodrigué, 2000). In 1943, he began

psychoanalytic therapy with Dr. Arnaldo Rascovsky (1907–1995), a founding member and didactic analyst of the Asociación Psicoanalítica Argentina (APA, Argentine Psychoanalytical Association). In 1946, he entered the training seminars at APA and began to collaborate on the *Revista de Psicoanálisis* (*Journal of Psychoanalysis*) writing reviews and translations from English.

In 1947, after a disagreement with Rascovsky, he interrupted his analysis and was unable to continue his training in Argentina, since an APA resolution stated that a candidate who abandoned his therapy could not continue his training with another training analyst (Rodrigué, 2000). Then, Rodrigué contacted Paula Heimann (1899–1982), a member of the British Psychoanalytic Society, close to Melanie Klein (1882–1960), and continued his studies in London.

There, he attended seminars given by John Rickman (1891–1951), Hilde Abraham (1906–1971), and Donald Winnicott (1896–1971) and participated as an observer in the group therapy sessions led by Wilfred Bion (1897–1979) at the Tavistock Clinic. He was also responsible for the analysis of Hazel Bentall, the youngest granddaughter of Melanie Klein – who was the training supervisor of the case (Rodrigué, 2000). During the 1950s, he published a series of articles in the *International Journal of Psychoanalysis* and was the only Latin American author to contribute to the collective volume on *New Directions in Psychoanalysis*, edited by Melanie Klein, Paula Heimann, and Roger Money-Kyrle (1898–1980) (Rodrigué, 1955).

Shortly after returning to Buenos Aires, Rodrigué participated in the foundation of the Asociación Argentina de Psicología y Psicoterapia de Grupo (Argentine Association of Psychology and Group Psychotherapy) (1954). That same year, he presented a paper on *Psicoterapia en grupos* (*Psychotherapy in groups*) at the First Argentine Congress of Psychology, held in the city of San Miguel de Tucumán. He joined León Grinberg (1921–2007) and Marie Langer (1910–1987) and published the first book in Spanish on group therapy (Grinberg et al., 1957).

In 1958, impressed by the work of American philosopher Suzanne Langer (1895–1985), he

traveled to the United States to work at the Austen Riggs Clinics (Stockbridge) with David Rapaport (1911–1960) and Erik Erikson (1902–1994), referents of *Ego Psychology*. The result of this experience, which lasted 4 years, was his book *Biografía de una comunidad terapéutica (Biography of a therapeutic community)* (Rodrigué, 1965).

In 1962, back in Argentina, he joined the so-called Grupo Escobar (Escobar Group), which had a powerful influence within the APA during the 1960s and in which several of its future presidents participated (Balan, 1991). Rodrigué became President of the APA between 1966 and 1968, and, soon after, he was elected President of the Capital Section of the Federación Argentina de Psiquiatras (Argentinian Federation of Psychiatrists).

In 1969, he published his novel *Heroína (Heroine)*, which had remarkable editorial success (Rodrigué, 1969). Three years later it became a film, directed by the prestigious Argentine filmmaker Raúl de la Torre (1938–2010), and a screenplay written by the director and Emilio Rodrigué himself. The novel and the film deal with the limits of psychoanalysis and the vindication of collective and social processes. It can be considered a critique of psychoanalysis, or at least of an official and dogmatic version of psychoanalysis, in a moment when Rodrigué had already begun his political radicalization. Such political position led him to join Plataforma, an international group that emerged in Europe during the XXVI Congress of the International Psychoanalytical Association (Langer, 1989; Modena, 1986) and was promoted locally by psychoanalysts such as Armando Bauleo (1932–2008) and Hernán Kesselman (1933–2019) (Vezzetti, 2009). This group was highly critical of the APA, particularly of its criteria for selection and training of psychoanalysts.

In 1971, at the height of the Cold War, Rodrigué traveled to Moscow as part of a delegation of Latin American psychoanalysts and psychiatrists who intended to exchange experiences and learn about the local psychiatric scene. There emerged the project of “La Casona” (“Major House”). Located in the Belgrano neighborhood of Buenos Aires, Rodrigué and several psychoanalyst friends hosted for 2 years multiple

experiences: theoretical or political debates, group psychotherapy sessions, and social laboratory.

By that time, the members of Plataforma, including Rodrigué himself, had already publicly resigned from the APA, based on mainly political-ideological differences. Shortly thereafter, this group was dissolved.

As a result of the turbulent situation in the country and the political persecution initiated by the so-called Alianza Argentina Anticomunista (Argentine Anticommunist Alliance), Rodrigué had to go into exile in 1974. For the next 7 years, he lived for 6 months in Europe, mainly in Madrid and Seville (Spain), and 6 months in Salvador de Bahia (Brazil), a city he had previously met at the invitation of his former patient, the anthropologist Juana Elbein and her husband Didi Mestre (1917–2013), a renowned Afro-Brazilian priest. In those years, together with his wife Martha Berlin, psychologist and psychotherapist herself, they published *El antiyo-yo (The anti-self)* (Rodrigué & Berlín, 1977) and collaborated in the training of psychiatrists and psychologists of the Núcleo de Estudios Psicoterápicos (Nucleus of Psychotherapeutic Studies), organizing intensive group laboratories, influenced by Psychodrama and the Human Potential Movement. In 1980, he settled definitively in Brazil and continued his work of disseminating psychoanalysis, adopting a pluralistic approach open to different approaches and schools.

In the 1990s, he wrote a voluminous biography of Sigmund Freud that was published initially in Portuguese, then in Spanish, and finally in French (Rodrigué, 1995). In 2000, he published *El libro de las separaciones (The book of separations)*, an “unfinished autobiography” that continues and expands on some of the issues developed in previous literary works such as *El paciente de las 50.000 horas (The 50,000-hour patient)* (Rodrigué, 1977), at turn later extended in *Mi prontuario (My criminal file)*, published posthumously (Rodrigué, 2011).

Emilio Rodrigué was part of the second generation of Argentinian psychoanalysts and was an early promoter of the English school of psychoanalysis, especially the ideas of Melanie Klein and Wilfred Bion. In addition, he was an active

disseminator of practices such as group psychotherapy, therapeutic communities, and psychodrama in both Argentina and Brazil.

Rodrigues, Aroldo Soares de Souza

Born *Rio de Janeiro (Brazil)*, November 14, 1933

Renato Sampaio Lima¹ and Julio Cesar Cruz Collares-da-Rocha²

¹Federal Fluminense University (UFF), Nova Friburgo, Brazil

²Catholic University of Petrópolis (UCP), Petrópolis, Brazil

Keywords

Brazil · Social psychology · Psychology education

Aroldo Rodrigues finished high school in 1951, in Rio de Janeiro, Brazil. He graduated in Psychology and Law course in 1956 from the Pontifical Catholic University of Rio de Janeiro (PUC-Rio), which was the first Psychology Graduation Course in Brazil. In 1961, he completed his MA in Psychology at the University of Kansas, in Lawrence, USA, and, in 1966, completed his PhD in Psychology at the University of California (UCLA), in Los Angeles, USA, under the guidance of social psychologist Harold H. Kelley (1921–2003), which was decisive for its continuity in this area, as well as for its theoretical/methodological option in social psychology.

His professional activity as a teacher began in 1957, in the psychology course at PUC-Rio, where he worked until 1979. Throughout his career, he worked at other institutions such as Instituto de Seleção e Orientação Profissional da Fundação Getúlio Vargas (ISOP/FGV) (Institute of Selection and Professional Guidance of the Getulio Vargas Foundation). (1983–1991), the Department of Psychology at Gama Filho University (UGF) (1982–1993), and the Department of Psychology at the Federal University of Rio de Janeiro (UFRJ) (1988–1992). Aroldo Rodrigues took over the coordination of the Master in Social Psychology at UGF to implement the principles of experimental social psychology, training several researchers who continued his legacy (Lima,

2009). He joined UFRJ as a full professor in 1988, where he took the discipline of social psychology until 1992. The following year, he returned to the USA as a professor at California State University, in Fresno, USA, in the Department of Psychology, where he worked until he retired in 2013.

In all of these institutions, he held positions of coordination, teaching, and school management. He conducted research on cognitive dissonance, causal attribution, attitudes, stereotypes, interpersonal relationship, etc. in the model of experimental cognitive social psychology.

The main contribution of Aroldo Rodrigues to psychology in Brazil occurred in the field of this modality of social psychology, an option that he helped to disseminate in Brazil with reviews, articles, chapters of books, and books with a manual published in 1972, his most famous work with several editions (the book received contributions from coauthors – Rodrigues et al., 2012). This work is a reference in the study of experimental social psychology in Brazil (more than 100,000 copies sold) and in several Latin American countries, since the publication of the translation into Spanish in 1976.

Aroldo Rodrigues, throughout the 1960s and 1970s, was primarily responsible for implementing cognitive and experimental social psychology in Brazil. Moscovici and Marková (2006) indicated that Aroldo Rodrigues was one of the interlocutors in Latin America who received a visit and support from the Committee on Transnational Social Psychology, aiming at the development of this area in the region. Rodrigues participated in international meetings and congresses, such as the XII Congress of the Interamerican Society of Psychology, in Uruguay, in 1969, I Latin American Workshop on Social Psychology in Venezuela, in 1975, and LXXXVIII Convention of the American Psychological Association (APA), in Canada, in 1980, which promoted his international recognition, at a time when it was not yet common for Brazilian researchers to participate in international events.

In 1973, Aroldo Rodrigues was elected president of the recently founded Latin American Association for Social Psychology (ALAPSO). His good relationship with social psychologists

from different countries in Latin America and North America was decisive for his election to the Interamerican Society of Psychology (SIP) in 1976 (Rodrigues, 2008). This international recognition enabled him to organize the 1st Yosemite Conference in Social Psychology, commemorating the 100 years of experimental social psychology, organized by him and Robert Levine (1941–2003) (Levine & Rodrigues, 1999) and his election as a fellow in the APA Division 8 (Society for Social and Personality Psychology).

In the mid-1970s, discussions about the so-called “Crisis of relevance of Social Psychology” began to affect practices in Brazil, and in the following decade, two forces were defending their positions on the making of social psychology, represented by Aroldo Rodrigues and Silvia Lane. This discussion culminated in the public debate transcribed in the journal *Psicologia: Ciência e Profissão* (Psychology: Science and Profession) published in 1985, in which the two authors defend their theoretical positions. Aroldo Rodrigues defended social technology as a practice of the social psychologist, and Silvia Lane, cofounder of the Brazilian Association of Social Psychology (ABRAPSO) in 1980, defended a historical-cultural understanding of man and of social psychology, linked to the Brazilian reality (Rodrigues et al., 1985).

In his academic career, Aroldo Rodrigues was awarded the Emilio Mira y López Award from FGV in 1968, the Rogelio Díaz-Guerrero Interamerican Psychology Award from the SIP in 1985, and received the title of Doctor *Honoris Causa* of the Federal University of Paraíba (UFPB) in 2012.

Aroldo Rodrigues worked in important teaching and research institutions in Brazil and abroad as well as had publications and dialogues with different researchers in the Americas, constituting himself as a fundamental name for the dissemination, teaching, and research of experimental social psychology in Brazil. In a recent publication in 2018, at age 85, he reaffirmed his brand of passionate researcher in the discussion of social issues and problematizations in social psychology.

Rodríguez Aguirre, Nelson Gustavo

Born *Ambato (Ecuador), February 1, 1949*

Died *Quito, (Ecuador) August 1, 2018*

Susana Baldeón Loza and Ramiro Cazar Flores
Universidad Central del Ecuador, Quito, Ecuador

Keywords

Ecuador · Organizational and social psychology · Epistemology of psychology

He was born in Ambato, Tungurahua province, son of Nelson Rodríguez Altamirano and Guillermina Aguirre López. He studied elementary school at the Vacas Galindo public school in the city of Puyo, and high school at the *Colegio Normal Juan Montalvo* (Juan Montalvo Normal School) in Quito where he obtained the title of teacher (1967). In 1972, at the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Letters and Educational Sciences) of the *Universidad Central del Ecuador* (UCE, Central University of Ecuador), he obtained the title of *Licenciado en Ciencias de la Educación, Profesor de Enseñanza Secundaria en la Especialización de Psicología* (Degree of Education Sciences, Professor of Secondary Education in the Specialization of Psychology); and, in 1990, at the *Facultad de Ciencias Psicológicas* (Faculty of Psychological Sciences), of *Doctor en Psicología Clínica* (Doctor in Clinical Psychology). In 2004, he studied for a master's degree in *Desarrollo del Talento Humano* (Human Talent Development) at the UCE. In 2006, he completed a specialization in Project Management at the *Politécnica de Madrid-Convenio Andrés Bello* (Polytechnic of Madrid-Andrés Bello Agreement). In 2018, he completed his Ph.D. studies at the University of Havana in Cuba, whose thesis was the following: *Estrategias institucionales para el compromiso de los principales actores con la calidad en la formación profesional de la Universidad Central del Ecuador* (Institutional

strategies for the commitment of the main actors with quality in professional training at the Central University of Ecuador). Unfortunately, death surprised him in the process of his degree.

During his university career, he was a teaching assistant from 1970 to 1972 in UCE, and representant of students at different levels of cogovernment of this university. He was also vice president of the *Federación de Estudiantes Universitarios del Ecuador* (FEUE, Federation of University Students of Ecuador), a Quito subsidiary, in 1971. First as a student and later as a teacher, he was one of the leaders of the *Segunda Reforma Universitaria* (Second University Reform) led by the writer and socialist thinker, Manuel Agustín Aguirre (1903–1992). The Second University Reform took up and implemented in the universities the proposals of the *Reforma Universitaria de Córdoba* (Cordoba University Reform), Argentina, of 1918 such as university autonomy, cogovernment, university extension, research, and free student entry. Rodríguez participated in the conceptual organization of the teaching, research, and extension processes to implement them at the UCE and other universities.

In 1971 and 1972, as a student and together with some teachers, he supported the process of separating the *Escuela de Psicología* (School of Psychology) from the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Letters and Education Sciences) of the UCE, to create the *Facultad de Psicología* (Faculty of Psychology), later called Psychological Sciences. The Faculty was created by the *Honorable Consejo Universitario* (Honorable University Council) of the UCE on December 12, 1972 (Universidad Central del Ecuador, 1972).

At the *Facultad de Ciencias Psicológicas* (Faculty of Psychological Sciences), he was a teacher since 1973 in the course of Experimental Psychology and Scientific Research in Psychology. In 1975, he led a divergent current with the authorities of the Faculty of Psychological Sciences for the application of the Second University Reform and questioned the predominantly medical-biologist training of psychologists,

which led to a strike by students and teachers to change the curriculum. For this reason, he had to leave the Faculty. He won a new contest at the *Facultad de Economía* (Faculty of Economics) where he taught about research and the socioeconomic reality of Ecuador. He returned to the Faculty of Psychological Sciences in 1990, graduated from Doctor of Clinical Psychology, and continued as a teacher.

In 1998, he was invited to work in the non-governmental sector as a regional facilitator of the *Red Nuevo Paradigma para la Innovación Institucional en América Latina* (New Paradigm Network for Institutional Innovation in Latin America), ISNAR/Costa Rica Division, with the Brazilian José de Souza Silva, creator of the *Teoría sobre el Cambio de Época y la Sostenibilidad Institucional* (Theory on Change in Epoch and Institutional Sustainability) (Souza et al., 2006).

He was *Coordinador General de Investigación* (General Research Coordinator) of the UCE (1987–2002), *Decano de la Facultad de Ciencias Psicológicas* (Dean of the Faculty of Psychological Sciences) (2002–2004), consultant of the reform project in the health sector (2004), *Director de Investigación Científica* (Director of Scientific Research) at the *Fundación para la Ciencia y la Tecnología de Ecuador* (Foundation for Science and Technology of Ecuador) (2002–2008), *Subdecano de la Facultad de Ciencias Psicológicas* (Assistant Dean of the Faculty of Psychological Sciences) (2010–2014), and *Vicerector Académico y de Posgrados* (Academic and Postgraduate Vice-rector) of the UCE (2014–2018) (Rodríguez, 2018) and was the few psychologists in the country who have reached high positions within public universities.

Death surprised him on August 1, 2018, when he was Academic and Postgraduate Vice-rector of the Central University of Ecuador.

Rodríguez Álvarez, Aníbal

Born *Canary Islands, Spain, 1917*

Died *Havana, Cuba, 2005*

Roberto Corral Ruso
Facultad de Psicología, University of Havana, La Habana, Cuba

Keywords

Cuba · Social psychology · Labor psychology · Community psychology

Son of Spanish parents who settled in Cuba, Aníbal Rodríguez Álvarez entered school and passed the elementary and secondary levels. Later, around 1933, he began his high school studies in Spain. At that time, he became a communist and joined a group of young people of the same ideology at school; as a result of the actions they were carrying out, the authorities began to persecute him. His father sent him back to Cuba to finish his last year of high school at the Instituto de La Habana (Institute of Havana).

He enrolled at the Universidad de La Habana (University of Havana), where he studied Philosophy and Letters, and Pedagogy simultaneously, from where he could approach psychology, a branch that had begun to be of interest to him since his secondary school years. In 1942, he became a doctor in Philosophy and Letters and graduated with a dissertation written in Latin on St. Augustine (354–430), which was later published and passed to the archives of the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities).

After graduating, his first job was at the Institute of Havana, where he taught the course of General Psychology. There he began his career as a professor. In 1947, he carried out a study in the city of Santiago de Cuba to observe the linguistic differences between that population and that of Havana, which could lead to errors in interpretation. Anibal Rodriguez and others made a study of verbalizations based on the Rorschach test.

Later, around 1951 or 1952, he went to Stockholm to achieve a master's degree in Applied Psychology and also took postgraduate courses in Paris. Upon his return, he began to teach psychology at the Faculty of Philosophy. Political instability affected the regularity of classes at the University of Havana, and he looked for and was accepted as a professor at the Universidad Católica de Santo Tomás de Villanueva (Catholic University of Saint Thomas of Villanova). During the academic year, he continued teaching at the university, and during vacations (1948–1953), he worked as assistant director and professor at the Summer School of the Universidad de Oriente (University of Oriente).

Between 1955 and 1956, he initiated a job in an advertising agency in Cuba, in charge of promoting American companies based in the country. Their executives called Aníbal Rodríguez to work with them and take charge of market studies and the design of advertising campaigns.

Rodríguez was a tireless worker, he combined his work in the advertising office with teaching at Villanova, and in 1957–1958, he worked at the Instituto Nacional de Psicología Aplicada (National Institute of Applied Psychology, INPA) with his partner Gustavo Torroella (1918–2006). The work was to give psychological and vocational guidance to anyone who needed it, from students to American companies that needed to know if their workers had the skills and aptitudes for the positions they held. The application of psychological tests was the most used method at the time.

In these times, Aníbal Rodríguez ventured into all branches of psychology except clinical psychology. In most of the work he did, the application of psychological tests was at the center of his studies. In 1948, he worked with Gustavo Torroella and Alfonso Bernal del Riesgo (1902–1975) in the Oficina de Psicometría y Orientación Vocacional del Ministerio de Educación (Commission of Psychometry and Vocational Orientation of the Ministry of Education) in order to study the issue of tests and their possible validity as a diagnostic instrument.

The use of psychological tests was also extended to industrial psychology. In 1955, he translated Cattell's 16 PF personality inventory, which he used in personnel selection. Despite the practice in the application of psychological tests, motivated by a clear economic interest in the selection and classification of personnel, his interest in social psychology was growing.

Due to the existing demand in the country, the Asociación Nacional de Profesionales Publicitarios (National Association of Advertising Professionals, ANPP) organized regular courses for the training of leaders and created the Escuela Profesional de Publicidad (Professional School of Advertising) where Rodríguez taught for several years. As a result of the creation of this school, social psychology as a specialty began to

gain a more serious and formal space within psychology, directed by Aníbal Rodríguez. He did a lot of applied research.

Later, with the triumph of the Revolution, most of the personnel working in advertising became unemployed, since the bosses and owners left the country and continued their businesses in other places. A study carried out by Rodríguez is also worth mentioning along 1959, 1960, and 1961 to discriminate between the counterrevolutionary conservatives and the revolutionary radicals that showed his acceptance of the Revolution.

The university reform of 1962 proposed the foundation of the Escuela de Psicología (School of Psychology) at the University of Havana, in which he participated. He was appointed the first director and was assisted (as stipulated by the University Reform) by a teaching commission composed of Gustavo Torroella, Diego González Martín (1913–1998), and Alfonso Bernal del Riesgo (Guevara et al., 1980).

These years at the school were very politically turbulent and were characterized by constant crises. In 1965, Aníbal Rodríguez resigned from the position of director of the school and became the director of the Department of Social Psychology.

During the rest of his working days and until his retirement, Rodríguez remained at the school teaching his social psychology classes. He maintained an intense research work linked to the tasks and demands of the revolution. It was during this period that he really developed and grew as a researcher.

On the subject of research linked to the social tasks of the Revolution, we remember the survey of the social problems presented by the rural teachers who rendered a practically voluntary service, with the aim of solving them in 1968, also studies for the characterization of the Cuban family, its organization and structure, and important studies of the social and moral feeling of the workers in the enterprises that were nationalized. He used to take students with him to collaborate in his research. In this way, he taught in practice. He did not publish a lot (Rodríguez, 1980, 1985, 1990), only teaching texts for his students (Rodríguez, 1980, 1985). But his teachings started current lines of psychology in Cuba, such as social

psychology, labor psychology, and community psychology (Casaña Mata, 1985).

As a professor, those who were his students remember him as a very demanding, serious, and strict professor. In the classroom, he was par excellence a promoter of debate, and he liked to encourage criticism in his students. He was the first professor who led the students to take the podium in the lecture hall and to present the seminars themselves (Oliva, 2006).

In 1980, Rodríguez decided to retire. He was 63 years old and had accumulated more than 40 years of work. But as a tireless worker, retirement did not prevent him from continuing his work.

His research work always had the intention of creating a 100% Cuban research, the methods and instruments were adapted to our culture, and the studies of our society were no longer done or directed by North Americans but by Cubans. (González Erigolla, 2008). Rodríguez was one of the main protagonists in the organization of psychological research in Cuba.

Rodríguez Arias, Enerio

Born *Santiago de los Caballeros, (Dominican Republic)*, 3 February 1939

Julio Leonardo Valeirón Ureña
Universidad Autónoma de Santo Domingo
(UASD), Santo Domingo, Dominican Republic

Keywords

Dominican Republic · Psychological training · Behavioral psychology · Cognitive psychology · Methodology

From 1957 to 1961, he studied Philosophy and Theology at the Seminario Pontificio Santo Tomás de Aquino (Pontifical Santo Tomás de Aquino Seminary). He graduated in Philosophy at the Universidad de Santo Domingo (University of Santo Domingo) in January 1964. Later, he studied Psychology at Universidad Autónoma de México (Autonomous University of Mexico) obtaining the degree of bachelor in psychology in 1968. He was the first Dominican professional to obtain that degree (Paniagua, 2018). In January 1975, he graduated with a doctoral degree in Philosophy from Universidad Autónoma de Santo Domingo (Autonomous University of Santo Domingo, UASD), with the dissertation: “The forgotten inheritance: The impact of Immanuel

Kant on the birth of scientific psychology.” (Rodríguez 1975)

He entered the UASD in 1964, where he directed the program in Psychology in the years 1970–1981. He was recognized as a “Most Merited Professor” of this University in 2004. He has also obtained the distinction of “Honorary Professor” from the Universidad Católica de Santo Domingo (Catholic University of Santo Domingo) in 2004. He is a member of the Philosophy of Science Association (PSA) and an international affiliate of the American Psychological Association (APA).

An essay about his academic profile has been included in the *Encyclopedia of the History of Psychological Theories* (Ruiz-Matuk, 2012), which was published under the editorship of Robert W. Rieber.

He is recognized as the most prestigious psychologist in the development of psychology in the Dominican Republic (Ardila, 1986). It has been and continues to be a reference for those who studied psychology at the UASD, as well as for those who have taken its courses in Scientific Research Methodology, Quantitative Analysis and Statistics, such as Philosophy of Science, in various programs Master’s degrees offered by several universities in the country.

As a systematic disseminator of the development of the psychological sciences, he introduced the teaching of Behavioral Psychology in the country, which contributed to the fact that several generations of psychology professionals followed the guidelines of the neo-behaviorism of B.F. Skinner. In light of the epistemological crisis, in contemporary psychology he promoted the study of cognitive sciences, in addition to having been a well-known disseminator of the ideas of Thomas S. Kuhn (1922–1996) about paradigms and the paradigmatic development of science. His zeal for the exact dissemination of the thinking of great exhibitors of psychological theories led him many times to confront the original texts of the referred author, with those that some publishers

did in the Spanish language, showing their errors and alerting their students when reading the same.

He has maintained a theoretical confrontation, through the written press, with Jacinto Gimbernard (1931–2017), renowned musician, concert performer and writer, as well as a Dominican diplomat, about Humanist Psychology versus Behavioral Psychology. He also participated in the public debate on the same topic at the Pedro Henríquez Ureña National Library with José Cruz, S. J. then Director of the School of Psychology of Universidad Nacional Pedro Henríquez Ureña (UNPHU).

He had great gratitude to his teachers, to whom he has dedicated a book, *Dissertationes Aenerianae: Dissertations of Enerio on various topics* (Rodríguez, 2016).

He is regularly invited to groups of intellectuals to participate in debates, as well as television programs of scientific dissemination, on philosophical and methodological issues. If something has characterized him in the world of psychological sciences, it is his passion for rigorous exposition, based on the original texts of the exposed authors, as well as his great determination that his students do not cease their interest in reading and studying, deeply scrutinize, and become passionate about the science and profession they have chosen to pursue.

Puerto Rico · Humanistic psychology

Leonardo Rodríguez-Betancourt was one of eight children born to Juan Rodríguez Benítez, a carpenter-businessman and Josefa Betancourt Rivera, a housewife, in a small worker’s town next to San Juan, the capital of Puerto Rico. He was the second youngest one and had four sisters: Rita, Claudina, Clota, and Teresa and three brothers: Juan, Antonio, and Joaquín. He attended St. Vincent School, a parochial school in Cataño and graduated in 1934 from Central High School in Santurce, PR (Personnel Record, 1955–1970).

Leonardo Rodríguez graduated from the University of Puerto Rico, Río Piedras campus (UPR-RP), with a Normal Diploma in 1936 and a Bachelor of Arts in Education in 1941 with a Psychology major and a minor in Elementary Education. He was a student of Dr. Néstor I. Vincenty at the College of Education, a professor that had an ample perspective in psychology because he had two doctoral degrees, one in psychology from Harvard and one in medicine from Spain. Moreover, he was the first student at

UPR-RP to graduate with a major in psychology (Personnel Record, 1955–1970). For several years after graduation, Rodríguez taught at secondary level in the public schools of San Juan, Puerto Rico. For the summer of 1942, he was hired by UPR-RP as a lecturer in vocational education. Stimulated by his quest for knowledge and his experience teaching at college level, he decided to move to New York City and entered Teacher's College at Columbia University to pursue graduate studies in educational and applied psychology. He earned a Master's degree in 1946 and, while studying at Columbia University and after graduating, taught languages at college level in New York (Personnel Record, 1955–1970).

From 1945 to 1954, he lived and worked in the United States of America. First in New York, he taught Spanish and Portuguese at Brooklyn College (1945–1946), and Spanish at Manhattan College (1948–1949), and then in Phoenix, Arizona (1949–1954), where he was Director of the Department of Spanish and Latin and taught both languages (Personnel Record, 1955–1970).

In 1955, he started working at UPR-RP, as an assistant professor, teaching a variety of psychology courses including Introduction to Psychology, Experimental Psychology, among others. He was so enthused with his academic work that after a few years of teaching, he decided to register at the University of Florida, Gainesville, to pursue doctoral studies. He obtained his PhD in general experimental psychology in 1966. His doctoral dissertation studied the performance of Latin Americans in a personality survey. His dissertation committee was chaired by Herbert D. Kimmel (1927–2012) and included Ted Landsman (1922–1990), who was known for his interest in phenomenological research and developed the concept of the beautiful and noble person and the need of psychotherapists to humanize themselves and contribute to humanizing social agencies (Landsman M.S., 1990; Landsman T., 1970). In 1970, just before his untimely death, Rodríguez and Kimmel published an article based on Rodríguez' dissertation in the *Revista Latinoamericana de Psicología*.

His academic appointments included Brooklyn College, Manhattan College, the University of Florida at Gainesville, and UPR-RP. At University of Florida, Leonardo Rodríguez taught undergraduate and graduate courses in counseling and education while pursuing his doctoral degree. During the 1960s, he was among a group of pioneer psychologists who contributed to the development of the earliest graduate education in psychology training programs in Puerto Rico along with Abigaíl Díaz de Concepción, Juan N. Martínez, Laura Leticia Herrans, Carlos Albizu-Miranda, Norman Matlin, and others. Rodríguez also joined the psychology faculty at the *Instituto Psicológico de Puerto Rico* (Puerto Rico Institute of Psychology), today Albizu University, a private institution that offered graduate studies in psychology along with its founders Dr. Norman Matlin and Dr. Carlos Albizu-Miranda.

One of his mentees in the 1960s, Dr. Francisco Vázquez-Ruiz, acknowledged Rodríguez' contribution in the development of the first master's program of psychology at the University of Puerto Rico in 1966 consisting of 30 graduate credits aimed to train psychologists for employment in public agencies, where he taught a graduate course in psychological measurements (Personal communication, September, 2020). Rodríguez is also fondly remembered for offering the first course of Humanistic Psychology at the UPR-RP psychology program at a time in which the field of psychology was strongly influenced by behaviorism.

Dr. José J. Bauermeister, another of his mentees, remembers that he used to give the Experimental Psychology course from a humanistic perspective. He mentioned that Leonardo Rodríguez was very observant of his students' behavior and was always ready to explain a concept when he noticed that it had not been understood (Personal communication, October 6, 2020). For many years, the Puerto Rico Psychology Association offered an award, *Premio Leonardo Rodríguez*, in his name, to the undergraduate who wrote an essay that demonstrated

the human values of love, dignity, and respect for human beings that were important for Leonardo Rodríguez (I. Roca de Torres, Personal communication, September 23, 2020).

In one of his journalistic essays, Dr. Carlos Varona (1979) publicly acknowledged his admiration and friendship with Leonardo Rodríguez since he had been his student at the Puerto Rico Institute of Psychology. Varona described Rodríguez as a humble, simple, and good humanist, and a follower of Carl Rogers. In highlighting an essential feature of a humanistic psychologist, Rodríguez emphasized the importance of listening carefully, interestedly, and with a nonjudgmental attitude to fully understand a person's feelings, perspective, and behaviors allowing for a respectful communication to flourish.

Rodríguez identified himself as a humanistic psychologist. His views were greatly influenced by Dr. Ted Landsman (1922–1990) one of his professors at the University of Florida. Following the steps of Dr. Landsman, Rodríguez became a strong advocate of Rogerian psychotherapy. Rodríguez inspired many of his students with his dedication, kindness, and teachings to embrace the humanistic approach in providing psychological services.

Leonardo Rodríguez was married twice. He had three children, a daughter and a son from his first marriage and a daughter with his second wife.

Puerto Rico · Educational psychology · Alphabetization

Ismael Rodríguez Bou was born in a small town in the center of Puerto Rico (PR), son of Francisco Rodríguez, the town's baker, and his wife Cristina Bou. He studied at the public schools of his town earning his high school diploma and obtaining the valedictorian award (the highest honor) of his class in 1928. He entered the University of Puerto Rico, at Río Piedras (UPR-RP), where he graduated with a normal diploma in 1930. This diploma certified him as a teacher, and he started teaching in a public elementary school but was soon named

director and assistant supervisor. He returned to UPR-RP to finish his bachelor's degree in education and, after his graduation, applied for graduate studies to Teachers College, Columbia University at New York City, NY, in the United States. He graduated in 1938 with an MA in psychology of children and adolescents.

Returning to PR after his master's graduation, he worked as a college instructor at the Polytechnic Institute at San Germán, PR, and at UPR-RP and as director of Mayagüez High School. At the college level, he taught courses in educational psychology and psychology of children and adolescents and did research on the teaching of English as a second language. In 1941, he was named assistant professor at UPR-RP and went to University of Texas, to work in a research project funded by the American Council on Education to develop bilingual tests to measure general ability, language, and reading, among others. Several Puerto Rican psychologists, Pablo Roca de León, Teobaldo Casanova, and Abigaíl Díaz de Concepción, collaborated in this endeavor. While studying for his doctorate, he developed a very creative and successful project in 1943 to alphabetize adults in Latin America by using animated movies developed in collaboration with Walt Disney to teach reading and writing (Rodríguez Bou, 1992).

Ismael Rodríguez Bou, while collaborating in the aforementioned development of bilingual tests, took the opportunity to initiate and finish, in 1944, his PhD in psychology of education at the University of Texas. With his doctoral degree completed, he returned to UPR-RP and was named permanent secretary of Superior Council of Teaching (*Consejo Superior de Enseñanza*) and director of educational research. He occupied these positions from 1945 to 1966. This organization is an office of the Puerto Rican government in charge of supervising all educational institutions in Puerto Rico; it evaluates and licenses new and existing educational institutions. Until 1966, this organization was under the administration of UPR-RP, and then, it was moved under the administration of the government of Puerto Rico.

From 1966 to 1969, Ismael Rodríguez Bou was named director of the Office of Planning and

Research of UPR-RP. Until his retirement, he also occupied the following positions at UPR-RP: full professor at the Psychology Department (1969–1973), rector of UPR-RP (1974–1978), and interim president of UPR for three months while rector of the Río Piedras Campus.

During his tenure as permanent secretary of *Consejo Superior de Enseñanza*, Dr. Ismael Rodríguez Bou was very active in educational research and representing Puerto Rico in conferences, meetings, and all kinds of educational and cultural endeavors. He directed a huge study of the educational system of Puerto Rico (1958–1960) that produced an island program for adult alphabetization, a study of the most common vocabulary, and books for teaching reading. He directed on his free time, from 1953 to 1958, the alphabetization and adult and English education programs of the Department of Education of the government of Puerto Rico.

Ismael Rodríguez Bou was a delegate for Puerto Rico at a seminar for the alphabetization of adults, celebrated in Brazil in 1949, attended by Jean Piaget, and was selected as the delegate who most contributions made to the seminar. He was very active in the National Education Association of the United States (1938–1942), visiting professor of psychology in Panamá (1939), and director of an educational mission for adult alphabetization in México, Honduras, and Ecuador (1945). He was consultant in education at all Latin American countries except Paraguay. He was also consultant for such world organizations as the United Nations Educational, Scientific and Cultural Organization (UNESCO), United Nations Special Fund, World Health Organization, US Department of Interior, Regional Center of Basic Education for Latin America, World Bank, International Agency for Development, and Organization of American States.

Ismael Rodríguez Bou was an educational expert who traveled all over Latin America as a representative of UNESCO to help many republics develop their educational systems especially those related to alphabetization of their adult populations. He even helped the University of Costa Rica design their Student Affairs Office

and the government of Costa Rica develop a curriculum for the study of social sciences for their public education system. In 1956, he conducted a study of the educational system of Panamá under the auspices of UNESCO. As a member of Alliance for Progress, a division of the Organization of American States, he promoted education, science, and culture in Latin American nations. He visited Haiti, Jamaica, Guatemala, Nicaragua, Costa Rica, and British Guyana, among others. His influence was not restricted to Latin America, because he went as a delegate to an adult education conference in India and as an educational consultant in Iran, in an educational mission organized by the United Nations.

According to Laura Gallegos (1992), Rodríguez Bou's quest to alphabetize Latin America was of prime importance because he believed that without alphabetization, there cannot be democracy or industrialization. In other words, people that cannot read cannot elect adequately its government or evaluate their work.

Ismael Rodríguez Bou published more than sixty books as author or coauthor. He also wrote numerous reports to Puerto Rican and Latin American governments about the many studies he undertook at their requests. He even wrote a report for John F. Kennedy in 1962. He offered more than 200 presentations all over Latin America. He also wrote in journals like *School and Society*, *La Torre*, *Journal of Educational Psychology*, and *Fundamental and Adult Education*.

For his accomplishments, Ismael Rodríguez Bou received numerous awards and distinctions: honor diploma from Florida State University, for his outstanding work for Latin American education; Doctor in Arts and Science honoris causa from *Universidad Católica Madre y Maestra de la República Dominicana*; Doctor in Humanities honoris causa from *Universidad Central del Caribe*; Award *Encomienda de Isabel la Católica*, from the King of Spain; National Cultural Award, 1986, by the Puerto Rican Institute of Culture; and Humanist of the Year in 1992. He was also a member of numerous boards of directors of various cultural and educational institutions.

He was married to Gloria Ponsa Feliú and had three children, Dora Silvia, Gloria, and Ismael,

and six grandchildren and eight great grandchildren. He lived most of his adult life in San Juan, PR.

Born *on August 15, 1943, in Aguadilla, Puerto Rico*

Irma Roca de Torres
University of Puerto Rico, Río Piedras, San Juan,
Puerto Rico

Keywords

Puerto Rico · Tests and measurements · Education

Juana Myrtea, whose nickname is Jenny, was the first of four children born to the marriage between Alejandro Rodríguez, a foreman at marine construction sites, and Ramona Vicenta González Cruz, a nurse. Jenny studied her elementary and middle school years at a private catholic school in Aguadilla, a town at the western coast of Puerto Rico, where she learned discipline and responsibility. She finished her high school education at a public school in Guaynabo, a town in the northern part of Puerto Rico; at this school, she learned to think critically, to maintain reasonable opinions, and to respect diversity (Rodríguez, 2018). She was one of the best students in her class and obtained the highest score in the college entrance examination test in Guaynabo and was admitted as an honor student at the University of Puerto Rico, Río Piedras campus (UPR-RP). Her plans were to study medicine but in her first year switched to psychology, because the mystery of

the human brain and human behavior intrigued her.

Juana Myrtea Rodríguez registered at the Faculty of Social Sciences of UPR-RP, where she majored in psychology. According to Jenny, learning dynamics at UPR-RP were immersed in diversity which made students reflect upon different sociocultural contexts and the complexity of human beings (Rodríguez, 2018). Juana Myrtea Rodríguez had many practical experiences working with persons with mental illness as part of course and practicum work under Dr. Juan Nicolás Martínez and Dr. Rafael García Palmieri, Chief of Clinical Services, Veterans Administration Hospital in San Juan, PR. She learned about research and statistics with Dr. Carlos Hernández. She obtained a BA with a major in psychology in 1964. Jenny was so enthused with psychology that she immediately entered graduate school at UPR-RP.

In 1964, there were no graduate programs of study in psychology in PR; therefore, Jenny Rodríguez entered an experimental program at UPR-RP that offered 30 graduate credits in psychology, but did not offer a degree, just a certification. She completed those credits and started working as a psychologist at the Clinic for Children and Adolescents of the Department of Health of the government of PR. She was eventually named director of this clinic for 2 years. As soon as an official graduate program in psychology was offered at UPR-RP, she applied and was admitted as a member of the first class. She graduated with an MA in general psychology with emphasis in clinical in 1969. Her thesis under Dr. Louis Everstine, Dr. Carlos Guevara, and Dr. Laura Leticia Herrans was an experimental thesis oriented toward behaviorism, titled *The effect of promise and continuous positive reinforcement in an achievement task* (Rodríguez, 2018).

In 1970, Juana M. Rodríguez started working as a professor of psychology at Inter American University, Metropolitan Campus (Inter-Metro) and joined two of her mentors, Dr. Herrans and Virginia Sacarello (1930–2018), MA, in private practice. She kept her private practice opened until 2010, for 40 years. She worked for 16 years

at Inter-Metro and then decided to pursue studies toward her PhD in School Psychology at Temple University. Here, she worked under Drs. Irwin Hyman (1935–2005) and Trevor Sewell (born 1940), and her dissertation was about the discriminating validity of the WISC-R (1974) in the differential diagnosis of learning disabilities with fourth and sixth grade children in PR. She finished her PhD in 1987.

After graduation, Dr. Juana M. Rodríguez co-directed with Dr. Laura Leticia Herrans the translation, adaptation, and standardization of the *WISC-R* to a Puerto Rican sample. After concluding this research project in 1990, she and Dr. Herrans offered a series of workshops, under the auspices of the Puerto Rican Council of Deficiencies, to train Puerto Rican psychologists on the use of the new scale of intelligence, *Escala de Inteligencia Wechsler para Niños, Revisada, PR* (EIWN-R, PR, Wechsler Intelligence Scale for Children, revised for Puerto Rico). Since 1990 and until her retirement in 2015, she was a full-time professor of psychology at UPR-RP.

Her achievements in Puerto Rican psychology are all centered around developing measurement instruments and in helping develop future generations of psychologists through her impact on students, as teacher for 41 years. As a faculty member of two important universities, Dr. Rodríguez participated actively in research, teaching, publishing, editing, mentoring, supervision of thesis and dissertations, and committee work (curriculum, personnel, clinical, among others). Her translated *Escala de Inteligencia Wechsler para Niños, Revisada para Puerto Rico* (EIWN-R, PR, Wechsler Intelligence Scale for Children, revised for Puerto Rico) has been used in Puerto Rico to measure children's cognitive abilities since it was developed. Dr. Rodríguez also translated to Spanish the Wechsler Adult Intelligence Scale-III (WAIS-III) (Rodríguez et al., 2008); this version was the one used in the *Escala de Inteligencia Wechsler para Adultos-III* (EIWA-III, Wechsler Adult Intelligence Scale), project to adapt and standardize the EIWA-III to a representative sample of an adult Puerto Rican population. She was part of

the group of researchers in this EIWA standardization research project (Pons et al., 2008).

Among other contributions, Dr. Rodríguez and Dr. Herrans developed representative norms for a hospitalized psychiatric population of adults for the *Bender Gestalt* and the *Draw a Person* along with developing a psychological and clinical profile of this population at public mental health facilities (Herrans and Rodríguez, 1989; Herrans, Rodríguez, and Canino, 1985). In collaboration with Dr. Laura Leticia Herrans and Aida Herrans, Dr. Rodríguez founded the Corporation for Scientific Research and Educational Projects, a non-profit organization that developed a training program for personnel of child care centers in Puerto Rico. This training program was funded by the Puerto Rico Council on Developmental Deficiencies from 1989 to 2010.

Among other achievements, Dr. Rodríguez was president of Puerto Rico's Psychologists Board of Examiners and in charge of developing the licensing test for the practice of psychology. Moreover, she developed and directed, at UPR-RP, a center for developing and validating measurement instruments that included the collaboration of professors and students from several universities in Puerto Rico. This center organized seminars about the use and interpretation of models of evaluation, taking into consideration their theoretical backgrounds and their ethical and legal implications.

Dr. Juana M. Rodríguez has been a member of Puerto Rican Psychology Association (APPR, *Asociación de Psicología de Puerto Rico*) since late 1960s and has occupied several positions in its board of directors, including president (1996–1997). She has worked in several committees, among them the ethics committee that developed the Ethics Code for Puerto Rican Psychologists. She has had multiple professional presentations at APPR, Interamerican Society of Psychology, and American Psychological Association, among others. She was co-editor for many years of the professional journal of Inter-Metro, *Homines*. Dr. Rodríguez has received various professional distinctions; among them, she was named by APPR Psychologist of the Year in

1993, and in that same year was named Distinguished Alumni in School Psychology at Temple University by the School Psychology Division of Philadelphia Psychological Association.

Dr. Juana M. Rodríguez González retired in 2015 after almost 50 years of being active in her profession and spends her time with her family and friends. She enjoys quiet afternoons reflecting on her work for the psychology profession in Puerto Rico and discussing with her friends and her students, now colleagues, what remains to be done, especially in the development of measuring instruments and clinical psychodiagnosis.

Rodríguez Kauth obtained a degree of Professor of Pedagogy and Psychology and Licenciado en Psicología (Graduate degree in Psychology) at the Universidad Nacional de Cuyo (National University of Cuyo). Later, he obtained a doctor's degree in Psychology at the Universidad Nacional de San Luis (National University of San Luis).

He began his academic activities as a Professor at the Escuela Normal Juan Pascual Pringles (Juan Pascual Pringles Normal School) of the National University of Cuyo and also worked for 4 years at the Universidad Nacional del Litoral (National University of the Litoral) in Santa Fe, Argentina, where he taught Criminology. In 1968, he joined the Professorship of Sociology at the National University of Cuyo, and later he became Professor of Social Psychology in the undergraduate Psychology program at the same university. For 45 years, he was Professor of Social Psychology. Since 1996, he was also Professor of Political Psychology for 21 years (National University of San Luis), until his retirement. He was a Researcher level 1 of the National Program of Incentives to Research. He was Counselor in the Superior Council and Science and Technical Secretary of the Facultad de Ciencias Humanas (Faculty of Human Sciences). For his academic

merits he was appointed Consulting Professor after his retirement.

He was Visiting Professor in the courses of the Doctoral Program in Social Psychology at the Facultad de Ciencias Políticas y Sociología (Faculty of Political Science and Sociology) at the Universidad Complutense de Madrid (Complutense University of Madrid) for 8 consecutive years, where he taught Latin American Political Psychology (between 1991 and 1999). He taught an important number of courses on Political Psychology in different provinces of Argentina, as well as in Mexico, Costa Rica, Chile, Venezuela, Uruguay, etc. He was an activist advocate of the political psychology of Latin America.

Rodríguez Kauth had a prolific production (Polo et al., 2014; Parisi, 2020). He published more than 50 books and more than 400 scientific papers and essays, published in various scientific journals and publications in America and Europe. Besides those mentioned in the Selected Works, it is worth mentioning some of the earliest (Rodríguez Kauth, 1971) to some of the latest ones (Rodríguez Kauth, 2016). In the middle of both, it is only possible to refer to a handful of his works (Rodríguez Kauth, 1987, 1992, 1993, 2001, 2002, 2011).

His works covered topics of psychology, psychoanalysis, social psychology, economic psychology, human rights, art, espionage, critical thinking, international politics, national politics, political participation, economics, religion, and hypocrisy, among the most outstanding. In addition to being a thinker of political psychology, he opened a space of thought by working on the politics of psychology. Among his interests, he worked and investigated the work and life of José Ingenieros (1877–1925), whom he considered the first Argentine political psychologist.

He was the creator and editor of *Idea*, the first journal of the Facultad de Ciencias Humanas (Faculty of Human Sciences) at the National University of San Luis, from 1987 to 2002. The journal had international repercussion.

He was an activist defender of human rights, freedom, critical thinking, and democracy.

Because of that, he was imprisoned and then expelled from the university for 7 years during the last military dictatorship (1976–1983). He was a Marxist, atheist, and activist of the Communist Party. He was a very consistent person with his thinking (Parisi, 2020).

Concerning his private life, Rodríguez Kauth had two sons with his first wife, Martha González Pereyra, she herself a well-known psychoanalyst: Gonzalo, who is a professor at Oxford University, and Diego, who died at the age of 27 (1969–1996). His last partner, Mabel Falcón, had been an outstanding psychologist in the field of Educational Psychology.

Angel Rodríguez Kauth was one of the most important Latin American psychologists. A bibliometric analysis carried out by researchers from the Universidad Nacional de Córdoba (National University of Córdoba) showed that throughout the period 2000–2010, he was the most productive author in the field of Latin American political psychology (Polo et al., 2014).

Mexico · Experimental psychology · Behavioral medicine

Elvia Graciela Rodríguez Ortega began her studies at the higher level in psychology at the Universidad Nacional Autónoma de México National (Autonomous University of Mexico) (UNAM) and completed her master's studies at the UNAM's Faculty of Psychology in 1962, with the same approach to mental health. Moreover, in 1985 she finished her doctorate in general experimental psychology at the same university. After obtaining her doctorate, she traveled to the United States where she developed postdoctoral activities at the University of Texas and the University of Florida. It should be noted that one of the figures who helped in the training of the doctor was the psychologist Rogelio Díaz-Guerrero.

Rodríguez Ortega had great successes in the work environment in which she developed, being a teacher at UNAM, teaching subjects at the bachelor's, master's, and doctoral levels since 1966, and where she became the first director of the psychology faculty in 1981. Likewise, she taught undergraduate and master's degrees from 1967 to 1972 at the Universidad Iberoamericana (Iberoamerican University) (IBERO) (Fletes 2012).

Other of her outstanding activities were belonging to a wide variety of memberships, among which the Sociedad Mexicana de Medicina Conductual (Mexican Society of

Behavioral Medicine) stands out in 2000; the Colegio Nacional de Psicólogos (National Board of Psychologists) from 2001 to 2008; she belonged to the advisory council, representing the state of Chihuahua in the Federal District in 2006. In addition, her knowledge gave rise to development in new fields of work, since she was part of the editorial team of scientific journals, among which the following stand out: *Revista de Psicoterapia y Familia (Journal of Psychotherapy and Family)*, *Suma Bioética (Sum Bioethics)*, and *Revista Mexicana de Psicología (Mexican Journal of Psychology)*. In turn in 1971, she was the founder of the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP) in order to promote the serious and scientific training of psychology in Mexico.

She dedicated part of his time to the participation and organization of congresses at the national and international level, among which are the National Congress of Psychology sponsored by the CNEIP (2002) and the Interamerican Congress of Psychology in 2003 in Cartagena, Colombia, sponsored by the Sociedad Interamericana de Psicología (Interamerican Society of Psychology) (SIP).

The themes of some keynote lectures within her professional career were "Retos y Perspectivas de la Psicología de la Salud en México" (Challenges and Perspectives of Health Psychology in Mexico), which she gave at the Universidad Autónoma de Sinaloa (Autonomous University of Sinaloa) in 2003 and at the Facultad de Estudios Superiores – Zaragoza (Faculty of Higher Studies – Zaragoza) (FES-Z); "Aplicaciones de la Psicología de la Bioética" (Applications of the Psychology of Bioethics) at the Universidad Católica de Colombia (Catholic University of Colombia) in this same year; and gave in the keynote conference called "Formación de Recursos Humanos en Psicología y Salud" (Training of Human Resources in Psychology and Health) in 2004. Her participation continued over the years since in 2007 she was a speaker at the XXXI Congreso Interamericano de la Psicología (XXXI Inter-American Congress of

Psychology) that took place in Mexico City covering the theme of “Poder en la Relación de Pareja en la Etapa de la Vejez” (Power in the Relationship of Couple in the Stage of Old Age), among others.

With the aim in mind of guaranteeing mental health, Rodríguez Ortega, in collaboration with some researchers, developed the creation of the residency in health psychology at the UNAM’s School of Psychology. Her work also consisted of consultancy for the creation of the psychology residency at the Facultad de Estudios Superiores (Faculty of Higher Studies) in two different areas, both in the Zaragoza and Iztacala units (Freights 2012).

She also received some awards and recognitions in different areas, in the field of health, scientific, and technological development and within the area of psychology. In 2002 she obtained the Premio Nacional de Psicología (National Psychology Prize) awarded by the CNEIP, attributing the achievement to her outstanding work in the field of teaching and research within the psychological area in Mexico; in that year she also obtained the Medalla y Reconocimiento al Mérito Académico (Medal and the Recognition of Academic Merit) from the Asociación Autónoma del Personal Académico (Autonomous Association of Academic Staff of the National Autonomous University of Mexico) (AAPAUNAM). In 2005 she obtained the recognition and medal for her participation as a tutor in the master’s and doctorate program in medical, dental, and health sciences.

The academic and work performance of the doctor led the society of alumni of the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) to view her as an important part of the faculty, granting her the appointment of honorary member of that society, and in 2007 she received the Premio Latinoamericano de Psicología de Salud (Latin American Award of Health Psychology) by the Asociación Latinoamericana de Psicología de la Salud (Latin American Association of Health Psychology) (ALAPSA) in Brazil (Flórez 2012).

Rodríguez Ortega believed that “in Mexico –as in the rest of the world- we face numerous challenges in health matters, typical of the interaction of various biopsychosocial factors” (Rodríguez 2004, p. 38). This problem with regard to the health area had a relationship with her achievements, since due to this, she made contributions to behavioral medicine in Latin America, for which she was recognized and admired by José Narro Robles who was Rector of UNAM in the book *Behavioral Medicine in Mexico* (Rodríguez 2004). Likewise, it helped to promote the creation of the area of experimental general psychology in the Facultad de Psicología (Faculty of Psychology) within the UNAM, which allowed a better academic development to the new generations. She managed to establish the bases in the design of new teaching models, which that benefited Mexican psychology to achieve the merit of being a recognized scientific discipline.

Her research contributed to various areas and approaches of psychology, among them the factors that were related to risk behaviors in the female sex, thus contributing to the psychology of women (Rivera-Rivera et al. 2006). Likewise, in the area of gender, she related the themes of health, work, and psychology in her work “Distribución del Poder en Tres Etapas de la Vida de Pareja” (Distribution of Power in Three Stages of the Life of a Couple) (Díaz-Marroquín et al. 2010).

Similarly, she contributed to the health area, since Rodríguez (2010) argued that “there are challenges that we still have to face in Mexico. For example, promoting research in this field not only in educational institutions but also in health and/or social sector institutions” (p. 10), for which she focused her research on behavioral medicine.

These contributions to psychology had a great social impact, since they included topics of self-control in the behaviors that lead to addiction and emphasized contributions at the national and international level to behavioral medicine, which is a key point for the maintenance of health, also gave rise to research on the prevention of diseases such as diabetes and the analysis of techniques that benefit the person who suffers from them (Rodríguez 2004). The publication of her articles

and books, in which she developed her research, has helped psychology expand and find new fields to focus on.

The interest in expanding psychology and the commitment and performance for the improvement of health and society is why Rodríguez Ortega is most remembered, and according to Fletes (2012), her contributions were not only essential in Mexico and in United States but also in other places such as Costa Rica.

Rodríguez Valderrama, José

Born *Bogotá (Colombia), 28 March 1933*

Died *(Colombia), 06 October 2021*

Aura Nidia Herrera

Universidad Nacional de Colombia, Bogotá, Colombia

Keywords

Colombia · Psychological measurement · Psychometrics · Psychological testing · Colombian Civil Service

José María Rodríguez Valderrama is a pioneer in the field of psychological measurement and evaluation in the country. He is recognized for his leadership in the creation of the Departamento Administrativo de la Función Pública (Administrative Department of Public Services) (DAFP) and the Instituto Colombiano para la Evaluación de la Calidad de la Educación (Colombian Institute for the Evaluation of Education) (ICFES) and his work as a teacher for many generations of

psychologists since the early 1960s. Additionally, he has played a fundamental role in the development of the leading entities responsible for evaluating the operation of different psychology programs and the psychologists' guild in Colombia.

José began his studies at the Deutsche Schule (German School), which was closed in 1942 following the declaration of nonbelligerent war by Colombia on Germany (José Rodríguez Valderrama, personal communication, September 8, 2020). He then moved to the Colegio San Bartolomé (San Bartolomé school), which functioned as a public school between 1939 and 1951, where he received a high school diploma in 1950.

Belonging to a middle-class family with an architect father, an uncle who was a physician, and another uncle a renowned historian (Horacio Rodríguez Plata, 1915–1987), he was part of a minority intellectual elite (Cardeno Mejía, 2007). During his senior years in high school, he became interested in reading Sigmund Freud's works, which led him to take an interest in psychoanalytic theory and study medicine, emphasizing psychiatry. He enrolled at the Faculty of Medicine of the Universidad Nacional de Colombia (National University of Colombia) in 1951. There, he discovered the Institute of Applied Psychology, which had recently opened (1947), and decided to study psychology simultaneously. He began studying psychology in 1953 and finished in 1956, obtaining two degrees: medicine and surgery, and the second one in psychology.

During his early years of medical studies, in the Laboratory of Physiology directed by Alfonso Esguerra Gómez, Rodríguez discovered one of his academic interests. Esguerra's pursuit of finding "the biological constants of the Colombian man" (Agusti Pastor, 1982, p. 38) had made the Physiology Laboratory the appropriate niche for the Institute of Psychology's emergence, under the leadership of Mercedes Rodrigo Bellido; this was exhilarating for the young student. In his first contact with Fechner and Galton's works, the use of anthropometric measurements and statistics seemed to him deeply fascinating (Domínguez-Blanco & Duque, 1999; Giraldo, 1998).

When Rodríguez arrived in the Physiology Laboratory, the Institute of Applied Psychology

had received its first group of students (Rodrigo, 1949), and it had two clear emphases (Villar Gaviria, 1965). First, the faculty consisted exclusively of men, mostly psychoanalyst doctors and psychiatrists. Second, the psychotechnic tradition continued, represented by Luis Alejandro Vargas, who was in charge of the "test techniques" (Minutes of a meeting of professors of the Institute of Applied Psychology, cited by Robles-Sáenz 2019, p. 73). Luis María Beltrán, professor of statistics, and Mateo V. Mankeliunas, professor of Methodology of Scientific Research, would later join (Alejo, 1993). This education was reinforced by professors visiting from abroad who played a significant role in the formation of these generations of psychologists, including Enrique Solari Swayne, Peruvian (1915–1995), and Oswaldo Robles Ochoa (1905–1969), Rafael Nuñez, and Concepción Zúñiga, Mexicans.

Rodríguez spent his early professional life between these two fields. In one field, he provided psychodiagnostic services with projective techniques; he was also a teacher of projective techniques and carried out didactic psychoanalysis with José Francisco Socarrás. In the other field, he taught statistics and was head of experimental psychology projects.

In 1954, Rodríguez met Betty Cardona (1934–2020). They got married in 1958, and Betty became not only his lifelong companion but also his most ardent admirer. Together they had three children: Felipe, Camila, and Andrés. Betty received a religious formation at the school Nuestra Señora del Rosario in Bogota and later studied psychology at the National University of Colombia. She was an intelligent and, jovial woman with an excellent sense of humor who was able to reconcile a successful professional life with her family's dedication (Eugenia Guzmán Cervantes, personal communication, August 26, 2020). Although she was always in her husband's shadow, Betty's contribution to Colombian psychology is also worth mentioning. She was a pioneer in developing tests in the Secretariat of Education of the District and of Civil Services. She also played a role in the Scholarship Committee of the Instituto Colombiano de Crédito Educativo y Estudios Técnicos en el Exterior (Colombian Institute of Educational Credit

and Technical Studies Abroad) (ICETEX). In that role, she gained recognition and respect within Colombian diplomatic spheres to benefit young people who aspired to obtain education credit and scholarships for studies abroad.

In 1960, Rodríguez became the head of the biostatistics department of Medicine School and a psychology and statistics professor at the University of Cartagena. Upon his return to Bogota a year later, his academic interests were more directed at psychometrics and statistics. In the following years, he participated and led several processes in the use of measurement and evaluation techniques applied to the selection of public servants and education, this perhaps being his most recognized area of contribution.

During that decade, Rodríguez alternated his professional life with training, mainly in the United States. He participated in Workshops on *Test Construction* and *Test Construction for Foreign Scholars*, at the Educational Testing Service (ETS), on *University Admission Procedures* at the University of California, and *Pre-University Testing* at the University of Washington. He also visited the United States Civil Service Commissions in Washington and New York to receive training on systems and procedures for personnel selection. He also pursued studies in public administration at the recently created the Escuela Superior de Administración Pública (School of Public Administration) (ESAP) and at the University of Manchester, United Kingdom.

Within the 1957 constitutional plebiscitary reform framework in Colombia, the Administrative Department of Civil Service was founded in 1958. And in the reorganization of 1960, the selection department was created and assigned the national and regional competition administration. Upon his return from Cartagena in 1961, Rodríguez participated in the development and application of tests; months later, he took the management of the selection department and the Administrative Department of Civil Service's general coordination, a position he held until 1964.

During the early years of the Frente Nacional (National Front), a political agreement between liberals and conservatives (1958–1974) to overcome partisan violence and the military

government of Gustavo Rojas Pinilla (1900–1975), the civil service law sought to quell the agitated political landscape in which public offices had become “partisan spoils” (Londoño et al., 2018, p. 15). Rodríguez's leadership in its implementation was crucial for the country and psychology. The reach of that first administrative career was limited by the two political parties' alternation in power. However, Rodríguez's work was a relevant precedent in adopting technical criteria for entering the civil service while opening up a field of action for recent graduates in psychology, promoting their recognition as professionals independent of the health sciences. From other positions, Rodríguez continued well into this century, leading selection processes for different state entities at the national, district, and regional levels.

In these activities, he always linked psychology students awakening their interest in psychometrics and psychological evaluation. Nevertheless, his interest in the quality of education had started early in his professional life. Between 1964 and 1971, he was a member of the Technical Council of Education of Bogotá, created by the District's Secretariat of Education, to guide primary education policy; these policies were implemented by a group of psychologists led by Betty Cardona de Rodríguez. Merit-based selection procedures for teachers, school principals, and school supervisors began, and the public-school student's performance was evaluated using “tests of high quality and beautiful presentation” (Rodríguez Valderrama 1997, p. 237).

The National University Fund and the Colombian Association of Universities were created in 1954 and 1957. In the early 1960s, the two entities organized a university admission and professional orientation service that in 1968 would become the National Testing Service (SNP) under the leadership of Rodríguez. In September of that same year, as head of the SNP, he led the first application of national exams (José Rodríguez Valderrama, personal communication, September 8, 2020), which today are the state exams for the evaluation of the quality of education in Colombia. After the reorganization of the National University Fund and the rise to the Colombian

Institute for the Promotion of Higher Education (ICFES), the SNP became the Professional Tests and Guidance Division of the ICFES, and Rodríguez continued to be at its helm until 1972 when he moved to the General Sub-Directorate of the ICFES, where he remained until 1979.

His contributions to the quality of higher education include several academic positions like Vice-Chancellor of the National University of Colombia, Director of Administration and Educational Inspection of the Ministry of National Education, Head of the Planning Office of the National Pedagogical University, and Director of the Admissions and Professional Information Department of the National University of Colombia, among others.

At the same time, he was always active in teaching statistics, experimental psychology, research design, psychometrics, and psychological tests at the National Pedagogical University, Pontifical Javeriana University, Colombian School of Medicine, El Bosque University, and mainly at the National University of Colombia. He was intermittently associated with the latter beginning in 1955 and more permanently since 1985. It is there where he left his main legacy in terms of psychological measurement and evaluation.

The Colombian political movements of the 1970s and 1980s impacted the country's psychology programs by associating psychological measurement with unpopular political stances. Hence, some of them excluded training in statistics and psychometrics from their curriculum. However, Rodríguez continued teaching these subjects, kept an interest in advances in psychological testing, rescued a significant part of the material produced in the 1940s in the Psychotechnics Section, and took care of guarding it, organizing it, and studying it for several decades. He also used it for his classes, and he enthusiastically taught it to students who came to his office to explore it in greater detail. With the participation of small groups of students, he developed tests to select staff of public entities forming the foundations of what is now the Laboratory of Psychometrics and the Thought Center on Evaluation and Meritocracy at the National University of Colombia.

Another of his ever-present concerns was recognizing the role of psychologists and the quality and ethics in their professional practice. In 1958, he was a founding member and the first president of the Colombian Federation of Psychology (Giraldo & Rodríguez, 2000) at a time when the fledgling profession was positioning itself in the country, and the budding guild was still too small and immature to handle the tasks of a stable organization. In his report to the 1964 General Assembly, Rodríguez stated such difficulties.

The guild of psychologists reached a certain degree of maturity in the 1970s and 1980s (Ardila, 1975). However, it was only until the issuance of the Constitution of 1991 that the guild achieved a more robust organization through the founding of the Colegio Colombiano de Psicólogos (Colombian Board of Psychologists) (COLPSIC); Rodríguez played a decisive role in its creation in 2006.

In the early years of this century, two private associations, the Colombian Board of Psychology Association and the Official School of Psychologists, competed to propose a bill that recognized and regulated psychology's professional practice in Colombia. Rodríguez, as a founding member and president of the first one, together with other outstanding psychologists, integrated both associations and founded the current COLPSIC, a guild with legal recognition and public functions that brings together Colombian psychologists and regulates their professional exercise. Rodríguez was the first president of COLPSIC, and he has also been a member of the Directive Council several times.

Brazil · Ideology of colonialism · Psychological ideas

Silvio Romero was a Brazilian conservative intellectual who used psychological ideas, in several areas, for the ideological justification of inequalities in Brazil and the apology of colonialism (Sodré, 1961). As a typical son of colonization, his father was a Portuguese merchant, who settled in the city of Lagarto, in the interior of the State of Sergipe, where Romero was born. He studied in Rio de Janeiro between 1863 and 1867 in Nova Friburgo College. In 1868, he moved to Recife, where he graduated from the Faculty of Law of Recife in 1873 (Bomfim, 2001). He was a deputy

at the Sergipe Provincial Assembly in 1874, in a time that Indigenous people, illiterate slaves, and women were excluded from voting. He worked in the Pernambuco press, writing for *A Crença* (Belief), *Americano* (American), e *Movimento* (Movement) newspapers.

He moved to Paraty, in Rio de Janeiro, and exercised the position of the municipal judge, in 1875. In 1879, he went to Rio de Janeiro. In 1880, he took a competition for the chair of Philosophy at Pedro II College, obtaining it with the thesis “Philosophical interpretation of historical facts” (Academia Brasileira de Letras, 2020). Among the various areas that he wrote, he ventured through poetry, as shown in his *The Last Harps*, from 1883. He was also appointed to the Higher Education Council of the Federal Capital, headquartered at that time in Rio de Janeiro, by Benjamin Constant (1836–1891). In 1897, he was “invited to attend the installation session of the *Academia Brasileira de Letras* [Brazilian Academy of Letters], [where] he founded chair n° 17” (Academia Brasileira de Letras, 2020, para. 1). Between 1898 and 1902, he was a federal deputy for the State of Sergipe. In this condition, he was chosen as “the rapporteur of the Commission of the 21 of the Civil Code and then defended many of his philosophical ideas” (Academia Brasileira de Letras, 2020, para. 6). In 1901, he went to Europe, going to the University of Coimbra. Still, “he received the medal of the Order of São Thiago, offered by the king Dom Carlos I of Portugal. In the following year, he joins the Lisbon Academy of Sciences and the Coimbra Institute, in Portugal” (Romero, 2020, para. 1).

His work reflected the amalgam of dominant ideas of his time, with psychological ideas being used in conjunction with a multiplicity of themes. To structure his theses on the Brazilian development process, he used conceptions based on the ideas of race and climate, responsible for what he characterized as national psychology. Consequently, he believed that: “the Brazilian people are apathetic, without initiative, discouraged. This seems to me to be one of the first facts to be recorded in our national psychology” (Romero, 1882, p. 76). To this end, he considered Portuguese culture as the most important within Brazil, as it is at a more advanced stage. He asserted his

colonial prejudice against blacks and Indigenous people with the help of psychology, having considered them primitive and savage.

The publication of one of his conferences, held in Rio de Janeiro, with the title *The Portuguese Element in Brazil*, came with a warning to the reader saying that in his work there is one: “enthusiastic apology of the Portuguese colonizer, woven loyally and nobly by one of the most illustrious figures of contemporary Brazil” (Romero, 1902, p. III).

The influence of Sílvio Romero on Brazilian psychology, at the end of the nineteenth century and the beginning of the twentieth century, was the articulation of psychological ideas to give some functionality in social analysis on topics such as politics, culture, history, etc. In doing so, he showed that psychology itself can be used to justify and defend relations of inequality within a society with a history of submission to the colonial yoke.

Colombia · Educational psychology · Psychometrics

In 1952, the first group of psychologists trained in Colombia received their degree from the Universidad Nacional de Colombia's Instituto de Psicología Aplicada (National University of Colombia, Institute of Applied Psychology). Within this group of young professionals (See Rodrigo Bellido, Mercedes and de la Vega, Beatriz* in this book), Julia Roncancio Mora stood out. She was not only the oldest graduate, but she was also an official of the same institute where she served as secretary-general and de facto administrator (Pérez Acosta, 1999; Robles Sáenz, 2019). She had entered as an administrative worker for the warehouse department of the National University more than 10 years before,

in 1940. In 1946, Mercedes Rodrigo herself requested her transfer to the *Sección de Psicotecnia* (Psychotechnics Section), which shortly thereafter would be changed to Institute. It might be worthwhile to reproduce here Rodrigo's arguments to justify her request: "*The Secretary is also initiated in the work of the Section for which, long ago, has shown true fondness and is also a person who given her previous culture and training is capable to develop a work of true effectiveness*" (Rodrigo Bellido 1946). The transfer of Roncancio to the Psychotechnics Section would be effective by means of Resolution 351 of the Rectorry, on May 23 of that year.

It was in this way that Julia Roncancio came to play a role in the history of Colombian psychology. A role perhaps humble, but decisive. As many historical accounts of Colombian psychology has registered, early in 1950 Mercedes Rodrigo and his closest collaborator, José García Madrid, left Colombia. The institute, which had been built around the psychotechnical work of both, and whose students had already approved more than half of their curriculum, drifted. The psychiatrist Hernán Vergara (1910–1999) was immediately appointed as director, but neither by vocation nor by profession could he respond to the needs of the first training center in psychology in Colombia (Ardila, 1973; Mankeliunas, 1993; Peña, 1993, 1999; Peña & Pérez-Almonacid, 2006; Villar Gaviria, 1965). According to the versions of several firsthand witnesses, at that critical moment and the following years, it was Julia Roncancio who ensured the continuity and development of the institute. These witnesses include José Rodríguez Valderrama, who states, "*If Julita (Roncancio) had not been there, after Mrs. Mercedes (Rodrigo) left, surely the Institute of Psychology could not have subsisted. All this is due mainly to the work of Julita Roncancio*" (Dominguez & Duque, 1999, p. 32; my own translation). According to Rodríguez Valderrama's report, it can be assumed with some certainty that Roncancio was not only responsible for ensuring the fulfillment of the academic tasks of the institute, but also for defending its identity as a school of psychology, as opposed to the psychiatric orientations of their

successive directors: Hernán Vergara (from 1950 to 1953), Luis Jaime Sánchez (from 1953 to 1956), Beatriz de la Vega (from 1956 to 1958, the only psychologist in this list), and Jorge Giraldo Ángel (from 1958 to 1962). In addition, according to Rodríguez Valderrama's account, she did so by establishing networks with the psychological communities of other Latin American countries: "One of the things she did here was to invite teachers coming from abroad, for example, (in 1953 she invited the) Peruvian psychologist, Enrique Solari, (in 1954, she invited the Mexican psychologist) Oswaldo Robles. (In 1955, she invited) a Mexican psychologist and his (psychiatrist) wife: Rafael Núñez and Conchita Zúñiga" (Domínguez & Duque, 1999, p. 32).

Perhaps because she was the senior institute official and she was there since the Section times, or as a way of recognition for her leadership, when in 1956 the inaugural issue of the *Revista de Psicología* (Journal of Psychology) appeared, Roncancio had the task of writing the text that summarized the process of institutionalization of psychology at the National University of Colombia, from its origins as a Psychotechnics Section until that year (Roncancio Mora, 1956). The brief writing, concisely titled *The Institute of Psychology of the National University*, was the very first account of the history of academic psychology in Colombia and as that has been referenced by most of the works on the history of psychology in the country (Jaraba, 2012). In that sense, it can be said that Julia Roncancio is the pioneer in the field of the historiography of Colombian psychology.

In 1959, after 13 years in charge of the administrative work of the institute, the National University gave her a grant for specialization studies abroad. England was the chosen country and school psychology the theme (Editors, 1959). In 1961, the Journal of Psychology launched a special section on the topic *Training of Psychologists in Various Countries*. The knowledge of the British model of psychological studies allowed Roncancio to contribute with the paper Training

of Psychologists in Great Britain (Roncancio Mora, 1961).

She returned to Colombia in 1962. By then, the Institute of Psychology had been elevated to the category of Faculty and an office of "Technical Teaching Services" was created. Under the direction of Fanny Gómez de Pedraza, Roncancio entered this unit as a "research assistant psychologist," with the duties of application, assessment, and adaptation of psychological tests to the school children, as well as the design of their own instruments. The Thurstone Intelligence Test and the Goodenough Drawing Test were applied extensively in various educational institutions in Bogotá for the purpose of "building a scale of mental ages characteristic of Bogota children" (Editors, 1963, p. 175). The guides corresponding to these instruments and the Stanford-Binet, the California Test of Interests, and the Blacky Test were also developed. The components and guides of the Gates Reading Test, the Otis Alpha, and the Sequential Test of Educational Progress were translated to Spanish (Editors, 1963, 1964, 1965). Despite this intense and interesting work, by 1965, in the same space of the Journal of Psychology in which their advances were made known, it was published a notice indicating that the office lacked sufficient resources to meet its goals. After such news, there is no other information related to this unit or to the work it was carrying out. Nor is there further information in that journal about Julia Roncancio.

However, the university was not her exclusive professional arena. In addition to promoting the development of psychology from the university, she contributed to various initiatives outside. The first of those initiatives was the kindergarten *Centro de Psicología* (Psychology Center), a project led by his graduation partner Beatriz de la Vega, in which Roncancio participated decidedly (Pérez Acosta, 1999). Years later, when returning from her studies abroad and very likely inspired by her knowledge of the organization in its place of origin, Roncancio led, in 1966, the creation of the Colombian subsidiary of the Young Women Christian Association (YWCA), where she held

the positions of secretary, first vice president, and president (*El Tiempo*, 1966). Her work in this institution was not limited to administration or activism. Otherwise, it maintained a distinctive psychological character. Through the YWCA-Colombia Roncancio signed a contract with the Colombian Institute for Family's Welfare (ICBF) to carry out "family and community promotion in the following services: 1. Adult training. 2. Promotion of the community and cooperative organization. 3. Directed recreation. 4. Family education. 5. Adult literacy" (Secretaría General del Ministerio de Gobierno, 1980, p. 795). This ambitious program of psychosocial intervention operated from 1972 until at least 1980. Although there is not much data on its components and its development, it can be said that it was another pioneering initiative on psychology promoted by Julia Roncancio, with her usual humbleness. She has been a hidden figure of Colombian psychology, a situation that should change from now on.

Chile · History of moral · Moral theology

Eduardo Rosales was the first director of *Universidad Católica de Chile's Departamento de Psicología* (1955–1957) (Psychology Department at the Catholic University of Chile). He was born in San Clemente (Chile) on June 14, 1904, and passed away in Santiago (Chile) on April 6, 1970. Ordained a Franciscan priest, he showed an early intellectual inclination toward moral theology. On April 3, 1941, he became the first *Doctor en Teología* (Theology PhD) to graduate from *Universidad Católica de Chile* with a thesis on St. Bonaventure (Rosales, 1939).

He undertook postdoctoral studies at Fordham University (NY, United States), a Jesuit institution where he first approached psychology as a discipline. Upon his return to Chile, he was hired as Professor of Morals at *Universidad Católica de Chile's Doctorado en Teología* de la Escuela de Teología (Theology School PhD program at Catholic University of Chile). During this period, he publishes *San Antonio de Padua* (Saint Anthony of Padua) (Rosales, 1947), *Breve curso de moral* (Brief course on morals) (Rosales, 1948), and *Universidades católicas y algunos santuarios* (Catholic universities and some sanctuaries) (Rosales, 1952). In 1955, he was named head of the *Departamento de Psicología* (Psychology Department) at the *Universidad Católica de Chile* – established “*ad experimentum*” in March 1954 – at the *Facultad de Filosofía, Letras y Ciencias de la Educación* (School of Philosophy, Humanities and Educational Sciences), maintaining his position until June 1957 (Cohl &

Cornejo, 2018). Despite his short directorship, Eduardo Rosales not only kick-started the Psychology Department, but also designed its first curriculum, founded the university's first library devoted to the discipline, recruited the initial faculty, and requested to purchase the first instruments for two new laboratories (experimental psychology and applied psychology), which would start operating in the ensuing years (Bravo 2004, 2013).

His vision was to train “students who are technically proficient and convey Christian criteria” (letter from E. Rosales to Dean Agustín Martínez, March 27, 1955), which supposed a synthesis between moral philosophy and scientific psychology. Following this approach, he proposed a 5-year curriculum that focused on philosophy, religion, sociology, and education during the first 3 years. The remaining 2 years were devoted to a specialization in psychology, including experimental, social, educational (“pedagogic psychology”), organizational, clinical (“pathological psychology”), and philosophical psychology.

During his director tenure, *Universidad Católica's* Psychology Department transitioned from a project to reality, took in a considerable number of students, and got affiliated with institutions which would provide internships to students, such as *Hogar de Cristo* (a Jesuit Chilean charity), *Liceo Politécnico de San Bernardo* (San Bernardo's Polytechnic School), and *Hospital José Joaquín Aguirre* (José Joaquín Aguirre Public Hospital). Rosales' encouragement of applied fields in psychology introduced a clearer differentiation between the newfound academic unit and pedagogic studies.

This translated into administrative apprehensions from its fostering School of Pedagogy, since the latter was primarily devoted to school-teachers' instruction. On the one hand, students – backed up by the department – demanded to receive a professional psychologist degree upon completion of their studies. On the other hand, the School of Philosophy, Humanities and Educational Sciences was only willing to provide the equivalent of a high-school psychology teacher, psycho-pedagogue, or vocational counselor degree. Eduardo Rosales was aware that solving

such impasse meant that the psychology department needed to become independent from the School of Pedagogy. This is attested, for instance, in the letter that Raimundo Kupareo – the school’s dean – prepared for Rector Alfredo Silva Santiago: “After a long debate, the Department’s Director, R. P. Eduardo Rosales proposed rather to call for the transformation of the current Psychology Department into a School or Institute of Psychology, dependent upon U.C.’s School of Philosophy, Humanities and Educational Sciences [. . .]. Thus, it would be perfectly possible to provide a ‘psychologist’ degree” (Kupareo, 1956, October 30). However, such transformation would only be approved and implemented a year later, not under Eduardo Rosales’ leadership, but by his successor as department’s head, Jesuit priest Hernán Larraín Acuña (Camus & Muñoz, 2017; Salas & Lizama, 2009).

Eduardo Rosales continued his teaching duties at the Theology School leading the morals chair, synthesizing his lectures in the book *Hacia una moral social y profesional* (Towards a social and professional morals) (Rosales, 1961). His last two books aimed to reflect upon issues on the Catholic Church’s renovation linked to the Second Vatican Council (1962–1965): *Preocupaciones y actitudes en el campo moral: Algo de lo que vi, escuché o comprendí, principalmente en el mundo europeo, referente a la moral Cristiana* (Concerns and attitudes in morals: Glimpses of what I saw, heard or understood, mainly in the European world referring to Christian morality) (Rosales, 1968), and his most renowned work: *El ateísmo y los fulgores de Dios* (Atheism and the splendors of God) (Rosales, 1970).

He contemplated the changes undergone by the Catholic Church in that period adopting a kind of ostracism, defending a rational assessment of innovation: “The Council’s overall idea is renovation [. . .] Not in the sense that everything has to undergo innovation, with or without a motive for it, but rather in that in every case one studies whether or not it is convenient or necessary to renew [. . .] Perhaps in many cases the conclusion will be to affirm it, and perhaps it will be to refuse it” (Rosales, 1968, p. 90).

History of psychology

Graduated in Philosophy by Catholic University of Pernambuco (UNICAP) (1954) and PhD in Psychology by Federal University of Pernambuco (UFPE) (1976), Paulo Rosas's professional journey merges with the recent history of Psychology in Brazil. With a great contribution to building the psychological field as well as the profession, his practice, always permeated by the concern with social issues, was oriented in two directions: Psychology and Education.

Born in Natal (Rio Grande do Norte, Brazil), Paulo Rosas had moved to Recife (Pernambuco) in 1951 after finishing high school. He was decided to study Educational Psychology, because of a History teacher, who made an impression on him by her sensibility to "psychological problems" (Rosas, 1997, p. 314). Without enthusiasm for the "medical strand" (Rosas, 1997, p. 316), oriented to clinical aspects of the embryonic field of Psychology, he searched in Philosophy some approximation to his area of interest.

In 1955, he became a professor at the Social Service School of Pernambuco, where he found two personalities that would impact on his life and career: Paulo Freire and Anita Paes Barreto.

The encounter with Paulo Freire, an educator that put into practice the worldwide known method of adult literacy which takes his name, yielded projects together, revealing affinities of thought regarding pedagogical practice. The contact with Anita Paes Barreto, pioneer of

Psychology in Pernambuco, on the other hand, awakened his interest in the history of Psychology in Brazil.

With both, Paulo Rosas participated in a wide movement for popular literacy in Recife in the 1960s: the Movimento de Cultura Popular (Popular Culture Movement). He occupied the institution's research coordination, which understood education as a political practice, looking to stimulate new positioning of the less favored classes and its "preparation to react to a state of things, whose awareness made its maintenance unbearable" (Rosas, 1986, p. 32).

In 1956, he was hired by the then called University of Recife, now UFPE, to teach Educational Psychology discipline at Pedagogy and Didactic courses. In 1957, Paulo Rosas became a Professor at the Philosophy Faculty of Recife (FAFIRE), where he also headed the Psychology Department (from 1968 to 1973), coordinated the Psychological Clinic (between 1971 and 1973) and implanted postgraduate courses *lato sensu*. His work at UFPE also had great relevance, with the creation of the Psychology Division in July 1963, within the Men's Science Institute, now the Philosophy and Human Sciences Center. He was the first coordinator of the Institute and principal of the Psychology Division, in which later, he would coordinate specialization courses and masters.

His interest in Psychology in a moment before the regulation of the profession in Brazil took him to Spain, in 1953, in order to take a postgraduate course in Applied Psychology and Career Guidance at the Institute of Hispanic Culture in Madrid. In his return to Brazil, Paulo Rosas searched to expand his studies in the field that was still in construction through the exchange with other personalities that contributed to the autonomization and systematization of Psychology, among them: Enzo Azzi, Lourenço Filho, Anísio Teixeira, Emilio Mira y López, and Pierre Weil.

In 1956, Paulo Rosas published his first work in Psychology, named *Reading, film and radio – their role in the pedagogical and psychological formation of adolescents* (Rosas, 1956), which resulted from the research done for the Adolescence Psychology discipline taught by him at the

Educational Advisors Formation Course, at the Instituto Pernambucano de Estudos Pedagógicos (Institute of Pedagogical Studies of Pernambuco).

In 1964, in view of the political situation in Brazil after the military coup, Paulo Rosas had resigned from his position as principal at the Men's Science Institute, evaluating the inconvenience of his presence in the institution due to his political belief. In the same year, he went to France with his wife in order to do an internship in Experimental Psychology at Paris University, where he specialized in Occupational Psychology.

In his return to Brazil, in 1965, he founded the Work Psychology Institute, in Recife, encouraging the opening of the market to the private practice in this field in Pernambuco. He remained in the institution until 1971, when he decided to dedicate himself entirely to UFPE.

After his retirement of UFPE, in 1988, Paulo Rosas kept on going with his worries with Education and with the development of the psychology in Brazil: he integrated the Education State Council of Pernambuco (1988–1994), presiding it in the last 4 years of his participation; he was president of the National Forum of the Education State Councils (1991 and 1992), one of the founders of the Association of Psychology in Pernambuco, member of the Editorial Committee of the magazine *Psychology: Science and Profession* of the Psychology Federal Council (in different time periods in the years of 1980, 1990, and the beginning of the 2000s) and vice-president of the Professors Association of the Federal University of Pernambuco (1984 and 1985).

Paulo Rosas also had an important role in the discussions about the Brazilian university structure. His restlessness reached issues regarding the threat of political practices that were said to be globalizing or neoliberal that, according to him, could compromise the future of public higher education which, he believed, should continue to be public, free, and independent (Oliveira, 2001). He considered himself “a hopeless case” for believing in the University against all the evidence (Rosas, 1999, p. 3).

As one of his last contributions, he integrated the direction of the Paulo Freire Center – Study

and Research, founded in May 1988. Functioning at UFPE without, however, belonging to it, the Center provided for Paulo Rosas to continue working in the place where he showed, beyond his teaching and researching qualities, his “ability to work in divergence” (Rosas, 1997, p. 315). And so he did until November 2003, when he died at the age of 73, in France, victim of a pulmonary embolism, while he prepared to participate as a guest of honor, in the UNESCO seminar “Education and Social Transformation.”

Rotondo-Grimaldi, Humberto

Born *El Callao (Peru)*, June 4, 1915

Died *Lima (Peru)*, March 13, 1985

Alfredo Zambrano-Mora
University of Lausanne, Lausana, Switzerland

Keywords

Peru · Social psychiatry · Family psychology

A prominent Peruvian psychiatrist, Humberto Rotondo studied medicine at the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM), graduating in 1942. Between 1943 and 1945, he carried out advanced studies in the United States (Henry Phipps Psychiatric Clinic, Johns Hopkins University, Baltimore, also attending courses and seminars at the William Alanson White Foundation, in New York).

In 1946, he entered the Hospital *Víctor Larco Herrera* (Víctor Larco Herrera Hospital, Lima, Peru) as a doctor and his *alma mater* as a teacher. In those years the most important figure in Peruvian psychiatry was Honorio Delgado, (1892–1969) who was the chief physician of the service at the Larco Herrera Hospital and was also his professor at UNMSM.

From 1961 until his retirement, Rotondo developed his work at the Hospital *Hermilio Valdizán*

(Hermilio Valdizán Hospital, better known as “*El Asesor*,” in the eastern part of the city of Lima, an institution specialized in the treatment of psychiatric disorders). There he carried out important clinical and research work as well as in the training of doctors who specialized in the field of psychiatry.

Interested in his student years and the first years of his professional life in psychopharmacology, he collaborated and published with Carlos Gutiérrez Noriega. Progressively, however, he oriented his interests to social and community psychiatry, being the co-author of an important book with studies on the subject (Caravedo et al. 1963), one of the first of its kind in Peru. He also studied the Peruvian family (a subject rarely addressed in Peruvian psychiatry and psychology) and published, in the final years of its existence, works devoted to terminology and psychological theories.

Humberto Rotondo did not practice psychiatry privately, concentrating on work at *El Asesor* Hospital, where several generations of Peruvian psychiatrists received his teachings (Mariátegui, 1985).

Bolivia · Pedagogy · Psychology

Georges Rouma was a Belgian pedagogue who formulated one of the first educational projects in Bolivia. He studied at the Charles Buls Normal School and graduated with a doctorate in social sciences from the Free University of Brussels (1909). He was professor of psychology and pedagogy at the Normal and Provincial School of Charleroi and director of the language problems section at the Brussels Polyclinic, in the service directed by Oliver Decroly (1871–1932), with whom he collaborated for 7 years.

In 1905, Rouma moved to Bolivia, with a contract signed with the liberal government of Ismael Montes (1861–1933, president of that country on two occasions, 1904–1909 and 1913–1917), being appointed first director of the *Escuela Normal de Profesores y Preceptores* (Normal School of Teachers and Preceptors of the Republic, currently *Escuela Superior de Formación de Maestros*, Higher School of Teacher Training “Mariscal Sucre”) in Sucre (1909), in which he was in charge of pedagogy and psychology courses (Escuela Normal, 1910).

The Montes government was seeking a radical reorganization of education in Bolivia, and Belgium was seen at that time as a country with very modern and effective pedagogical methods (Candeias Martins, 2019). For this reason, the Bolivian government turned to the Brussels Normal School, directed by Alexis Sluys (1849–1936), who recommended Rouma for the tasks of reorganizing education in the Andean country. Shortly before, Rouma had published *Le parole et les troubles de la parole* (Rouma,

1907), an award-winning book (Prix de Keyn, 1909) by the Royal Academy of Belgium (Combaire, 1989).

Rouma toured the entire Bolivian territory and carried out a diagnosis of the state of education, proposing a new system for organizing primary and secondary education and teacher training schools, in accordance with the advances in European education. In 1912, Rouma was appointed general director of instruction of Bolivia. A new government contract for the period 1913–1917 allowed him to create and direct the *Escuela Normal de La Paz* in 1917.

Rouma proposed an educational system “for Bolivia and from Bolivia,” noting that the Bolivian student was intelligent but with little critical and synthetic capacity, and whose enthusiasm for learning could diminish at the first obstacle. Between 1915 and 1917, Rouma carried out pedagogical and anthropometric research in both Aymara and Quechua children, aboriginal populations of that Andean country. His proposals in the pedagogical field were developed by hired Belgian teachers.

At the end of his contract (1917), Rouma left for Cuba, where he served for a time as a technical adviser in education. The reasons for his not continuing in Bolivia were the lack of resources to implement the measures he recommended as well as the criticisms, among others, of Franz Tamayo, who valued more the importance of Indigenous culture in the development of an appropriate pedagogy for Bolivia.

Between 1928 and 1929, Georges Rouma returned to Bolivia as a representative of the Belgian Chamber of Commerce and the Central Industrial Committee of Brussels, at the invitation of President Daniel Salamanca (1869–1935) to make an evaluation of educational policy, making recommendations that were not carried out.

The pedagogical and anthropometric investigations carried out by Georges Rouma in Bolivia offered very important information about the psychosocial reality of Aymara and Quechua children, two ethnic groups hardly studied by psychologists of the time and also today (León, 2014).

Henrique Roxo began studying at the *Faculdade de Medicina do Rio de Janeiro* (FMRJ) [Rio de Janeiro Medical School] in 1895, at 17 years of age. The following year, his father passed away, leaving him in serious financial straits. In order to continue with his studies, he relied on the recommendation of friends to the FMRJ professor of Clinical Psychiatry and director of the *Hospício Nacional de Alienados* (HNA) [National Hospital for the Mentally ill], João Carlos Teixeira Brandão, who offered him a place as an unofficial resident student (Os nossos cientistas, 1925). In 1898, he became an official resident student at that hospital and, the following year, a resident in Clinical Psychiatry at the *Pavilhão de Observação* [Observation Pavilion], a unit of the FMRJ that performed triage for the HNA and where practical psychiatry classes took place. The Pavilion was renamed the *Instituto de Neuropatologia* [Institute of Neuropathology] in 1911, then the *Instituto de Psicopatologia* [Institute of Psychopathology] in 1927 and later the *Instituto de Psiquiatria* [Institute of Psychiatry] in 1938 (Muñoz et al., 2011). He completed his degree in medicine in January, 1901 with a thesis

about mentally ill. This research, based on the experimental psychology of Wilhelm Wundt (1832–1920), was the first medical thesis to use this method in Brazil. Associating this science with psychiatry, Roxo carried out 2500 experiments with mentally ill patients at the HNA and in healthy individuals, with the objective of demonstrating that experimental psychology could contribute to the prognosis of mental diseases through objective data.

In 1901 he was promoted to Clinical Psychiatry assistant. From 1904 to 1907, and again from 1911 to 1921, he held the position of substitute professor, teaching the classes in that area. After the death of Teixeira Brandão in 1921, he was promoted to the professorship in Clinical Psychiatry at FMRJ (Fidalgo, 1942). Roxo held this position and was director of the Institute of Psychiatry at the University of Brazil from 1921 until his retirement in 1945. He was honored the following year with the title Professor Emeritus of the University of Brazil.

In terms of his role in institutionalizing psychology in Brazil, after creating the experimental psychology service associated with the Clinical Psychiatry Professorship (1907), Henrique Roxo began to use the service extensively for Pavilion observations with the explicit goal of increasing the credibility of diagnoses and providing students practical, modern and unique training (Roxo, 1925, as cited in Mathias, 2017, pp. 94). As with experimental psychology, psychoanalysis was also a frequent topic in the classes taught in the department and appeared in its academic publications. The importance of psychology in his teaching can also be seen by noting the large number of books (about 300) on the subject purchased by the institution's library during the 24 years in which he was director of the Observation Pavilion.

In 1938, the Observation Pavilion was incorporated into the recently founded University of Brazil, and became known as the *Instituto de Psiquiatria* [Institute of Psychiatry (IPUB) of the University of Brazil]. Roxo stood out during the transfer negotiations, successfully annexing all buildings that had been part of the Pavilion/

IPUB for the University. From then on, the IPUB began to focus more on basic research, emphasizing research on mental illnesses and therapies (Mathias, 2017a). To foster and disseminate the knowledge created, as well as research carried out at the new institute, and give them more scientific authority and recognition, he founded the periodical *Anais do Instituto de Psiquiatria* in 1942, renamed the *Jornal Brasileiro de Psiquiatria* in 1949. This journal continues to be published even today.

Although at the start of Roxo's career he disseminated the precepts of alienism, over the years German organicism became part of academic studies in his field, as well as policies related to eugenics, mental hygiene and prophylactic measures, which were appropriated, reframed and circulated through his classes, publications and participation in medical-scientific events in Brazil and abroad. In the 1940s, the psychiatry practiced in the *Pavilhão/IPUB* began to follow and implement the scientific knowledge of the United States schools.

Henrique Roxo was a member of many scientific societies, such as the *Sociedade Brasileira de Neurologia, Psiquiatria e Medicina Legal* [Brazilian Society for Neurology, Psychiatry, and Forensic Medicine], the *Academia Nacional de Medicina* [National Academy of Medicine], the *Soci ete Clinique de Medicine Mentale de Paris* [Paris Clinical Society for Mental Medicine], the *Soci ete M edico-Psychologiques* in Paris [Medical-Psychological Society], the *Soci ete Fran aise de Psychologie* [French Psychology Society], the *Sociedad de Neurologia y Psiquiatria de Buenos Aires* [Buenos Aires Society for Neurology and Psychiatry], the American Medico-Legal Association and the *Sociedad Argentina de Psicolog a M edica y Psicoan alisis* [Argentina Society for Medical Psychology and Psychoanalysis], among others (Mathias, 2018).

In terms of international visibility, the professor also represented Brazil at a variety of academic medical events in Latin America, the United States and Europe. He gave one particularly important talk at the Ninth International Congress of

Psychology, New Haven (1929), entitled “Medical Psychology in Rio”. The physician also gave talks on Brazilian psychiatry at the Clinic for the Mentally Ill at the University of Paris, at the *Société Médico-Psychologique* [Medical-Psychological Society], Paris, and at the *Société de Neurologie* [Neurology Society], Paris, at the invitation of the *Institut Franco-Brésilien de Haute Culture* [Franco-Brazilian Institute for High Culture] (1936). Even after retirement, he continued to attend different international conferences, such as the *Congrès International de Psychiatrie* [International Psychiatry Conference], in Paris (1950) and the Congress of the World Federation of Mental Health held in Mexico City (1951). The *Sociedad Interamericana de Psicología* [Interamerican Psychology Society] was created at this event and Dr. Roxo was one of its founders (Gallegos, 2012a). In 1953, during the Society’s first conference, in Santo Domingo, the Dominican Republic, Roxo was one of the official guests (Gallegos, 2012b).

He was a prolific author and published on a variety of topics in psychiatry, in addition to some on psychology. But his most well-known work was his *Manual on Psychiatry*, with four editions published (1921, 1925, 1938 and 1946). This book was used as a basic textbook for the course on Psychiatry, and contributed to direct teaching and medical practices toward well-defined specializations, including introducing and popularizing topics such as experimental psychology, psychological research and psychoanalysis among members of the medical community. The psychiatrist also sought to obtain professional recognition from the general public by publishing articles in the mainstream press, such as daily newspapers and weekly magazines (Carvalho et al., 2017).

Following his career, it is fair to say that the wide dissemination of the results of his research (at least 10 presentations in international conferences and 99 articles published, in addition to books with many editions) made Henrique Roxo a renowned academic both at the national and international level, and led to the Institute of Psychiatry of the University of Brazil becoming a reference for Brazilian psychiatry (Mathias, 2017a, b).

Keywords

Brazil · Traffic psychology · Psychophysics · Psychology education

Reinier Johannes Antonius Rozestraten took his undergraduate studies in philosophy (from September 1943 to August 1946) and theology (from September 1946 to July 1950) with Franciscan friars, and he received holy orders to come to Brazil and lecture at *Colégio Santo Antônio*

with the responsibility of creating the college course of natural history in Belo Horizonte, in the State of Minas Gerais (MG), graduating in 1955 Campos (2001). As of 1957, he began administering classes as an assistant for Pedro Parafita de Bessa (1923–2002).

In 1956, Reinier was involved in the establishment of the *Associação Mineira de Psicologia* (Psychological Association of Minas Gerais – a psychology association based in MG) along with André Rey (1906–1965), as well as other characters of the history of psychology in MG, e.g., Daniel Antipoff (1919–2005) and Pedro Parafita de Bessa. Moreover, Rozestraten was president of that same association from 1965 to 1967. He worked at the *Universidade de Minas Gerais* – UMG (currently, *Universidade Federal de Minas Gerais* – Federal University of Minas Gerais) and, also, at the *Universidade Católica de Minas Gerais* – UCMG (currently, *Pontifícia Universidade Católica de Minas Gerais* – Pontifical Catholic University of Minas Gerais) which he left in 1968. He moved to Salvador, Bahia (BA), where he taught various courses in the field of experimental psychology and worked with activities of professional selection and orientation for almost a year, until he accepted an invitation to live in Brasília. There, he taught at the *Faculdade de Serviços Social* (Social Service College), at the *Serviço Nacional de Aprendizagem Comercial* – SENAC (National Service of Commercial Apprenticeship) and at the *Centro Universitário de Brasília* – CEUB (University Center of Brasília) between the years of 1969 and 1970. At CEUB, he would help create the psychology undergraduate program and be responsible for the establishment of an experimental psychology laboratory. He remained in Brasília until the first semester of 1970, then going to the *Faculdade de Filosofia, Ciências e Letras* of *Universidade de São Paulo* – FFCLRP-USP (School of Philosophy, Sciences, and Humanities of the University of São Paulo) in Ribeirão Preto (São Paulo). He took on disciplines related to the history of psychology, general psychology, and experimental psychology.

As Rozenstraten had done before at UMG and at UCMG, he developed instructional materials

related to both experimental psychology and psychophysics for usage in FFCLRP-USP. These practices steered his interest toward traffic psychology and, specifically, to perception in traffic. In the early 1970s, he met Antônio Battro (1936 -), researcher of the *Centre International d'Épistémologie Génétique* (CIEG) at the *Université de Genève*, who awakened Rozestraten's interest for open-field researches on perception. Traffic psychology was intertwined to his concerns regarding concrete instances and application of psychology, and traffic emerged as a common and open field, in which people measure sizes, speed, and distances. Rozestraten was a pioneer in the research of traffic psychology and he conducted a variety of studies, in laboratories as well as in open field, in Brazil. His researches in open field led to the understanding that psychophysics could be taken outside of laboratories and its principles could be applied to problems of perception in daily life and during the performance of ordinary tasks staged in open field, namely, in traffic, be it in urban areas or highways.

Rozestraten was linked to the organization of psychology as a profession, being a part of the first administration of the *Conselho Federal de Psicologia* (Federal Council of Psychology [CFP]) between the years of 1973 and 1975. In 1981, he integrated the ad hoc commission of the CFP entitled “Comissão Especial do Exame Psicológico do Motorista” (Special Commission of Drivers Psychological Exam), taking the role of president. Nestor Efrain Rojas-Boccalandro (1933–2017) and José Augusto Dela Coleta (1942 -) were also part of that same commission and their goal was to suggest solutions and improvements in the field to the *Conselho Nacional de Trânsito* – CONTRAN (National Traffic Council). Their results were important to outline the paths that would later on be taken in the field and in the practice of a traffic-related mandatory preliminary psychological exam, in Brazil. Rozestraten was also associated to the conformation of the *Sociedade de Psicologia de Ribeirão Preto* – SPRP (Psychological Society of Ribeirão Preto), predecessor of the *Sociedade Brasileira de Psicologia* – SBP (Brazilian Society of Psychology), being its first president in office

from 1971–1973 Rozestraten et. Al (2008). Furthermore, he was one the cofounding members of both the *Associação Brasileira de Psicologia do Trânsito* – ABRAPT (Brazilian Association of Transit Psychology), in 1981, and of the *Associação Brasileira de Ergonomia* – ABERGO (Brazilian Association of Ergonomy), in 1983.

During a brief stay in the *Universidade Federal de Uberlândia* – UFU (Federal University of Uberlândia) in the early 1980's, Rozestraten created the first traffic psychology research group in the country and in the whole of Latin America, in 1982. He also coordinated the foundation of the first scientific journal with the subject matter traffic psychology in Latin America, entitled *Psychology and Traffic*, in 1983. In the same institution and year, he conducted a nongraduate degree in traffic psychology. There he produced the *International Guide for Research on Traffic Psychology*, edited in English and in Brazilian Portuguese, and its purpose to instrumentalize the researchers in this field, as a reference work Rozestraten (1983, 1987).

In 1988, Rozestraten published his book *Traffic Psychology: Concepts and Basic Processes*, the first one to be published in Brazil under the subject matter of traffic psychology. The book presents the dynamics of psychogenesis of behavior in traffic with the support of behavioral, cognitive, and information theories. This oeuvre was used as a baseline to the edition of the CONTRAN Resolutions No. 51/98 and 80/90, which regulated the psychological evaluation of drivers in the post-veto period and continue to be the basis for subsequent resolutions that came to replace the ones in question. In 1998, President Fernando Henrique Cardoso vetoed item II of Art. 147 of the Brazilian Traffic Code which was instituted by Law 9.503/97, thus extinguishing the existence of psychological evaluation in the context of traffic, thereby it being restituted with the topple of the presidential veto by the National Congress and with the come into effect of Law 9.602/98. The work of Rozestraten (1988) was used as a basis for the creation of the CONTRAN Resolutions which deal with what must be evaluated by psychology professionals in that context since the aforesaid in 1988 until the currently in effect, the CONTRAN Resolution No. 425/12 Silva (2012).

Between 1982 and 1984, he was at UFU and returned to FFCLRP-USP, acting as a teacher until 1995, when he retired as visiting teacher at *Universidade Federal do Pará* – UFPA (Federal University of Pará) and stayed until 2000. In the same year, he transferred to *Universidade Católica Dom Bosco* – UCDB (Dom Bosco Catholic University) located at Campo Grande state of Mato Grosso do Sul (MS) teaching history of psychology, experimental psychology, and traffic psychology on the psychology undergraduate degree. At UCDB, he also worked at the graduate program in psychology, guiding students with themes on traffic psychology Prereira (2005).

Beyond prizes and tributes along his career, he occupied the 34 chair of the *Associação Paulista de Psicologia* (Psychological Association of São Paulo) Academia Paulista de Psicologia (2008) and since 2017 with the tribute received by *Associação Brasileira de Psicologia de Tráfego* – ABRAPSIT (Brazilian Association of Traffic Psychology), he lends his name to the prize delivered biennially during the Brazilian Congresses of Traffic Psychology to honor markable psychologists in traffic psychology around Brazil. Rozestraten was a pioneer of the research, teaching, and application of traffic psychology in Brazil and Latin America. His papers contributed to connect Latin America and Europe in the research, contributing to the advance in the area. In this sense, his studies had an impact in the exchanges inside the campus of ergonomics and ambiental psychology, which contributed to the organization of representative entities of Brazil psychology.

When Domingo was born, Puerto Rico had been under the Spanish rule for almost four centuries. He was the oldest of five children – 3 boys and 2 girls – born to Mr. Domingo Luis Rubio Rivera (1839–1907) and Gervasia Arana (1842–1907). His mother was a housewife and the father a teacher. That means that Domingo’s family had enough resources and held a privileged social status, as the majority of the inhabitants of the Island in that epoch were poor, illiterate, and worked mostly as laborers. There is enough basis to assume that young Domingo received his first education from excellent teachers, as his father was a professor.

Domingo attended the famed *Instituto Civil de Segunda Enseñanza*, (Civil Institute for Secondary Education), a Spanish institution established in Puerto Rico in 1882–1883 (Coll y Toste, 1910), in which he obtained the elementary teacher and the superior teacher certificate, and a Bachelors of Arts degree. There he was awarded the prize for the History of Spain discipline. Approximately from 1895 to 1897, he attended the *Escuela Normal Central de Madrid* (Normal Central School of Madrid), in Spain, obtaining the normal teacher degree. In Spain, he was awarded the Pedagogy prize, the Honors Diploma, and the extraordinary price, these last two against two other candidates (Méndez Pérez, 1918).

In 1883, Domingo Rubio was appointed, by opposition, as an elementary school teacher in the

northern municipality of Vega Alta, Puerto Rico, where he worked for 5 years. From 1888, he was a teacher of Spanish and Arithmetic in *Institución Libre de Enseñanza Popular* (Free Popular Teaching Institution). This was a voluntary work to contribute to the educational development of Puerto Ricans and he did not receive any pay for his services (Méndez Pérez, 1918). He also worked as a teacher at the end of the 1880s and beginnings of the 1890s in the auxiliary school in the town of Cataño, and the first-class elementary schools in San Juan’s district 40. In 1897 he was appointed professor in the first-class elementary school in the town of Manatí, in charge of 115 students (Coll y Toste, 1910). In 1898, the municipality of Manatí awarded him a metallic price for his excellence (Méndez Pérez, 1918).

He also served as Professor and Secretary of the *Escuela Normal Superior de Maestros* (Teachers Superior Normal School) in the capital city of San Juan by the year 1893, when he married to María Dolores Arana Arana, 18 years old. The couple had four children between 1895 and 1904: Beatriz, Domingo Luis, Carlos, and Augusto. In 1898, the United States troops invaded and took under their control the island of Puerto Rico. Spain ceded Puerto Rico as a war booty after losing the Hispanic American War and sovereignty change took place immediately after. The Spanish school system was abolished because Americans found it to be “defective” (United States Bureau of Education, 1901), and the Americanization of the inhabitants was a top issue in the agenda of the new regime. Education and schooling processes were instrumental to achieve this goal (Negrón de Montilla, 1970).

In 1900, a normal and industrial school was opened in Fajardo with the purpose of beginning the preparation of the teachers who will be in charge to implement the American instruction system in the schools of Puerto Rico, including the teaching of English. The school was opened with five faculty members, three Puerto Ricans and two North Americans, and 20 students (Frazier, 2019; Rivera, 2000). Domingo Rubio was among the members of that intellectual elite of professors in charge of the future of public instruction in the new US possession. His solid

educational background, experience, and prestige as a teacher of excellence made of him one of the few chosen. According to the requisites for the position, “faculty should be familiar with American teaching methods and have the necessary competences to equate the local departments to similar schools from the United States” (Torres, 2000, p. 39). The normal school curriculum was designed following three North American institutions for the Black and Indians: Carlisle Indian School, Hampton Institute, and Atlanta University (United States Bureau of Education, 1901).

Due to diverse hardships, a year after, the school was moved to the town of Río Piedras, closer to the capital (Rivera, 1999). In 1903 the *Escuela Normal Insular* (Normal Insular School) became the basis of the University of Puerto Rico, under Instruction Commissioner Samuel McCune Lindsay, sociologist and former professor at the University of Pennsylvania. Mr. Domingo Rubio continued as a faculty member, not any faculty member, but the professor with the most diverse teaching load. He was in charge of teaching five courses: History of the United States, History of Europe, Descriptive Geography, Physical Geography, and Psychology (Acta de la Junta de Síndicos, 1903–1905). Along with Mr. Felipe Janer Soler (Spanish Grammar, Spanish Literature, Civil Government, Rhetoric) and Mr. Arturo Vega (Arithmetic, Algebra), they were the true pillars of the modern University of Puerto Rico, nowadays a High Research Activity university according to the Carnegie Classification.

Although he was not trained as a psychologist, in fact he became the first professor to teach a Psychology course in the University of Puerto Rico. That course was offered during the second year of studies as a full year class (Álvarez, 2006) and in the first semester of the fourth year (Actas de la Junta de Síndicos, 1903–1905). As a relatively new discipline, the content to be taught must have been somewhat limited to names such as Wilhem Wünder, Hermann Ebbinghaus, Sigmund Freud, James McKeen Cattell, William James, G. Stanley Hall, John Dewey, and perhaps Edward B. Titchener, Ivan Pavlov, Alfred Binet, and Edward Thorndike. The fact is that, by the

beginning of the twentieth century, psychology was taught in academic settings as a natural science of the mind and mental processes, and textbooks described the methods used in the discipline and suggested potential applications to practical concerns (Fuchs, 2000). In this context, Prof. Rubio should have had addressed topics related to child and adolescence psychology, personality development, and learning processes, at least.

Besides teaching duties, professors from the normal school following instructions from the Commissioner of Education embarked in the organization of activities and the production of materials to train and induce active local Puerto Rican teachers in the US mainland instructional model, practices, and philosophy. For example, in 1904, a group of 504 teachers attended special sessions of summer schools at Harvard and Cornell (Navarro, 2013), and the faculty wrote *Syllabus of Work for the Puerto Rico Teachers' Institutes*, for the 1904–1905 trainees (Biblioteca Virtual de la Filología Española, 2020).

By 1908, there were 19 faculty members in the normal school and only two of them were Puerto Rican (Actas de la Junta de Síndicos, 1908–1913). Domingo Rubio was no longer associated with the school. It coincided with the time of the death of both of Domingo's parents and the opening of the Arecibo High School (1907), the fourth of its class to be opened under the US flag dominion. Mr. Domingo Rubio was appointed as Professor of Spanish at the new institution. He was remembered fondly by students, many decades later (Lago Padín, 1990).

Domingo Rubio's intellectual activity transcended the classroom. By 1891 he was an active member of the *Ateneo Puertorriqueño* (Puerto Rican Atheneum) and of the *Sociedad Económica de Amigos del País de Puerto Rico* (Economic Society of Friends of the Puerto Rico Country), a learned society established in 1812 which promoted the development of knowledge in general. The teachers of Puerto Rico organized themselves in 1911 as the *Asociación de Maestros de Puerto Rico* (Association of Teachers of Puerto Rico). In the 1912 annual assembly Domingo Rubio was Delegate from Arecibo, demonstrating his

leadership capacities; furthermore, in that very assembly he was elected member of the Board of Directors for the year 1913 (Actas de la Asociación de Maestros de Puerto Rico, 1912). Besides his important contribution to higher education in Puerto Rico, especially in the preparation of generations of future teachers and other professionals, Domingo Rubio was actively involved in other cultural and civic activities aimed at promoting the quality of life of his town of residence. He was among the group of distinguished citizens that established *Fomento Arecibeño* in 1917, responsible for the installation and conservation of various monuments in the town of Arecibo.

At age 54, Domingo Antonio Rubio Arana passed away in Arecibo, Puerto Rico. He had served already 35 years as a devoted educator who promoted the wellbeing of the youth, the formation of responsible citizens, and the progress of the Island. He suffered an acute peritonitis. He is buried in the Old Cemetery in Arecibo, location CO, PE, 20, close to the chapel. The municipality of Arecibo named a street in the urban zone to posthumously honor the memory of this distinguished educator.

Brazil · Educational psychology · Progressive education

Born in the interior of São Paulo state into a family of female daughters, Noemy Marques da Silveira and her sisters opted for professional training. One of her sisters was a pharmacist and another acted as an educator like her, which at the time was not common among women. She became known as Noemy da Silveira Rudolfer, after adopting the surname Rudolfer from her marriage to a Czech engineer in 1934. Her education was marked by the influence of the quantitative method in educational studies that began to be introduced in Brazil at the same time she was developing her studies in applied psychology, an area in which she developed, in Brazil, as part of the scientific field of education.

After her formation in 1818, as a normalist at the Escola Normal do Bráz (Bráz Normal School), she began her career as a substitute teacher in Elementary Education, named like that at the time and which attended children from 7 to 10 years old. In 1921, assumed by tender the position of assistant elementary teacher in the Grupo Escolar Prudente de Moraes (Prudente de Moraes School), in which she remained until 1927. Between 1927 and 1930, she began a long partnership with Lourenço Filho, influential Brazilian educator, as his assistant in the chair of Psychology and Pedagogy at Escola Normal da Praça (Square's Normal School). In 1931, she assumed the coordination of the Serviço de Psicologia Aplicada no Departamento de Educação do Estado de São Paulo (Service of Applied Psychology at São Paulo States' Department of Education).

In 1928, while acting as an assistant to Lourenço Filho, she visited the United States on an invitation of the International Institute of Education of New York and the Associação Brasileira de Educação (Brazilian Association of Education) as part of a delegation of educators who sought to know and study the education carried out in the United States. In the second semester of 1930, she returned to the United States to deepen her studies in psychology at Teacher's College, with a scholarship from Columbia University. In the same year, she was elected to the Council of Foreign Students of the Young Women's Christian

Association (Y.W.C.A.) of New York as representative of Latin America.

In the United States, as a student, she had contact with professors such as John Dewey (1859–1952), Edward Lee Thorndike (1874–1949), Arthur Irving Gates (1890–1972), and William Heard Kilpatrick (1871–1965), and later translated into Portuguese works by these last two theorists, which contributed to the dissemination of their ideas in Brazil. She stayed in the United States for only one semester, returning to Brazil in 1931 to contribute to the São Paulo educational reform initiated by Lourenço Filho.

In 1933, she took up the Chair of Educational Psychology at the Escola Normal Caetano de Campos (Caetano de Campos Normal School) known as Escola Normal da Praça (Square's Normal School) and shortly after became director of the Laboratório de Psicologia do Instituto de Educação Caetano de Campos (Psychology Laboratory of the Caetano de Campos Education Institute) which, after the creation of the Universidade de São Paulo – USP (University of São Paulo – USP) in 1934, became the chair of the Laboratório de Psicologia Educacional da Faculdade de Filosofia, Ciências e Letras – FFCL/USP (Educational Psychology Laboratory at the Faculty of Philosophy, Sciences and Letters FFCL/USP).

In 1936, she defended the thesis to assume the chair of Psicologia Educacional do Instituto de Educação da USP (Educational Psychology at the Institute of Education at USP), entitled “The evolution of educational psychology through a history of modern psychology,” a work that in 1938 was published in a book under the same title.

She was a professor at the Faculdade de Filosofia, ciências e Letras (Faculty of Philosophy, Sciences and Letters) (FFCL) of the University of São Paulo (USP) between 1938 and 1954 when she retired. She taught the Social Psychology discipline at Escola Livre de Sociologia e Política de São Paulo (Free School of Sociology and Politics of São Paulo) in the 1930s and in 1932 was a signatory, along with other important Brazilian intellectuals, of the document known as the Manifesto dos Pioneiros da Educação Nova (Manifesto of the Pioneers of New Education),

which became an important guide of the educational renovation project of her country.

Noemy represented an example of the achievements of women in a traditional society in which public positions were held mostly by men, holding positions of leadership, occupying a prominent role, and exerting intellectual influence in discussions about public policy. She was part of the commission that discussed the Brazilian National Education Plan in the 1930s, participated in the creation of the Sociedade de Sociologia de São Paulo (São Paulo Sociology Society) and the Associação Paulista de Psicologia (São Paulo Psychology Association).

In the first 30 years of the twentieth century, Brazil experienced the debates and reforms that shaped the educational policies of the time and Rudolfer was inserted in this situation and her studies contributed to the development of an Educational Psychology that supported the pedagogical performance of professionals working in the country. Her studies focused on the use of tests, on the guidance and training of professionals who worked in education in the country, trying to respond to the concerns of Brazilian elites and governments, and based on psychology studies she sought to contribute to the struggles for public education.

As an author and translator, she left several bibliographical contributions with publications of articles, books, and translations by North American authors. She served as a teacher, researcher, intellectual and teacher trainer, with national and international recognition of her contributions to education. It influenced the implementation of educational public policies in Brazil and developed pioneering studies on the use of tests to improve reading and writing. For Rudolfer, the psychologist, supported by the information obtained by the tests, would be able to scientifically classify individuals and determine, from school, which group they should belong to until entering the labor's world.

Otto Rühle (Karl Heinrich Otto Rühle) was born almost simultaneously to the founding of the German Empire. He was the second son of the couple formed by Ida Christine Emilie Schöber and Karl August Heinrich Rühle. From 1881 to 1889, he attended elementary school in Gröditz, and from 1889 to 1895, he studied at the Seminary for Teachers in Oschatz, Saxony. From 1896 he worked as a teacher’s assistant in Oederan, Freiberg. From an early age, he dedicated himself to being a teacher of elementary education, above all, linked to the children of workers. His life as a teacher, educator, and politician always had as a central objective, the abolition of the inequalities of the working class. Some of his earliest ideas can be found in the newspaper *Volkstimme* (The Voice of the People), published in Chemnitz, where he collaborated between 1900 and 1902, and also in the *Volkswacht* (The People’s Observer), a newspaper where he reflected on the working conditions of teachers, the Social Democracy, the elementary foundations of Pedagogy, and, above all, the living conditions of the proletarian child.

On June 3, 1901, he married Johanna Erna Henrika Zacharias (1878–1920) who was very active in the women’s movement until the beginning of the First World War. Their daughter, Margarete (Grete) Rühle, was born on January 14, 1903, in Hamburg.

From 1912 on, Otto Rühle was elected to the German Parliament, and on August 3, 1914, together with Karl Liebknecht (1871–1919), he turned out to be one of the only two deputies who refused to vote for war credits, i.e., to support the later so-called First World War, rejected by the international leftist movement arguing its imperialistic origins.

On December 30, 1914, he was one of the founders of the German Communist Party, KPD, the same party who would later on get him expelled from, mostly due to his critical ideas toward the party bureaucracy and the proposal to unite the Party with different workers’ unions. In 1920 he founded in Berlin the KAPD, the German Communist Workers’ Party, which upheld the ideal that the worker’s councils would receive the main task of carrying out the communist revolution. The image of Otto Rühle as an agitator was embodied by the expressionist painter Conrad Felix Müller (1897–1977). In 1921 he was expelled from the party that he had helped to form. He continued true to the slogan “the revolution is not a party affair, but will only be possible through the active and conscious participation of the great proletarian masses” (Gálvez Cancino, 1987: 11) as befitted his socialist council ideology. From this moment on, and gradually distancing himself from the various political groups and never again taking part in any of them, he became a marginal figure, far distanced from his role as a recognized socialist leader he once was. In 1921 he married his second wife, Alice Rühle-Gerstel.

Later on, the couple founded the publishing house *Am Andern Ufer*, and under this label, they published several texts dedicated to their main interests. That is, the education of the proletarian child (in Otto Rühle’s own words “poor pariah, he is the most helpless creature living under the sun” (Rühle, 1933: 21)), the socialist education, and Marxist texts based on interests of Otto Rühle and the possible link between

Marxism and the Individual Psychology in tackling the problem of women in Germany in the first half of the twentieth century, based on the interests of Alice Rühle-Gerstel.

In addition to his work as an editor, Otto Rühle devoted himself during the 1920s and during the time of the so-called Weimar Republic (1918–1933) to giving lectures in German universities related to socialist issues. It was because of this activity that the Hitlerist regime – as he used to call it – carried out a persecution against the Rühle couple. Thus, in 1933, only 2 months after coming to power, the Nazi State secret police (Gestapo) entered the Rühle house in Friedewald in Dresden to confiscate their writings and their library. After this incident, the couple decided to go into exile to Prague, Alice Rühle-Gerstel's hometown. On May 10, 1933, the Nazi regime organized the “burning of books” written by the opponents of National Socialism (*Bücherverbrennung*) but also by all those authors who could arouse criticism of the new government. The books written by the Rühle couple were among the titles burned, the same month in which the Gestapo finished destroying and plundering their home.

The Rühle's exile began that year, and they were never to return to Germany. Otto Rühle remained in Prague until 1935 when, through the efforts of his son-in-law, Fritz Bach, a Swiss economist who had lived in Mexico since 1926, he got a job in Mexico, in the Secretaria de Educación Pública (Ministry of Public Education) (SEP) during the regime of President Lázaro Cárdenas (1934–1940). On November 29, 1935, Otto Rühle entered Mexico as a conditioned immigrant for 1 year, which could be countersigned up to 5, using the card of the Secretaría de Gobernación (Ministry of Inner Affairs) number 102999 (Rühle); his wife would arrive a year later. Since January 1, 1936, he worked as a technician in the SEP assigned to the Instituto de Psicopedagogía e Higiene Escolar (Institute of Psychopedagogy and School Hygiene).

From 1936 to 1938, he dedicated himself to writing texts related to educational matters.

During this time, he wrote various articles, opinions, manuscripts, and publishing materials, such as *La escuela del Trabajo* (*The School of Labor*). He also dedicated himself to the preparation of materials for night schools, explicitly aimed at education for workers, an edition published by the Education and School Hygiene Commission. It was during the 1930s that he refined his book *El alma del niño proletario* (*The Soul of the Proletarian Child*) (Rühle, 1987), a rigorous pedagogical study linked to Individual Psychology, with the aim of outlining the psychological profile of the proletarian youth (to fully understand their condition, their feeling of inferiority, and the mechanisms of overcompensation and possible neuroses), a work dedicated to the children of urban workers. For Otto Rühle it was very important to differentiate, within the individuality of each child, between the different psychological types in order to develop appropriate pedagogical strategies for each individual. Thus, for Rühle, a distinction had to be made between two types of children: (a) the sensitive type, which is more suitable for carrying out tasks that require concentration and deeper study, and (b) the motor type, which refers to those children who need more movement and physical activity. As he often stated, these differences are of great significance for education and school organization (Stecklina & Schille, 2003: 94).

Especially in his texts “Illustrated history of the customs of the proletariat” and “The child and the environment – A psycho-pedagogical study,” his biography of Karl Marx, and the periodicals published in the *Monatsblätter für proletarische Erziehung*, we can see the influence that Individual Psychology exerted on his work and thought. Otto Rühle identified problems not previously seen by Marxist intellectuals. The latter perhaps, and also probably due to his commitment to socialist education raised by the Mexican Cardinalist government. Rühle's presence was widely commented in political and pedagogical circles in Mexico, especially because he was recognized as one of the founders of the Spartacist League and the German Communist Party. In that

sense, the magazine *El Maestro Rural* dedicated some very moving words to present Rühle as a very outstanding pedagogue of his time and as a fighter for a better and socially more humane world, who, in addition, has delved deeply into knowing the Mexican nation from within and from its most remote places (Pohle in Stecklina, 2003: 135).

Of particular note is his participation in the Dewey Commission (1938 and related to the specific defense of Leon Trotsky, 1879–1940), which countered the attempts made by Joseph Stalin (1878–1953) to imprison and accuse the former leaders of the Bolshevik revolution of treason. From the friendship and joint work made by Leon Trotsky, who also lived in Mexico during the last years of his life, and Otto Rühle, we have left the four-handedly written book *El pensamiento vivo de Karl Marx (The Living Thought of Karl Marx)*.

In the late 1930s, Otto Rühle ended up jobless, although he and his wife had obtained Mexican citizenship, which allowed them to continue living in Mexico despite the precarious situation. At the beginning of 1940, Otto Rühle decided to start a small business, which consisted of painting traditional postcards about daily life in rural Mexico, the same postcards Alice Rühle-Gerstel would sell and distribute in stores as souvenirs for foreigners, especially American tourists. For this purpose, Otto Rühle used the nickname Carlos Timonero, an almost literal translation from German into Spanish of the pseudonym he used from 1932 on, in Germany and during the rest of his exile: Carl Steuermann.

On June 24, 1943, Otto Rühle died from a heart attack. Two hours later, his wife Alice Rühle Gerstel committed suicide by throwing herself from the third floor of their apartment located in a neighborhood near the center of Mexico City.

Alice Gerstel was the first born of Emil Gerstel (April 8, 1870–July 15, 1919) and Cornelia (Nelly) Strakosch (July 3, 1874–December 9, 1923), members of the German-Jewish minority living in the city of Prague, Bohemia, in the Austro-Hungarian Empire. The family owned a furniture factory of great international prestige. She attended the bilingual Prague primary school (learning German and Czech). Once she completed the primary education, she continued her studies at the secondary school for girls, where she learned music and French. After completing school, she further decided to pursue her studies at the *Deutsche Karl-Ferdinands-Universität [German Karl Ferdinands University]* in Prague. Her university studies were unfortunately interrupted by the outbreak of the First World War. During the war she worked in a hospital as a volunteer nurse and afterward also as a governess at the Schönau Palace, the summer residence

of the von Habsburg family. At the end of the war, Alice Gerstel left the newly formed Czechoslovak Republic and went to live in Vienna. During her years in Austria, she was drawn toward the individual psychology proposed by Alfred Adler, a professor at the Vienna Pedagogical Institute at that time. The psychotherapist of Alice Gerstel in Vienna, Leonard Seif (1866–1949), was the person who introduced her to the methods of analysis used by the individual psychology. She later on enrolled at the Faculty of Philosophy of the University of Munich, where she received her doctorate title in literature with honors (*summa cum laude*) on March 3, 1921, with the thesis *Friedrich Schlegel und Chamfort* (Friedrich Schlegel and Chamfort).

In December 1921 Alice Gerstel met Otto Rühle (1874–1943), a well-known German pedagogue and defender of the council communism who had been a member of the German Parliament for the Social Democratic Party (SPD). Six months later, in June 1922, they decided to get married, and Alice Gerstel changed her name to Alice Rühle-Gerstel. It was the second marriage of Otto Rühle.

With the inheritance Alice Rühle-Gerstel received shortly after the wedding, the couple founded the publishing house *Am Andern Ufer* in Buchholz-Friedewald near Dresden. The first book they published was *Freud und Adler* (Freud and Adler 1924), which was no coincidence. Alice Rühle-Gerstel would attempt throughout her entire intellectual work the introduction of the theoretical construct of individual psychology of Alfred Adler on the one side and Marxism on the other into the analysis of women and feminism, especially in Germany in the first half of the twentieth century. The couple even formed the International Association for Individual Psychology. They published texts related to pedagogy, individual psychology, Marxism, and critical thought in general, which was exemplarily synthesized in their periodical publication *Das Proletarische Kind* (The Proletarian Child, 1925/26). One of the main ideas defended by Alice Rühle-Gerstel was that the feeling of inferiority, the core issue analyzed by the individual psychology, plays an important role in child's development

and actually also in the development of a society as a whole. During the years of the Weimar Republic (1918–1933), Alice Rühle-Gerstel devoted herself also to promoting the core ideas of individual psychology and feminism, as well as discussing social sciences in general, and carrying out book reviews on the radio (Marková 2007, p. 84). She also participated in various workshops and seminars where she offered lectures both in Germany and in other European cities. Her work *Der Weg zum Wir* (The road to us, 1927) was undoubtedly her most relevant effort set to unify Marxism with individual psychology and to analyze the importance of the conscious will and the capacity of each individual to assume his own destiny. In 1932 she published what is considered to be her most important work: *Das Frauenproblem der Gegenwart* (The women's problem today). In this book she analyzed the role women play in contemporary society, approaching the issue from the point of view of historical materialism and individual psychology, theoretical constructs that she used to deepen the analysis of the situation of women in Germany in the first half of the twentieth century.

Because of their open stand against the totalitarianism of national socialism, the Rühle couple soon became the target of attacks perpetrated by Hitler's followers and his Secret State Police (*Gestapo*). In April 1933 their house, especially their library and manuscripts, was burned down, so the Rühle had to leave Germany for good and, at first, seek refuge in Prague. During this time, Alice Rühle-Gerstel dedicated her knowledge to write for children, even becoming the director of the cultural supplement of the *Prager Tagblatt* newspaper. The daughter and son-in-law of Otto Rühle were at that time living in Mexico, so Otto Rühle decided to go into exile and join them there in 1935 but with a job in the Ministry of Education and as an advisor on socialist education. After the Rühle couple had to separate and Alice stayed behind in Prague, the editor-in-chief of the *Prager Tagblatt* gave Alice Rühle-Gerstel a letter that was confirming that she was to engage on a research trip to North America, the same trip she used to follow Otto Rühle into exile.

After arriving in Mexico in 1936, Alice Rühle-Gerstel first worked as a translator at what would later become known as the Mexican Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACYT). During her exile in Mexico, she continued publishing articles related to feminism in Mexico. She also finished her autobiographical novel *Der Umbruch oder Hanna und die Freiheit* (The upheaval or Hanna and freedom), which was published posthumously in 1985 by the *Fischer Verlag* in Germany.

She also served as a translator during the sessions of the Dewey Commission (1937) formed to defend Leon Trotsky (1879–1940). It is worth mentioning that neither she nor her husband Otto Rühle were Trotskyists, but rather humanist socialists. They were from the very beginning of the October Revolution open critics of the excesses carried out by the Bolsheviks and later by Joseph Stalin (1878–1953) in the former Soviet Union, as well as critics and enemies of the national socialism and the policies of Adolf Hitler (1889–1945). During their joint time in Mexico, Alice Rühle-Gerstel cultivated a friendship with Natalia Sedova (1882–1962) and Leon Trotsky and the parts of her diary dedicated to the encounters when the Trotsky couple gave birth to a book entitled *Kein Gedicht für Trotsky* (No poem for Trotsky, 1979), a psycho-cultural-political analysis of the former leader of the Red Army during his stay in Mexico. The academic production of Alice Rühle-Gerstel during her years in Mexico was dedicated to writing articles that were published in national and international magazines and newspapers, where she dealt with topics related to daily life, women, and the social analysis of some of Mexico's festivities and traditions.

On June 23, 1943, Otto Rühle died suddenly due to heart-related complications; a couple of hours later, Alice jumped from the balcony of her third floor apartment located in the "Carta Blanca" [White Carta] building, in the 288 *Emanuel Villalagín* Street, in Mexico City.

Daughter of Roberto Juan Sacchi and María Ursula Conti. She attended her elementary studies in the city of Mendoza (1942–1947). In 1952, she graduated as a school teacher at Escuela Normal Mixta “Tomás Godoy Cruz” (“Tomás Godoy Cruz” Co-educational Normal School) in Mendoza. In 1953, she entered the Universidad Nacional de Cuyo (National University of Cuyo) in Mendoza, Argentina. In 1954, she took Psychology courses with Dr. Bela Székely at the Universidad de Valparaíso (University of Valparaíso) in Chile. In March 1960, she graduated as Professor of Pedagogy and Philosophy at the Facultad de Ciencias of the Universidad Nacional

de Cuyo (Faculty of Sciences, National University of Cuyo). Prior to graduation, she began her research work as an assistant student (1958–1960) under the direction of Dr. Plácido Alberto Horas (1916–1990), one of the pioneers of Psychology in Argentina, who directed the Instituto de Investigaciones Pedagógicas de la Universidad Nacional de Cuyo (Pedagogical Research Institute of the National University of Cuyo), and in 1948, he transformed it into the Instituto de Investigaciones Psicopedagógicas (Psychopedagogical Research Institute). There she met colleagues such as Eva Borkowska de Mikusinski (1921–2020), Claribel Morales de Barbenza (1932–2017), and Carmen Dagfal (1926–2015), pioneers of research in Psychology and Education in Argentina, who would be later her friends and intellectual group of reference throughout her life. It is worth highlighting the recognition given to her work as a researcher-student, given that she was elected as a delegate of the Facultad de Ciencias of the Universidad Nacional de Cuyo (Science Faculty, National University of Cuyo) to the 3rd Conferencia Argentina de Asistencia Psiquiátrica (3rd Argentine Conference on Psychiatric Assistance) that was held in Mendoza in September 1959.

Immediately upon graduation in 1960, she traveled to Italy to study Psychology at the Scuola di Specializzazione en Psicologia (Specialization in Psychology School) at the Università Cattolica del Sacro Cuore (Catholic University of the Sacred Heart), in Milan, Italy. There she trained

with the disciples of Agostino Gemelli (1858–1959), one of the leading exponent of Italian Psychology of the first half of the twentieth century, an expert in Experimental Psychology, but with a neo-thomistic anthropological stance. She took courses in the years 1960, 1961, and 1962 with Leonardo Ancona (1922–2008), in General and Evolutionary Psychology, with Mario Bertini (b. 1932) in Psychophysiology, and with Marcello Cesa-Bianchi (1926–2018) in Personality Psychology, among others. During the year 1963, she carried out seminars in Clinical Psychology, and in 1964 she approved her doctoral studies in Psychology. Her dissertation was *Application of a technical group in chronic alcoholism treatment*.

During her stay in Italy, she worked as a psychologist in the Alcoholism Section of the Ospedale Psichiatrico Provinciale di Mombello (Mombello Provincial Psychiatric Hospital) and as director in charge of the Group Psychotherapy Service at the Center for the re-education of chronic alcoholics of the Ospedale Neuropsichiatrico Provinciale di Cernusco sul Naviglio (Provincial Neuropsychiatric Hospital of Cernusco sul Naviglio), Milan.

Upon her return to Argentina in 1965, she continued with activities of psychodiagnostic evaluation and clinical assistance, later working (1968–1969) as head of the Psychology Service at the Hospital Neuropsiquiátrico “El Sauce” (“El Sauce” Neuropsychiatric Hospital) in Mendoza.

In 1969, she joined the chair of Medical Psychology at the Hospital de Clínicas de la Universidad de Buenos Aires (Buenos Aires University Clinic Hospital) under the direction of Dr. Jorge Antonio Insúa (1923–2015), where she performed undergraduate and graduate teaching tasks, clinical assistance in outpatient clinics and research. In the research area directed by Dr. Ana María Insúa (b. 1931), between 1969 and 1971, she carried out research, in her role of Research Improvement Scholar under the direction of Dr. Jorge A. Insúa. Then, she received a grant from the Fundación Argentina de Salud Mental (Argentine Mental Health Foundation) to investigate patients who abandoned group treatment (1972–1973). From February 1, 1974, Dr. Sacchi

(as technical support research staff) and Dr. Ana María Insúa joined the Centro Interdisciplinario de Investigaciones en Psicología Matemática y Experimental (Interdisciplinary Research Center in Mathematical and Experimental Psychology), pioneer center of the Consejo Nacional de Investigaciones Científicas y Técnicas (National Council for Scientific and Technical Research, CONICET) of Argentina, for psychometric and experimental research, founded and directed by Dr. Horacio J. A. Rimoldi (1913–2006), where Dr Sacchi carried out her main research work until her death.

With Dr. Rimoldi, she trained in Mathematical Analysis and Factorial and Multivariate Analysis. She completed, in various courses, her training in Psychodiagnostic and Rorschach Evaluation. In March 1978, she obtained a research position within the Scientific and Technological Researcher Career at the National Council for Scientific and Technical Research (CONICET). A research position at CONICET, allows people with doctoral degree to exclusively work in research activities. Researchers carry out their research in institutes or centers belonging to CONICET itself or in institutions belonging to universities or other organizations.

Dr. Sacchi developed many of her research together with Dr. María Cristina Richaud (b. 1946), with whom she published many papers and participated in various projects directed by Dr. Richaud on: 1- Threat perception and ways of coping with stress (Richaud & Sacchi, 2004), 2- Interpersonal relationships in childhood and the formation of resources for coping with stress, 3- Types of parental influence, socialization, and coping with threats in childhood, 4- Holtzman’s Inkblot Test(HIT), 5- Resilience development in children at environmental risk due to extreme poverty, 6- Loneliness (Richaud & Sacchi, 2004), 7- Anxiety (Richaud & Sacchi, 1995), 8- Social Support (Sacchi & Richaud, 2002).

In addition, she collaborated in research with Fernando Pagés Larraya (1923–2007), director of the Programa de Investigaciones sobre Epidemiología Psiquiátrica (Psychiatric Epidemiology Research Program) of the National Council for Scientific and Technical Research, on

Psychiatric Anthropology and Cross-cultural Psychiatry, indigenous populations (personality assessment using the HIT to evaluate Tehuelches), and socially vulnerable (homeless children). Prior to these two investigations, in 1967, she had already collaborated in the psychological survey of the aboriginal area of Pilcomayo River.

She maintained a direct bond of exchange and work with foreign researchers such as Wayne H. Holtzman (1923–2019) (University of Texas at Austin, USA) and Jean Yves Bégin (1929–2016) (Québec University at Trois-Rivières, Canada).

In 2001, she was appointed deputy director of the Centro Interdisciplinario de Investigaciones en Psicología Matemática y Experimental (Interdisciplinary Research Center in Mathematical and Experimental Psychology), holding this position until she retired in July 2004, as an Independent Researcher of the Consejo Nacional de Investigaciones Científicas y Técnicas (National Council for Scientific and Technical Research) of Argentina. After her retirement, she continued working ad honorem until 2017, especially in the direction of scholars and researchers.

She was an undergraduate and graduate professor at different Argentine universities such as: Universidad Nacional de Cuyo (National University of Cuyo) (Research Assistant in the Chair of Psychiatry of the Faculty of Medical Sciences), Universidad Nacional de San Luis (National University of San Luis) (Associate Professor of the Role of the Clinical Psychologist in the Master's Degree in Clinical Psychology from Cognitive Behavioral Approach), Universidad Adventista del Plata (River Plate Adventist University) (Visiting Professor) and Universidad de Belgrano (Belgrano University) (Professor, from 1976 to 1992, on Psychodiagnosis in the Doctorate in Clinical Psychology). She was part of the Committee for the Doctorates of Psychology and Psychopedagogy of the Universidad Católica Argentina (Catholic University of Argentina) and of Psychology of the Universidad del Salvador (Salvador University).

She was a founding member of the Asociación Argentina de Ciencias del Comportamiento (Behavioral Sciences Argentine Association),

where she played a fundamental role in its constitution and in the legal and administrative support, in addition to her active participation as an organizer and lecturer at the National Meetings of the Behavioral Sciences Argentine Association since 1988. She had an active participation in the Asociación Argentina de Estudio e Investigación en Psicodiagnóstico (Argentine Association for Study and Research in Psychodiagnosis) and the Asociación Argentina de Psicodiagnóstico de Rorschach (Rorschach Psychodiagnostic Argentine Association).

She was a member of the Sociedad Interamericana de Psicología (Interamerican Society of Psychology), the International Association of Applied Psychology, the International Council of Psychologists, and the New York Academy of Sciences.

She was also member of the Editorial Committee of *Interdisciplinaria. Revista de Psicología y Ciencias Afines* (Interdisciplinary Journal of Psychology and Related Sciences).

Taking into account that the first university degree for Psychology at Argentina began in 1956 at the Universidad Nacional del Litoral (Litoral National University), Dr. Sacchi must be considered one of the pioneers of Argentine Psychology. In addition, she has been one of the first scientific researchers in this discipline in our country.

Her publications and her teaching activities were very relevant for the training of specialists in psychometric evaluation and psychodiagnosis. Her research in indigenous people and vulnerable populations, as well as cross-cultural studies, were precursors of these issues so much studied currently. She promoted the formation and development of scientific associations of psychologists in our country.

Saforcada, Enrique Teófilo

Born in Buenos Aires, Argentina, on May 25, 1934

Marcelo Alejandro Muñoz and Sebastián Vázquez Ferrero
Universidad Nacional de San Luis, San Luis, Argentina

Keywords

Argentina · Health psychology · Social psychology · Community psychology

Enrique Teófilo Saforcada was an Argentine psychologist. He started a line of research and intervention oriented to health psychology.

He finished his high school studies at the Deán Funes National School, in the Province of Córdoba, in 1951. Before starting university studies in psychology, he studied 3 years of medicine. In 1963, he got his psychology degree from the Universidad Nacional de Córdoba, UNC (National University of Cordoba). His undergraduate thesis topic was: "Study of the relationships between sound pressure level and discomfort," as it stated the second issue of the *Boletín de la Escuela de Psicología* (Bulletin of the School of Psychology), of the Facultad de Filosofía y Humanidades (Faculty of Philosophy and Humanities) at National University of Cordoba, published in 1970 (p. 65). The study was carried out at the Centro de Investigaciones Acústicas y Luminotécnicas de la UNC (Acoustics and Luminotechnical Research Center at UNC). Saforcada was part of the first cohorts of graduates of that psychology program. Between 1963 and

1964, he studied the Specialization in Sociology at the Instituto de Sociología Profesor Raúl A. Orgaz de la Facultad de Derecho y Ciencias Sociales de la Universidad Nacional de Córdoba (Institute of Sociology, at the School of Law and Social Sciences of the National University of Córdoba). In 1998, already living in Buenos Aires, he obtained his PhD, with a specialization in social psychology, at the Facultad de Humanidades de la Universidad de Belgrano (School of Humanities of the University of Belgrano).

Saforcada's contributions have been outstanding both in research and in applied psychology in various fields such as social psychology, community psychology, public health, poverty, public health policies, positive health management, and welfare and quality of life in popular sectors.

A large part of his intellectual production is oriented toward the construction of theoretical tools, as well as the systematization of field experiences in the public sector. His efforts have been aimed to provide political models for promoting national development, from the perspective of public university and psychology (Saforcada, 2008).

His critical look at the models of psychology and health that have been hegemonic in Argentina has contributed to making alternative models of psychology more visible; this includes public and community health, as well as the field of public policies and positive health management (Saforcada, 2012a; Saforcada, 2006; Saforcada et al., 2010).

In 1969, Saforcada participated in the creation and was the first director of the Centro de Investigación en Psicología Social (CIPS), en la Facultad de Filosofía y Humanidades de la Universidad Nacional de Córdoba (Center for Research in Social Psychology, at the Faculty of Philosophy and Humanities of the National University of Córdoba). In such institution, one of the lines of work was social psychology applied to public health (Saforcada, 2012b).

In this institution, both academic and applied experiences were carried out for the local community. In 1974, he was visited by psychiatrist Juan Marconi Tassara (1924–2005) one of the most

important community psychiatrists in Chile and, broader, in Latin America as a whole (Saforcada, 2012b; Marconi & Saforcada, 1974; Marconi, 1974; Muñoz, 2011).

That same year, Saforcada taught as professor in charge for the first time a course devoted to psychology applied to health, "Social psychology applied to mental health in the context of public health." Later, the course was renamed "Health Psychology" (Saforcada, 2006, 2012b).

In 1976, during the Argentine military dictatorship, the Social Psychology Research Center was raided and later closed. Many of its members dispersed, and Saforcada was expelled from the National University of Córdoba.

After the return of democracy and at the University of Buenos Aires, Saforcada obtained by public selection process a position as Full Professor for the course on Salud Pública y Salud Mental (Public Health and Mental Health) and took up some of his lines of research and applied intervention from the previous decade.

Saforcada obtained a Tenure Position as Full Professor (1986–2003), and since 2000 he was appointed in an honorary position, Consultant Professor, both of them at the University of Buenos Aires. He credits more than 290 dissertations at scientific meetings and publications, has directed and codirected more than 33 graduate dissertations, and has directed more than 21 undergraduate theses.

From those academic positions, between 1989 and 1990, he started the "Programa de Epidemiología Social y Psicología Comunitaria" ("Social Epidemiology and Community Psychology Project"), usually simply known as Programa Avellaneda (Avellaneda Project). The project was supported by the Faculty of Psychology at Buenos Aires University in agreement with the City Hall of Avellaneda, a city located just 15 min from downtown Buenos Aires. In 2001 and 2002, he carried out a similar project in agreement with the City Hall of San Isidro, a city 30 min away from Buenos Aires (Ferullo et al., 2011).

He also was the Vice-Dean of the Faculty of Psychology at the Buenos Aires University during the periods 1986–1987, 1987–1990, and 1990–1994.

Together with Isaac Prilleltensky (1959-) (Dean at School of Education, University of Miami), he has created and coordinated the Inter-American Network for Research and Promotion of Community Well-Being. This Network is made up of institutions of different orders; it includes municipalities, professional associations, civil associations and nongovernmental organizations (NGOs), and national and international universities.

In 2006, he initiated the First Multidisciplinary Congress on Community Health of the Mercosur. He has been one of the mentors and organizers of these Congresses, which have great regional impact, year after year.

Some of his outstanding theoretical contributions include the concept of *Public Disease* (Saforcada & Moreira Alves, 2014), the concept of *Community Health* (Saforcada, 2010), or the characterization of health models: the “*Restrictive individual model*” and the “*Expansive social model*,” (Saforcada, 2006) representing different paradigms in relation to health and its approach and the ways to look at and analyze the complexities of the problem.

Enrique Saforcada has had an active participation in numerous institutions and debates about the role of psychology in health systems. He has also discussed the same role of health systems within Latin American societies, always with a perspective focused on the most vulnerable. In addition, his training of numerous professionals is also a testimony to his commitment to the development and circulation of knowledge both in psychology and health.

Sal y Rosas, Federico

Born *Huaraz (Peru) July 18, 1900*

Died *Lima (Peru), October 21, 1974*

Ramón León

Ricardo Palma University, Lima, Peru

Keywords

Peru · Psychiatry · Cross-cultural psychology

Federico Sal y Rosas was a psychiatrist born in a humble home in northern Peru. From his childhood, he was bilingual (Spanish and Quechua). He studied medicine at the *Universidad Nacional Mayor de San Marcos* (UNMSM, Lima, Peru; MD 1934), joining after the completion of his studies to the chair of psychiatry at his *alma mater*, directed by Honorio Delgado, and as a doctor on the staff of the Víctor Larco Herrera Hospital, the most important psychiatric center in Peru at that time. In 1944, he founded the psychiatry department at the Police Hospital (Lima).

Throughout their long clinical practice, Sal y Rosas became interested in the study and treatment of epilepsy and carried out studies using the insulin coma technique and chlorpromazine. However, his greatest contributions are in the field of cross-cultural psychology and psychiatry, in which he described the *susto* or *jani* syndrome, a phenomenon typical of the Andean world, which occurs after a severe negative impression, a fall, or some type of emotional shock, and whose symptoms are paleness, weight loss, loss of energy, neglect, fear, and frequent stupor, as well as startles during sleep and extreme susceptibility to stimuli perceived as threatening. He also investigated folkloric practices and quackery in the diagnosis and prognosis of diseases. The frequency of earthquakes in Peru also led him to be one of the first to study their psychological consequences.

Sal y Rosas was an outstanding connoisseur of the psychological world of the inhabitant of the Andes thanks to his command of Quechua,

describing frequent syndromes and phenomena in that part of Peru.

Salas Bravo, Sonia

Born *in Santiago, Chile, May 21, 1939*

Gonzalo Salas
Universidad Católica del Maule, Talca, Chile

Keywords

Chile · Ambiental psychology · Child development · ADHD

In 1964, Sonia Salas received her degree in psychology at the *Universidad Católica de Chile*

(Catholic University of Chile) which is the second-oldest school of psychology created in the country; this program was founded by Bela Skezely (1882–1955) and continued in its beginnings by the Jesuits Eduardo Rosales (1904–1970) and Hernán Larraín (1921–1974) (Camus & Muñoz, 2017; Salas & Lizama, 2009). Dr. Salas was one of the first women qualified as a psychologist in Chile and is included in the book *Pioneers without monuments. Mujeres en Psicología* (Pioneers without monuments. Women in Psychology) in a list of 63 pioneering women in the United States, Argentina, and Chile (Winkler, 2007).

She obtained her master's degree in Education from the *Universidad Católica de Chile* (Catholic University of Chile) in 1978 and her doctorate in Psychology (PhD) from the *University of Tennessee* in the United States (1988). Additionally, she has studied production and direction of educational television at the BBC in London (1976) (Universidad de la Serena, 2021). Sonia Salas has a diploma in family mediation from the *Instituto Chileno de Terapia Familiar* (Chilean Institute of Family Therapy) (2004), family crisis intervention from the *Universidad Católica de Chile* (Catholic University of Chile) (2005), and social constructionism and psychotherapy from the *Instituto Dialogos* (Institute Dialogues).

She is currently Professor at the School of Psychology at the *Universidad de La Serena* (University of La Serena) and was appointed as Adjunct Professor at *Saint Mary's University* and the *University of Regina* in Canada. She is a professor in the Master's Program in Water Resources at the School of Agronomy of the *Universidad de La Serena* (University of La Serena) and an associate researcher at the *Centro de Estudios Avanzados de Zonas Áridas* (Center for Advanced Studies of Arid Zones). Since 1993, she is dedicated to teaching in the Psychology program at her university, which has a master's graduate program since 2002. She has served as a member of the advisory committee of this program developing the regulations of this initiative and acting as director between the years 2013 and 2017.

Dr. Salas made an early contribution to research in child development which has made possible a series of works dedicated exclusively to the study of childhood, among which are the following: *Corre Conejín. Text of stimulation of basic functions for children between five and seven years old* (Run Conejín. Text of stimulation of basic functions for children between five and seven years old) (Berdicewski et al., 1972), *El globo amarillo. Segundo nivel de transición. 5–6 años* (The yellow balloon. Second transition level. 5–6 years old) (Salas, 1990), and *Las aventuras del inspector camarón. Texto para enseñar a los niños. 2nd grade. Los principios del desarrollo sostenible y el cuidado del agua* (The adventures of Inspector Camaron. Text for teaching school children the main principles for sustainable development and caring of water resources) (Salas, 2004).

The last book was later transformed into a series of videos with activity guides called *El Inspector Camarón y su amiga Abeja* (Inspector Camaron and his bee friend), which in five chapters narrates the adventures of a shrimp who travels through the Elqui Valley looking for the *Contamin Monster* that has sickened the animals living in the area (Salas, 2021). This audiovisual material was approved by the *Ministerio de Educación de Chile* (Ministry of Education of Chile) as educational material for the transition level and first year of elementary school. These works, along with her knowledge of child development issues made it possible for her to carry out research on attention deficit disorder with hyperactivity (Salas et al., 2017b). Acting for more than two decades as a psychologist, teacher, and thesis guide in the area of Attention-Deficit/Hyperactivity Disorder (ADHD) allowed her to gain the experience leading to the recent publication of the book *Creciendo con Trastorno de déficit atencional con Hiperactividad/Impulsividad* (Growing up with Attention Deficit Hyperactivity/Impulsivity Disorder) (Salas et al., 2021). The text, along with providing updated information on the subject, presents a set of activities intended to help parents and teachers cope with the disorder.

She also has been a pioneer in environmental psychology studies in Chile. In the last two decades, she has been director, codirector, and researcher of a dozen projects in this field. These projects have been funded by national and international organizations; the topics she has studied include sustainable development, climate change, desertification, water conservation in rural communities, and psychosocial interventions in disasters, such as earthquakes and tsunamis, among others. She was the researcher of the terminal evaluation of the Project for Ecosystem Services. ProEcoServ (2010–2016). The goal of the project was to better integrate ecosystem assessment, scenario development, and economic valuation of ecosystem services into national sustainable development planning in four countries: Chile, South Africa, Trinidad-Tobago, and Vietnam (Nunes, 2010–2016). The work has been carried out largely in rural and coastal areas that host communities associated with agriculture and fishing. She also participated in projects funded by the *International Development Research Center* (IDRC), *Social Sciences and Humanities Research Council-Canada* (SSHRC), and the *Fondo de Fomento al Desarrollo Científico y Tecnológico-Chile* (Fund for the Promotion of Scientific and Technological Development, Chile), among others.

Another area in which she has developed important research is the field of cross-cultural research on sexuality, where she has studied important topics such as patterns and universals of adult romantic attachment and universal sex differences in the desire for sexual variety, research that has produced interesting data for Chile in this area in comparison with more than 50 countries, research led by David P. Schmitt, a leading researcher at *Brunel University London*. These studies were published between 2003 and 2017. In this research, she was part of the application of the Big Five Inventory (BFI) self-report measure designed to assess the high-order personality traits of extraversion, agreeableness, conscientiousness, Neuroticism, and openness, which was translated into 28 languages. Administered to 17,837 people, the study found that people

from South America and East Asia were significantly different in openness from those inhabiting other regions of the world (Schmitt et al., 2007).

Finally, she has performed (1995–2003) relevant roles (director, treasurer, and vice-president) in the management and administration of the *Colegio de Psicólogos de Chile* (Chilean Association of Psychologists), an organization that brings together psychologists once they have graduated. She was in charge of international relations for the XXVIII Interamerican Congress of Psychology, developed in Chile by the *Interamerican Society of Psychology* in 2001. In addition, she acted as a member of the academic council (2012–2014) and the board of directors of the *Universidad de La Serena* (University of La Serena) (2017–2019). Among the awards she has received are Woman of Excellence, *University of Tennessee* (1985), *Colegio de Psicólogos de Chile* (Chilean Association of Psychologists) Career Achievement Award (1987), and Career Achievement Award, *Universidad de la Serena* (University of La Serena) (2020).

Colombia · Social psychology · Political psychology · Health psychology

Miguel Salas Sánchez studied at the Pontificia Universidad Javeriana (Pontifical Javeriana University) in Bogotá where he received the undergraduate degree of psychologist in 1970. In 1975, he finished his master studies in social psychology at the Universidad Nacional Autónoma de México (National Autonomous University of México).

He was a social psychologist with a serious conviction that psychology has to be socially engaged and based on rigorously produced knowledge. His research and application interests varied. During his career, he showed interest in many issues, including the use of the semantic differential for the assessment of attitudes; the importance of the contributions of the psycholinguistic paradigm to the explanation of communication phenomena; the importance of socially relevant problems like abortion, gender roles, health, community participation in low-income housing problems, and violence in Colombia; and the psychology of politics (different from political psychology, as he liked to emphasize). His last publications point out his engagement with Latin-American critical psychology and his conviction that ideology needed to be studied and its impact on behavior and knowledge production revealed. For him, social psychology must be critical; it should study everyday knowledge and the ideology that occurs in it. It should seek the liberation of the oppressed (Salas Sánchez, *n.d.*).

Some of his publications listed at the end demonstrate Miguel's interests, their evolution, and profile.

Death surprised him when he was working in one of his most ambitious projects, developed in the context of the new-approved Colombian political Constitution in 1991. He began a project aiming at the evaluation of the impact of school for the development of democracy and coexistence. In 1995, few months before his death, he organized an international conference called *From political history to democratic intersubjectivity*. His own presentation was titled "Towards the construction of the new citizenship: From constitutional norm to psychosocial practice."

Miguel was a professor at the Psychology Department of the Universidad de los Andes (University of Los Andes) at Bogotá. He was one of the founders and a chairperson of the department. For over 20 year, he taught different courses like history of psychology, social psychology, attitudes change, applied social psychology, social health psychology, environmental psychology, demographic transition and gender roles, Latin-American critical psychology, and political psychology (Departamento de Psicología Universidad de los Andes, 1996).

He is considered one of the pioneers of the development of social and political psychology in Colombia and Latin America. His impact was due to his dissatisfaction with the social psychology existing in the region in the 1970s and 1980s. For him, social psychology was showing an inability to respond to the urgent social problems present in the continent. He wanted a social psychology that was socially sensitive; responsive to the problems of our societies; and, in search of that objective, based on the need to achieve a practice and interpretations that consider the context and collectivities and not only the isolated individuals. Many of his students are today important researchers and activist in political psychology (Molina Valencia & Rivera Escobar, 2012; Sánchez Pilonieta, 1996).

He grew up in the state of Nueva Esparta in Margarita Island, Venezuela. Since his adolescence, he lived in the United States, where he attended high school and studied psychology at the University of Michigan (1949).

He returned to Venezuela during the dictatorship of Marcos Perez Jimenez (1952–1958), being arrested for political reasons and deported to England, where he pursued doctoral studies from 1954 to 1957 at the University of London, and obtained a PhD in psychology.

In 1958, he returned to Venezuela and became a professor at the School of Sociology and the School of Social Work at the Universidad Central de Venezuela (UCV) (Central University of Venezuela). Later, he was part of the group of professors who initiated activities in the first School of Psychology in the country, at the UCV, and was responsible for creating the Chairs of

Experimental Psychology and Social Psychology. He also contributed to the organization of the first research groups.

In 1966, he returned to the University of London where, a year later, he completed his postdoctoral studies. In 1969, he was appointed Director of the Escuela de Psicología (School of Psychology) of the UCV, a historical period full of conflicts, with a national political crisis and a process of academic renewal, which marked a milestone with the raid of the UCV in 1971, the year that marked the end of his tenure as director of the school. Among his most important achievements as director was the approval – at the beginning of 1970 – of the new study plan that established a basic cycle and a cycle applied by mentions.

Professor Salazar contributed to the organization of the so-called “11th floor group,” which was intended to be an informal high prestige group. The name of the group referred to the number of the floor of the Central Library of the UCV, where the academics dedicated to Experimental Psychology and Social Psychology worked. Members of this groups were Euclides Sanchez (1940–), Eduardo Santoro (1939), Carlos Muñoz(–2014), Maritza Montero (1939–), and Julio F. Villegas (1944–2016).

In 1976, as Head of the Departamento de Psicología Social (Department of Social Psychology), together with the team of professors of the “11th-floor group” and under his editorial direction, he published the first treatise on social psychology in Venezuela, which was the first book on the subject published by Latin American psychologists, in Spanish; that same year, he created the Master’s Program in Social Psychology, which he directed until 1988 (Salazar et al., 1979).

He served as Director of the Instituto de Psicología (Institute of Psychology), a UCV’s Psychology Research Center from 1978 to 1985. He was a member of the Academic Committee of the Doctoral Program in Psychology at UCV after his retirement and until he died in 2001. He participated as a guest professor in the “Simón

Bolívar” Chair of the University of Cambridge, Great Britain, in 2001.

In addition to his academic activity, he developed an important guild activity; in 1957, he was part of the group of psychologists who founded the “Venezuelan Association of Psychologists” being its president between 1959 and 1961. Subsequently, this association was transformed into the Colegio de Psicólogos de Venezuela (Board of Psychologists of Venezuela), being elected as a principal member of the Disciplinary Tribunal (1961–1963) and consecutively its president (1963–1964). He was a founding member of the Asociación Latinoamericana de Psicología Social (Latin American Association of Social Psychology, ALAPSO) (1975–1985) and of the Asociación Venezolana de Psicología Social (Venezuelan Association of Social Psychology, AVEPSO), of which he was its first President in 1975. From 1976, he held various positions in the Interamerican Society of Psychology (SIP), where he assumed the presidency in 1987 until 1989, vice-president for South America of the SIP for two consecutive periods (1981–1983 and 1983–1985), and finally, editor of the *Interamerican Journal of Psychology* of the SIP, for four consecutive periods, from 1989 to 1997 (Recagno-Puente, 2002).

For more than 20 years, his essential concern was to study the development of identity processes at the national, regional, and supranational levels. He participated in numerous presentations at scientific events, both national and international, and published eight books and more than 50 articles or book chapters. His line of research revolved around nationalism, national stereotypes, attitudinal determinants of behavior, and identity processes at national, regional, and supranational levels (Latin Americanism) with more than 75 investigations.

He was distinguished with the José María Vargas Order of the Central University of Venezuela in its different classes – Francisco de Miranda Order (1979), Francisco De Venanzi Award for the trajectory of the University Researcher (1990) – and also with Ignacio Martín-Baró

Award of the Latin American Association of Social Psychology (1991), Inter-American Award of Psychology (1993), and was the first psychologist to receive the National Science Award (1995), which was the most important recognition – at the time – granted by the National Council of Science and Technology of Venezuela (Villegas, 2001).

José Miguel Salazar is recognized as one of Latin America's foremost social psychologists.

Brazil · Educational psychology · Psychology of learning

Antônio de Sampaio Dória graduated in legal and social sciences at the Faculty of Law of São Paulo in 1908. After completing his undergraduate course, he briefly worked as a lawyer and then moved to the city of Rio Janeiro, where he dedicated his work to the role of editor-in-chief of the newspaper *O impartial*. He returned to São Paulo, assuming the position of professor of pedagogy and psychology at the São Paulo Normal School in 1914, being succeeded by Lourenço Filho (1897–1970) in 1925. In the following years he joined the political organization Liga Nacionalista (Nationalist League) where he remained until 1924. The trajectory of this important educator, politician, and intellectual in the Brazilian scenario is recognized mainly for his engagement in conducting Instrução Pública de São Paulo (Public Instruction in São Paulo) in the 1920s. His work was configured as a landmark in the field of education, by privileging policies of universalization of the public education facing the educational problems posed in those historical circumstances, considering the contributions of psychology to the implementation of educational projects.

In 1920, he was appointed general director of public instruction in the state of São Paulo, by Washington Luís Pereira de Souza (1869–1957), president at that time. In the exercise of his four-year term, he played a fundamental role in formulating the pedagogical thinking, as he was tasked

with eradicating the expressive rate of illiteracy that plagued the state. In support of these propositions, one of the main measures taken was the creation and implementation of the 1920 Reforma do Ensino Paulista (Paulista Education Reform), currently known as the Sampaio Dória Reform (Medeiros, 2005). This Reform presented, among its main purposes, the restructuring of public education, mainly mandatory primary education, by reducing its duration from four to two years (Mathieson, 2012; Boto, 2018).

To carry out this project, he defended the subsidies of psychological bases, especially from the psychology of learning to educational actions. He proposed the incorporation of the intuitive – analytical method of teaching in educational programs as the foundation of his theory of learning, not merely appearing in a teaching method. The 1920 Reform was widely contested by sectors of society, among other aspects, for being anchored in concepts that radically modified the educational precepts of the time, based on encyclopedic teaching, as well as for prioritizing valuation actions to increase the number of students served, detached, at times, from the commitment to the quality of education provided to them.

Specifically in the scope of psychology and education, he produced two works entitled *Principles of Pedagogy – Essays*, published in 1914, and *Psychology*, published in 1926, in addition to producing articles in different scientific journals, among other publications of a pedagogical nature.

In his first book, the author exposes the need for Education to sustain itself in scientific knowledge involving the “child’s soul” and in the processes of human development, with a view to preparing the child for “full life,” through three foundations: intellectual, moral, and physical, in compliance with the propositions of Spencer Vampré (1988–1964) about the “abbreviated recapitulation.” It is clear that the focus of this work was centered on the contributions of human development psychology to understand the learning process and child development, these aspects being fundamental for the exercise of educational action. In this sense, the pedagogical propositions

defended in this work were supported by principles of the law of abbreviated recapitulation, which is conceived as a demonstrative theory of the “social” factor of child development, among other elements of an individual nature, which are related to the presuppositions of psychology differential. Sampaio Dória is also concerned in this work, highlighting the movement of defense of educational practices that take into account the particularity of children’s psychological phenomena, which should not be apprehended based on the psychological aspects of adults, given the respect for the specificity of the process of child development. Many were those who inspired the course of this work, among them Jean Jacques Rousseau (1712–1778), William James (1842–1910), Édouard Claparède (1873–1940), Gabriel Compayré (1843–1913), Alfred Binet (1857–1911), and Johann Heinrich Pestalozzi (1746–1827); in addition to mentioning Ruy Barbosa de Oliveira (1849–1923), these allusions were most often correlated with the defense of New School parameters.

In *Psychology*, Sampaio Dória discusses contents related to psychology and pedagogy that underpinned the classes taught in the Escola Normal de São Paulo (Normal Schools of São Paulo) for over ten years, having the influence of Wilhelm Maximilian Wundt (1832–1920) (Antunes, 1991a), not only by considering consciousness as an object of study in psychology, but also by proposing the method of introspection, linked to observation and experimentation; however, it is William James (1842–1910) who inscribed the analytical method that inspired, to a large extent, the formulations of this work (Antunes, 1991a, 1991b).

The emphasis on the articulation between psychology and education as an essential condition for the development of the student’s learning abilities is also evident in the works: “How to learn the language” (1922) and “How to teach” (1923). In the words of Lourenço Filho (nd, p.8) quoted by Mathieson (2012, p. 86), Dória “[. . .] had occasion, however, to more clearly the conviction that pedagogy, due to its formal aspect, is a ‘psychology’,” which was in his manual “Como is taught.”

Therefore, the school institution, for Sampaio Dória, in its strengths and limitations, was characterized as a fundamental means for the realization of the republican project of society that was being designed, as education associated with psychological bases became the foundation of the method of analytical intuition, with a view to promoting the processes of universal education and literacy programs for the population. That said, it is noteworthy that the propositions of psychology that built the educational project proposed by Sampaio Dória revealed themselves as theoretical and practical subsidies for the constitution of educational psychology in the Brazilian scenario.

Colombia · Personality · Violence · Epistemology

Jaime Samudio studied psychology at the Universidad Nacional de Colombia (National

University of Colombia) and completed two master's degrees. One of them in the field of theoretical and methodological problems of personality psychology at the Universidad de la Habana, Cuba (University of Havana, Cuba), where Fernando Gonzalez Rey tutored him, and the other in social and educational development from CINDE – Universidad Pedagógica, Colombia (CINCE-Pedagogical University). He was professor of the Psychology Program at the Universidad INCCA de Colombia (INCCA University of Colombia), founding Dean of the Faculty of Psychology at the Universidad Los Libertadores (Los Libertadores University) from 1996 to 2011, professor at the Universidad Católica of Colombia (Catholic University of Colombia) in 2018 and at the Universidad Distrital Francisco José de Caldas (District University Francisco José de Caldas) in 2012. Samudio was the founder and president of the Taller del Hombre Foundation, president of the Colombian Society of Psychology and the Colombian Academy of Psychology, and member of the Board of Directors of the Colombian College of Psychologists. In this latter entity, he was a promoter and active member of the History and Epistemology of Psychology division. He was also co-author (with Germán Gutiérrez) of the project to create the National Committee of Public Policy at the same institution, promoting psychologists and professional organizations' participation in the debate and design of public policies.

In 2016, he received the Colombian Award of Psychology in recognition of the “Guild management and its beneficial social impact.” In 2020, he received the Recognition and Exaltation of the Universidad Popular del César for his outstanding contributions to Colombian psychology. In 2020, he was awarded the National Award of Psychology “For a life of dedication to psychology” by the Colombian College of Psychologists.

Early in his professional life, he worked as a teacher, which he developed in the first stage at the INCCA University of Colombia. There, he found favorable conditions and colleagues interested in researching and consolidating a professional training program with its bases in the conceptual basics of the historical-cultural approach in psychology.

The presence of Alberto Merani (1918–1984) at the INCCA University please, put the years here, after University (1980–1984) allowed him to advance in a project about the conceptual premises of personality development. In Merani's biographical sketch, he synthesized the sense and meaning that personality has in psychology: “For Merani, personality is the biopsychosocial unit of concrete human, and its study is the key problem of psychology. The overcoming of this problem is, in his concept, indispensable to overcome the fragmentation of psychological knowledge” (Samudio, 1984, p. 483). These experiences are the basis of his concern about the lack of a unified theory of psychology. As a synthetic idea, personality and its developmental cycles were fundamental to overcoming psychological schools' dogmatism and pragmatic eclecticism.

In 1991, Samudio founded the Taller del Hombre Foundation, a nonprofit organization to study the “problem of the personality development of Colombians and the consequent elaboration of procedures to intervene in its conscious self-construction.” Six teachers and four psychology students initially constituted the Foundation. As a psychologist and citizen, his conscience led him to value the 1991 Constitution as a change in Colombian society's historical and cultural horizon.

He took the initiative to establish, with seven members of the Foundation (1993), the Study Group on Violence, Immorality, and Delinquency (known in Spanish as GEVID), which focused its efforts on the study of the development of the delinquent personality in Colombia and ways for its rehabilitation. From a preventive public policy perspective, it held the hypothesis that it was possible to prevent the formation of the delinquent personality.

Having assumed this professional commitment, he and his group implemented a practical theoretical approach called Integral System for Self-Determination and Self-Construction of Personality (known in Spanish as SIFA-d/c). He characterized the conceptual core of this approach as follows: “... we can assume that in both phylogenetically and ontogenetically processes there is a centralization that creates the conditions for regulating, through conscious constructs, all behavior

previously subject to three factors outside the control of the person: organism (biopsychological factors), society (sociopsychological factors) and activity (psychic factors)” (Samudio, personal communication, June 1994).

In 1993, his group joined an institution, directed by the Capuchin Tertiary Order, in charge of reeducating young offenders. In this institutional setting, the SIFA-d/c was put into practice. The project was supported by a study with six incarcerated women in the “El Buen Pastor” national women’s prison (Palomino et al., 1991). The general aim of this labor consisted of achieving a progressive redefinition of reality by adolescents and young offenders.

This research experience led him and his team of students to delimit research on parenting guidelines. His master’s thesis made him advance in his first synthesis. Always considering the contribution of his students, he raised the idea of “upbringing patterns for high criminogenic risk”:

It is impossible to affirm that they lead, inexorably, to crime. However, these patterns have been repeatedly found in adolescent and adult delinquents, but not in children. Nevertheless, there are studies in Colombia such as Gutiérrez de Pineda (1978) regarding “gamines” (homeless children) and the presence of these patterns in children upbringing, essentially like those found in the development of the offender and in essential works of members of the GEVID of our foundation, who search for the traces of these upbringing patterns in children and puberty. The initial discovery in adults entails another finding: its prolonged consequences on the lives of the subjects exposed to them. (Samudio, 2001, p. 68)

These conclusions support later efforts to design intervention to prevent the development of the “criminogenic risk.” Samudio argued that these interventions would allow: “. . . to achieve, with the expansion of the individual’s behavioral possibilities and the strengthening of the capacity for self-determination” (Samudio, personal communication, June 1994). It was about guaranteeing the generic conditions so that the person could act in freedom. Psychologist Sergio Trujillo (2003, p. 221) refers to this formulation in the following terms:

Hence, humankind is the only being who exercises freedom, assuming the responsibility of constructing and giving meaning to his existence.

Man is, then, a unit of nature and culture built in the individual history of each human being.

Jaime Samudio was consistent with the need to bring these conclusions to public discussion. He assumed, then, the task of proposing a synthetic approach to the persistence of violent conflict resolution in Colombian society and to the possibility of developing public policies for seeking a specific historical solution based on the idea of freedom. In his book *Violencia y desarrollo humano en Colombia* (Violence and Human Development in Colombia), he persevered in clarifying the debate about violence as an endemic fact of society and promoting a positive approach to the solution in terms of public policies (Samudio, 2020a, p. 113).

His concern for what he called “the crisis of psychology” not overcome by the tendency to eclecticism and school dogmatism had in his last work, *La Salida del Laberinto* (The Exit of the Labyrinth), his final formulation. In this work, he thinks that humanity has reached a moment where it can fully assume responsibility for its freedom. He sets the idea as follows: “Human experience, not reducible to a hedonistic experience, sustains human evolution, modifies the ideas that humans have about themselves as well as those they have about reality. Additionally, the human experience enriches the psychic instruments of this species. Consequently, it is possible to reorient history, in any ethical, aesthetic, and political field. It may also reorient all human domains in unpredictable ways. Humanity permanently creates freedoms that rule and reorient its construction” (Samudio, 2020b, p. 134).

Psychology training · Psychology guild

José Antonio Sánchez graduated from high school at the Liceo de Cervantes [The Cervantes

Lyceum] in Bogotá (Colombia) in 1954. He was accepted to Universidad Nacional de Colombia [National University of Colombia] in 1957 and graduated as a psychologist in 1962. He was a remarkable student, receiving several scholarships during his time as student of the program (*Revista de Psicología* 1958, 1959, 1960) and serving as student representative in 1960 (*Revista de Psicología* 1960). He used his standing as a representative to demand an addition of courses based on scientific psychology, which he thought were not nearly enough in the curriculum at the time. He also collaborated with the *Revista de Psicología* (Journal of Psychology) as deputy chief editor, under the direction of Mateo V. Mankeliunas (e.g., Sánchez 1961). Sánchez graduated with an undergraduate thesis titled *Character and values. Investigative essay on character structure as axiogenic dynamism* (Sánchez 1962).

While still a student of psychology, he was teacher of philosophy and literature at the Nuevo Liceo (New Lyceum) in Bogotá (1955–1961), and philosophy, psychology, and Latin at the School José Joaquín Castro (1961–1962). Simultaneously, he wrote a column for the daily *El Espectador* titled “Correct your language.” The proper use of Spanish was a constant interest during his whole life.

Sánchez attended the Institute de Psychologie at the Université de Paris between 1962 and 1964 where he did studies on psychology and epistemology and received a certificate. He approved his preliminary oral exams and was a doctoral candidate but did not receive a diploma. He also attended several seminaries in other European institutions (Universidad Nacional, Archivo General, copies provided by Martha Restrepo Forero, August 21, 2020).

Although he was not a researcher himself, he was always aware of current research and used his encyclopedic knowledge to shape the minds of young aspiring psychologists in a scientific way. His publication record centered on theoretical issues. His essay “Psychology as a science” (Sánchez 1965) is a “tour de force” presenting in brief the science of psychology in order to propose the planning office of the National University of

Colombia, the integration of the Faculty of Psychology to the Faculty of Science. Starting in 1964, the Rector of National University had proposed a major reorganization of Faculties in order to reduce their number, under the assumption that this change would improve and simplify administrative and academic management. The Dean of the then Faculty of Sociology, Orlando Fals Borda (1925–2008), had secretly proposed to the Planning Office the closing of the Faculty of Psychology and its integration as a Department of a new Faculty of Sociology and Social Sciences. Sánchez' essay was a negative response to this proposal and to the undermining of the discipline through an integration with the human or social sciences. In the second part of the essay, he proposes instead that psychology is part of the biological sciences and should join the Faculty of Sciences. The rejection of Fals Borda's proposal by the Planning Office of the National University led to his resignation, which allowed the Dean of Psychology, Alvaro Villar-Gaviria, to negotiate new terms for the change (Carrillo-Guerrero 2006). In the end, psychology was integrated within a new Faculty of Human Sciences as a founding Department (Universidad Nacional de Colombia 1966, Agreement 49).

After returning to Colombia, José Antonio Sánchez worked at the Instituto Colombiano de Pedagogía (ICOLPE) (Colombian Institute of Pedagogy) between 1965 and 1971. He was also a professor of psychology at National University (1965–2000), Universidad del Rosario (Del Rosario University), and Universidad Pedagógica Nacional (National Pedagogical University). He taught classes on medical psychology, a course initiated by Mercedes Rodrigo Bellido that Sánchez took during the 1970s at National University; he also taught experimental psychology, perception, motivation, learning, formulation and evaluation of social projects, and diagnostic processes; during his last years, he focused on the topic of individual differences as a way to explain personality traits.

His main academic interests were on epistemology, theoretical psychology, and ethical issues in psychology and in general in the behavioral sciences. He rejected dogmatism in psychology

and attributed the need for it to a “cognitive trap” to reduce uncertainty. He proposed that theoretical discussions had to be considered as dynamic in time and place. Above all, he considered evolutionary theory to be the basis for explanation of behavior in psychology. Thus, as a Dean in various universities, he always offered support for the inclusion of ethology in the curriculum of psychology (Ascofapsi 2013). He closely followed theoretical trends related to the role of evolutionary theory in behavioral explanations, including ethology, sociobiology, and evolutionary psychology, which he argued offered a richness in explanation for psychology.

Sánchez was very active throughout his life in the development and consolidation of psychology as a science based upon evidence, rejecting all kinds of speculative and empirically unsupported approaches. He dedicated his efforts to the education and teaching of several generations of psychologists, making sure that psychology as a science relates to most other fields of human endeavor; therefore its practice must include a wide knowledge of culture and science.

He contributed in a most defining way to the creation of several Faculties of Psychology in the country that promoted the scientific model under which several generations were educated. He was Dean of Psychology in four universities in Colombia, all of them in the city of Bogotá. He was the third Dean of Psychology at Pontificia Universidad Javeriana (Pontifical Javeriana University) (1971–1973), the second Faculty of Psychology to be founded in Colombia (1962) after that of National University of Colombia. At Pontifical Javeriana University, Sánchez promoted an exchange of students, faculty, and research with National University to the benefit of both institutions. He also promoted the inclusion of Javeriana Faculty as officers in the Colombian Federation of Psychology (Ardila 1973).

At the Javeriana program, he promoted a scientific approach to psychology, which was perceived by some of the faculty and university officials as somewhat conflicting with the humanistic approach purportedly defining this religious institution. His tenure as Dean of that institution ended in 1973. He later was the Dean at the

Universidad Católica de Colombia (Catholic University of Colombia), and in the early 1990s, he had a role as Academic Dean for the institution. He was also Dean of Psychology at the Fundación Universitaria Konrad Lorenz (Konrad Lorenz University Foundation) between 1988 and 1989. He was founder of the Psychology Faculty of Universidad El Bosque (El Bosque University) where he stayed from 1993 to 2018, that is to say, a total of 25 years, 18 of them as a Dean of the Faculty shaping it as a high-quality program of psychology in the country. His main contribution to the program according to university officials and professors that remain to this day at the school was the epistemological design of the curriculum, which reflects his stance on the scientific nature of psychology and makes it somewhat unique among psychology programs in the country. In fact, graduates of this program are recognized as professionals able to approach every issue in a methodological and research like kind of way.

Not to be forgotten is the fact that the library of the Faculty of Psychology, founded by Sánchez, houses one of the most complete databases on psychology in the country. Upon his retirement in 2018, he was awarded the distinction of Professor Emeritus of the university.

José Antonio Sánchez contributed to professional psychology by supporting the creation and functioning of professional organizations seeking to defend the practice of psychology in educational, clinical, and professional settings. He was very active in support of the Federación Colombiana de Psicología (Colombian Federation of Psychology) (founded in 1955), where he was Secretary General (1965–c1973). According to Ardila (1973), Sánchez and José Rodríguez Valderrama were the most important contributors to the Federation that had been founded as a student organization at National University of Colombia and later became the first professional psychological organization of the country.

Sánchez was also an important force behind the creation of the Asociación Colombiana de Facultades de Psicología (Ascofapsi) (Colombian Association of Faculties of Psychology) (1986), an organization that promotes the quality of educational programs in psychology, represents the

interests of the training programs before the Ministry of Education, and helps define policies that become standard procedure of the professional and academic practice of psychology in the country. Sánchez was Dean of the Faculty of Psychology of the Catholic University at the time and would be a source of inspiration and support for the organization and its leaders for many years (Martha Restrepo Forero, personal communication, August 21, 2020).

He was also instrumental in the approval of Law 1090 (2006) that gives professional status to psychology in Colombia, and in the foundation of the Colegio Colombiano de Psicólogos (Colpsic) (Colombian Board of Psychologists) (2006) a government-sanctioned organization that certifies by means of an official license, the right to have a professional practice as a psychologist in the different areas of application of the discipline. Colpsic also hosts the ethical tribunal for the application of sanctions when a professional has incurred in unethical behavior in the practice of psychology. Sánchez had a central role in the writing of the statutes of the organization, was part of the founding Council, and readily attended the annual National Board Meeting, as one of the founding members of the organization, even after retiring from academic and administrative life.

In 2013 Colpsic awarded him the most important distinction of psychology in Colombia. He received the National Psychology Award to “A life dedicated to psychology.” Upon his retirement in the year 2016, he received an accolade of distinctions, among them the title of “Professor Emeritus” from Konrad Lorenz University Foundation and from El Bosque University, the last of his academic posts. The Catholic University of Colombia also named him “Dean of Deans” of the University, a distinction seldom given to a member of that institution.

The contributions of José Antonio Sánchez to psychology in Colombia are not to be judged by the traditional standard of publishing of original research but by the huge impact on the practice of psychology and the establishing of it as a respected profession in Colombia. It is safe to state that Professor Sánchez will be remembered as a teacher of psychology teachers, as a very

relevant figure who shaped the status of the profession in Colombia and as an active supporter of organizations that helped constructing the guild in the country.

Sánchez was an erudite with ample and integrated knowledge from the sciences to the arts and literature. His thinking was always extended to the training of psychologists. Sánchez was concerned with a purely technical training in psychology. He was also a lover and source of knowledge in literature, specially poetry. In the words of a colleague, “José Antonio was a very special and unforgettable person. Besides being an excellent academic, he was a humanist of the old days; in constant reflection on aspects of culture and society” (Martha Restrepo Forero, personal communication, August 21, 2020).

organizations and journals of psychology ·
Graduate programs

Efraín Sánchez Hidalgo was just 54 years old when he died. He was in the middle of his academic and research career. His parents were Zenón Sánchez Avilés and Pelegrina Hidalgo Pérez. He studied at the public schools of Moca and Aguadilla, and when he obtained his high school diploma, he entered the University of Puerto Rico, Río Piedras Campus (UPR-RP) to study a bachelor's degree in education and majors in Spanish and English. He graduated in 1939, *magna cum laude*. After graduation, as many Puerto Rican educators of this time, he registered at Columbia University in New York, where he graduated with a master of arts (MA) in 1940. His concentration was educational psychology (Roca de Torres, 2006).

After his graduation, Efraín Sánchez Hidalgo accepted a position as an instructor at the College of Pedagogy of the UPR-RP, where he taught psychology and education courses for future teachers. After a year, he was recruited by the US Army to serve in the World War II. He served in the US Army until 1946 as director of education and orientation of his regiment, 65th Infantry Regiment (*Regimiento 65 de Infantería*). For his service during World War II, he was bestowed a *Medal of Honor* and the *Infantry Emblem*.

In 1946, he returned to Puerto Rico and began working at the Vocational Rehabilitation Office of the Veteran's Administration as officer and director of training in San Juan, PR. After brief years attending the educational needs of the Puerto Rican veterans, he decided to pursue studies toward a doctoral degree. In 1948, Efraín Sánchez Hidalgo entered Columbia University, where he graduated in 1951 with a PhD in social psychology. His professors included Edward Thorndike (1874–1949) and Goodwin Watson (1899–1976). His doctoral dissertation was titled *A study of the symbiotic relationships between friends*, reviewed by Goodwin Watson as one of the best available studies on friendship (1966, as cited by Méndez, 1977).

In the academic year 1949–1950, he returned to the College of Pedagogy at UPR-RP, to

organize the Office of Evaluation and Orientation for UPR's elementary, intermediate, and superior schools. He also helped develop the Graduate School of Education and founded in 1953 a professional journal, *Pedagogía (Pedagogy)*. In 1954, he founded the *Asociación de Psicólogos de Puerto Rico* (Puerto Rico Psychological Association, APPR), with a group of psychology professionals in Puerto Rico, and was its first president. This was the first professional association of psychologists in Puerto Rico. He affiliated the association to the American Psychological Association (APA). APPR persists to this date, 2020, as the largest association of psychologists in Puerto Rico (Boletín, 1980). Today, this association is called *Asociación de Psicología de Puerto Rico (Association of Psychology of Puerto Rico, APPR)*.

During the 1950s and 1960s, Efraín Sánchez Hidalgo had a very active and diverse academic life. Besides offering his regular courses at UPR-RP, he offered lectures and workshops, participated in congresses, conducted a weekly radio show on child rearing, and wrote the first edition of his book *Psicología Educativa*. This book was considered by Hershell T. Manuel (1887–1976) as the best book in Spanish of its kind (1962, cited by Méndez, 1977).

In 1957, Sánchez Hidalgo was named Secretary of Public Instruction, position he occupied until 1960. In this governmental position, named by the governor, he oversaw the public system of education of Puerto Rico. As leader of the education in Puerto Rico, he emphasized research and evaluation as prime factors in the decision-making process. Efraín Sánchez Hidalgo developed many creative initiatives, among them are the following: conducted the first survey on interests and needs of public school teachers; initiates the kindergarten program for five-year-old children; special classes for children with intellectual disability, exemplary or model schools; an educational government TV station; televised adult educational and cultural courses; and development of instruments to evaluate achievement, general abilities, personality, and interests. He also made efforts to establish links between schools and their communities (Méndez, 1977).

After returning to his position as full professor at the UPR-RP, he continued with his prolific creative work until his retirement in 1974. He authored more than 145 articles about educational, social, or psychological themes published mainly in *Revista de la Asociación de Maestros de Puerto Rico* (Teachers Association Journal), *Pedagogía* (Pedagogy), *Revista Mexicana de Ciencias Sociales* (Mexican Social Sciences Journal), and daily newspapers or weeklies like *La Torre* (The Tower), *Escuela* (School), *Semanas* (Weeks), *El Mundo* (The World), and *Ideales* (Ideals). His writing, in simple language, was directed to parents and teachers hoping to aid them with the daily problems they encountered while rearing and teaching the Puerto Rican youth (Roca de Torres, 2006).

His intensive labor toward the development of psychology as a profession and as an academic program was cut short by his premature death in 1974. Nevertheless, Efraín Sánchez Hidalgo left us three very important books that helped train thousands of psychologists many years after his death. His first book, on the psychology of education, was first published in 1954; it was revised nine times and reprinted 41 times including an edition in Portuguese and one in English. This book was last reprinted in 1988, 14 years after its author's death. This book was widely used as a textbook both in Puerto Rico and Latin America. His second published book, about the psychological principles for rearing children, was also very successful; Dr. Sánchez Hidalgo and his wife Lydia Ayéndez, also a psychologist, issued five editions of this text and reprinted it 13 times. Finally, his third book, versed around the psychological principles important in dealing with elder population, had two editions and was reprinted ten times including once in 1990.

Sánchez Hidalgo's legacy also included the memory of a committed professional that saw love as the essence of any successful human relationship, a humanist whose quest included increasing the quality of life in Puerto Rico while improving family relationships and the education, and a person who in spite of all degrees

and honors received never forgot the humble classroom where he started his personal quest for education at the age of four.

He was married to Lydia Ayéndez and had three children: Ariel, Melba, and Iván.

Sánchez Nuñez, Ligia Mercedes

Born in *Caracas, Venezuela, on May 17, 1939*

Died in *Caracas, Venezuela, on May 18, 2018*

Soraidée Romero Sandoval
Federation of Psychologists of Venezuela,
Caracas, Venezuela

Keywords

Venezuela · Health psychology · Emergency psychosocial care · Guild

Ligia Mercedes Sánchez Nuñez studied psychology at the Universidad Central de Venezuela (UCV) (Central University of Venezuela) and graduated on August 28, 1964. She studied Philosophy at the same university, where she obtained her degree on October 9, 1969. She traveled to England and studied at the University of Cambridge where she obtained a master's degree in Criminology (1972). Upon her return to Venezuela, she pursued doctoral studies in Political Science at the UCV and graduated on December 8, 1988, with her doctoral dissertation "Venezuelan Democracy and Drugs: Venezuelan State Policy in the face of the drug problem between 1959 and 1985."

Dr. Sanchez began her academic activity at the Escuela de Psicología (School of Psychology) of the UCV in 1965, after winning the competition for the position of part-time Instructor Professor. She attained the category of Full Professor in 1999. She was director of the Instituto de Psicología (Institute of Psychology) at the UCV and a member of the Academic Committee of the Doctoral Program in Psychology, where she served as Coordinator. She was dedicated to university extension work and research in Health Psychology, psychological care in emergencies, and the creation of psychological support networks.

She presented several papers in national and international congresses, making known her work about drug use and drug policies, drug use in women, and health psychology. She was Tutor, Advisor, Jury, and Coordinator of first degree's Thesis, Master Scientiarum Degree Works, and Doctoral Dissertations, as well as jury and tutor of research works of university professors. After she retired from the UCV in 2003, she continued working as a teacher and researcher until 2016.

Along with her teaching activity, she developed extensive work in the guild with Erik Becker. She began as a member of the Colegio de Psicólogos de Venezuela (National Board of Psychologists of Venezuela) and later of the Federación de Psicólogos de Venezuela (Federation of Psychologists of Venezuela), institutions in which she held the position of vice president during the periods 1977–1978 and 1978–1980, respectively.

Within the guild, she managed to unify criteria: sports psychology, school psychology, legal psychology, clinical psychology, and others and established consensus with guilds such as physicians, educators, and psychiatrists to present for the approval of the Venezuelan parliament of the time the Law of the Practice of Psychology (approved on September 11, 1978). Thus, the Board became the Federación de Psicólogos de Venezuela (FPV) (Federation of Psychologists of Venezuela) in 1978. She supported and organized the creation of Colegios de Psicólogos (Board of Psychologists) in the interior of the country (Del Olmo & Salazar, 1981; Colegio de Psicólogos de Venezuela en, 1985).

She promoted the creation of psychology schools at Universidad Rafael Urdaneta (URU) (Rafael Urdaneta University) and Universidad de Los Andes (University of the Andes) (ULA). She advised and promoted the constitution of the electoral commissions of the Colegio de Psicólogos de Distrito Capital (Board of Psychologists of the Capital District) and the FPV, for the renewal of the guild authorities. She encouraged the knowledge of the history of the guild in the country, activated discussions regarding the future of the profession in Venezuela, and supported the use of new technologies that help psychologists (Dembo & Sánchez, 2010).

Dr. Sánchez was a member of several professional, academic, and trade associations, such as the Asociación Venezolana de Psicología Social (AVEPSO) (Venezuelan Association of Social Psychology), the Latin American Association of Health Psychology (ALAPSA) of which he was president (2006–2008).

Her contribution to Venezuelan psychology was oriented toward the history of Venezuelan psychology, and to publications in health psychology and psychosocial emergency care, by coparticipating in the drafting of the Law of the Practice of Psychology in Venezuela, and creating and generating psychologists' guild institutions in Venezuela as well as promoting in the renewal of its authorities. She received several awards and recognitions for her work, among them, the Recognition of Honor al Mérito "Francisco de Venanzi" (Honour for Merit "Francisco de

Venanzi”) in humanities and psychology (2016) awarded by the UCV.

Her contribution as one of the leaders of Venezuelan psychology has been recognized by Sexton and Hogan with a mention in their book international psychology, *Views from around the world* (Pino 2021).

Sánchez Veliz, Euclides Antonio

Born *Cumaná, (Sucre State, Venezuela), 28 May 1940*

Esther Wiesenfeld

Universidad Central de Venezuela, Caracas, Venezuela

Keywords

Venezuela · Community psychology

Euclides Sanchez was the only son of the second marriage of Mr. Manuel Sanchez to Mrs. Cruz Veliz. He was left under the exclusive care of his father after the death of his mother and settled in the city of Maturin, where he attended elementary and secondary school. His childhood and adolescence were characterized by economic difficulties, leading him to work from an early age. During this period of his life, his aspirations to learn and study, and at the same time, his enthusiasm for music and cinema fostered his desire for improvement and development.

He was an outstanding student at the Liceo Miguel José Sanz (“Miguel José Sanz” High School) in the city of Maturin, for which he obtained a scholarship that allowed him to begin his studies at the Universidad Central de

Venezuela (UCV, Central University of Venezuela), in the undergraduate Program of Psychology (1959). He moved to Caracas and lived in the residences of the University City of the UCV; he had the close friendship of his friends and fellow students Carlos Noguera (1943–2015), Eduardo Santoro (1939–), José Balza (1939–), among others. As well as his Professor José Miguel Salazar (1931–2001), who took him under his tutelage. During his years of study, he served as a student representative at various levels: course delegate, president and vice president of the Asociación de Estudiantes de Psicología (AEP) (Association of Psychology Students), Member of the Senate and Assembly of the Facultad de Humanidades y Educación (FHyE) (Faculty of Humanities and Education), and he was part of the university movement for mental health, from where he organized cultural events in the psychiatric hospitals of the city, which sometimes had the participation of renowned artistic figures of the time.

His interest in cultural activities, especially music, led him to become a member of the Orfeón Universitario (University Choir) of UCV, with which he participated in various presentations at national and international level. In 1976, he was part of the group that would attend the XII International Festival of Choral Singing in Barcelona, Spain. However, due to unforeseen circumstances, he was unable to board the Hercules C-130 plane of the Venezuelan Air Force that would transport the members of the University Choir, which tragically crashed in the Azores Islands on September 3, 1976.

He was part of a research project on learning, carried out at the Instituto Venezolano de Investigaciones Científicas (IVIC) (Venezuelan Institute of Scientific Research) in the 1960s. By that time, he explored the field of literature and wrote some short stories, published in university magazines and in the national press. He graduated in 1963 with a degree in psychology, and a year later, he was hired as an Instructor Professor at the School of Psychology of the UCV teaching General Psychology and later won the competitive examination (1964) to teach the courses of Experimental Psychology and Social Psychology.

Finally, he was Head of the Department of Social Psychology at the School of Psychology of the UCV (1980–1983).

He received a scholarship from the Consejo de Desarrollo Científico y Humanístico (CDCH) (Council for Scientific and Humanistic Development) of the UCV to study for a master's degree at the London School of Economic and Political Sciences in London, from which he obtained the degree of Master of Science in Social Psychology in 1974 (Sánchez, 1997).

Upon his return to Venezuela, he rejoined the School of Psychology of the UCV as a professor and began his research in the field of Social Psychology and Environmental Psychology, pioneering research on psychosocial factors related to traffic accidents in the country. In 1977, he was part of the first academic committee of the master's Program in Social Psychology founded by José Miguel Salazar, where he incorporated Environmental Psychology as a required course, as well as in the School of Psychology of FHyE and in the Facultad de Arquitectura y Urbanismo (Faculty of Architecture and Urbanism) of the UCV. In the same year, he joined the Environmental Psychology and Participation Unit of the Department of Applied Research at the Instituto de Psicología (Institute of Psychology) of the UCV. He was co-founder and Head of the Unit since its creation until 1989. He was later appointed Director of the Institute, in recognition of his outstanding work, a position he held from 1989 to 1997 (Otálora, 2007).

Since the early 1980s, he participated in some environmental-community and research projects with the psychologist Dr. Esther Wiesenfeld, whom he married in 1990. In 2000, he received the degree of Doctor in Psychology from the UCV. In his dissertation, he deepened in the analysis and scope of the process of community participation in psychosocial work in neighborhood contexts, for which he obtained the Honorable Mention and Publication Mention.

He has published several books and articles in important scientific journals with national and international recognition. He was a member of the editorial board of some publications, such as: *Annual Review of Critical Psychology*,

International Journal of Applied Psychology, Community, Work and Family, Inter-American Journal of Psychology, and Avepso, Revista de la Asociación Venezolana de Psicología Social (Avepso, Journal of the Venezuelan Association of Social Psychology); he was also co-editor for Latin America of the *Journal Forum Qualitative Social Sciences* (FQS) (2003–2005) and Member of the International Editorial Board of *Critical Psychology* (2007) (Otálora, 2007).

Sánchez was actively involved in community work and sustained training and teaching in paradigms, theories, and methodology of research, as well as in various areas of psychology (general, experimental, social, environmental, and community), in several national and international universities, and frequently as visiting professor/researcher, among which are mentioned: University of Buenos Aires, Argentina (1993, 1999, and 2005); Autonomous University of Barcelona, Spain (2001 and 2009); University of London (1973–1974); Autonomous University of Mexico, Mexico (1980 and 1994); Université de Toulouse (University of Toulouse), France (1994); L'École des hautes études en Sciences Sociales (School of Advanced Studies in Social Sciences) de Paris, France (1984 and 1993); University of San Francisco, United States (1990); University of Santiago de Chile (1993), Universidad Católica Andrés Bello (“Andrés Bello” Catholic University), Caracas-Venezuela (2006–2007); Universidad Lisandro Alvarado (“Lisandro Alvarado” University), Venezuela (2007), among others.

He has also participated in the planning, execution, and evaluation of social projects and public policies in various public and private institutions in the country. He also held important executive positions such as: Vice-President for South America of the Sociedad Interamericana de Psicología (SIP) (Interamerican Society of Psychology) (1987–1989) and President of the SIP (1995–1997); President of the International Scientific Committee of the SIP (1991–1993); and Vice-President of the International Scientific Committee of the SIP (1987–1989). He was also Principal Member of the Directorio del Consejo Nacional de la Vivienda (CONAVI) (Board of

Directors of the National Housing Council, CONAVI) (2001); Principal Member of the Social Sciences Commission of the Consejo Nacional de Investigaciones Científicas y Tecnológicas (CONICIT) (National Council of Scientific and Technological Research) (2001–2002); and Member of the Board of Directors of the International Association of Applied Psychology (1996–2000).

He obtained several national and international recognitions, among which are: the Order “Francisco Miranda” (1985) granted by the Presidencia de la República de Venezuela (Presidency of the Republic of Venezuela); the Order “Andrés Bello” first class (1996) granted by the Congreso de la República de Venezuela (Congress of the Republic of Venezuela); “José María Vargas” in its first class (2001) granted by the UCV; the Order of Merit, granted by the Federación de Psicólogos de Venezuela (FPV) (Federation of Psychologists of Venezuela) (1987); and the Order “Merit to Work” (1983) conferred by the Ministerio del Poder Popular para el Proceso Social del Trabajo (Ministry of the Popular Power for the Social Process of Work). He also obtained the following awards: third place in the National Award for Housing Research, granted by CONAVI (2001), the Interamerican Award in Psychology in 2003, and the Interamerican Award in Environmental Psychology (2007), both granted by the SIP. He has authored and co-authored more than 60 publications, including books and scientific articles, and attended more than 70 national and international congresses.

Keywords

Colombia · Psychiatry · Psychopathology · Mental health

Luis Jaime Sanchez was a physician, psychiatrist, and multitalented, liberal humanist who participated in various fields of knowledge: clinician, teacher, researcher, and writer (essayist, journalist, storyteller, editor), within the historical, cultural, and academic context of his time. His production can be organized in three subsequent periods. During the first period, between 1936 and 1947, he wrote scientific and clinical papers and some philosophical dissertations on the practice of psychiatry. During the second period, between 1947 and 1960, he wrote textbooks and articles with the aim of delimiting psychiatry conceptually. Finally, during the third period, between 1975 and 1988, his writing centered on epistemological issues.

He attended Brussel’s St Michael’s College (Belgium) during high school (1928–1931) and returned to Bogotá to enroll at the Faculty of Medicine of the Universidad Nacional de Colombia (National University of Colombia) (1932–1936) where he graduated (1937) with his work *Research about schizophrenia and other studies*, at 21 years of age.

In 1938, he was admitted as an intern at *El Aserrio (The Sawmill)*, a women’s psychiatric

hospital, and as an extern at the National University's Chair for Psychiatry and Neurology; in both institutions, he obtained every possible title by merit. On the first, he was director in 1951 and, on the second, professor in 1952. He was also chief and professor at the Psychiatry Department of the Medical School at Pontificia Universidad Javeriana (Pontifical Javeriana University) from 1946 to 1958 and once again from 1961 to 1963 and chief and professor at the Psychiatry Department of the Medical School at Universidad del Rosario (Del Rosario University) from 1966 to 1978.

He was an unmatched reader, a talker, an exuberant smoker, a fan of soap operas and soccer, a catholic, and a brilliant writer with eloquent verbs, penetrating dissertations, sharp synthesis, and fundamentally with an unparalleled proliferation of texts. More than half of his literary production was never published, and a significant amount was destroyed by himself on a "book fair" during a symbolic immolation where he was both executioner and victim.

During the first period mentioned above (1936–1947), he devoted special attention to diagnosis and new biological procedures for the treatment of psychosis: insulin coma, convulsant therapy, and prefrontal lobectomy, published in more than a dozen articles. Some other articles were of psychological and psychotherapeutic interest (Manrique and Sánchez 1939; Sánchez 1939), others philosophical and epistemological (Sánchez 1946, 1985), and some of a forensic nature (Sánchez 1938, 1943).

His second, and brightest, period (1947–1960) was one of fertile intellectual production which led him to take a leading role on the medical and the psychological scene of the twentieth century. He published multiple articles of interest for psychology, medicine, and psychiatry with the same concern: a holistic approach to the healthy and sick human being.

Textbooks of his that deserve special attention are *Psiquiatría General y Psicopatología* (*General Psychiatry and Psychopathology*), honored by the National University, where he addressed the fundamentals of the specialty, several schools of

thought on mental pathology, tests to assess children's development, aspects of normal and pathological personality, the notion of "type" in psychology, mental illness and its classifications, mental exams, clinical history, symptoms, and the dynamics of psychic processes. Another of his books is *Tratado de Clínica de las Enfermedades Mentales* (*Clinical Treatment of Mental Illnesses*) divided in eleven topics: oligophrenia, psychosis and similar states, neuropsychic syphilis, epilepsy, manic-depressive psychosis, schizophrenic psychosis, toxicophilias, psychoneurosis, paranoia, paraphrenia and delirious states, and symptomatic psychosis. He developed a historical account, definition of terms, etiopatogenia, symptomatology, clinic forms, evolution, biological and psychotherapeutic treatment, medical and legal aspects, and reference list with national and international studies for each topic. It is worth mentioning that despite being used as textbooks and studied at the National University of Colombia and at the Pontifical Javeriana University for over a decade, these books were not cited on the psychiatry treaties that were developed in the country in the years to come (Sánchez 1947, 1952).

Sánchez was the director of the Institute of Psychology between 1953 and 1956, before it turned into the Faculty of Psychology. In 1956, he founded the *Revista de Psicología* (*Journal of Psychology*), antecessor of the *Revista Colombiana de Psicología* (*Colombian Journal of Psychology*), where he wrote the presentation and an article for its first issue. Under his direction, different modifications to the psychology curriculum at National University were made, and distinguished academics from Mexico, Peru, and other countries were invited to the university (Ardila 1967; Giraldo and Rodríguez 1997; Villar Gaviria 1965). After his tenure as director of the Institute of Psychology, he continued teaching psychopathology at the Faculty of Psychology (Universidad Nacional de Colombia 1958).

He also held a weekly column in the Colombian newspaper *El Tiempo*, from 1955 to 1956, called *Por los Caminos de Swan* (*Swan's ways*), in honor to the first book of the great novel of Marcel Proust *In Search of Lost Time*, where Sánchez

discussed national affairs, the exercise of medicine, academy, some philosophical reflections, and book reviews.

The third period (1970–1988) was of epistemological nature (a term that was not common at the time) because of his interest in explaining problems related to mental illness from an understating of the human being rooted in psychology, anthropology, and philosophy. This allowed to remove psychiatry from the field of speculation, without being tempted to make psychological illness equal to cerebral illness or, in other words, to reduce the psychopathological phenomenon to the neurological one. He moved through other sources to approach an understanding of the medical issue: Plato (427–347 BCE), Aristotle (384–322 BCE), Saint Augustin (354–430), Saint Thomas (1225–1274), Rene Descartes (1596–1650), Immanuel Kant (1724–1804), Friedrich Nietzsche (1844–1900), Max Scheler (1874–1928), Karl Jaspers (1883–1969), José Ortega y Gasset (1883–1955), Ivan Pavlov (1849–1936), Sigmund Freud (1856–1939), Carl Gustav Jung (1875–1961), Harry Stack Sullivan (1892–1949), Jean Piaget (1896–1980), Auguste Comte (1798–1857), Georges Canguilhem (1904–1995), Claude Levi-Strauss (1908–2009), Ferdinand de Saussure (1857–1913), Noam Chomsky (1928–), and Michel Foucault (1926–1984).

Luis Jaime Sánchez argued that psychological illness is not only psychogenic; to him, human beings are an indivisible psychosomatic unit. Thus, he rejected unilateral suppositions on the origin of psychic suffering. Humans are above schools of thought in psychology and psychiatry and go beyond the temptations of the current hypothesis maintaining the magnitude of its ontological height, its dignity, and its freedom.

In his words, “we have reached a point in which the center of gravity of the ill self is not the same center of gravity of the disciplines that attempt to study it. Modern psychiatry is at a crossroads. . . . The human being is both ‘concentric’ and ‘exocentric’. As a ‘concentric’ being it binds together, by virtue of its rational nature, all of the fusions of the ‘humanities’ that contribute to its growth around itself. As an ‘exocentric’

being, at the same time it radiates each and every one of the characteristics of its individuality as a species into its surroundings. . . . Thus, mental illness implicates the formative and expansive portions of the self into its complex scheme. . . . If this is not considered it will be impossible that psychiatry constitutes a systematic, coherent and objective corpus” (Sánchez 1980, p. 9).

The journal *Gaceta Neuropsiquiátrica* (*Neuropsychiatric Gazette*) was a product poured off of years of reading and reflecting. After various years without publishing, Sánchez felt prepared to subject himself to criticism. The first issue appeared on June 1975. The culmination of a dream that lasted thirteen years. “I know the difficulties that faces a publication of this kind. But it’s more alarming the chronic, sterilizing paralysis in which our Colombian psychiatry hibernates. . . . A journal of this kind will not wake our scientific inertia up because maybe some national and cultural habits that are hard to beat will register within her (. . .) Our *Gaceta* doesn’t belong to any exclusive, professional and selective group; on the contrary, it is and will be as long as it exists, a permeable publication, open to all currents of psychology, psychopathology and psychiatry” (Sánchez 1975, p. 3). There were thirty-two issues of this publication, and he was its director and main collaborator, contributing with more than a hundred articles under many pseudonyms. This was a publication authentically eclectic, guided by an anthropological philosophy with a strong humanist sense.

From *Mundo y Vida del Don Nadie* (*A Nobody’s World and Life*), one of his unpublished, undated books: “To the big and incorrigible Nobody I am, in the shadows of a halfway point, between the Insane-Sanity. In this shadow, where there is no one but the one who CAN, I feel the beating of the one who WANTS, and we both pity each other” (Sánchez, s.f.). *El Médico y la Cultura* (*The Physician and the Culture*); *El Complejo de Stentor: la Vocación del Escritor* (*Stentor’s Complex: A Writer’s Calling*); *Cartas a un Médico Rural, con Ocho Ensayos sobre la Investigación, la Vocación, la Vejez, los Enfermos Crónicos, la Muerte, la Deshumanización y los*

Especialistas (Letters to a Country Doctor, Eight Essays on Investigation, Calling, Old Age, the Cronically Ill, Death, Dehumanization and Specialists); *Lección de Vida (Life Lesson)* (1972–1975); *¿Generaciones de Universidad o Universidad de generaciones? (Generations of University or University of Generations?)*; *Psicología del Revolucionario (Psychology of the Revolutionary)*; *¿Se Justifica una anti-Nosología psiquiátrica? (Is a Psychiatric Anti-nosology Justified?)*; *La Relación Médico-Paciente (The Doctor-Patient Relationship)*; and *El Alma del Médico (A Physician's Soul)* (1987) are some other of his unpublished books.

Luis Jaime Sánchez was fundamentally a relentless seeker of a status for psychiatry and psychology. He considered that psychology should have an independent status and one he professed between those who had a phenomenological orientation in its conception, a biological one in its therapeutic, and a catholic one in its purpose. He harmonized these aspects with no explicit contradictions. He was a man who shone with its own light, a member of multiple Colombian and foreign associations, a recipient of the National Psychology Award (1974), and possibly the Colombian psychiatrist who read, wrote, and published the most in his country's short history, someone whose work should be read critically and in detail.

Rafael Santamarina Sola was born on September 2, 1884, in Mexico City and completed in this city his elementary and secondary education. He then attended preliminary studies at the Scientific Institute of Mexico and at the National Preparatory School. On graduation, he studied at the National School of Medicine and graduated as general physician on August 2, 1911. The year he graduated from medical school, he was hired as external physician and the following year as intern at the General Mental Hospital (Manicomio) “La Castañeda” (Colotla 1984). This hospital had been inaugurated in 1910 by President Porfirio Díaz (1877–1880; 1884–1911) as part of the

government celebrations for the anniversary of Mexico’s independence from Spain. He also worked at the Jesus Hospital (Hospital de Jesus), in the National Pathological Institute (Instituto Patológico Nacional), and as assistant anthropometrician at the General Prison (Prisión General).

In addition to his work within the mental hospital, where he began using psychological instruments, Santamarina began teaching courses of psychiatry within the School of Medicine and also in the Social Work program when it was still part of the Law School (it is now an independent school within the university). In fact, Santamarina was one of the founders of the National School of Social Work of the National Autonomous University of Mexico (Universidad Nacional Autónoma de México) (Colotla and Jurado 1983).

Santamarina’s work in the mental hospital “La Castañeda” is the most significant for Mexican psychology. Beginning soon after he began working there, he continued testing in school settings. Santamarina began translating and adapting to Mexican children the Binet-Simon test, from the French original, and was able to present the first provisional adaptation of the test before the National Congress of the Child, organized by the newspaper *El Universal* held in Mexico City, January 2 to 9, 1921 (Santamarina 1921a). He adapted and standardized as well three other group tests in students of both elementary and secondary schools: the language scale developed by Swiss educator Alice Descoedres, the Fay test, and the test of Ebbinghaus, when he became Director of the Department of Psychopedagogy and Hygiene established in 1925 by the Secretary of Public Education (Departamento 1926). This Department was staffed by physicians previously affiliated with the School Hygiene Service at the Public Health Department (Stern 1999). Santamarina’s training and experience in pediatrics, psychometrics, and neurology were likely factors in this appointment. Furthermore, as noted before, he had presented papers in the puericulture section at the First Congress of the Mexican Child (January 2–9, 1921). Incidentally, the term underlines the European leanings of health scientists and professionals at that time,

since “puericulture” was the term defined by the French obstetrician Adolphe Pinard (1844–1934) as “the scientific study of the child.”

According to several authors (e.g., Negrete Torres 2016; Stern 1999) the First Congress of the Child was a pivotal event for the care of children in Mexico and was important for the development of the eugenics movements in the country that would prevail for the next two or three decades. It should be noted, however, that some of those accepting eugenics ideas followed the French eugenics movement that was less radical than the movement in America. Santamarina was one of them. Whereas he joined in 1933 the Mexican Eugenics Society, he did not endorse the orthodox eugenics principles advocated by the founders of the society, but instead he followed the moderate French puericulture movement.

Under Santamarina’s purview, thousands of children were administered tests of attention, logic, and intelligence (Stern 2000). At that time, prior to the development of computing equipment, the scoring, tabulation, determination of quotients, calculation of norms, and development of graphic depictions of such a large number of students required several full-time staff members.

The Department of Psychopedagogy and Hygiene (or Department of Psychopedagogy and School Physician, according to some records) included three sections: Psychognosis, School Hygiene, and Physical Education. The first addressed research, adaptation, standardization, and administration of psychological tests for purposes of classifying children at school. The second was devoted to prophylactics, or prevention of illnesses in children, while the third attempted to incorporate exercise as part of an “integral” (or wholistic) view of the child (Negrete Torres 2016).

Santamarina was not the only active researcher of mental tests in the second decade of last century. David Pablo Boder (1886–1961), a Russian émigré, spent a few years in Mexico at the National University and some governmental organizations, translating and adapting the Stanford version of the Binet-Simon test and other psychological instruments (Jurado et al. 1989).

Santamarina left the direction of the Department of Psychopedagogy and Hygiene in 1929 when he was replaced by Alfonso Priani (1888–1945), but continued his work within that Department in the Section of Biometrics Estimation. In a report at the beginning of the next decade (Departamento 1930), Santamarina had obtained norms for two more psychometric scales, the Vermeyley Scale and the Vaney test, for the assessment of verbal reading in students.

When he left the Department of Psychopedagogy and Hygiene in the decade of the 1930s, Santamarina’s work on psychometric testing ceased, and he began working for the Tribunal para Menores (or Tribunal for Underage Offenders; see Santamarina, 1937) that had been established in 1926 and was composed of a teacher, a psychologist, and a physician (Zuniga 1984). He also continued teaching at the National University until his retirement in 1963.

Alvarez Diaz de Leon and Monroy Nasr (2019) recently published an interesting and insightful review of the circumstances surrounding the birth of psychological measures in Mexico. They contend that early Mexican psychologists were greatly influenced by European philosophers and investigators. Undoubtedly, the German researchers Wilhelm Wundt (1832–1920) and Oswald Külpe (1862–1915), as well as French-speaking educators Henri Bergson (1859–1941), Alfred Binet (1857–1911), Georges Dumas (1866–1946), Pierre Janet (1859–1947), Henri Piéron (1881–1964), and Theodule Armand Ribot (1839–1916), were influential in Mexican psychology. Janet, for instance, visited the National University of Mexico as a guest professor in 1925; and George Dumas and Henri Bergson from the University of Paris received honorary doctoral degrees from the National University of Mexico. It is not surprising, therefore, that Santamarina became interested in applying Binet’s newly developed test to Mexican students.

Salvador Santiago-Negrón is the son of Domingo Santiago-Ramos and María Negrón-Marrero. His father practiced the profession of agriculture, and his mother dedicated her life to family and to take care of household responsibilities. In the hierarchy of siblings procreated by his father, Salvador Santiago-Negrón occupies number 32. Dr. Santiago-Negrón has been married to Dr. Carmen Albizu-García for 53 years. Product of this marriage are their two children, Xavier

Ernesto and Iván, and two grandchildren, Juan Esteban and Kyan.

Salvador Santiago-Negrón completed his university studies at the University of Puerto Rico, Río Piedras Campus (UPR-RP), where he obtained his Bachelor's Degree with a concentration in Psychology. He carried out his graduate studies in School Psychology at the University of Wisconsin at Madison, where in 1969 he obtained a Master's Degree in Science and in 1973 his Doctorate in Philosophy. In 1982, he obtained his Master's Degree in Public Health from the School of Public Health at Harvard University in Boston, Massachusetts. He is also a graduate of the American Board of Administrative Psychology (Board Certified) and completed a Certificate of Proficiency from the American Psychological Association (APA) in the treatment of disorders associated with alcohol and other substances (Santiago-Negrón, 2018).

While in the United States, Dr. Salvador Santiago-Negrón served as co-director of the Internship in Psychology at Boston University School of Medicine, Massachusetts. Upon returning to Puerto Rico, he worked as a Dean of Students and Professor of Community Medicine at the Central University of the Caribbean. For 21 years, he was president of Carlos Albizu University, an institution formerly known as the Caribbean Center for Postgraduate Studies. He retired from the presidency of this institution in 2006. It is important to point out that he had a leading role in the process of transforming the Caribbean Center for Postgraduate Studies into Carlos Albizu University, which currently has campuses in Puerto Rico and Miami, Florida. On two occasions, he was president of the Association of Presidents of Universities and the Association of Private Colleges and Universities of Puerto Rico. Likewise, he has been a member of various advisory groups for the Government of Puerto Rico and Boards of Directors of various nongovernmental organizations. He served as a member of the Advisory Council for Drug Control in Puerto Rico; he was president of the Commission for the Prevention of Violence (COPREVI) and the Commission for the Study of Crime and

Addictions. Currently, he chairs the Commission for the Study of Crime and Addictions and maintains his private practice as a psychologist and consultant (Santiago-Negrón, 2018).

Once Dr. Santiago retired as president of Carlos Albizu University, he opened his private practice and in 2013 was named administrator of the Puerto Rico Administration of Mental Health and Anti-Addiction Services, position he maintained for a year. Since 2014, he is adjunct professor of School of Public Health at the Medical Sciences Campus of the University of Puerto Rico (Santiago-Negrón, 2018).

Dr. Santiago-Negrón has contributed to the scientific literature with his numerous publications and presentations on topics related to higher education and analysis of drug policy. His career as an academic and health worker has earned him recognition from various organizations. In 1999, he was awarded the "Psychologist of the Year" by Puerto Rico Psychological Association. In 2000, he received the Cultural Diversity Award – awarded by the National Council of Schools and Programs of Professional Psychology for Promoting Cultural Diversity in US Higher Education. In 2002, he obtained the award for Exemplary Practices in the Academy – awarded by *Fundación Puertorriqueña Pro Salud Mental* [Puerto Rico's chapter of the National Association of Mental Illness, NAMI]. Likewise, in 2004, the National Latino Psychological Association conferred him the Distinguished Psychologist Award, in recognition for the service to the Latino Community. In 2006, he received Karl F. Heiser Presidential Award, from the American Psychological Association, for advocating for the legal definition of the profession. In 2007, he was recognized with the award *Una Vida de Logros (A Lifetime Career Award)* by the Puerto Rico Psychological Association. He received the Merit 2007 awarded by the newspaper *The San Juan Star* (Santiago-Negrón, 2018).

The professional career of Dr. Santiago-Negrón has shown that he is a tireless worker for the development of the discipline of Psychology in Puerto Rico and the well-being of his people, making great contributions to the

field of study and intervention of problematic substance use, at the local and international level.

Keywords

Venezuela · General psychology · Innovation

Eduardo was the son of Italian immigrants who arrived in Venezuela in 1917 fleeing the First World War. He entered the Universidad Central de Venezuela (UCV) (Central University of Venezuela) in 1957. His inclination for reading, especially subjects related to philosophy, sociology, anthropology, and psychology, led him to direct his studies to the career of psychology. He was an outstanding student, and due to his high performance, he was appointed as a trainer in the subject of General Psychology Practices, a position he held from 1961 to 1963. He obtained his degree in psychology in 1963 and immediately participated and won the competitive examination for the course of General Psychology Practices at the School of Psychology of the UCV (1965) (Universidad Metropolitana, 2021b).

He attended several postgraduate studies: Educational Technology (1978) and Construction of Theories in Psychology (1979), both at the Universidad Simón Bolívar (USB) (Simón Bolívar University), and Philosophy of Science at the UCV (1979).

He developed his professional life at the School of Psychology of the UCV, where he taught several required courses: Seminar, General Psychology, Experimental Psychology, Research, Learning Facilitators, Social Psychology, Group Conduction, and also several electives courses: Attitude Change, Persuasion, History of Psychology, and Research Topics in Contemporary Psychology.

He taught in other Schools of the UCV: Librarianship and Social Communication. He was also a

Born in Caracas, Venezuela, July 7, 1939

professor in several postgraduate courses at the UCV: in the Master's Program in Psychology and the Specialization in Juvenile Law at the Facultad de Ciencias Jurídicas y Políticas (Faculty of Juridical and Political Sciences). During his teaching work, he was the tutor of multiple undergraduate and graduate theses of students from different disciplines (Universidad Metropolitana, 2021b).

In addition to his teaching work, he held multiple administrative positions within the UCV: Head of the Chair of General Psychology (1972–1980); Head of the Substantive Department (1975–1978); Head of the Chair of General Psychology (1991–1993); Head of the Chair of Experimental Psychology (1991–1993), 1998 (In-charge); Director (In-charge) of the Nucleus of the School of Psychology, in San Bernardino (1975); and Member of the Board of Directors of the School of Psychology during the academic renovation process (1969–1970). In addition, he was also Member of the Technical Council of the Instituto de Investigaciones en Comunicación (ININCO) (Institute of Communication Research), under the direction of Professor Antonio Pasquali (1985); Assistant Director of the Directorate of General Services of the UCV and from that year until 1988 Director of the same agency; and Head of the Methodological Department of the School of Psychology (1960–1998). He also has held the following positions: Member of the Board of Directors of the UCV Foundation during two periods (1998–2000 and 2001–2004); Coordinator of the Computer Unit of the School of Psychology from 1999 to the present; and Administrative Coordinator of the Facultad de Humanidades y Educación (Faculty of Humanities and Education, FHE) 1999-present. Director of the School of Psychology in three periods (1974; 1975–1978, and 1980–1982) and Director in Charge from 2013 to the present.

Parallel to his teaching and administrative work, Professor Santoro developed a remarkable career as a researcher and theoretician. He wrote books that are obligatory references for psychologists, in addition to several articles and chapters on Psychological Theory, History of Psychology, Experimental Psychology, Psychology of Learning, and Social Psychology, among other

important topics. He carried out an outstanding work of systematization and information processing of student databases (1970–2019), databases of degree work (1970–2019), digitization of the journal *Psicología* (1974–2019), digitization of the Asociación Venezolana de Psicología Social (AVEPSO) (Venezuelan Association of Social Psychology) *Bulletin* and Database of the contents (2019), and digitization of the AVEPSO Fascicles Collection and database of the contents (2018). He has been a member of the Editorial Committee of the revista *Psicología* since its creation in 1974.

Santoro represents a symbol of commitment and dedication. He devoted much of his time to the construction and strengthening of psychology in Venezuela from the UCV. His contribution can be measured in four lines: (a) His extensive teaching work: he has trained more than 20 generations of psychologists; (b) as a productive researcher and writer of works that are still required reading for scholars in the area; (c) his efforts to modernize the management of information, safeguarding knowledge through digitization and systematization of processes; and, (d) his impeccable and continuous administrative work in the School of Psychology and the Faculty of Humanities and Education of the UCV. His tireless work has managed to keep the academy alive and inspires the work of the professors who accompany him and the students (Universidad Metropolitana, 2021a).

In the year 2021, he was unanimously conferred the Doctorate Honoris Causa, by the Superior Council of the Universidad Metropolitana (UNIMET) (Metropolitan University) in recognition of his outstanding and distinguished career in the fields of education, scientific research, and humanistic progress (Universidad Metropolitana, 2021a).

Brazil · Faculties of the soul

He was born in the District of Diamantina, Minas Gerais (MG)/Brazil, a son of a traditional family with prominence in the political and economic scene in the region. He studied philosophy and theology at Colégio do Caraça (Caraça School) (MG), under the direction of the Lazarist Priests. In 1842, he became Regent of Philosophy at the Colégio de Congonhas do Campo (Congonhas do Campo Schol) (MG). He was ordained a priest in 1845, and in that same year, he was appointed rector of the Mariana Seminary (MG), where he was responsible for the chairs of Philosophy and Dogmatic Theology. At that time, João Antônio dos Santos was one of the greatest collaborators of Dom Antônio Viçoso (1787–1875), then bishop of Mariana. He was part of a group of young priests and lay people who carried out a project to reform customs led by this bishop.

Santos was responsible for organizing and publishing the religious journal *Selecta Catholica*, printed by the Episcopal Printing Office of Mariana, between 1846 and 1847. The periodical was linked to the project to reform the education of the clergy and customs of the people of Minas Gerais state, as it had the objective to expand the reading of Catholic authors and works and to fight against materialist and pantheistic ideas, as well as religious indifferentism.

In 1847, João Antônio dos Santos wrote a small work of 16 pages: *Skeleton of the Faculties and the Origin of Ideas*, a very useful work for

young men who endeavor to the study of Philosophia. As the manuals by Antônio Genovesi (1713–1769) and Sigismund Von Storchenau, used at the time, were expensive, the author claimed to have organized the *Skeleton of the faculties* so that the young students of the Mariana Seminary, one of the most important schools in Minas Gerais, had a more affordable alternative to study the “psychological part” of philosophy. From this perspective, psychology was understood as the study of the faculties of the soul and the relationships between mind and body.

In the work, the soul is defined as a being endowed with strength, whose activity consists in acting driven by the relationship with objects. From the activity of the soul, the three main faculties of the human being arise: intelligence, sensitivity, and will. As in a skeleton, these main instances can be subdivided into several others, with intelligence taking precedence in the hierarchy of faculties. Intelligence is formed by consciousness, external perception or senses, and understanding; sensitivity is divided into physical, moral, and intellectual and is defined as pleasure or pity in the face of objects; and the will, finally, is responsible for volition and formed by the necessary will and freedom. The author stated the perception of a unitary self, by consciousness, as one of the main characteristics of the human soul. According to Rodrigues (1986), Santos avoided mitigated empiricism – a widespread philosophical tradition in the context of the reforms carried out in Brazil by Sebastião José de Carvalho e Melo, Portuguese Prime Minister, and Marquês de Pombal – and joined spiritualism, becoming one of the representatives of a new philosophical reflection in Minas Gerais (Rodrigues, 1986). Thus, we can say that the first philosophical treatise produced and published in Minas Gerais was dedicated to psychology.

The publication of the work *Skeleton of the Faculties and Origin of the Ideas of the Human Spirit* gave rise to a debate on the psychology taught, through philosophy, in Minas Gerais schools, lyceums, and seminaries. In 1849, Rodrigo José de Ferreira Bretas, professor of philosophy at the Minas Gerais High School of Ouro

Preto/Minas Gerais, wrote a reply to João Antônio dos Santos’ book: *The New Skeleton of the Faculties and the Origin of the Ideas of the Human Spirit According to the Principles of Mr. Laromiguière or current psychology*. This manual was published in 1854 and disclosed another proposal for psychology based on the ideology of the French philosopher Pierre Laromiguière and Jean-Ferreol Perrard. Both conceptions of psychology, based on spiritualism and ideology, circulated in the schools, seminaries, and lyceums of Minas Gerais.

At the age of twenty-eight, João Antônio dos Santos traveled to Rome, where he studied Canon law, and to Paris, where he studied physical and natural sciences. Upon his return, Santos settled in Diamantina, where he taught philosophy and directed the Ateneu São Vicente de Paulo, a secondary school. At this school, the prelate was responsible for the philosophy, rhetoric, and physics classes. He collaborated with the *Jequitinhonha* newspaper, publishing several texts. In 1864, he became bishop of Diamantina, founding in the city the Episcopal Seminary, the Colégio Nossa Senhora das Dores (Nossa Senhora das Dores School) for female instruction, and the Orphans’ Asylum. He was also responsible for founding the Biribiry Fabric Factory, where mainly poor women were employed. In his episcopal action, the religious man showed great sensitivity to the social problems of his region. He acted in favor of the abolitionist cause through pastorals, having established, in 1870 in Diamantina, the philanthropic association *Patrocínio de Nossa Senhora das Mercês* (Nossa Senhora das Mercês Sponsorship), whose objective was to help the emancipation of slaves.

Oswaldo de Barros Santos studied at Caetano de Campos State School; graduated in 1936 at the Education Institute; graduated at the Higher School of Physical Education, in 1939, and in Pedagogy, in 1950, at the University of São Paulo (USP). He took courses and participated in internships in Europe and North America. In Paris, in the year of 1956, he studied with Henri Piéron (1881–1964), at the Institute d'Études du Travail et d'Orientation Professionnelle. He did a postgraduate course in Clinical Psychology at Florida State University, in 1956, and at Columbia University, in 1957. He also took field trips to countries such as: Italy, Switzerland, Belgium, Portugal, England, and Japan.

His academic background and his dedication to Psychology and Education enabled him to contribute to these areas, in three fields: labor psychology, professional and educational counselling, and psychological counselling. He started his professional life as an elementary school teacher and his interest in psycho-technique and in professional counselling led him to enter, in 1937, the Psycho-technical

Bureau of the Getúlio Vargas School, where he was the director from 1938 to 1942, substituting Roberto Mange (1886–1955), founder of this organ. The pioneering work of this Department enabled, in 1947, the making of a document with Guidelines and Fundamentals for Guidance Counselling at industrial schools.

In 1942, the Organic Law of Industrial Teaching was enacted (Decree Law number 4073, which established, in its 50 article, the compulsory implementation of Guidance Counselling at each industrial or technical school aiming at adequate professional and social adaptation, enabling students to get to solve their problems autonomously. Industrial teaching, one of the teaching fields in which Oswaldo de Barros Santos worked at that time, was the first one to assume the task established by the Organic Law, organizing an internal contest for positions in Guidance Counselling in his schools, soon 21 schools had guidance counsellors subordinate to the Research Service and Guidance Counselling of the Department of Professional Teaching in the State of São Paulo.

In 1952, Oswaldo de Barros Santos published a Work Manual for Guidance Counsellors, which detailed the functions and competencies of the counsellors, the study cases method and the guidance counselling modalities.

Also, as from 1945, Serviço Nacional de Aprendizagem Industrial, SENAI (the National Service of Industrial Learning) in the abbreviation in Portuguese, developed a system of professional and educational guidance by means of vocational courses. Ten of these courses, that took place in the countryside of São Paulo, were under the direction of Oswaldo de Barros Santos. Guidance Counselling got to Secondary and Teaching education, except from experimental schools. Only in 1969 the first contest for Guidance Counsellors for Secondary education happened in the State of São Paulo. The Decree that established the criteria for the contest, enacted in 1967, was prepared by a Commission in which Maria José Garcia Werebe (1925–2006) and Oswaldo de Barros Santos took part. The decree included among the subjects to be evaluated in the selection, Guidance Counselling Theory, in this topic, besides a vast bibliography

of North American authors, there was the work *Guidance and Professional Selection* (by Oswaldo de Barros Santos and *Psychotherapy Centered on the Client* by Carl Rogers (1902–1987).

Oswaldo de Barros Santos was one of the pioneers in the introduction of Rogers's thinking in Brazil, after studies at the end of the 50s in the United States. The Rogerian approach strongly influenced him and defined a new trend in his professional practice. When Rogers died (Santos, 1988, p. 96), he states: “[...] his experience, his doctrine and the techniques expressed in his famous book *Counseling and Psychotherapy: Newer Concepts in Practice* caused one of the most remarkable revolutions in the field of psychotherapy and guidance counselling since Freud's time and the several versions of Psychoanalysis.”

He started his work in Clinical Psychology in the 1960s, after concluding a postgraduate course at Columbia University and having presented his doctoral thesis at the University of São Paulo (USP), where he worked as a professor, also at the end of the 1960s, at the Philosophy, Sciences and Language Arts Faculty.

Rosenberg (1987) explains in more details Oswaldo de Barros Santos's Rogerian phase, geared toward psychological counselling and psychotherapy. She was in contact with when she was Santos's student during her graduate studies in Psychology at USP, what provoked her for studying and working with Humanist Psychology and the Approach Centered on the Person, recently introduced in Brazil. Rosenberg became his assistant at USP. Both of them created in 1969 the Serviço de Aconselhamento Psicologico, SAP (Psychological Counselling Service), USP Institute of Psychology, which housed the Service, was one of the first institutions to officially integrate the Approach Centered on the Person as a practice option in psychologists' development programs and to offer psychological assistance to the population. In *Biography of a Service* (Rosenberg, 1987), the SAP is presented comprehensively. The initial goal of this service was to offer psychological assistance with a differentiated support for those who looked for it, thus

becoming a possibility of intensifying the assistance. The SAP creation happened in a period when, despite the fact that the regulations for psychology as a profession had been enacted by the Federal Law number 4.119, of August 27, 1962, its recognition in Brazil was still being discussed and sought.

Oswaldo de Barros Santos published *Psychological Counselling and Psychotherapy* (1982), *Guidance and Professional Selection* (1963), organized the book *The Gifted: who are they, where are they?* (1988), and wrote dozens of articles, in the fields of organizational and labor psychology, psychotherapy, and psychological counselling. He participated in the creation of the Brazilian Association of the Gifted, the Psychologists' Union of the State of São Paulo, the Psychology Society of São Paulo, and the Brazilian Association of Psychologists. In the Psychology Academy of São Paulo, he held seat number 15. He was an effective member of the Federal Council of Psychology management from 1974 to 1976 and of the Norms and Procedures Psychological Evaluation Commission of the Psychology Regional Council of São Paulo from 1994 to 1996.

Oswaldo de Barros Santos's path was marked by the production of knowledge and his work as a psychologist and educator in different fields. His contribution to labor psychology, professional and educational guidance, and psychological counselling, as well as the strengthening of Psychology as a science was relevant in the history of Brazilian psychology, what will guarantee his legacy in this area.

Brazil · Psychological tests · Person-Centered Approach

A Philosophy graduate from Universidade Santa Úrsula (Santa Úrsula University), Scheeffler took her Master's degree in Educational Psychology at Teachers College, Columbia University, in 1951. She did a doctorate and a free-doctorate in educational guidance at the Universidade Federal do Rio de Janeiro (URFJ) (Federal University of Rio de Janeiro) in 1975. From the 1950s on, she participated in the diffusion, in Brazil, of the Person-Centered Approach (PCA) developed by Carl Rogers (1902–1987) in the 1940s. In 1951, Ruth Scheeffler took part in the organization of the Professional Guidance Division at the Instituto de Seleção e Orientação Profissional (Institute for Selection and Professional Guidance, ISOP.) of the Fundação Getúlio Vargas (FGV) (Getúlio Vargas Foundation). The ISOP was created in 1947, under Emilio Mira y López' direction, with the objective of carrying out professional selection and guidance, and became a center for training psychotechnicians and research in applied psychology. During her time at ISOP, besides being

the head of the Professional Guidance Division and responsible for the journal *Arquivos Brasileiros de Psicotécnica* (Brazilian Archives of Psychotechnics), Scheeffler was part of the Technical Council and was director of ISOP between 1964 and 1966, after Emilio Mira y López' death. During her administration, the Centro de Estudos de Testes e Pesquisas Psicológicas (CETPP) (Center for the Study of Tests and Psychological Research) was created in 1966 with the purpose of expanding and improving test standardization, validating imported tests, and building Brazilian methodologies and instruments.

Ruth Scheeffler had great relevance in the dissemination of nondirective counseling, by publishing books on the subject (a work published in the mid-1960s on psychological counseling had several editions over the years), and in the development of the field of psychological assessment in the country.

Vera Schiller de Kohn was born in former Czechoslovakia. Her father was a lawyer, and she had a

sister and a brother. She began psychology studies, which never ended, at the Carolina University in Prague. She married in 1934, with the architect and painter Karl Kohn (1894–1979) (El país de la mitad, 2018), an Orthodox Jew, and they had two daughters: Tanya, born in 1935 in Prague, and Katya in 1942 in Quito, both artists. With the invasion of the Germans into Czechoslovakia in 1938, the Kohns and their families escaped from Prague in 1939 (El Universo, 2006), heading to England, from where they left for South America. Initially, the destination was Argentina, but they ended up in Ecuador; Karl Kohn did not want to get away from one of his brothers who had decided to stay in Quito. One of the possible reasons for Czech emigrants to choose Ecuador was that the country owed money to Czechoslovakia for the purchase of weapons for their conflict with Peru; accepting migrants was a way of compensation.

Initially, she wanted to be a theater actress. In Ecuador, she began her career under the German director Carlos Lowenberg (El Telégrafo, 2012) but later abandoned it after a short time in New York, where she was told that this was not her way. Back in Quito, she had an internal crisis after breaking with the theater. She traveled to Europe, in 1957, and in Germany met Karlfried Graf Dürckheim (1896–1988) and his wife Maria Hippus (1909–2003) (El Universo, 2006; Guerrero, 2006). Dürckheim was a psychologist and had developed what is known as “initiation therapy” (Pastas-Tapia & Romero-Ponticelli, 2018), which is a fusion of several psychological theories, especially the deep psychology of Carl Gustav Jung (1875–1961) and the psychodrama of Jacob Levy Moreno (1892–1974). He had also trained in Zen meditation in Japan, which he had introduced in Germany. Hippus was a psychologist and was more focused on the graphic expression of emotions; she had developed the “directed psychography”: The patient draws with his eyes closed, and then the therapist interprets the drawings; it is a way to help patients to know and grow.

Dürckheim and Hippus founded an Existential Psychology Center in the early 1950s in Rütte (Todtmoos), in the Black Forest of Germany, and together they consolidated the “initiation

therapy.” Vera trained with Dürckheim for 3 years: “I went for a twenty-minute appointment and stayed three years,” (Schiller, 2006, p. 50). In 1961, at the end of her stay in Germany, and after applying, once again, as an actress in a play in Zurich, and not being accepted, she finally abandoned that road and returned to Ecuador.

In Ecuador, she studied psychology at the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Humanities, and Education Sciences) of the *Universidad Central del Ecuador* (Central University of Ecuador). She graduated as a *Doctora en Psicología Clínica* (Doctor in Clinical Psychology) with a research paper on psychography (1969), being one of the first female psychologists in Ecuador. She was a volunteer at the *Hospital Psiquiátrico San Lázaro* (San Lázaro Psychiatric Hospital, 1961) (Landázuri-Camacho, 2008). For her help and collaboration, she received recognition from the Sisters of Charity who ran the institution. She also collaborated as a volunteer in a psychiatric hospital in Mexico. She worked for about 12 years (1970 to 1982) at the *Pontificia Universidad Católica del Ecuador* (Pontifical Catholic University of Ecuador) with a subject on Mental Hygiene (Guerrero, 2006).

In 1975, together with her friend, the Jesuit priest and Ecuadorian anthropologist, Marco Vinicio Rueda (1914–2005), who had also been trained in Zen meditation, she founded the *Centro de Desarrollo Integral* (Integral Development Center, CDI) in Quito, to offer psychological services to people with limited economic resources and all people who need psychological support (Centro de Desarrollo Integral, 2019). It is also the first Zen meditation center in Ecuador.

Vera, somehow, managed to bring together Judaism, Buddhism, Christianity, and psychology (La Televisión, 2012). At the CDI, she developed and applied the initiation therapy and psychography, which she learned in Europe. She has traveled to give conferences in several countries. She received recognition from the Ecuadorian Government and the Municipality of Quito for her work (La Televisión, 2012; Guerrero, 2006).

Vera Schiller de Kohn died in Quito at the age of one hundred (Plaza, 2012).

Schneider graduated in law at the University of Brazil in 1939; however, he did not practice the profession. These studies, especially the themes of Legal Medicine and Criminal Law, aroused his interest in psychology (Jacó-Vilela, 1999). In 1941, Schneider began his career in psychology by joining the Instituto de Psicologia (Institute of Psychology) through a competition for “Technician on Educational Affairs,” then exercising the position of “psychologist,” where the activities carried out consisted especially of the application of psychological tests (Jacó-Vilela, 1999).

In 1946, Schneider entered in a master course at the University of Iowa, under the guidance of Gustav Bergaman (1906–1987). He obtained his master’s degree in 1947 with a thesis on emergent personality theories, being “one of the first Brazilians with an academic background in Psychology” (Jacó-Vilela, 1999, p. 331). The University of Iowa was then a center for behavioral studies, heavily influenced by the Clark Leonard Hull school (1884–1952). When he returned to Brazil he considered himself a “convinced behaviorist,” but he did not give up the knowledge of other psychological schools (Schneider, 1999). He had the intention to pursue a doctorate at this same university, but in times of Marcatism, he was prevented from going to the USA due to his connection with communist ideals in his youth (Jacó-Vilela, 1999).

Among the activities that Schneider carried out, it is possible to highlight his performance as a psychotherapist at the Instituto de Seleção e Orientação Profissional (ISOP) (Institute of Selection and Professional Guidance) in 1949 until he moved to Porto Alegre in 1953, where he served as professor at the Pontifícia Universidade Católica (Pontifical Catholic University) of Rio Grande do Sul (PUC- RS) and as a psychotechnician at the Departamento de Estradas e Rodagem (Department of Roads and Highways) until 1954, when he returned to Rio de Janeiro (Jacó-Vilela, 1999). Back at his hometown he continued his activities at the Instituto de Psicologia (Institute of Psychology), he was director of the Colégio Hebreu Brasileiro (Brazilian Hebrew College) and was appointed to the Manicômio Judiciário Heitor Carrilho (MJHC) (Judicial Asylum Heitor Carrilho) as a psychologist under the influence of Jurandyr Manfredini (1905–1974) (Penna, 2001; Schneider, 1997). It was at the MJHC that Eliezer Schneider was able to return to his initial interest in criminology, carrying out activities with criminals and allowing him to combine his knowledge in law and psychology (Schneider, 1999).

Although Schneider developed a great amount of his practices at MJHC, his publications in the journal of this Asylum are scarce. Between 1957 and 1961 there was an interruption in the publications of the Arquivos do Manicômio Judiciário Heitor Carrilho (Archives of the Judicial Asylum Heitor Carrilho). When they were resumed, Eliezer Schneider was one of the editors, collaborating in the organization of articles, reports, and other publications related to the years 1958–1961. However, Schneider’s greatest dedication in relation to the publication of his works was in the *Boletim do Instituto de Psicologia* (Bulletin of the Institute of Psychology), a journal he created with Antônio Gomes Penna in 1951 when he worked at the Instituto de Psicologia (Institute of Psychology) (Penna, 2001). His publications, both in the Bulletin and in other scientific journals, were especially focused on the following themes: social psychology, education and development, personality studies, psychotechnics, and

history and epistemology of psychology and legal psychology.

From 1962, the year in which the profession of psychologist was regulated in Brazil, Eliezer Schneider worked in several undergraduation courses created in Rio de Janeiro, among them at the Universidade Federal do Rio de Janeiro (UFRJ) (Federal University of Rio de Janeiro), at the Universidade do Estado do Rio de Janeiro (UERJ) (State University of Rio de Janeiro), Universidade Gama Filho (UGF) (Gama Filho University), Faculdade de Humanidades Pedro II (FAHUPE) (Faculty of Humanities Pedro II), Universidade Santa Úrsula (Santa Úrsula University) and Centro Universitário Celso Lisboa (University Center Celso Lisboa) (Jacó-Vilela, 1999). He usually taught social psychology, based on an interdisciplinary approach, in which the contents of the other social sciences were present (Sá, 2007), which contrasted strongly with the cognitive-experimental social psychology taught by Aroldo Rodrigues beginning at the 1970s. This approach is reflected, for example, in the title of the only book he published, in which historical, cultural, and political issues are part of the constitution and field of interest of social psychology.

It was in the psychology course at FAHUPE that he was able to introduce the subject of legal psychology for the first time in the curriculum, which he taught from 1974–1977 (Jacó-Vilela, 1999). He also included the subject of legal psychology in the psychology course at UERJ, and in the 1980s this discipline was also included in the specialization course in clinical psychology, in research area called “psychodiagnosis for legal purposes” (Altoé, 2001; Rovinski, 2009). In addition, Schneider was director of the Instituto de Psicologia (Psychology Institute) at UERJ during the period 1971–1975 (Reis, 2001). Still in the 1970s, Schneider returned to ISOP and was invited by Franco Lo Presti Seminério to participate in the creation of the graduation course in psychology and to compose its planning committee (Jacó-Vilela, 1999).

Nowadays, Eliezer Schneider is recognized by the historiography of psychology for his production in the field of social psychology as well as for

the attention he devoted to his students, transmitting his knowledge with affection and with the commitment to guarantee a pluralistic formation and engaged with the historical, cultural, and political processes of his time.

Schneider, Georg Heinrich

Born *Leipzig, (Germany), 1846*

Died *Santiago, (Chile), 1919*

Silvana S. Hernández-Ortiz

Universidad Católica de Maule, Talca, Chile

Keywords

Chile · Germany · Pedagogy · Experimental Psychology · School and learning

Georg Heinrich Schneider was born in Leipzig, Germany, in 1846 and died in Santiago de Chile in 1919 (Figueroa, 1931). He was a German academic, psychologist, and pedagogue who was among the first teaching staff of the Instituto Pedagógico de la Universidad de Chile (Pedagogical Institute of the University of Chile). At the age of 20, he obtained a schoolteacher's diploma and continued his academic training until he qualified in 1868 to work in Elementary Education (Letelier, 1940; Salas & Lizama, 2009). He studied Pedagogy at the University of Jena and Psychology at the University of Leipzig (Drago & Espejo, 2014; Letelier, 1940).

Schneider arrived in Chile, at the request of President José Manuel Balmaceda, as part of a plan to improve education in Chile, which began with the creation of the Instituto Pedagógico (Pedagogic Institute) in 1889. Here he was entrusted with the chairs of Philosophy and Pedagogy. In 1892 he founded Liceo de Aplicación (Lyceum of Application), an establishment created under the auspices of the Pedagogical Institute (Godoy, 2015), where he held the chairs of pedagogy and

technical training of teachers, as well as managing the complete organization of the high school (Letelier, 1940; Mann, 1905). The lyceum served as a training and practice ground for the new principles of didactics for new teachers, under the direct supervision of Schneider (Godoy, 2015). In this way, a complementary relationship between psychology and pedagogy was initiated (Ligüeño & Parra, 2007).

Schneider was the first headmaster of the Lyceum of Application and was considered by his peers to be a highly prestigious theorist – he sought to implement technical branches in high schools by fitting out an area near the school so that the children could cultivate the land. He actively involved teachers in finding joint solutions to pedagogical problems. One of his main contributions to teaching, pedagogy, and psychology was his strong interest in considering the students as an active and protagonist part of the teaching process. He considered the student as the center of the school and learning, the basis of preparation for life as the ultimate goal. In the same way, he was an important proponent of the need for collaborative work between the school and the family, for the educational and coherent development of the child (Peña y Lillo, 1942/2014).

Among the great number of works published by Schneider, those that reached a wider audience are worth mentioning Salas & Lizama, 2009), such as *Der thierische wille* (The animal will) (Schneider, 1880); *Der menschliche Wile vom Standpunkte der neueren Entwicklungstheorien* (The human will from the point of view of the more recent development theories of “Darwinism”) (Schneider, 1882); and *Lust und Schmerz des Menschengeschlechts* (Pleasure and Pain of the Human Race) (Schneider, 1883). In his works, the use of the empirical method of philosophy is predominant. He discarded that which constituted mere speculative reflection and tried to build, through the careful study of material reality and active practice, the foundations of the fundamental assertions of the spirit (Salazar & Navarro, 1942).

Schneider's work was widely recognized by leading figures in science and psychology. One of them was Wilhelm Wundt, who said: "With his works *Der thierische wille* and *Der menschliche wille*, books that have earned him a doctorate in philosophy from our university, Dr. Schneider has contributed greatly to the development of psychology in general and mainly of animal psychology" (Salas, 2012, p. 105). Similarly, Valentín Letelier (1852–1919) (Letelier, 1940) refers to him as one of the founders of Experimental Psychology in Chile. He was equally interested in the relationship between physical and mental phenomena and tried to unravel the eternal mystery that is the nature of the soul. He sought to establish the parameters of psychic development through a comparative method applied to mental phenomena in both lower and higher beings (Salazar & Navarro, 1942).

For Schneider, Pedagogy and Psychology had to be articulated through a scientific approach, where Pedagogy would be based on the adequate knowledge of the child, considering aspects of Psychology, in relation to mental reality as an individual activity. Therefore, it could not be reduced to the mere reproduction of schemes or theoretical formulas, but it considered as central the practice and integration of the mental activity or concern towards learning, with which the student arrived at school. With this perspective, it is the teacher who must guide the student's discovery of his or her personality and provide him or her with the necessary tools to contribute to social progress. He advocated a pedagogy that was both theoretical and strongly practical, both in the actions of the teacher and the active role of the student (Salazar & Navarro, 1942).

After Schneider's retirement from the Pedagogical Institute, he was temporarily succeeded by Professor Rodolfo Lenz, as deputy rector, until the arrival in 1903 of Wilhelm Mann (1874–1970), to take over the post of rector of the Lyceum of Application (Salas, 2012). His contributions were relevant at the beginning of the Pedagogical Institute and the inclusion of the Experimental Psychology that Mann would later develop more strongly.

Segui, Juan Carlos

Born *Córdoba, (Argentina), 21 August 1940*

Laura M. V. Manoiloff
Universidad Nacional de Córdoba, Córdoba,
Argentina

Keywords

Argentina · France · Experimental psychology · Cognitive sciences · Psycholinguistics

Juan Segui performed all his studies, primary and secondary school and university, in the city of Córdoba.

He began his degree in psychology at the Universidad Nacional de Córdoba (National University of Córdoba) in 1960. In 1964, after finishing all the courses, he traveled to France to conduct research that would allow him the completion of the degree. In Paris, he studied experimental psychology at the Institute of Psychology, directed by Paul Fraise (1911–1996). The following year he obtained a diploma in experimental psychology and began a research in visual psychophysics directed by Fraise. Subsequently, under the direction of Fraise, he completed his

doctorate in the psycholinguistic field on memory and sentence comprehension. In 1967 he joined the Centre National de la Recherche Scientifique (French National Council for Scientific Research, CNRS) as a researcher at the Laboratoire de Psychologie Expérimentale, Université René Descartes (Laboratory of Experimental Psychology, LPE, René Descartes University), in which he was already working. In addition, he assumed the leadership of the Psycholinguistics Team, which would last for several years. At that point, psycholinguistics represented the paradigmatic discipline of recent cognitive sciences.

In 1968 he published his first article in the renowned journal *L'Année Psychologique* dealing with the naming of images in collaboration with Fraise (Segui & Fraise, 1968). Shortly, he would become the author of numerous scientific articles in the most prestigious journals in the area of cognitive and experimental psychology; together with books and book chapters, his main research domains are: the perception and production of speech, and the processes involved in reading.

From 1969 to 2005 he taught cognitive psychology and psycholinguistics at the University René Descartes, Paris V.

In 1973 he received the Bronze Medal from the CNRS, which is awarded to recognize the first work of a promising researcher in a given field, making him a specialist in his issue.

In 1992 he was appointed director of the laboratory in which he had been trained: the Laboratory of Experimental Psychology. This prestigious laboratory was associated with important institutions such as the French National Council for Scientific Research (CNRS), the René Descartes University, and the École des Hautes Études (School of Advanced Studies) (Muñoz & Mañas, 2012). This position was held by him until 2001.

From 1994 to 2004 he was one of the individuals in charge of training in cognitive psychology for the Diplôme d'Études Approfondies (Diploma of Advanced Studies) in Cognitive Sciences of the School of Advanced Studies, and later, of the Cogmaster of Cognitive Psychology in Paris.

In 1995 he took the position of director of the journal *L'Année Psychologique* created by Henri Beaunis (1830–1921) and Alfred Binet

(1857–1911) in 1894, and prestigious in the French experimental psychology. He held the position for 11 years, until 2006.

He trained several generations of prominent French and foreign researchers and professors. During his career he collaborated with colleagues from prestigious universities in Europe and America.

In 2004, when Segui retired, a group of colleagues and friends (consisting of recognized researchers from different countries) met for the preparation of a book and a conference in his honor with the aim to remind the scientific community about his great contribution to contemporary psycholinguistics (Ferrand & Grainger, 2004).

He is currently the Emeritus Director of Research at the CNRS.

Regarding Argentina, Juan Segui maintained relationships with his Argentine colleagues, seeking to generate and participate in projects that would allow the development of cognitive psychology in the country.

At the end of August 1974, invited by the linguist Gabriel Bes (1935–2013), he made an annual stay in San Luis as part of his sabbatical year in Paris. The project was to collaborate in the creation of an interdisciplinary training in the domain of language at the University of San Luis. This project was intended for students from different disciplines who were interested in the problems of language and its alterations.

Within the project, he taught the course on the processes of comprehension, memorization, and language acquisition. The course was held during the 1975 university year. Segui explained that this subject had aroused great interest in the students, who, in addition to attending the courses, participated in research experiences in psycholinguistics and in the writing of the corresponding reports (J. Segui, personal communication, October 20, 2020). However, this project was left unfinished due to the political circumstances of the country prior to the coup d'état, so he had to return to Paris at the end of September of that year.

After the return of democracy, during the 1990s, Segui began to travel regularly to Argentina. For several years he participated in update

courses for psychology professors organized by the Asociación de Unidades Académicas de Psicología (Association of Faculties and Departments of Psychology, AUAPSI), an institution that brings together all the most important psychology majors in the country. That occasion was an important opportunity for Segui to establish new scientific relationships, and also friendship, with colleagues from the National Universities of Córdoba, Buenos Aires, Mar del Plata, La Plata, Rosario, and San Luis (Muñoz & Mañas, 2012).

Later, he was invited by Aníbal Duarte (1934–2009), professor at the Facultad de Psicología de la Universidad de Buenos Aires (Faculty of Psychology at the University of Buenos Aires, UBA) and an important promoter of cognitive science in Argentina, and Carlos Molinari Maroto (1956–2011), who would be Duarte's successor, to take part of the teaching team of the master's degree in cognitive psychology at the UBA. In addition, he took responsibility for the training of young researchers (including doctoral students), which led to the creation of research groups in different universities, such as the National University of Córdoba (UNC), which currently has a promising line of research in psycholinguistics.

He obtained important recognitions in Argentina: Honorary Professor of the University of Buenos Aires, Honorary Member of the Argentine Society of Neuropsychology (SONEPSA), Doctor Honoris Causa of the National University of Córdoba, and Full Professor at the University of Belgrano.

In May 2011, in the city of Buenos Aires, by initiative of the Instituto de Lingüística de la Facultad de Filosofía y Letras de la UBA (Institute of Linguistics of the Faculty of Philosophy and Letters of the UBA), a meeting of renowned researchers dedicated to studying language processing was organized at the prestigious National Library, with the additional reason to honor Juan Segui. This tribute received the adhesion of foreign and local colleagues.

Segui continues to collaborate with research teams from the Faculty of Psychology of the UNC and the Institute of Linguistics of the Faculty of Philosophy and Humanities of the UBA.

His last participation in Argentina was in 2019 as one of the main speakers at the *II Jornadas de Trabajo en Estudios del Procesamiento del Lenguaje. Homenaje a Ana Borzone por su aporte a la enseñanza de la lengua* (II Workshop on Language Processing Studies. Tribute to Ana Borzone for her contribution to the teaching of Language), organized by the National University of Cordoba.

In conclusion, as mentioned by other authors (Jaichenco & Sevilla, 2013), although Seguí developed a successful career in France and being internationally recognized, he always maintained relationships with his Argentine colleagues, participating in innumerable scientific and academic activities, committing himself in the training of young human resources, and maintaining a frequent exchange with Argentine research groups in experimental psychology, neuropsychology, and psycholinguistics. In other words, the current development of the cognitive psychology of language in the country had the invaluable contribution of Juan Seguí.

Seguín, Carlos Alberto

Born on Arequipa (Peru), August 8, 1907

Died in Lima (Peru), August 26, 1995

Ramón León

Universidad Ricardo Palma, Lima, Peru

Keywords

Peru · Psychiatry · Psychoanalysis

Carlos Alberto Seguín was a Peruvian psychiatrist. His father was deported to Argentina for political reasons, for which he studied medicine at the University of Buenos Aires, graduating in 1932. He then settled in Formosa (Argentina), where he strengthens his vocation for psychiatry. In 1939, he returned to Peru and attended the classes of Honorio Delgado, his uncle, at the Faculty of Medicine of the National University of San Marcos (UNMSM). In 1941, he began to work in the recently inaugurated *Hospital Obrero* de Lima (now *Hospital Guillermo Almenara*), of the Social Security, in which he founded the psychiatry service in 1942.

In order to improve himself, he moved to the United States and carried out a stay first at the Neuropsychiatric Institute in Hartford, Connecticut, and then at Columbia University, New York, at least 2 years of term where he had Helen Flanders Dunbar (1902–1959) as tutor, one of the most important figures in psychosomatic medicine. He returned to Peru in 1946 and began a vigorous movement for the dissemination of psychosomatic medicine and psychoanalysis, gathering around him a broad discipleship. In 1972, he retired from the *Hospital Obrero*.

In 1961, after the crisis caused by the massive resignation of teachers from the Faculty of Medicine of the UNMSM due to a new university law, Seguín began his teaching work in that institution where he became the main professor of the chair of psychiatry and founder of the psychosomatic medicine course. During his time at the Faculty of Medicine, he made modifications in the courses of the psychiatry specialty, giving special value to psychology (*The psychological preparation of the Medicine student*, Seguín 1964).

Throughout his extensive professional work carried out both at the institutional level and in private practice, Seguín published around 300 articles not only in specialized journals but also in newspapers in the Peruvian capital (Silva Tuesta 1994a, b). During his work at the *Hospital Obrero*, he created and animated the *Annals of the Psychiatry Service* (*Anales del Servicio de Psiquiatría*), a publication in a very modest format and with not always regular periodicity, in which papers of his and his disciples appeared.

His books had a widespread readership: the *Introduction to Psychosomatic Medicine* (Seguín 1947) made known this approach to medicine, at that time very widespread. Some time later, *Existentialism and Psychiatry* appeared (Seguín 1960, which presents the approaches of Binswanger, Frankl, Sartre, and Boss, among others), but undoubtedly the most influential work was *Love and Psychotherapy* (Seguín 1963), in which he introduced the term *psychotherapeutic eros*, with which he designated the feeling experienced (free from erotic components or the purpose of imposing values) by the psychotherapist with respect to his patient.

The variety of topics that attracted Seguín was very great and in almost every area that aroused his interest, he made bibliographic contributions. Thus, he edited *Psychiatry and Society* (Seguín 1962) and also a book on folk psychiatry (Seguín 1979). A work on Freud (Seguín 1940) is one of his first books. Essays, plays, and newspaper articles also form part of his important bibliographic output.

A book that provides a panoramic view of Seguín's work as well as certain aspects of his personal and professional life is *Conversations with Seguín*, which presents his continued dialogues with one of his disciples, Max Silva Tuesta (1979).

Carlos Alberto Seguín represented psychoanalysis in Peru during the years in which Honorio Delgado, the most influential Peruvian psychiatrist, defended phenomenological psychology and harshly criticized Freudian theory. Seguín's books, especially *Love and Psychotherapy*, were widely disseminated, and their reading was almost mandatory in psychology and psychiatry study programs.

Keywords

Bolivia · Psychiatry · Psychology

Alberto Seleme was a Bolivian doctor. He spent part of his childhood and adolescence abroad, pursuing secondary studies at the *Salvador School (Colegio del Salvador, Buenos Aires, Argentina)*, the city where he also completed his university studies. Later he traveled to Spain, where he

specialized in clinical psychiatry and medical psychology at the University of Navarra (Pamplona), working alongside his mentor José Soria Ruiz (who died in 2016) between 1963 and 1967, teaching general psychology and differential psychology at that university between 1962 and 1965. Likewise, between 1963 and 1964 he worked as a psychiatrist specializing in families and children at the Navarra Health Department and was a professor of child psychiatry at the *Escuela del Magisterio (Teacher's School)* also in Navarra. His work and his professional performance were greatly influenced by the ideas of Karl Jaspers (1883–1969), the German psychopathologist and philosopher, as well as Ludwig Binswanger (1881–1966) and Eugène Minkowski (1885–1972).

Returning to his country in 1968, Seleme Antelo taught at different university institutions, and developed (together with Alberto Conessa and René Calderón Soria) the study plan for the specialty of psychology that began to function in 1971 at the Bolivian Catholic University (Peace). In Santa Cruz, his hometown, he also taught at the Gabriel René Moreno University, worked at the San Juan de Dios Hospital, and inaugurated outpatient psychiatry services at the National Social Security Fund and at the Petrolero Hospital. A supernumerary member of *Opus Dei*, Seleme Antelo participated in numerous activities of this institution in the world of medical assistance. Suffered from a severe illness shortly after returning to his country, he carried out his work until shortly before his death.

A man with a solid phenomenological training in psychiatry and psychology, Seleme Antelo is one of the pioneers in the teaching of psychology in Bolivia.

Seminerio, Franco Lo Presti

Born *in Turin, Italy, January 23, 1923*

Died *in Rio de Janeiro, Brazil, on June 23, 2003*

Jean Costa Santana¹ and Francisco Teixeira Portugal²

¹Universidade Federal do Rio de Janeiro, Rio de Janeiro, Brazil

²Instituto de Psicologia, Universidade Federal do Rio de Janeiro, Rio de Janeiro, Brazil

Keywords

Brazil · Italy · Psychotechnics · Ergonomics

Franco Lo Presti Seminerio graduated in letters from *Universit  Degli Studi Di Genova* (University of Genova), Italy, in 1944. At the same university, he defended his PhD dissertation on Portuguese literature in 1946 addressing the work of Antero de Quental. That same year, concurrently, by taking advantage of optional and complementary disciplines, he graduated in philosophy (Silva; Biasoli-Alves, 2003). After WWII, he emigrated to Brazil in 1947 and was granted Brazilian nationality in 1954, but the Universidade do Brasil (University of Brazil/UB) – now Universidade Federal do Rio de Janeiro (Federal University of Rio de Janeiro) – did not revalidate his PhD title at the time.

The Centro Juvenil de Orienta o e Pesquisa (CEJOP) (Youth Center for orientation and Research), in Niter i, received Seminerio as a teacher in the late 1950s. He conducted in this institution experiments in applied psychology (Marques; Oliveira; Motta, 2009). In 1962, the Instituto de Sele o e Orienta o Profissional (ISOP) (Institute of Selection and Professional Guidance) of the Get lio Vargas Foundation, under the direction of Mira y Lopez, integrated Seminerio in his professional frame as a technician, and the Universidade Federal Fluminense (Federal University Fluminense) received him as a new professor to teach the discipline “Psychopedagogical examination technique” (D’Ara jo, 1999).

Seminerio applied for and obtained professional registration of psychologist in Brazil in 1962 in accordance with law 4.119/1962, due to his academic degrees and the activity of psychologist exercised in the country. However, despite having this professional record, he decided to participate in the first selection of students for the psychology course at the Faculdade Nacional de Filosofia (FNF) (National Faculty of Philosophy), of the former UB. He began his studies at FNF in 1964, and after completing his bachelor’s degree in 1967, he began to act as a teacher and taught the subject of techniques of psychological examination and counseling. Transferring from UFF to UFRJ, he assumed, between 1968 and 1974, the head of the Department of Psychology and Education of the Faculdade de Educa o (College of Education) of UFRJ. Meanwhile, he defended his second PhD dissertation in philosophy at the University of Genoa whose title was revalidated the following year by UFRJ, and in 1977, he joined as a full professor at the Institute of Psychology of UFRJ.

Much of Seminerio’s performance in Brazil, however, took place at ISOP. Seminerio worked in the Selection Division, participating in the evaluation of drivers and candidates for the National magistrate, assuming a critical stance to the quantitative model of psychotechnics (Seidl-de-Moura, 2011). In 1969, Seminerio was appointed deputy director and head of the research sector of ISOP. The following year, he assumed the direction of the Institute, a position he held until the extinction of ISOP in 1990. As director of ISOP, Seminerio implemented research and teaching making it a Social Research Center.

Seminerio established at ISOP the Center for Studies and Research Applied to Labor (CENPAT); the Center for Studies and Research Applied to Education (CENPAE); the Center for Information and Occupational Studies (CIPO); and the Center for Graduate Studies in Psychology (CPGP). He inaugurated at CPGP in 1971 one of the first Master’s courses in psychology in the country and participated in the creation, in 1977, of the doctoral course in psychology (Castro; Alc ntara, 2011).

In 1975, Seminerio innovatively implemented the qualification course in ergonomics in the country and coordinated a research project involving sugarcane cutters in the city of Campos dos Goytacazes, State of Rio de Janeiro, finding poisoning by chemical substance of common use in that work activity. The Ministério da Agricultura (Ministry of Agriculture) banned the use of the substance once informed of the results of the research carried out.

From the PhD dissertation in philosophy, defended in 1973 at the University of Genoa, Seminerio extended his studies to the educational area by analyzing the meaning of information in thought and intelligence. Still at ISOP, he sent a proposal to the Ministry of Education for an educational diagnosis at the national level.

Franco Lo Presti Seminerio was, between 1970 and 1990, editor of one of the oldest psychology journals in Brazil, founded at ISOP in 1949 under the name Arquivos Brasileiros de Psicotécnica (Brazilian Archives of PsychoTechnics) (Seidl-de-Moura, 2011). The journal was called Arquivos Brasileiros de Psicologia Aplicada (Brazilian Archives of Applied Psychology) between 1969 and 1978 and currently circulates under the name Arquivos Brasileiros de Psicologia (Brazilian Archives of Psychology) edited by the Institute of Psychology of UFRJ. He was president of the Associação Brasileira de Psicologia Aplicada (Brazilian Association of Applied Psychology) and of the Associação Brasileira de Psicologia de São Paulo (Brazilian Association of Psychology of São Paulo).

El Salvador · Clinical psychology · Psychological testing · Vocational Assessment

Rodolfo José Semsch Aguilar is recognized as the very first person who obtained an undergraduate degree in psychology in El Salvador. As a professional, he was a multifaceted pioneer in the areas of clinical, organizational, and military psychology. As a scientist, he was passionate about the study of personality and the early use of computers and application of factorial models to personality measurement. In academia, he worked with world-class psychologists, trained generations of professionals, and held several senior positions. He even had the distinction of having counseled the first Salvadoran to be elevated to sainthood by the Catholic Church, Archbishop Oscar A. Romero y Galdámez (1917–1980).

Rodolfo Semsch, known to family and friends as Rudy, was the son of Rodolfo Carlos Semsch Porth and Julia Aguilar (Semsch Larín, 2017). His father, whose roots were both Austrian and Peruvian (Personal communication with Maria Teresa Salinas de Semsch, July 12, 2007), emigrated to El Salvador where he worked as an accountant at the State Audit Court. After the end of World War II, Rodolfo Semsch Jr. traveled to the United States when he was 20 years old and enlisted into the US military service in 1946 in San Francisco, California (Ancestry.com, 2011). There, he started training and was later deployed to Japan as a member of the American occupation Army. Upon his return to El Salvador, he met and married Maria Teresa Salinas, and together they had four sons: Rodolfo, Francisco, Ludwig, and Hermann (F. Semsch, personal communication, September 6, 2020).

Before the School of Psychology was founded at the University of El Salvador in 1956, Rodolfo Semsch ran a very successful career as an insurance sales agent for Pan-American Life Insurance Cia. Despite having a very promising future in the company, he decided to leave it behind and study psychology instead. The president of the company visited his wife and asked her to intercede on his behalf to convince Semsch to stay, but she made it clear that being a psychologist was her husband's dream and that she would not do anything to stop him from fulfilling it (F. Semsch, personal communication, September 6, 2020).

When the School of Psychology finally opened in April of 1956, it first offered a 2-year professional degree in psychometrics that trained only five students, including Semsch. He began his studies in 1957, finished them in 1959, and graduated in 1960 as a psychometrist. However, the School of Psychology ended the psychometrics program right after the first cohort and reorganized it as a full-fledged 5-year undergraduate program in psychology. Semsch continued to enroll in the program and was the first psychologist fully trained in the country. He obtained his degree in 1964 (Ávalos Guevara, 2010). At that time, his family had grown to four children (F. Semsch, personal communication, September 6, 2020).

Albert Walter Stahel (?-?), the founding figure of the psychology program at the University of El Salvador, was joined by renowned Austrian psychologist Paul Watzlawick (1921–2007) in 1957. Both Semsch and his close friend and colleague, Francisco Armando Torres, worked directly under the mentoring of Stahel and Watzlawick (F. A. Torres, personal communication, February 17, 2005).

On behalf of the US Office of Naval Research, US psychologist Morton A. Bertin (1913–1997) visited 10 different Latin American countries in the early 1970s and interviewed a number of leading psychologists to document “the status of psychological research and activity in foreign schools and laboratories” (Bertin, 1974, p. i). He visited El Salvador in 1973 and interviewed Semsch. According to Bertin's report and Semsch Larín's (2017) account, Semsch started his professional clinical work in the Department of Physical Medicine and Rehabilitation in 1960 at Hospital Rosales. This was the very first time a psychologist was working in an applied setting in the country.

Semsch combined his clinical work with academic endeavors and joined the psychology program as an instructor in 1960 (Gómez Solís et al., 2009). In 1965, he was awarded a scholarship under the joint sponsorship of the British Council of Education and the University of El Salvador to study in London (Bertin, 1974). Semsch did his

postgraduate and doctoral work at the University of London's Maudsley Hospital under the mentorship of Hans Eysenck (1916–1997) and Franz Morgenstern (1929–2001). By the time he arrived to London, Eysenck and his colleagues were working and refining the Eysenck Personality Inventory (EPI, H. J. Eysenck & Eysenck, 1964). Combining his early work on rehabilitation and his interest in personality, Semsch collaborated with Eysenck and Morgenstern in the study of sensory processes related to the phantom limb syndrome as well as the study of personality factors. As part of his studies, he received advanced statistical training with Patrick Slater (1908–?), who had conducted studies in personality testing as well. Semsch completed his Ph.D. in clinical psychology and returned to El Salvador.

Semsch introduced the EPI to El Salvador to study personality factors among Salvadorans (Bertin, 1974). With Spanish psychologist, Luis Blanco Pérez (?-?), Semsch presented one of his early personality studies in the 10th Interamerican Congress of Psychology held in Lima, Peru, in 1966 (Hereford & Natalicio, 1967). By then, he was one of the 8 Salvadoran psychologists listed as members of the Interamerican Society of Psychology (Sociedad Interamericana de Psicología [SIP], 1967). He later reported part of his work in a publication of the Department of Psychology (Semsch, 1968). He also introduced the Minnesota Multiphasic Personality Inventory (MMPI), which he standardized as he was the only person authorized to use it in Central and South America (Personal communication with F. Semsch, September 6th, 2020). Besides being an SIP member, Semsch was a member of the International Association of Applied Psychology (IAAP) and the American Association for the Advancement of Science (AAAS) (M. T. Salinas de Semsch, personal communication, July 12, 2007).

Recommended by psychologist Mariano Yela Granizo (1921–1994), former students Luis Blanco Pérez (?-?) and Pío Rodríguez (1935–) had come from Spain, and Semsch worked with both of them (Personal communication with Rodríguez, November 2nd, 2008). In the mid-1960s, together they began the early use of computers to statistically analyze data from multiple

studies that measured psychological variables. Blanco Pérez and Rodríguez left in 1967 and Semsch took over the position of chair the Department of Psychology. He left his post after a short period because he disagreed with the turn to the left that the Faculty of Humanities was taking in the early 1970s and the way that this was influencing the academic agenda of the Department of Psychology (F. Semsch, personal communication, September 6, 2020).

After leaving the University of El Salvador, Semsch pursued in the 1970s two main activities: teaching and practicing clinical, military, and organizational/industrial psychology (Bertin, 1974; F. Semsch, personal communication, September 6, 2020). As an instructor, he continued teaching psychology courses at the Salvadoran Nursing School, the Salvadoran Military School, the University of Central America (UCA), and other private universities. As a clinical psychologist, he is credited with opening the first bona fide private practice in the country. In his clinic, he offered psychotherapy and psychological testing in the areas of personality and vocational assessment. According to Cabrera (1975), during the first half of the 1970s, the availability of private practice among psychologists in El Salvador was close to none, and only those trained abroad could offer it. Although Semsch was not trained as a psychoanalyst, he combined it with other behavioral approaches as many psychologists did during that period (Cabrera, 1975).

At the Salvadoran Military School, he began offering individual counseling, and later on he introduced a more comprehensive mental health service to the new cadets. He also attempted to develop psychological instruments that could predict successful outcomes among those completing their military careers. At the Salvadoran Central Bank, he initially offered individual counseling too, but soon after, he introduced the use of psychological testing for purposes of personnel selection and human resources. When he met Bertin in 1973, he was planning to introduce “supervisor, management, and executive training approaches as applied to bank personnel” (Bertin, 1974, p. 10). He also conducted vocational assessments

at the San José de la Montaña seminary in San Salvador among aspiring seminarians. In addition, he worked for several embassies, including the American embassy, and several public and private organizations. Due to his prestigious professional career, he received job offers from UNCESCO and Rice University in Houston, but he declined them in order to remain with his practice in El Salvador (Semsch Larín, 2017).

Perhaps one of the most unique activities that Semsch engaged in during his professional life was counseling the Archbishop of San Salvador, Monsignor Oscar A. Romero y Galdámez. Their relationship was unknown due to Semsch's strict professional confidentiality, but Romero disclosed it in his personal diary which eventually was made public. According to Brockman (1982), Romero started seeing Semsch in 1973, after meeting him at the seminary where he provided psychological testing services. Semsch, nevertheless, did not offer psychological therapy to Romero; instead, he offered psychological support and a psychological perspective about his life and decisions. Romero regarded Semsch's counsel very highly, and from March 31, 1977, until March 20, 1980, he recorded seven entries that made reference to encounters with him (Romero, 1990). He even baptized Semsch's granddaughter, Dina Semsch, an event that showed the strong bond between both men. Romero's last meeting with Semsch took place on January 14, 1980, a little more than 2 months before being killed by a sharpshooter while giving mass on March 24, 1980.

Romero's assassination escalated the sociopolitical conflict that was engulfing the country and triggered the beginning of the 12-year Salvadoran civil war. On January 16, 1981, in the context of a general offensive launched by the Farabundo Martí National Liberation Front (FMLN, in Spanish), Semsch was gunned down with his third youngest son, Ludwig, when they both were leaving Semsch's private clinic. The assassination made international news and was reported in papers like the Washington Post and ABC in Spain. At the time, Semsch was a professor of psychology at the Military School and a consultant to the American Embassy, two very risky

places to work for. Although it was not clear who the authors of the crime were, Semsch's family attributed it to a leftist urban commando (F. Semsch, personal communication, September 6, 2020). Semsch was 56 years old and his son Ludwig 24.

Fearing for the safety of the surviving children, the family made the decision to send them into exile immediately after Semsch's funeral service. Maria Teresa Salinas de Semsch followed them shortly after (M. T. Salinas de Semsch, personal communication, July 12, 2007). Before leaving, however, she burned all the personal notes and documents of her late husband to leave no traces of his work and erase any compromising information provided by his patients. Unfortunately, besides a couple of pieces, much of the unpublished works left by Semsch were lost forever as well. His extensive personal library was donated to a private university in El Salvador.

Senet, Rodolfo

Born *San Martín, Province of Buenos Aires, 29 March 1872*

Died *Buenos Aires, 15 October 1938*

Luis Moya
Universidad Nacional de Mar del Plata, Mar del Plata, Argentina

Keywords

Argentina · Psychology · Pedagogy · Positivism

In 1889, at the age of 17, he graduated as a teacher from Escuela Normal de Buenos Aires (Buenos

Aires Normal School of Teachers) and began university studies in mathematics while working as an elementary school teacher. Senet did not graduate as a mathematician, but he later applied the methodological tools he had acquired in that program to his studies of experimental psychology (Sassi, 1985). When he was working as a secretary and French teacher at the Escuela Mixta de Mercedes (Co-ed School of the city of Mercedes), in 1894, he met “Victor Mercante” (1870–1934), one of the main representatives of educational psychology at the time. He then moved to the city of Dolores, Province of Buenos Aires, and served as Vice-Director of the local Normal School, where he undertook his first systematic steps in psychological research.

In 1902, he founded the newspaper *El Nacional* (The National) and integrated the first group of editors of the *Archivos de Criminología, Psiquiatría y Medicina Legal* (Archives of Criminology, Psychiatry and Legal Medicine) directed by José Ingenieros (1877–1925). One of the papers he published in this journal was “Período de megalomanía en la evolución psicológica individual” (Megalomania period in individual psychological evolution) (Senet, 1902), demonstrating his early interest not only in students' intellectual dimension, but also in their affective and volitional aspects (Ostrovsky, 2010). In 1905, he moved to the city of La Plata to participate as a Professor in the newly created Sección Pedagógica de la Facultad de Ciencias Jurídicas de la Universidad Nacional de La Plata (Pedagogical Section of the College Faculty of Law at National University of La Plata), directed by Víctor Mercante. In that area, he taught Anthropology and Abnormal Psychology and represented Argentina at the 5th International Congress of Psychology held in Rome. There he began his academic exchange with representatives of French and Belgian educational psychology, which was then reflected in numerous studies. For more than 20 years, Senet worked in La Plata conducting psychological research, which was published mostly in the journal *Archivos de Pedagogía y Ciencias Afines* (Archives of Pedagogy and Related Sciences) (Talak, 2014; Vicari, 2014). Some of his books on pedagogy, child psychology, and education are a clear example

of the association between scientific pedagogy and naturalistic psychology in the early twentieth century in Argentina (Senet, 1902, 1908, 1909, 1911, 1912a, 1912b, 1914).

Senet was one of the founding members of the Sociedad de Psicología (Psychological Society) in 1908 and also of the Comité Positivista Argentino (Argentine Positivist Committee). During the University Reform transition in 1918, he occupied political and administrative position at the National University of La Plata. Towards the mid-1920s, Senet retired from teaching and devoted himself to writing literary works and essays related to identity, *gaucho* psychology, and the uses of popular language (Glozman, 2010; Ostrovsky & Moya, 2018). As a consequence of these works, some years later he was hired to study the national language (Senet, 1927, 1938). Imbued with an intellectual climate which differed from his first positivist concerns, Senet continued focusing on essay writing until his death in 1938, at the age of 66.

Serafini, Oscar

Born *Asunción, Paraguay, 28 December 1931*

Died *Asunción, Paraguay, 3 April 2021*

José Gaspar Britos

Universidad Católica, Asunción, Paraguay

Keywords

Paraguay · Psychological measurement · Educational quality · Social research

Oscar Serafini studied Philosophy between 1951 and 1954 at the Facultad de Filosofía de la Universidad Nacional de Asunción (Faculty of Philosophy, National University of Asunción), Paraguay. He obtained a university degree in Philosophy.

Time after, he was admitted for doctoral studies in Philosophy at the Universidad Central de Madrid (Central University of Madrid), Spain. The doctoral courses spanned the years 1956 and 1957. Later, he defended his doctoral dissertation at the Facultad de Filosofía de la Universidad Católica de Asunción (Faculty of Philosophy of the Catholic University of Asunción).

Seven years later, he traveled to the United States to join the Project on Didactics of Learning and Advanced Methods in Educational Research, taught at the University of New Mexico, in the city of Albuquerque.

Oscar Serafini's professional and academic career is internationally recognized. Proof of this is that, in addition to his country, he made anchor in ten other countries. His works on Critical Thinking, Evaluation of educational projects, Evaluation of institutional projects, and Divergent Thinking were presented in Brazil, the United States, Ecuador, Guatemala, Uruguay, Mexico, Peru, Costa Rica, Portugal, Nicaragua, Venezuela, and Colombia. Serafini was a protagonist in the transition from *evaluation* as an auxiliary to *educational research*, to a discipline with its own principles and methods.

After completing his doctoral studies at the Central University of Madrid, in 1960, he joined

the teaching profession at the Catholic University of Asunción (UCA), maintaining his academic relationship position until his death. Attached to the university, the Centro Interdisciplinario de Derecho Social y Economía Política (Interdisciplinary Center for Social Law and Political Economy, CIDSEP) commissioned a follow-up study on the graduates, in which Serafini served as the senior researcher (Serafini et al., 1989). In the period 2002–2004, Serafini held the position of Academic Vice-Rector at the Catholic University.

Within the framework of projects sponsored by the Organization of American States (OAS) and the Israel Institute of Applied Social Research, Oscar Serafini participated in various seminars under the direction of the eminent researcher, Louis Guttman (1916–1987). Above all, using as a basis the Theory of Facets applied to the generation of research instruments. Later, he was hired as technical personnel in the educational projects of the OAS (OAS), from 1974 to 1984.

In 1977, Professor Oscar Serafini joined the Faculty of Education of the University of Brasilia as a research professor. He was also part of the coordination of the first evaluation project of the University of Brasilia for all its undergraduate courses (Belloni et al., 1987).

His next academic destination was the University of Miño, at Braga, Portugal, where he was a postgraduate professor. In conjunction with the University of Santiago de Compostela, in Spain, Serafini was part of the team that carried out an evaluation of pedagogical internships. In the same year, as a consultant for the Center for Educational Studies and Community Development of the University of Miño, he served in a study published under the title “The experimentation for the new programs for the 10th year of schooling. An evaluation study” (Serafini et al., 1991).

His passage through Portugal also meant the formulation and validation of his instrumental research on the Robot Test (Serafini & Geada, 1989). Due to its characteristics, this nonverbal test to evaluate the visual-motor performance of children's cognitive development can be considered cross-cultural.

During the 1990s, he carried out research and evaluation work on educational systems, plans

and programs in national and international institutions. Universities in Paraguay and other countries, ministries of education and science, United Nations agencies, the Inter-American Development Bank, among others, can be mentioned.

In the early 2000s, the Catholic University of Asunción appointed Oscar Serafini Academic Vice-Rector, a role he held until 2004. After fulfilling the academic position, he restarted research and development activities. In 2005, he completed the process of generating and validating the Critical Thinking Test. This work was published in the digital library of the Organization of Ibero-American States for Education, Science and Culture (OEI) (Ministry of Education and Culture, 2005).

At the same time, the Paraguayan Ministry of Education undertakes reforms and includes *skills development* as part of the *national capacities* for formal education. The validation of competency measurement instruments, the teacher profile, and other measurements related to educational quality, meant good intellectual production that can be seen in the publication *Mechanism of Licensing of Teacher Training Institutions* (Ministerio de Educación y Cultura, 2007).

Under the tutorship of Oscar Serafini, the Catholic University of Asunción arranged a doctoral program in Psychology in 2006. The doctorate staff brought together international professors and currently has psychologists with the highest degree, and candidates for a doctorate in Psychology.

Among the awards that Oscar Serafini received, it is worth mentioning a distinction as the “Recognition for 10 uninterrupted years of professional work,” awarded by the Organization of American States (OAS), in 1985. Thus, also the “Alma Mater” award conferred by the Catholic University of Asunción, in 2010. And on July 1, 2013, the same university awarded Oscar Serafini as a *Doctor Honoris Causa*, highlighting his meritorious career.

It is also worth mentioning the recognition “For his ethical integrity, his theoretical and methodological contributions to evaluation, psychological and social research and for the exercise of teaching with intellectual rigor and a climate

of good humor,” by the National Congress of the Republic of Paraguay in 2014.

From his academic training in Philosophy, Oscar Serafini traveled the paths of evaluation, the construction of measurement instruments and conceptual models applied mainly to education and society. His expertise, mainly, in key areas of education, has made him a protagonist for research initiatives, evaluation, or the development of plans and programs. His mastery of the evaluation processes took him through countries in the Americas and some in Europe. It could be said that he was in interfaces where culture went from *evaluation* as an auxiliary discipline to an autonomous one. Also in Pedagogy, he starred in the transition from *content* to *Psychological skills*, in other words, from *contents* to *competences*.

When Oscar Serafini Trulls passed away on April 3, 2021, the Secretariat of Culture of the Presidency of the Republic of Paraguay made public an acknowledgment to his *example of life and invaluable legacy*.

México · Psychiatry · Optical physics · Mental illness

Rafael Serrano was born to Epifanio Serrano Santisteban and Soledad Daza Amable, who married in 1841. In a speech by his nephew in 1927 while celebrating the funeral of his memory, he said Serrano was born in 1858, as recorded in the

University Archive of Benemérita Universidad Autónoma de Puebla (Meritorious Autonomous University of Puebla) (BUAP).

Of his first studies, practically nothing is known. His high school studies were carried out from 1875 to 1879, time in which it was flared to learn about law and physics; he was known as an exemplary student. Later, he enrolled into the Real Seminario Palafoxiano (Royal Seminary Palafoxiano) (AEMF), in which he found out he had no religious vocation.

He studied medicine at the Escuela de Medicina y Farmacia, Colegio del Estado de Puebla (School of Medicine and Pharmacy at the College of the State of Puebla) [institution founded in 1825], (1879–1883). During his stay he highlighted as an excellent student, as shown by the various academic awards and honorable mentions received at the end of each school year. On 22, 23, and 29 December 1884 he presented his professional exam, with an investigation in which he united not only the scientific part but also nature with the spirit.

In it he defined madness as “a condition that is at the same time the most terrible for the individual and for society; the most full of difficulties; the one that inspires the most respect; the most worthy of compassion and according to Erasmus, the most common among men” (Serrano: 1884: 1). In it, he related physics to optics, as triggers for mental illness.

He obtained his medical degree in 1885 from the Colegio del Estado de Puebla (College of the State of Puebla). The thesis was awarded in 1890 by the Academia Médica Mexicana (Mexican Medical Academy).

His research work for his thesis carried out at the Hospital de San Roque (San Roque Hospital) and at the Hospital de Santa Rosa (Santa Rosa Hospital) in 1882 allowed him to make descriptions of clinical and forensic cases, always presenting the description of the diagnosis, the evolution of the disease, the treatment and timing of the condition, accompanied by cabinet (such as biological samples and X-ray) and laboratory (referring to autopsy) studies. He also described the use of a dark room to treat depressive and difficult patients. Furthermore, he was the first in

Mexico to use the term psychosis in 1884 and to state that the origin of mental illnesses was related to the sociocultural environment in which the sick lived. Likewise, he named and identified the mental illness and their pathological dysfunctions and proposed the theory that had its origin in the clinical and physiological synchronization. (Robles Galindo, 2003).

He practiced psychiatry from 1884–1927. He was a professor at the Colegio del Estado de Puebla (College of the State of Puebla) from 1890–1924, teaching classes mental disease and hygiene, principles of logic, moral psychology, pathology, and therapeutics (Robles Galindo, 2003: 113). He was the member of the Sociedad Médica de Beneficencia de Puebla (Charity Medical Society of Puebla) (1886–1927). He was partner of the Sociedad Filarmónica-Literaria (Literary-Philharmonic Society) (1901–1927); director of the Colegio del Estado de Puebla (College of the State of Puebla) (1910–1914 and 1921–1924); and director of the health house of Our Lady of Guadalupe (1910–1927). Meanwhile, he worked at the General State Hospital. Since 1990, he had been invited to be part of the faculty of the School of Medicine, where he had been a student. In 1923, he was appointed counselor of the Colegio del Estado de Puebla (College of the State of Puebla), thanks to the work he had carried out as a teacher for 30 consecutive years.

He participated in national and international conferences, such as the Third Mexican Medical Congress held in Guadalajara on June 7 to 10 in 1897. In 1910, he was held in Milwaukee, Wisconsin in the USA, at the American Public Health Association in which he presented one investigation of alcoholism (Robles Galindo, 2003: 133; Serrano, 1911).

After a long academic career, he decided to civil marriage in 1917 with Emilia Errea Escudero, with whom he had a daughter named Refugio Emilia Serrano Errea in 1918. He became widower at the age of 66 years because his wife perished in 1924.

In 1921, for the second time, he was appointed director of the Colegio del Estado de Puebla (College of the State of Puebla), for the period 1921–1924. In this last year, he joined the Public

Charity Board. In addition, at the conclusion of his time, he was elected rector for the period of 1924–1925 and advisor to the same college. Also, he received the Palma de Oro (Golden Palm) from the same college in 1924, as dean of medicine.

He died at the age of 69 in 1927, and was a victim of liver cancer, as recorded in the death book in the archive of the civil registry of Puebla. To commemorate his first mourning month, friends and students placed his portrait inside the school, where he had studied and taught. Currently, it is located inside the office of the management of the Biblioteca José María Lafragua (José María Lafragua Library) and is part of the collection of the Museo Universitario (University Museum).

In 1931, this same institution acquired more than 10,538 thousand volumes that were part of its enormous library. These can be identified through the Ex dono. In 1935, a plaque with his name was placed in the space that protects his heritage. In 2012, an exhibition was organized with the doctor's books and personal documents, which is available online until today.

On the other hand, the psychiatric hospital known as El Batán bears his name. It was opened in 1967 and is in Lomas de San Miguel in Puebla City.

Ecuador · Educative psychology · Social psychology · Congress President

Son of Javier Serrano Mantilla and María Bolivia Jara Rodríguez, Nelson Hernán Serrano Jara was the first child of six siblings. Married to Norma Ojeda, they had three children: Paulina Cecilia, Nelson Hernán, and Norma Gabriela. He studied in the primary section of *Colegio Don Bosco* (Don Bosco School, 1948–1954). Secondary education was done at the *Colegio Normal Juan Montalvo* (Juan Montalvo Normal School, 1954–1960).

In 1964, he entered the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Letters and Educational Sciences) of the *Universidad Central del Ecuador* (Central University of Ecuador, UCE). He graduated as *Licenciado en Ciencias de la Educación, Profesor de Enseñanza Secundaria en la Especialización de Psicología* (Degree in Science in Education, Professor of Secondary Education in the Specialization of Psychology, 1968) and *Doctor en Psicología Educativa* (Doctor in Educational Psychology, 1973). He also obtained a *Master en Gerencia de Proyectos Educativos y Sociales* (master's degree in Management of Educational and Social Projects, 2003).

In 1975, he began his training in the social area with the *Seminarios Latinoamericanos de Psicología Social* (Latin American Seminars of Social Psychology) held in Caracas (1975 and 1979), Havana (1980), Santiago de Chile (1982), Madrid (1984), and Tampico-Mexico (1985) under the organization of the *Asociación Latinoamericana de Psicología Social* (Latin American Association of Social Psychology, ALAPSO).

His interest in social behavior of individuals led him to take a *Diplomado Superior en Ciencias*

Sociales con Mención en Análisis y Motivación de la Decisión Política (Higher Diploma in Social Sciences with a Mention in Analysis and Motivation of Political Decision) at the *Facultad Latinoamericana de Ciencias Sociales* (Latin American Faculty of Social Sciences, FLACSO) in Costa Rica (1990). He also completed a *Diplomado en Formador de Formadores* (Diploma in Training of Trainers) at the *Universidad Nacional Federico Villareal* (Federico Villarreal National University) in Peru (2006–2007), sponsored by the *Naciones Unidas* (United Nations) Office on Drugs and Crime.

At then *Instituto Nacional Mejía* (Instituto Nacional Mejía), he was a professor (1968–2005) and rector (2001–2005). He was also professor at the *Escuela de Psicología Educativa* (School of Educational Psychology) of the Faculty of Philosophy, Letters and Sciences of the UCE (1973–2013). He also worked as a contract professor at the *Pontificia Universidad Católica del Ecuador* (Pontifical Catholic University of Ecuador) (1998–2000).

He was *Director Nacional de Educación* (National Director of Education, 1998–2001) from where he contributed to the formulation and implementation of the *Plan Nacional de Educación para la Sexualidad y el Amor* (National Plan for Education for Sexuality and Love) in 2000, which was applied in the country's Secondary Education. He was also Advisor on Drug Abuse Prevention of the *Consejo Nacional de Control de Sustancias Psicotrópicas y Estupefacientes* (National Council for the Control of Psychotropic Substances and Narcotic Drugs, 2005–2010).

He promoted the creation of the *Sociedad Ecuatoriana de Psicólogos Educativos* (Ecuadorian Society of Educational Psychologists, 1977) and the *Sociedad Ecuatoriana de Psicología Deportiva* (Ecuadorian Society of Sports Psychology, 1979). The UCE awarded him the Central University Prize (1995) for the publication of his work *Processes of Socialization* (Serrano-Jara, 1995).

In 1974, he joined the *Sociedad Interamericana de Psicología* (Interamerican Society of Psychology, SIP), his first participation was in the XV *Congreso Interamericano de Psicología*

(Interamerican Congress of Psychology) held in December 1974 in Bogotá. From 1976, he was, for several periods, National Representative in Ecuador of the SIP and also Executive Secretary for South America (1981–1983) (Sociedad Interamericana de Psicología, 2020). Beginning in 1976, he joined the group of Associate Editors of the *Boletín de la SIP* (Bulletin del the SIP), where he collaborated with information on psychology in Ecuador.

The Board of Directors of the SIP chaired by Luiz Natalicio, in June 1981, commissioned Nelson Serrano Jara to organize and carry out the XIX Interamerican Congress of Psychology in Ecuador. The congress took place from July 24 to 29, 1983, in Quito. The event coincided with the commemoration of the bicentennial of the birth of the Liberator Simón Bolívar (1783–1830). About 2000 participants attended. In this congress, the Mexican Isabel Reyes-Lagunes (1942–2020) assumed the presidency of the SIP, who was the first woman to preside over the institution. In 1983, he began his participation in the production of the *Revista Interamericana de Psicología* (Interamerican Journal of Psychology) as Editorial Consultant, a function he was in charge of for five periods (1983–1993).

He was an active member of the ALAPSO; he was vice-president (1980–1984) and president (1984–1986) of the Andean Zone of that association; at this time, he collaborated with the edition of the *Revista de la Asociación Latinoamericana de Psicología Social* (Journal of the Latin American Association of Social Psychology). He was also a member of the Editorial Board of the *Revista de Psicología Social* (Journal of Social Psychology, 1986–1992).

His professional dedication was focused on education and mainly on social psychology; in the latter, he dealt with issues such as sexuality, social perception of adolescents, ethnic groups, and drug use and prevention with various works that address these issues.

Servo, Geraldo

Born *Morro do Ferro, district of Oliveira, 1 November 1930*

Died *Brasília, January 2001*

Rodolfo Luís Leite Batista
Universidade Federal de Minas Gerais, Belo Horizonte, Brazil

Keywords

Brazil · Educational psychology · Educational guidance · Institutional direction · Professional organizations

Geraldo Servo began his studies at the Grupo Escolar Francisco Fernandes (Francisco Fernandes School Group), in Oliveira, Minas

Gerais, where his family had moved to in 1934. He was sent to complete his secondary education at Colégio São João (Saint John School), in São João del-Rei, Minas Gerais. On the occasion, he dedicated himself to the study of mathematics, physics, and chemistry and had his first contact with pedagogy and psychology during secondary school. In 1946, he started his seminary studies at the Instituto do Coração Eucarístico (Institute of the Eucharistic Heart), in Pindamonhangaba, São Paulo. Back in São João del-Rei, he studied philosophy at the Instituto Salesiano de Filosofia e Pedagogia (Salesian Institute of Philosophy and Pedagogy) (1947–1949), receiving neoscholastic education and pedagogical training. He took his practicum as a teacher of physics and chemistry in different Salesian schools (1950–1952). Between 1953 and 1956, he graduated in theology from the Instituto Teológico Pio XI (Pius XI Theological Institute), in São Paulo, and in pedagogy from the Faculdade Salesiana de Filosofia, Ciências e Letras (Salesian Faculty of Philosophy, Sciences and Letters), in Lorena (1953–1956). In the capital of São Paulo, he had the opportunity to follow courses in characteriology at the Instituto de Psicologia (Institute of Psychology) da Universidade Católica de São Paulo (Catholic University of São Paulo). In 1955, he turned his religious profession perpetual, and, on August 15, 1956, he was ordained priest.

During his undergraduate course in pedagogy, he turned to the study and research of psychological themes. With the support of Father Carlos Leôncio da Silva, a Brazilian responsible for the foundation of the Istituto Superiore di Pedagogia (Higher Institute of Pedagogy), in Turin, and then director of the Faculdade Salesiana de Filosofia, Ciências e Letras (Salesian Faculty of Philosophy, Sciences and Letters), in Lorena, he was appointed to attend the Master of Pedagogy, with emphasis in psychology, at the Pontificio Ateneo Salesiano (Salesian Pontifical Athenaeum) in Turin, between 1956 and 1957 (Lourenço Filho, 1955/2004). During this period, he worked at the Laboratorio di Psicologia Sperimentale (Laboratory of Experimental Psychology), guided by Giacomo Lorenzini, and came to know the Experimental and Applied Psychology projects

disseminated in the Università Cattolica del Sacro Cuore (Catholic University of Sacred Heart), in Milan, the Université Catholique de Louvain (Catholic University of Louvain) and the Institut Catholique de Paris (Catholic Institute of Paris) (Misiak & Staudt, 1954). To obtain his master's degree, he defended the thesis "L'insegnamento della Fisica" (The teaching of Physics), an investigation about the perception of causality in the learning of physics (Servo, 1958). When he came back to Brazil, he became a professor of educational psychology at the Faculdade Dom Bosco de Filosofia, Ciências e Letras (Don Bosco Faculty of Philosophy, Sciences and Letters), in São João del-Rei, replacing Father Ralfy Mendes de Oliveira (1917–2008) as director of the Laboratório de Psicologia Experimental (Laboratory of Experimental Psychology) and the Serviço de Orientação Educacional (Educational Guidance Service). In that institution, in February 1958, he started clinical care and research with individuals diagnosed with mental impairment.

From 1959, he worked for the organization of the Instituto de Psicologia e Pedagogia (Institute of Psychology and Pedagogy), an entity officially founded in March 1960 to bring together the teaching, research, and application of psychology undertaken at Faculdade Dom Bosco de Filosofia, Ciências e Letras (Don Bosco Faculty of Philosophy, Sciences and Letters) (Servo, 1964; Batista, 2015). Directing it for almost a decade made it possible for Geraldo Servo to establish relationships with different characters from the psychology and education scene of the time, and to participate in debates for the regulation of the profession of psychologist in Brazil, which happened in 1962. He taught child and adolescent psychology, dynamic psychology, and psychopedagogical examination techniques in the Educational Guidance course in the different Salesian schools. Between the 1950s and 1960s, he received an invitation from the management of the company responsible for building the future Brazilian capital, Brasília, to implement psychological services there. Due to their religious commitments, this invitation was declined.

Between 1961 and 1962, he underwent a new training period in Europe, conducting research on psychodynamics of normal personality and psychology of motivation with Joseph Nuttin, at the Université Catholique de Louvain (Catholic University of Louvain) and at the Centre International d'Études Pédagogiques (International Center for Pedagogical Studies) in Paris. Back in Brazil, in compliance with the Brazilian law that regulated the training and profession of psychologists, he obtained registration as a psychologist with the Ministry of Education. He dedicated himself to expanding the activities of the Instituto de Psicologia e Pedagogia (Institute of Psychology and Pedagogy), consolidating his clinical care and guidance services and participating in the organization of the Escola dos Excepcionais (School for Exceptional People), precursor of the Associação de Pais e Amigos dos Excepcionais (Association of Parents and Friends of the Exceptional) de São João del-Rei. He also taught in courses in applied psychology for teachers and created the Serviço de Orientação Educacional (Educational Guidance Service) in public schools financed by the Campanha de Desenvolvimento do Ensino Secundário do Ministério da Educação (Ministry of Education's Secondary Education Development Campaign) in more than 30 Brazilian cities. In 1967, he returned to Europe to participate in the International Congress of Applied Psychology and visited research centers. In December of that year, while still living in São João del-Rei, he founded and was elected the first president of the Sociedade de Psicologia do Distrito Federal (Psychology Society of the Federal District) – an entity that, in conjunction with other regional societies, advanced proposals for the creation of the professional council of psychologists.

In 1969, Geraldo Servo left the priesthood and moved to Brasília (Brandão, 2001). In the following years, he participated in the creation of psychology courses at the Centro Universitário de Brasília (University Center of Brasília) and Universidade do Distrito Federal (University of the Federal District), organizing his laboratories and teaching various courses related to human development and psychological techniques. In his classes, he took a critical stance on the

behaviorism disseminated from the Universidade de Brasília (University of Brasília), arguing that the training of the psychologist should guarantee the study of different theoretical and methodological perspectives and enable its application in various domains of human activity (Angelini, 2012).

Servo's political commitment to the professionalization of psychologists guided his activities throughout the following decade. In April 1970, in partnership with his wife, psychologist Hélia Ribeiro de Sá (1926), he created the Instituto de Psicologia, Seleção e Orientação (Institute of Psychology, Selection and Orientation), in Brasília. He engaged in the debates for the fulfillment of the minimum curriculum and exercise of the psychologist's private functions. In that occasion, he participated in the meetings held in São Paulo, Rio de Janeiro, and Barbacena, between 1971 and 1973, for the proper implementation of the Sistema Conselhos de Psicologia (Psychology Councils System) guaranteed by Law No. 5,766/1971 (Soares, 2010). In December 1973, he was elected Secretary of the First Plenary of the Conselho Federal de Psicologia (Federal Psychology Council) (1973–1976), offering the Instituto de Psicologia, Seleção e Orientação (Institute of Psychology, Selection and Orientation) as the entity's first operational headquarters and assisting in the drafting of its bylaws and resolutions (Conselho Federal de Psicologia, 2004). As a tribute for his pioneering spirit and dedication to the profession, he received the first professional registration from the Conselho Regional de Psicologia do Distrito Federal (Regional Council of Psychology of the Federal District). From 1976 to 1996, he devoted himself exclusively to the Instituto de Psicologia, Seleção e Orientação (Institute of Psychology, Selection and Orientation), providing services of clinical psychology, educational guidance, and selection of candidates for companies and public agencies in Distrito Federal. In 1999, he retired, ending his professional activities.

Geraldo Servo's path shows the effort to professionalize and take to the countryside the teaching of psychology in Brazil. He contributed to the dissemination of psychological knowledge through teaching courses in pedagogy,

philosophy, educational guidance, and after the regulation of the profession, in undergraduate psychology courses in Minas Gerais and Distrito Federal. He created research institutes and psychological services, aimed at the educational and labor fields. He was a member of several scientific entities, such as the Sociedade Mineira de Psicologia (the Psychology Society of Minas Gerais), Associação Brasileira de Psicologia Aplicada (the Brazilian Association of Applied Psychology), Associação Brasileira de Psicólogos (the Brazilian Association of Psychologists), Sociedade Brasileira para o Progresso da Ciência (the Brazilian Society for the Scientific Progress), Sociedad Latinoamericana de Psicología (the International Society of Applied Psychology), and the International Association of Applied Psychology. Although his bibliographic production is not extensive, Geraldo Servo's participation in important moments of the institutionalization and regulation of the profession of psychologist in Brazil exemplifies the trajectory of the first Brazilian psychologists.

Sesman Rodríguez, Myrna Josefina

Born *San Juan, Puerto Rico (PR)*, 16 March 1936

Nydia Lucca-Irizarry
University of Puerto Rico, Río Piedras, San Juan, Puerto Rico

Keywords

Puerto Rico · Clinical Psychology · Children psychoanalysis

Myrna Josefina is the youngest of three siblings born to Mr. José Sesman, 30 years old at the time, and Mrs. Josefina Rodríguez, 28. Her brother José was 5 years older and her sister Miriam was 2 years older than Myrna. Although she was born in San Juan, the capital city of Puerto Rico, her parents came from distant towns, her father

from the Eastern coast, Humacao, and her mother from the central mountains' region, Aibonito. The couple married in 1930 at the bride's hometown and settled in the capital, which was quite common when people looked for a better future life. Myrna's father had 1 year of college studies and worked 43 years in a renowned business, first as a stenographer, escalating to the position of chief of personnel. Her mother was a nurse.

Myrna grew up in a Catholic family. She had a frail health and was attached to her mother (R. Figueroa, personal communication, September 26, 2020). She lived her childhood and adolescence in the first public housing project built in Puerto Rico (Falansterio, in Puerta de Tierra) under the 1935 US Puerto Rico Reconstruction Administration (PRRA), aimed at improving the living conditions of the poor and invigorating the economy in the Great Depression era. By that time, Puerta de Tierra was a residential place for many workers in the tobacco industry (Torres Rivera, 2004), slum hovels were the typical dwelling units, and poverty was rampant. Located in the San Juan Bay area, maritime traffic, both commercial and military, brought about all sorts of activities related to the constant presence of sailors and soldiers in the zone. A service economy flourished in the neighborhood, which included bars, gambling houses, and brothels. The new living facilities for the family secured the physical care and early education needs of children, as they had a nursery, classrooms, and an interior playground surrounded by the 18 three-story buildings that housed 216 families (Torres Rivera, 2004). This happened in the context of World War II (1939–1945), when Puerto Rico, a US possession since 1898, was considered a very strategic point in the South Atlantic for the US defense (Piñero Cádiz, 2013). It is worth mentioning that the San Juan Bay area was under constant alert of a possible war attack, specially from Germany, whose naval forces came into Caribbean waters threatening the Island with their U-boats (Rodríguez Beruff & Bolívar Fresneda, 2012). Residents from San Juan lived in a state of panic, especially during nighttime, when it was prohibited to turn the lights on for security reasons. Notwithstanding the adverse general situation, Myrna has

always kept warm memories about her neighborhood (R. Figueroa, personal communication, September 26, 2020).

In Puerta de Tierra, the Redemptorist priests established a large parochial school (*Colegio San Agustín*) early in the twentieth century. Myrna was a gifted student; she took piano lessons and was awarded a fellowship to study in *San Agustín* with nuns from the *Notre Dame* order, graduating with the first high school class, in 1953. She was the first graduate from *Colegio San Agustín* to obtain a PhD. After graduating from high school, she enrolled at the University of Puerto Rico, Río Piedras campus, and obtained a Bachelor of Arts in 1957. A year after, she earned an MA in Psychology from the University of Michigan, Ann Arbor. She pursued further graduate studies in Clinical Psychology at the Catholic University of America, during the convulsive 1960s. At Catholic, she became a member of Sigma Xi, the Scientific Research Honor Society which promotes friendship in science. In 1964, she completed the doctoral degree presenting the dissertation *Equivalence range and differentiation of perceptual space as a function of self-evaluation*.

After her MA graduation, she returned to Puerto Rico and joined the faculty at the University of Puerto Rico, College of Education, until 1968. That year she transferred to the Department of Psychology at the same campus. For the 1968–1969 period, she was elected president of the Association of Psychology of Puerto Rico (APPR). Her tenure was characterized by her openness to welcome psychology students from diverse institutional affiliations to join the association for the first time, 15 years after its establishment. She promoted the celebration of informal gatherings in order to talk about the advances in the field and the most pressing issues of the profession at the time, in a rather relaxed atmosphere (I. Roca de Torres, personal communication, September 11, 2020). Members of the APPR remember fondly the kind of professional activities that she organized, for example, the celebration of a 3-day-long workshop in a hotel facility to introduce T-groups, as developed in the Esalen Institute, Big Sur, California, and the National

Training Laboratories, in Michigan (Roca de Torres, 2006).

Seeking to advance her professional development and supported by the University of Puerto Rico through diverse mechanisms, in the 1970s, Dr. Sesman moved to London, UK, to conduct postdoctoral work at the renowned Tavistock Institute. During 1972–1973, she attended the School of Psychiatry, Family and Community Mental Health, Children Psychotherapy Program, at Tavistock Institute of Human Relations. There she specialized in psychotherapeutic techniques for helping troubled children, like play therapy developed by Melanie Klein (1882–1960). Among other activities, she participated in the Institute of Group Analysis and the Group Relations Forum. She also participated in the biweekly case discussions and lectures delivered by Anna Freud (1895–1982) in the Hampstead Child Therapy Clinic. In London, she underwent psychoanalysis for some years. She became more in-depth involved with psychoanalysis, which was her preferred theoretical framework for understanding human behavior and for the treatment of psychological conditions.

After her years in London, when she returned to the University of Puerto Rico, colleagues from the institution enrolled in the innovative courses that she started teaching about observation techniques in family contexts. For example, the observation of a child began when the mother was pregnant. Trainees had to shadow the mother in order to take notes about the details related to pregnancy; when the child was born, observations continued and so on. The idea behind the exercise was to obtain a complete picture of the development of the child as early as possible, to correlate findings with future behavioral outcomes (I. Roca de Torres, personal communication, September 4, 2020).

In 1978, she co-authored with Carlos I. Guevara in the book, *The Mother and the Learning of the Child: The Puerto Rican Urban Experience*, perhaps the most important socialization study of the 1970s in the Island. The publication presented the findings of a study in which both low- and middle-class mothers were observed in terms of rearing styles and during children's

learning activities. The study documented differences between the two groups, as mothers from a poverty background were more imposing, authoritarian, and punitive; they decided for their children, did not offer explanations for their commands, and emphasized obedience and respect, whereas middle-class mothers stressed social interaction skills, the expression of affect and achievement motivation, were less imposing, were more inclined to offer explanations of their commands, and fostered autonomy in their children.

In the 1980s, Dr. Sesman made a shift in her working scenario and joined the Behavioral Research Institute at the UPR Medical Sciences Campus. For a while, she collaborated with Dr. Glorisa Canino (born 1946) research team, conducting epidemiological studies and developing culturally sensitive diagnostic instruments (Roca de Torres, 2008). Her contribution was more on the clinical aspect of psychological diagnosis and her deep knowledge and understanding of children's world. There she joined the faculty at the Department of Psychiatry at the UPR School of Medicine, where she trained future psychiatrists in psychoanalysis. She also worked on campus for *Hospital Pediátrico* (Children's Hospital), a teaching hospital, providing psychotherapeutic services, especially psychoanalysis for seriously disturbed children. Besides, she kept a teaching load at the School of Medicine Department of Psychiatry and managed to keep a successful private practice as psychoanalyst. A former colleague described her as "an exquisite observer, especially with children" (A. Díaz Royo, personal communication, September 16, 2020). Former alumni of Dr. Sesman stated that through her therapeutic approach, she generated profound changes in psychotic children within 6 months.

During the 1990s until the 2010s, Dr. Sesman continued to be actively involved in psychodynamic-oriented groups and activities. Two of these groups are *Taller del Discurso Analítico de Puerto Rico* (Puerto Rican Analytic Discourse Workshop) and *Foro del Campo Lacaniano* (Lacanian Filed Forum). She also helped in the coordination of some of Dr. Néstor A. Braunstein's visits to Puerto Rico. For decades,

Dr. Sesman had been deeply absorbed in the study of French psychoanalyst Jacques Lacan (1901–1981), although her preferred psychoanalytic approach was that of Melanie Klein (A. Díaz Royo, personal communication, September 16, 2020). After retirement, she also devoted a lot of time to the inner world of spirituality, as she rejoined religious activities.

Dr. Myrna J. Sesman will be respectfully remembered as the academician highly committed to her professional formation, concerned with leaving a generation of psychiatrists and psychologists very well trained in child psychoanalysis, and the ethically concerned professional always willing to share with students and colleagues the latest developments in the behavioral science disciplines. She has dictated the text for her epitaph: *Amé. De eso se trata la vida* (I loved. Life is about that.) (R. Figueroa, personal communication, September 26, 2020).

Shimanovich de Hoffs, Eugenia

Born in *Vilnius, Poland, on February 4, 1930*

Died in *Mexico City on October 17, 2001*

Irene Martínez-Cava Cáceres
University of Colima, Colima, Mexico

Keywords

Mexico · Psychoanalysis · Political psychology · Feminism

She graduated in Philosophy from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM). Along with Marie Lemberger Langer, she was one of the first to obtain a Master's degree in the Departamento de Psicología (Department of Psychology) of the Facultad de Filosofía y Letras (Faculty of Philosophy and Literature) (FFyL) of UNAM (1947) and the first to obtain the title of

Doctor of Philosophy with a Specialty in Psychology from UNAM (Rivera Gómez, 2019), with the thesis *Essay on the application of Jackson's principles to psychopathology problems* (1950) (Shimanovich de Hoffs, 1950), directed by Guillermo Dávila García.

She completed her studies with training in psychoanalysis with Santiago Ramirez (1921–1989), a Mexican psychoanalyst, who was also a co-founder of the Asociación Psicoanalítica Mexicana (Mexican Psychoanalytic Association) (APM) in 1956. Eugenia S. de Hoffs was part of this Association, being one of the “laic analysts” along with Luis Feder (1942–2018), Estela Remus (1923–present), and Amapola González (1926–1991) because they didn't come from the medical field. Because of the requirement to continue psychoanalytic training in this Association was to have medical studies, Eugenia decided to begin her studies at the Facultad de Medicina (Faculty of Medicine) (FM) at UNAM and obtained the degree in 1965.

As a result of this training and the increasing incursion of psychoanalysis in the Departamento de Psicología (Department of Psychology) (attached in those days to the FFyL) in the UNAM, she taught psychoanalysis classes from the Freudian theories after 1950 (Reynoso, 2012; Ridle & Echeveste, 2004). In this university, in addition, she taught the Doctorate of the Dynamics of Projective Personality Tests Seminar and the Cathedra of Clinical Psychology in the postgraduate courses of the FM and the FFyL of the UNAM.

In addition to her pleasure for teaching, Eugenia's interest in social service served to spread and apply Psychology in several practical fields. An example of this can be seen in her involvement with the Jewish community in Mexico City, becoming the director of the monthly magazine *Tribuna Israelita* (Israeli Tribune).

She collaborated in writing the statutes of the Instituto Cultural Mexico-Israel (Mexican-Israeli Cultural Institute) in 1958, and over the time she held the positions of General Secretary and President of the Executive Committee. In 1998 she received the Premio Cultural México-Israeli

(Mexican-Israeli cultural award) to distinguished people from different areas of knowledge who contributed to peace negotiations with Israel and to the dissemination of its culture (Instituto Cultural México Israel, s.f.).

In 1954 she participated in the organization of the Segundo Congreso Interamericano de Psicología (Second Interamerican Congress of Psychology) and was elected for the first time Vicepresidenta de la Rama Mexicana de la Sociedad Interamericana de Psicología (Vicepresident of the Mexican Representation of the Interamerican Society of Psychology (SIP)). This Society promotes Psychology knowledge transmission in America through the exchange of teachers, students, books, magazines, and scientific data. Eugenia held this position from 1955 to 1957, from 1959 to 1961, and from 1963 to 1964 (SIP, s.f.).

In December of that same year (1955), she participated in the Tercer Congreso Interamericano de Psicología (Third Interamerican Congress of Psychology), in the city of Austin, Texas. In this Congress, together with other colleagues, she presented the work *Image of American in the Mexican Child* (Dávila et al., 1956), in which 500 children were evaluated, and whose importance was such that it has been pointed out by Maritza Montero (1960–present) (quoted in Reidl and Echeveste, 2004) as the origin of Political Psychology in Latin America. Furthermore, because of this Congress, an important and constant collaboration was consolidated between psychiatrists and psychologist from the UNAM and psychologist from the University of Texas (Reidl and Echeveste, 2004).

Another area in which she participated was gender equality. She participated in the first world conference on women, held in Mexico in 1975 during the Año Internacional de la Mujer (International Women's Year). Within this event, Carla Stellweg (1942–present) – founder and editor of *Visual Arts*, the first magazine on contemporary art in Latin America – organized a seminar in which Eugenia participated. This seminar made an important contribution to the development of Mexican artistic feminism and the link between Psychology and gender, articulating themes such

as representation, language, cultural construction of gender, social change, class, and race (Giunta, 2019).

It was proposed for the Premio de la Sociedad Mexicana de Psicología (Mexican Society of Psychology Award), in the modality of best professional performance. Despite her professional achievements, the documents sent to the jury by those who proposed her candidacy were scarce, and finally, the award was granted to another person, according to Urbina-Soria (1993), then president of the Society, in his book *Faculty of Psychology: Testimonies of twenty years (1973–1993)*.

Eugenia Shimanovich de Hoff, in addition to being one of the first women in the birth of Psychology in Mexico, was widely committed to the growth and dissemination of this discipline, nationally and internationally. Likewise, it contributed to the development of psychoanalysis in the country and its connection with Psychology at a time when psychoanalysis was out of the reach of psychologist. He was a person eager for knowledge and full of curiosity, who always tried to relate theory and practice with the aim of improving people's lives. This social commitment was approached as a link between Psychology and practice, analyzing various phenomena critically. This union of critical analysis of reality, with psychological knowledge and practice, had undeniable repercussions in the formation of Political Psychology and in the development of the feminist perspective in Psychology.

Sieber, Julius

Born *Friedrichshafen, (Germany), 1892*

Died *Langenargen, (Germany), 21 March 1963*

Sonia Carrillo

Universidad de los Andes, Bogotá, Colombia

I was born in Germany, but I consider myself boyacense, and I feel Colombian. I have devoted the best of my life to this land. I feel the national problems as much as the most sleepless Colombian can feel them. I have always dreamed of doing something worthy of the teaching profession. Since I arrived in the country more than 27 years ago, my most significant concern has been an excellent center for teachers' pedagogical and scientific training (Sieber, 1953, as cited in Ocampo, 1992, p. 48).

Keywords

Colombia · Germany · Pedagogy · Escuela Normal Superior · Universidad Pedagógica de Colombia

Julius Sieber was a German physicist-mathematician with pedagogy studies on natural sciences, mathematics, and physics. He dedicated the most important part of his life to teacher training, described by some as a “teacher of teachers.” Repizo Cabrera (1982) described him as a man “tall, stocky, fair-skinned and blond; he had blue-green eyes with a penetrating and scrutinizing gaze; his golden glasses gave him distinction” (p. 29). He played the violin and piano and was passionate about teaching. His wife Maria and his son Rudolph accompanied him to Colombia, where he arrived in March 1926 as a member of the second German Pedagogical Mission summoned by President Pedro Nel Ospina (1858–1927) to provide advice on issues related to education and pedagogy. Following World War I, a school reform movement emerged in some regions of Germany based on a philosophy of education that promoted universal values and “idealistic principles based on freedom community and nation” (Ocampo, 1992, p. 28). These

new ideas greatly influenced Sieber and other educators who were part of the German missions to Colombia.

The first German Pedagogical Mission (1872–1878) had been convened by the government of Eustorgio Salgar (1831–1885) (Toro et al., 2014) to modernize and secularize education. The second mission was part of a pedagogical movement that had been brewing in the country. It was led in Boyacá by Rafael Bernal Jiménez (1898–1974), secretary of education of the department and by Julius Sieber, who assumed the direction of the Escuela Normal de Varones (Normal School for Men) at Tunja, Boyacá (Figueroa & Sánchez Cubides, 2018). Despite the interference of the Catholic Church, which had privileges in the educational structure in the country and saw its interests threatened, the second mission had important results in promoting primary, secondary, and professional education. This mission mainly focused on training teachers with high formative standards at the university level, and introduced multiple areas of knowledge, hardly known in Colombia.

After he was appointed rector, Sieber changed the name of the School to Escuela Normal Superior (Higher Normal School) and implemented a series of critical curricular reforms in the institution, based on principles of psychology proposed by Herbart and associationism (Figueroa & Sánchez Cubides, 2018). Additionally, Sieber managed to involve governmental entities of the department to allocate a budget for books and materials for the various laboratories and thus contributed to the development and flourishing of the Higher Normal School.

The Higher Normal School was characterized by innovative teaching methods that promoted a comprehensive education based on strengthening an investigative attitude centered on mathematical reasoning skills and promoting ethical, responsible, and autonomous behavior in students. According to Ocampo (1992), Sieber’s teaching methodologies followed three main assumptions: Herbart’s idea of education as moral instruction, New School’s active teaching, and the notion of creative research based on scientific methods in the educational context (from the Siberian

School). These methodologies opposed the use of strategies such as memorization in the different subjects. According to Guerrero Recalde (2016), from the arrival of Professor Sieber to the Normal School for Men a series of reforms began to take form both in the curriculum and in the pedagogical strategies taught to the teachers in training entering the School. The central objective of these reforms was to offer a quality and comprehensive education to the country's future teachers that was based on scientific assumptions, which created an investigative conscience, and emphasized moral, cultural, and civic values (Parra, 2004). In addition to their traditional classes on teaching and pedagogy in different areas, teachers who attended this School began to receive specialized training in a set of supplementary courses emphasizing mathematics and science. Sieber argued that these classes were an "instrument to build the identity of a man adaptable to the new system of the productive world; this man should be mathematically efficient, capable of understanding his new role in the process of social change and of responding to the advance of science. The modern man demanded by society had to be trained as a professional in finance, commerce, as well as in the knowledge of civil engineering, for which a solid mathematical formation was required" (p. 78).

The Supplementary Specialization Courses were classes taught by specialists in mathematics and science. Although Professor Sieber did not speak Spanish at first, since his arrival in the country he received classes from one of the teachers at the Normal School, which soon enabled him to teach in Spanish. Thus, he thought one of the first supplementary courses; this course lasted two years and included three blocks of disciplines: The first block was mathematics and included subjects such as algebra, geometry, trigonometry, and calculus. The second was chemistry and included organic, inorganic, theoretical, and biochemical chemistry, and the third was physics, which included theoretical and laboratory physics (Guerrero Recalde, 2016). One of the key arguments behind Sieber's pedagogical vision was that mathematical knowledge and skills were not the privileges of a few brilliant

minds; so, it was crucial that from early ages, boys and girls were allowed to "derive arithmetical notions from reality itself to apply them later in the solution of practical and life problems" (Álvarez Gallego, 2001, p. 24). As Sieber himself stated, "The science of numbers is made easy for the mind and wins the affection of children to study it. The main error when teaching arithmetic consists in the fact that it is not immediately useful, it is not truly elementary, nor does it agree with the interests and capacities of the student" (Sieber, 1932, p. 97).

In addition to the supplementary courses, Professor Sieber took over other classes in pedagogy and psychology at the School; the students also had the opportunity to receive music lessons (piano and violin), sports, and participated in various pedagogical and recreational outings (Helg, 1987). Many teachers from Boyacá obtained their degrees at the Higher Normal School at Tunja and generally described their experience under Sieber's direction as inspiring. In a context where the nation's vision was pessimistic, Sieber promoted commitment, dedication, and an image of a better future through pedagogy, albeit through German discipline and seriousness, which were considered a model of change for an indolent culture (Helg, 1987).

Sieber's vision was complemented by the views of Rafael Bernal Jiménez, who was trained in Europe and had contact with the ideas of Ovid Decroly (1871–1932), John Dewey (1859–1952), Édouard Claparède (1873–1940), Jean Piaget (1896–1980), and Maria Montessori (1870–1952), and considered the promotion of a humanistic training connected to psychology and science (Figuerola & Sánchez Cubides, 2018). In complement to the scientific training promoted by Sieber, the graduates of the Higher Normal School developed integral pedagogical-scientific thinking. Sieber promoted creative research, and Bernal Jiménez an active education and the new school (Gómez Gómez, 2011).

Julius Sieber published some works that collected his teaching and pedagogical experiences, among which are *Elementary Arithmetic, Psychology*, and *Chemistry* (Repizo Cabrera, 1982). He also published an influential article in which he

advocated special training for rural women teachers, which served as a basis for creating institutions primarily dedicated to this purpose (Sieber, 1934a). Luis López de Mesa (1884–1967), then Minister of Education, welcomed his project, and two institutions were created for this purpose (Helg, 1987).

Sieber's main work on psychology was *Psychology for Normal Schools and Teachers*. In this book, he unequivocally stated that it is essential to "develop a psychological approach to instruction, methodology, and education, to awaken in teachers an interest in psychology, and to enable them to study more extensive and profound psychological works" (Sieber, 1934b, p. 5). Clearly and straightforwardly, Sieber summarized in this work a journey through the foundations of the discipline. He began with a presentation of the concept of psychology and introduced the term pedagogical psychology, which he considered the basis for the work of educators. With this term, Sieber emphasized the importance of a developmental view of psychological processes in the early stages of life and explicitly highlighted the need for "the study of the evolution of psychic capacities and the psychic life throughout three basic periods: the preschool period, the school period and the period of adolescence" (p. 8). Following the introduction, the author presented a broad chapter dedicated to cognitive functions in which he referred to sensation, perception, and memory, among others. This chapter was enriched by detailed and well-done drawings that illustrated aspects of the nervous system, sense organs, or communication between stimuli, which undoubtedly became a good resource for teachers to appropriate these contents. Another chapter focused on intelligence, and the book ended with two chapters dedicated to feelings and will. In an apologetic tone in the preface to the book Sieber explains that he "dares to publish this booklet because the teachers themselves who have left the school have requested this modest manual to guide them in the strange and entangled field of psychology" (Sieber, 1934b, p. 5).

Julius Sieber directed the Higher Normal School for a decade until 1935. According to Helg (1987), at a time of significant politicization

in the country between liberals and conservatives, Sieber showed sympathies for National Socialism that in 1936 would come to power in Germany. Amid a controversy over the attempted closure of the Higher Normal School at Tunja by the liberal government of Alfonso López Pumarejo (1886–1959), he left Tunja and went to Barranquilla. He was appointed rector of the Normal School of Atlántico, where he worked for a year. Later, in 1936, he left for Germany, which was calling its citizens to join a national purpose, which unfortunately would be war.

There is no detailed information available on Sieber's life upon his return to Germany. Repizo Cabrera (1982) states that Sieber's son Rudolph was drafted into the army and died in battle only a few months after the family's return to Germany. Given the difficult circumstances in which Sieber lived in Germany, his disciples in Colombia gathered some resources and sent them to their teacher with an invitation to return to Colombia, which would only happen in 1947. However, on this occasion, he joined a German company in Bogota, which distributed products for chemistry, biology, and physics laboratories.

The Higher Normal School changed its name to Normal University School in 1951, and Professor Sieber was appointed rector of this institution. At the end of 1952, for reasons that have not been documented, he resigned. However, in October 1953, as a result of a referendum held in the Department of Boyacá, the national government created the Universidad Pedagógica de Colombia (Pedagogical University of Colombia) with headquarters in Tunja and appointed him as its first rector.

Julius Sieber later returned to his homeland and died near his birthplace on the shores of Lake Constanza, in unfortunate conditions of poverty, far from Colombia, the place where he had made outstanding contributions to education and teachers' training. His vision, based on the psychological discipline, was combined with elements proper to what he considered the character of his culture of origin: discipline, autonomy, constant work, and the holistic development of the individual; for him, the educators' optimal training occurred among the sciences, the arts, physical exercise, and especially respect for

those who should be the ultimate recipients of his professional task, the children.

Puerto Rico · Educational psychology · Psychological testing

Alfredo Silva (aka Martín Alfredo Silva) is the second child and only son of Herminio Silva y Pabón y Rosalía Cofresí y Álvez from Cabo Rojo, Puerto Rico. He had three sisters. Alfredo Silva studied in the public schools of Puerto Rico and entered the University of Puerto Rico where he obtained a Bachelor of Arts in Education (chemistry and mathematics) in 1915.

As soon as he graduated, Alfredo Silva started working for the Department of Public Education of Puerto Rico first as a rural teacher and later as principal and supervisor. He worked from 1915 to 1926 and then decided to move to New York City in the United States and start working towards a master's degree in Educational Psychology at Columbia University. In 1927, he earned a Diploma as Examiner of Mental and Educational Tests and a Master's in Arts, specializing in Evaluations and Measurements (Personnel Record, Alfredo Silva, 1936–1962).

Alfredo Silva started working as a professor at the University of Puerto Rico, Río Piedras

Campus (UPR-RP), in 1927 and worked until his retirement at age 65 in 1962. He taught a diversity of Psychology courses. Additionally, he taught Philosophy and Law and Spanish. During his academic career, he was named Director of the Education Department.

Prof. Silva was one of the pioneers in psychological testing in Puerto Rico. He worked with Dr. Fred Walters (1879–1965), Prof. Malvina Monefeldt (1892–1967), and Ms. Mercedes Chiqués Walsh (1893–1976) on the translation of Stanford Binet in 1933 and in the development of the *Prueba Hispanoamericana de Destrezas y Logros, para grados 3-12* (Spanish-American Test of Skills and Achievements, for grades 3–12) (Álvarez, 2006; Roca de Torres, 2007). Their translation of the Binet was the one used in Puerto Rico to evaluate our children until Pablo Roca de León (1951, 1953) published his translations and adaptations of the Wechsler Intelligence Scale for Children (1949) and the Stanford Binet Intelligence Scale for Children (1937). During the academic year 1938–1939, Prof. Alfredo Silva translated and developed norms for university students for the Woodworth's Psychoneurotic Questionnaire (*Cuestionario Psiconeurótico de Woodworth*) trying to increase the number of valid and reliable psychological tests available to evaluate the Puerto Rican population. During 1936 and 1937, he contributed to investigate the cognitive abilities of UPR-RP's students by conducting a research study about their intellectual abilities with a representative sample of students by colleges and departments. In 1941, Prof. Silva developed a questionnaire study on the relations existing among North Americans and Puerto Ricans. Among his publications there are a few pamphlets and newspaper articles that are listed in his following Selected Works section and are mentioned in his Personnel Record (1936–1962) at UPR-RP, but no other information is available (González-Rivera, 2013).

Alfredo Silva Cofresí was married twice, first to Mercedes Plajaia Bloch and then to Virginia Vincenty Ramírez. With his second wife, he had three sons: Alfredo, Francisco, and René.

Son of a family of rural workers, Marcus Vinicius lived in the countryside for the first few years of his life. He studied at a boarding school in Minas Gerais (near the city of Ouro Preto) and later at the Escola Técnica Agrícola (Agricultural Technical School), linked to the Universidade Federal de Minas Gerais (UFMG) (Federal University of Minas Gerais). With great interest in reading and a fascination for questions of the mind, he turned to Psychology. In 1975, he enrolled in the Psychology course at Newton de Paiva Institute. He completed his course at Fundação Mineira de Educação e Cultura (FUMEC) (Minas Gerais Education and Culture Foundation) in 1982.

As a public-school teacher of Basic Education, he was active in teacher strikes and contributed to the creation of the União dos Trabalhadores da Ensino de Minas Gerais (Minas Gerais Education Workers Union); he chaired the Associação dos Professores de Contagem (Teachers Association of Contagem). He took up residence in a working-class community and participated in the so-called “neighborhood movements”; he was a member of a faction of a Trotskyist political party, clandestine at the time; he participated in the founding of the Partido dos Trabalhadores (PT) (Workers’

Party) and was a member of its first state board (1980) as an alternate. Associação Assistencial e Educacional Grávida (Assistencial and Educacional Pregnant Association) was a center for guidance and psychophysical monitoring of pregnancy for underprivileged women where Marcus worked from 1983 to 1986, making the transition to a psychologist.

In 1986, he was approved in a public selection at the Fundação Ezequiel Dias (FUNED) (Ezequiel Dias Foundation), a state foundation that used to hire public health workers in Minas Gerais. This first job as a psychologist defined his political inscription in the field of health, and his participation in specific movements in the area of mental health was important and was definitely linked to the processes of Health Reform, Psychiatric Reform and the construction of the Movimento Anti-manicomial (Anti-Asylum Movement) in Brazil. He coordinated the implementation of a regional mental health program in Minas Gerais and also was Coordinator of Human Resources at the Centro Regional de Saúde Regional (Health Center) of Sete Lagoas, Minas Gerais. He was vice president of the Conselho Regional de Psicologia de Minas Gerais (Minas Gerais Regional Psychology Council) from 1986 to 1989. In that entity, he was responsible for organizing the Commission of Public Health Psychologists and organized the I and II State Meeting of Health Psychologists, seeking to link the category to the debates on the Health Reform; he also organized the participation of psychologists in the initial debates of the Psychiatric Reform, involving this entity in the process of creating the mental health workers’ movement “For a society without asylums!”; he was part of the organizing committee of the Bauru Congress, in December 1987, the milestone of the creation of the Anti-Asylum Movement and Psychiatric Reform movement in Brazil.

Later, he joined the National Coordination of the Anti-Asylum Movement until 1999. He actively participated in the debates on the guidelines of the Psychiatric Reform bill proposed by Deputy Paulo Delgado, which was approved

(Law 10.216/2001) and which “disposes of the rights of people with mental disorders.” In December 1988, by recommendation of the Conselho Regional de Psicologia (CRP) (Regional Council of Psychology) of Minas Gerais for the first time, he occupied the direction of the Conselho Federal de Psicologia (Federal Council of Psychology). During this period, as general secretary, he was responsible for leading an institutional initiative to bring the Councils closer to the psychologists’ union movement, organized in the Federação Nacional dos Psicólogos (National Federation of Psychologists). The tactic of bringing the entities closer together was successful and resulted in the organization, at the end of 1989, of the I Congresso Unificado dos Psicólogos (1st Unified Congress of Psychologists), with the participation of elected delegations from the base, in regional events, deepening the institutional democratization movement of the Psychology Councils system, attracting the most progressive forces. He sought for institutional transformations to convert the autarchy into a democratic entity and politically committed to the causes of citizenship, capable of referring its professionals in a progressive perspective.

In 1993, elected by direct vote to the management of the Conselho Federal de Psicologia (Federal Council of Psychology), representing CRP of Bahia and Sergipe, he held the positions of vice president and president. He worked on the political restructuring of the entity, with the reforms of its statutes, to include a congressional dimension as its highest instance; he also contributed to organize the Processo Constituinte da Psicologia (Constituent Process of Psychology) by mobilizing a debate on the process of political organization of the profession. Through the movement “A council to take care of the profession,” victorious in an electoral dispute (1997) and as general secretary of the entity, he undertook efforts to produce an ideological and political twist capable of interfering in the social configuration of Psychology as a science and profession. From 1997 to 2007, he was involved in the production of various political projects. He was the

proponent and organizer of the Comissão Nacional de Direitos Humanos do Conselho Federal de Psicologia (National Human Rights Commission of the Federal Council of Psychology); introduced debates on Public Policies in the scope of the Psychology Councils System, responsible for the creation of the Centro de Referências Técnicas em Psicologia e Políticas Públicas (CREPOP) (Technical Reference Center in Psychology and Public Policies); he worked in the construction of União Latino-americana de Entidades de Psicologia (ULAPSI) (Latin American Union of Psychological Entities), strongly marking the political performance of Brazil in this space.

He became Master in Public Health at the Universidade Federal da Bahia (UFBA) (Federal University of Bahia) in 1995 and PhD in Public Health at the in 2003. A scholar of social inequality and subjectivity, he conducted his post-doctoral degree with Professor Jessé José Freire de Souza (1960–), at the Universidade Federal de Juiz de Fora (UFJF) (Federal University of Juiz de Fora). He served as a professor at UFBA from 1991 to 2014. He was coordinator of Laboratório de Estudos Vinculares e Saúde Mental (Laboratory of Linkage Studies and Mental Health) of the Instituto de Psicologia (Institute of Psychology) at UFBA, director of the Instituto Silvia Lane – Psicologia e Compromisso Social (Silvia Lane Institute – Psychology and Social Commitment), occasional consultant in the Technical area of Mental Health of the Ministério da Saúde (Ministry of Health), member of the Núcleo de Estudos pela Superação dos Manicômios (Nucleus of Studies for the Overcoming of Mental Health Institutions).

He worked with the following themes: Psychiatric Reform and Mental Health, Psychosocial Clinic of Psychosis, Psychology and Human Rights, Social Inequality and Subjectivity.

On February 4, 2016, he was brutally murdered in Pirajuaia, district of Jaguaripe, Bahia, where he lived the beginning of his retired life and fought for the defense of the mangrove in the region.

Marcus Vinicius is recognized for his contribution to the insertion of the theme of Human

Rights in Psychology and for initiatives that produced a break between Psychology and its elitist tradition, investing in the development of the profession in the field of public policy, in Latin American articulation, in creation and organization of national psychology entities in Brazil. He participated in the direction of the Conselho Federal de Psicologia (Federal Council of Psychology) in several terms between 1988 and 2007.

Nise Magalhães da Silveira graduated in 1926 from the Faculdade de Medicina da Bahia (Faculty of Medicine of Bahia), with the final work *Essay on the Crime of Women in Bahia*. In 1927, she went to Rio de Janeiro, starting to attend at the neurological clinic of the Faculdade de Medicina do Rio de Janeiro (Faculty of Medicine of Rio de Janeiro), coordinated by Antônio

Austregésilo. During this period, she lived in the district of Santa Teresa, a place of great political and cultural effervescence. There, she shared home with her cousin and husband, Mário Magalhães da Silveira (1905–1986), with the modernist poet Manuel Bandeira (1886–1968) (Bezerra, 1995), and with one of the leaders of the Partido Comunista Brasileiro (PCB – Brazilian Communist Party), Octávio Brandão (1896–1980), and his wife, the poet Laura Brandão (1891–1942). Thus, the relationship between health, art, and politics had been established, which marked Nise da Silveira's trajectory.

Nise da Silveira's entry into the Brazilian Communist Party came, however, following an invitation by Hyder Correa Lima (1903–1981) to attend a lecture by jurist Edgardo Castro Rebelo (1884–1970) on maritime law. Nise da Silveira was fascinated by the arguments presented, which were fundamental to her adherence to communist ideals (Gullar, 1996). In 1933, she stopped going to the PCB meetings in order to study for a public tender for the position of psychiatrist, being then expelled from the party. As approved in the contest for *Assistência a Psicopatas e Profilaxia* (Assistance to Psychopaths and Prophylaxis), she started to live in a room at the *Hospício Nacional de Alienados* (National Asylum of Alienated), in Praia Vermelha. In 1935, she joined to the *União Feminina do Brasil* (Female Union of Brazil), signing political manifestos and providing free medical care. The association for the defense of women's rights was linked to the *Aliança Nacional Libertadora* (National Liberation Alliance), an antifascist political entity that, after the *Insurreição Comunista* (Communist Insurrection) led by Luís Carlos Prestes (1898–1990), which had occurred on November 27, 1935, with the intention of overthrowing the government of Getúlio Vargas (1882–1954), was considered illegal, being forced to act in hiding then. In this context, Nise da Silveira was denounced by a nurse and was arrested on the night of March 26, 1936.

At the prison, Nise da Silveira was taken to the female cell, together with Maria Werneck

de Castro (1909–1994), Beatriz Bandeira Ryff (1909–2012), Olga Benário Prestes (1908–1942), and Elisa Berger (Sabo) (1907–1940). The coexistence in the prison occurred, many times, in the organization of activities, such as sports, card games, radio programs of the *Rádio Libertadora* (Radio Liberating), and study groups. The incarceration of Nise da Silveira extended until June 21, 1937, and she remained out of public service until 1944.

When she was readmitted, two changes had taken place: The National Asylum of Alienated had been closed and moved from Praia Vermelha to the district of Engenho de Dentro, in the suburb, changing its name to Hospital Pedro II; and new treatment methods were introduced, such as electroshock, insulin coma, and lobotomy (Melo, 2009). Due to her refusal to use such procedures, which she compared to the tortures she had seen in prison, she was transferred, in 1946, to the Occupational Therapy Section, which she added, in 1954, the term rehabilitation, showing her concerns about the inpatient's return to the social field. However, she was used to think that this return should be based on psychic reorganization.

The experience in prison was essential for Nise da Silveira to establish the work guidelines of the *Seção de Terapêutica Ocupacional e Reabilitação* (Occupational Therapy and Rehabilitation Section): affectivity, freedom, and activity. In this way, the environment and relationships were based on affection, there was complete freedom of expression, and the sectors of activities were characterized as true therapeutic methods. The painting studio opened on September 9, 1946, and on December 22, the first exhibition took place at the hospital itself. The following year, the exhibition was expanded, and on February 4, 1947, it was transferred to the first floor of the *Ministério da Cultura* (Ministry of Culture) building. Art critic Mário Pedrosa (1900–1981) admired the exhibition, considering the works from the esthetic point of view. The drawings, paintings, and models produced in the workshops of the Section of Occupational Therapy and Rehabilitation gave rise to the *Museu de Imagens do*

Inconsciente (Museum of Images of the Unconscious), founded on May 20, 1952 (Mello, 2014).

In 1954, Nise da Silveira founded the Grupo de Estudos C. G. Jung (C. G. Jung Study Group). The book *Psychology and Alchemy*, by Carl Gustav Jung (1875–1961), was fundamental to make connections between circular or circle-like images, present in the Museum of Images of the Unconscious' collection, and the compensatory character of the unconscious field, evidenced by the *mandalas*, described by Jung. Thus, on November 12, 1954, Nise da Silveira sent a letter to Jung, along with photographs of such circular images. Jung's response was immediate, initiating a fruitful exchange. In 1957, Nise da Silveira participated in the II International Congress of Psychiatry, in Zurich, presenting works on the pictorial production of Fernando Diniz (1918–1999). Among the activities of the congress, Nise da Silveira organized an exhibition of the Museum of Images of the Unconscious, inaugurated by Jung on September 2, 1957, at the Eidgenössische Technische Hochschule (ETH). From then on, she returned to Zurich for studies at the C. G. Jung Institute in the years 1958, 1961, 1962, and 1964. In 1968, she founded the study group at the Museum of Images of the Unconscious.

In the middle of this intense work that combines clinical practice, research, and teaching (Melo; Ferreira, 2013), Nise da Silveira also founded, on December 22, 1956, the Casa das Palmeiras (Palms House), a day care clinic, with the objective of stopping the cycle of psychiatric readmissions. Despite the differences, Palms House served as ground for the creation of Centros de Atenção Psicossocial (Psychosocial Care Centers), central devices for the implementation of the Reforma Psiquiátrica Brasileira (Brazilian Psychiatric Reform) (Melo, 2001).

The work developed by Nise da Silveira, based on the study of the series of images of the unconscious, made possible not only a theoretical inflection in the field of mental health from the analytical psychology of C.G. Jung, but also intense interdisciplinary debates. The exuberance of shapes and colors caught the attention of artists,

such as Almir Mavignier (1925–2018), Ivan Serpa (1923–1973), and Abraham Palatinik (1928–2020). The artistic-scientific exhibitions created the opportunity for dialogues with society, allowing the gradual change in mental health and mentality institutions, establishing, this way, a movement for cultural transformation. In addition to the dialogue with the field of plastic arts, Nise da Silveira maintained long-term contacts with actor Rubens Correa (1931–1996) and with filmmaker Leon Hirszman (1937–1987) (Melo, 2010). He directed, with scripts by Nise da Silveira, the cinematic trilogy *Images of the Unconscious – In Search of Everyday Space* (about Fernando Diniz), *In the Kingdom of Mothers* (about Adelina Gomes, 1916–1984), and *The Boat of the Sun* (about Carlos Pertuis, 1910–1977). The film was released in 1987, the same year the director died.

Before that, however, Leon Hirszman did two interviews with Nise da Silveira, on April 15 and 19, 1986. The interviews would serve as a subsidy to produce a film about Palms House, which would be called *Emotion of Dealing*. This film was only completed in 2014 by Eduardo Escorel (1945–), with the title *Afterword*, presenting two parts, with the respective interviews: *The Egress* and *Emotion of Dealing*.

Nise da Silveira's work is one of the references of the Brazilian Psychiatric Reform and inaugurated the systematic study of analytical psychology in Brazil. In addition, it gained recognition at national and international levels. The Museum of Images of the Unconscious is characterized as an important treatment and research center, having nowadays a collection of more than 350,000 works. In 2003, the Instituto do Patrimônio Histórico e Artístico Nacional (IPHAN – National Historical and Artistic Heritage Institute) registered more than 128,000 works (Cruz Junior, 2015). Nise da Silveira's personal documents are also part of the collection of the Museum of Images of the Unconscious. In 2017, these letters, books, manuscripts, and photographs were recognized by the United Nations Educational, Scientific and Cultural Organization (UNESCO) as part of the Memory of the World Program.

Théodore Simon, orphan since the age of twelve, went to live with one of his uncles in the city of Sens, in France, where he went to secondary school. A brilliant student, he graduated from the Medical School of Paris (1892–1900), and in those years, he went through several institutions, such as the *Hôpital des enfants malades de Paris* (Paris Hospital for Sick Children), the *Hôpital Saint-Antoine* (Saint Antoine Hospital), the *Hôpital de La Rochefoucauld* (La Rochefoucauld Hospital), and the *Hôpital Lariboisière* (Lariboisiere Hospital). In 1899, he started his internship with Dr. Adolphe Blin (1852–1915) at the *Hôpital Psychiatrique de Perray-Vaucluse* (Perray-Vaucluse Psychiatric Hospital). Thus, he wrote to Alfred Binet (1857–1911) and offered him his experiences of suggestion and cephalometry studies concerning the colony of “abnormal children” received in the annex of that hospital. Binet, then chief editor of *L’Année psychologique* (Psychological Yearbook), enthusiastically accepted these first two studies, having more than 40 pages each, in his magazine (Simon, 1899a, 1899b). In this partnership, they published 24 articles together in *L’Année psychologique*. Simon’s membership to the *Société libre pour l’étude psychologique de l’enfant* (Free Society for the Psychological Study of the Child), founded in 1899 by Ferdinand Édouard Buisson (1841–1932),

led Binet to invite him so as to continue the work in his physiological psychology laboratory at Sorbonne. This partnership would culminate, over the following years, in the constitution and presentation of *Échelle Métrique d'Intelligence* (Intelligence Metric Scale), which would leave a mark in psychology and psychometrics history as the Binet-Simon Test, the first published intelligence assessment instrument (Rota et al., 2020).

Therefore, in 1904, he undertook a study with Alfred Binet as a mean to establish a scientific diagnosis of “lower states of intelligence,” which brought them to present new methods for measuring development in children (Binet & Simon, 1905a, 1905c). These works aimed, according to the objective of the Bourgeois Commission formed by the French government, to develop evaluation strategies from “abnormal children” (Vial & Hugon, 1998), and to find schooling modalities for abnormal children under the application of law from March 28, 1882, which had made primary education compulsory for children of both sexes, from 6 to 13 years old. Binet and Simon, who were part of this ministerial commission, undertook a new research in the school environment, including the creation of the Experimental Pedagogy Laboratory, in 1905, at the primary school on Rue de la Grande aux Belles, 36, in Paris (Ouvrier-Bonnaz, 2011), aiming to provide concrete solutions to the problems faced by the teachers. In the wake of the conclusions of the Bourgeois Commission, they elaborated a guide for the admission of abnormal children getting educated in the improvement classes (Binet & Simon, 1907/1934). After Binet’s death in 1911, Simon remained active along with the *Société libre pour l'étude psychologique de l'enfant*, which has become *Société Alfred Binet* (Alfred Binet Society), in 1917, as a way of paying tribute to its founder. After his death in 1961, also as a tribute, it became known as *Société Binet-Simon* (Binet-Simon Society) (Rota et al., 2020).

Theodore Simon, since 1920, returned to the children’s colony of Perray-Vaucluse, now as the hospital’s head doctor. This position at the

hospital, where he started his internship, allowed him to participate in the sessions of the *Société Médico-Psychologique* (Medico-Psychological Society), of which he became a full member during the general assembly on December 10, 1920. In addition to the different forms of assistance that the public institution offered for these children, Simon claimed that teachers were trained in experimental pedagogy (Rota Jr et al. 2020).

In this perspective, since 1924, together with several active members of the *Société Alfred Binet*, in particular with Madeleine Rémy (1882–1955), he led a real endeavor in the development of tests of different types (vision, hearing, and memory) and also of instruction (reading, writing, spelling, calculus, history, geography, drawing, music, and others), which would inform him about the school level reached by the students in these disciplines. One of them ended up figuring as important for his relationship with Brazil, which would start at the end of the 1920s. The P.V. test, whose name is a reference to the children’s colony of Perray-Vaucluse, was a true guide for the delayed children’s teachers. The 25 subtests proposed by Simon would allow teachers to adapt their teachings to the different degrees of intelligence and instruction of their students (Rota Jr et al. 2020), as well as to improve their integration into society.

In 1928, Simon attended to the 10th Congress of French-Speaking Medical Practitioners of North America, that was held in Quebec. He took advantage of the trip to go to other cities, and he was amazed to find that the “batteries of tests,” drawn up on the other side of the Atlantic, had an essentially social purpose. They were used to measure what individuals are capable of doing, in order to be able to appreciate the tasks’ difficulty level that will be assigned to them afterward. Théodore Simon criticized this usage in the United States, in the context of ethnic comparisons. According to him, psychological tests must be systematically adapted to local populations, as a mean to preserve their social and scientific importance. Over the following decades, the

author continued to criticize the approach of psychological tests, especially the Binet-Simon Scale, which lost its original clinical dimension (Rota Jr et al. 2020).

In 1929, on the occasion of a Franco-Brazilian cooperation project, he was asked to hold a series of lectures and practical works as part of teachers' training on psychological tests into school groups in the city of Belo Horizonte, state of Minas Gerais (Gutierrez et al. 2017). Over there, he warned his listeners about the possible deviations related to the use of the results obtained in these tests by Brazilian students in comparison to those registered in France. He remained in the city for 2 months, "because it was expressed to me the wish that the teachers of this country were presented to the methods that, since Binet's death, I strive to continue, and that are French, even if it is quite common to think that they are American" (Simon, 1929, p. 10). During this period, he held lectures to the teachers at the *Escola de Aperfeiçoamento de Professores* (Teacher Improvement School), in that city, as well as introduced some tests, including the aforementioned P.V. test. His stay in Belo Horizonte preceded the arrival of Helena Antipoff, which took place in August 1929, in order to take over the laboratory coordination and to be chair of Psychology at the *Escola de Aperfeiçoamento*. On the other hand, in the following years, she applied both P.V. test and other tests brought by Simon to the city, including some versions of the Binet-Simon test itself. Therefore, Simon's presence in Belo Horizonte was remarkable in the establishment of scientific methods focused on school education, on the path of the Brazilian escolanovism movement (Rota Jr et al. 2018).

Sick since 1956, he was forced to step aside from his activities in March 1959, passing away 2 years later, at the age of 88. According to his wishes, his funeral was celebrated in private on Thursday, September 7, at the church of Saint-Sulpice, in Paris. His body rests on the grave of his in-laws, in the monumental cemetery of Rouen, France, where it can be read: "*Docteur Th. Simon, Président de la Société Alfred Binet de Paris.*"

Siquier de Ocampo, María Luisa

Born in *Buenos Aires, Argentina, February 6, 1929*

Died in *Barcelona, Spain, June 8, 2019*

Fernando Silberstein

Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Argentina · Brazil · Spain · Personality assessment · Child psychoanalysis

María Luisa Siquier de Ocampo was an Argentine psychologist and psychoanalyst who worked extensively in her country of origin, in Brazil and in Spain in the field of personality assessment and child psychoanalysis.

She began her studies in the first undergraduate program in Psychology that was opened in Argentina at the Universidad Nacional del Litoral (Litoral National University) in Rosario, where she graduated in 1961 in the group of the first psychologists in the country. Later he studied and trained in Psychoanalysis, being especially interested in child psychoanalysis, he studied the Rorschach test and projective techniques.

She developed her professional career in Buenos Aires, where she was born. In her early years as a graduate, she worked in hospitals as a psychoanalytically trained psychologist in care, teaching, and research projects with children and adults.

Early on, she became a professor of Clinical Psychology, first at the UNL and later at the Universidad de Buenos Aires (University of Buenos Aires). She worked with Jaime Bernstein (1917–1988), organizer of the first psychology career in the country and a leading figure in personality assessment and projective techniques. María Luisa Siquier became the one who

continued his teaching and many of his ideas to which she added her own developments.

In 1966, in the midst of serious political events in the universities linked to a militar government, she resigned from her university positions along with a great majority of university professors from all over the country. Shortly thereafter, in the private sphere, she participated in the founding of the Escuela de Psicología Clínica para niños (School of Clinical Psychology for children), where she would later teach courses for psychologists.

In 1973, with the return of democracy in the country and in the universities, she was appointed Director of the Departamento de Psicología (Psychology Department) at the University of Buenos Aires, the highest hierarchical position within the administrative structure of university Psychological studies in Argentina at that time.

In 1976, with the beginning of the violent military dictatorship that persecuted her and her immediate family, she was forced to go into exile, first in Brazil until 1980 and then in Barcelona, where she remained until her death. In Brazil, she worked in several universities in Sao Paulo and Rio de Janeiro and founded another School of Child Psychoanalysis. Later, in Barcelona, she founded the Escuela de Clínica Psicoanalítica con Niños y Adolescentes (School of Psychoanalytic Clinic with Children and Adolescents) ("La Escoleta") together with other professionals, a training school that consolidated as a reference in the country. In 1989, she also participated in the foundation of Gradiva, Association of Psychoanalytic Studies.

María Luisa Siquier, during her time at the Argentine university, was a professor who is well remembered by the generations of psychologists who continued for decades the model of work that she encouraged and that, together with other colleagues, she helped to develop. Throughout her life, María Luisa Siquier led teams that she was able to coordinate effectively, both in the field of child psychoanalysis and in personality assessment.

She belonged to the first generation of Argentine psychologists and played a fundamental role in the configuration of the professional identity of

psychology in Argentina. They were able to glimpse the horizon of a new field of development with its own identity and autonomous performance that, in this case, redefined the previous practices linked to the administration of tests.

Between 1974 and 1976, María Luisa Siquier de Ocampo published, together with María Esther García Arzeno and Elsa Grassano and collaborators, the two-volume book *Las Técnicas Proyectivas y el proceso psicodiagnóstico* (Projective Techniques and the Psychodiagnostic Process), a book that at the time of this writing has been reprinted 32 times.

This work proposes Personality Assessment with interviews and projective techniques as a model of approach in Clinical Psychology with a psychoanalytic basis, which delimits an activity whose knowledge and application is specific to psychologists and which, by virtue of psychoanalytic theoretical training, consolidates a role and an identity as autonomous professionals. The emphasis on the study of psychoanalysis acquired in the undergraduate programs in Psychology in Argentina redefined the previous practice in the application of psychological tests.

The model proposed is that of a controlled clinical research process of determined duration, with an opening and a closing in the relationship with the subject, in which the tests are integrated in the exploration of emotional processes. This process is understood as a transference relationship, from the psychoanalytically approach. During the evaluation time, the subjects are studied with different techniques, at the end of which a closure and a feedback are established according to the possibilities of approaching the evaluated subjects to their own conflicts. This model integrates the tests in a specific role within the clinical approach, not to label but to understand functions and help the evaluated to recognize their conflicts and, eventually, to bring them closer to a subsequent therapeutic indication.

It should be recalled that in the European psychiatric tradition prevailing until the middle of the twentieth century, tests were administered by technicians and proto-psychologists at the service of psychiatrists, who were the only ones authorized to prepare reports and establish functioning,

nosological diagnoses, and therapeutic indications. The testists were the technicians who administered and the psychiatrists who possessed the knowledge to understand, evaluate, and formulate decisions based on these data.

This model of a Personality Assessment associated with an extensive psychoanalytic theoretical training, which proposes the projective evaluation as a stage of a clinical work of short duration, was to become a characteristic of the training of Argentine psychologists for several decades. The exiles suffered by psychologists, frequent victims of the violent political persecutions that accompanied the military coups suffered by the country between the foundation of the undergraduate programs in Psychology in the 1950s and the definitive return of democracy in 1983, gave as an unexpected consequence that this model was taught in many other Spanish speaking countries, destination of the psychologists trained in this work model and of María Luisa Siquier de Ocampo herself.

Sluzki, Carlos E.

Born *Ciudad Autónoma de Buenos Aires, (Argentina), 13 December 1933*

Florencia A. Macchioli
Facultad de Psicología, Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Argentina – United States of America · Psychiatry · Family therapy · Systemic therapy · Mental health · Global community health · Human rights

He completed training in Psychiatry at Facultad de Medicina (Faculty of Medicine) at Universidad de Buenos Aires (University of Buenos Aires, UBA) in 1960. As a medical student, he participated in student organizations that protested against the second administration of Juan Domingo Perón (1895–1974).

After that, in 1956, Sluzki developed and coordinated a program at a Public Hospital in Argentina. In 1957, while still in training, he joined the team headed by Mauricio Goldenberg (1916–2006) team at G. Araoz Alfaro Hospital, a public hospital where he completed his internship in Psychiatry during the period 1964–1967. From 1960 to 1965 he completed his psychoanalytic training at the Asociación Psicoanalítica Argentina (Argentine Psychoanalytic Association), an organization member of the International Psychoanalytic Association.

Early on in his medical training, in the 1960s, Sluzki joined a research group led by Eliseo Verón (1935–2014), a leading social scientist in Buenos Aires, who introduced him to the work of Levy-Strauss (1908–2009), and Gregory Bateson (1904–1980), a landmark in Sluzki's career (Macchioli, 2014a). For the first time, he became aware of the work of French and British anthropologists, and, in the framework of the research, he happened to find interdisciplinary connections in the paper: “Toward a theory of schizophrenia” in the journal *Behavioral Sciences* (1956) by G. Bateson (1904–1980), D. Jackson

(1920–1968), J. Haley (1923–2007), and J. Weakland (1919–1995).

Shortly afterward, he was put in contact with Donald Jackson (1920–1968), then Director at the Mental Research Institute (MRI) in Palo Alto, California, on whose invitation he earned a Pan-American Union three-month grant to be trained. The stage was set to put the actors of the systemic approach into action: Jay Haley, Virginia Satir, John Weakland, Albert Schefflen, Gregory Bateson, and the authors of *Pragmatics of human Communication* (1967), Janet Beavin (1940–), Paul Watzlawick (1921–2007) and Don Jackson (1920–1968), among others.

The connection marked the beginning of a powerful exchange between North and South, in which Sluzki became the leading voice of the Systemic theory in the Spanish language. Since 1963, *Acta Psiquiátrica y Psicológica de América Latina*, a well-known journal edited in Argentina, published a selection of articles, including Sluzki's contributions with references to the work of Bateson, Jackson, Watzlawick, and Weakland. The publications included lectures, concepts, and obituaries of those authors. Sluzki edited the translation of Bateson's work into Spanish. He wrote the preface to the Spanish translation of *Pragmatics of Human Communication* (Sluzki, 1971a) and the prologue to the second edition (Sluzki, 1981). He published a translation of selected articles previously published in USA journals (Sluzki, 1971b); his 1965 lectures on Mental Illness and the Family; his presentation speech and paper at the first Conference on Pathology and Therapy of the Family Group, held in Buenos Aires in June 1970.

In short, his clinical work, research, and the training of professionals in Lanús radiated the knowledge and understanding of Systemic Theory from Argentina to the Spanish speaking world (Macchioli, 2014c, 2017).

After Hernán Kesselman (1933–2019) left this service in 1968, Goldenberg had to reclude into private practice in 1971. Sluzki left Argentina to study in the USA in December 1971 on a Guggenheim Fellowship, and later, he became an Advance Research Fellow by the Foundations' Fund for Research in Psychiatry (FFRP) (Macchioli, 2014b).

Emigration, however, did not mean disengagement from his sociopolitical concerns regarding his discipline. In 1978, when Argentina was yet again ruled by a military dictatorship, he published an article entitled "La decisión de hablar" (The decision to speak) (Sluzki, 1978). The article, dealing with communication, is a clear denunciation of the abuses of power which came through to those oppressed mental health workers banned from public service, locked up, and silenced in their consulting rooms. It meant to be a resource of hope to remind them that the spirit of the Lanús (as it was known, the public health service hospital, Gregorio Araoz Alfaro), which was famous for the creative exploration of mental health and therapeutic intervention in community, groups, and families, was still alive.

Over the years, his solidarity and commitment with the victims of state terrorism in Latin America was demonstrated in his work, particularly through therapeutic action and support for the families of the *disappeared people*. Sluzki's action in that context reached out to other Latin Americans who had been the victims of oppression, in an attempt he described himself as "the exorcism that sought to widen the semantic field towards greater freedom" (Sluzki, 1994, n/p). He ran workshops where therapists gained the strength that would enable them to deal with situations involving censorship and violence. His critical stand before sociopolitical events of that kind has continued to the present. Tirelessly, since 1991 he has been part of international institutions in support of human rights and refugees.

In that role, between 1973 and 1982, he developed the first program for a residentship in Family Therapy at the University of California and the San Francisco General Hospital. Many other psychiatry departments at several hospitals and universities took his leading example. Sluzki took part in a number of training and treatment programs at US Hospitals and Universities held both in English and Spanish. As of 1979, those intensive programs were to be adopted by numberless professionals in Latin America and Europe.

Sluzki has a large list of publications, and he contributed to more than 20 journals. Thirty out of more than one hundred of his papers were written in Argentina between 1961 and 1971, and half of the list of his 15 books were published in Argentina before 1975.

Colombia · Higher Teacher Training College · Psychoanalysis

José Francisco Socarrás was a typical Colombian intellectual of the first half of the twentieth century, a man with varied interests and occupations that included academic, political, literary, historical, journalistic, and cultural issues; he wrote about all these fields. His life as a public figure gave him an important place in the country's educational history in the twentieth century, as well as in the history of psychology, psychiatry, and psychoanalysis in Colombia.

Socarrás spent his childhood in Valledupar and Barranquilla, and later on, he traveled to Bogotá in 1923 to finish his secondary education. In 1924, he began his studies at the Universidad Nacional de Colombia (National University of Colombia) and obtained his degree in medicine in 1930 with a dissertation about the fundamental principles of psychoanalysis, maybe the first academic work on the matter in the country, where Socarrás made an exhaustive exposition of the Freudian postulates (Roselli 1996, p. 15).

After leaving the National University, Socarrás went back to the Colombian Caribbean coast and worked there for about 5 years as a practitioner in different cities. At the same time, he occupied some public service positions, including town councilor of Ciénaga (1931–1932) and treasurer (1933) and head of public education in the Department of Magdalena (1935).

Upon returning to Bogotá, Socarrás was commissioned by the liberal government to contribute to the modernization of the education system in Colombia. Based on his studies in education and psychology, he founded and assumed the headship of one of the most, if not the most, ambitious educational projects in Colombia in the twentieth century: the Escuela Normal Superior de Colombia (ENS) (Colombian Higher Teacher Training College). Although this institution was founded in 1936 and lasted until 1951, it was between 1937 and 1944, when Socarrás was at the helm, that it attained its distinctive character, and it was during this time that it became an institution that left lasting seeds for science and education in Colombia.

The importance of the ENS and the role of Socarrás merit a deeper look because this institution was, perhaps, Socarrás' main contribution to the nation's history, and without a doubt, it was the source of his greatest pride. Several conditions made the ENS an unprecedented institution in the country. The first one was, perhaps, that this was the first institution in Colombia that allowed coeducational instruction; men and women studied together and had the same right to study whatever subject of matter they decided without any kind of gender distinction. Another characteristic that gave the college a unique character, achieved by the efforts of Socarrás and the liberal government, was to hire or to connect with foreign teacher experts in different fields who had arrived in Colombia fleeing the rise of fascism in Europe. World-renowned researchers such as the anthropologist Paul Rivet (1876–1958), the linguist Pedro Urbano González de la Calle (1879–1966), the psychologist Mercedes Rodrigo Bellido (1891–1982), the geographer Ernesto Guhl (1915–2000), the economist Rudolf Hommes (1896–1955), the pedagogue Fritz Karsen (1885–1951), and the historian Gerhard Masur (1901–1975) taught in the ENS and laid the foundations for the modern social and behavioral sciences in the country.

The ENS established for the first time a professional emphasis on biological sciences, as well as lectures in anthropology and geography. Because of this, the ENS has been considered the hotbed of modern social sciences in Colombia; modern anthropology, geography, history, linguistics, and psychology were born there (Jaramillo 2009), and the basic sciences, although not always acknowledged, also developed at this institution (Sánchez 2009).

The pedagogic and scientific orientation of the ENS was led by Socarrás; he was convinced that pedagogues should master a science to familiarize themselves with the scientific method and studying psychology and pedagogy should be mandatory for all specialties because the aim of the institution was to train not only good specialists but also good teachers, that is, experts in

pedagogy that also dominated a specific scientific area (Socarrás 1987, p. 33). That explains why neither psychology nor pedagogy was sections of the college but topics that every student should study. In this spirit, Socarrás created, attached to the college, the Instituto de Psicología Experimental (Institute of Experimental Psychology), with three sections: anthropology, physiology, and psychotechnics.

At the same time that he chaired the ENS, Socarrás started to lecture in biology and psychology at different universities, namely, in the law faculties of the National University of Colombia and Universidad del Rosario (Del Rosario University) where he offered an introduction to the discipline of psychology for law students. The lectures Socarrás taught on the matter of psychology were one of the first in the country at the university level. From these lectures, it is possible to see that Socarrás had a broad idea of psychology built from different and varied sources. He presented psychology as the part of philosophy that deals with the faculties and operations of the soul and the branch of biology that deals with the study of the mind and the affective faculties (Socarrás 1939, p. 1). In these lectures, he considered topics such as personality, emotion, feelings and passions, instincts, perverse constitution, mass psychology, will, intelligence, memory, prejudices and judgments, beliefs, and reason – included abstraction and generalization – an outlook in which it is possible to find references to authors so varied as Ovide Decroly (1871–1932), Sigmund Freud (1856–1939), Ivan P. Pavlov (1823–1899), Edward L. Thorndike (1874–1949), and John Stuart Mill (1806–1873), among others.

As if all this was not enough, it was also during this period when he wrote two of his most famous books: a psychoanalytic study of one of the most known leaders of the conservative party of the time and a series of literary tales about Colombian reality. The first one, published in 1942 and entitled *Laureano Gómez, Psychoanalysis of a Resentful Person*, was a very polemic book in which Socarrás made a psychopathological description of the conservative leader's

personality, a peculiar character with many enemies and few friends that would reach the presidency in 1951. The book was one of the most notable publishing successes of its time that, of course, brought him the hostility of the conservative leader and some of his closest friends, but in general terms, it was well received within the literate elite in the country and was praised as an excellent book both in content and style.

The second book wasn't published until 1961 with the title of one of the tales of the anthology, *Tropic Wind*, but most of the tales were written between 1940 and 1945. About this book, Socarrás explicitly said that his purpose was to get close to the language and reality of the people in Colombian Caribbean coast and to tell stories for the poor people “that as much as the bread, they lack literature appropriate to their needs” (Socarrás 1961, p. 8). It is difficult to say if Socarrás' purpose was fulfilled, but it is not exaggerated to affirm that the stories contained in the book have great literary value and are very sensitive depictions of the complexities of the sociopolitical reality of the country and the idiosyncrasy and customs of the humble people of the Caribbean coast.

Both *Psychoanalysis of a Resentful Person* and *Tropic Wind* reveal Socarrás' liberal character and his permanent concern about connecting his academic interests with the explanation of Colombian reality.

After leaving the ENS, Socarrás was elected in 1945 to the House of Representatives representing the Department of Magdalena and the political tendency of socialist liberalism. In late 1946, thanks to his friendship with Paul Rivet, Socarrás earned a scholarship to study neurology, psychiatry, and psychoanalysis in Paris where he made specialty studies at Paris University and the Psychoanalytic Institute of Paris. He remained in France until 1950.

Socarrás had a difficult time after returning to the country. By this time, Colombia was experiencing a period of intense political violence. The conservatives in power were persecuting and killing liberals all over the country, and

the retaliation of liberals in the countryside was no less violent. Socarrás returned to the country when the presidency of Laureano Gómez (1950–1953) was about to start, and he became an enemy of the regime because of his liberal positions in politics and education and because of his writings, especially the one about Gómez. During this time, Socarrás received several death threats, and he almost went into exile in Venezuela, but his conservative friends in Bogotá convinced him to stay in the country and protected him in their homes. Until 1953, when Laureano Gómez left the presidency and the country after a military coup, Socarrás lived in a kind of exile despite being in Colombia; he could barely leave the house of his closest friends because of the serious death threats (Socarrás 1994). During his forced seclusion, however, Socarrás could work as a psychiatrist, he started to train the first generation of psychoanalysts in the country, and he founded the Instituto Colombiano del Sistema Nervioso [Colombian Institute of the Nervous System].

In 1956, he founded, with Arturo Lizarazo (1915–1991) and Hernán Quijada, the Grupo de Estudios Psicoanalíticos (Group of Psychoanalytic Studies) in Colombia that became the Sociedad Colombiana de Psicoanálisis (Colombian Society of Psychoanalysis) in 1961. Socarrás, who was a member of the Society of Psychoanalysis of Paris since 1950, played a very important role in the development and history of psychoanalysis in Colombia until his death in 1995. He taught on the subject for more than 50 years, and he helped to create the first institutions and lectures in this area. Because of all his work in this discipline, he has been considered as one of the founding fathers of psychoanalysis in the country (Roselli 1996).

In addition to his work in psychology and psychoanalysis, Socarrás had an abundant written production in different areas: as a physician, he dealt with issues of mental health such as schizophrenia and of public health such as the effects of addictive drugs and their cultural and medical implications, violence, and the working-class diet and the nutritional value of Colombian food. As a historian, he published works about historical characters such as Francisco de Paula Santander (1792–1840), the Admiral José Prudencio Padilla (1784–1828), and Juan Bautista Pavageau

(1788–1854) and also about the history of his region and the history of the indigenous population in Colombia, among other themes. As a man of letters, he wrote several short stories; he wrote about poetry and the Academy of the Spanish Language. At the same time, he wrote a column in the newspaper *El Tiempo* (*The Time*) entitled “Salud Mental” (Mental Health) for 21 years.

José Francisco Socarrás was a very sensitive man; he knew how to connect the knowledge of individual personalities with that of sociocultural processes in an extensive work that covered several areas and interests. He put together psychology and history, physiology and customs, psychoanalysis and politics, and literature and reality. His concern about improving the conditions of the poor people in Colombia was a life-long theme as well as his conviction of the necessity of a better education and of scientific knowledge to change society. Knowledge and science, and therefore psychology, psychiatry, and psychoanalysis, were, for Socarrás, both passions and necessities to build a better country, whose reality he could not and did not want to avoid.

His last years were thoughtful and calm. He became a member of the societies of history, medicine, and language and received the highest recognition granted by the national government in the area of education. He died at the age of 89 in Bogotá, in 1995, after being hit by a motorcycle when he was about to attend to one of his many commitments, leaving an impressive work and an immense legacy for psychology, psychoanalysis, and education in the country.

Solari-Swayne, Enrique

Born *Lima (Peru), July 28, 1915*

Died *Lima (Peru), May 2, 1995*

Mauricio Borja-Mostacero
Universidad Ricardo Palma, Lima, Peru

Keywords

Peru · Counseling · Teaching of psychology

Enrique Solari-Swayne was a Peruvian psychologist and writer who, after completing secondary education, left for Europe and studied medicine and psychology at the University of Munich, Germany (1934–1939) and later in Spain (1939–1940). In 1947, he was a member of the first teaching staff of the recently founded Facultad de Educación (Faculty of Education) of the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM, Lima), where he was in charge of psychology courses. Likewise, he was part of the Instituto Psicopedagógico Nacional (National Psychopedagogical Institute) at Lima, an important Peruvian institution founded in 1941 and dedicated to development and research in the field of education in the country.

He stood out especially for his specialization in psychological tests and in vocational selection and orientation, courses that he also taught at the UNMSM when the specialty of psychology was created. Not only psychology, but also literature was at the center of his interests, gaining more and more importance in his work with the passage of time. That is how he wrote novels, and in 1955, he unveiled *Collacocha* (Solari-Swayne, 1955), a play set in the Andean world of Peru, which has been considered one of the great Peruvian plays.

He also deployed extensive work of cultural dissemination, participating in the *Revista del Instituto de Arte Contemporáneo* [Journal of the Institute of Contemporary Art], as well as in other periodical publications (*Mar del Sur*, *Las Moradas*).

Solari-Swayne was one of the forerunners of psychology as a profession in Peru and contributed to the formation of the first psychologists in that country. His contributions have not been so much in the field of empirical research (generally little developed in his time), but above all in the field of the dissemination and teaching of psychological tests (the Szondi test, for example), as well as in that of the integration of psychology with literature.

Sosa Mieles, Carlos Víctor

Born *on October 2, 1942, in Toa Baja, Puerto Rico*

Died *on January 31, 2021, in San Juan Puerto Rico*

Frances Boulon-Jiménez
University of Puerto Rico, Río Piedras Campus,
San Juan, Puerto Rico

Keywords

Puerto Rico · Clinical Psychology ·
Developmental Psychology · Couples and
family therapy

Carlos Víctor Sosa Mieles was the son of two public servants: Julio Sosa, who worked at the Legislature of Puerto Rico, and Aida Mieles de Sosa, who served as secretary at a government agency. He studied at the public elementary school of the Municipality of Toa Baja, Puerto Rico, and completed secondary education, in 1962, at Gabriela Mistral High School, in the capital city of San Juan, Puerto Rico.

He entered the University of Puerto Rico, Río Piedras Campus (UPR-RP), to study Psychology and graduated with a BA degree in 1967. He earned a Master's Degree in Rehabilitation Counseling (MRC) at the same University in 1971. For his Master's thesis, he studied the vocational interests of freshman students at the UPR-RP. He completed his Doctorate in Clinical Psychology from the Centro Caribeño de Estudios Postgraduados (currently known as Carlos Albizu University) in 1996. For his dissertation, he studied the effects, related factors, and behavioral reactions of six adolescents who abandoned their homes.

Dr. Carlos Sosa-Mieles dedicated most of his professional career to teaching in higher education at the *Universidad del Sagrado Corazón* (USC, Sacred Heart University) in Santurce, PR. He retired in 2005 after 32 years at the USC and became adjunct professor and practice supervisor at Interamerican University, Metropolitan Campus, San Juan, PR. He also maintained a private practice in Clinical Psychology until 2020.

Among his former students from the USC are two past presidents of the Puerto Rico Psychological Association (APPR): Kalitza Baerga and Ivonne Moreno-Velázquez. Ivonne, who is also a retired professor from the UPR-RP, shared her feelings about her former teacher and colleague when she learned of his passing. She said: “his memory will always be present in myself, as well as in the minds of all the students he helped in his long and fruitful career” (Ivonne Moreno-Velázquez, personal communication, February 4, 2021). Dr. Kalitza Baerga also commented about the professor who introduced her to Psychology, “I remember Dr. Sosa as a very warm and caring person. He was not only one of my

professors; we were also colleagues at Interamerican University Clinic of Psychological Services. During that time, I enjoyed our conversations regarding the profession that is so dear to both of us. Rest in Peace” (Kalitza Baerga, personal communication, February 8, 2021).

Dr. Carlos Sosa Mieles was a member of APPR and served as president in the year 2000. He was very active for many years, participating in committee work, attending conventions, and interacting with colleagues who appreciated his friendship and good sense of humor. He was also an accomplished singer and liked to share his talent and passion for this art with his friends and family. He developed his talent for singing during the period he studied at the UPR-RP, where he was a member of the Choir of the University of Puerto Rico, under the direction of renowned professor of music and composer Augusto Rodríguez (1904–1993). He joined the members of this Choir in numerous travels to perform concerts in a variety of countries, including the United States, México, and others.

Dr. Carlos Sosa-Mieles was intensely committed to his profession, and he considered that orienting the community about issues related to mental health and family wellness was of the utmost priority. He frequently participated in radio and television programs offering the community information and recommendations about family life and the pursuit of happiness. In these endeavors, he collaborated with another past president of the APPR, Dr. Pascual Merlos (born 1955). He also produced a weekly radio program about family at WRTU FM, the educational radio station affiliated with the University of Puerto Rico. He was often interviewed by journalists representing daily newspapers, who requested his views about family problems and related community issues. He provided practical recommendations and presented a sensitive, accessible approach to complex situations, especially those related to intra-family communication and conflicts.

He was especially interested in defending the rights of non-custodial parents interested in maintaining close relationships with their children. He dedicated much time and energy to

studying and providing orientation about parental alienation syndrome. He provided consultation and advocacy to community groups engaged in efforts to transform public policies related to the custody of minors and kindred issues. He was a significant collaborator of the movement named *Creando Conciencia [Creating Awareness]* that was successful in promoting the approval in 2019 of legislation supporting the rights of alienated parents and preventing parental alienation.

Dr. Sosa’s lessons and recommendations about behavior were published during more than 10 years by the daily newspaper *Primera Hora*. The topics he presented include parental alienation, eating disorders, suicide, abuse of video games by adolescents, tantrums in children, family values, emotional explosions, people who fake illnesses to obtain sympathy, broken hearts, unlikely (odd)couples, infidelity, and addictive relationships.

When he became ill late in 2020, he was still providing clinical services to a select group of patients. His passing in early 2021, due to complications from surgery, was quite unexpected. He is survived by his daughters, Ingrid, Karen, and Natasha, his five grandchildren, and his extended family. He will always be remembered as an amiable and gentle person, who contributed to the growth and welfare of many people, whom he touched as students in his classes, patients in his practice as a clinical psychologist, and participants in community orientation programs through the public communications media. He will also be remembered as tireless advocate for the welfare and unity of families.

Sostre Ruiz, Nydia

Born *on November 21, 1944, San Juan, Puerto Rico (PR)*

Luisa Álvarez Domínguez
University of Puerto Rico, Río Piedras, San Juan,
Puerto Rico

Keywords

Puerto Rico · Forensic Psychology · Criminal Justice

Nydia Sostre Ruiz was the only child of José Sostre Plaza and Angelina Ruiz Patxot. During her childhood and until she was 12 years old, she used to spend most of her time in her maternal aunt's house, with her three cousins and her older brother. Even when she was much younger than them, she remembers having a great time with all of them.

She started first grade at the age of 5 and finished high school at 15 years old. After this, she wanted to study Engineering at the University of Puerto Rico in Mayagüez, but her parents thought she was too young to study away from home, and she started her studies at the Faculty of Social Sciences of the University of Puerto Rico, Río Piedras Campus. In 1964, she graduated with a major in Psychology and a minor in Sociology. At that time, her plans were to apply to graduate studies in the United States but decided to postpone them when her father died. She decided to start working instead, and the experiences she had during that time helped her expand and acquire knowledge in areas that represented her many interests and talents. In those years, she studied and graduated in interior and fashion design and took painting and drawing classes; she also participated in groups of Puerto Rican folk dance (*bomba y plena*) and took cooking lessons.

From 1972 to 1979, Nydia Sostre Ruiz collaborated and worked with *Hogares* CREA

(*Comunidad de Re-Educación y crecimiento del carácter del Adicto* (Homes for Community of Re-education and Growth of Addicts)), a non-profit organization with numerous centers in Puerto Rico, which offered long-term rehabilitation services to persons using drugs. It is based on the concept of *therapeutic community*, with in-residence interventions by peer groups. It was founded in 1968 by Juan José García (1940–2002), an ex-user, and it has been fairly successful in the rehabilitation of this population. Besides residence, they offer nutrition, detox, medical, transportation to activities and medical appointments, social work and psychological services, and individual and group therapy. In that organization, Nydia Sostre Ruiz offered direct services to participants, where she was a member of the Central Team of one of the centers and later become part of the Top Central Team at regional level and then for all centers. She collaborated in the development of trainings for employees and participants of the programs; she was external supervisor of two centers in particular and participated in establishing the first center for women and the first center for adolescents. She also collaborated in the supervision and development of similar treatment centers in Pennsylvania in the United States, in Venezuela, and in the Dominican Republic.

During these years, Nydia Sostre Ruiz also collaborated in programs developed at the YMCA (Young Men's Christian Association) to offer services to young students from marginalized and poor communities aimed for the development of social skills necessary for their academic success. Psychology was always present in all her interests, and in 1978, she decided it was time to start again studies in Psychology. All the experiences she accumulated between 1964 and 1978 helped her to identify her diverse interests and how Psychology was central in all of them.

In 1984, Nydia Sostre Ruiz finished her Doctorate in Philosophy with a major in Clinical Psychology and Criminal Justice at the Caribbean Center of Postgraduate Studies in San Juan, Puerto Rico, known today as the Albizu University. While studying for her PhD, she also worked as assistant director of the Institute of Research of

the University. She did her required doctoral internship at the Puerto Rico's Senate Commission of Penal and Judicial Affairs. Her doctoral dissertation, about psychosocial classification and rehabilitation, created a process for the evaluation of inmates in order to assess their needs for services and their classification considering risk assessments. Her work as a doctoral student was recognized by the University and used as a basis for a research with the youth population, conducted by herself in partnership with sociologist/psychologist Dr. Pedro Vales Hernández (1936–2007). The results of this research were used to develop and establish the Institute for Juvenile Services for youngsters who confronted problems with the law and under supervision of the Family Department of Puerto Rico. Later the program was transferred to the Department of Correction.

From 1983 to 1987, Nydia Sostre Ruiz taught several courses related to Criminal Justice and Psychology at Interamerican University of Puerto Rico, Metropolitan Campus. She was also Director of the Department of Science and Conduct Professions of that University. She contributed to the development and establishment of the Psychology, Sociology, Criminal Justice, and Political Science programs as 4-year baccalaureate programs.

From 1987 to 1993, Nydia Sostre Ruiz worked at the Department of Justice as special assistant of Puerto Rico's Secretary of Justice. In that position, she was responsible for the creation and development of a program aimed to assist victims of crime for the 13 judicial regions of Puerto Rico and the central office. She also created and supervised the first program in Puerto Rico for assistance to senior citizens crime victims. During those years, she also created and offered trainings for employees on both programs and offered consulting services in many areas related to the application of Psychology in the justice and court systems.

Volunteer collaboration has also been an important part of Dr. Sostre Ruiz contributions. As a member of the American Red Cross, she has been a volunteer at disaster situations in Puerto Rico since 1989, participated in their Watch Team

developing their Crisis Intervention protocol during a Disaster, has been an instructor of many capacitation courses and collaboration in the coordination of refugee centers in Puerto Rico, and since 2008 has offered diverse services in areas of Puerto Rico and the United States including interventions after an air disaster. As a volunteer to United Funds of Puerto Rico (1986–2015), she has collaborated in the evaluation of proposals for funds aimed to provide nonprofit services to different disadvantaged populations. During those years, she provided pro bono services and consultation on research projects to a Center of Family Skill Development ESCAPE (Exchange Sponsored Child Abuse Prevention Effort), a nonprofit organization that offers services to domestic and child abuse victims and that was founded in 1983 by Exchange Clubs in Puerto Rico as a preventive model of intervention with families at risk. In 1996, this organization disaffiliated itself from Exchange Club and continued functioning as family violence prevention center.

As a member of the Asociación de Psicología de Puerto Rico (APPR, Association of Psychology of Puerto Rico) for more than 25 years, Nydia Sostre Ruiz has served in many positions in their Board of Directors, including Treasurer from 1986 to 1987 and from 1993 to 1995, and has been a member of working committees in the organization. She has been especially active in the Committee for the Prevention of Violence from 2013 to 2019, a committee she coordinated during 2019, and the Editorial Board of *Revista Puertorriqueña de Psicología* (Puerto Rican Journal of Psychology) from 1985 to 1988. She was also very active in the Forensic Science Association of Puerto Rico from 1986 to 2016, being president from 2012 to 2016, and has been an advocate for crime and violence victims in collaboration to all these organizations.

Never away from teaching after her first experience in 1983, Nydia Sostre Ruiz is currently an associate professor at the University of Puerto Rico, Carolina Campus. Since 1999, she teaches Criminal Justice courses at the Forensic Psychology program and supervises students during their practice and internship experiences. She also directs or has been a member of the advisory

committee of doctoral student's dissertation projects at the Interamerican University of Puerto Rico since 2008. She keeps a private practice in Clinical Forensic Psychology, testifies as an expert in court in domestic violence of child abuse cases in Puerto Rico, and is an external evaluator for the Superior Education Council of Puerto Rico.

Juan B. Soto is the only son of Juan Bautista Soto and María González. He was born in a small town in the western coast of Puerto Rico and attended the public schools near his home. Juan married Felícita Ramos at the age of 20 and had two children, Juan Francisco and José. His wife died of pneumonia after 4 years of marriage. He married for the second time Mary Josephine Eakin with whom he had a son, David, who died at the age of 13 of peritonitis. His wife died 2 years after their marriage. In 1921, he married a third time to Librada Alarcón with whom he procreated Margarita. Librada contracted malaria but survived and accompanied Juan B. Soto until his last days.

Once Juan B. Soto finished high school, he took courses to obtain a teacher's license and began working as a rural teacher in Aguada, at the school where he had been a student. Juan B. Soto obtained a bachelor's degree in arts in 1899 from the Instituto Civil of Puerto Rico; in 1909 he obtained a degree in law, and in 1929 the University of Madrid awarded him a Doctorate in Law and another in Philosophy and Letters (Personnel Record of Juan B. Soto, 1919–1963). His doctoral dissertation was about German psychology and the mechanistic laws of learning, document that he later published both in Puerto Rico and in Spain (Soto, 1933).

In 1915 he began working as an instructor at the University of Puerto Rico, in Río Piedras (UPR-RP), where he held several positions: professor, lecturer, and department director. From 1936 to 1941, he held the position of chancellor. As a professor he offered diverse courses in Psychology, Philosophy, and Law (Álvarez, 2006; González-Rivera, 2013). He was among the first professors of Psychology at UPR and the author of one of the first books of Psychology published by a Puerto Rican (Bernal, 2006; Soto, 1933). He founded the Department of Philosophy at UPR-RP and led the Academy of History of Puerto Rico from 1937 to 1956. At his retirement from UPR-RP, he was bestowed with the title of *Professor Emeritus* (Personnel Record of Juan B. Soto, 1919–1963).

Carlos Rojas (2002) summarizes the philosophical works of Juan B. Soto. He argues and

presents evidence that the philosophical thought of Juan B. Soto started with a positivistic view and over time changed his stance towards a pragmatist position. This pattern was also observed in other Latin American philosophers of the time (Rojas, 2002). He taught courses in logic, ethics, aesthetics, epistemology, and science logic.

Dr. Juan B. Soto was also a prominent politician. While teaching at the UPR, he was elected senator by accumulation by the Republican Party (1925–1932). Later, he was a founding member of the Republican Union and in 1951 he was a delegate to the *Constituent*, the group of people who drafted the Constitution of the Commonwealth of Puerto Rico. He also distinguished himself as a lawyer presiding over the *Colegio de Abogados* (Bar Association) from 1931 to 1933.

Dr. Juan B. Soto was the director and founder of *Revista Puerto Rico*, a cultural journal devoted to articles in philosophy, psychology, and law that was published in the first decades of the twentieth century (Rosa-Nieves & Melón, 1970). He was also founder of *Revista Jurídica*, published by the Bar Association of Puerto Rico. He contributed to other cultural publications of his time like *Nuestro Tiempo* y *La Espera*.

He was a member of several associations including *Ateneo de Puerto Rico*, an important cultural and educational institution, *New York Academy of Political Science*, *American Institute of Criminal Law and Criminology*, and *Puerto Rican Academy of History* (Rosa-Nieves & Melón, 1970).

Neusa Santos Souza was born in Cachoeira, located in the interior of the state of Bahia, a small city, marked in its past by the significant interaction between Africans and Afro-descendants with Europeans from different countries. This resulted in great richness and diversity of popular culture, so the colonial architectural and landscape ensemble of the city is considered, today, as a national monument by the National Historical and Artistic Heritage Institute (Instituto do Patrimônio Histórico e Artístico Nacional – IPHAN).

She was black, native of a family referred to as aristocracy, and believed to be from a priestly class in Africa. The family arrived in Brazil to be enslaved. Many of her family members kept close to the *candomblé*, as mothers and fathers' saints (who are the celebrants that evoke the deities during the rituals), but she herself did not link to any yard.

She graduated in medicine by *Faculdade de Medicina da Universidade Federal da Bahia* (Bahia's Federal University Medicine College) in the 1970s, breaking paradigms for being black and poor at a college attended by white people and with good financial conditions. During the graduation, she worked as assistant in the *Sanatório Bahia*, Mental Health Clinic located in Salvador City. In this clinic, works were developed with

nondrug and enclosing vision, with group activities and gardening.

Still in the 1970s, in the Bahia's state, she participated in the *Núcleo de Estudos Psicanalíticos* (NEP) (Psychoanalytic Studies Nucleus), establishing contact with psychoanalysts from other states and studying authors as Franz Alexander (1891–1964), Melanie Klein (1882–1960), and Pichon-Rivière (1907–1977).

She moved to Rio de Janeiro in 1975, to pursue her Master's degree at the *Instituto de Psiquiatria da Universidade Federal do Rio de Janeiro* (IPUB/UFRJ) (Federal University of Rio de Janeiro Psychiatry Institute), initially staying at the *Pavilhão Maurício Medeiros* (Pavilion Maurício Medeiros), at the institute's residence for students from other regions of the country. Under the guidance of José Otávio de Freitas Júnior and Gregório Baremlitt (Argentine psychiatrist living in Brazil), her dissertation became her best-known book, *Becoming Black: The Vicissitudes of Brazilian Black Identity on the Rise*, which won two editions: in 1983 and 1990, with a third edition due out in 2021. The book, with a preface by the well-known Brazilian psychoanalyst Jurandir Freire Costa (1944–), marks the psychoanalytic bibliographic production on racism and the suffering to which black people are subject, related to the denial of one's own culture and body, for taking white people as a model of identification. Based on psychoanalysis, Neusa valued individualization so that there was no mention of a generic black person, and she believed that each subject should be responsible for their history, with this awareness being a fundamental step for their social situation to change.

In this period, she attended a study group in the *Instituto Brasileiro de Psicanálise, Grupos e Instituições* (IBRAPSI) (Brazilian Institute of Psychoanalysis, Groups and Institutions), a moment that coincides with her political activism during Brazil's military dictatorship that lasted from 1967 till 1985. She also approached the *Instituto de Pesquisa das Culturas Negras* (IPCN) (Black Culture Research Institute),

where her book “Tornar-se negro” was launched in the Institute’s headquarters.

As a direct consequence of the interest raised by the book, she gave lectures about “*Identidade Negra e Ascensão Social do Brasil*” (Brazil’s Black Identity and Social Uprise) – the first of them on July 18, 1985 – at the course “*Conscientização da Cultura Afro-Brasileira*” (“Awareness of Afro-Brazilian Culture”), occurred between 1984 and 1986 in the *Pontifícia Universidade Católica de São Paulo* (PUC-SP) (Pontifical Catholic University of São Paulo) and *Universidade do Estado do Rio de Janeiro* (UERJ) (Rio de Janeiro State University), promoted by *Instituto de Pesquisas e Estudos Afro-Brasileiros* (IPEAFRO) (Institute of Afro-Brazilian Research and Studies).

It is important to highlight that, parallel to studies on racism, she developed other activities. In 1977, she began to act at the *Centro Psiquiátrico Pedro II* (Pedro II Psychiatric Center), currently *Instituto Municipal Nise da Silveira* (Nise da Silveira Municipal Institute), in Rio de Janeiro, as a psychiatrist. She stayed there for a short time, leaving the public service, and dedicating herself to clinical practice in Lacanian psychoanalysis and teaching. In her last ten years of life, she worked at *Casa Verde – Núcleo de Assistência em Saúde Mental* (GreenHouse – Health Mental Assistance Nucleus), attending to severe psychotics and developing theoretical seminars on the clinic of psychosis. Based on a patient’s request, she started a Voices Workshop, with patients who heard voices, which was also taken to IPUB/UFRJ. In her activities, she was used to include patients and/or their families, whether in seminars, workshops, or lunches.

She also worked at *Núcleo de Atendimento Terapêutico* (NAT) (Therapeutic Attendance’s Nucleus), founded by Jurandir Freire Costa, in 1981. In 1997, she published *A psicose – um estudo laciano* (The psychosis – a Lacanian study), where she presented the figure of the psychotic beyond an individual with a deficit, incapable, but rather someone with a relationship with language other than the neurotic. She believed

that the distance between neurosis and psychosis was not so large and that we had a lot to learn from psychotics.

In 1996, she published *Science and Truth – A Commentary*, in partnership with the psychologists and psychoanalysts Ana Beatriz Freire and Francisco Leonal Fernandes, which attempted to join Jacques Lacan’s theory (1901–1981) with Heidegger (1889–1976), Spinoza (1632–1677), and Santo Agostinho (354 d.C.–430 d.C.).

In 2005, with Maria Silvia G. F. Hanna’s coauthorship, she edited the book *The Object of Anguish*, with 11 chapters which broach the *Seminar X: The Anguish*, by Jacques Lacan. Neusa Santos signed the first chapter: *Anguish in the Analytic Experience*.

She published several articles, arising from lectures and interviews she had given. Besides, she also wrote some book chapters and was a chronicler in newspapers and magazines, among them *Correio da Baixada* (Baixada’s Mail). Throughout her life, she disconnected from the institutions, keeping her belief in self-employment, as instructor (she was teacher for a few years at *Universidade Gama Filho* (Gama Filho University), and participating in several study groups, such as the *Oficina de Psicanálise da Universidade Federal Fluminense* (UFF) (The Fluminense Federal University Psychoanalysis’ Workshop).

Her last testimony was an interview on the television show *Espelhos* (Mirrors), from *Canal Brasil* (Brasil Channel), conducted by the black Brazilian actor Lázaro Ramos. One month later, on December 20, 2008, with no signs or advertisement except for an apology note, she took her own life, throwing herself from her apartment in Laranjeiras, in Rio de Janeiro.

Neusa Santos Souza occupied a prominent place as a militant against prejudice and for racial equality in Brazil, from the 1980s, her work being recognized for this immeasurable contribution. The relevance of her work earned her some posthumous honors: in 2010, at *I Encontro Nacional de Psicólogos Negros e Pesquisadores sobre Relações Interracialis e Subjetividade* (PSINEP)

(I National Meeting of Black Psychologists and Researchers on Interracial Relations and Subjectivity); and in 2015, with the foundation of the *Coletivo de Estudantes Neusa Souza no Instituto de Psicologia da UERJ* (Neusa Souza Students Collective at the UERJ Institute of Psychology). Her name was also given to the *Centro de Atenção Psicossocial (CAPS)-II* (Psychosocial Care Center), organized in 2016, in Senador Camará, specialized in the psychosocial care of patients with severe mental disorders.

In October 2016, a seminar in her honor was held, produced by *Grupo de estudos, pesquisas e ações sobre racismo e relações etnicorraciais e indígenas* (GEPARREI) (Group of studies, researches, and actions on racism and ethnic-racial and Indigenous relations) of *Colégio Pedro II* (Pedro II High School). Next month, in November of the same year, Neusa was honored at the closing table of *XII Encontro Clio-Psyché – Saberes Psi: Outros Sujeitos, Outras Histórias* (XII Seminar Clio-Psyché – Psi Knowledge: Other Subjects, Other Stories), held at UERJ. On December 7, 2018, the event *Psicologia, Racismo e o legado de Neusa Santos Souza* (Psychology, Racism and the Legacy of Neusa Santos Souza) was held, at UFF, in Niterói (RJ). Volume IV of the *Coleção Sankofa* (Sankofa Collection), the book *Afrocentricidade: uma abordagem epistemológica inovadora* (Afrocentricity: an innovative epistemological approach), 2019, is dedicated to her memory.

Charles Webster was the only child born to Mrs. Gertrude Baldwin, a housewife, and Mr. Edward P. St. John, a Bible lecturer and teacher. He grew up in an extended family of five members (both parents, a maternal uncle, and the maternal grandmother) in Prattsburgh, Steuben County, NY, where the grandmother was the head of the family. His grandmother ran a boarding house in the Prattsburgh community, located near a railroad station.

Eventually his parents moved to Hartford, Connecticut, where his father worked as a teacher of pedagogy. When he finished his school years, he attended Clark University, at Worcester, Massachusetts, where he obtained a BA and an MA in Psychology. By that time the institution was presided by famed psychologist G. Stanley Hall (1846–1924), the institution has had over the years worldwide recognition for its psychology program. In 1928, after years of working experience, he was awarded an EdD from Harvard University.

Months before his departure to Puerto Rico, in the summer of 1914, at age 24, he married Gertrude Gillette, 25, a teacher from Savona, New York. He was appointed professor at the University of Puerto Rico in October 1914 (Minutes of the Board of Trustees of the University of Puerto Rico, June 18, 1914). He had the title of professor of Psychology and Education

and head of the Normal Department in 1915 (Minutes of the Board of Trustees of the University of Puerto Rico, 1915; Clase de 1915, 1915). He was in charge of teaching three courses: General Psychology, Advanced General Psychology, and Pedagogical Psychology. The description of the courses as they appear in the 1916–1917 catalog denoted the functionalist approach, according to Ana I. Álvarez (2006). The General Psychology course focused on the relationship between behavior and mental processes, whereas the Pedagogical Psychology course put emphasis on the biological and psychological basis of the cognitive processes. Ana I. Álvarez (2006) also sustains her interpretation of a functionalist perspective in the teaching of these courses taking into consideration the use of particular texts, such as Thorndike's *Elements of Psychology* and the preeminent predicament on experimental methodology in psychological studies.

On December 24, 1917, the Board of Trustees of the University of Puerto Rico appointed him as dean of the Río Piedras Colleges (Normal Department, Liberal Arts, College of Law, and College of Pharmacy). According to the institutional minutes, his 4 years of experience as university professor and his 2 years of administrative experience as chairperson of the Normal Department (1915–1917) made of him “the best candidate for the position as Dean of the Río Piedras colleges of the University of Puerto Rico” (Minutes of the Board of Trustees of the University of Puerto Rico, December 24, 1917, p. 347). The position was equivalent in scope and responsibilities to that of a chancellor. His associate dean was Dr. Felipe Janer y Soler (1855–1929), who also continued to be a Spanish professor as he had been since the very beginnings of the institution in 1900.

For the academic year 1919–1920, St. John taught General Psychology, an applied course, in the Liberal Arts College and Introduction to Psychology, which focused on the objectives and methods of the discipline and the basic psychological processes of sensation, affect, attention, and memory, maintaining the functionalist approach (Álvarez, 2006). In the Normal College, he continued teaching Pedagogical Psychology,

which comprehended the relationship between psychology and education, and focused on the psychological approach to the teaching process (Álvarez, 2006).

Under St. John's deanship, the university continued growing in an accelerated manner, even with serious budgetary constraints. The number of students increased every year, and the need to build new facilities, to acquire teaching materials, and to appoint new faculty was carefully considered by St. John, who sought for fiscal resources and travelled to the United States in order to identify and interview candidates for teaching positions at the university (Minutes of the Board of Trustees of the University of Puerto Rico, 1918–1924). During his term as dean of the colleges, the library hours were extended to the evening; the university catalog turned into a bilingual publication, using the Spanish language for the first time; the publication of texts written by the university professors began; a position was created to appoint a professor of Puerto Rican History (Minutes of the Board of Trustees of the University of Puerto Rico, August 28, 1922); and a Puerto Rican professor, Mr. Víctor Coll y Cuchí, (1886–1961), was hired for the position (Minutes of the Board of Trustees of the University of Puerto Rico, September 5, 1922). The position of dean of Women was created and filled (Minutes of the Board of Trustees of the University of Puerto Rico, October 2, 1922).

In July 1923, the Puerto Rico Legislature approved Act No. 67, with the purpose of reorganizing the University of Puerto Rico. Among other things, it established rules about the Board of Trustees and created the position of chancellor of the university. According to the new Act, the dean of the Colleges, St. John, was no longer allowed to attend the Board meetings; furthermore, the Office of the Dean of the University was declared nonexistent (Minutes of the Board of Trustees of the University of Puerto Rico, September, 5, 1924, p. 67).

Meanwhile, St. John was reinstated to his former position as professor and head of the College of Education. By May 1925, St. John had already presented his resignation to the University. The Board of Trustees conceded him a

60-day leave of absence with full salary, after which his resignation became effective on August 18, 1925. In his last report to the Board of Trustees, St. John highlighted the importance of psychology for the development of the university and recommended, among other things, the appointment of new faculty to teach psychology courses. He left behind a full agenda of works to be accomplished, including the development of the graduate programs, the Medicine School, the Business College, and the reorganization of the College of Education. Under his deanship, the offering of psychology courses flourished, as courses in Educational Psychology, Educational Measurement, and Psychology of Teaching in the Elementary School were implemented (Álvarez, 2006). This task was masterfully continued by his successor as dean of the College of Education, Dean Dr. Juan J. Osuna (Benner, 1965).

St. John was a contributing editor to *The Porto Rico School Review* during the period that he was dean of the Río Piedras Colleges. This was a publication of the Department of Public Instruction (in the beginnings, a joint venture with the Association of Teachers of Puerto Rico), mainly concerned with the transmission to the teachers working in Puerto Rico, of the US mainstream teaching methods, the pragmatism ideology, and behaviorist learning theories.

St. John's ideas about education and psychology are well documented in his writings and research. His appreciation for education and democracy was voiced out at the end of the First World War in an address that he delivered to the annual meeting of the Puerto Rico Teachers' Association in 1919, in which he stated that "the prime essential of an efficient, enlightened democracy, and the most important consideration of democratic government, is its schools, and the success of its schools depends ultimately upon the teachers" (St. John, 1920a, b, p. 12). As early as the first quarter of the twentieth century, St. John ardently advocated for the professionalization of teachers, a process that should encompass at least four aspects according to his views: professional preparation, suitable salaries, continuation and adherence to the profession, and professional spirit, attitudes, and service.

In 1917, St. John conducted an island-wide study about the spelling errors of English among Puerto Rican eighth graders (St. John, 1919a, b, c). Departing from the results of his study, St. John proposed possible instruction and teaching strategies based upon modern psychological principles of the time. Besides the technical aspects of spelling instruction such as word visualization, word division, practices, grouping, and so forth, St. John believed that “the effectiveness of spelling instruction depends quite as much upon the degree of interest in the work and pride in the results, experienced by the pupil” (St. John, 1919, p. 39), denoting in these words his child-centered perspective on learning. St. John pointed to three sources of interest and pride in pupils: consciousness of the need and value of good spelling, direct intrinsic appeal of interesting subject matter and good organization and presentation of the work, and consciousness of the progress being achieved.

This piece of research was originally published in 1917 in the *Porto Rico School Review* as five separate articles. Its impact was of enormous importance for the understanding of the learning processes of English as a foreign language among Spanish native speakers from Puerto Rico, to such an extent that the full monograph was reprinted by the University of Puerto Rico in 1922 as a *University Bulletin*. The publication was reprinted again in 2012 by HardPress, Ann Arbor, Michigan. One hundred years after the study was conducted, the document was recognized as a historical classic and reprinted by Forgotten Books of London (St. John, 2018).

Regarding the teaching of children, St. John promoted the idea of concomitant learning. Accordingly, he stated that “children exercise their social instincts in group activities” (St. John, 1920a, b, p. 22). For him, group situations in child learning were better off than the teacher-pupil situation. He suggested to student teachers group activities for teaching and learning, such as writing books, preparing dramatizations based on historical events, and planning group activities. St. John was a true defender of the idea that children have capabilities and enough intrinsic motivation to develop and fulfill the human potential inherent to each person. He

wrote: “Children are not lumps of clay to be shaped into adult form; they are energetic bundles of interests and instincts given by nature to start them on their way to adulthood” (St. John, 1920a, b, p. 20). He thought that curricula should depart from those interests demonstrated by the learners, affirming that “school is for children, not the children for school” (St. John, 1920a, b, p. 22).

For his doctoral dissertation at Harvard, St. John conducted an intricate study on the relation between educational achievement and intelligence, considering teachers’ marks, promotions, and scores in standard tests. The magnitude and importance of this research were acknowledged by Harvard, and it was published as volume 15 of the *Harvard Studies in Education Series* (St. John, 1930).

In the early 1930s, Charles W. St. John was associated to Dana College, Newark, New Jersey (St. John, 1932), an institution that eventually was incorporated as part of the Rutgers University system. Unfortunately, his productive intellectual career was interrupted too early, when in 1933 he passed away in Maplewood, Essex, New Jersey, where he was living with his wife Gertrude and his three Puerto Rican born sons: Webster, 16; Herbert, 14; and Charles, 12. The academia lost a bright and promising young scholar and his family a loving husband and father.

Bela Székely was a Hungarian-Argentine psychologist. Little is known about his childhood and adolescence, although it is known that his mother was a victim of Nazi persecution. He studied in Nagyvárad (Oradea) and Budapest. In his youth he worked as a journalist and had literary interests, publishing a book of poems *Számvetések (Calculations)*, 1912), several plays, and essays, at the same time that he translated German texts, among others by the famous Austrian novelist Arthur Schnitzler (1862–1931).

After the First World War he was a columnist for several Jewish newspapers published in Hungarian and was a member of Jewish cultural and political organizations in Transylvania, visiting Palestine in 1925, after which he published a book (Székely, 1925). In 1918 he founded with Erno Márton (1896–1960) the newspaper *Uj Kelet (Oriental News)*, which was published in Cluj-Napoca, and of which he was director until 1919. Likewise, his works appeared in *Korunk (Our Time)*, a magazine founded in the same city in 1926 by Gábor Gaál (1891–1954), Marxist philosopher and writer. *Korunk* was, according to Erős (2018, 2019), important in disseminating psychoanalytic concepts, which must have stimulated Székely's interest in the ideas of Sigmund Freud (1856–1939).

Established in Budapest in 1926, he wrote on social, sexual, and women's rights issues for leftist-oriented political and art magazines. It was also in that city that his sympathy for Marxism was accentuated (Hopfengärtner, 2011–2012).

It is not known if Székely had a systematic psychoanalytic training or if he was a self-taught person, but his interest in psychology is recorded towards the beginning of the 1930s and it is a fact that he knew the works of the main Hungarian psychoanalysts such as Sándor Ferenczi (1873–1933), Géza Roheim (1891–1953), Imre Hermann (1889–1884), Mihály (1896–1970), and Alice Balint (1898–1939). However, more than attracted by Freudian psychoanalysis, Székely was interested in the ideas of Alfred Adler (1870–1936), participating very frequently in the activities of the Adlerian movement in Hungary (León, 2000). His friendship with the poet Attila József (1912–1937), a follower of the

ideas of Wilhelm Reich (1897–1957), played an important role in his closeness to Marxism and seeking an integration of this doctrine with psychoanalysis.

In Székely's interest in Adlerian theory and in his proximity to Marxism, István Kulcsár (1901–1986), a prominent neurologist and member of the Communist Party of his country, played an important role. With him, Székely cofounded the magazine *Emerismeret (Human knowledge)*, with an Adlerian-Freudian orientation, published between 1935 and 1936.

Székely worked for a time under the direction of William Stern (1871–1938), in Hamburg; Karl (1879–1963), Charlotte Bühler (1893–1974), and Alfred Adler, in Vienna; and Paul Ranschburg (1870–1945) and Stefan (István) von Máday (1879–1959), who founded the Hungarian Society for Individual Psychology in Budapest in 1927 (Calcagno, 1966). He also worked in the Charité Polyclinic (1928–1934), in the office of the workers' organizations for the sexual problems of youth (1932–1938) and in the adjustment clinic (1933–1935) in Budapest. In addition, he was a professor at the State Superior School for specialized teachers in childcare and at the Workers' University of Budapest.

In 1934 he published in Hungarian a guide for parents and teachers (*A te gyereked... A modern nevelés kézikönyve*), in which he integrated ideas of Jean Piaget (1896–1980), the Böhlers, Edouard Claparède (1873–1940), and Stern with Freudian and Adlerian concepts. This work was very well received. In 1936 he published *Az antiszemitizmus pszichoanalízise*, a work dealing with anti-Semitism and based on Freud's mass psychology and Reich's ideas. This work was one of the first to deal with the issues of anti-Semitism from the psychoanalytic point of view.

The increasing presence of National Socialism in Europe led Székely to emigrate with his wife to Argentina in 1938, settling in Buenos Aires. He soon learned Spanish and gave lectures at the *Colegio Libre de Estudios Superiores (Free School of Higher Education)*, with the aim of spreading psychoanalysis, dealing with criminological, artistic, and literary issues. Although he participated in the first meetings to form a

psychoanalytic society in that country, when it was established in 1942 with the title of Argentine Psychoanalytic Association, he was not accepted as a member because he was not a M.D. (Acuña, 2009). But probably other cause for not admitting him was the clinical orientation that the association adopted, something that Székely criticized, while he stressed the importance of treating the educational and social problems (García, 2005).

Around 1940, Székely founded the Sigmund Freud Institute in Buenos Aires, a psychopedagogical institution dedicated to the diagnosis and treatment of problems in children and adolescents, in which more than working with psychoanalytic doctrine, Adler's concepts and techniques were used, Rorschach Psychodiagnosis was used for diagnostic purposes. Jaime Bernstein (1917–1988) worked at that institute for a time, who later cofounded the Paidós publishing house, and on whose ideas Székely seems to have had an influence. The interest and use of the Rorschach by Székely led him to publish a work dedicated to this technique (Székely, 1941), widely disseminated in Latin America.

Between 1946 and 1947, motivated by Alfredo Calcagno (1891–1962), Székely founded and worked at the Víctor Mercante Behavior Clinic (Institute of Minority Psychopedagogy), in the city of La Plata. It was Calcagno, also, in his capacity as director of the "Library of Educational Sciences" of the Kapelus publishing house (in which a large number of psychological works would be published), who published Székely's *Los tests* (Székely, 1946), which would have a wide diffusion throughout Latin America (Klappenbach, 2001).

Székely extended his radius of action beyond Argentina. In Brazil he taught courses at the University of Salvador (Bahia), which in 1950 awarded him an honorary doctorate. In Santiago (Chile) he founded in 1954 the specialty of psychology at the Catholic University, where he remained for a short time. It is also known that among his plans was a visit to Peru.

Over the years his interests expanded beyond psychoanalysis and the Adlerian movement, approaching the ideas of Leopold Szondi (1893–1986) and his experimental diagnosis of

instincts and those of Harald Schultz-Hencke (1892–1953), with whom he came into contact during a stay in Europe after the Second World War. Likewise, in the final stage of his life, he showed great interest in the approaches of Viktor E. Frankl (1905–1997) and Igor Caruso (1914–1981).

Although little cited today, Székely was a very prolific author, very active as a lecturer and in the organization and management of psychological treatment centers. Some of his books originally published in Hungarian were translated into Spanish.

His theoretical approaches have been overcome with the passage of time, although his reflections on racism remain topical taking into account current times. Two works, however, achieved great resonance in the context of Latin American psychology of their time: the *Diccionario enciclopédico de la psique* (*Encyclopedic dictionary of the psyche*, Székely, 1950), one of the first psycholexicographic works published in the region, and *Los tests* (Székely, 1946), which contained detailed information about psychometric tests and projective techniques, both having reached various editions.

Both works were, at least in their first edition, the exclusive authorship of Székely who, as far as we know, had not shown a very specific interest in psychotechnical aspects and psychological terminology during his European years. In this sense, they appear to be the result of his recognition of the deficiencies in theoretical and applied information among Latin American psychologists.

Los tests, in particular, were an essential reference work for many Latin American psychologists for years, as the region's libraries and universities did not have the original manuals of many psychological tests (Carpintero Capell et al 2011; León, 1997). The information on its application, qualification, and interpretation and other technical aspects referred to by Székely were a great help for those who wanted to use the tests in this part of the world. The *Encyclopedic dictionary of the psyche*, despite the years and the new developments in psychology, has ended up being a *long-seller*, as evidenced by the numerous reissues (and updates) it has had.

Education and psychology research ·
Phenomenological-existential research ·
School, family, and community

Heloisa Szymanski contributed to research in the area of education, family, and community. Her work ranges from clinical hermeneutics to phenomenological research and the interface between psychology and education. In addition to being an active research producer, she has also contributed to research in the education, family, and community field.

As a member of the first psychology class of the Psychology graduation at the Pontifical Catholic University of São Paulo (PUCSP) (1963–1968), she was a Joel Martins' student and under his guidance developed her master's degree: *Discriminação de formas em recém-nascidos: um estudo de tempo de fixação em padrões visuais (Form discrimination in newborns: a study of fixation time in visual patterns)* (Szymanski, 1976). In the early 1980s, through Martins, she was introduced to the work of Martin Heidegger (1889–1976). According to her report, Joel Martins had returned from an internship in the United States where he had encounter research guidelines based on Martin Heidegger's Hermeneutic Phenomenology. There begins an influence in her work having Phenomenology as a research method. She started studies on *Ser e Tempo (Being and Time)* (Heidegger, 1927/2012) which extends until today and started her doctorate already in this approach.

The doctoral thesis: *Um estudo sobre significado de família (A study on the meaning of family)* (Szymanski, 1987) sought to understand the family as a *locus* of education, updating the traditional conception of education beyond the formal education at school's facilities. Going to the low-income areas of the city of São Paulo, she found a great diversity of families, in general, very far from the traditional family portrait found in the bibliography of psychology and education available at the time.

She joined as a professor at the Pontifical Catholic University of São Paulo (PUC-SP) in 1967, where she stayed for more than four decades until 2014, reaching the highest degree as a full professor; at this institution, she was also on the Postgraduate Studies Program in Education:

Educational Psychology where she has mentored Masters and Ph.D. theses for 21 years.

Parallel to her intense academic activity, she also developed clinical work, trained in family therapy and came into contact with Psychodrama and Sociodrama. Heloisa Szymanski states that Phenomenology required her to face a different proceeding as a researcher. An approach to psychological research capable of understanding the phenomenon of education, *in loco*, required specific analytical techniques and procedures. Her clinical work with couples and families and her experience working with groups also contributed to this. She also reports that the character of welcoming and understanding, present in her research method, was repeatedly evaluated positively by research participants (Szymanski, 2001a).

In the years following the encounter with the approach, the influence of Phenomenology began to develop as a method for research in psychology. She met Amedeo P. Giorgi (1931–?), brought to PUC after a Joel Martins invitation. Giorgi was a professor at Duquesne University in the USA and a critic of traditional psychology as the only research method and who proposed foundations for research based on the work of Edmund Husserl (1859–1938) and Maurice Merleau-Ponty (1908–1961). Heloisa Szymanski used this epistemological foundation, specifically in the construction of *units of meaning*, to develop her own method of analysis. After years of existential phenomenological studies, and constant observation and reflection about the possibilities of analysis categories, she also came to be influenced by the work of Georg Gadamer (1900–2002) and his Hermeneutics. From *units of meaning* analysis, she built the understanding of *meaning's constellations*.

In Education field of research, she based her studies on Paulo Freire's dialogic proposal, which influenced her research through the investigations of the poorest population and those without public education services. Freire's influence is also manifested in the construction of paths to develop participatory research in psychology and education. The work of Heloisa Szymanski has a care bias from considering the insertion of the researcher in the research field to the construction

of research problems based on the demands of the researched population.

She has published 18 articles in specialized journals, 11 book chapters and 2 books as the sole author. She also supervised 33 master's dissertations and 10 doctoral theses.

In her academic production, she develops a rigor in the phenomenological method that has grown over the years, and at the same time developed an expertise in the interface of Phenomenology and Psychology research field.

Has developed important partnerships in the construction of her academic publishes, from the aforementioned relationship with Joel Martins, through the Working Group: *Psychological Practices in Institutions: attention, deconstruction, invention* of the National Association for Research and Postgraduate Studies in Psychology (ANPEPP) where its main production partners and interlocutors Henriette Tognetti Penha Morato, Carmem Lucia Brito Tavares Barreto, Maria Luisa Sandoval Schmidt, and Luciana Szymanski, her daughter.

The impact of phenomenology on their work occurred progressively, changing both the understanding of research, increasingly active and interventional, and the understanding of research problems, increasingly oriented by the demands of the participants as well as methodologically. Received more and more influences from fundamental authors of phenomenology, developing the methodology from the method and building a research practice used by several researchers in many Brazilian universities such as Henriette T.P. Morato, Carmem Lúcia B.T. Barreto, and Ana M. Jacó-Vilela.

In the last texts produced so far, the growing influence of the Hanna Arendt (1096–1975) philosophy for the understanding of the phenomenon related to dialogic education, family, and community is present. Heloisa Szymanski, worked and still works to broaden the understanding of research, family, and education from a phenomenological approach by training dozens of researchers and teachers throughout Brazil, by building a method based on phenomenology thinkers, but with strong decolonized influence of Paulo Freire's thought.

Bolivian poet, politician, diplomat, and intellectual, Franz Tamayo Solares was born into the home of a wealthy family, receiving a careful education. Baptized as Francisco, he promptly adopted the name Franz. After living for a few years in Brazil, where his father (Isaac Tamayo, 1844–1914, prominent writer and diplomat) was sent as Bolivian ambassador, and three years in Europe (France, Great Britain, and Germany), he returned to his homeland in 1904, and he received the title of lawyer at the Universidad Mayor de San Andrés (La Paz) in 1905, without having studied at the law school, noting that he had learned law personally.

Between 1910 and 1912, Tamayo was a professor of sociology at his *alma mater*, founding the *Partido Radical* (Radical Party) in 1911 and being elected deputy for La Paz in 1914. In 1917, he ran for president of Bolivia for this party. With active journalistic work (for example, in *El*

Tiempo – Time), Tamayo founded the newspapers *El Fígaro* (*The Figaro*, 1913) and *El Hombre Libre* (*The Free Man*, 1917), which replaced the former, also collaborating in international publications (such as *Amauta*, which was directed in Lima by José Carlos Mariátegui, 1894–1930). In 1921, he represented Bolivia before the League of Nations, and during the government (1931–1934) of Daniel Salamanca (1860–1935) he was Minister of Foreign Relations (1932–1933). In 1931, he was president of the Chamber of Deputies and, in 1934, won the presidential elections but could not assume office due to the coup against Salamanca. In 1943, he was elected president of the Constituent Assembly. Later he retired from public life and concentrated on his literary and essay work in which he also addressed issues of the Bolivian politics. His difficult personality led him to be involved in political controversies and incidents in which his enemies manifested their open hostility.

Prolific, versatile, and polyglot writer (including the Aymara language, which a large number of the Bolivian population speaks, learned in his childhood years, because his mother spoke it), with extensive production in terms of poetry and essays, Tamayo's most important and best-known work is *Creación de la pedagogía nacional* (*Creation of the National pedagogy*, Tamayo, 1910) in which he proposes a vindication of the Indigenous race, promoting the inclusion of the native culture in the pedagogical plans.

Creation of the national pedagogy compiles 55 journalistic articles published in *El Diario de La Paz* between July 3 and September 22, 1910. Presented by its author as a “battle book and reflection book,” in its pages it is possible to recognize the influence of thinkers such as Friedrich Nietzsche (1844–1900), Hyppolite Taine (1828–1893), Johann Wolfgang von Goethe (1749–1832), Friedrich Ratzel (1844–1904), and especially Johann Gottlieb Fichte (1762–1814). Tamayo criticizes the ignorance of the psychological reality of the Bolivian child and proposes to investigate the personality of the inhabitant of his country, discarding the imitation of the European pedagogical models represented at that time by the Belgian mission in Bolivia headed by Georges Rouma since 1909.

The projects of repeating the pedagogical models of the Old World in Bolivia were described by Tamayo as “pedagogical bovarism” (in allusion to *Madame Bovary*, the great novel by Gustave Flaubert, 1821–1880), since in them the copying and simulation of a strange work made it seem like his own. According to Tamayo, there must be two types of education, one for the Indigenous, whom he considered unintelligent and reluctant to outside influence, but endowed with great will and tenacity, and another for the mestizo, intelligent but disorderly, undisciplined, and frivolous.

Tamayo’s written work is considered among the most representative of Bolivian literature, and, in particular, his *Creation of the national pedagogy* is (apart from its influence on the pedagogy of Bolivia), along with *Pueblo enfermo* (Sick country, Arguedas, 1909), by Alcides Arguedas (1879–1946), the most ambitious attempt in the early years of the twentieth century to formulate a social psychology of the Bolivian people.

Rosa Tanco-Duque · Depth Psychology · Psychoanalysis Schools · Universidad Nacional

Rosa Tanco-Duque lived with her parents Jorge Tanco and Rosa María Duque in Fresno (Tolima, Colombia) until the age of 10. In 1940, when the family moved to Bogotá, she joined the Escuela Anexa de Prácticas (Annexed School for Practical Training) of the Instituto Pedagógico Nacional para Señoritas (National Pedagogical Institute for Ladies). A school initially founded following the first and second German Missions hired by the Colombian State to support the modernization of education to respond to the new demands posed by Colombia’s industrialization process. It was oriented by Dr. Francisca Radke, who continuously supported women’s inclusion in education (Angulo, 2007). In conformity with its mission, the institution paid particular attention to pedagogy and child psychology. Like Rosa Tanco-Duque, alumni would be in charge of implementing the recommendations of the Pedagogical Mission in the field of education. The National Pedagogical Institute for Ladies was a pretty demanding school and maybe the first to offer good quality education for women in Colombia (Prieto, 1996). During her last years as a student in this school, Rosa Tanco-Duque was influenced by a female psychologist, Victoria Bossio Herrera, who had recently arrived in the country with a master’s degree in learning and

educational psychology from Columbia University's Teachers College, of New York. On February 22, 1951, Rosa Tanco-Duque graduated as *Institutora* and practiced her profession in primary education at public schools until 1957.

In 1954, Rosa Tanco-Duque joined the Instituto de Psicología Aplicada (Applied Psychology Institute) at the Universidad Nacional de Colombia (National University of Colombia). Her cohort, one of the firsts of the program, was made of six female and two male students. She maintained a very critical stand regarding her teachers and their pedagogical strategies. By that time, the program was under the direction of a renowned psychiatrist, Luis Jaime Sanchez. During her studies, she proved to be an outstanding student, inquisitive, and restless, leading the critical stand, and representing her peers at the Faculty Council (*Crónica Información*, n.d.). On November 25, 1957, she received the degree in psychology with six more students.

By then, Rosa Tanco-Duque had developed a thematic interest in psychoanalysis. Her encounter with the book *Psychoanalysis and Existential Synthesis* published by Igor Caruso in 1954 introduced her to the Vienna Circle of Depth Psychology. It motivated her to establish personal contact with Caruso by mail. In 1958, she moved to Vienna to formally begin psychoanalytic studies, with the support of a scholarship granted by the Institute of Psychology. Meanwhile, she was one of the founding members of the Colombian Federation of Psychology officially recognized by the Justice Ministry of Colombia in April 1958.

During her 3-year stay in Vienna, she received training as a psychoanalyst from the Vienna Circle of Depth Psychology. Soon she became the bridge between the Vienna Circle and interested members of the Spanish-speaking community. In 1958, after the creation of the Work Groups International Secretariat in Innsbruck, Rosa Tanco-Duque became the secretary for Ibero-America. She facilitated the arrival of other candidates from Spain, Mexico, and other Spanish-speaking countries. New seminaries and eventually new work groups emulating the Vienna Circle were created. In 1962, she returned to Colombia and joined the Faculty of the Psychology Institute and the

counseling service for students, as a psychotherapist, at the National University of Colombia.

Meanwhile, almost everywhere globally, psychoanalytic practice was deeply rooted in the practice of medicine. Some examples of this in Colombia were the Grupo de Estudios Psicoanalíticos (Group of Psychoanalytic Studies) founded in 1957, the Sociedad Colombiana de Psicoanálisis (Colombian Society of Psychoanalysis) founded in 1961, and the Asociación Colombiana de Psicoanálisis (Colombian Psychoanalytic Association) founded in 1962. All of them oriented their educational activity to the medical community (Villar Gaviria, 1965).

This aspect of psychoanalytic schools led Igor A. Caruso (1914–1981) in 1947 to move away from the Wiener Psychoanalytische Vereinigung. Critical of what he thought was an excessive medical and materialistic orientation, he created the first Vienna Circle of Depth Psychology. While acknowledging his Freudian legacy, Caruso rejected the International Psychoanalytical Association (IPA) rules that limited psychoanalytical education to those in the field of medicine. Instead, the Vienna Circle of Depth Psychology welcomed participants from social sciences and liberal arts (Frank-Rieser, 2014).

Aligned with this understanding of psychoanalysis and thanks to Rosa Tanco-Duque's initiative, a group of medicine and psychology professionals initiated a work group in Colombia in August 1963 that followed the lead of the Vienna Circle led by Caruso. In 1964, the work group formally became the Colombian Circle of Depth Psychology, under the leadership of César Constaín Mosquera, whose psychoanalyst was Rosa Tanco-Duque. By the end of that year, the Circle organized a Latin American symposium and invited other work groups and Circles of Depth Psychology associated with the Vienna Circle. Igor Caruso participated in the symposium and remained in Colombia for another 6 months. In 1964, the Circle launched the first publication of the *Archivo de Estudios Psicoanalíticos y de Psicología Médica* (Psychoanalytic Studies and Medical Psychology Archive), which included 10 of Caruso's conferences in Bogota between July and August 1963. The title was "La

personalización: biología y sociedad” (Personalization: biology and society) (Villar Gaviria, 1965).

Despite the ties between psychoanalysis and medicine in Colombia, the work group’s insertion was relatively easy compared with experiences from other countries in Latin America, where traditional groups rejected anyone who was not a medical practitioner (Rosa Tanco-Duque, personal communication, January 2020).

In 1966, Rosa Tanco-Duque became the first director of the Department of Psychology at the recently created Faculty of Human Sciences at the National University of Colombia (Peña, 2008). Her closest collaborators were Professors Alvaro Villar Gaviria and Mateo V. Mankeliūnas. In 1967, she promoted a significant curricular reform. The debate revolved around, first, her defense of a 5-year program for psychologists’ education at the National University of Colombia; second, the importance of educating students based on structured knowledge (in opposition to specific topics), allowing them a broad vision of the field; third, the need for an initial cycle before the concentration in highly specialized content; and finally, she argued that the psychology program should be structured in three cycles: basic, applied, and professional/research (Tanco-Duque, 1967).

In 1966, the German government granted Rosa Tanco-Duque a 3-month scholarship to get acquainted with psychotherapy educational centers and schools in Berlin. In 1968, the Austrian government awarded her an academic scholarship to continue her PhD studies at the University of Salzburg. During her doctoral training, together with her colleague Lore Watzka, she worked on two projects: the Social Center for Life Orientation (Levensperatung) and the *Anuary of Psychoanalytic Studies*. In 1971, she earned her PhD with a dissertation on “Psychology and Psychopathology.”

From 1972 to 1973, Rosa Tanco-Duque took charge of the training section of the Salzburg’s Depth and Psychosomatic Psychology Research Group at the Psychology Institute of the University, and in 1974, she became a board member of the Salzburg Depth Psychology Circle. In 1976, together with Lore Watzka and others, she

founded the Austrian Society for the Study of Children Psychoanalysis (presided by Igor Caruso). The society promoted an international exchange with other psychoanalytic organizations and with renowned psychoanalysts such as Anna Freud (London), Françoise Dolto (Paris), honored members of the society, as well as Paulina Kernberg (New York) and Ricardo and Marisa Rodulfo (Buenos Aires). She also joined the redaction team of the Child Psychoanalysis Studies, launched in 1981. The annual publication revolved around the most important topics of the seminars and work groups and included the contributions of the psychoanalysts mentioned above (Rosa Tanco-Duque, personal communication, August 2020).

On March 22, 1974, the Republic of Austria granted Rosa Tanco-Duque Austrian citizenship. Nowadays, she lives in Salzburg and retired from any professional activity.

Paraguay · Psychology and education · Lamarck's theory · Exercise law · Mental inheritance

Francisco Tapia was a teacher of Argentine nationality who emigrated to Paraguay in the last decade of the nineteenth century and lived in the country for a few years period. Concerning him, the biographical data is not abundant, making it difficult to make a well-informed and safe reconstruction regarding many stages of his life, mainly his school years and academic training. Dark and unknown aspects predominate in many of them. Sometimes, it is necessary to make reasonable deductions to organize aspects of his trajectory (García, *in press*). In the last decade of the nineteenth century, Tapia was hired by the Paraguayan government to direct the Escuela Normal de Maestros (Normal School for Teachers), founded in Asunción in 1896 (Benítez, 1981). At that time, Juan Bautista Egusquiza (1845–1902), a Paraguayan military and politician who governed between 1894 and 1898 and belonged to the Partido Colorado (Colorado Party), was the president. According to Tapia's own comments in some of his articles, his dedication to teaching originated at a very early age, possibly around the age of 17. At the Normal School for Teachers, in addition to institutional management, he taught pedagogy, grammar, and arithmetic (García, 2006).

We do not know much about Tapia's personality characteristics either. A fundamental referent of Paraguayan psychology and education at the same time, the teacher Ramón Indalecio Cardozo

(1876–1943), who was Tapia’s disciple at the Normal School of Teachers, provided some interesting descriptions, although reduced and fleeting, that concern outstanding features of Tapia. He described him as a great friend of accuracy, although also observed a certain rigidity in his habits (Cardozo, 1991). He also stated that Tapia never accepted violations of school regulations, always insisting on their compliance. Cardozo (1991) highly valued Tapia’s intellectual conditions, qualifying him as an eminent man of letters and science. Likewise, Cardozo alluded to his physical appearance, pointing out that Tapia used a “goat beard.” Beyond these incidental descriptions, we lack other precise information that tells how Tapia was like on a personal ground. Authors, such as Amaral (2003), also point to him as a good teacher and excellent pedagogue.

Despite priority dedication to activities framed in his educational functions, Tapia’s life knew other edges, possibly unwanted, related to situations of undeniable political connotations. It is these events that most frequently transcended the consideration of historians. The main one was a serious interdict that he sustained with Enrique Solano López (1859–1917), one of the several sons of the Marshal Francisco Solano López (1827–1870), a military and politician leader of the country during the War against the Triple Alliance that pitted Paraguay against Argentina, Brazil, and Uruguay between 1865 and 1870. From his position as the Superintendente de Instrucción Pública (Superintendent of Public Instruction), which held since May 1, 1898, he tried to vindicate his father’s historical memory through a campaign of marked patriotic tint (Warren, 1985). The image of the Marshal was highly discredited in public consideration during the postwar period and was widely rejected, as many considered him responsible for the ruin of the country. Part of Enrique Solano López’s vindication effort was the publication of a booklet for students to read that praised the Marshal as one of the greatest heroes in history. Tapia’s reaction was of extreme rejection, to the point of prohibiting its use, and comparing Francisco Solano López with Caligula and Nero. He responded by writing a short work titled *El tirano Francisco Solano*

López arrojado de las escuelas (The tyrant Francisco Solano López thrown out of the schools), where he laid out his position in detail.

These disagreements far exceeded the strictly educational context and came to occupy spaces in the public debate, with repercussions in the press (Gómez, 2020). Tapia was the object of vehement attacks, even during cultural activities, such as some lectures he gave in public venues. But the high point was the duel challenge with pistols formulated by Enrique Solano López that took place on the banks of the Pilcomayo River, on April 25, 1898. Although none of the contenders was seriously injured, the event caused enormous damage to Tapia’s prestige and reputation, irreparably affecting his work at the Normal School, whose management position he finally lost, as well as his courses. Little is known about him after these events, except that in 1903 he married in Lambaré, a city neighboring Asunción, with Teresa Gambaraberry Eyherabide, a citizen of French nationality.

Tapia has also been mentioned for his alleged presence aboard the steamship *Sajonia*, a vessel that departed transporting a contingent of individuals from the Argentine city of La Plata, with the intention of supporting with ammunition and weapons to those plotted in the revolution of 1904, which displaced the Partido Colorado (Colorado Party) from power and replaced it with a government of its traditional political adversary, the Partido Liberal (Liberal Party). Passengers related to the insurrection were traveling on the ship, as well as others who had no relation or knowledge of the events, so it is difficult to make an unequivocal judgment on Tapia’s participation in them. Years later, his death occurred due to natural causes at the Hospital Italiano (Italian Hospital) of La Plata, on December 14, 1914.

Tapia’s relevance for Paraguayan psychology is due to his insertion as one of the central references for one of the conceptual traditions that support the development of psychological knowledge: the one that links the contributions of psychology with education (García, 2006). In fact, Tapia has been considered one of the pioneers of psychology (García, 2007). A couple of articles published in the *Revista del Instituto Paraguayo*

(Journal of the Paraguayan Institute), the first entitled *Pedagogía* (Pedagogy), which was released in 1897, and another called *Algunas leyes biológicas* (Some biological laws), from 1898a, constitute his main references. With regard to psychological knowledge, the latter have a special value. Both transcribed previously dictated lectures. Tapia took as support the theories of the French naturalist Jean-Baptiste Lamarck (1744–1829), author of the *Zoological philosophy*, originally published in 1809 (Lamarck, 1873). This work constitutes the main evolutionary approach prior to Darwin's work (García, 2018). According to Tapia, pedagogy was a biological science that should provide useful knowledge about human nature, offering advice and providing effective rules to guide the education of children.

Tapia thought that humans are subject to diverse and effective influences. These are of several types: (a) inheritance; (b) the environment; (c) organic variability; (d) the harmony or irregularity in the processes related to development and growth; and (e) the development of mental faculties. Pedagogy had to contribute a lot to the solution of problems in the hygienic, physical, and psychological sphere. He believed that organisms tend toward perfection and optimal functioning in order to respond to the circumstances of life in a constant and progressive way. One of the ways to achieve this is through exercise, coinciding with one of the laws formulated by Lamarck, finding its expression in the practice of pedagogy, which is essential in the improvement and progress of individuals. Tapia spoke of degradation or degeneration that biological organisms and even nations can suffer and, in this aspect, he also ventured into the analysis of the national character of Paraguayans. Likewise, “mental inheritance” increases the ability to modify the structure and behavior of living beings through the use of environmental variability and the appropriate biological principles, always following Lamarck. This conception of evolution and heredity had essential implications in the consideration of psychological variables, mainly those such as intelligence, which are of central interest for the educational process. In sum, the work of Francisco Tapia

constitutes the most representative example of the influence of Lamarck's evolutionary ideas in the context of Paraguayan psychology and pedagogy.

Tapia-Mendieta, Violeta

Born *Pisco (Peru)*, June 22, 1930

Died *Lima (Peru)*, June 12, 2014

Alfredo Zambrano-Mora
University of Lausanne, Lausana, Switzerland

Keywords

Peru · Educational psychology · Teaching of psychology

Violeta Tapia-Mendieta was a prominent Peruvian psychologist. At a time when the specialty of psychology did not exist as an autonomous study program at the *Universidad Nacional Mayor de San Marcos* (National University of San Marcos, UNMSM, Lima), she studied at that university as a secondary education teacher, graduating in 1955. Years later, in 1970, she obtained the degree of professional psychologist and a doctoral degree in education (1974) from UNMSM. Tapia carried out postgraduate studies in the USA (Ohio University, 1958–1959, and Florida State University, 1981). Professor at her *alma mater* from 1960–2001, as well as at other universities in Lima, Tapia was dean of the Colegio de Psicólogos del Perú (Board of Psychologists of Peru, 1990–1992) and received the Premio Nacional de Psicología (National Prize of Psychology, 2001), awarded by the aforementioned professional association (Caycho, 2014).

Tapia was one of a group of students who were disciples of Walter Blumenfeld (1882–1967), who taught undergraduate and graduate level, with

whom he conducted research in the field of educational psychology, specializing in that domain of psychology (educational technology and creation of measurement instruments in education), on which he constantly investigated (Arias-Gallegos, 2014).

Although she was not an author with a high production of articles and books, Tapia-Mendieta was a psychologist highly respected by the Peruvian psychological community, many of whose members had had her as a teacher or had been directed by her in the preparation of their theses of bachelor's, master's, and doctoral degrees not only in psychology but also in education. Her presence and active participation in academic meetings and congresses on the specialty also made her well known (Hurtado-Alva, 2014).

Brazil · Experimental psychology · Psychology laboratory

Lucília Tavares graduated as a teacher at the Escola Normal do Distrito Federal (Federal District Normal School), then the city of Rio de Janeiro, in 1922, and worked as a municipal public school teacher from 1924 to 1928. In 1925, she was appointed by the Diretoria Geral de Instrução Pública (General Directorate of Public Instruction), the agency responsible for education in the Federal District, to work at the Laboratório de Psicologia da Colônia de Psicopatas (Psychology Laboratory of the Psychopathic Colony), where she worked until 1931, and, from 1928 on, as an assistant of Waclaw Radecki. During the period she worked at the laboratory, Lucilia published three papers as a result of her researches, which are among the first female publications in psychology in Brazil. One of these

publications was a book, which is considered the first psychology book written by a woman in Brazil (Lourenço Filho, 2004 [1950]). In March 1932, through Decree n. 21.173, the laboratory, previously linked to the Assistência aos Psicopatas (Assistance to Psychopaths), of the Ministério da Justiça (Ministry of Justice), was transformed into the Instituto de Psicologia (Institute of Psychology) and inserted in the Ministério da Educação e Saúde (Ministry of Education and Health), then newly created, expanding its institutional project. The institute thus became the first proposal for higher education for psychologists in Brazil, offering several courses, both theoretical and practical, as well as internships. Lucilia was part of the institute's staff, teaching the subject "Methodology of Experimental Work in Psychology." But this experience lasted only 7 months, and the institute was closed by decree n. 21.999, of October 24, 1932. After the closing of the Institute of Psychology, Lucilia enrolled in a contest at the Escola Normal (Normal School) in 1930, but this was canceled by the institution. In the late 1940s, she participated in Emilio Mira y López' courses Selection and Professional Guidance at the Departamento de Administração do Serviço Público (DASP) (Department of Public Service Administration). In the 1950s, she participated in the Minor Psychotherapy course at the Fundação Getúlio Vargas (FGV) (Getúlio Vargas Foundation) as a technician, collaborating with supervision and complementation to these courses. Her name appears in a list of technicians who had this role in the report commemorating the 10 years of the Centro de Orientação Juvenil (COJ) (Youth Guidance Center), in 1956. More precise data about Lucilia's trajectory are still waiting to be found, despite the common silencing of historiography in relation to women.

Argentina · Psychometric assessment · Psychological measurement and school counseling

He graduated as a teacher in San Francisco. He also completed partial studies as a professor of Philosophy and Educational Sciences. Furthermore, he worked as a psychologist to take psychological tests in the Centro de Psicología y Psiquiatría infantil del Hospital de Clínicas (Center of Psychology and Child Psychiatry of the Clinical Hospital), between 1943 and 1946 and in the Psychopedagogical section of the Hospital Fernández in 1955, both of them in Buenos Aires city. He was Director of the Jonson Children's Residence, a private establishment for the care of atypical children, in Martinez, Province of Buenos Aires, located 30 min from downtown Buenos Aires, between 1944 and 1954.

At the University of Buenos Aires, he was Professor of the course on Theory and Interpretation of Mental Tests (1959–1966) and Vocational Orientation (1963–1966), in the Department of Psychology, Faculty of Philosophy and Humanities. He was also Full Professor of the course on Research Techniques, Department of Educational Sciences, at the same institution (1960–1966). Tavella was the organizer of the Department of Vocational Guidance at the Universidad de Buenos Aires (University of Buenos Aires) and held the position of Director (1958–1963). When the military dictatorship led by Juan Carlos Onganía (1914–1995) began in 1966, he left

Argentina and settled in Venezuela to work at the University.

When he joined the Facultad de Humanidades y Ciencias de la Educación de la Universidad Nacional de La Plata (Faculty of Humanities and Educational Sciences of the National University of La Plata) in 1958 as Professor of the course on Psychomathematics and Statistics, he was already a well-known professional due to his aforementioned work and his participation in the creation of the Dirección de Psicología y Asistencia Social Escolar en la Provincia de Buenos Aires (Department of Psychology and School Social Assistance in the Province of Buenos Aires), in 1956. His arrival at that University coincided with a particularly prolific moment, which we have called the “second foundation” (Southwell, 2003) that unfolded around the unifying figure of Ricardo Nassif (1924–1984). Nassif developed an articulating and renovating role between the distant positivist past and the – less distant – spiritualist current in that institution, with the process that was opening up around the development, technocratic, and sociological perspective conceptions of those decades. In those years, this institutional space deeply debated about structural problems: on the one hand, the question of the scientificity of educational science studies, and on the other, the need for the systematic reform of the educational system (Southwell, 2014), which would be a permanent topic of those years.

As we have mentioned in another work (Southwell, 2003), the problem of the scientificity of pedagogy and its relationship with other disciplinary knowledge did not only refer to exclusively epistemological issues, but also highlighted the concern to provide legitimacy to the growing willingness to intervene in health and educational policies more generally, as well as the instances of training policy deployed in universities. Therefore, Tavella was part of that university movement in which significant efforts were made to define and strengthen the epistemological field of educational sciences, scientific research, and philosophical reflection, continuity and re-articulation between positivism and spiritualism and behaviorism that was being deployed in Argentina in those years. A person who could be

characterized as his disciple was María Celia Agudo de Córscico (1928–2014), who assumed early in the early 1960s the responsibility for the chair of Psychopedagogy and developed a career in the area of Educational Psychology at the National University of La Plata.

In the journal *Archivos de Ciencias de la Educación* (Archives in Educational Sciences), Tavella promoted the formation of “stable technical resources” capable of equipping “technical-pedagogical organizations” to intervene educationally both in public policy and in the research field. In his writings, the educational sphere should be carried out in its technical and specific aspects by “specialists” in educational sciences, duly trained in the knowledge and techniques derived from scientific disciplines (Suasnábar, 2014). Likewise, educational policies required technical bodies to monitor the results of educational policies over a certain period of time, as input for the introduction of educational reforms and innovations. Otherwise, the educational system would not manage to overcome the lack of pedagogical orientation and the non-operability to deal with the school’s problems (Tavella, 1961). Tavella conducted important research related to psychological measurement instruments and vocational orientation, which had great influence on the study and application of psychometric tests, influencing the educational and labor area. As a result, he published the books: *La contribución pedagógica en el ámbito universitario* (The pedagogical contribution in university settings) (Tavella, 1960), *El departamento de orientación vocacional de la Universidad de Buenos Aires* (The Department of Vocational Guidance of the University of Buenos Aires) (Tavella, 1961), *La orientación vocacional en la escuela secundaria* (Vocational guidance in secondary school) (Tavella, 1962), *Los juguetes* (Toys) (Tavella, 1968), *¿Qué es la dislexia escolar?: Conocimiento del niño en edad escolar* (What is school dyslexia?: Knowledge of the school-aged child) (Tavella, 1969), *Los repetidores en la escuela primaria: causas psicológicas y psicopedagógicas* (Repeating students in primary school: Repeaters in elementary school: psychological and psycho-pedagogical

causes) (Tavella, 1969), *Dificultades en la lectura y en la escritura: análisis de sus causas y recursos para su corrección* (Difficulties in reading and writing: analysis of their causes and resources for their correction) (Tavella, 1969), *Ayuda de los padres en el aprendizaje de la lectura y la escritura* (Parental support for learning to read and write) (Tavella, 1970), *Los tests en la escuela* (Tests in school) (Tavella, 1972), *Las pruebas de comprobación: un modelo para las pruebas de lectura* (The proof tests: a model for reading tests) (Tavella, 1972), and *Los instrumentos psicométricos en el diagnóstico del retardo mental* (Psychometric instruments in the diagnosis of mental retardation) (Tavella, 1974).

Brazil · Psychiatry · Association director

Teixeira Brandão studied at the *Imperial Colégio de Pedro II* [Pedro II Imperial College], obtaining a bachelor's degree in science, language, and literature in 1870. In 1872, he entered the *Faculdade de Medicina do Rio de Janeiro* (FMRJ) [Rio de Janeiro School of Medicine] and graduated in 1877 with a dissertation entitled "Operations required for narrowing of the urethra: On quines; The best treatment of accidental lesions

and surgeries; Organic lesions of the heart, from the surgery department.” In 1880, he traveled to Europe to specialize in psychiatry, given that there were still no courses for this medical specialty in Brazil. Upon his return, he began to work as a specialist in mental and nervous illnesses. In 1881, a professorship was created at FMRJ for a Psychiatric Clinic for Nervous Disorders and, in 1883, a selection process to fill this position was begun. Teixeira Brandão was selected and became the first person to hold the Clinical Psychiatry professorship via approval through a competitive exam, as determined by Statute No. 3141 of 1882.

That same year, Brandão returned to Europe in order to improve his knowledge of psychiatric medicine. In 1884, he was appointed as a physician at the *Hospício de Pedro II* [Pedro II Hospital]. Shortly before the end of the monarchy, in 1887, João Maurício Wanderley, the Baron of Cotegipe (1815–1889), President of the Council of Ministers and his protector, appointed him director of the *Hospício de Pedro II*. In 1890, after the proclamation of the Republic, the *Hospício* separated from the *Santa Casa de Misericórdia* Hospital pursuant to Decree Law 142-A. Teixeira Brandão, a historic defender of the republican movement, remained director of what was then called the *Hospício Nacional dos Alienados* (HNA) [National Hospital for the Mentally Ill], holding the position from 1887 to 1897 (Facchinetti & Reis, 2014).

Throughout his tenure, he implemented plans that had been proposed by doctors of mentally ill patients, such as increasing the number of physicians at the asylum, removing the sisters of charity of the *São Vicente de Paula* Congregation from the institution's health service, and hiring of professional French nurses for support, in addition to creating an *Escola Profissional de Enfermeiros e Enfermeiras* [Professional Nursing School]. Another important act for the process of institutionalization of Brazilian psychiatry was the establishment of two agricultural colonies on the Ilha do Governador (an island in Rio de Janeiro), to which chronic patients were transferred in order to minimize overcrowding at the HNA. In 1892, he returned to Europe and represented Brazil at the Third International Conference on Criminal

Anthropology, held in Brussels, Belgium. On that occasion, he visited asylums and agricultural colonies, and upon his return he submitted a report suggesting alterations in the establishments for the mentally ill in the Federal District (Rio de Janeiro at that time) (Brasil, 1893). The physician, who called himself the Brazilian Pinel, was also appointed director-general of the Medical-Legal Service for the Mentally Ill, and later, from 1897 to 1899, was inspector-general of the Service (Brandão, 2002).

With respect to his role as a professor of clinical psychiatry and mental illnesses, Brandão founded and directed the *Pavilhão de Observação* [Observation Pavilion] (1892), an institution linked to the HNA and to the FMRJ, with the double objective of providing no-cost assessment of those suspected of suffering from mental illness and offering a physical space for practical classes in Clinical Psychiatry. The professor was “the first to propose a sophisticated classification system for mental disorders and that would strongly influence his young disciples” (Engel, 2001). In 1910, he was also a member of the commission that developed the first Brazilian psychiatric classification, a proposal to standardize the collection of data on mental disorders in hospitals.

Brandão's political activities were critical to the institutionalization of psychiatry in Brazil. Although he continued in his post as professor at FMRJ until his death, he left the HNA in 1897 and stopped teaching in 1903 to focus on politics. He was elected as a federal representative and remained in the legislature from 1903 to 1921. He led the struggles to enact the first general law on jurisprudence and services for the mentally ill in Brazil (Decree No. 1132 of Dec 22, 1903), which addressed protection of rights in relation to the property of the mentally ill and the position of the psychiatrist as a specialized medical professional.

During his career, he was a member of a variety of national and international scientific societies, such as the *Sociedade de Medicina e Cirurgia Brasileira* [Brazilian Society for Medicine and Surgery], *Société de Psychiatrie* [Society for Psychiatry], and the *Société Médico-Psychologique de Paris* [Medical-Psychological Society of

Paris]. In 1886, he was elected as a member of the *Academia Imperial de Medicina* [Imperial Academy of Medicine], later becoming an emeritus member in 1918. The physician was one of the founding members of the *Sociedade de Jurisprudência Médica e Antropológica* [Society for Medical and Anthropological Jurisprudence] (1897) and of the *Sociedade Brasileira de Neurologia, Psiquiatria e Medicina Legal* [Brazilian Society for Neurology, Psychiatry and Forensic Medicine] (1907), becoming the honorary president of the latter.

In relation to promotion of local academic production, he contributed to the periodical *Brazil Médico*; in 1901–1902, he was the editor of the *Jornal da Ordem Médica Brasileira*; in 1907 and 1918, he published books in which psychology is mentioned, albeit in a superficial manner.

In fact, led by Teixeira Brandão, psychological thinking was introduced and disseminated at FMRJ as a science to support research and psychiatric practice. Under his guidance, some students employed the new experimental scientific psychology in their dissertations. Mirroring the growing importance of the topic, the initially timid purchase of books on the subject for the institution's library gradually increased. By the end of his tenure as a professor, the library had about 50 books on the topic.

During his 40-year career as a professor, psychiatrist, and politician, Teixeira Brandão played a fundamental role not only in the process of institutionalizing and consolidating psychiatry in Brazil and in recognition of the professional jurisdiction of the alienist/psychiatrist, he also promoted the introduction of psychology as a supporting science within the FMRJ and the HNA.

Brazil · Escola Nova · Educational reforms

Raised in a Jesuitical background along Elementary (Caetité) and Secondary (Salvador) school in the 1910 decade, Anísio Teixeira wanted to join

the Society of Jesus. However, following his parents' guidance, he graduated in Legal and Social Sciences at the Faculdade de Direito da Universidade do Rio de Janeiro (Faculty of Law of the University of Rio de Janeiro) in 1922. After his return to Bahia in 1924, he was invited by Francisco Marques de Góes Calmon (1874–1932), then state governor, to take over the position of General Inspector of Education, remaining in charge until 1928. In 1925, during a trip to Europe, he visited schools in Belgium and Paris to learn about the local education system. On that occasion, he visited the Laboratório de Psicologia Experimental da Escola Charles Buls (Experimental Psychology Laboratory of the Charles Buls School), in Belgium, where he learned about the rigorous scientific method used there in pedagogical investigations (Teixeira, 1924/1927). Concerned with the quality of public education, illiteracy, and book-based teaching in Bahia, he enacted the Public Instruction Reform (Law n° 1846/25) and approved the Decree n° 4312/25, both in 1925, which proposed new regulations for the elementary and secondary teaching-training education in the State of Bahia. For Anísio Teixeira, the related previous laws did not address issues necessary for education such as those concerning psychology, pedagogy, and sociology. He defended a comprehensive education that would enable students to be active and develop civic, intellectual, and moral qualities (Teixeira, 1925).

In 1927, he spent 4 months visiting the United States in an official mission in order to learn about institutions and teaching methods. On that occasion, he saw the work of the pragmatic philosopher John Dewey (1859–1952), who influenced him significantly, contributing to and expanding his convictions in relation to democracy, and public, secular, and free education for all (Cardoso, 2013).

During the year of 1928, he organized a course on measurements in Psychology, which was taught by Isaias Alves, a friend of him. Thus, he became closer to psychometrics, understanding that it could constitute one of the scientific bases of education and contribute to the success of teaching. At the same time, he also had contact

with psychoanalysis, through studies on mental hygiene (Bortoloti, 2012).

He returned to the United States in 1928 to do a master's degree in education at the Universidade de Colúmbia (Nova York) (Columbia University (New York)) and completed the program in 1929. Upon returning to Brazil, with new proposals for education and unable to convince the new governor of Bahia, Vital Soares (1874–1933), of the importance of his proposals, he resigned from the position of General Inspector of Education of Bahia. In 1930, he translated two monographs by John Dewey, setting them together in a book entitled *Life and Education*, the first translation of Dewey's works in Brazil. Between 1929 and 1931, he was professor of Philosophy and History of Education at the Escola Normal da Bahia (Teaching Training Secondary School of Bahia). He returned to the Federal District (Rio de Janeiro) and at the invitation of the Mayor Pedro Ernesto Batista (1884–1942) became Chief Head of the Public Instruction, still in 1931. He was also chief-head of the secondary education sector in Rio de Janeiro during the government of Getúlio Vargas (1882–1954).

In 1932, understanding the national problems and the importance of educational modernization and reconstruction in the country, he was one of the signatories of the Manifesto dos Pioneiros da Educação Nova (Manifesto of the New Education Pioneers), a document inspired by the ideas of the active school, which was produced by a group of intellectuals who wanted significant educational transformations in Brazil. Among these changes, it was included the concept of an education that would be public, free of cost, compulsory, secular, and based on scientific grounds. This document, at that time, caused a great impact on the developments of psychology in the country, as it was among the sciences that would support the new education.

While in charge of the Serviço de Instrução Pública do Distrito Federal (Public Instruction Service of the Federal District (1931–1935)), he created a municipal education network, expanded and built school units and secondary technical schools, transformed the Escola Normal into Instituto de Educação (Education Institute)

(1932), and created the Universidade do Distrito Federal (University of the Federal District) (1935). He was persecuted by the dictatorial government headed by Getúlio Vargas, and afraid of being arrested, he left for Argentina in December 1935. He returned to his homeland, Caetité, in 1936, resigning from public life until 1945, when Vargas left power. During this period, he ran his own business and translated several books for the Companhia Editora Nacional (National Publishing Company).

From 1946 to the beginning of 1947, he lived in Europe, both in London and Paris, when he became a higher education advisor at Unesco (FGV, 2001). He returned to Brazil to explore his manganese mine in the state of Amapá. However, moved by his purposes in education, he resumed public life, accepting the position of Secretary of Education and Health of Bahia (1947–1951) in the government of Otávio Mangabeira (1886–1960). While in charge, in 1949, he created the Fundação para o Desenvolvimento da Ciência (Foundation for the Development of Science), whose objective was to stimulate researches and higher education in the state. In addition, in 1950, he created the Centro Popular de Educação Carneiro Ribeiro (Carneiro Ribeiro Popular Education Center) in Salvador, known as Escola-Parque (Park-School). It was the first full-time Brazilian school, which was opened aiming at offering full-time education, with food, medical and dental care, artistic and socializing activities and, mainly, preparing for citizenship and work. With the Escola-Parque project, Anísio Teixeira intended to minimize the poor conditions experienced by low-income children and young people exposed to social risks (Souza, 2018). Currently, the project in the same original format still exists in educational centers in the city of Salvador and has served as a reference for the construction of public and private full-time schools, in other Brazilian cities, such as Brasília and Rio de Janeiro.

He collaborated with the Associação Brasileira de Psicotécnica (Brazilian Psychotechnics Association) during 1949, and among the projects for teacher training, he created the Coordination for the Improvement of Higher Education Personnel

(CAPES) in 1951, occupying the position of general secretary therein until 1964 and, in 1952, he established the Instituto Nacional de Estudos e Pesquisas Educacionais Anísio Teixeira (the National Institute of Educational Studies and Research Anísio Teixeira) (INEP), being the institution's director until 1964. He was a leading participant of the debates, which started in 1947, defending the inclusion of public schools in the Lei de Diretrizes e Bases da Educação Nacional (Law of Guidelines and Bases of National Education) which was enacted in 1961 (Souza, 2018). In 1955, the Escola Guatemala (Guatemala School), in the Federal District, in partnership with INEP, began to invest in teachers' pedagogical and psychological training. In its pilot plan, it was created a Psychology Office, which later became known as the Serviço de Orientação Psicopedagógica (Psychopedagogical Guidance Service) (SOPP), and between 1955 and 1967, it held a team consisting of psychologists, such as Therezinha Lins de Albuquerque and Maria Helena Novaes Mira, social workers, and physicians (Albuquerque, 2001).

He participated in the creation of the Universidade de Brasília (University of Brasília) in 1961, holding the position of vice-dean until 1963, when he became the dean. He was removed from this position on the accusation of communism, resulting from the repression and persecution generated by the military coup that occurred in the country in 1964. In that same year, he was invited to teach at two colleges at Columbia University (New York and California) and left for the United States, where he remained until 1967. He maintained his relationship with the Brazilian Federal Council of Education until 1968. In 1970, he received the title of professor emeritus at the Federal University of Rio de Janeiro. From 1964 to 1971, he worked with translations and research at Companhia Editora Nacional (National Publishing Company). He created the Institute for Advanced Studies in Education (IESAE) of the Getúlio Vargas Foundation and was one of the professors designated for its creation in January 1971 (Fávero, 2003). In the same year, he died after falling into the elevator pit of a building in the southern part of the city of Rio de Janeiro which

was officially considered an accident. The accidental nature of the fall has, since that time, been questioned by family and friends and researchers focusing on the Brazilian military dictatorship.

Anísio Teixeira defended universal, public, mandatory, secular, and qualified education, based on scientific and humanist principles, for all. He had a democratic ideal for Brazil and believed that education was the way to achieve this ideal as well as prepare individuals fully, both in school content and in citizenship. He stood out in the proposal and defense of improvement policies and professional qualification for teachers, based on the sciences and humanities. In the field of Psychology, he started based on the conceptions of psychometrics, still in the 1930s, to sustain the importance of scientific practices and, based on them, of measurements, as ground for educational practices. At that same time, the knowledge of psychoanalytic concepts served as the basis for his statements about the family and social influence in the formation of personality and in the education of the child. He said that it was necessary to assist children, as this was the most fertile moment in human development. He developed surveys and researches on Brazilian educational problems so that these studies could sustain more efficient educational policies. He also designed the locus of teacher training and pedagogical innovation for experimental schools. Grounded on the ideals of the Escola Nova movement, he believed in Psychology as a science that would contribute to the democratization of education, through the knowledge about childhood and the development of individual potential for social functions.

Thalassinós, Pablo Antonio

Born *Panama City March 12, 1945*

Died *Panama City on April 11, 2018*

Ericka del Carmen Matus García
Universidad Especializada de las Américas,
Panamá, Republic of Panama

Keywords

Panamá · Psychotherapy · Education

Thalassinós completed his primary and secondary studies at the San José La Salle School in the province of Colón, Republic of Panama, and he obtained the title of commercial expert and Bachelor of Science and Letters in 1963.

In the same year, he began his undergraduate studies in psychology, which he finished in 1968; he also completed a master's degree in psychological counseling, between 1968 and 1970, and the degree of doctor on psychology, from 1970 to 1973; he made all his studies at the Central University of Oklahoma, United States of America.

Additionally, he made a specialty in pediatric clinical psychology and a subspecialty in technical psychotherapeutics at Children's Memorial Hospital, School of Medicine, University of Oklahoma Health Sciences Center, from 1973 to 1976.

He founded the Thalassind Psychological Clinic, in Panama City in 1971.

On his return to Panama, in 1976, he was considered the second psychologist registered in this profession by the Technical Council of Psychology of Panama.

He worked as a psychotherapy teacher since 1977 until 2000; his entire career at the University of Panama contributed to the training of the first generations of psychologists who studied in the national territory.

He held many positions, since 1980 until 2000, such as Director of the School of Psychology (1980–1982), Vice Dean (1983–1987), Dean in Charge of the Faculty of Humanities (1989), and Advisor to the Rector at the University of Panama (1995–2000).

He also was President of the Panamanian Association of Psychologists (APP) in 1975 and founding member of the American Pediatric Psychological Society (PPS) and the Panamanian Academy of Psychology (1975). In addition, he was editor of the *Revista de Psicología REDEPSI* of the University of Panama and the *Revista Latinoamericana Aprendizaje y Comportamiento* (Latin American journal *Learning and Behavior*).

He was a prominent psychologist in the professional organization of psychology in Panama, a recognized specialist in pediatric psychology and in marriage counseling, president of the Latin American Association for Analysis and Modification of Behavior (ALAMOC), and organizer of the first Psychology Congress in Panama in 1977.

He worked as a Clinical Supervisor in the Psychiatric Ward of the Metropolitan Hospital of the Social Security, and he founded and was Head of Psychology and Mental Health at the Psychiatric Hospital. Likewise, he initiated a Market Research company under the name Grupo Aristón. In 1981, he was also appointed General Director of the Colon Free Zone (1986–1987).

He also was Honorary Consul General of the Republic of Cyprus in Panama from 1977 until he died.

He assumed the presidency of the Kiwanis Club, of the Rotary Club of Panama, served as Advisor to the Minister of Education, Minister of Education from 1994 to 1999, Minister in Charge of the Ministry of the Presidency, and Ambassador on Official Mission, to represent Panama in Former Yugoslavia, Italy, and Greece in those years).

He was Ambassador of Panama to the United Nations (UN) from 2009 to 2014.

Author of several research articles published in national and international scientific journals, he introduced in Panama the new psychotherapeutic currents, the phenomenology of Carl Rogers (1902–1987), and the operant conditioning of B. F. Skinner (1904–1990), and theorists such as Albert Bandura (1925–2021) and Joseph Wolpe (1915–1997). His work focused mainly on child psychotherapy, attention deficit, behavior modification, and education.

In 1995, he published the *The future of Panamanian education. Education: a priority factor for development* and designed the 10-year plan for the Educational Modernization of Panama, which prompted the modification of the Organic Law of Education, in that same year.

In 2016, he donated his personal library to the Universidad Latina de Panamá (Latin University of Panama), inviting new generations to learn about the behavior of Panamanian society and specially to work with children.

Thomas, Florence Marie Thérèse

Born in Ruan (France), on March 29, 1943

Luisa Ramírez

Universidad del Rosario, Bogotá, Colombia

Keywords

Colombia · Social psychology · Gender studies · Feminism

Florence Marie Thérèse Thomas is the daughter of Francis, a lawyer of liberal orientation, and Marie Thérèse, a woman with a restless mind who was forced to abandon her desire of studying medicine in order to adopt the traditional feminine role for a woman of her time: a home-stay mother. Nevertheless, Florence attended a public school among other reasons because her mother, who received a religious education, didn't want the same for her daughter. Florence is the third among her siblings. Her two brothers became a physician and an economist. From her early years, she was not only exposed to the secular and liberal thinking

at home but at school as well. Her philosophy teacher, a woman who had herself been a pupil of Simone de Beauvoir, arrived 1 day to class holding in her hands what appeared to be a bubblegum packet and said to her students “Here I hold your liberation in my hands” (Personal communication, December 9, 2019) while showing its content: birth control pills.

Florence started studying psychology at the University of Ruan. After 3 years during which she obtained several certificates, requirement for her education at the time, she decided to obtain her last certificate in psychoneurology from the School of Sciences at the University of Paris, thus requiring her transfer to Paris. Along with her interest in psychology, her choice was motivated by her wish of arriving to the French capital, where she would live with one of her older brothers, an economy student at the time. On one hand, she was motivated by the vibrant atmosphere of a time of historical cultural change for the French society and, on the other hand, to move away from a difficult relationship with her mother. At the time, she was conflicted by what she felt was an overwhelming obligation of adopting her mother’s frustrated aspirations, versus the need to give way to her own.

Soon after, she joined the Institute of Psychology majoring in social psychology (this would later be the equivalent of her master’s degree). During this time, she was deeply influenced by the thinking of authors such as Simone de Beauvoir (1908–1986), Michel Foucault (1926–1984), and Pierre Bourdieu (1930–2002), through her work with teachers like David Victoroff (1914–1979) that helped widen her horizon to include the study of daily life and semiology and methodologies like discourse analysis in the realms of psychology. Overtime, the use of this knowledge would become a definitory aspect of her influence in the field of psychology.

She lived the prelude of what has been known as May 1968, a time that committed the entire French society to a reassessment of its fundamental values, the marches and demonstrations against the Vietnam War accompanied by the Rock of the sixties, the Beatles, and the strong and dramatic voice of Joan Baez. In this context,

Florence met her future husband and father of her children, a Colombian student from the Pontificia Universidad Javeriana (Pontifical Javeriana University) enrolled in postgraduate studies on industrial psychology. By the end of his program, Manuel Morales went back to Colombia and, a year after, returned to Paris to marry Florence. The couple settled in Bogotá, and both joined academic life.

From the heated environment of Paris in July of 1968, Florence arrived in Bogotá and landed in an equally agitated sociopolitical environment. Just recently, new armed organizations had mobilized like the Ejército de Liberación Nacional (ELN) (National Liberation Army) in 1964 and the Ejército Popular de Liberación (EPL) (Popular Liberation Army) in 1967 that, like in other Latin-American countries, emulated the Cuban movement *26 de Julio* seeking for an economic and social revolution (Calderon Rojas, 2016). The recent assassination of Camilo Torres (1929–1966), the leader of another political movement, and the blooming of several social and students’ movements added to the creation of a highly heated environment in the country as well (Lacombe, 2012).

With 24 years of age and no knowledge of Spanish, Florence quickly joined the Faculty as Professor of Social Psychology at the National University of Colombia under the direction of Rosa Tanco Duque. She worked with professors José Antonio Sánchez, Mateo Mankeliunas, Rubén Ardila, Esther de Zachmann (1926–1996), and Alvaro Villar Gaviria, among others. With the support of students and teachers that helped as translators, she taught social psychology, group theory, and psychodrama in the sociology and psychology departments. Simultaneously, at night, with the help of her husband, she studied Spanish. As a social psychologist, she defended the field as an autonomous discipline that studied a group of phenomena of its own that didn’t belong to psychology or to sociology (Thomas, n.d.).

It is well known that love is the best reason to learn a language – would later say Florence. To be sure, her husband introduced her not only to Spanish but to Colombian daily life: riding the bus,

moving from one extreme of the city to the other, daring to melt the highly regarded cheese for a French person into the hot chocolate, and many more local crusts, facilitating the acquisition of basic life skills that would, together with the knowledge acquired at the Institute of Psychology in Paris, become a distinctive aspect of her field work, one that fit well with the emancipatory efforts not only of Latin-American societies but also of social sciences and emerging social psychology approaches that draw on critical theory and are committed to anti-imperialism values and social change.

At the time of her arrival, Florence had a curious and eager mind, but she was not a feminist. Nonetheless, as a woman, she was soon confronted with the difficulty that other women experienced in participating in interactions that were not limited to their responsibilities at home. Discussions regarding the reality of the country seemed to be out of their reach at a time when social change and equality were at the core of the social debate (Luna & Villarreal, 1994). This realization troubled and motivated Florence. It seemed as though the male “comrades,” as much as they were concerned with fighting for social equality, did not take into consideration women’s needs.

For the most part, at that time in Colombia, women’s contributions to society appeared to be limited to matters of daily life. Still in France, female academic figures like Simone de Beauvoir openly discussed the difficulties implied in combining motherhood with an academic career, which led them sometimes to give up the latter (Beauvoir, 1949). Florence was concerned with the women’s apparent relegation to the realms of private life and the fact that professional development and motherhood appeared to be mutually exclusive. Even at the university, it seemed to Florence that women’s participation in student activities was rather low and in the midst of a patriarchal environment.

These concerns led her to contact people within the recently created Faculty of Human Sciences of the National University of Colombia in an attempt to open an academic discussion regarding gender and the place of women in

Colombian society. Her efforts were more successful among academics from social work and history and less among those of sociology and philosophy. In psychology on the other hand, they found a better reception within the group of psychoanalysis.

In the early 1970s, Florence gave birth to her two children and committed to their upbringing. In her case, however, the university together with social practices common in Colombia, such as hiring domestic service, allowed her to better accommodate her motherhood and to be always present in her children’s lives while at the same time building her career. By 1977, after divorce, she decided to remain in Bogotá not only to allow for the continuation of a close relationship between the children and their father but also because the study and understanding of Colombian women’s situation, and ultimately, feminist activism had become an important part of her professional and personal identity and success (Thomas, 2003).

Indeed, during this time, Florence had continued to meet with her colleagues every week to reflect on Colombian women’s situation. The *Grupo Mujer y Sociedad (Women and Society Group)* was formalized in 1985 (Zumosa, 1991). It was mainly formed by women although some men contributed to their reflection. To be fair, other outstanding professors and researchers like Virginia Gutiérrez de Pineda (1921–1999), Magdalena León de Leal (1939), and Alvaro Villar Gaviria helped pave the way for the consolidation of the group with their pioneer work on topics directly relevant to the study of gender in Colombia.

In her published work, Florence reiterates the importance of the Women and Society Group. Beyond academic reflection, in this group, she found sorority, that is, friendship and solidarity between women that have shared the discrimination of a patriarchal world and have developed a critical stand toward it, and a place from which to act and contribute to social transformation from a gender perspective. Some of their achievements include the incubation and development of processes of social change with a gendered perspective; the creation of the Program of Gender, Women, and Development Studies that in 2001

became the Gender Studies School located at the Human Sciences Faculty at the National University (Arango Gaviria, 2018) as well as other postgraduate programs; the periodic publication of the magazine *En otras palabras...* (*In other words...*); and active participation in public policy design and implementation.

In addition to the above, from 1985 to 1988, Florence was the head of the Psychology Department at the National University, a period of great turmoil and strong controversy revolving the standing of the program on several ideological, theoretical, and political debates. Florence, who has been known as a person who acts strongly upon conviction, led the program through this algid period. From the start, Florence had defended that social psychology should be committed to an understanding of social realities, issues of power, and inequality and, thus, critical of the system and eager to engage in social change. Later on, as she delved into gender relations, she became increasingly committed to feminism and activism. Notwithstanding, the first graduate studies program in psychology at the National University of Colombia, a specialization on clinical, experimental, and health psychology, opened during her tenure as director of the psychology program.

With her continuous and committed work, Florence has contributed to a better understanding, positioning, and action (some would say empowerment) on gender issues: associated meanings, social dynamics, and their historical rooting in the context of Colombian society (Navia Velasco, 2010). In doing so, she has contributed to the construction of a gender perspective not only in the context of social sciences but of the Colombian society as a whole. From her retirement from the National University of Colombia in 1990, Florence has continued to impact social debate from a gender perspective through her contributions to social media. In 2005, she was rewarded with the National Journalism Award Simón Bolívar (30th Edition) for the best opinion column.

Peru · Educational psychology · Congresses of psychology

Peruvian psychologist who between 1967 and 1968 studied at the Pontificia Universidad Católica del Perú (Pontifical Catholic University of Peru, PUCP-Lima, Peru) and later studied the same specialty at the University of La Sorbonne, in Paris (France). Upon returning to Lima, she joined teaching at the PUCP, to which she remained linked until her death. In 1991, she obtained a doctoral degree in psychology from the University of Nijmegen (the Netherlands). She was awarded the Premio Nacional de Psicología (National Prize for Psychology) in 1999.

Specialized in the area of educational psychology, Thorne played a very important role in the long process leading to the legal recognition of the profession of psychologist in her country and the creation of the Colegios de Psicólogos del Perú (Board of Psychologists of Peru) in 1980. At the PUCP, she also undertook the task of updating the study programs in psychology. She also made a great organizational effort to hold the XXIX Inter-American Congress of Psychology in Lima (2003), which she chaired. Since 1988, she was director of the *Revista de Psicología (Journal of Psychology)* of PUCP, in which she also contributed to the creation of the master's and doctoral programs in this specialty, achieving – thanks to her contacts with European psychology – the participation of professors from different parts of Europe as guest teachers.

A person endowed with qualities that favored the management of research projects and

advanced study programs, Thorne-León was one of the most representative psychologists in Peru. Apart from her interests in developmental psychology and learning psychology, she stood out for her continued teaching work for many years.

Luis Alfredo Tirapegui Leiva was born in Bulnes, central Chile, in 1890 (officially registered on November 10, 1893). Luis, a gifted student of rural origin, studied the elementary school in his birth town and completed high school in the *Liceo de Concepción* (Lyceum of Concepción). He worked as schoolteacher since 1906. From 1914 to 1917, he studied Education at the *Instituto Pedagógico* (Pedagogical Institute), *Universidad de Chile* (University of Chile), while working as a teacher of Spanish and English (Figueroa, 1931). He obtained the degree of Teacher in English.

In July 1917, Tirapegui left for the USA to continue studies in Education under commission from the Government of Chile. He entered Teachers College, Columbia University, in

September 1917. In June 1918, he received the degree of Bachelor of Science. In June 1919, he received the degree of Master of Arts. In 1920, he traveled Europe, visiting educational institutions and laboratories of psychology in England, France, Italy, and Switzerland. Also, he was Instructor of Romance Languages in the Universities of Pennsylvania (1920–1921) and Wisconsin (1921–1923). In 1923, he submitted his doctoral thesis (Tirapegui, 1923). In 1924, he obtained the “Diploma in Education: Awarded in connection with the decree of Doctor of Philosophy: Instructor in Education” (Columbia University, 1924/1925, p. 329).

In June 1923, Dr. Tirapegui was appointed Professor of Educational Psychology and Director of the *Laboratorio de Psicología Experimental* (Laboratory of Experimental Psychology) of the University of Chile, which was in recess since 1917 (Salas, 1923). In parallel, in 1924, he founded an independent *Centro de Investigaciones Psicológicas y Educativas* (Center for Psychological and Educational Research). Tirapegui reoriented the aforementioned Laboratory towards Developmental and Educational Psychology and actively sought to provide it with equipment, since it was made up of a set of instruments corresponding to the initial times of psychological chronometry (Munizaga and Cizaletti, 1967). This involved some disagreements with the administration of the University. In 1931, he left the institution (Parra, 2017). His duties in the Laboratory and the Chair of Educational Psychology were subsequently assumed by Abelardo Iturriaga.

From his Chair of the Pedagogical Institute, Tirapegui disseminated the new orientations of psychology and introduced mental and educational measurements into teaching and the application of statistical methods to psychology, pedagogy, and related sciences (Iturriaga, 1944). Furthermore, he promoted that educational problems be addressed from the study of the Chilean child and the conditions of the country (Figueroa, 1931). Product of this work was the publication of *El desarrollo de la inteligencia medido por el método Binet-Simon* (The development of intelligence measured by the Binet-Simon method) in

1925, an adaptation of the Stanford-Binet Scale to be used in the mental study and evaluation of school children. Its second edition was funded and strongly promoted by the Ministry of Education (Tirapegui, 1928). Also, in 1928 he published an adaptation of the Intelligence Test of J. C. Kohs, republished in 1941 (Tirapegui, 1941).

Tirapegui gave multiple lectures throughout his life in subjects such as the education of women, the protection of children, vocational orientation, freedom and initiative in education, and psychology applied to army activities (Figueroa, 1931). Tirapegui participated in multiple courses aimed at improving the teaching staff in service, mainly disseminating the statistical methods applied to education. In 1929, he presented three sessions on Educational Psychology at the *Asamblea de Directoras y Rectores de Establecimientos de Educación Secundaria* (Assembly of Directors and Rectors of Secondary Education Establishments), which were published in a compilation volume (Dirección General de Educación Secundaria, 1930) and as a booklet (Tirapegui, 1930). In 1936, he gave and published a dissertation about “the mentally deficient child from the psychological and social point of view” (Tirapegui, 1936).

At the service of the Government, he contributed to the *Ley de Protección de Menores* (Juvenile Law) of 1928. He worked in the reorganization of the *Escuela de Reforma* (School of Reform), later *Casa de Menores* (Juvenile Home) installing and directing a psychology laboratory for the study of delinquent children, and he was member of the *Consejo de Protección de Menores* (Child Protection Council). Furthermore, in October 1928 he was commissioned by the Government for the reorganization of the *Escuelas de Profesores Primarios* (Schools of Primary Teachers). He restored the denomination of *Escuelas Normales* (Normal Schools), persisted on the creation of the *Escuelas Normales Rurales* (Rural Normal Schools) (1929), and held the position of *Inspector General de Educación Normal* (General Inspector of Normal Education). He was member of the *Consejo Universitario* (University Council) until 1931. Also, he worked as Psychologist for the *Departamento de Sanidad*

Escolar [Department of School Sanity] and the *Casa Nacional del Niño* [National House for the Child].

Since 1941, Tirapegui worked at the *Universidad Técnica Federico Santa María* (Federico Santa María Technical University), Valparaíso. In this University, he developed and administered psychological and mathematical tests of admission. He served as Chief of the Administrative Section of the University until his retirement in 1960. He died at home, in Valparaíso, on March 3, 1964. (Tirapegui V. and Tirapegui, C., personal communication, November 12, 2019).

Tobar Garcia, Maria Carolina

Born *San Luis, Argentina, November 10th 1898*

Died *Buenos Aires, Argentina, October 5th 1962*

Pablo Rodríguez Sturla

Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Argentina · Child psychiatry · Mentally handicapped

After finishing elementary school in 1912, Tobar Garcia completed high school in Villa Mercedes City, in her home province of San Luis, graduating as *Maestra Normal Nacional* (elementary teacher) in 1916 (Fontán Fernández, 1995). Afterward she spent several years teaching in rural schools in San Luis, until she decided to move to Buenos Aires in order to attend Medicine School at University of Buenos Aires (UBA) (Fontán Fernández, 1995). She obtained her medical degree from the Facultad de Medicina de la Universidad de Buenos Aires (UBA) (Faculty of Medicine at Buenos Aires University) in 1929. Between 1930 and 1931 she took some courses at the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) (UBA) to improve her knowledge in human behavior. Due to a scholarship awarded by the Instituto Cultural Argentino-norteamericano (Argentinian-American Cultural Institute), she was able to travel to the USA in 1931 and 1932, where she conducted several studies on concepts regarding children's mental handicap at the Columbia

University Teachers College and at the Medical Center in New York.

Back to Argentina Tobar Garcia spent her time working not only at educational institutions but also in medical – psychological and psychiatric – ones. In 1940 she obtained the specialist degree in legal medicine from the University of Buenos Aires.

Two years later her dream came true with the opening of the first “Escuela Primaria de Adaptación” (Elementary Adaptative School) in Buenos Aires, which was in charge of taking care the mentally handicapped children (or retarded ones, as they used to be named in those years).

In June, 1944, the Faculty of Medicine approved her PhD with a dissertation entitled “Higiene Mental del Escolar” (Student Mental Hygiene).

Over the years Tobar Garcia took part in several Congresses in which different topics related to children's mental health were discussed. She also actively collaborated in the creation and opening of many institutions dedicated to disabled children.

In 1961 she traveled to Geneva where she interviewed Jean Piaget (1896–1980). She acquired educational materials in order to introduce Piaget's ideas in Argentina.

Tobar Garcia was committed to many activities in several institutions along her life (Rodríguez Sturla, 2001). In the first place, the *Cuerpo Médico Escolar* (School Medical Staff) under the *Consejo Nacional de Educación* (National Education Council); the *Patronato Nacional de Menores* (National Child Welfare); and the *Liga Argentina de Higiene Mental* (Argentine League of Mental Health) are noteworthy, for their relevance documented in her own PhD dissertation.

Tobar Garcia held different positions at educational institutions. She was a professor of psychopedagogy at the *Instituto Nacional del Profesorado Secundario* (National Institute of High School Teachers) from 1958–1962. She was head of psychology at the Faculty of Medical Sciences (UBA) in 1943. From 1944 to 1948 she was also assistant professor at the official course in psychiatry whose full professor was Gonzalo Bosch (1885–1967). From 1947 to 1956 she was

in charge of the Neuropsychiatry Child course for psychiatrists. At the Faculty of Philosophy and Humanities (UBA) she was professor of *Pedagogía Diferencial* (Differential Pedagogy) between 1957 and 1962. She was also professor at the Facultad de Humanidades y Ciencias de la Educación (Faculty of Humanities and Educational Sciences) at the National University of La Plata from 1956–1960.

The *Cuerpo Médico Escolar* (School Medical Staff) was another institution where the author took part, in charge of the Psychophysiological Office since 1934. In 1945 she became medical inspector, retiring in 1957. Since 1935, she also worked as a physician at the *Hospicio de las Mercedes* mental health hospital, currently Dr. José Tiburcio Borda Municipal Hospital. From 1948 she became headmaster of the Neuropsychiatric Institute *Cecilia Estrada del Cano* in the Argentine League of Mental Health. It is important to point out that Tobar García was the first woman in the country to become Medical Forensic, in 1956 (Stagnaro, 2002).

Among the institutions founded by the author, we will mention: the *Cuerpo Médico (Medical Staff)* of the First Private Children's Hospital, where she was in charge of reeducation and psychopedagogy (1934–1935); the *Hogar Santa Rosa del Patronato Nacional de Menores* (Home Santa Rosa of the National Board of Minors), where she was head of the *Gabinete Psicopedagógico* (Psychopedagogical Cabinet) (1938–1945); the *Escuela Primaria de Adaptación* (Elementary School of Adaptation), where she was principal from 1942–1944; and the Children's Psychopathology Clinic in her private home between 1957 and 1962 (Rodríguez Sturla & Luque, 2005).

She was also a full member of many institutions throughout her life such as: *Sociedad de Neurología y Psiquiatría de la Asociación Médica Argentina* (Society of Neurology and Psychiatry of the Argentine Medical Association), *Sociedad Argentina de Criminología* (Argentine Society of Criminology), and the *Sociedad Interamericana de Psicología* (Inter-American Psychological Society), among others.

It can be said that childhood was conceptualized by Tobar-García predominantly from a medical point of view (Rodríguez Sturla & Luque, 1999). She tried to establish clinical-psychiatric indicators for the detection of deficits and the subsequent therapy of children abnormal behavior in regarding their educational performance as well as their social skills. From the beginning, her work was guided by the aim to transfer to Argentina the American model of differential schools that she had known as a scholarship holder, and that she succeeded in achieving it in 1942. She deserves the merit of having systematically addressed the difficulties presented by children in the educational field and their derivation to what is known as differential education. There she had a special role, in Argentina, as creator and supervisor of specific institutions (Rodríguez Sturla & Luque, 1999).

²Pontificia Universidade Católica de São Paulo, São Paulo, Brazil

³Universidade Federal de São Carlos, São Carlos, Brazil

Keywords

Brazil · Behavior analysis · Basic psychological processes · Cultural practices

With a bachelor's (1962) and teaching degree (1963) in psychology from the Universidade de São Paulo (USP) (University of São Paulo), Todorov served as a psychology instructor at the Universidade de Brasília (UnB) (University of Brasília) (1963–1965), where he participated in the implementation of the Personalized System of Instruction. He obtained his doctorate degree at Arizona State University – the USA (1969). He

studied and conducted research with internationally renowned scientists in scientific psychology such as Carolina Bori, Frederico Graeff (1940–), Fred Keller, Stanley S. Pliskoff (1930–2014), and Jack Michael (1926–2020).

Between 1968 and 1969 he was assistant professor at the University of Virginia and researcher at the Institute for Behavioral Research (IBR) – the USA.

Back in Brazil, he became professor at the University of São Paulo (Ribeirão Preto campus; 1969–1972), where he taught behavior analysis to medicine and psychology students and supervised graduate students.

He moved to the University of Brasília (UnB) in 1973 where he actively participated in teaching, research, and university administration and politics. Amidst the Brazilian dictatorship, he was one of the founders and the first president of UnB's Faculty Union (1978). He was head of department, dean of research and graduate studies in the first interim administration after the military dictatorship, vice-chancellor, and, later, was elected chancellor (1993–1997) of the University of Brasília, where he retired in 2000 as full professor. He was a member of the University of Brasília's Board of Founders and maintains a relationship with the University as a researcher and advisor of the Graduate Program in Behavioral Sciences.

He worked in the Behavior Analysis Program of the Catholic University of Goiás (2000–2009) and coordinated the Undergraduate Psychology Course at Centro Universitário de Brasília (IESB) (2004–2010).

He founded and helped strengthen Experimental Behavior Analysis Laboratories at the University of São Paulo, University of Brasília, Universidade Federal de São Carlos (Federal University of São Carlos), and several private institutions. He was a visiting professor at the Autonomous University of Mexico (1977) and visiting researcher at Stony Brook University (1990–1991).

As a researcher of basic psychological processes, he initiated, in the 1960's, an uninterrupted and robust scientific production. He translated, along with Rodolpho Azzi, B. F. Skinner's

(1904–1990) *Ciência e Comportamento Humano* (*Science and Human Behavior*), a book that played an important role in the dissemination of behavior analysis in Brazil. He supervised masters and doctors that went on to lead research groups and disseminated scientific knowledge in psychology throughout the country.

He is recognized by students, colleagues, and readers as a great teacher due to his vast experience as a researcher and educator and for the conceptual clarity that characterizes his production. He is one of the most cited Brazilian authors and one of the most widely read in courses related to behavior analysis (Hanna, 2012). His theoretical and methodological contributions are reported in his diverse production that includes conceptual analysis and discussions (e.g., Todorov, 2012), history of psychology (Todorov & Hanna, 2010), and relevant and original scientific discoveries related to behavioral processes. His most studied processes were aversive control, especially avoidance behavior (e.g., Ferrari et al., 1973), choice and the quantification of the law of effect (e.g., Todorov, 1973), and social behavior and cultural practices (e.g., Machado & Todorov, 2008). His contributions to teaching include his dedication to individualized instruction, creating conditions for laboratory practices and student participation in research activities as a condition for their scientific training and the promotion of students' autonomy.

He is one of the pioneers responsible for the consolidation of psychology as a scientific discipline in Brazil (CFP, 2014), working to strengthen scientific institutions and psychology councils. He participated in the foundation and development of scientific societies, such as the Sociedade de Psicologia de Ribeirão Preto (SPRP) (Ribeirão Preto Psychological Society) in 1991, which in 2005 became the Associação Brasileira de Psicologia (SBP) (Brazilian Psychological Association), the Brazilian section of the Association for Behavior Analysis International (ABAI), and the Associação Brasileira de Análise do Comportamento (ACBr) (Brazilian Association for Behavior Analysis). He served as an advisor for the Conselho Federal de Psicologia (Federal Council of Psychology) (1979) and one of those

responsible for the creation of the Regional Council of Psychology of the 1st Region (1974). His concern with the development of the scientific psychology in Brazil is also reflected in joint actions to create and strengthen journals for research dissemination: *Psicologia: Ciência e Profissão* (CFP's journal), *Psicologia: Teoria e Pesquisa* (UnB), and *Revista Brasileira de Análise do Comportamento*. He participated in the editorial board of the *Journal of the Experimental Analysis of Behavior*, the *Mexican Journal of Behavior Analysis*, and *Behavior and Philosophy*. He has recently made systematic use of social media to broaden the scope of dissemination of behavior analysis; blog Joao Claudio Todorov (<http://jctodorov.blogspot.com/>) has more than 600 followers and his Facebook page (<https://www.facebook.com/joaoclaudio.todorov.7/followers>) has close to 5000 followers.

In recognition for his valuable contributions to the development of psychology and his important role as a scientist, teacher, and activist, Todorov has received awards and honors. From the Sociedade Brasileira de Psicologia (Brazilian Psychological Society), he received the titles of "Honorary Member" (1991) and "Native Council Member" (since 2002). He was "Honored Researcher" at the II Reunião Anual Instituto Brasileiro de Neurociências e Comportamento (II Annual Meeting of the Brazilian Institute of Neuroscience and Behavior) (Recife, 2011). He was elected "Fellow (Emeritus Full Member)" of the Association for Behavior Analysis International in 2015 and the "2009 award for International Dissemination of Behavior Analysis"; from the Society for the Advancement of Behavior Analysis he received the "2020 Award for Distinguished Service to Behavior Analysis." From educational and research institutes he received the following distinctions: from the University of Brasília, "Professor Emeritus" (2006) and "Doctorate *Honoris Causa*" (2019); from UnB's Graduate Program in Behavioral Sciences, "Honored Professor" (2012); and from the IESB University Center, "Doctorate *Honoris Causa*" (2015). He also received the Centennial Medal of Scientific Psychology from the Conselho Regional de Psicologia (6a. Região) (Regional Council of

Psychology), in 1979. On April 24, 1994, the Brazilian president awarded Todorov the degree of “Commander of the Rio Branco Order.”

Puerto Rico · HIV/AIDS · Advanced research and theory on homosexuality and homophobia

Dr. José R. Toro-Alfonso, whom many people knew as Joe, was an exceptional psychologist, a committed citizen, and a sensitive human being dedicated to the well-being of other people.

Joe lived in his birth place, Yauco, during his youth with his mother Cruz Alfonso Ramírez, a

second grade teacher and his father Jorge Toro, a merchant. He had one brother, Georgie. Joe remained in Yauco during his elementary and high-school years.

His education was interdisciplinary, which allowed him to generate multiple and accurate perspectives of the problems and populations of his concern. He earned a Bachelor of Science at the University of Puerto Rico, Mayagüez Campus. In 1976, he completed a Master of Education at Ponce Catholic University; in 1988, a Master in Psychology, Family, and Sexual Therapy at the Caribbean Center for Advanced Studies where he also finished a PhD in Clinical Psychology in 1990.

His professional experiences were multiple and varied. He worked as a biology teacher in high schools and founded and taught at the Montessori School in Caguas. He was Director of the Childrens' Program of the *Casa Protegida Julia de Burgos* – a shelter for victims of domestic violence and their families – and Executive Director of the AIDS Foundation of Puerto Rico for 10 years (1988–1998), a nonprofit organization dedicated to the well-being of people infected and affected by HIV/AIDS.

His work at the AIDS Foundation in defense of the rights of gay, lesbian, bisexual, transgender, and transexual people and against the HIV/AIDS epidemic was the basis of academic contributions to the understanding and support of these struggles through the creation and implementation of a course on homosexuality and lesbianism at the University of Puerto Rico, Río Piedras Campus, multiple presentations in professional fora on the Island and abroad and numerous publications. His work at the AIDS Foundation also prepared him to deal effectively with the country's news media and legislative processes. As a result, he published many newspaper articles and presented on multiple occasions before the legislature. One of his proposals resulted in the approval of a law requiring training of all health professionals about the prevention of HIV/AIDS. Because he recognized the importance of public policy work, he also participated in a Training Course in Public Policy for psychologists.

Joe exhibited scientific productivity and an interest in the development of conscious

professionals. His career at the University of Puerto Rico, which started in 1998, was outstanding. He directed the Clinical Services Unit of the University Center for Psychological Services (1998–2005) and was Associate Director of the first and only Social Sciences Postdoctoral program on the Island (1998–2004). He was also Acting Director of the Department of Psychology and Dean of Graduate Affairs of the Faculty of Social Sciences (2014–2015). He taught at the undergraduate and graduate levels and participated in committees of more than 60 theses and dissertations. He served as consultant for local and international organizations including the Pan-American Health Organization and the United States Agency for International Development. He carried out research with institutional and external funds in the areas of domestic violence in gay couples, prevention of HIV/AIDS, masculinities, support networks for people living with HIV, and older homosexual couples, among others. He published 78 peer-reviewed articles and 13 books. His articles appear in prestigious journals such as the *International Journal of Clinical and Health Psychology*, *Terapia Psicológica (Psychological Therapy)* and the *Journal of Homosexuality*.

He presented novel looks at HIV/AIDS, innovative approaches to social problems such as violence among gay couples, and creative constructions about health, disease, and the body. He dreamed of a psychology committed to social change. Because of this, he generated controversy and conflict – because he believed and defended his positions with ardor and conviction.

It is also important to highlight his commitment to organized psychology. He belonged to three psychology organizations. During several years, he participated in various committees of the American Psychological Association. He was a member of the Board of Directors, President (2001–2002), and Editor of the journal of the Psychology Association of Puerto Rico. He also served as Executive Secretary (2001–2007) and President of the Inter-American Society of Psychology (SIP, 2011–2013).

Joe received awards for his contribution to the practice of psychology, to ethnic minorities, for his research, and for his community activism. He

received the Investigator of the Year Award from Carlos Albizu University and the Psychologist of the Year and Lifetime Achievement Awards from the Puerto Rico Psychology Association. He was awarded the Rogelio Díaz Guerrero Award by SIP and the Distinguished Career in Psychology award by the National Latino Psychology Association. He received the APA Distinguished Contribution to the Public Interest Award posthumously

Joe was gay. It was important to him that others were aware of his identity. He came out of the closet when it wasn't in style, when the stigma surrounding the LGBTQI community was even more overwhelming than now, and he used his sexual identity to assert himself, and to demonstrate that success and competition are not limited by sexual orientation.

As a father, grandfather, and friend, Joe also stood out. He had an atypical relationship of companionship and trust with his two daughters Adriana and Verónica, and bonds of commitment and unwavering affection, with his grandson Andy. His friends knew that he would provide sustained support, sincere and constructive criticism, fulfillment of his promises and affection. His colleagues knew we could count on his enviable work capacity, initiative and drive for new projects, and with support for moments when stress overwhelmed us.

The best way to finish this biography is in his own words:

Psychology cannot be complicit to injustice and inequity. Objectivity is impossible when faced with the vulnerability of marginalized groups. There is no neutrality in the face of war, the death penalty, bribery, poverty, homophobia and colonial subordination. As citizens and psychologists. . . we must . . . engage in a psychology from and for the community. May our research and our listening become a breath of life for the community that observes us (Toro-Alfonso, 2006).

Torres Benites, Francisco Armando

Born *in San Salvador (El Salvador), June 1, 1926*

Died *in San Salvador (El Salvador), March 8, 2015*

Nelson Portillo
Boston College, Chestnut Hill, MA, USA

Keywords

El Salvador · Rorschach test · Psychometrics · Clinical psychology

Francisco Armando Torres Benites was the second person to obtain an undergraduate degree in psychology in El Salvador and was a professor of psychology to numerous generations of students. He devoted over 40 years of his life to train countless students and shape the professional organization of the field of psychology in the country. He created the first office of psychological testing at the Psychiatric Hospital of El Salvador and founded the first mental health clinic that offered services at a public hospital. Trained in Europe as a clinical psychologist, he was an expert in psychometrics, humanistic psychology, and ethics.

Francisco Armando Torres, known affectionately as *Torritos*, was the son of Felipe Benites and María Eugenia Torres (F. A. Torres, personal communication, February 17, 2005). Of modest origins, his father was a shoemaker, and his mother worked as a seamstress and as a homemaker. Torres was born in Barrio La Vega, one of the oldest urban areas in the city of San Salvador. He studied his first six grades at Escuela San Alfonso—under the direction of Marist brothers—and Francisco W. Cisneros public school. He completed his high school degree at General Francisco Menéndez National Institute in 1943.

Torres' affair with psychology started in high school when he took the course "Psychology and

Logic," which provided a robust introduction to the field following a 90-point program that emphasized experimental psychology (see Portillo, 2006). Torres distinguished himself from the rest of his classmates by achieving the highest grade, and as an incentive, his teacher gifted him his first psychology book. An avid reader like his father, later on, he added to his personal library books by Freud, Havelock Ellis, and others that were published in accessible formats.

Despite his early interest in psychology, Torres had to wait 13 years to embark in its study when he joined the first program in psychometrics opened at the University of El Salvador in 1956. There, he met Rodolfo Semsch and they became close friends and collaborators. Before finishing his studies in psychology, he had already joined the Department of Psychology at the university as an instructor and as member of a technical committee that guided the psychology program (Calderón de Orellana, 2006). Both Torres and Semsch worked directly with Walter Albert Stahel and Paul Watzlawick (1921–2007) while they were members of the program. In the 1960s, Torres and Semsch worked with Luis Blanco Pérez and Pío Rodríguez (1935–) who had come from Spain (P. Rodríguez, personal communication, November 2, 2008).

Torres initiated his academic career as a professor teaching the subject psychology of children and adolescents in the Department of Education of the Faculty of Humanities. Then, he taught psychometrics and introduction to Rorschach's psychodiagnosis in the psychology program. As most members of the program, he combined teaching with other professional activities. In 1969, he introduced the use of psychological testing at the Psychiatric Hospital of El Salvador and founded its first office of psychological testing with the help of its director, Dr. José Molina Martínez, a psychiatrist who also taught in the psychology program. Torres was an expert in the use of the Rorschach test and other projective tests to evaluate mentally ill patients.

The same year that he opened the office of psychological testing at the Psychiatric Hospital of El Salvador, he was awarded a scholarship to

further his studies in Europe. Although he had applied to study in Geneva, he was ultimately accepted at the Catholic University of Leuven in Belgium. The university customized a program that allowed him to join simultaneously as an undergraduate- and graduate-level student in order to obtain a bachelor's degree and postgraduate degree in clinical psychology.

In total, Torres spent two and a half years in Europe. To validate his undergraduate degree, he was asked to complete a capstone thesis, which he did on the use of the Bender Visual-Motor Gestalt Test on children from primary schools in Brussels. For his graduate-level prerequisites, he completed a mandatory internship at the student orientation center and an internship at the Hospital del Rey in Madrid.

Torres returned to El Salvador in April of 1971 and rejoined the Department of Psychology at the University of El Salvador. He had become an expert in psychometrics, humanistic psychology, and ethics, and soon, he was back to teaching. His own clinical psychology training had convinced him of the need to introduce a more specialized program that went beyond the generalist one offered up to that point. He also considered the need to require supervised clinical practice in order to work as a psychotherapist. These ideas had been proposed in the past, but neither Torres nor anyone else succeeded in implementing them at the time. In 1973, he was one of the founders of Albert Einstein University in San Salvador.

Outside academia, Torres played a more effective and significant role in shaping the professional organization of the field of psychology in the country for over 20 years. Before leaving for Europe, he helped to organize the Salvadoran Society of Psychology in 1964, and as a founding member, he served as its first member at large. However, he had to leave his post shortly after because he also served as secretary of the university's Faculty of Humanities. The Salvadoran Society of Psychology paved the way to form the Psychology Licensure Board in 1987, an organization whose main goal was to authorize and ensure the professional and ethical practice of psychology in the country. This provided a legal

framework to the field and recognized it as bona fide health profession. Torres was elected as the first president of the Psychology Licensure Board in 1988, and he later occupied that same position in two other separate terms. He also offered his professional services free of charge at Hospital Rosales, one of the main public hospitals in the country, for 17 years.

As the sociopolitical crisis worsened in the 1970s, the military took over the University of El Salvador in numerous occasions, and this disrupted the academic and professional progress of the field. This impact was felt more at a personal level as well since the government began to target many psychologists. As a representative of the Faculty of Humanities for the Board of Governors, Torres was arrested and jailed in February of 1981 after the military stormed an emergency meeting at a local private school, near the university campus. In the 1980s, the military had taken over the university and closed it intermittently until 1984. As a result, Torres left his alma mater for good in 1986 and started working at the University of Central America (UCA) that same year. The chair of the Department of Psychology, Ignacio Martín-Baró, offered Torres a position. He stayed at the Jesuit university until 2002, when he retired, although he continued teaching at the José Matías Delgado University's Department of Psychology.

Despite the fact that he was a sympathizer of the left, as were most intellectuals in academia, he kept a low profile during the Salvadoran Civil War and limited himself to participate in public demonstrations. He suffered the loss of colleagues though, including his close friend Rodolfo Semsch and Ignacio Martín-Baró. He spent the last years of his life in the St. Vincent de Paul Nursing Home. Torres rests in the Illustrious People Cemetery in the city of San Salvador.

José María Torres Orozco was the son of the lawyer Mariano de Jesús Aniceto Torres Reyes (1838–1921) and of Mrs. María del Socorro Orozco Rojas (c. 1849–1915); he was the youngest of nine children of the marriage.

His childhood was spent in the midst of a hectic family life, where his father, in addition to being a trial lawyer, was an illustrious polygraph, with his own printing press, who was completely devoted to his literary productions, among them dramatic works, poetry, history, but above all journalism, founding numerous magazines and newspapers, notably *El Centinela* (The Sentinel) (1893–1914), as well as a Historical, Biographical Dictionary, etc., of Michoacan in three volumes (1905, 1912, and 1915). The home library was

huge and well stocked, a place where Torres Orozco recreated his intellect in his childhood years. He grew up in a cultural world, surrounded by personalities with whom his father maintained relationships similar to his own, among them were professionals, writers, politicians, and ecclesiastical dignities.

On May 25, 1910, he enrolled in the Escuela de Medicina de Morelia (Morelia School of Medicine), where he carried out professional studies with the highest grades. He presented his graduation exam on July 25, 1914, with the thesis called: *Ensayo Sobre la Patología del Lenguaje* (Essay on the Pathology of Language). Any reply by the jury was suppressed due to the academic record of the applicant.

Between 1911 and 1913, he was a contract professor of Philosophy at the baccalaureate. His top philosophical work dates from that time: *Los Datos de la Filosofía* (The Data of Philosophy). In 1912, when the Colegio de San Nicolás (Saint Nicholas College) was closed for political reasons, in an alternate “School” called San Nicolasito, he gave free classes in Moral, Logic, and Psychology.

After completing his medical studies, he attended the Escuela de Altos Estudios de la Universidad Nacional de México (School of Higher Studies of the National University of Mexico) (EAE-UNM) and attended the course that Antonio Caso (1883–1946) taught on Metaphysics and Aesthetics in 1914. He returned to Morelia, and in 1915 he again taught the Chair of Philosophy in San Nicolás. In February 1916, Professor Jesús Romero Flores (1885–1987), Director of Public Instruction of the State, appointed him head of the subjects of Logic, Ethics, and Experimental Psychology. Many of his students of those years appeared, later, as eminences in their respective areas, among them the cardiologist Ignacio Chávez Sánchez (1897–1979); the philosopher Samuel Ramos Magaña, whom he teaches in the fourth year of high school (1915); the parasitologist Manuel Martínez Báez (1894–1987); as well as his brother, the lawyer and politician Antonio Martínez Báez (1901–2000), highlighting Daniel Cosío

Villegas (1898–1976), founder of the Colegio de México (f. 1940).

At this point in his life, although already in late stages, Positive Philosophy and the study of the Psyche are already his priorities, credibly the only ones.

From the first, he traced the history of philosophy, from classical times to Henri Bergson (1859–1941). He had a profound knowledge of the entire work of Herbert Spencer (1820–1903) and Isidore Marie Auguste François Xavier Comte (1798–1857), without overlooking John Stuart Mill (1806–1873) and the Mexicans Gabino Eleuterio Juan Nepomuceno Barrera Flores (1818–1881) and Porfirio Parra Gutiérrez. Samuel Ramos, who nonetheless said at the time that he did not agree with Torres Orozco's already obsolete ideas, recognizes the worth of man and intellectual, in such a way that he places him as the last Mexican positivist, "in fact, he is the only positivist" (Ramos, 1925).

Torres Orozco was a man of ideas, rather than action, of intellectual work, and of academia; his work is related to his convictions about the science he represents. Meanwhile, recently graduated, he was looking for a position as a doctor; still very young, some of his most famous writings are released, many of them on psychological studies: Essay on the psychology of Cervantes (1916); Psychological dissertation on the personality of Nietzsche; and, in 1918, Neurasthenia as an abnormal state of cenesthesia and The neurasthenia of day laborers. According to Ponciano Tenorio Montes (1912–1963) (Tenorio, 1962), it is the year of his "medical exaltation," and he acquires national prestige. After multiple vicissitudes in his professional practice, with the help of Salvador Iturbide Alvérez (1893–1980) and Dr. Rosendo Amor Esparza (1879–1970), director of the National School of Medicine, on October 4, 1918, he entered as Internal Doctor in the General Asylum of "La Castañeda." He was assigned the load of a ward with 146 patients.

In the Pathology of Language, published in the *Medical Journal of the Colegio del Estado de Puebla* (Puebla State College) (Vol. I, n. 4 and 5, November and December 1918), Torres Orozco says he understands language as "the set of physical-psychic processes which have the effect

of the externalization of thought," in such a way that the metaphysical concepts that were held in this regard until then were suppressed; therefore, "language is nothing but an organic reaction that arises from the impulse of thought and is translated by modalities as dissimilar to each other as are the mental states that determine it" (Torres, 1985: 77).

In 1922, in the magazine *México Moderno*, he published *Las Doctrinas de Freud en la Patología Mental* (The Doctrines of Freud in Mental Pathology). It is the first formal study on the Czech neurologist in Mexico, with a great impact on the scientific community, both due to the prestige of the journal and those who write in it. Torres Orozco shows no less astonishment when he affirms that: "since the not too remote constitution of psychiatric science, no doctrine like Freud's had managed to revolutionize in such a decisive and fundamental way our knowledge about the causation and development of mental illnesses [...] previously unknown facts [that] came to enrich the wealth of psychological observation [...] mental developments that previously went unnoticed [...] and a new way of interpreting those facts, arising from apparently irrefutable inductions, established in the world of psychopathic phenomena, a synthesis that, by explaining its developments and origin, truly illuminated the vast field of normal psychology" (Torres, 1922: 39). A new way of psychoanalysis, he says. Under his premise that things must be learned well and firsthand, with that philosophical "pathos" that was characteristic of him, he had learned German to read without a translation from his favorite authors. He studied Sigismund Schlomo Freud (1856–1939) in his original language.

Torres Orozco's latest work is *El Estado Mental de los Tuberculosos* (The Mental State of Tuberculosis). He wrote this, prostrate in ward # 26 of the Hospital General de México (General Hospital of Mexico). Although certainly the fundamental basis of the study is a psychobiography of the Italian philosopher Giacomo Leopardi (1798–1837), with whom it has been said he identifies, it also takes parts of the lives of other tuberculous geniuses such as Chopin, Laënnec, the Ukrainian artist Marie Bashkirtseff (1858–1884), Fernández de Lizardi

(1776–1827), and the Yucatecan Miguel Rodríguez, without ignoring, of course, Jean-Marie Guyau Tuillerie (1854–1888). In this historical-clinical correlation of the psychology of tuberculosis, as in *Patología del Lenguaje* (The Pathology of Language), he complements his impregnations with small vignettes of his personal experience with other companions of misfortune in the Hospital where he convalesces.

“It is known - Freud himself affirms it - that psychoanalytic treatment does not cure neuroses definitively, but on rare occasions,” because even when disappearing from the field of Consciousness, “the obsessive idea continues to make its appearances in the subconscious, taking advantage of a thousand occasions and, above all, of the breach of the personality caused by sleep” (Torres, 1956: 114-115). He signed the work on November 5, 1924, and it was published by Dr. Ignacio Chávez, to whom he entrusted his correction, the following year, in the *Journal of the Mexican-Medical Association* (vol. IV, n. 18 and 19, 1925). In that same decade, but with greater formality in the following, when the violence after the Mexican Revolution (1910–1917) has already dissipated, doctors from the General Asylum of Mexico began to offer seminars on Psychoanalysis, and the study on Sigmund Freud consolidates.

Keywords

Cuba · Psychological orientation · Diagnosis · Education

He completed his elementary studies at the Escuelas Pías La Salle, Havana. In 1936 he finished his studies in Science and Letters, in the Instituto de Segunda Enseñanza de la Habana (High School Institute of Havana). In 1938 he began the university program in Philosophy and Letters at the Universidad de la Habana (University of Havana) and he graduated in 1942 in Doctor in Philosophy and Letters, in the specialty of Psychology and Philosophy, and began to work as a professor of Psychology, Philosophy

María Elena Segura Suárez is retired

and Social Sciences in the Instituto de Segunda Enseñanza del Vedado (High School Institute of Vedado) until 1961. In 1949 he created the Departamento de Psicometría y Orientación en el Instituto del Vedado (Department of Psychometry and Orientation at the Vedado Institute) and considered the first Psychometry and Professional Orientation laboratory for Secondary Education in the country (González & Rodríguez, 1987; González, 1989).

In 1947 he worked as a professor at the University of Havana teaching History of Philosophy, Methodology of Social Research and Professional Orientation, Personality Psychology, Educational Psychology and Evaluation and Diagnostic Techniques. In 1950 the School of Psychology and Education was created at the Catholic University of Villanueva, where he held the chair of Psychometry and Psychological Orientation until 1958.

During the 1940s and 1950s, he participated in the Summer Institutes organized at the Universities of Havana, Oriente, and Las Villas for the improvement of teachers and professors, referring to the contents, methods, and techniques of psychological and educational orientation, in aid of school learning and the training and education of students. In 1954, he studied postgraduate courses in Social Sciences at Duke University, North Carolina, the USA. In 1955 he obtained a Master's degree in Counseling Psychology from Columbia University, New York, the USA.

During this stage of his life, he created by his own efforts the Instituto Nacional de Psicología Aplicada (National Institute of Applied Psychology, 1956–1961), a private institution that he declined when he devoted himself to his work at the Escuela de Psicología (School of Psychology) at the University of Havana, where he was part of the founding faculty, co-director, and the principal for several years of the Departamento de Psicología Educacional y técnicas de Evaluación y Diagnóstico Psicológico (Department of Educational Psychology and Psychological Evaluation and Diagnosis techniques). The first generations of Cuban psychologists owe their training in part to the teaching work of Professor Gustavo Torroella (Guevara et al., 1980; de Armas et al., 1984).

He was appointed by the Cuban Government and UNESCO to be in charge of a research on Cuban youth as part of an international study on ideals and values, which concluded with a report (Torroella, 1963). In 1969 he began his work at the Academia de Ciencias de Cuba (Academy of Sciences of Cuba), and he was appointed director of the Departamento de Psicología Aplicada (Department of Applied Psychology) where he promoted researches on adolescence and youth, developed courses that benefit different organizations in the country, and culminated his work in 1985. The *Revista Latinoamericana de Psicología* (Latin American Journal of Psychology) distinguished him with his appointment as a member of its Editorial Board representing Cuba.

From 1985 to 1990, he worked at the Instituto Superior Pedagógico Enrique José Varona (Enrique José Varona Pedagogical Institute) where he continued his research and academical improvement until his retirement. He directed the Servicio de Orientación Educacional (Educational Guidance Service) and began a period of collaboration with institutions and associations inside and outside the country, such as the Ministry of Education, the United Nations Children's Fund (UNICEF), and the Instituto Pedagógico latinoamericana y Caribeño (Latin American and Caribbean Pedagogical Institute, IPLAC) where he occupied the chair of Education for Life. From 1995 until the end of his days, he was coordinator of the group of Education for Life and then in 2002, director of the Chair for Human Development at the IPLAC.

Torroella was deeply humanistic, not exclusively affiliate to any school of thought in psychology, that excludes other sources of knowledge about humankind. His training and thinking were more holistic and original. He constructed his own vision of the "human drama" and defined his objectives with his own criteria.

He is considered the pioneer of psychological orientation in Cuba. His fundamental contribution was directed to the teaching of Psychology, as well as to the development of multiple researches on the study of adolescence and youth, psychological and vocational orientation, personality, conception of the world, orientation of values

and meaning of life, methods of psychological and social research, and education for life and human development (Guevara, 1984; Rodríguez-Álvarez, 1990; Segura Suárez, 2003).

Tuana, Élide J.

Born in Montevideo, Uruguay, July 18th 1913

Died in Montevideo, Uruguay, October 19th 2015

Emaluna Gallo Goncalvez
Universidad de la República, Montevideo,
Uruguay

Keywords

Uruguay · Educational psychology · Dyslexia

Elida Tuana was the granddaughter of Italian immigrants who arrived in Uruguay in the decade of 1870. Because she was the first born, she had the responsibility of continuing with the family name and taking care of her two sisters' education. At the end of elementary school, the last grade teacher urged Elida's mother for her daughter to follow her studies.

In 1925, she entered the Universidad de Mujeres (Women's University), whose students continued the training in school teaching in the Instituto Normal de Mujeres (Lady's Normal Institute). In January of 1925, Sebastián Morey Otero (1894–1939) presented the first Experimental Psychology course in the Normal Institutes and Elida Tuana participated in that course. In 1929, along with the students of the Women's

University, they organized the Alfredo Binet Association, the first association of scientific nature in psychology in Uruguay (Monetti & Ocampo, 2011).

In 1933, the Laboratorio de Psicopedagogía (Psychopedagogy Laboratory) was created in the Instituto Normal de Varones (Men's Normal Institute) due to the impulse of Sebastian Morey Otero, who summoned school teaching students to do honorary work and it was so that Tuana along with other students entered the Laboratory. The work consisted in the application and adaptation to the country of aptitude tests used in Spain and France.

When Morey Otero died in 1939, the Laboratory stopped functioning, and in 1941, a public selection was called to provide its direction. Tuana applied, but María Angélica Carbonell de Grompone (1907–1995) ended up taking on that position. Tuana continued working there until 1954, when she became the vice principal of the Institutos de Formación Docente (Teaching Formation Institute). Being a teacher, between the years 1940 and 1942, she took up the post of headmistress at a school in Montevideo. During that period, she became interested in the big percentage of repeating students and that led her to applied psychological tests to the kids in that school, activity that lasted a short time because Montevideo's Primary Inspector wouldn't let her continue.

In 1942, Emilio Mira y López (1896–1964) visited Uruguay on several occasions to offer conferences and seminars, and in 1944, he was hired by the Uruguayan State to make a study about *El Normotipo del Niño y del adolescente uruguayo* (The Uruguayan child and adolescent normotype). During 1944 and 1945, on the occasion of the investigation conducted by Emilio Mira y Lopez, Elida Tuana directed the team that applied the Test de Inteligencia espacial (Spatial Intelligence Test). The contact with Mira y Lopez as a trainer continued in Rio de Janeiro, where Tuana participated during 1947 and 1948 in the first Latinoamerican Psychotechnics Training Course about professional guidance in South America, in the Professional Selection and Orientation Institute (ISOP).

In 1950, she got the Beca Galinal (Gallinal scholarship) to study abroad, which allowed her to travel to Europe. There she took classes with professors such as Jean Piaget (1896–1980) and at the Sorbonne with Pierre Pichot (1918–2020), among others. Meanwhile in Uruguay, in 1953, Juan Carlos Carrasco (1923–2010), Jorge Galeano Muñoz (1919–1987), and Washington Risso promoted the foundation of the Sociedad Uruguaya de Psicología (Uruguayan Society of Psychology, SPU), a scientific society of psychology in a country that did not yet have professionals trained in the discipline. When she returned to the country, Tuana entered in the SPU as a secretary, developing a highlighted activity and holding various positions of importance. In 1956, the Licenciatura en Psicología (undergraduate Psychology Program) was created in the Facultad de Humanidades y Ciencias (Humanity and Science Faculty) in the Universidad de la República (University of the Republic). In 1960, the first Uruguayan Psychology Workshops were held organized by the SPU, and by the ends of the 1960s, the first attempts to regulate the professional practice of psychology began, a process in which Tuana played a fundamental role as the SPU president (Monetti & Ocampo, 2011; Oiberman, 2001).

At the request of Maria Angélica Carbonell, she became interested in dyslexia and joined a group that in 1962 organized a course with Suzanne Borel-Mausonny (1900–1995). At the end of the year, they created the Sociedad Uruguaya de Dislexia (Uruguay's Dyslexic Society), and in 1963, they organized an international seminar about dyslexia in Montevideo. Tuana specialized in the lecture, and along with Carbonell, they made various studies that deepened the relation between orthography, lecture, and language.

In the civic-military dictatorship period between 1973 and 1984, the undergraduate program in Psychology at the Humanities and Science Faculty got shut down, because it was considered a highly politicized environment. Meanwhile, a sector of medicine promoted the limitation of professional practice by defining the role of psychology as the physician's assistant.

In this period, different psychology associations defended the discipline's autonomy countering the attack from some sectors of psychiatry and the SPU played a relevant part in that process, Tuana being its president.

Tuana held positions in the educational environment. In 1954, she took part in the direction of the Instituto de Formación Docente (Teaching Training Institute), where she had previously served as a responsible for the Psychology and Educational Psychology courses. Later on she worked in the Consejo del Niño (Child's Council), she was an Education counselor in 1985, and from there she started working with sexual education in schools.

In the year 2006, she was granted the Doctora Honoris Causa degree by the Facultad de Psicología (Faculty of Psychology) at the University of the Republic, based on her "extraordinary input to psychology from many years before it existed as a scientific discipline," as stated Sylvia Castro (Universidad de la República, 2015). Elida Tuana passed away at 102.

psychoanalytical association

Physician graduated from the University of Buenos Aires (1951), he carried out his initial practice as a surgeon. In 1957, he joined the Asociación Psicoanalítica Argentina (Argentine Psychoanalytic Association, APA), component society of the International Psychoanalytic Association (IPA), becoming a training analyst and a member of the Board of Directors of this institution.

In 1958, he was a group coordinator at the Rosario Experience where Pichon-Rivière (1907–1977), considered by Ulloa as his greatest teacher, presented his new theory in the field of social psychology using the technique of operational groups (Fabris, 2007).

He was one of the Full Professors in the undergraduate program in Psychology at the Universidad Nacional de Buenos Aires (National University of Buenos Aires, UBA). There he organized the Centro Experimental de Psicología Institucional (Experimental Center for Institutional Psychology, CEPI), a study group dedicated to institutional psychology. Also at Buenos Aires University, he taught Adult Clinic Psychology course, where he created in 1966 a clinical procedure that he called Clinical Assembly. The objective of the Clinical Assembly was to reflect on learning from a respectful closeness, in which third parties of appeal allow finding a solution to typical dilemmas of institutional life.

In the Clinical Assembly, (in which even dozens or hundreds of people participated), a clinical management, a psychoanalytic reading, and a reflection on the institutional dimension are combined, understood as an organizational history that refers to a series of creative processes both like others of stereotypy and repetition. In other words, the attempt to establish critical thinking – a way of *staying* and not just of *being* – that transforms the suffering syndrome and tragic enclosure, in situations open to problematization.

The clinical Assembly requires the establishment of a third party of appeal, an attitude as abstinent as it is committed by the operator. Underlying this positioning is a tenderness understood as a gesture that, being empathetic, prevents the destructive seizure of the figure of the other.

While still in the APA Seminars, he published a paper on Relationships between psychoanalyst candidates (Ulloa, 1959). Later, he made strong criticisms of the ideological use of the psychoanalytic settings that is, the use of transference regression and a rigid asymmetry, as instruments of control and power, in institutional relations between analysts (Ulloa, 1971).

He was one of the leaders of the so-called Grupo Documento (Document Group), which together with the Grupo Plataforma (Platform Group, the Argentine branch of International Psychoanalytical Association 26th Congress, held in Roma in 1969), decided to resign from the APA in 1971, based on the rejection of the autocratic and conservative ways of this institution (Langer, 1971)

Ulloa was president of the Buenos Aires branch of the Federación Argentina de Psiquiatras (Argentine Federation of Psychiatrists, FAP). The Buenos Aires branch of FAP, together with the Asociación de Psicólogos de Buenos Aires (Buenos Aires Psychological Association), the Asociación de Psicopedagogos de Buenos Aires (the Buenos Aires Psychopedagogical Association), and other institutions organized the Coordinadora de Trabajadores de Salud Mental (Coordinating Committee of Mental Health Workers). Within the Coordinating Committee, it was organized the Comité de Docencia e Investigación (Teaching and Research Center), an instance of training in mental health of a progressive nature and interdisciplinary spirit, in which psychiatrists, psychologists, psycho pedagogues, anthropologists, nurses, among other professionals converged in a horizontal and democratic process (Dubcousky, 1973).

With a moderate and at the same time committed spirit, he was forced to live for several years in Brazil (San Salvador de Bahia), to protect himself from the Civic-Military Dictatorship (1976–1983), which, in those years, made tens of thousands of citizens disappear.

Upon his return, when the new democratic government had not yet assumed, he increased his collaboration with Human Rights organizations, such as the Movimiento Solidario de Salud Mental (Solidarity Movement of Mental Health),

in the program with relatives of the disappeared and political prisoners, becoming an expert on the part and advisor to movements of Grandmothers of Plaza de Mayo and Mothers of Plaza de Mayo.

In these years, he developed theoretical topics such as the tragic enclosure and the relationship between cruelty and tenderness. “The paradigm of the tragic enclosure is torture, a situation where the victim completely depends, to stop suffering or to survive, on someone whom he totally rejects” (Ulloa, 1995, p. 133; translation is ours)

Ulloa stated that similar situations, in their basic structure, also produce a syndrome of suffering typical of a culture of mortification that sits in a void, which is attempted to be resolved from a position between perverse and addictive. The suffering syndrome is comparable to a current neurosis, which as such impoverishes and blocks the approach to the task, as a result of the defensive effects in the face of the “dark object of work.” (Ulloa, 1995, p. 133)

In Ulloa’s work, reflection on the place of the operator has a prominent place, both in individual psychoanalytic clinical practice (carried out in his case in unorthodox ways) and in practice with *numerosidad social* (*social numerosity*). The operator must have an attitude of abstinence, without this implying an indolence that dismisses or denies the sinister. That is why his approach, as regards the necessary attitudes, is that of tenderness. . . abstinent. Similar to parental tenderness, which is what allows child disability not to be the object of a destructive seizure of the figure of the child.

He offered frequent lectures and published dozens of articles, in addition to two books: *Novela Clínica Psicoanalítica* [Psychoanalytic Clinical Novel], in 1995, and *Salud EleMental* [EleMental Health] in 2012. His disciples published *Pensando Ulloa*, [Thinking Ulloa], in 2005, a book that reflects on his work (Taber & Altschul, 2005).

Its most outstanding contribution can be summarized in the idea of *social numerosity*, as a sociocultural object – and at the same time psychoanalytic – which is approached through the Clinical Community – or Clinical Assembly, mentioned above.

Unanue y Pavón, Hipólito

Born *Arica (Viceroyalty of Peru)*, August 13, 1755

Died *Lima (Peru)*, July 15, 1833

Tomás Caycho-Rodríguez

Universidad Privada del Norte, Lima, Peru

Keywords

Peru · Race · Climate and psychology

Hipólito Unanue, Peruvian physician and naturalist and one of the main representatives of the Enlightenment in Peru (Salazar, 2006), studied at the Seminario de San Jerónimo (Seminary of Saint Jerome) in Arequipa (south of the Viceroyalty of Peru), becoming familiar with philosophy, literature, theology, Latin, and Greek. At the end of 1770, he traveled to Lima, abandoning his priestly studies, starting medicine, and graduating in 1786. He had an important political role in the period of the transition from the colony to the republic, being, among other things, the first Minister of Finance of José de San Martín (1778–1850), who independized Peru, and one of the signatories of the act of independence of this country. He was also a collaborator and minister of Simón Bolívar (1783–1830). In medicine, Unanue was the founder of the anatomical amphitheater (1792), where he began the study of anatomy through the dissection of corpses. Later, he directed the Colegio de San Fernando (later Faculty of Medicine of the Universidad Nacional

Mayor de San Marcos, National University of San Marcos, Lima) and actively participated in the Sociedad Académica de Amantes del País (Society of Lovers of the Country), being editor (1791–1794) of *Mercurio Peruano* (Peruvian Mercury), an important publication of scientific dissemination (García, 2010).

Unanue emphasized the need to study the climate as a cause of variations in the nature of living beings, analyzing the psychology of the Peruvian settlers, more specifically those of Lima (Caycho, 2016). For him, both climate and race explain the psychological traits of people. Unanue described various psychological characteristics for different races. Thus, the Europeans are considered as having a solid thought and the ability to discover truths that require reflection, as well as generous. He considered the Africans of a heavy and barbarous spirit, while he described the Indians as sensitive, shy, a lover of solitude but imaginative. On the other hand, the miscegenation produced in the colony from the unions between Europeans, blacks, and indigenous people gives rise to intermediate traits. This allows him to develop a typology based on the proportion in which these three races are mixed. This classification expresses a very hierarchical society, in which Spaniards and Creoles had the highest rank while Indians and blacks are degraded in the last steps of society.

In addition, Unanue believed that the climate of Lima produces a weak nervous system, easily excitable by the presence of different objects. This physiological characteristic would be associated with the sadness and melancholy. He points out, in turn, that the organs of digestion would also be related to bodily weakness. For this, he remembered that in ancient times philosophers placed the place of the soul in the pit of the stomach, just like Democritus (Alarcón, 1992). Likewise, the imagination and shyness of the natives would have their origin in their body structure and weak nerves. For the first, Unanue points out that the impressions received by the delicate organs are forcefully transferred to the spirit. In the second case, the surprise produced by coming into contact with the stimuli takes hold of the soul, which causes fear of a new stimulus that can bring danger to life.

Unanue's observations regarding races and miscegenation should not be superficially

interpreted as an expression of racism, as he pointed out that alongside the characteristics described above we can find virtuous and talented people, but his ideas constituted at the time a scientific foundation of racial discrimination in Peruvian society. The idea of attributing negative characteristics to people of color was common in the society and colonial state of the time, where racial or ethnic aspects fixed the main aspects of the relations between the incipient classes. Despite no longer being current or valid, it cannot be denied that such a classification is the first psychological typology of Peruvian man.

Urdaneta Ballén, Orlando

Born *in Bogotá (Colombia) on November 9, 1941*

Died *in Bogotá (Colombia) on September 13, 2018*

Lyria Esperanza Perilla-Toro
Universidad de los Andes, Bogotá, Colombia

Keywords

Colombia · Organizational psychology ·
U model · Human capital management

Orlando Urdaneta Ballén was born in the family of María Emma Ballén Zapata and Oliverio Urdaneta Mayorga, a national railroad mechanic. He had two brothers, with whom he grew up in the Bogotá's La Soledad neighborhood. He attended high school at Carmen's Institute (currently Champagnat School). He began studies in psychology in 1961 at the Universidad Nacional de Colombia (National University of Colombia), with honors throughout the same, and graduated in 1966 with the thesis "Construction and standardization of proficiency tests and usable knowledge in professional orientation" (Ardila, 1971). Later, between 1969 and 1972, he carried out a specialization in organizational psychology and labor sciences at the Higher Institute of Labor of the Catholic University of Leuven (Belgium). He published four books, each with several editions, and about 80 articles in specialized journals, as well as various manuals. He worked on the construction and validation of three instruments to measure the climate, culture, and organizational conflict.

After graduating as a psychologist, he took several positions at Servicio Nacional de Aprendizaje – SENA (National Learning Service), until he became director of Industrial Relations between 1973 and 1977. According to Urdaneta, SENA had a decisive influence in "the development of organizational psychology in Colombia, because thanks to it, sections and departments of selection, training and

development, and later, industrial relations services, began to be organized" (1993, pp. 347–348). He was also vice president of the Asociación Colombiana de Relaciones Industriales y Personal – ACRIP (Colombian Association of Industrial Relations and Personnel; currently, Colombian Federation of Human Management) and president of the Consejo Nacional Profesional de Psicología (National Professional Council of Psychology), the Federación Colombiana de Psicología (Colombian Federation of Psychology), and the Asociación Colombiana de Graduados de Universidades en Bélgica (Colombian Association of Graduates of Universities in Belgium). He worked as a teacher of undergraduate and graduate courses in organizational psychology and human talent management in several Colombian universities such as Pontificia Universidad Javeriana (Pontifical Javeriana University) at Cali and Bogotá, Universidad Católica de Colombia (Catholic University of Colombia), Universidad Santo Tomás (Saint Thomas University), Universidad Central (Central University), Universidad Piloto (Pilot University), Universidad Nacional de Colombia (National University of Colombia), Universidad Libre (Free University), Universidad del Rosario (Del Rosario University), and Universidad de la Salle (La Salle University). Orlando Urdaneta stood out as a high-level international speaker on human resources management issues in globalization scenarios, with experiences in countries of America and Europe, including Belgium, Chile, Colombia, the Dominican Republic, Norway, Panama, Peru, Sweden, the United States, and Venezuela. His primary work activity was as an independent consultant, being an advisor in labor competencies (Law 909, 2004 – Colombia) of public entities such as the Fondo Nacional del Ahorro (FNA) (National Savings Fund), the Instituto de Tránsito del Atlántico (Atlantic Transit Institute), the Unidad Especial de la Aeronáutica Civil (Special Unit of Civil Aeronautics), the Superintendencia de Sociedades (Superintendence of Societies), the Hospital de San Vicente de Arauca (Arauca's San Vicente Hospital), the Instituto Nacional de Concesiones (National Concessions Institute), and the Instituto Nacional de Vías (National Roads Institute). In recent years, he

worked in the restructuring of state companies such as the Ministerio de Educación (Ministry of Education), Aeronautica Civil (Civil Aeronautics), and the Superintendencia de Sociedades (Superintendence of Societies). In the academic field, its principal impact can be seen in the multiple citations to his books, mainly of *Organizational Psychology Applied to the Management of Human Capital* (2001). Thus, it is possible to find a good number of references to this work in articles on organizational structure and culture issues (Pérez Uribe, 2007), personnel administration (Higueta-López, 2011), organizational climate (Dávila et al., 2011), and performance evaluation (Pereira et al., 2008), among others. In his two other most outstanding books, he develops the well-known U model, a diagnostic intervention methodology, product of his experience as a consultant for large entities, which led to identifying staff development needs and initiating a program of strategic redirection and continuous improvement that he adopts with practical instruments that allow general managers and human resources managers of Latin-American countries to face the processes of economic openness and globalization (Urdaneta Ballén, 1997, 2002).

In 1990, his only child, Juan Camilo, was born. He remembers his father as a very active person, who especially liked playing tennis and volleyball, a sport in which he excelled in the 1960s as part of the National University of Colombia's team, and regular reader of politics, current affairs, and health issues and a constant writer who, with his knowledge and experience in the field of human talent, advised and generously helped many people prepare for job options. A few days after having the pride and joy of seeing Juan Camilo graduating as an industrial engineer, a CVA took the life of this remarkable organizational psychologist.

educational institutions

Dr. Federico Uribe Martínez founded and was the first principal of the Escuela de Psicología de la Universidad Autónoma de Coahuila (School of Psychology of the Autonomous University of Coahuila) that has trained thousands of graduated psychologists in more than 50 generations (Universidad Autónoma de Coahuila, 2019b).

Federico Uribe was born in Mexico City; his parents were Federico Uribe López that was from Nuevo Laredo Tamaulipas, Mexico, and María Inés Martínez de Uribe, native of Guanajuato, Guanajuato, Mexico (CEAS, 1991). He completed his elementary education in Mexico City pending the Mexican revolution (1910–1917), an important historical moment for his country that marked his temper and that would be reflected in his successful and extensive professional development.

Motivated by friends of his mother, in 1923 he went to live to Belgium to study his baccalaureate and then continue his medical training in the Université Catholique de Louvain (Catholic University of Leuven) and later the Neuropsychiatry specialty (CEAS, 1991).

He studied exact sciences at the L'Université de Lyon (University of Lyon), France. Upon his return to the country, he revalidated his studies at the Universidad Nacional Autónoma de México (National Autonomous University of México), and in this same institution, he studied his post-graduate in philosophy. He also studied History and Pedagogy in 1958 and obtained his Master's degree in History from the Escuela Normal

Labastida (Normal Labastida School) in Monterrey (CEAS, 1991).

He was fluent in Latin, Greek, French, English, and German. One of the main characteristics in his contribution to the psychology was its development in relation to phenomenology and his general domain of human sciences (Valdez, 2015). His scholastic career was consolidated along with his studies, he changed his residence to the north of the country in 1943, invited to be part of the founding teachers of the Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM) (Monterrey Institute of Technology and Higher Education), in this institution he remained until 1947. He also taught at the Escuela de Bachilleres del Instituto Lauren (Bachilleres School in the Lauren Institute); at the Escuela Normal del Colegio Excelsior (Normal School of the Excelsior College), at the Facultad de Medicina, Arquitectura y Psicología de la Universidad Autónoma de Nuevo León (UANL) (Faculty of Medicine, Architecture and Psychology of the Autonomous University of Nuevo León); and at the Bachillerato y Normal de la Escuela Normal Labastida en Nuevo León (high school and Normal School of the Normal Labastida School in Nuevo León) (CEAS, 1991).

Among his administrative and academic management activities, he was part of the founding teachers of the Facultad de Filosofía y Letras de la UANL (Philosophy and letters faculty) and the la Facultad de Ciencias Químicas y Psicología en la Universidad Labastida (Chemical Sciences and Psychology faculty at the Labastida University) where he also taught for more than 26 uninterrupted years. From 1954 to 1956, he taught at the Bachillerato del Colegio Mexicano (High school in the México College), later he was director of department and finally vice rector in the same institution, he was also principal of the Colegio Israelita de Monterrey (Israelite College of Monterrey).

In 1963, Cesar Augusto Cárdenas called him to found the Universidad Jaime Balmes (Jaime Balmes University) in Saltillo, Coahuila, in this assignment Federico Uribe collaborated in academic activities and development of educational programs. The psychology school was founded in 1965 as a part of the Universidad Jaime Balmes

(Jaime Balmes University), Uribe was the first director having this position for several periods. Later this University changed its name to *Facultades Universitarias de Saltillo, A.C.* (University Faculties of Saltillo) and finally in 1975 it was incorporated to the *Universidad Autónoma de Coahuila* (Autonomous University of Coahuila) in which Uribe was again the first director that year and he taught in it until 1976, year of his death (*Universidad Autónoma de Coahuila, 2019a*).

Uribe worked as a consultant for the development and incorporation for different programs at the *Escuela Normal* (Normal School), and he always had a great commitment and dedication to guarantee academic excellence in the professional training of Mexicans in the north of the country.

In each institution mentioned, he left an important mark in teachers and students who studied undergraduate in the early 1960s, teaching in the field of psychology students from different municipalities of the state and from different places in the northeast region of the country.

In spite of working in an important way in the teaching and administration of various institutions, he left a written work among which it can be mentioned *Temptation of the technique*, in the *Cuaderno de Investigación Humanística* (Humanistic Research Notebook) and *Of the exiostic congeries*, published in October of 1966. Between 1950 and 1956, he collaborated in publications of the UANL with various philosophical articles and on different topics published in the journal *Vida Universitaria, Armar y Letras* (*College life, Arm and Letters*) and in student newspapers among which *Diotimia, Previsión y seguridad* (*Forecast and Security*), *Reflejos Sociales de Monterrey* (*Social Reflexes of Monterrey*), and *El Porvenir* can be mentioned (CEAS, 1991). He was invited to participate in presentations in Nuevo León, Coahuila, Sinaloa, and Mexico City. He carried out activities to broadcast psychology, and he was invited to various local television programs in the city of Monterrey to address issues of community interest, from an academic and scientific perspective, with the aim of informing and disseminating the importance of the profession (CEAS, 1991).

He dedicated most of his life to teaching; he finally died in the city of Monterrey, Nuevo León, having 68 years. His most valuable heritage was the dissemination and teaching of psychology in the northeast of the country, always manifested by his great commitment to teaching, but above all reflected in the way he enjoyed sharing his knowledge about psychology.

Uribe Patiño, Francisco Javier

Born *in Mexico City, on September 26, 1945*

Died *in Mexico City, on February 28, 2012*

María Teresa Acosta Ávila
Autonomous Metropolitan University, México City, Mexico

Keywords

Mexico · Education · Social representations

Uribe graduated as Social Psychologist at the Facultad de Filosofía y Letras (Faculty of Philosophy and Literature) (FFyL) at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) (1969–1972). He obtained a Master's degree at the École des Hautes Études in Social Sciences (EHESS) in Paris, France, under the direction of Serge Moscovici (Srul Hers Moscovici, 1925–2014). He also realized PhD studies under Moscovici's direction in the same institution in 1981–1984. Since he came back to Mexico City in 1984, he was a professor and a researcher at the Universidad Autónoma Metropolitana, Iztapalapa (Autonomous Metropolitan University, Iztapalapa) (UAM-I) until he left away. During his academic career, he worked as a professor at the Facultad de Psicología (Faculty of Psychology) at the UNAM from 1973 until 1979, in regular courses as well as in the Open University System.

He collaborated in the post-graduated plan in Social Psychology at the Benemérita Universidad Autónoma de Puebla (Meritorious Autonomous University of Puebla) (BUAP); he gave classes, workshops, conferences, and consultancies in research programs at the Universidad Autónoma de San Luis (Autonomous University of San Luis Potosi) (UASLP), at the Universidad Autónoma del Estado de México (Autonomous University of the State of Mexico) (UAEMex), at the Universidad Pedagógica Nacional (National Pedagogical University) (UPN), the Centro Universitario de Ixtlahuaca (University Center in Ixtlahuaca) (CUI), and the Universidad de Tlaxcala (University of Tlaxcala) (UT); all of these were an active support for the significant role of Social Representations theory in Mexico.

As a witness and coparticipant of the effervescence of the student's movement in 1968 in Mexico, and the union strike in 1977 at the UNAM, his interest grew concerning subjects about democracy and violence, as well as the significance and interpretation that different social groups are to a great extent in the origin of these discomforts.

The tight friendship with Jorge del Valle Cervantes (born 1946) and Luis Gonzalez de Alba (1944–2016), as well of other professors at the Faculty of Psychology at that time, together with other like-minded colleagues, allowed him a

space for a dialogue and reflection on these issues, organized on Friday nights.

During his staying in Paris (1979–1984), he established relations with colleagues of other universities which continued when he came back to Mexico creating and encouraging reflection spaces with professors and students of different universities, as well as encouraging the visiting of European professors to Mexico with the support of Serge Moscovici. His pioneering effort transformed the (UAM-I) into a fertile ground for the study and discussion of the Theory of Social Representations. As it was not possible to have access to texts in Spanish language, he made translations together with María Teresa Acosta Ávila (born 1951) that have been spread among students and professors at other universities. This way, Uribe had a prominent role within the impulse of this theory.

Professor Uribe's work mainly enrolled within the framework of the social representations. He was co-author of the first paper in Mexico about the subject at the Asociación Latinoamericana de Psicología Social (Latin American Social Psychology Association) (ALAPSO) in 1978. Among his activities for the diffusion of the research work of theory, it stands out the obtaining of the headquarters in Mexico for the IV Conferencia Internationale sur les Représentations Sociales (IV International Conference on Social Representations (CIRS)) in 1998, when somehow the interest for the theory invigorated.

His work in the diffusion of the Theory of Social Representations allowed to create national networks, such as the Red Nacional de Investigadores en Representaciones Sociales (National Network of Social Representations Research Networks) (RENIRS). Besides, at the UAM-I he worked in the research area of "Psicología política e identidades" (Political Psychology and Identities), promoting workshops and seminars with colleagues such as Michel-Louis Rouquette (1948–2011) and Jean Claude Abric (1941–2012), among other researches of the Theory of Social Representations.

In homage to his work, since 2014 UAM-I established the "Award Francisco Javier Uribe Patiño" for young researchers.

Ecuador · Paraguay · Pedagogy · Institution building

Emilio Uzcátegui García was born in the San Marcos neighborhood, located in the historic center of Quito. His parents were Teófilo Uzcátegui and Rosa García. In 1905, he entered the Sucre Municipal Secular School when secularism was established in the education of Ecuador.

During his student years, one of the most important events was when Eloy Alfaro Delgado (1842–1912), president of Ecuador who introduced liberalism and secularism, decorated him with a medal in recognition of his academic achievements. He entered (1912) the *Escuela Normal Juan Montalvo* (Juan Montalvo Normal School), which trained school teachers, where he was educated without political and religious orientations. He accessed a scholarship granted by the German Pedagogical Mission to study in Germany; however, he preferred to study in Chile. In Santiago de Chile from 1914 to 1916 he studied at the *Escuela Normal José Abelardo Núñez* (José Abelardo Núñez Normal School), where he was also decorated as a good student, and he graduated as the best *normalista* (teacher). He devoted himself to music, theater, ballet, and to the reading of important European philosophers and writers that made him a cultured person in various subjects (Pérez, 2019).

Once he obtained the title of *Normalista*, he stayed in Chile to continue his studies at the *Instituto Pedagógico* (Pedagogical Institute),

specializing in natural sciences, as a secondary-level teacher. He also studied at the *Conservatorio de Música y Educación Manual* (Conservatory of Music and Manual Education), while working as a teacher at the school attached to the José Abelardo Núñez Normal School.

In 1926, he returned to Ecuador with the titles of Normalist granted by the Ministry of Public Instruction of Chile, Bachelor of Modern Humanities, Professor of Manual Works and Professor of Biological Sciences and Chemistry, conferred by the University of Chile.

He entered the Faculty of Jurisprudence of the *Universidad Central del Ecuador* (UCE, Central University of Ecuador). In December 1934, President José María Velasco Ibarra (1893–1979) closed the university because he thought it was a superficial and rebellious proselytizing club, which neglected scientific quality and was a constant threat against the order and legality of the country (Barreto, 2015; Terán & Soasti, 2006). The closure of the university made Uzcátegui study at the *Universidad de Cuenca* (University of Cuenca), where he obtained a Bachelor of Social Sciences degree from the Faculty of Jurisprudence (1935). In the same year, he obtained the title of Doctor of Jurisprudence at the UCE with the dissertation *Situación del niño en la legislación ecuatoriana* (Situation of the child in Ecuadorian Legislation), which served as the basis for the country's Juvenile Code.

In 1938, General Alberto Enríquez (1894–1962) as Supreme Chief of Ecuador reopened the UCE under the decree of a new Law of Higher Education and ratifying its autonomy. The *Facultad de Pedagogía y Letras* (Faculty of Pedagogy and Humanities) appointed Uzcátegui as professor of Applied Psychology to Education.

Uzcátegui contributed from various areas of knowledge to public education and participated in the creation of the *Partido Socialista del Ecuador* (Socialist Party in Ecuador) (Fonseca & Martínez, 2018). He also contributed (1944) to the creation of the *Unión Nacional de Educadores* (National Union of Educators), which was legalized in April 1950, being one of its main actors and its first president (Órgano Central del Partido

Comunista, 2009). Uzcátegui drew up the first regulation to appoint, promote, and remove teachers leaving behind unfair processes in which teachers entered the teaching profession for political reasons and not for their pedagogical skills. Together with other professionals, he drew up the *Ley de Escalafón Profesional del Magisterio* (Law for the Professional Rank of Teaching) and was the manager of courses to update knowledge for teachers in Ecuador (*Revista Ecuatoriana de Educación*, 1951).

In 1944, he assumed the Presidency of the *Comisión Técnica del Consejo Nacional de Educación* (Technical Commission of the National Education Council). In 1945, he participated in the *Asamblea Nacional Constituyente* (National Constituent Assembly) – which would draft a new Political Constitution of the Republic of Ecuador – as a representative of primary education for the Sierra (Highlands) region (Pérez, 2019).

In 1949, at an event held at the UCE, Uzcátegui gave a conference, in which he proposed the training of psychologists and counselors and the creation of an *Instituto de Investigaciones Psicopedagógicas* (Institute for Psychopedagogical Research). Once elected Dean of the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Humanities and Education Sciences) of the UCE in November 1949, he drew up the proposal for the creation of the *Instituto de Psicología* (Institute of Psychology), which was approved by the University Council in 1950. The first Institute of Psychology of Ecuador had two sections: Psychology and Psychopedagogical and Methodological Research. The University Council approved the Regulations of the Institute of Psychology in 1952. Among the objectives of the Institute were: to study and investigate psychological problems in relation to national needs; train professionals in the different psychological specializations; centralize the teaching of psychology so that it is taught in the different faculties of the university; carry out research and experiences of a methodological and pedagogical nature; determine the psychological profile of the Ecuadorian inhabitant. The Institute only conferred the

degrees of Professor of Psychology and Doctor of Psychology.

In recognition of his work, Uzcátegui was elected Dean of the Faculty of Philosophy, Humanities and Educational Sciences on two more occasions, from 1951 to 1953 and from 1953 to 1955. In 1955, the Institute of Psychology was renamed as *Escuela de Psicología* (School of Psychology).

In 1947, he directed the *Revista Ecuatoriana de Educación* (Ecuadorian Journal of Education) of the House of Culture. Between 1947 and 1955 he worked as a lawyer for the *Fondo de Seguridad Social del Ecuador* (Social Security Fund of Ecuador). And in 1950 he was appointed member of the Electoral Tribunal of Pichincha. In 1951, President José María Velasco Ibarra awarded him the National Order of Merit for being the best Pedagogue in the country.

From June 11 to 15, 1955, with the support of other professionals, he organized the *Congreso Nacional de Enseñanza de la Psicología, Antropología y Ciencias Biológicas* (National Congress of Teaching of Psychology, Anthropology and Biological Sciences). From 1955 to 1959 he served as head of the UNESCO Mission to Paraguay, in order to contribute to the educational reform of that country. Under his guidance, Paraguayan education achieved transformations of all kinds and at all levels, from the institutionality of the *Ministerio de Educación* (Ministry of Education) itself to the reform of the teacher training system. Between 1958 and 1959 he was a professor at the *Instituto Normal de Física y Química de la Escuela Superior* (Normal Institute of Physics and Chemistry of the Higher School) in Asunción, Paraguay.

In the field of psychology, as UNESCO expert, Uzcátegui promoted the creation of the *Departamento de Psicología Educativa* (Department of Educational Psychology) at the Ministry of Education of Paraguay. The department was to have a director and three psychology professionals. In 1959, under his guidance, a psychology and psychopedagogy office was inaugurated at the *Escuela Normal de Profesores N° 1* (Normal School of Teachers N° 1), in Asunción,

including an experimental psychology laboratory for student's practices.

The planning and execution of the reforms can be reconstructed from two publications that appeared under his direction: the *Revista del Ministerio de Educación* (Journal of the Ministry of Education) and the *Boletín de Educación Paraguaya* (Paraguayan Education Bulletin). In addition, he published a compendium of his articles on education in Paraguay, the *Panorama de la educación paraguaya* (Overview of Paraguayan education) (Uzcátegui, 1959). His official mission ended in 1959. According to the historian of psychology García (2006, 2021) the initiative was truncated due to a lack of professionals who could support it at the time that Uzcátegui had to leave the country for the end of his activities at the head of the UNESCO in Paraguay.

Between 1959 and 1960, Uzcátegui was again a UNESCO expert, in those years in El Salvador, where he put into practice a regional education project. In 1960, he dictated the chairs of Pedagogy and Special Didactics of the *Escuela de Ciencias de la Educación de la Universidad de San Salvador* (School of Educational Sciences of the University of San Salvador).

From 1961 to 1964 he was head of the UNESCO Mission in Bolivia and taught at the *Universidad de San Andrés* (University of San Andrés) and at the *Instituto Superior de Pedagogía* (Higher Institute of Pedagogy) of La Paz in this country. In 1969, he was appointed Consul in Bolivia. In 1972, he was a professor at the *Pontificia Universidad Católica del Ecuador* (Pontifical Catholic University of Ecuador) and chaired the Academic Council of the Faculty of Philosophy, Humanities, and Educational Sciences of the UCE.

Uzcátegui wrote approximately 40 works between essays and books, which encompass issues of education, inclusion, history of Ecuador, social changes, and influential figures at the Latin American level. In his works he urged university professors to have a high scientific training and a modest knowledge of pedagogical technique; therefore, it was essential that they be trained in learning psychology and university student

psychology. He was a key figure not only in Ecuador but also in Paraguay.

behaviorism

Pablo Valderrama Iturbe majored in Psychology at Facultad de Psicología (Faculty of Psychology, FP) at Universidad Nacional Autónoma de México (National Autonomous University of Mexico, UNAM) in 1983; his thesis *Ensayos de la Historia de la Psicología en México* (Essays on the history of Mexican Psychology) was directed by Jorge Molina. In 2010, he got the Master's Degree in Experimental Psychology at UNAM; to achieve this degree, he wrote the thesis *Evolución de la enseñanza de la psicología en la Universidad Nacional Autónoma de México de 1920 a 1973* (Evolution of Psychology Teaching at the National Autonomous University of Mexico from 1920 to 1973).

In 2005, he got a PhD in Humanities at Universidad Latinoamericana (Latin American University, ULA).

Valderrama joined the academic staff at the FP in 1980 and he retired in 2013 after having held the *Profesor Asociado B Medio tiempo* position. He was also the Director de la Escuela de Psicología (Principal of the School of Psychology) at ULA from 2000 to 2009. In 2015, he worked as a professor at Universidad Chapultepec (Chapultepec University), where he taught several subjects at the Psychology major up to 2017.

Valderrama started his academic career when he was still a major student; he worked together with Benjamín Domínguez Trejo on the field of cognitive behaviorism therapy. As a result of this labor, he published several works; one example of this is the 1983 proposal, authored by Domínguez and Valderrama, issued on *Revista del Instituto Mexicano de Psiquiatría Juan Ramón de la Fuente* (Juan Ramón de La Fuente Mexican Institute of Psychiatry Magazine). This work proposed a training program on the topic of cognitive therapy as well as different professional usages in national issues.

In 1995, he wrote a chapter for the book *Emotion, Disclosure and Health*, published by the American Psychological Association (APA); he was invited by James Pennebaker (born in 1950) to participate in this work due to his works on adapting the technique called self-reflective emotional writing to the Mexican context.

His work on cognitive behavioral therapy focused on practical uses on patients with physical ailments, especially on women with cervical cancer.

His publishing record proves his devotion to cognitive behavioral therapy matched his passion towards Psychology History, on which he tried to keep a record on the most relevant events and personalities that left a mark in the field in Latin America and Mexico. Several works, such as *Estado actual de la psicología en México* (Current state of psychology in Mexico) (1998), show the breakthroughs of Mexican Psychology pioneers by analyzing books, articles, thesis, and other papers that prove the development of Psychology as science.

Along with Sánchez Sosa (2001), he also documented scientific and professional activities performed in the origins of Psychology all over Latin America in the late 1800s as well as the funding of higher education institutions with Psychology programs, and the arise of scientific communities that nourished Latin American Psychology.

Pablo Valderrama's contributions to the study of the History of Psychology in Mexico help understand the need to define a Mexican Psychology (as stated in Valderrama and Rivero, 1983); to do this, he studied in depth the development of Psychology teaching from 1910 to 1973, when the FP opened at UNAM, as well as the diverse theories that influenced the making of courses and studies, postgraduate courses, and field research.

He focused his professional interest on Sports Psychology, too. He published articles on the topic on *Boletín de la Facultad de Psicología* (Bulletin of the Faculty of Psychology) as well as he did on the newspaper *El Nacional*, which was printed all over Mexico in those days (1990–1992).

He worked as a therapist for over 10 years. In this activity, his main interest was helping patients improve their life standard.

He directed and advised 43 bachelor degree thesis. He worked on topics such as stress, cognitive behavioral treatment, psychometrics, and Sports Psychology.

In his personal life, Pablo Valderrama enjoyed listening to classic rock and planning trips on which he visited libraries that held books that could help him know more about the History of

Mexican Psychology since, according to his own son, “his work was cognitive behavioral therapy, but his real passion was History” (García Saénz, 2022, personal communication).

Valdivia, Juan Gualberto “Deán”

Born *Cocachacra, (Arequipa, Peru), 11 July 1796*

Died *Arequipa, (Peru), 11 December 1884*

Walter Arias
Universidad de San Pablo, Arequipa, Peru

Keywords

Peru · Phrenology · Psychology

In 1811, Deán Valdivia traveled to the city of Cusco to study philosophy and then returned to Arequipa, where he studied theology. In 1817, he made his religious vows in the Orden de los Mercederarios (Order of the Mercedarians), and in 1820, he taught mathematics and physics at the Colegio de la Inmaculada Concepción (Inmaculada Concepción College) and introduced the teaching of chemical mineralogy for the first time in Peru. He occupied a high position (that of dean, hence his nickname) in the church of the city of Arequipa. In 1828, he founded Universidad Nacional de San Agustín (National University of San Agustín, UNSA), the first university in the city. A year earlier, he opposed celibacy and hung up the habit.

In 1841, Deán Valdivia was captured under the charge of conspiracy and put into captivity by Ramón Castilla (1797–1867), according to the orders of President Agustín Gamarra (1785–1841) but was released thanks to the intervention of the ecclesiastical authorities of the city. From the dialogues he had with Castilla (who was president of Peru twice, 1845–1851 and 1855–1862), a lasting friendship emerged, which was reflected in the biographical book he wrote about him, where the results of the phrenological analysis he made of him are also reported, also resorting to physiognomy (Valdivia, 1873).

Deán Valdivia’s phrenology meant for regional psychology the step from metaphysical

explanations to the search for the neurophysiological foundations of the mind (Arias, 2018). Likewise, he made some innovations to the phrenological theory, since he raised four new phrenological faculties: penetrability, smoothness, tactivity, and conjugability. In this sense, he was based on the basic principles of phrenology enunciated by Franz Joseph Gall (1758–1828) and made craniographic descriptions of the location of each phrenological faculty referring to brain structures that were known at the time (hemispheres, lobes, convolutions, meninges, brainstem, and basal ganglia). He highlighted certain normal and irregular manifestations when there are excessive protrusions on the skull and presents an analysis of temperaments following the Hippocratic-Galenic theory. He also proposed an analysis of the “geniuses” or attributes of the personality and a professional guide to the ideal characteristics of 22 professions or occupations.

His phrenological analysis involved dividing the brain into three regions: anima (back of the skull), moral (upper part), and intellectual (front part); and the distinction of 25 affective faculties that he divided into inferior and superior, and 14 intellectual faculties that he divided into perceptual and reflective. The work of Deán Valdivia combines in an original way the phrenological doctrine with physiognomy, the Hippocratic-Galenic theory, Thomistic psychology, and the enlightened knowledge typical of the nineteenth century.

Deán Valdivia’s work was pioneering in the history of regional and national psychology, which constitutes a historical antecedent of physiology, psychopathology, and applied psychology in Peru and Latin America.

Peru · Psychiatry · Psychiatric journals

Hermilio Valdizán was a Peruvian psychiatrist born in Huánuco, a city in the Peruvian Andes. Still in his childhood, in 1894, he moved to Lima for secondary studies, and in 1903, he entered the Faculty of Medicine of the Universidad Nacional Mayor de San Marcos (UNMSM), obtaining a bachelor's degree in 1909.

With a scholarship from the Peruvian government, he made a stay in Europe (1911–1914), especially in Italy, where he worked with Sante de Sanctis (1862–1935), an important figure in Italian psychiatry and psychology.

On returning to Peru, he obtained an M.D. degree and created (1916) the Chair of Nervous and Mental Diseases at his alma mater. Since 1921, he was director of the Víctor Larco Herrera Asylum (today the Víctor Larco Herrera Hospital, Lima), an institution dedicated to the care and treatment of mentally ill patients, which he modernized. In that hospital, he had entered to work as a resident doctor 2 years before, and as director, he arranged changes based on his European experience, which, however, encountered strong

opposition from the nuns who were in charge of that institution. Thanks to donations from Víctor Larco Herrera (1870–1939), a man of great personal fortune and important political contacts, the reforms proposed by Valdizán were implemented, and the nuns left the asylum.

In 1918, he founded the *Annals* of the Faculty of Medicine of the UNMSM (*Anales de la Facultad de Medicina de la Universidad de San Marcos*), a journal of which he was the editorial secretary and which continues to be published today. That same year, together with Honorio Delgado, he also founded the *Revista de Psiquiatría y Disciplinas Conexas* (*Journal of Psychiatry and Related Disciplines*), the first Peruvian periodical specialized in psychiatric issues, which appeared until 1924. Between 1922 and 1925, he directed *Unanue*, a journal also founded by him and dedicated to the history of medicine.

His publications are numerous despite having died prematurely, being dedicated to the history of psychiatry and clinical psychiatry. He also dedicated himself to studying topics of Peruvian folk medicine. Mariátegui (1990) has edited a selection of his most significant writings under the title of *Paleopsychiatry of Ancient Peru* (*Paleopsiquiatría del Perú antiguo*).

Hermilio Valdizán was the initiator of psychiatry as an autonomous specialty in his country, and his works on psychiatric problems in Peru continue to be cited to this day (Mariátegui 1981). In the field of psychology, he expressed interest in psychoanalysis, expressed in the large number of psychoanalytic works (especially by Honorio Delgado) published in the *Journal of Psychiatry and Related Disciplines*, which he together with Delgado directed but also disseminated psychological tests to Europeans and implemented a psychological laboratory in the hospital he ran.

Mexico · Philosophy · Catholicism · History

Valverde Téllez Emeterio was a prominent Mexican philosopher, historian, and academic, who, for more than 40 years, led topics related to the psychology of the Mexican, mainly on Catholic philosophy and its instruction in Mexico. In 1876 at the age of 12, he was awarded a scholarship to study at the Clerical College of San José, where he later taught Philosophy and Latin lessons; likewise, at the age of 23, he was ordained as a priest by Bishop Pelagio Antonio de Labastida y Dávalos (1816–1891) on March 5, 1887. At the

age of 26, he was appointed parish priest of Santa Fe, the same year in which he began his writing career; a year later he was selected as parish priest of Tlalmanalco until 1885, the year in which he was appointed to Zinacantepec and in 1896 to the parish of San José in Mexico City. It is in this last year where he published one of the pioneering works of its kind (Villalpando, 2002) *Apuntaciones Históricas Sobre la Filosofía en México* (Historical Notes on Philosophy in Mexico), where he contributed writings on the subject, reviewing Mexican Catholic schools, the training that was had within education, libraries, the profile of Catholicism in the country, societies, and cultural symbolisms of spirituality among others.

In 1897 Valverde was named “prebendado canon” in the chapter of the Cathedral of Mexico, where he served as a consultant for the V Concilio Provincial Mexicano (V Mexican Provincial Council). In 1904 he wrote another of his books called “Crítica filosófica; estudio bibliográfico y crítico de las obras de filosofía escritas, traducidas o publicadas en México desde el siglo XVI hasta nuestros días” (Philosophical Critique; bibliographic and critical study of the works of philosophy written, translated, or published in Mexico from the sixteenth century to the present day), in which he made a critique of the theories and writings of the moment regarding nationalist philosophical controversies and atheism, training philosophical such as Darwinism, positivism, spiritualism, and the different beliefs of the Mexican population of the time. From that moment until 1905, one of his main tasks was to visit parishes and ecclesiastical personnel throughout Mexico. In addition to the above, in that last year, he was appointed a member of the Mexican Society of Geography and Statistics upon returning from a trip to the city of Rome and Palestine. In 1907, being secretary of the Chamber and Government, he wrote his work entitled “Bibliografía filosófica mexicana” (Mexican Philosophical Bibliography), a book that 2 years later he expanded with two volumes and took up some of the themes of his first book and added more characters.

By 1909 he was appointed bishop of León Guanajuato, an activity that he worked for 40 years until his death. Two years later, in 1911

he published another work with the title of “La Verdad” (The Truth) in which he promotes the rebirth of Mexican philosophy as well as defends metaphysics in teaching and some other teachings above technical tasks; this text can come to be considered more in terms of the defense of the Catholic faith than of philosophy itself (Ibargüengoitia, 2000).

In 1914 he reissued his work “Bibliografía Filosófica Mexicana” (Mexican Philosophical Bibliography) where he encourages in various ways to establish the foundations of different disciplines such as Sociology and Historiography in Mexico, as well as Psychology. He considered that together they created, through behavioral and mental patterns, the way of thinking of the Mexican and their problems and characteristics differentiated from other cultures. This would allow finding solutions to archaic problems that have led the Mexican to where he is. Contrary to what positivism posited, which only observes in a reductionist way, as Emeterio considered positivism. Added to this aversion, he postulates the coldness with which positivism is handled, calling it a manipulator of procedures and blind to things that cannot be verified because he believes he has the only key to understanding the world, art, knowledge, and science leaving faith aside since positivism despite its scientific veracity does not give importance to beliefs and ideas regarding the formation that goes beyond the measurable, that is to say, the spiritual.

Thanks to his political skills, in 1921 he managed to get the Mexican Catholic archbishops and bishops to sponsor the raising of the national monument to the Sacred Heart of Jesus on the “Cristo Rey” mountain, an act that was condemned by President Álvaro Obregón Salido (1920–1924) and he decreed the expulsion in 1923 of the Vatican’s apostolic delegate in Mexico Ernesto Eugenio Filippi (1879–1951). This was the preamble to the conflict that broke out between the Mexican government and Catholic religious: In June 1926, President Plutarco Elías Calles (Francisco Plutarco Elías Campuzano, 1924–1928) proposed a law, called “Ley Calles,” in which the church was refused to participate in political activities and to be possessors of real

estate and it prevented the religious cult in places that were not temples; this fact caused riots between the parishioners and the Mexican militia. This event was called the “Cristero War,” which lasted from 1926 to 1929.

Valverde was appointed in 1926 as a representative to the Holy See to respond to the Mexican population during the events and began to reside in Rome, within the Pío Latino school; 2 years later, the monument that he had ordered to be erected together with some other characters was destroyed by a bombardment by opponents of the church. The war ended with the interruption of the United States, which sought to apply the proposals and requests of the bishops and Catholics of that country, which led the interim president of Mexico, Emilio Cándido Portes Gil (1928–1930), not to modify the constitution but alluding to the fact that the Catholic Church had to submit to what was requested by the country.

From 1928 to 1929, he ardently defended the Mexican episcopate since the war had left consequences causing both groups to continue contending for power (political and religious). Upon his return to Mexico, in 1930 he was appointed a member of the Mexican Academy of History, thanks to the fact that the work he had carried out magnified the history of the new world and the way of thinking about its inhabitants through the years; added to this he managed to assemble a private library that had more than 20,000 volumes, which are in a collection that bears his name in the library of the Universidad de Nuevo León (University of Nuevo León).

As we can see, the studies and writings of Emeterio Valverde Téllez helped to form what in the future would be the psychology of the Mexican, in which he would try to investigate social problems and their resolution through the tools that he has at his disposal, the development of his personality, as well as his motives for acting. All of the above thanks to the studies of Philosophy and the importance of Historiography to observe behavioral patterns.

It was on December 26, 1946, in the city of León Guanajuato that Emeterio Valverde Téllez suffered from hemiplegia and died.

Varela y Morales, Félix

Born *Havana, Cuba, November 27, 1788*

Died *St. Augustine, Florida, USA, on February 25, 1853*

Asel Viguera Moreno

Universidad de Oriente, Santiago de Cuba, Cuba

Keywords

Cuba · Philosophy · Psychological ideas · Teaching

Lived his early years in Havana, and in 1791 his father was appointed Captain of Fusiliers in St. Augustine, Florida (still a Spanish colony), where he spent his childhood. He returned to Havana in 1801 and enrolled in the Real y Conciliar Seminario de San Carlos y San Ambrosio (Royal and Conciliar Seminary of San Carlos and San Ambrosio). Four years later, he received a bachelor's degree in Theology, taking the religious habit. In 1811, he graduated with a degree in Theology and the following year, he was ordained as a Catholic priest and obtained the chair of Philosophy (Ibarra-Cuesta, 2008).

In this context, the first psychological ideas appeared at the Universidad de la Habana (University of Havana), through the Course of Moral Philosophy; in the Institutos de Segunda Enseñanza (Secondary Schools Institutes) with the courses in Psychology, Logic and Moral Philosophy and in the religious seminaries. The teaching in these centers was permeated by the colonial condition of the Island, in which the Catholic Church imposed its religious dogmas on culture, so that a scholastic philosophy predominated. However, in the Seminario de San Carlos (Seminary of San Carlos) and in the private high schools, Psychology was part of the Philosophy Course and reflected the assumptions of the philosophy of the Enlightenment, which was pronounced as a critique of traditional institutions.

Varela y Morales' teaching focused on philosophy as well as on chemistry and physics. His conception of education aimed at forming a human being prepared to change society. The ethics of his teaching method implied placing the student in a learning situation that would allow, through his reflections and analysis, to formulate solutions to certain situations. Thus, the student should analyze, understand, and meditate without learning texts by heart, but rather learn to think and that this should involve value actions such as love for the native country (Segura-Suárez, 2003).

Varela's psychological ideas seemed to be part of his pedagogical, philosophical, and political work. In his writings, he started from the thesis that experience and reason were the true foundations of knowledge and, therefore, knowledge came from the encounter of the senses with reality. The attention he paid to the problems of the theory of knowledge led him to criticize the agnosticism from Kant (1724–1804) for sustaining the thesis that the senses, reasoning, and experience were insufficient to arrive at the truth (Ibarra-Cuesta, 2008).

His sensualism and empiricism discarded the assumption of innate ideas; thus, knowledge had its origin in the contact of the senses with external reality and general ideas were the product of logical abstractions. He was a connoisseur and disseminator of the work of Locke (1632–1704), Descartes (1596–1650), Condillac (1714–1780), and Destutt de Tracy (1754–1836); he also read and criticized the work of Gall (1758–1828) (Guevara-Valdés, 1984).

In the search for the genesis of human knowledge in sensations and psychological evolution, in different ages of children, he gave vital importance to the senses, giving priority to the sense of touch. It is through this sense that the sensations of the remaining senses are discovered, of the object that has produced them. Touch puts the human being in contact with nature and takes him out of himself.

In Varela's conception of the human being, man was the result of nature, but also of society. The human being was a result of nature, but his difference with the animals was the environment in which he lived. A human being in the jungle

would hardly be distinguished from the animals and would not have, like them, the properties that belonged to him in the social state. Thus, the physical and moral good were closely linked to society; otherwise, the faculties of the soul would not find development and virtue would not be exercised. Varela also conceived the relationship between affection and cognition, arguing the need to cultivate not only the intellect, but also the feelings, in order to lead life in a harmonious way (Segura-Suárez, 2003).

In December 1823, Félix Varela arrived to the United States, after being persecuted and condemned to death for his position against the Spanish authority. There he lived in Philadelphia and New York until his death. He continued his struggle for Cuban independence by publishing the newspaper *El Habanero* (The Havanero) (Miranda-Francisco, 1999).

His main contribution to Cuban psychological thought lays in his method: It inspired the idea of synthesis through integration and criticism, always thought in the solution of problems. This method was enriched by his followers, among them José de la Luz y Caballero (1800–1862).

Carlos Vargas-Ordóñez, the son of José Gabriel Vargas, lawyer by profession, and Laura Ordóñez, studied philosophy at the Conciliar Seminary of Popayán and subsequently obtained a bachelor's degree in theology from the Pontificia Universidad Javeriana (Pontifical Javeriana University) in 1962. In addition, in 1980, he obtained a degree in psychology from the Universidad

Católica de Colombia (Catholic University of Colombia) (UCC). During his time as a student, he was characterized by his leadership, reflected in the fact that he was proposed to provide the monitoring given by advanced students and to systematize academic records (C. Cifuentes, personal communication, September 2, 2019). In 1984, he married the psychologist María Consuelo Quintero Giraldo, with whom he had two daughters.

At the beginning of his professional life, he was a professor of philosophy and psychology in vocational and secondary education at the Colegio Alejandro von Humboldt (Alejandro von Humboldt High School), the Instituto Técnico de Popayán (Technical Institute of Popayán), and the Colegio Fernández Guerra (Fernández Guerra School) in Santander de Quilichao (Cauca). In Bogotá, he also worked at the Colegio Restrepo Millán (Restrepo Millán School) and Liceo Antonia Santos (Antonia Santos Lyceum).

Between 1980 and 2000, he served as principal of the Colegio Nacional Nicolás Esguerra (Nicolás Esguerra National School), a public institution which, under his leadership in the afternoon shift, was recognized for its high-quality educational project, which distinguished it from other public schools at that time (Ocampo 2018).

While he was principal in the Nicolás Esguerra National School, the Ministry of National Education, through Decree 1162 of May 14, 1980, awarded him the *Camilo Torres Civil Medal* in the higher category for his “virtues and dedication to the enhancement of the nation.” Later on, in 1998, on the 60th anniversary of this school, he received the *José Acevedo y Gómez* award from the Council of Bogotá.

Concerning his service to higher education, he taught at the Universidad Jorge Tadeo Lozano (Jorge Tadeo Lozano University), the Catholic University of Colombia (UCC), and Fundación Universitaria Konrad Lorenz (Konrad Lorenz University Foundation) in Bogotá. In 1989, he was appointed dean of the UCC Psychology Faculty, a position he held until his death. He received this appointment amid a crisis that began in 1986, with the resignation of the then dean José Antonio Sánchez and other renowned academics. The

students went on a hunger strike and got organized to demand the reinstatement of the professors and the appointment of a suitable candidate for the post of dean. This situation jeopardized the survival of the Psychology Faculty at this institution, which had three temporary deans between 1987 and 1989 (Gómez and García 2018; Ocampo 2018).

In the first part of his tenure, Vargas promoted research and its dissemination. During this period, approximately 150 students graduated as psychologists, through participation in institutional research projects led by teachers and supported by the student body.

Moreover, under his leadership, the Psychology Faculty curriculum began to be overhauled, with an emphasis on research skills and students' integral development. Between 1992 and 1998, due to his conviction of the importance of research in psychology training, Carlos Vargas negotiated the purchase of the first laboratory equipment at UCC that would make it possible to formalize experimental practices. He subsequently supported the creation of the human research laboratory and the setting of psychometric and behavioral neuroscience laboratories.

Concerned about the shortage of quality psychology graduate programs in Colombia, Carlos Vargas endeavored to offer alternatives to improve teacher training, increasing the number of professors who obtained specializations, master's and doctoral degrees, benefiting at least 30 of them. Between 1998 and 2002, he promoted the creation of graduate programs with specializations in the clinical, educational, legal, and organizational areas.

In 1996, he formed a team of five psychologists with master's and doctoral degrees to strengthen a line of research in addictions and violence, creating the Center for Studies and Research on these topics (CEIAV), which was officially registered in the Administrative Department of Science, Technology and Innovation in 2000, as well as the master's degree program in psychology, which was approved by the Ministry of National Education (Flórez 2018). The creation of this program

was important since there were only six such graduate degree programs in the entire country at that time. Subsequently, in 2015, his team achieved official registration for a doctoral program in psychology (Londoño et al. 2018).

In 2006, under his leadership, the bachelor's degree program in psychology obtained the high-quality accreditation for 6 years, granted by the Ministry of National Education. In 2012, its accreditation was renewed for a further 8 years, making it the only private university psychology program to obtain this level of accreditation at that time.

In 2011, Carlos Vargas was recognized by the president of this institution for its commitment to academic excellence, due to the high scores obtained by students in the final year of the program in the state tests (Evaluation of Academic Skills in Higher Education – ECAES, currently called Pro Knowledge Tests).

In his capacity as dean, Vargas supported the creation of the journal *Acta Colombiana de Psicología* (Colombian Psychological Record) and contributed to the management of its publication as its director for 20 years (Ravelo-Contreras 2018). He also contributed to the creation and publication of the *Carta de Psicología* (Psychology Newsletter) that has been published for over 15 years.

In 2013, UCC awarded him a mention for the achievement of the reaccreditation of high quality of the Psychology Faculty, and that same year, he was granted the institutional recognition *Sapientia aedificavit sibi domum* (Wisdom has built its home), given to the “professional who undertakes or has undertaken outstanding academic work in their respective discipline, art or science, in the humanities or politics” (Ravelo-Contreras 2018, p. 8; Universidad Católica de Colombia 2019).

In 2015, Carlos Vargas was nominated for national awards in the categories “To a life of commitment” and “Management of the guild and its beneficial social impact,” granted by the Colombian Board of Psychologists (Colpsic), and was awarded the latter (Universidad Católica

de Colombia 2019). In 2016, the president of the Council of Bogotá presented him with the “José Acevedo y Gómez Order of Merit” for his excellent and permanent education services in the city of Bogotá.

His professional life focused on education, especially program management, whose hallmark was the positive leadership that enabled him to form committed, high-level work teams. One of the outstanding features of the accreditation processes he led was the cohesive, committed working group behind them. During his 28 years as dean, approximately 6,000 undergraduate students and 1500 graduate students completed their degrees.

As a teacher, he was always interested in integral development and ethics, subjects he taught at the various institutions where he worked. He participated in several congresses and academic events whose central axis was the development of psychology in the country, particularly as regards the training of psychologists.

In the late 1990s, several of the most representative psychologists in the country had expressed the need to update the legislation (1983) to regulate the exercise of the profession, but the existing groups (two professional associations) had apparently irreconcilable positions. However, on April 16, 1999, the deans present at the annual meeting of the Colombian Association of Psychology Faculties (Ascofapsi), in the city of Pasto (Nariño), constituted the assembly of the founders of the Colombian Board of Psychologists (Colpsic). Subsequently, in 2006, Colpsic was formally created, of which Carlos Vargas was a founding member (*Revista Colombiana de Psicología* 1999, p. 148). In addition, Vargas was jointly responsible for merging the two existing professional associations in 2004. He undertook mediation work, led meetings to unify and create agreements, and formed part of the team that negotiated the enactment of Law 1090 (2006) regulating the practice of psychology in Colombia.

In the Colombian College of Psychologists, Vargas was an active member for 13 years, serving on the National Board of Directors on two

occasions. Between 2007 and 2011, he was president of the regional chapter of Bogotá and Cundinamarca.

Carlos Vargas was a leader of training of psychologists in Colombia; a teacher of several generations; a manager and administrator of various quality programs that included different levels of education including middle school and undergraduate, specialty, master's, and doctoral degrees; and a defender of the rights of psychologists and psychology in the country.

Carlos Varona was one of the five children of Francisco Varona Roura, a lawyer, and Angela Emilia Duque de Estrada both originally from Camagüey, Cuba. Following his father's steps, in 1946, he obtained a Doctor of Laws degree from the Universidad de La Habana (University of Havana). He practiced as a lawyer in Cuba for 14 years (1947–1961) at Varona-Roura Law Firm with his siblings. Varona was a professor of jurisprudence at the School of Law of the *Universidad de Camagüey* (University of Camagüey) and the *Universidad Oficial Ignacio Agramonte* (Official University Ignacio Agramonte). In 1948, Varona married Ana Margarita Lavernia-Hernández and became parents to Emilia, Ana, and Magdalena. Varona joined groups opposed to the Cuban President Fulgencio Batista dictatorial regime and was a supporter of the July 26 Movement and Civil Resistance Movement. In 1959, he was appointed Under Secretary of Labor of Cuba and resigned on October of the same year due to the Fidel Castro's government alignment with the communist ideology. Concerned about political transformations and events after the Cuban Revolution in 1959, Varona and his family migrated to Puerto Rico on 1963.

Upon his arrival to Puerto Rico, Varona held a variety of jobs including assistant librarian at the School of Law of the Interamerican University (1963–1964), director of the Department of Social Sciences, dean of Students, professor of Social Sciences, and director of the Río Piedras and Caguas campuses of Puerto Rico Junior College (1963–1969). Since his years as a lawyer and throughout his life, Varona nurtured his interest in the field of psychology and the interface among law, psychology, sociology, political science, and philosophical views of human behavior. Varona completed his master's degree in clinical psychology at the *Instituto Psicológico de Puerto Rico* (Puerto Rico Institute of Psychology, today Carlos Albizu University) in 1969 and a PhD in professional psychology with distinction at the Caribbean Center for Advanced Studies (presently known as Carlos Albizu University) in 1976. The title of his doctoral dissertation is *The Concepts of Responsibility and Guilt in Psychology and Puerto Rico Criminal Law* (Varona 1974).

Varona began his professional career as a psychologist in 1969, serving as a professor and supervisor of clinical practice at the Puerto Rico Institute of Psychology. In 1970, he worked as special assistant to the Secretary of the Puerto Rico Department of Social Services and in 1971 became a professor of psychology at the Interamerican University, Metropolitan Campus, until retiring in December 1998. He also lectured in the Criminal Justice program and the Doctoral Education Program at the same institution. He was elected to the University Senate of the institution in 1977, 1985, 1990, and 1992. In the 1980s, he was also a recurrent lecturer in the master's level program on Decision Analysis at the Universidad Central de Bayamón, Puerto Rico, along with his friend and mentor Dr. Norman Matlin.

Varona was a very prominent social commenter, public speaker, and activist on a variety of issues especially human rights. He was vice president of the Cuban Committee for Human Rights (circa 1990) and active member of similar organizations. As a keen observer of social-political dynamics, he began publishing several articles and essays in Latin American newspapers

and magazines in 1951. Once in Puerto Rico, his articles on psychology and legal or political topics were published in the legal journal of the Inter American University of Puerto Rico; the *Judicial Bulletin*; *Homines*, a social science journal; the *Puerto Rican Journal of Psychology*; and the newsletter of the Puerto Rico Psychology Association. Between 1977 and 1992, he wrote about 217 articles and essays on various topics for the newspaper *El Nuevo Día* and from 1994 to 1998 was a frequent collaborator in the magazine *El Camagüeyano Libre*. His writings became influential for discussions on public policies, highlighted views and contributions of psychology to society, and were recommended readings for college students on a variety of disciplines. His books constitute an invaluable legacy for psychology in the country.

Varona defined himself as a humanist-rational psychologist. His thinking integrates his liberal philosophical beliefs (liberalism), humanist pragmatism, humanist psychology (i.e., holistic view on individuals' capacity to make their own choices and actualize themselves in their own way), and rational psychology (i.e., study of psychological phenomena that emphasizes philosophy, logic, and deductive reason). Consistent with these views, he embraced an ethics of respect philosophy positing that the autonomy, rights, choices, values, and goals of individuals must be regarded as well as their special moral status as persons. Varona emphasized the importance of reasonableness and common sense as criterion for selecting useful counseling and psychotherapy methods. He believed that individuals act as if they have free will (whether a fact or an illusion) and have the intellectual abilities to foresee the consequences of their actions and avoid taking risks that endanger their lives or the lives or well-being of others. He believed that individuals can make intelligent and creative decisions considering alternative options presented by their own body, physical environment, culture, society, and the people with whom they interact. Varonas' views were greatly influenced by Antonio R. Martínez y Martínez (1905–1982), his professor of psychology and logic at the Instituto de Segunda Enseñanza de Camagüey (circa 1940,

Secondary Education Institute of Camagüey), Dr. Leonardo Rodríguez Betancourt and Dr. Norman Matlin both professors at the Puerto Rico Institute of Psychology (circa 1966–1970), and philosophers and theorists advocating rational analysis and cognitive reconstruction to solve human problems.

Varonas' participation in the development of the graduate psychology program at the Interamerican University of Puerto Rico was enduring. In 1995, he was recognized as exemplary professor by the excellence of his educational work by the faculty of the Division of Sciences and Behavioral Professions. His contributions to the development of psychology in Puerto Rico were honored by the Puerto Rico Psychology Association in 1978, 1979, and 1993. In 2004, the School of Psychology of the Interamerican University of Puerto Rico dedicated the Third Congress of Psychology and Mental Health to Dr. Carlos Varona Duquestrada in recognition of his memorable legacy to the profession and Puerto Rico.

Cuba · Study of psychology

Varona studied at elementary school in his native city and soon after in Havana. In 1868 when the “Guerra de los 10 años” (first war of independence in Cuba), he incorporated to the battle field. When concluding, began the war in 1878, he restarted his literary activities and dictated and published in Havana his celebrated *Conferencias Filosóficas sobre Lógica, Psicología y Moral* (Conferences on Logic, Psychology and Morals). Later, before the failure of their management like deputy to the parliament of Spain representing Cuba, he broke up with the autonomism. As intellectual he participated in different educational spaces. On September 1878, in a covert of the *Revista de Cuba* (Magazine of Cuba) (which he opened up and directed from 1885), he exposed about the independence of the psychology in connection with the biological sciences. On May of the following year, he exposed his

speech known as “*The psychological evolution*” (1879). The Spencer doctrine marked him when declaring that the capacity of abstraction linked to the language, defined the human’s significant superiority on the nearest animal relatives (Pruna-Goodgall, 2006), that made him a convinced evolutionist. These postulates implied an opposition to the innatism of the ideas.

He also dictated in the years 1880 and 1881 a course in the Academia de Ciencias Médicas, Físicas y Naturales de La Habana (Academy of Medical, Physical and Natural Sciences of Havana). It was about a series of Philosophical Conferences on Logic, Psychology and Morals. Such a course was very well received by the intellectuality and the critics, and it was published in the *Revista de Cuba (Cuban Magazine)* until 1888. To a demand of José Martí, in 1895 he traveled to New York and assumed the writing of the newspaper *Patria* (“Homeland”), official organ of Revolutionary Cuban Party (PRC), and in 1896 he pronounced the titled conference *The Colonial Failure of Spain*.

During the North American occupation in 1898, he carried out the Secretary of Treasury position. Later, he assumed as Secretary of Public Instruction and Fine arts, implanting a plan for the modernization of the teaching known as Varona Plan. This reformation was possible thanks to the position of Secretary of Public Instruction that he exercised. There he articulated his vision of educate scientists and technicians for the economic and social development when organizing both the higher and secondary education systems. In the high school, the Varona Plan was applied on June 1900. In the logic course, for example, was incorporated psychology notions. In the university, new programs were created. Resources were dedicated to install spaces that favored the scientific and practical distinctive in the formation (Segura Suárez, 2013).

In this context, Varona expressed the idea that teaching should be directed from and toward the individual person, being the results consequences of the characteristics of the personality of the students. The teacher should have certain flexibility to assist each case that was presented and to reconcile the general rule with the local

application that should be individual. In this sense, the teacher had to be a psychologist (Aguayo, 1925).

In 1900, Varona was teaching the course of Logic, Psychology, Ethics, and Sociology at the Universidad de la Habana (University of Havana) and was the first holder until 1915. Here Psychology was taught as subjects in the Faculties of Philosophy and Letters, Education, and Law. It was also becoming trained in the institutes of second level and in the normal schools for teachers. In 1902, when the Republic was established, he devoted to his work as professor at the University of Havana. Then, he entered the Partido Conservador Nacional (Conservative National Party) and assumed the vice-presidency of the Republic from 1913 to 1917). One year later, his aphorisms, entitled *Con el eslabón (With a link)*, expressed their frustration with the social situation and, at the international level, with the beginning of First World War.

Varona established a considerable impact in Cuban pedagogy, being articulated with his psychological thought. He was a defender of a pragmatism in the Cuban pedagogy that stimulated the university reform for that he proposed.

His conceptions about Psychology were summarized in a text published in 1905. In the book, he defines the object of study of the Psychology and the relationship of this science with the Physiology. He understood the biological system as a basis of the mental phenomena. Concepts like sensation, perception, memory, representations, attention, judgment, and reasoning, imagination, emotions, and feelings are approached and defined (Bernal del Riesgo, 1951; Guevara-Valdés, 1984). Also, issues related with the morality and the ethics. He consulted the works of outstanding authors of the time such as Wundt (1832–1920), Binet (1857–1911), Spencer (1820–1903), James (1842–1910), Titchener (1867–1927), and Ribot (1839–1916). In his ideas were expressed a continuity of the sensualism, empiricism, and humanism of Félix Varela (1788–1853), José de la Luz Caballero (1800–1862), and José Martí (1853–1895) and of the tradition of the critical elections in the psychological Cuban thought (Viguera Moreno, 2017a).

He criticized the advanced introspection of his time. For him, not all the states of the mind had the same clarity and not all were conscious (Varona, 1921). From this idea, he outlined the necessity to study them by means of objective phenomena that accompanied such states and their conscious results. He showed examples about the effects that the person's affective state could play in the observation of itself. As a consequence, declared that the introspection was necessary, but incomplete (Viguera-Moreno, 2017, 2018; Viguera-Moreno et al., 2012).

In the definition of the conscience as the object of study of Psychology, Varona was beyond the idea of studying their function or structure, just as James and Titchener proposed. The fact he argued was to accept all the mental states, inside or outside of the conscience. In this sense, he agreed with Wundt when proposed that the Psychology should also be interested in the religion, the art, and other manifestations of the culture and the society (Viguera-Moreno & González González, 2012).

As a consequence, he paid attention to psychosocial topics. He considered in this way that the psychosocial investigations should keep in mind the social classes, historical, ethnic antecedents, the language, the industry, and the necessities of the persons. For Varona, each one of these factors, as much as the specific characters of the individuals, was relationships of the subject with the object (Ferrer-Lozano, 2015).

His thoughts transcended the averaging concept of the human with a vision free of atavisms. His conception of the psychological, the biological, and the social allowed him to define the person in context. He also enabled to think an ethics that is built from the native culture; nevertheless, the value that might have the psychological ideas imported from outside. It is possible whenever the psychology is applied with critical arguments that respond to the problems that find solution from the practice, be formative, investigative, or professional. Enrique José Varona y Pera, considered by the Cuban Society of Psychology as the first Cuban psychologist, was one of the maximum exponents of the positivism in Latin America (Segura-Suárez, 2003). He is the representative

in Cuba of the transit of the psychological ideas in the ideology and the Philosophy, to the Psychology like science, since he lived both in the Colony and the Republic.

Carlos Vaz Ferreira was born in Montevideo in October of 1872; his father Manuel Vaz Ferreira was a native of Portugal, and his mother Belén Ribero had Spanish and Portuguese ancestry. His first studies were at home with different teachers. In 1888, he entered the Universidad de la República (University of Republic) and graduated in law in 1903. Although he graduated in law, his most outstanding performance was both in the philosophy and public teaching field, where he held teaching and directorate of teaching agencies positions. During the period of 1897–1922, he served as a Philosophy Professor in Preparatorios (High Schools), focusing his interest on psychology developments.

In April of 1897, he was appointed as interim professor for the first year of the philosophy course that included psychology and logic contents. For the psychology course, he proposed a training program that stood out because of its topicality, depth, and rigor. In May of that year, he published the *Curso Expositivo de Psicología Elemental* (Expository Course of Elementary Psychology), work prepared for the teaching of the psychology course and that in the previous year had been presented in five consecutive issues of the *Anales de la Universidad* (Annals of the University) (Vaz Ferreira, 1896b, 1896c, 1897a, 1897b, and 1897c). In that work, he exposed his position on the knowledge and teaching of philosophy, synthesized in the idea of knowing without exclusions the different doctrines that make up the field of psychology, reflecting a broad vision on the knowledge of psychology and being careful not to emphasize any of the proposals of the tendencies that coexisted in the philosophy field in Uruguay. In that moment, a controversy between two currents of thought was developing: spiritualism and positivism, which Arturo Ardao (1965) defined as: “the struggle between two epochs, two systems, two political ideals in the Eastern Republic” (p. xii).

In the manual made for the course, Vaz Ferreira warned that psychology is a very large field that integrates both discussions and hypotheses of metaphysics, and laws that arise from the novel development of positive science. He distinguished, on the one hand, the field of metaphysics that would take care of the essence or intimate

subject of spirit, and on the other, a rational psychology in which he highlighted experimental psychology as a science of the same genre as physical and natural sciences.

In his course, he taught that psychology studies facts or phenomena, and its scientific method conjugates introspection and observation. Vaz Ferreira’s proposal echoed the precepts that formed the scientificity of knowledge at the time: on the one hand, the search for the laws through the scientific method, and on the other, the theory of evolutionism. Vaz Ferreira highlighted that experimental psychology not only makes use of the observation of mental phenomena, but also intervenes in their production and even manages to produce them artificially in order to study them in an “adequate way,” as understood from the experimental sciences at the time.

To Vaz Ferreira, laboratory psychology had a direct relationship with education, and he proved it including Alfred Binet (1857–1911) and Henri Beaunis’ (1830–1921) experiences in his course, over 1894, as well as the statistical investigation performed by Francis Galton (1822–1911) in 1880. The professor presented experimental psychology as an element to pay attention to for the educational advancement of the country.

In his course, Vaz Ferreira included training in experimental psychology considering that: “The objective and concrete method is very practical and easy to use, facilitated by simple experiences that can be very frequent and very fruitful in the Psychology class” (Vaz Ferreira, 1897e, p. 362). This leads him to wonder “Could and should a Psychology laboratory be created in our University?” (Vaz Ferreira, 1897e, p. 362). He answered that laboratories linked to universities are intended for original research or for pedagogic demonstration. He found the first type unnecessary due to the low interest for psychology in his country at that time (1897). But the second type would allow him to reach the pedagogic ideal he was trying to achieve, practical teaching through classroom demonstrations.

The beginning of the courses in 1897 was accompanied by the creation of a Laboratorio de Psicología Experimental (Laboratory of Experimental Psychology). Vaz Ferreira considered that the creation of a psychological laboratory, would

put our country at the forefront of psychological teaching in South America (Vaz Ferreira, 1897e). It was possibly the first Laboratory of Experimental Psychology organized in Latin America, if we consider that the one organized by Victor Mercante in San Juan in 1891 was a Laboratory of Psychophysiology. The psychology laboratory worked for 10 years, in addition to preparations for the anatomical demonstrations (brain with cuts, skull, etc.), and it had several psychometric devices. Those elements were discontinued as Vaz Ferreira took up other positions and became interested in other aspects of philosophy, closing a stage of sustained development of psychology in Uruguay. After the closure of the laboratory in 1907, it was not until 1933 that under the influence of Sebastian Morey Otero (1894–1939), the country once again had a psychology laboratory.

Vaz Ferreira focused on the articulation between psychology and logic, supported by Stuart Mill's studies (1806–1873) (Ardao, 1961). This interest took him away from the specificity of psychology, to enter fully into the field of philosophy and embark on a path of elaboration of his own, original and of clear local cut. His philosophic work had a "strong scientific impregnation" (Vaz Ferreira de Echevarría, 1981, p. 256). He called the axis of his reflection "living logic," articulating psychological, logical, and epistemological elements and addressing a wide field of philosophical problems, such as morality, esthetics, freedom, religion, pedagogy, and legal and social philosophy.

Throughout his career, he was a member of the Consejo Directivo de Instrucción Primaria (Directing Council of Primary Instruction) (1900–1915); he was Decano de Preparatorios (Dean of Preparatory) (1904–1906) and Maestro de Conferencias (Teacher of Conferences) (1913–1958) of the University of the Republic. He was Rector of the University of the Republic on three occasions (1929–1930, 1935–1938, y 1938–1943), and he was Dean of the Facultad de Humanidades y Ciencias (Faculty of Humanities and Sciences) in two periods (1952–1955 y 1955–1958). Vaz Ferreira provided a strong impulse to the teaching of psychology, and he taught the discipline as pragmatic and useful knowledge.

Applied behavioral analysis

Thru his teaching and extensive professional labor in the public and private sectors, Hugo Gabriel Vázquez Fernández played an important role in the development of psychology as a profession.

He was the last of six children of a typical middle-class family, 16 years younger than his eldest brother. At 14, he held his first paid job as the leader of the marching band at the “Fray Juan de Zumarraga” primary school. In 1964, he entered the Facultad de Filosofía y Letras (FFyL, Faculty of Philosophy and Literature) at the Universidad Nacional Autónoma de México (UNAM, National Autonomous University of Mexico), interested in what motivated people to behave in one way or another. His first 2 years passed – as he mentions – without pain or glory, although his friendship with Arturo Bouzas Riaño, Ely Rayek Zaga (born in 1945), Gustavo Fernández Pardo, Francisco Montes Ahumada (born in 1946), Jorge Molina Avilés, and Héctor Ayala Velázquez, among others, got him involved in the local efforts to promote a scientific psychology, removed from the philosophical and psychoanalytic approaches to the teaching of psychology that prevailed at the time, and the founding of a professional identity.

In 1966, his life took an important turn when he and Fernando García Cortés (1943–2019) represented the students of the Colegio de Psicología (College of Psychology) (CP) before the Consejo de Huelga (Strike Council) of the student movement that led to the dismissal of the Rector of the University, Dr. Ignacio Chávez

Sánchez (1897–1979), and foreshadowed the student movement that 2 years later, in 1968, would become a watershed for democracy in Mexico.

The 1966 student movement was a trigger for the first modern curriculum for the training of psychologists, with definite psychological and scientific orientations, and paved the way to the creation of the Facultad de Psicología (Faculty of Psychology) (FP) at the UNAM in 1973.

In the struggle to have a science of psychology, independent from philosophy and distanced from the dominant influence of psychiatrists and psychoanalysts, Gabriel Vázquez, as representative of the student activists in 1966 (Jorge Molina, Jorge Llanes, and Fernando García, among others), demanded the resignation of the Jefe del CP (Dean of the CP), José Luis Curiel, who viewed psychology from the stance of a philosopher. To replace Curiel, Gabriel Vázquez suggested Santiago Ramírez Ruiz Sandoval. A psychoanalyst himself, Ramírez understood that the science of psychology was something different from psychiatry and psychoanalysis and served as a bridge between the different factions in the conflict, backing up the students.

The first modern curriculum was conceived in the consulting room of Guillermo Dávila García, and for the first time, laboratory courses in motivation, sensation and perception, and learning formally appeared as part of the curriculum. Later on, still as students, Jesús Figueroa Nazuno, Jorge Molina, Héctor Ayala, and Gabriel Vázquez would write the lab manuals for these courses.

Gabriel Vázquez showed early on a greater interest in the practical/applied side of psychology. In 1969, years before he obtained his licentiate in psychology (1974), he founded the “Walden Dos” (Walden Two) school and led it (1972–1991), to demonstrate that it was possible and advantageous to apply the principles of operant control in a school setting with normal children. At that time, the general opinion was that those principles were only appropriate for children with mental retardation or disability and psychological training at the FP at the UNAM was becoming more academic and theoretical.

With the advice and friendship of Bill Hopkins (1935–2011), a pioneer of applied behavior

analysis, he set up a token economy to regulate the social behavior of children and adolescents, as a necessary prerequisite for academic behavior, under the double premise that reinforcement increments the motivation to learn and the efficiency to follow instructions and self-control (delay gratification) that facilitate learning. In a very innovative way, he extended the token economy to reading and writing and to the learning of arithmetic, obtaining significant improvements in time on the task, attention to the task, and number of correct responses (error reduction) in the solution of arithmetic problems. For many years, during Gabriel Vázquez's tenure, Walden Dos was open as a practicum in behavior modification in school settings for students of the Department of Psychology at the UNAM. All this changed with the introduction of constructivism in the teaching of psychology and a new administration that changed Walden Dos's philosophy of education.

In 1977, he became the head of the Department of the Centros de Atención del Sistema para el Desarrollo Integral de la Familia del Gobierno Federal (Attention Clinics, System for Integral Family Development, Federal Government). He was quickly promoted to operational under-director, in charge of the Centros Foráneos (Attention Clinics outside Mexico City), Casas Cuna y Hogar (Newborn, Infant, and Child State-Care Centers), and the educational services of the system, serving until 1980. That same year, he began a 27-year-long teaching career as a lecturer at the FP at the UNAM, sharing his knowledge and practical experience in courses on experimental, educational, and organizational psychology.

At the UNAM, he held several academic administrative posts at the FP: head of the Department of Social Service (1985–1986); coordinator of Exchange, Extension, and Support Services (1986–1989); coordinator of Institutional Relations and Communication (1993); head of the Division of Continuing Education (2013); and secretary general (2013–2018).

He alternated his work in the public service and in academia, at and outside the UNAM. He worked as an advisor and regional under-director for the Federal District at the Instituto Federal Electoral (Federal Electoral Institute,

1991–1992), as an independent advisor to the Secretaría de Comunicaciones y Transportes (1992; Ministry of Communications and Transportation), and as coordinator of Technical Support and Monitoring and later director of Procurement for the House of Representatives, LVI Federal Legislature (1994–1997), where he put into action the first Regulations Manual for Procurement.

He was appointed rector (President) of the Universidad Latinoamericana (ULA) (Latin American University) for the period 1997–2001. Under his leadership, the ULA went through a period of great academic and professional growth and consolidation: the schools of Psychology, Architecture, and Graphic Design were created, enrollment in the Schools of Dentistry and Law increased substantively, and two additional ULA campi opened.

From 2001 to 2006, he worked as an independent consultant in Strategic Planning and Quality Systems and helped ad-honorem to certify under the norm ISO-9000 the academic extension services and the Psychological Service Clinics of the Department of Psychology at the UNAM.

Gabriel Vázquez's academic and professional career reflects his conviction that the scientific understanding of the principles that regulate behavior are fundamental for the development of an effective and wide-spectrum professional psychology.

Born *in Havana, September 20, 1926.*

Died *in Havana, July 5, 2019*

Roberto Corral Ruso

Facultad de Psicología, Universidad de La Habana, La Habana, Cuba

Keywords

Cuba · Child Psychology · Therapy

Vega studied his primary education in a public school, and high school in the Instituto de la Habana (Institute of Havana). He entered the Universidad de la Habana (University of Havana), where he obtained a doctor's degree in medicine in 1952. He developed interest in mental illnesses,

for which he took a specialization in Psychiatry at Hospital General “Calixto García” (General Hospital “Calixto García”). Then, he was interested in child psychiatry, because he liked to work with children and at that time in Cuba, they didn't have child psychiatrists, just psychiatrists for adults. He decided to work in the Hospital Infantil “Pedro Borrás” (Children's Hospital “Pedro Borrás”) with other colleagues with the same interests, especially Noemí Pérez Valdés (1926–2008), and Juan José Guevara, with whom he agreed on the need to organize an institution for the care on child psychiatric disorders. In 1954, they opened the first clinical school of behavior, the Centro de Orientación Psiquiátrica Infantil (OPI, Center for Child Psychiatric Orientation), dedicated to childcare. He remained there until 1960. Unlike other psychiatrists, he used medication as a last resort, and he greatly respected the opinion of psychologists.

He looked for information from behavior clinics that existed in other countries, especially in the United States and in England. He consulted directly the works by Anna Freud (1895–1982). Other authors that Vega consulted were Leo Kanner (1894–1981) of the psychobiological school; Carl Rogers (1902–1987) that somehow influenced in their practice; and Telma Reca (1904–1979) from Argentina whose works also served him as bibliography. Although his practice at the beginning consisted fundamentally of individual psychotherapy, he was interested in group therapies. Then, he established contact and shared orientations of Lauretta Bender (1897–1987), and began to use the theater of marionettes that didn't have antecedents as therapeutic practice in Cuba.

In 1959, with the beginning of the Revolution, the psychiatry departments were founded in the infantile new hospitals. From 1960 to 1968, Vega was designated responsible for the Departamento de Psiquiatría (Department of Psychiatry) of the Hospital Infantil “William Soler” (Children's Hospital “William Soler”). There, he designed a playing room with games to supplement the psycho-diagnostic tests he carried out.

In 1962 appeared the possibility to create the Escuela de Psicología (School of Psychology) at the University of Havana and he was invited to

participate in it. Vega began to teach lessons of Psychotherapy jointly with the other activities that he developed. Later on, from 1975 until his decease, he was the principal professor of Child Psychotherapy. Besides, he provided consultation to university students as part of a service that was offered at the university. He was also professor of Child Psychopathology in courses for Health Counselors of the Children's Circles, at the Finlay Institute, from 1963 to 1966 (Cairo, 1988; Oliva, 2005).

In addition, he was advisor for the Administration of one of the 13 Municipal "Creches" that existed in different municipalities of the city. The "Creches" were institutions for children without family support. The first decision he made next to their work team was to change the name of "Creches" to Hogares Infantiles (Infantile Homes). With other colleagues, he organized a Hogar Especial (Special Home) called "Casper," where they cared for the children who presented the most difficulties. Vega became Director from 1965 to 1975 because in these years the Home became a part of the system of Infantile institutions. The name "Casper" was due to the fact it was the original name of the puppet with whom Bender first started psychotherapy, as well as being a legendary hero of German children's literature. Innumerable students passed through this center and did their professional training with Vega as a professor.

Later on, he moved from the Infantile Hospital "William Soler" to the similar "Angel Arturo Aballí" as principal of the Department of Psychiatry, where he remained from 1968 to 1994. Vega redesigned a large playroom with games for therapeutic work. They also had temporal schools in their Department of Psychopathology for those children who didn't adapt to the school, and an obligatory School for Parents as a complement of the work with the children. He was always characterized by being responsible with his consultations, demanding in terms of discipline, and his work was always very integral indeed.

In 1994, the Centro de Orientación y Atención Psicológica (COAP, Center of Orientation and Psychological Attention) was founded, ascribed to the Facultad de Psicología (Faculty of

Psychology) of the University of Havana, to which he contributed with all his capacity and enthusiasm (Oliva, 2005). There he worked mainly with children and adolescents, making use of a great diversity of resources, many which he created himself through his good manual skills, and his love for painting. Even after his retirement, he continued to provide services without free of charge.

He was considered a practical person, with a dialectical realist approach and an incredible worker. On more than one occasion he was publicly recognized, as a tribute of gratitude by the professional psychologists and the Cuban Psychology, for his foundational work and mainly for his total and passionate dedication (Labaut & Pérez, 2010). He was a professor respected by colleagues and students, and perhaps what was the most important legacy of his life as a professor: the professionals he trained in clinical psychology for children.

Development of tests

Son of Manuel Velasco and Victoria Mogollón. Married to Blanca Margarita Abad Grijalva. He had two children, Margarita and Fernando, the latter known as *El Conejo* (The Rabbit), a young leftist intellectual and father – along with Rosa María Torres – of the Ecuadorian singer, Juan Fernando Velasco Torres (Margarita Velasco Abad, personal communication, April 8, 2020).

Velasco entered *Escuela de los Hermanos Cristianos* (Christian Brothers School) elementary school, then he transferred to *Escuela Leopoldo Chávez* (Leopoldo Chávez School, 1922–1925) and finished his studies there. He completed his high school studies at *Colegio*

Normal Juan Montalvo (Juan Montalvo Normal School, 1925–1931) where he graduated as a normalist teacher (Velasco-Mogollón, n.d.). He studied to become a professor of psychology at the *Universidad Central del Ecuador* (Central University of Ecuador, UCE, 1932–1936) (Pérez-Pimentel, 1996). In 1947, he obtained the degree of *Profesor de Enseñanza Secundaria en la Especialización de Psicopedagogía* (Professor of Secondary Education in the Specialization of Psychopedagogy) by the *Ministerio de Educación Pública* (Ministry of Public Education), and in 1958 he graduated as *Profesor de Educación Superior en la especialización de Estadística* (Professor of Higher Education in the specialization of Statistics) in the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Letters and Education Sciences) of the UCE (Velasco-Mogollón, n.d.).

Since the 1930s and for several decades, he worked with some renowned educators such as Fernando Chávez Reyes (1902–1999), Gonzalo Abad Grijalva (1910–2009), Gonzalo Rubio Orbe, and especially, with his friend Edmundo Carbo Bravo (1907–2004). At *Reformatorio de Menores de Quito* (Quito Juvenile Reformatory, 1932–1935), he worked together with Gonzalo Abad Grijalva (Pérez-Pimentel, 1996). Since 1933, he was a member of the *Sociedad de Profesores Grupo Cuadernos Pedagógicos* (Society of Teachers Pedagogical Notebooks Group) (Margarita Velasco Abad, personal communication, April 8, 2020); it was the place of reflection on educational issues; furthermore, he collaborated in the journal *Cuadernos Pedagógicos* (Pedagogical Notebooks) founded the same year by Fernando Chávez Reyes (Rubio-Orbe, 1957).

He was *Profesor de Psicopedagogía de la Dirección de Higiene Escolar del Ministerio de Educación Pública* (Professor of Psychopedagogy at the Department of School Hygiene of the Ministry of Public Education, 1936), where, under the command of Celso Jarrín, he worked with Bolívar Drouet in mental tests, which were applied at the elementary school of Quito (Rubio Orbe, 1957); they used the Ballard Collective Test (Carbo-Bravo & Velasco-Mogollón, 1976). This was the beginning of his interest

in educational research; over the years, he trained as a quantitative researcher, especially in educational statistics.

He was also professor of psychology and overseer at the *Escuela Normal Urbana Juan Montalvo* (Juan Montalvo Urban Normal School, 1936–1937) in Quito, professor at the *Colegio Normal Juan Montalvo* (Juan Montalvo Normal School, 1939–1942) (Velasco-Mogollón, n.d.). In the middle of World War II, he became *Secretario-Ayudante de la Dirección de Prioridades y Distribución de Importaciones del Ministerio de Hacienda* (Secretary-Assistant of the Department of Import Priorities and Distribution of the Ministry of Finance, 1943) and *Ayudante de la Sección Técnica de la Dirección de Comercio Exterior del Ministerio de Economía* (Assistant of the Technical Section of the Department of Foreign Trade of the Ministry of Economy, 1944) (Margarita Velasco Abad, personal communication, April 8, 2020).

Later, he was *Jefe de la Sección Estadísticas y Escalafón del Ministerio de Educación Pública* (Head of the Statistics and Ranking Section of the Ministry of Public Education, 1944–1963) (Velasco-Mogollón, n.d.); during this time, he specialized even more in statistics applied to education and worked for the benefit of teachers through the application of the teacher ranking (Velasco-Abad, 2010). Later, UNESCO awarded him a scholarship to observe for several months (1952) the statistical directorates and the school statistics offices of Canada, the United States, France, Italy, Spain, and Brazil (Velasco-Mogollón, 1955). When he came back, he innovated the department he was in charge of. He was *Subdirector de Planeamiento de la Educación del Ministerio de Educación Pública* (Vice principal of Educational Planning of the Ministry of Public Education 1963–1968). In 1968, he retired from the Ministry of Public Education and received the *Condecoración al Mérito Educativo de Primera Clase* (First Class Educational Merit Award).

He was a professor of statistics at UCE for many years. He collaborated with the founding of the *Escuela de Psicología y Orientación Vocacional* (School of Psychology and Vocational Guidance) of the *Facultad de Filosofía, Letras y*

Ciencias de la Educación (Faculty of Philosophy, Letters and Educational Sciences, 1955). He was a professor of statistics at the *Escuela de Pedagogía* (School of Pedagogy, 1955–1960) and at the Faculty of Philosophy, Letters and Educational Sciences (1960–1980) (Velasco-Mogollón, n.d.). He also collaborated in the *Escuela de Servicio Social* (School of Social Service) founded by Graciela Escudero (Margarita Velasco Abad, personal communication, April 8, 2020). He was an honorary professor at UCE from 1975 until his death.

He attended to various meetings related to education and statistics on behalf of Ecuador: *Conferencias Culturales de Lima* (Cultural Conferences of Lima), Peru (1956); *Seminario Regional Latinoamericano sobre Normalización de las Estadísticas relativas a la Educación* (Latin American Regional Seminar on Standardization of Statistics Related to Education), Tucumán, Argentina (1960); *Conferencia Mundial de Población* (World Population Conference), Belgrade, Yugoslavia (1965); *IV Reunión Técnica del Comité Consultivo Intergubernamental del Proyecto Principal sobre Extensión y Mejoramiento de la Educación Primaria en América Latina* (IV Technical Meeting of the Intergovernmental Consultative Committee of the Major Project on the Extension and Improvement of Primary Education in Latin America), Buenos Aires, Argentina (1966); and *Reunión Técnica sobre Mejoramiento de las Estadísticas en la Educación* (Technical Meeting on the Improvement of Statistics in Education), Washington, USA (1966) (Velasco-Mogollón, n.d.).

He was a member of the *Casa de la Cultura Ecuatoriana* (House of Ecuadorian Culture, 1946) and directed the *Sección Académica de Ciencias de la Educación y Disciplinas Filosóficas* (Academic Section of Educational Sciences and Philosophical Disciplines, 1969) (Velasco-Mogollón, n.d.). Additionally, he was an honorary member of the *Sociedad Ecuatoriana de Psicólogos Educativos* (Ecuadorian Society of Educational Psychologists, 1977) and a founding member of the *Academia Ecuatoriana de la Educación* (Ecuadorian Academy of Education, 1978) (Velasco-Mogollón, n.d.).

One of his interests was mental tests and educational achievement tests that he, together with Edmundo Carbo Bravo, introduced in Ecuador. One of his most important works together with Gonzalo Abad Grijalva and Edmundo Carbo Bravo (1942) was *Pruebas de instrucción ACV: guía para su corrección, valoración e interpretación de sus resultados*. The House of Culture section Azuay awarded him a medal for his book: *La investigación del niño en la edad escolar* (1965) (Velasco-Mogollón, n.d.). In 1971, he published the first volume of *Estadística para educadores y psicólogos*, and in 1976, his last book, together with Edmundo Carbo Bravo, *Antecedentes y realizaciones de la investigación Psicopedagógica en el Ecuador*. He also published several works related to educational statistics in the *Revista Ecuatoriana de Educación* (Ecuadorian Journal of Education) of the House of Ecuadorian Culture.

He contributed to the development of psychology and education in Ecuador, through quantitative research about mental and educational achievement tests, and showed the importance of using statistics to have relevant information and guide decision-making.

Personality Psychology · Humanism

Julio Velilla Moreno did his primary school studies at the Colegio Marista San José (Marist School San José) (Logroño, Spain), and his high school studies at the Colegio Apostólico de Javier (Apostolic School of Javier) (Navarra, Spain), the latter being a decisive influence to opt for the

consecrated and priestly life, as a member of the Society of Jesus (Jesuits).

He entered the Jesuit Novitiate in Loyola (Spain) on September 3, 1949, where he began his education as a religious. During his first months of novitiate, he was sent to Venezuela to continue his formation, arriving in Caracas on January 15, 1950. In January 1952, he moved to Santa Rosa de Viterbo (Boyacá, Colombia), where he spent 2 years, during which time he was immersed in the study of humanistic sciences such as history, literature, arts, and others, where the mastery of languages such as Latin and Greek were fundamental.

He moved to the Pontificia Universidad Javeriana de Bogotá (Pontifical Javeriana University of Bogota) (January, 1954), where he studied Philosophy and Letters, and Chemical and Biological Sciences, simultaneously. So, obtained the degree of both careers (1956). When he returned to Venezuela, he worked as a teacher at the Colegio San Ignacio de Loyola (San Ignacio de Loyola School) (Caracas, 1956) and also performed tasks of a group and personalized accompaniment to students. The most relevant contribution at that time was the reorganization and the impulse given by Velilla Moreno to the Centro de Excursionista Loyola (CEL) (Loyola Excursionist Center), which led him to lead excursions both in Venezuela and in the United States.

In 1959, he was assigned to the United States, where he completed his studies of priestly education and studied for a degree in Theology at West Baden College (West Baden Springs, Indiana), Faculty of Theology of Loyola University, where he graduated with honors in 1963, being awarded the distinction of Magna Cum Laude. He began his studies in Psychology at Loyola University Chicago (USA), with a single subject in the summer of 1961, Psychology of Personality, where he obtained the highest grade. Later, he stood out as a professor of this discipline.

At that time, Chicago had an important and renowned psychologist, Charles Arthur Curran (1913–1978), who was his professor and represented a great influence during his training, with special emphasis on two courses: Principles of Counseling and Group Counseling. Dr. Curran,

for working together with Carl Rogers (1902–1987), was the one who brought Julio Velilla closer to such an important author and psychological system, who became his main teacher in the field of psychology. Later, Carl Rogers visited Venezuela at the invitation of his disciple, where he gave important lectures at the Universidad Católica Andrés Bello (UCAB, Andrés Bello Catholic University).

Velilla finished his psychology studies at the University of Loyola, when he delivered his special degree work, entitled *Descriptive study of the interests and personality characteristics of diocesan priests with counseling training at the University of Loyola, compared with diocesan priests without counseling training*, using the Kuder-Vocational and the MMPI (Velilla Moreno, 1967).

He continued his doctoral studies at the same university, but these were not completed due to the request to return to Venezuela made by the religious authorities, where he joined the Escuela de Psicología (School of Psychology) at the UCAB.

He became a professor in the course of Psychological Counseling at the School of Psychology and in the Supervised Practices of the Postgraduate Course of Psychological Counseling (October, 1966). As an undergraduate and graduate professor, he became one of the pioneers of humanistic psychology in Venezuela, with an important Rogerian emphasis. That same year, he assumed the coordination of the Postgrado de Orientación Psicológica (Postgraduate Program of Psychological Orientation), a position he held for a decade.

In 1967, he founded, at the UCAB, the Centro de Orientación Psicológica (COP) (Psychological Guidance Center), which later – in the 1990s – was named Centro de Asesoramiento y Desarrollo Humano (CADH) (Counseling and Human Development Center), as a tribute to his work. When the fiftieth anniversary of CADH was commemorated in 2017, the University placed him as the eponym of the Center.

He was appointed as professor of Personality Psychology (1969), a course that together with Psychological Orientation stood out for more than 40 years in the School of Psychology. A year later (1970), he was appointed as Director

of the School of Psychology, contributing to the renovation of the Psychology career at the University, leaving behind the model with emphasis on the medical-psychiatric and adapting to the psychological model with openness to different approaches. In 1982, he was appointed Academic Vice-Rector of the UCAB, a position he held without leaving his teaching duties at the School of Psychology until 1986.

Julio Velilla, in addition to his teaching and administrative work, stood out as a psychotherapist in the university and religious environment. His work as a psychologist evaluating candidates to the priesthood and consecrated life (male and female) has been highly valued, as well as his contribution to education in these areas.

In the university environment, his career was distinguished with the Andrés Bello Order and, upon his retirement, he was awarded the title of “Professor Emeritus,” an act in which a recognized tribute was made (2013). The Federación de Psicólogos de Venezuela (FPV) (Federation of Psychologists of Venezuela) distinguished him for his contribution to Venezuelan psychology. The School of Psychology, in the celebration of its 60th anniversary, paid tribute to him as one of the founding professors who laid the foundations of the program at the University.

Julio Velilla was a member of the American Psychological Association (APA), of the Focusing Institute (Chicago, USA), and of the Federation of Psychologists of Venezuela in which he is accredited with the N° 1.046.

On August 28, 2021, at 12:20 m. at the Provincial Infirmary, in Caracas-Venezuela, Fr. Julio Velilla, S.J., died at 91 years of age and 71 years as a Jesuit. His companions describe him as a counselor, teacher, a humble human being, who enjoyed good humor and joy (Jesuits of Venezuela, 2021).

Veloso, Elisa Dias

Born in *Minas Gerais* on *February 16, 1914*

Died in *2002*

Karina Pereira Pinto

Universidade Estadual de Santa Cruz, Ilhéus, Brazil

Keywords

Brazil · Clinical psychology · Clinic with children and adolescents

Elisa Dias Velloso was a student of Helena Antipoff at the Laboratório de Psicologia da Escola de Aperfeiçoamento de Professores de Minas Gerais (Psychology Laboratory of the School for Improvement of Teachers) of Minas Gerais, in Belo Horizonte, from 1936 to 1941. Between 1945 and 1947, she took courses with Emílio Mira y López on selection, advisement, and professional readaptation in the Departamento Administrativo do Serviço Público (DASP) (Administrative Department of Public Service), and, in 1948, on child psychotherapy at the Instituto de Seleção e Orientação Profissional (ISOP) (Institute for Selection and Professional Guidance), both in the city of Rio de Janeiro. She participated in courses and internships at schools for children with disabilities in England and Scotland, in 1952, and published, in the *Boletim da Sociedade Pestalozzi do Brasil* (Newsletter of the Pestalozzi Society of Brazil), the work carried out in these institutions (Rafante & Lopes, 2010). Between 1965 and 1966, she did an exchange and training in psychology in the United States (CFP, 1998).

Velloso’s professional career is quite extensive, having worked as a teacher, therapist, and director

of relevant institutions in the history of psychology in Brazil. Between 1938 and 1941, she taught psychology classes at the Instituto de Educação de Minas Gerais (IEMG) (Institute of Education of Minas Gerais), in Belo Horizonte. In 1941, she went to Rio de Janeiro to work at the Instituto Nacional de Estudos Pedagógicos (INEP) (National Institute for Pedagogical Studies), where she worked from 1941 to 1944. After this period, she went to the Departamento Nacional da Criança (DNCr) (National Department of Children), an agency of the Ministry of Education and Health in the same city. This institution, created by Helena Antipoff and Emilio Mira y López, had a body in its Social Advisement Section of the Social Protection Division, the Centro de Orientação Juvenil (COJ) (Youth Guidance Center). Velloso worked there between 1946 and 1968, being the director in the period from 1960 to 1964, succeeding Helena Antipoff's direction. This body was important for the development and consolidation of clinical psychology in Brazil. COJ was an orientation clinic with psychological assistance for young people (Jacó-Vilela et al., 2017). The demand for its creation arose from the need to integrate psychological guidelines to the medical treatment and pedagogical support developed by DNCr, which resulted in the expansion of the specific area of study and professional practice in psychology (Jacó-Vilela et al., 2017).

Elisa Dias Velloso, in an interview granted in 1985, highlights that the professional team of COJ, made up of psychiatrists, social workers, and psychologists – among whom she was part – in addition to providing services to the public through orientation clinics, developed professional training activities permeated by research (Rafante & Lopes, 2010). At COJ, Elisa Dias Velloso did psychological counseling as a counselor and therapist for children and adolescents, supervised the psychology team, and held clinical meetings with case discussions, in addition to being a director.

Between 1960 and 1964, she was a professor in a postgraduate course at the Escola Nacional de Saúde Pública (National School of Public Health). From 1960 to 1966, she was an undergraduate

professor at the Pontifícia Universidade Católica do Rio de Janeiro (PUC/Rio) – (Pontifical Catholic University of Rio de Janeiro), and between 1967 and 1969, she taught postgraduate studies at the same university. She participated in several surveys, including one on child recreation in shelters for destitute children. She also made scientific dissemination at congresses and symposia, such as the presentation of the work “Evolution of two cases of child psychotherapy through psychosomatic problems – child enuresis,” held at the “Simposium sobre Alguns Problemas de Pediatria Psicossomática” (“Symposium on Some Problems of Psychosomatic Pediatrics”), in 1963 in the city of São Paulo (Velloso, 1964).

Velloso participated in the Interministerial Commission responsible for drafting a preliminary draft law which created the councils of psychology. Between 1974 and 1976, she had an active participation in the Conselho Regional de Psicologia do Rio de Janeiro (Regional Council of Psychology of Rio de Janeiro) and, between 1976 and 1979, in the Conselho Federal de Psicologia (Federal Council of Psychology), where she chaired the Ethics Committee. She was a member of the Associação Brasileira de Psicologia Aplicada (Brazilian Association of Applied Psychology), the Sociedade Interamericana de Psicologia (Inter-American Psychological Society), the International Association of Applied Psychology, and the International Council of Psychologists. In 1982, she received the Dante Moreira Leite Prize by the Federal Council of Psychology, and in 1998, she was honored at the Interdisciplinary Seminar of the Brazilian Association of Applied Psychology.

Elisa Dias Velloso published about fifty articles in the period from 1940 to 1982 (CFP, 1986). In 1962, when she was director of COJ, she published the article “Some aspects of the evolution of a psychological clinic (Youth Advisement Center),” coauthored with Vera Castro Silva. The authors present a study on the transformations undergone in the treatment offered to the COJ's clientele, organized in three overlapping phases: “I. Predominance of psychological diagnosis and direct advisement (1946–1954)” (p. 8), “II.

Predominance of psychotherapy for the client and parallel advisement of those responsible for them (1945–1954)” (p. 9), and “III. Beginning of analytical treatment – 1960” (p. 10). These three phases are presented along with summaries of clinical cases and are justified as a way of “better serving the interns and the clientele” (p. 8), highlighting the concern not only with the service, but also with the professional training and also the emergence of other services offering psychological diagnosis, making it possible for the COJ to invest in the “depth of help that one intends to give to adolescents” with the analytical treatment (p. 8).

In the article “*Clinical Psychology in Brazil*,” from 1982, Elisa Dias Velloso discusses the roots of the constitution of psychology in the country, marked by the medical model, referring to the important role of women like Helena Antipoff and Noemy Silveira Rudolfer. She describes the struggles and disputes for the regulation of psychology in Brazil, pointing out clinical psychology as one of the main obstacles in this process, considering that, as a bordering area to medical work, it suffered resistance from these professionals. She also highlights aspects and characteristics of the consolidation of clinical psychology in Brazil.

Elisa Dias Velloso’s involvement with clinical psychology at COJ was expanded to professional training in psychology in Brazil. She taught courses, gave conferences, and made visits to psychology and psychiatry services to exchange experiences in several Brazilian states, such as Pernambuco, Bahia, São Paulo, and Rio Grande do Sul (Velloso, 1964). She was responsible for training psychologists for over twenty years (CFP, 1998). Her contribution to the development of clinical psychology in Brazil is marked by a persistent activity in the field of professional training, combined with constant updating, research, and scientific dissemination.

Verdesio, Emilio

Born *in Montevideo, October 6th, 1892*

Died *in Montevideo, s/d, 1984*

Lucía Freire Barreiro
Facultad de Psicología, Universidad de la
República, Montevideo, Uruguay

Keywords

Uruguay · Public school · Psychopedagogy ·
Special learning

Emilio Verdesio started his teaching studies at the Instituto Normal de Varones (Men's Normal Institutes) in Montevideo, graduating as a first-grade teacher in 1911 and as a second-grade teacher in 1912. From that moment on, he occupied teaching positions in different educational centers in Uruguay. During his teaching trajectory, Verdesio was concerned with the way Uruguay's public schools were organized, and because of that, he contributed largely to the innovation and modernization of the country's education system at an academic level. As he himself proved on several occasions, he considered that the student's individual characteristics were not addressed adequately, and simultaneously, it wasn't able to explain the high percentage of school failure that happened at the time.

Verdesio became interested in designing a nationwide educational reform; for that, he traveled to Europe with the specific goal to observe the educational practices in some countries and, in this way, to increase the knowledge of the attention of deficient children or those maladjusted at school level. In Switzerland he established contact with Édouard Claparède (1873–1940), a psychologist, child neurologist, and educator, and in Italy with María Montessori (1870–1952). Because of that effort and his collaboration with different European educationalists, in 1925 he became a correspondent for *Bureau International d'Education*

(International Bureau of Education) at Ginebra. The experience in Europe brought him closer to the developments of experimental psychology and to the valuable contribution of this discipline to the educational renovation. Psychology turned into the foundation of the proposals for the Uruguayan educational reform, and Verdesio was a member of a group of educators that drove, over more than two decades, the necessity to transform the education, including the more current scientific knowledge.

The main pedagogical proposal that Verdesio had was oriented towards the implementation of special classes for boys and girls with different psychological and pedagogical skills. In 1927, he got the special classes installed, in an experimental way, in three schools in Montevideo, and because of that initiative, the Consejo Nacional de Enseñanza Primaria y Normal (National Council for Elementary and Normal Education) continued with such pedagogical reforms. Over the years, Verdesio published various works in which he presented his ideas and investigations about special education: "Selección escolar" (School selection) (1927a), *Clases diferenciales* (Differential classes) (1931), and *La enseñanza especial en el Uruguay* (The special teaching in Uruguay) (1934).

In this last book, the author made an exhaustive statistic investigation with the aim of increasing the knowledge about the physical, intellectual, and moral difficulties of the students in order to be able to design more inclusive, special classes that were more adequate to the needs of all the students. This work resulted in being of great value to special education, given that in it Verdesio gives notice of the different experiences and the general knowledge relating to the multiple difficulties that public school student's present, useful knowledge: psychological, physical, and sensory weaknesses. And, moreover, the author leaves a record of future projects related to the education of intellectually "well endowed" children, and dedicates the last chapter of this book to the technical formation of teachers, in which he includes (among others) a detailed description of

the new psychology program for teachers imposed by the teaching reform of 1925.

After this investigation, the modifications designed by Verdesio for the Special Teaching plan were integrated into the Educational School System and the government enacted a law that established the compulsion of the special teaching for deficient students. In the year 1941, the First American Congress of Special Teaching was held in Montevideo, which Verdesio ran and in which educationalist's of the whole region's works were presented, with the shared goal to set up a new conception of education as a science (...) A pedagogy that doesn't deny philosophy and sociology, and on the contrary is based on the principles of one and the other (Primer Congreso Americano de Enseñanza Especial, 1942, p. 21).

This congress was of great importance to psychology, because in it, among others, the following works were presented: Psychopedagogyc Procedures in the Prophylaxis of infantile hysteria, medical-psycho-pedagogic office for students, courses of mental hygiene for school students and teaching of mental hygiene for students, Moral Formation of the teenager, and Formation of professional psychologists (Primer Congreso Americano de Enseñanza Especial 1942).

In 1943, Verdesio presented his work *Education and Democracy: A New Educational Reform*, which emerged from the criticism of the uniquely theoretical pedagogy that took place habitually in schools at the time. The author proposed the establishment of a correct relation between the individual goal of education (which aims to develop the child, respecting their personality, the formation of their character, and their vocations), and the social goal, the school socialization (which consists in preparing the child to act in society in an adequate form, because of the stimulation of cooperation and solidarity). The main idea of this work was to defend political education at school, understanding that it allows the child to adapt to the democratic reality of the country. On the basis of the reaffirmation of the mutual dependency between State and education, the author states that "School should educate the child in a

complete way: providing a general education and cultural elements, for them to become an upright citizen of a free country" (Verdesio 1943, p. 19).

Verdesio's interest to educate "upright citizens" that could act in democracy plays a part in a common interest of educators during the first four decades of the twentieth century, a period of construction of Welfare State in Uruguay. This way, school was essential to educate the subjects in a way that subsequently made them able to work, politics and the legal system.

Emilio Verdesio had an important political participation; he became a departmental deputy of Montevideo and director of the Child Council; he left behind a long professional trajectory in the education field, having had contributed hugely to the progress of this discipline in Uruguay.

Alberto Vilanova received his degree in psychology from the Facultad de Humanidades (Faculty of Humanities) of the Universidad Nacional de Mar del Plata (National University of Mar del Plata) (UNMdP) in 1978 and a MSc in social psychology from the same University in 2001. In 1999, he achieved certification as a specialist in curricular innovation at the University of Buenos Aires.

In 1996, he was awarded the Konex Foundation Merit Diploma for being “one of the five most important representatives of Argentine humanities in the field of psychology of the last decade” (Konex Foundation, 1996). In 1998, he obtained the highest level category (Category I) in the Argentine Ministry of Education Research Fellowship. He directed the “History, Training and Professionalization of Psychology in the Countries of America’s Southern Cone” Research Group at UNMdP from 1995 until his death. His research addressed such topics as psychology training and education, the professionalization of psychology in the countries of the Southern Cone, and the history of psychology in Latin America, among others.

He served as academic secretary of the Escuela de Psicología (Psychology Department), UNMdP, and then as academic advisor in the 1987–1996 period. He held various teaching positions at

UNMdP and in 1987, following a process of selection by competitive exam and background submission, he became full professor of Social History of Psychology and Contemporary Systems I, a position he held until his death. He also had various roles in Postgraduate and Advisory Committees of the UNMdP Chancellor’s Office.

He was associate director and codirector of the *Acta Psiquiátrica y Psicológica de América Latina* (Latin American Journal of Psychiatry and Psychology), head of the psychology section of the *Enciclopedia Iberoamericana de Psiquiatría y Ciencias del Hombre* (Iberian-American Encyclopedia of Psychiatry and Human Sciences) (1993), member of the advisory board of the *Boletín Argentino de Psicología* (ADIP) (Argentine Psychological Bulletin), member of the advisory board of the *Cuadernos Argentinos de Historia de la Psicología* (Argentine Journal of the History of Psychology), member of the advisory committee at the *Revista de Historia de la Psicología* (History of Psychology Journal), and member of the editorial committee of UNMdP scientific journal *Nexos* (Nexus), among others.

His writings include works which could be referred to as journalistic (Fierro, 2017), considering the media in which they were published. Such works include 320 notes, articles, and columns published in Paraguayan newspapers between 1979 and 1980, in which he already showed his expertise in psychological theory, epistemology of social sciences, and philosophy of man. Human rights violations during the military dictatorship in Argentina from 1976–1982 (Sanz Ferramola, 2000) led to Vilanova’s voluntary exile to Paraguay, where he lived with his wife Margarita Orr, who was also a psychologist.

During his work as an academician, he was a prolific writer, and his works stood out for their original, diverse, and relevant sources, their conceptual rigor, erudition, and impeccable style, which reflect a literary vocation he never renounced (Di Doménico, 2003). He wrote five books: *Contribuciones a la psicología clínica. Algunos aportes teóricos de psicólogos notables*

(Contributions to Clinical Psychology. Some Theoretical Contributions by Outstanding Psychologists) (Vilanova, 1993); *Formación de psicólogos en el Mercosur* (Psychology Training and Education in Mercosur) (Vilanova & di Doménico, 1999), *La psicología en el Cono Sur. Datos para una historia* (Data for the History of Psychology in the Southern Cone) (Vilanova & di Doménico, 1999), *El carácter argentino. Los primeros diagnósticos* (The Argentine Temperament. First Diagnoses) (Vilanova, 2001) – which was the result of his master’s dissertation, in which he explores psychosociology development in Argentina since the end of the nineteenth century, and *Discusión por la psicología* (Debates in Psychology), a compilation of his own writings, selected and reviewed over his last year of life, which was published posthumously (Vilanova, 2003). His concern about issues in psychology training and education was reflected in several publications: *La formación de psicólogos en Iberoamérica* (Psychology training and education in Iberian America) (Vilanova, 1993), *El dilema olvidado de la Psicología latinoamericana* (The forgotten dilemma of Latin American psychology) (Vilanova, 1995), and in some works included in *Discusión por la Psicología*, such as, “Psicología latinoamericana: un comienzo bifronte” (Latin American psychology: a two-faced beginning) (p. 85), “Las deudas de la Psicología en el Cono Sur” (Deficits of psychology in the Southern Cone) (p. 123), and “La formación académica del psicólogo” (Psychology academic training) (p. 175). He also wrote two chapters: “La formación académica de psicólogos en el mundo y en el país” (Local and Worldwide Psychology Academic Training) (Vilanova, 2000a) and “Diez Problemas en la Historia de la Psicología como Curso de Grado” (Ten Issues in the History of Psychology as an Undergraduate Course) (Vilanova, 2000b), among several writings. In the *Enciclopedia Iberoamericana de Psiquiatría* (1993), he contributed 5 macroentries and 134 microentries, concepts, biographies, and notes, all of them within his subjects of interest. Regarding his technical writings on the historiography of Argentine psychology, we could arbitrarily mention “Vida, mente y moral en el Río

de la Plata” (Life, mind and morals in Río de la Plata) (Vilanova, 1996) and “Evolución de la clínica psicológica antes de 1940” (Evolution of clinical psychology before 1940) (Vilanova, 1994). A record of 64 of his works can be referred to in a review paper whose young author, without having met Vilanova in person, has considered him as a master in his field (Fierro, 2018).

The following brief synthesis may reflect Vilanova’s contributions to psychology.

Klappenbach (2003) referenced a 1986 paper: “Pluralidad, desarrollo y transformación” (Plurality, development, and transformation) in which Vilanova already advocated theoretical plurality in psychology, antidogmatic approaches, and dehegemonizing positions in university education. This concern for a scientifically based education and his interest in promoting critical thinking are manifested throughout his works.

He considered the history of psychology as a tool of the discipline itself. Far from advocating corporatism and rejecting extra-disciplinary contributions, his position sought to avoid extrapolation of intellectual discussions from other disciplines, other latitudes, or other times (Ostrovsky & Moya, 2015). He claimed that the history of psychology is meaningful when it is understood at a socio-professional level, and contextualized in a determined academic tradition of a given age (Vilanova, 1997).

In the 1980s, after democracy had been restored in Argentina, he was a pioneer in addressing psychology training and education, which had been always taken for granted in a vernacular context of clinically oriented psychoanalytic hegemony. From 1991 onward, he had both a leading and guiding role in the foundation and development of the Asociación de Unidades Académicas de Psicología (Association of Psychology Academic Departments) (AUAPsi) of Argentina and Uruguay, as well as in their curricular improvement programs and documents into which he infused his ideas.

When the Psychology Undergraduate Program at UNMdP was reopened, he chaired the Curriculum Reorganization Committee, which produced an innovative curriculum, approved in 1989. In 1996, he prepared the source documents to

request academic autonomy for the Psychology Department of UNMdP, which then changed its status into Facultad de Psicología (Faculty of Psychology).

In 1995, he joined the first Committee on Specialties of the Colegio de Psicólogos (Association of Professional Psychologists) of the province of Buenos Aires, to regulate and operationalize specialist professional certifications. This was a necessary step for professional consolidation after the enactment of professional practice laws proposed by psychologists at large and the resulting creation of their professional associations.

At a regional level, he participated in the *Encuentros Integradores de Psicólogos del Mercosur* (Integration Meetings of Psychologists from Mercosur) on behalf of the Federación de Psicólogos de Argentina (Argentine Federation of Psychologists) (FEPPRA) as a member of the Committee on Training and Education, which produced two framework agreement protocols in 1998 and 2001 that clearly reflect his ideas.

Through his actions and writings, he provoked multiple debates on various field-specific topics, which are mirrored today in his disciples, in the field of the history of psychology and in the current ministerial regulations for the evaluation and accreditation of psychology graduate and undergraduate programs.

He is remembered for his generosity, learnedness, and passionate advocacy of scientific psychology and its professionalization.

Villa Landa, Florencio

Born *Badajoz (Spain), 22 May 1912*

Died *Madrid (Spain), 19 September 1992*

Virgilio Ibarz

Universidad Ramón Llull, Barcelona, Spain

Keywords

Mexico · Cuba · Spain · Soviet Union · Soviet psychology

Florencio Villa Landa was a Spanish psychiatrist. In 1927, he moved to Madrid to study medicine at the *Universidad Central* (Central University). He obtained an MD in 1934 and started to work as an intern at the Department of Psychiatry of *Hospital Provincial* (Madrid Provincial Hospital), under the direction of Dr. Gonzalo Rodríguez Lafora (1886–1971), who established the first

institutional foundations that made the development of psychology in Spain viable. The Civil War interrupted his training.

Villa, in August 1936, joined the Communist Party of Spain (Partido Comunista Español, PCE), and in October he joined the Medical Services of the Fifth Regiment. He was appointed Chief of Health of the V Army Corps. After the defeat of the Republic, he crossed the French border and was interned in concentration camps in the south of France. He had the option of going into exile in Mexico but chose to go to the USSR to learn about the Revolution and complete his training with Russian neuropsychiatrists (Marco-Igual, 2009, 2010).

At the end of September 1939, the Ministry of Public Health suggested that he go to work at the Ryazan Psychiatric Hospital, southwest of Moscow. This psychiatric hospital was a model institution. It had wards that housed patients according to their pathologies. In 1940, Villa married Alejandra Serova. As the Germans approached Moscow, the couple moved to the Omsk, region of Western Siberia, where Villa worked as a rural doctor in four villages. In 1945, at the end of World War II, he returned to the Ryazan Psychiatric Hospital. He was the chief of the plant where the sick who suffered from somatic diseases associated with mental disorders were.

Villa was a marxist-leninist. He was affected by the death of Stalin (1878–1953) and was surprised to learn of the accusations made by Nikita Khrushchov (1894–1971) in his report to the *XX Congress of the CPSU* (1956), in which he made a harsh criticism of Stalin. Villa tried to explain Stalin's behavior considering that he suffered from a cerebral vascular disease that had affected him during the last stage of his life. In his autobiographical writing *Mi vida* (Villa Landa, 2013), he wrote that years later he was able to contemplate it from another perspective and understand the unreason of that time.

In 1957, tired of the monotony of work at the Ryazan Psychiatric Hospital, he accepted the invitation of his exiled relatives in Mexico to emigrate. From 1957 to 1961, he lived in Mexico City. He had to validate his medical degree and dedicate himself to private medicine, and in 1960 together with Manuel de la Loma (1906–1968), he

translated *Psiquiatría (Psychiatry)* of Izmail F. Sluchevski (1903–1966) (Sluchevski, 1960). In 1961, he accepted the invitation to work as a professor of Psychiatry at the *Universidad de La Habana* (University of Havana), whose clinical center of reference was the Psychiatry Service of the General Hospital. Villa was a follower of Pavlov's theories, and in Havana he applied a marxist approach to psychiatry, based on the knowledge he had acquired in the Ryazan stage.

In Cuba, a series of books were published that divulge the theories of Pavlov and his disciple P. K. Anojin (1898–1974). In 1960, he translated *Psicología (Psychology)* by Smirnov (1894–1980), Leontiev (1903–1979), Rubinstein (1889–1960), and Teplov (1896–1965) (Smirnov et al., 1960), which marked the beginning of the influence of Soviet Psychiatry and Psychology in Cuba. This book was used in the initial formation of psychologists in Cuba.

In 1963, at the National Conference of Psychiatric Institutions, Villa presented the paper “La psiquiatría en tiempos de guerra” (Psychiatry in times of war) (Lambe, 2017), in which he maintained that during the Bay of Pigs invasion in Cuba and the Caribbean crisis, men and women, adolescents, and the elderly participated. These events recall the great deeds of history, episodes from the Bible, and the revolutionary wars of the Soviet Union and Mao's China. Villa claimed that it would be a blindness to ignore that also in the wars of liberation and defense, citizens carry a heavy inheritance, that of the scourges, customs, and modalities accumulated during centuries of exploitation.

For Villa, it was not possible that men and women, especially those of the middle class – although not only of this one – suddenly detach themselves from the scourges of the past. A long, difficult, and hard process of rehabilitation was often required. The Revolution not only had to put its hopes in new people, in the children, and young people, but it also had to count on mature people and has to confront those who did not want to change, those who were actively or potentially counterrevolutionary.

Villa Landa is not only important for his work as a translator of psychological works from

Russian to Spanish, but he also produced his own bibliographic materials for his courses, which contained a severe questioning to psychoanalysis. It was used as a textbook at the University of Havana. In 1970, he decided to leave the PCE for disagreeing with the leading groups of the communist parties and, in 1973, left Cuba to return to the USSR, where he worked again at the Ryazan Psychiatric Hospital. He pointed out in *My Life* that the standard of living in Ryazan had improved, but the Soviet doctors were poorly trained.

In 1978, he definitively returned to Spain. He settled in Madrid and worked in the medical cooperative “*Centros Médicos Asociados*” (Associated Medical Centers), created by his brother, also a physician. He died in 1992 because of multiple myeloma (Sueiro-Rodríguez, 2010).

Colombia · Critical psychology · Social psychoanalysis · Children · Women

Alvaro Villar-Gaviria's academic path ran parallel to the origin and development of psychology at the Universidad Nacional de Colombia (National University of Colombia) between 1950 and 1986. He obtained his degree as a medical doctor and surgeon in 1950 and later specialized in psychiatry. He was dean of the Faculty of Psychology between 1962 and 1966 and director of the Department of Psychiatry of the Faculty of Medicine, between 1976 and 1980. He married Leonor Concha Maldonado (?–1995) in 1946. They had five children: Eduardo, Elsa, Clemencia, Patricia, and Juan Carlos. Elsa Villar Concha was closer than the others siblings to his work; she was the proofreader of his writings and wrote a biographical summary for the journal *Psicoanálisis* (Psychoanalysis) (Sánchez 2012).

As a student of medicine, he worked with the Institute of Applied Psychology (1947–1950) carrying out the application and qualification of aptitude tests and measuring skills according to vocational orientation of those who expected to enter the National University (Domínguez-Blanco 2017). Mercedes Rodrigo Bellido (1891–1982) hired him as a professor when the undergraduate *curriculum* was approved on April 9, 1949 (Universidad Nacional de Colombia 1949). According to his words, “at that time the acquisition of knowledge and the practical approach was in charge of physicians specialized in psychiatry, and pedagogues interested in individual and group cases” (Villar-Gaviria 1965, p. 7).

As dean of the Faculty of Psychology, in 1962, he pursued the creation of specializations in clinical, pedagogical, industrial, and criminology psychology, but only the first one was approved much later in 1988. From 1964 to 1965, he had to negotiate the ongoing academic reform, aiming at the integration of disciplinary faculties in new larger faculties. This negotiation was especially difficult because the Faculty of Sociology, led by Orlando Fals Borda (1925–2008), wanted to transform the Faculty of Psychology in one of its sections, with a common curriculum. Following a negative response by psychology, Fals Borda proposed, alternatively, to divide psychology in two programs: (1) a social psychology program within a new Faculty of Human Sciences led by sociology and (2) a clinical psychology program as part of a new Faculty of Health Sciences. Psychology also rejected these proposals; Villar-Gaviria (1965) argued “Psychology was a science, both biological and social, and therefore, a curriculum should simultaneously offer a background in experimentation and social research” (p. 9). After Fals Borda's resignation associated with the rejection of his proposals by the Planning Office of the university (Carrillo-Guerrero 2006), psychology and other programs became part of the Faculty of Human Sciences as departments (Universidad Nacional de Colombia 1966, Agreement 49).

Villar-Gaviria taught the subjects of psychological tests and applied psychology from 1950 to 1967. Later, he taught psychoanalytic theory, therapy techniques, psychology applied to the clinic, and the Rorschach test until 1987 (Domínguez-Blanco 1999). During the 1950s and 1960s, he was a tireless promoter of Freudian psychoanalysis in the training of practitioners and the care of patients in psychiatric hospitals. In his opinion, psychoanalysis was presented as a theory of great depth, to understand human mind, unconscious, and dreams. As an alternative to traditional psychiatry, psychoanalysis could avoid confinement in nursing homes and therapies with electroshocks or with medications that had negative side effects: “Psychoanalysis was shown to us as something almost magical. Our teachers said that the patients of the psychiatric hospital were there for lack of

analysis. Over time this proved inapplicable. Who would work in analysis with 2,000 women patients from a psychiatric hospital?" (Montenegro-Álvarez 1999, pp. 38–39).

In any case, psychoanalysis allowed Villar-Gaviria to understand the origin of mental disturbances he saw in the mentally ill. He could interpret the cause of hallucinations and delusions. However, he began to feel disappointed by the limitations of psychoanalytic therapy. This non-conformity led him to study Marxism, specifically Wilhelm Reich's (1897–1957) ideas. This German psychoanalyst pointed out a psychological criticism to capitalist structure and with other first-generation Frankfurt School philosophers' integrated psychoanalysis to study the relationship between individual and society. The concepts of repression and the principles of reality and pleasure became equivalent to those of alienation, fetishism, and oppression to explain mental illnesses as a product of inequalities in capitalist society. Consequently, Álvaro Villar-Gaviria defined himself as a Marxist psychologist, critic and researcher of how exclusion by social class, gender, and age constructed abnormality in contemporary subjectivities (Domínguez-Blanco 1999).

Villar-Gaviria was director of the Department of Psychiatry of the Faculty of Medicine of the National University of Colombia between 1976 and 1980. He promoted alternative mental health experiences for patients held in psychiatric internships. His psychotherapy techniques were accepted little by little by psychologists and psychiatrists, because they involved therapeutic communities with outpatients. With this change, he wishes he could change the history of exclusion, which has been psychiatry. He really believed that the patient and society had to be cured, because "... we should be all included ourselves in a better society. This would have to do with politics, with Marxism, with history ..." (Montenegro-Álvarez 1999, p. 38).

As a researcher, Villar-Gaviria found out the origin of many clinical symptoms in the socio-economic characteristics of Colombian families. The critical analysis from Marxism, "with the emphasis on social classes, I soon realized that it was

indispensable to understand how first consultation people, placing them from their social class, their way of life, education, religion, habitat and region" (Montenegro-Álvarez 1999, p. 37). Accordingly, he developed an ambitious program in order to understand *how abnormality has been constructed historically*. He carried out psychosocial studies on bourgeois and proletarian families, for explaining clinical symptoms of the housewife, the housekeeper, teenagers, and children. The research about the Colombian family by anthropologist Virginia Gutierrez (1921–1999) brought him an important background for his discovering. The results of his work gave rise to three volumes of *Psychology and Social Classes* between 1978 and 1988, but only the first and the second volumes were published. He wished he had published the third volume about young people and teenagers of different social levels, but his death in 1999 cut this project short.

Villar-Gaviria focused on childhood vulnerability. His book *The Child, Another Oppressed* (1973) was reprinted seven times between 1973 and 1988. He pointed out that the education that children received was unrealistic and unjust. First, it was not allowed to talk about religion, politics, art, or literature at home. Second, the rules of behavior were instilled through humiliation and shame. This violent learning subsequently justified irrational hatred toward women and low-class people in adult life.

Villar-Gaviria's studies started from the daily observation of different urban and rural social groups. He kept a thorough field diary and never took pictures. In *Everyday Life in the Working-Class Family of Bogotá* (Villar-Gaviria 1986), he gave an account of the psychosocial effects of the migration of the rural proletariat to the city, seeking better living conditions due to unemployment and violence. In these studies, he was able to verify how the clinical symptoms in women originated in the violence they received from men, their excessive workload, and poverty. Many young poor women had chosen domestic service as an alternative life from abuse in their own homes, but they found similar abuses in homes of bourgeois families. His book *Domestic Service, a Guild in Extinction* (Villar-Gaviria 1974)

demonstrated how the dialectic of the master and the slave was reproduced in other forms of voluntary servitude by maids (Montenegro-Álvarez 1999, p. 35).

Given the above, Professor Álvaro Villar-Gaviria can be considered the pioneer of critical psychology in Colombia, because he developed an original complex interpretation of clinical symptoms and mental illnesses of bourgeois and proletarian families in urban and rural settings. He was also a precursor of feminist studies regarding women, sexuality, and psychoanalysis. His scientific production covered ten books and 60 articles. His main topics were about mental health and sociohistorical context of mental illnesses (anxiety, depression, and neurosis). Other topics include the situation of women and homosexual individuals and the oppression of children, teenagers, and young people. In all these works, he alternated criticism of psychoanalysis, with its emancipator role. He also made numerous presentations at national and international events in Mexico, Italy, Spain, and Argentina, among other countries.

Villar-Gaviria had extensive knowledge about classical, contemporary, and Latin-American literature. He used literature as a pedagogical resource to interpret clinical symptoms in main characters as Sigmund Freud (1856–1939) used to. He generously shared both his knowledge and his books with many students. Although he showed himself up as an erudite scholarly teacher, he carefully listened to his practitioners in clinical supervision sessions. Therefore, he first wisely invited each disciple to self-examination before a later diagnosis of a clinical case. He thought that pedagogy instead of adding knowledge should contribute to remove those ideas that did not allow scientific thinking. In 1983, he was awarded with the highest distinction to the work of a teacher and scientist: professor emeritus of the National University of Colombia.

His work influenced professionals and teachers of psychoanalysis, the health sciences, and social work (Díaz Leguizamón 2017). It helped transform the diagnosis by avoiding stigmatizing classifications. He emphasized that clinical treatment to each patient should include his or her partner,

their family, and other significant relatives or friends.

Finally, it is important to add that during his career as a professor of the Department of Psychology, he participated in different international associations, such as the Interamerican Society of Psychology, the Rorschach Society of New York, and the International Network of Alternatives for a Democratic Psychiatry. Without a doubt, he was a key figure for research, teaching, and administration, because he contributed to a dialog between different trends for the development of psychology at the National University and developed a kind of indigenous psychology for a Colombian context affected by internal war since 1948.

Julio Francisco Villegas Bustos was born in San Carlos, a mainly agricultural and cattle raising area in Ñuble region, in Southern Chile. His first years of education were carried out in San Carlos city, later in Concepción city he attended the emblematic Enrique Molina secondary school. His training in psychology started at the University of Chile concluding with his thesis entitled *Factores Psicosociales de la desnutrición infantil* (Psychosocial Factors on child malnutrition) which he carried out with Virginia Nassar who would be his wife until the end of his days and with whom he had two children.

In 1973, a few days before the military coup in Chile, Villegas wrote *Técnicas de influencia sobre las actitudes y el cambio del comportamiento* (Influence over attitudes and change of behavior

techniques), a work that was presented at the XIV Pan American Children's Congress and later published with the same title in *La Psicología Social en Latinoamérica* (Psychology Social in Latin America) (Villegas, 1975).

Julio Villegas was a social psychologist and his work is summarized in the areas of social perception, social cognition, and subjective culture (Ardila, 2002). In addition to his undergraduate and postgraduate training, he complemented his career as an experimental social psychologist at the Latin American Faculty of Social Sciences (FLACSO). At the 1st National Congress of Psychologists in Chile, he gave a conference entitled: *Psicología Social y Desarrollo Nacional* (Social Psychology and National Development) in which he asked how can social psychology contribute to national development? To answer this, he discussed various works related to theoretical approaches to democracy and authoritarianism as subjects associated with trends and resistance to social change. He argued that the various social psychology projects, that implied the possibility of participating in a difficult but challenging process, should succeed in contributing to the design of a democratic, participatory social system open to possibilities of change (Villegas, 1985).

In the Sociedad Interamericana de Psicología (Interamerican Society of Psychology) [SIP], he actively participated in international psychology, where he was a member since 1973 (Villegas, 2004), National Representative of Chile (1983–1985), member of the SIP Board of Directors (1985–1995) and in 1993 he chaired the XXIV Inter-American Congress of Psychology (Alonso & Eagly, 1999). The first carried out in Chile and very important for Chilean psychology since it returned to place it in the international arena shortly after democracy returned to the country.

The training for psychologists, not only in his country but also in Latin America, was the area of work to which he dedicated the last 20 years of his life. Joining in discussion that began to gain relevance in the region with works such as the book *Formación de Psicólogos en el Mercosur* (Training of Psychologists in the Mercosur) (Di Doménico & Vilanova, 1999). For its part,

the Chilean College of Psychologists stated the minimum conditions for training psychologists (Massardo, 1999) and in 2001, the SIP commissioned Villegas along with Juan Pablo Toro to coordinate the project called *Problemas centrales para la formación académica y el entrenamiento profesional del psicólogo en las Américas* (Problems for Academic Education and the professional training of the psychologist in the Americas), which would eventually generate a publication over three volumes.

In his various meetings, conferences, and publications, Villegas always defended the urgency of assuming responsibility for the development and training of psychology, for which it is essential to seek the development of psychology from the Emic and Etic prisms (Villegas, 2002).

Along with the work carried out at the SIP, his work has been added to the *Asociación Chilena para la Formación Académica y Profesional en Psicología* (Chilean Association for Academic and Professional Training in Psychology) [ACHIFAPs] that emerged in mid-2007 and that sought to reflect on training in psychology in a systematic way as a manner of integrating this activity to the institutional tradition of the discipline.

Although Villegas cannot be seen as a historian of psychology as such, he was always interested in the history of scientific research, being an active disseminator of these studies, being a fundamental contribution to articulate the problems of training of psychologists throughout the history of psychology in Latin America (Salas, 2016). The permanent enthusiasm that he maintained to spread the subject of professional training, even when his health was already very deteriorated, speaks of his commitment, discipline, and deep generosity to psychology and psychologists, especially young people and students for whom he always had time and words of support.

Among the numerous recognitions and awards received are those of the *Colegio de Psicólogos de Chile* (Board of Psychologists of Chile), the *Sociedad Chilena de Historia de la Psicología* (Chilean Society for the History of Psychology), and the Inter-American Prize "Rogelio Diaz Guerrero," the most important prize for psychologists

working in Spanish or Portuguese from the Interamerican Society of Psychology, in 2015 in the city of Lima. In his accepting speech, he pointed out that “half a century after the beginning of training in psychology in our countries, we now only have data, information and scope for 2000 undergraduate programs at around 700 universities in the Americas” (Villegas, 2015, p. 12) being a challenge to start thinking about discipline for the next 50 years. That same speech concluded with the following: “at this stage of my life, I face a circumstance as painful as, sad and inevitable that makes my perception of time more vulnerable, more sentimental and briefer with close people. For this reason, this Inter-American Psychology Award allows me to leave you my proud memory as a husband, as a father, as a father-in-law and as a grandfather” (Villegas, 2015, p. 12).

Néstor Isaac Vincenty was the fourth of eight children born to the marriage between Francisco Vincenty Polanco, a pharmacist, lawyer, and educator, and Juana Ramírez de Arellano (W. Vincenty, personal communication, April 8, 2020). He was born at the beginning of the twentieth century, three years after the United States received Puerto Rico as a gift from Spain to end the Spanish-American War. There is no doubt that this family stressed education as an important value as most of its members studied professional careers (L. Vincenty, personal communication, April 16 2020). This family also stressed political views of independence for Puerto Rico as the father was a founder of the *Partido Nacionalista de Puerto Rico* (Puerto Rico Nationalist Party) which fought for independence. Although Dr. Vincenty was born in the western part of the island, his family moved frequently, according to work requirements of his father, and he lived in different towns and regions of the island.

He studied at the public school system of the island graduating from Central High School in Santurce, one of the best high schools of Puerto Rico at that time. As expected by his family, he

entered the University of Puerto Rico in Río Piedras (UPR-RP) in 1919 to study to be an educator like his father but left his studies a year later and moved to New York City and worked as a translator of Spanish, French, Italian, and English for a year. In 1921, he returned to Puerto Rico and worked for two years at the public school system, first teaching English at elementary level and, then, Spanish and science at secondary school level (Publications, lectures, studies by Néstor I. Vincenty, 1927–1948).

In 1923, Néstor I. Vincenty returned to UPR-RP and obtained a bachelor's degree in education with high honors in 1925. Following his father's example, he decided to pursue graduate studies in education and entered Harvard University, in Massachusetts, to study educational psychology (L. Vincenty, personal communication, April 16, 2020). He obtained a master's degree in education in 1926 in educational psychology and continued toward his doctoral degree (EdD) in mental and educational testing (Publications, lectures, studies by Néstor I. Vincenty, 1927–1948).

In 1928, Dr. Néstor Vincenty was granted a fellowship from Harvard University to undergo his dissertation research in Puerto Rico which compared the intelligence of children from Puerto Rico and the United States. That summer, he taught a psychology course at UPR-RP and was hired as director of the Division of Technical Research, paid by UPR-RP, but ascribed at the Department of Education of the government of Puerto Rico. He also published a book in Spanish that analyzed the impact of the United States in the future development of Puerto Rico (Vincenty, 1928). He obtained his doctoral degree with high honors in 1930 with the following dissertation: *Racial differences in intelligence as measured by pictorial group tests with special reference to Porto Ricans and the United States* (Vincenty, 1930).

During the summer of 1929, he married Ana Eulalia Cardona with whom he had eight children. His first child, a girl, was born in 1933 with a brain tumor that nobody in Puerto Rico could operate. Dr. Vincenty and his family left for Chicago looking for medical answers for his daughter, and he decided to study medicine. He started his medical studies, but looking further for treatments

for his daughter found a surgeon in Spain who was willing to operate his daughter's tumor. He transferred to the Universidad Central de Madrid, where his daughter was successfully operated—she had a long life with no sequelae of her brain operation. Dr. Vincenty obtained his medical degree in 1936, including some practical experience in pediatrics, at the beginning of the Spanish Civil War, and returned to Puerto Rico (L. Vincenty, personal communication, April 16, 2020).

In Puerto Rico, in 1936, Dr. Vincenty started working at the Department of Health, as director of the Public Health Unit in Río Piedras. From 1937 to 1939, he was named Assistant Commissioner of Education under Dr. José M. Gallardo (1897–1976). In 1939, he also started teaching psychology at UPR's College of Education with the rank of full professor (Álvarez, 2006). He taught a variety of courses: experimental psychology, physiological psychology, advance psychology, general psychology, abnormal psychology, social psychology, educational tests and measurements, and experimental pedagogy. According to Álvarez (2006), in 1939, the College of Education of UPR offered the majority of courses of psychology at this university and had two academic tracks: one for students of education interested in the benefits of psychology in teaching and one for students interested in psychology as a career.

In 1943, UPR restructured its academic offerings and transferred all psychology courses to the newly created College of Social Sciences (Roca de Torres, Gaztambide Géigel, and Morales Vázquez, 2003). Dr. Vincenty was transferred to the new college, taught most of the psychology course, and coordinated the psychology program.

In December 1947, Pedro Albizu Campos (1891–1965), political leader of the Nationalist Party, a Harvard educated lawyer, co-student and friend of Dr. Néstor I. Vincenty, and at that recently liberated from jail for political reasons, was coming to visit UPR campus in Río Piedras and offer a lecture to its students and faculty. As leader of the Nationalist Party, Pedro Albizu Campos was judged responsible for a public protest

uprising in Ponce which resulted in the death of several participants and policemen, even though he personally had not attended. The Student Council, in order to welcome him, raised a Puerto Rican flag from the UPR's tower, an act that was illegal at the time but which had been previously permitted by the chancellor of the university. No permission had been asked this time, and security guards took the flag down, and a commotion was started. Due to this incident, the chancellor banned the use of UPR's theater for the Pedro Albizu Campos lecture (Abayarde Rojo, 2011). Students were suspended by university authorities and later expelled from the university; professors defended the students' actions, among them Dr. Vincenty. He voiced his defense of the students' rights based on the liberty of expression guaranteed by the Bill of Rights of the US Constitution, and he lectured freely in the campus and published his arguments in local newspapers (L. Vincenty, personal communication, April 16, 202; Vincenty, 1948a; 1948b; 1948c; 1948d). Due to his active participation in the defense of the students and his harsh and strong criticism of the chancellor and the university, Dr. Néstor I. Vincenty, even though he was a full professor, coordinator of the psychology program, and the one who taught most of the courses, was also expelled from his tenured position (Huelga 1948, 2018). As Álvarez says, "the professor who had been longest teaching Psychology full time at this College, stopped being a member of its Faculty" (2006, p.110).

From 1948 to mid-1970s, Dr. Néstor I. Vincenty opened a private office for the practice of both his professions. He attended both medical and mental health patients at his office in Río Piedras. He dedicated more time to his family and continued writing articles on local newspapers about important issues in education, politics, and physical and mental health. His interests stressed the importance of teaching children in their vernacular to give them every opportunity to develop fully their potentials.

He died at 91 years of age of an infection produced by stones in his gallbladder.

Fred C. Walters is the eldest of the ten children born to John H. Walters and Margaret Jane Withers, a distinguished family of pioneer immigrants to the United States of America. His father emigrated from Germany in 1853 while still a child (Ward, *n.d.*). They worked a farm, and during the Civil War years, his father joined the Army.

Fred C. Walters studied at the schools near his hometown in Woodson County, Kansas, graduating from high school and obtaining a teaching certificate. He started teaching at the elementary schools in Kansas in 1903 and taught until he earned his bachelor's degree in education from Kansas State Teachers College in 1916. Education was an important value for this first-generation

American, and he decided to continue his education. In 1917 he earned a master's degree in Education and in 1927 a doctorate in Education, both from Teacher's College at Columbia University (Personnel Record of Fred C. Walters, 1924–1962).

From 1917 to 1918, Fred C. Walters was an instructor in education in Wilmington College in Ohio. In 1919 he moved to Freemont, Nebraska, where he was named Chair of the Department of Education at Midland College. The following year he moved to Connecticut where he worked until 1923 as a School Psychologist at Bridgeport (Personnel Record of Fred C. Walters, 1924–1962).

In 1924, Fred C. Walters was hired as a professor at the University of Puerto Rico, Río Piedras Campus (UPR-RP); he was also named director of the newly created *Institute for Educational Research and International Education* (Álvarez, 2006). From 1937 to 1941, he served as the Head of the Department of Psychology in the Education Faculty. He remained working at the College of Education at UPR-RP until his retirement in 1962. He then moved back to the United States of America.

Dr. Fred C. Walters was one of the pioneers in psychological testing in Puerto Rico. He spent much of his time developing instruments and psychological tests for students at the University of Puerto Rico and the Puerto Rican

population in general. Dr. Walters with Prof. Malvina Monefeldt (1892–1967), Prof. Alfredo Silva (1897–1990), and Mrs. Mercedes Chiqués de Walsh (1893–1976) developed the *Test Hispanoamericano de Habilidad y Logro, para grados 3–12* (Spanish-American Test of Skills and Achievement, for grades 3–12) (Álvarez, 2006; Roca de Torres, 2008). They constructed six forms of *Test Hispanoamericano de Habilidad y Logro* (Hispano-American Test of Skills and Achievement) for high school students. This same group of researchers translated the 1916 edition of the Stanford-Binet Intelligence Test. Their translation was the one used in Puerto Rico to evaluate our children until Pablo Roca de León (1951, 1953) published his translation and adaptation of the Wechsler Intelligence Scale for Children (1949) and the Stanford-Binet Intelligence Scale for Children (1937).

Later in his career, Dr. Fred C. Walters devoted time to studying bilingualism, developing achievement tests in different subjects, and researching general educational themes in Puerto Rico. His quest for developing measuring instruments for different abilities with adequate reliability and validity measures established a very strong tradition in Puerto Rico that was reinforced by Dr. Pablo Roca de León, Dr. Miguelina Nazario de Hernández, Dr. Laura Leticia Herrans, and Dr. Gabriel Cirino, among others.

Walther, Leon

Born *Saint Petersburg, (Russia), 28 March 1889*

Died *Geneva, (Switzerland), 20 April 1963*

Deolinda Armani Turci

State University of Minas Gerais, Belo Horizonte, Brazil

Keywords

Switzerland · Brazil · Technopsychology · Psychotechnics · Career guidance

Leon Walther graduated in 1912 from the Faculty of Arts of St. Petersburg. He kept teaching at a college in that capital until 1914, when he moved to Switzerland. He studied sociology in Laussane and law at the University of Geneva. In 1916, he ran a career guidance office attached to the Jean Jacques Rousseau Institute (JJRI). In order to continue in the teaching field, he joined the psychopedagogy course at the JJRI in 1917, where he attended Edouard Claparède and Pierre Bovet's courses (1878–1965). He completed the graduation in 1918 (Antonini, 2001; Walter, 1953).

From 1918 to 1921, he worked in a watchmaking factory in Geneva. In the same year, 1921, on the recommendation of Pierre Bovet, he began working as an expert psychologist in a large graphic company in Switzerland, where he remained until 1926. According to Claparède, stated in a preface to a Walther's book (1926), it was based on the knowledge acquired at the watchmaking factory and in an internship program carried out at the Geneva Psychology Laboratory that Leon Walther, right in the first year of operation in this company, managed to considerably expand the company's production. They managed to have less employee's fatigue by applying principles of occupational technopsychology, based on the rationalization of work and better conditions for workers.

In 1922 he was appointed the chief head of the technopsychology and professional guidance section of the JJRI. He completed his doctorate in

philosophy at the University of Geneva in 1926, when he defended a thesis on the technopsychology of industrial work, which was made into a book under the title *La psychologie du travail* which was published in the same year. This work expanded his reputation worldwide, and it was translated and divulged in other countries, such as Colombia, Spain, Italy, and Germany, among others. In Brazil, it was translated by Lourenço Filho, in 1929.

He began teaching at the University of Geneva in 1926. Later on, in 1929, he accepted an invitation from the government of the State of Minas Gerais, Brazil, to perform, complying with the principles of the *Escola Nova* [New School] at the *Escola de Aperfeiçoamento de Belo Horizonte* [School of Improvement of Belo Horizonte]. Leon Walther, together with other teachers, such as Théodore Simon, Louise Artus Perrelet (1867–1946), and Eugénie Rogovine (?–?), arrived in Rio de Janeiro (Brazil) in February of the same year and were welcomed by members of the Brazilian Education Association (ABE). At this opportunity, and sponsored by the organization of the Secondary Education Section of ABE, Leon Walther delivered a lecture at the headquarter of that association on “The work of the International Bureau of Education” and donated the copyrights for the translations of several of his works to the ABE.

He stayed in the city of Belo Horizonte (Minas Gerais) with his wife and children for 4 months, contributing to the organization of the School of Improvement of Belo Horizonte and teaching Psychology in the Course of Improvement for Elementary Teachers, approaching themes related to physiology and brain development, organs of the senses, and manual aptitude tests, among others. Later on, in the second half of 1929, he was replaced by Helena Antipoff. In August 1929, he accepted an invitation from the government of São Paulo state to give lectures on the scientific organization of industrial work, Taylorism, industrial workforce, labor selection, and occupational fatigue. In the following month and in the same city, he gave a lecture on vocational guidance for the Brazilian Association for Professional Education and started delivering a series of five conferences, under the invitation of the Commercial

Association of São Paulo, with the program: “(1) Introduction, definition and methodology of technopsychology, (2) worker selection, (3) the study of professional movements, (4) the adaptation of work instruments to the worker, (5) occupational fatigue” (Correio Paulistano, 1929, p. 6). The free-admission conferences were based on a course on psychotechnics and professional guidance that Leon Walther had taught at the University of Minas Gerais.

Still in September 1929, Walther visited the library of the Brazilian League of Mental Hygiene in Rio de Janeiro at the invitation of the board of directors of the Institution, when he complimented them for their set of works specialized in psychology and pedagogy (O Jornal, 1929). On the occasion, he offered to obtain from the JJRI an agreement to exchange publications with the League. In the same month, before heading for Europe, invited by the Secretary of Instruction of Vitória (Espírito Santo), he visited the Gomes Cardim School Group, headquarter of the State Higher Education Course, and he participated in a school ceremony on Arbor Day, which took place at the Moscoso Park in that city. In an interview to the *Diário da Manhã* newspaper (1929) he expressed the good impression he had of Brazil, of the teaching methods based on the modern pedagogy of the Active School in that city, as well as in Minas Gerais and Rio de Janeiro.

In 1930 he was awarded for his scientific work by the Belgian government at the *L'Exposition Internationale de La Grande Industrie et Des Sciences in Liege*. From 1933 to 1938 he held the chair of Experimental Psychology at the University of Cairo and in 1939 he started to collaborate with the International Institute of Psychopedagogy in Geneva.

He returned to Rio de Janeiro (Brazil) in 1948 and, together with his assistant and JJRI alumnus, Pierre Weil (1924–2008), developed and organized the Department of Professional Guidance and Selection of the *Instituto Técnico Comercial* [Technical Commercial Institute] of the Serviço Nacional de Aprendizagem Comercial [Teaching Department of the National Service for Commercial Learning] (SENAC). On the occasion, he evinced that technical education should also be based on educational psychology and scientific

pedagogy, highlighting the student’s learning motivation and practical activity as in the precepts of the Active School, based on functional training and not only on the domain of technology. He started the first Professional Guidance course at the National Department of SENAC.

Before returning to Europe, from August to October 1948, he gave lectures, conferences, and courses on topics related to occupational psychology, guidance, and professional selection, in Rio de Janeiro and São Paulo. In August he lectured on “The Psychology of work” at the *Associação Brasileira de Medicina do Trabalho* [Brazilian Association of Occupational Medicine], of the Ministry of Labor in Rio de Janeiro. In September, he delivered conferences on the commercial profession, the adaptation of instruments to men and on occupational guidance for commercial and independent careers, at the *Federação das Indústrias* [Federation of Industries] of the State of São Paulo, at the invitation of the *Instituto de Organização Racional do Trabalho* [Institute of Rational Labor Organization] (IDORT), SENAC, and the *Serviço Nacional de Aprendizagem Industrial* [National Service for Industrial Learning] (SENAI). In October 1948 he held a series of lectures on “The Psychology of Liberal Careers” at the Faculty of Philosophy Sciences and Letters, installed in the building of the Caetano de Campos School in São Paulo. Leon Walther contributed to industrial psychology, innovating in techniques and methods based on technopsychology in several countries.

Concerning Brazil, he introduced the importance of education and science as bases for the rationalization of work, through concepts derived from psychology and physiology, contributing to the developing segments of commerce and industry in the country. He praised the selection and professional training based on psychological knowledge as premises for adaptation to work. He pointed out that the selection of workers made on a preliminary basis through standardized psychotechnical tests would demonstrate the skills required for the functions and, consequently, the institutions would have more capable and better trained employees. It included motivation as a stimulus for work, automated movements, and interspersed pauses to shorten

workers' occupational and learning time. For the training of workers, he presented to Brazilians the proposal for a functional training in technical education with practical classes and assessment of students' progress. He proposed that the training should meet the students' aspirations and ideals so as to stimulate learning and work.

Considered one of the leading specialists in psychotechnics of the period, he was concerned with better organization of work, with the adaptation of the work process to the worker, reconciling the reduction of fatigue, workers' functional training, and the interests of industries, which under his point of view would be the harmony between labor and capital. He diffused his ideas on industrial psychology, teaching courses as a visiting professor at several universities or higher degree schools, as in São Paulo and Belo Horizonte (1929), and in Bogotá (Colombia) in 1932, among others. He also taught special courses at the University of Minas Gerais (Brazil), at the University of Bogotá (Colombia), and at the Catholic University of Sacro Cuore, in Milan (Italy), in addition to working as a professor at several universities around the world, such as the University of Cairo (Egypt), University of Lyon (France), and the University of Geneva (Switzerland).

Pierre Gilles Weil was educated in France and had most of his professional journey in Brazil (Bomfim, 2016). Weil went to *l'Institut National d'Études du Travail et d'Orientation Professionnelle de Paris* (National Institute of Work Studies and Vocational Orientation of Paris), *École pratique de psychologie et de pédagogie de Lyon* (Lyon practical school of psychology and pedagogy), and *Faculté de psychologie et des sciences de l'éducation – Institut Jean-Jacques Rousseau – de l'Université de Genève* (Faculty of Psychology and Educational Sciences – Jean-Jacques Rousseau Institute – of the University of Geneva). Weil held a doctoral degree in psychology from *Sorbonne Université* [Sorbonne University] (1972). He was also a student of Henri Pierón (1881–1964), Henri Wallon (1879–1962), Jean Piaget (1896–1980), André Rey (1906–1965), and Léon Walther.

In 1948, Weil, invited by his former professor, Léon Walther, became in charge of training the groups that would work on psychotechnical activities at the *Serviço Nacional de Aprendizagem Comercial (SENAC)* (National Service of Commercial Learning), an institution recently established in Rio de Janeiro, which was the capital of Brazil at the time. Overall, the idea was to adapt, focusing on commercial work, what Roberto Mange was already doing at *Serviço Nacional de Aprendizagem Industrial (SENAI)* (National Service of Industrial Learning), another institution created a few years before, in 1942.

As a director of the Education Division of the National Department at SENAC, where he held the role for 10 years (from 1949 to 1958), Weil conducted many research projects and published a significant number of articles in the journal *Arquivos Brasileiros de Psicotécnica* (Brazilian Psychotechnical Archives). Initially, Weil defended eclecticism as a positive psychotechnics trend, proposing the combination of many different techniques of psychophysiological investigations to substantiate the SENAC actions (Weil, 1953). However, by comparing different methods, Weil indicated the lack of accuracy of the intelligence tests in predicting the success of commercial workers, stating that the recruiting process for sales staff depends more on individual personal

characteristics (Weil et al., 1953). Hence, influenced by theories which related physical types with individual mood profile and behavior, Weil developed studies around the biotype of retail sales employees (Weil et al., 1954).

These activities of SENAC, in Rio de Janeiro, added to the spread and creation of professional orientation services across the country. SENAC was also the educational center for psychologists who created the *Centro Editor de Psicologia Aplicada (CEPA)* (Publishing Center of Applied Psychology), in 1952, which focused on the production of psychological tests (Weil, 1972).

Along with the work developed at SENAC, Weil was also part of a psychology clinic in the *Instituto Pestalozzi no Rio de Janeiro* (Pestalozzi Institute of Rio de Janeiro), from 1949 to 1958, having been invited by Helena Antipoff. This clinic was mostly focused on treatment of disabled children. Therefore, considering the need of measuring the intellectual level of these children, the main focus of Weil's research was on the development of its Nonverbal Intelligence Test (INV), which was the basis of many future studies related to adaptability (Schechtmann, 1955).

In 1958, Weil moved to Belo Horizonte, another important Brazilian city, with the purpose of organizing and directing the *Departamento de Orientação e Treinamento (DOT)* (Department of Training and Orientation) of the *Banco da Lavoura de Minas Gerais* (Lavoura Bank) in a time where he also became a professor at the *Universidade Federal de Minas Gerais (UFMG)* (Federal University of Minas Gerais). Weil felt his compensation at SENAC was not competitive but accepted their invitation under one condition that he could travel and research what was currently being done around the world related to psychology in banking. As a result, Weil went to the United States, France, Germany, and the U.K. (Motta, 2004). Under his direction, from 1958 to 1969 (when the bank moved to São Paulo), the DOT trained managers and employees on Human Relations Developments (DRH), a technique which combined the basis of T Group and Social Analysis (Goulart & Santos, 2011). His book *Relações Humanas na Família e no Trabalho* (Human Relations at Work and in

Family), developed from findings of previous work, was first published around the same time of the DOT creation (1959) and became a best seller (with approximately 60 editions, selling for over six decades).

One of the Lavoura Bank owners, a private bank, held a medical degree and supported the DOT project in the creation of its own research center. To recruit specialists in the subject, Weil went in France and selected Anne Ancelin Schützenberger (1919–2018), a professor of group dynamics and student Jacob Levy Moreno (1889–1974), who Weil invited to a workshop as well as to begin the creation of the DOT Psychodrama team. For this reason, Anne went to Brazil many times from 1961 to 1968 to teach triadic system of Psychodrama (Motta, 2004).

These actions made Weil an author of books on the subject and one of the pioneers on Psychodrama in Brazil, both as a theoretical (even his academic disciplines at UFMG) and applied science reference, beyond clinical treatment, as a specialist in the training of the labor force (Kladi, 2009).

Weil, during his time at DOT, experienced a personal crisis, originating experiences with Anne Schützenberger in Paris, in the Group Psychodrama of 1960 (Motta, 2004). Such crisis, around 1968, propelled his professional break, and Weil started to develop what later was called Psychodrama of Sphinx which became Weil's doctoral dissertation, defended in 1972 at Sorbonne University.

From these changes, Weil's new studies resulted in a transpersonal psychology. In Brasilia, the capital of Brazil, Weil also established Universidade da Paz (UNIPAZ) (Peace University) in 1988, which uses a holistic view and a cross-disciplinary approach as a core philosophy (Bomfim, 2016). Weil was the head of UNIPAZ until his death.

Colombia · Clinical psychology · Industrial psychology

Guido Wilde Seifert was one of the first psychologists from the Universidad Nacional de Colombia [National University of Colombia] and a prominent clinical and industrial psychologist. He wrote several papers that contributed to positioning the new profession in Colombia.

Wilde Seifert was the only child of a German family formed by Ivan Wilde (who died in World War I in 1916) and Doris Seifert. During his childhood and adolescence, Guido lived with his

mother and Jenny Wilde, his father's sister, who worked for the Library of Berlin.

Wilde went to a public school in Berlin, and after finishing high school, he took several courses on business administration. In 1937, a German printing company (Printator) gave him its representation in Medellín, Colombia. There, he had economic success with Printator, and later, he also represented an English pharmaceutical laboratory (Glaxo).

In 1945, Wilde married Inge Sondermann, a German migrant (born in 1921 in Delmenhorst, Germany, and died in Bogota, Colombia, in 1963). They had three children: Tomás, Norman, and Elianora.

In 1946, Wilde adopted Colombian citizenship; because of the law, he lost his German nationality (however, when the Colombian law changed, he recovered German citizenship in 1972).

In 1949, Guido Wilde and his family moved to Bogotá because he wanted to become a psychologist and the only program in the country was in the capital. He graduated as a psychologist on December 18, 1954, from the National University of Colombia (His degree act appears in Act 2, page 3 of November 2, 1954, of the Faculty of Human Sciences). He then enrolled in a doctoral program in philosophy at the Pontificia Universidad Javeriana [Pontifical Javeriana University] and graduated in 1958. His dissertation was a critical review of psychoanalysis (published as a book, Wilde, 1959); some psychoanalysts did not receive Wilde's criticisms very well.

Wilde was a good friend of Jaime Vélez Correa, a Jesuit philosopher who invited him to give lectures on Freud and Jung in his course of History of Philosophy in 1958 and 1959 in the philosophy program of that university. Previously, in 1952, Guido Wilde was baptized as a Catholic by father Vélez in the Chapel of the Psychiatric Clinic Santo Tomás. Since then, one of the recurrent themes of his writings was the relationship between psychology and theology (Wilde, 1968, 1973). However, although Wilde never was an active catholic practitioner, he kept his faith until death and gave his children a catholic education

(T. Wilde, personal communication, February 4 and 11, 2021).

His first job as a clinical psychologist was in the Santo Tomás Neuropsychiatric Clinic (Bogotá, Colombia). Wilde was the first psychologist hired by this clinical institution. There, he had an active social and academic exchange with many renowned psychiatrists and psychoanalysts of that time in Colombia, including Hernán Vergara, Ariel Durán, Oscar Jiménez, César Constain, Hernando Chala, Guillermo Ballesteros, and Simón Brainsky, among others. Wilde had several academic debates because, for them, Wilde was not a physician (psychiatrist) nor a psychoanalyst, and the functions of psychologists as therapists were not recognized at that time. Alvaro Villar-Gaviria (1965), a psychoanalyst, wrote on this topic: “Dr. Guido Wilde published a book on psychoanalysis. His theoretical knowledge was patent, but this book is objectionable because the author is not an analyst, and therefore, he has no direct experience in the field. It is possible that because of that, more than any other reasons, there are many imprecisions of approaches already reassessed or not completely analyzed.” Also, Delgado (1960) said: Psychoanalysis, according to Wilde, is “a world view or *weltanschauung* that pretends to be an absolute authority in the fields of social and natural sciences, although is an issue of controversy... and the religious man should not accept the psychoanalytic view of religion” (p. 183).

After his graduation as a doctor in philosophy, Wilde took 6 months in New York with Kurt Goldstein (1878–1965), a psychiatrist, and neuropsychologist, influential in Wilde’s psychological thinking. Goldstein introduced Wilde in the works of Lippot Szondi (1893–1946), a Hungarian psychoanalyst who developed a projective test. Wilde learned the application of this test and was the first Colombian psychologist who used it and worked with Szondi’s theories that showed an essential distancing from orthodox psychoanalysis.

During this time, Wilde also had teaching experience, first as a professor in the Pedagogical Feminine University (1958–1959) and then as a professor of the newly created psychology program at the Pontifical Javeriana University (1966–1972).

He taught courses on psychometrics and projective tests and also in psychotherapeutic issues. For example, the newspaper *Hoy en la Javeriana* of March 1965 announced a clinical training program for psychology students in psychological testing, psychological diagnosis, psychopathology, projective techniques, and interview techniques and treatment of mental problems. At Javeriana, Wilde became the first associate professor of the Psychology Faculty, and among his students and colleagues stand out well-known Colombian psychologists such as Isa Fonnegra de Jaramillo, Nelly de González, Sara Pérez de Cabrera, Elisa Dulcey Ruiz, José Antonio Sánchez, Rosa Tanco Duque, Mateo Mankeliunas, Victoria Bossio, Beatriz de la Vega, and others.

Wilde was a prolific writer during this time of his life. He wrote several books and journals and newspaper articles: Wilde (1959, 1962, 1963, 1968, 1973, 1974a, 1974b, 1975).

Returning to his personal life, after his first wife died in 1963, Guido Wilde got married again to Susana Frank, a Czech immigrant (born in Praga but raised in Nürnberg) who died in 2012. This union had no children. Unfortunately, in 1992 his daughter Elionora was killed in a robbery attempt. This event affected him emotionally during the last years of his life.

In Wilde’s professional life, several activities characterized his performance: (a) During many years, he had a private clinical practice in which he made the clinical assessment and psychodynamic therapy with a robust humanistic approach; (b) translated and adapted the Minnesota Multiphasic Personality Inventory (MMPI) to the Colombian population in collaboration with psychiatrist Jaime Giraldo Ángel (the Dean of the Faculty of Psychology of the National University); (c) he was the first Colombian psychologist in using the Szondi projective test for clinical assessment and personnel selection; (d) after retiring from the Santo Tomás Neuropsychiatric Clinic, he started to work for Avianca Airlines and created the Department of Psychology specially focused on the selection of pilots and executives; and this was a long-term job (more than 20 years), and Wilde received training in

“aeronautic psychology” in Pan American Airlines in the United States.

Guido Wilde dedicated his last years to family life with his wife, children, and grandchildren, but he also was affected by several health problems. According to his son Tomás, Wilde kept his cognitive abilities and love for music, art, history, and literature intact. He died in Bogotá at the age of 89. He left a library of more than 2500 volumes, some of which were donated to the library of the Pontifical Javeriana University, and others were donated to the bookstore “Torre de Babel.”

Guido Wilde’s main contributions to psychology were in the areas of clinical and industrial psychology. He was a man of his time. The way he thought about psychology as a science and profession reflects the dominant approaches in psychology during the 1950s, 1960s, and 1970s.

In the middle of the century, psychological thinking was dominated by psychoanalysis and was referred to as “deep psychology” or “dynamic psychology.” Wilde adopted psychoanalysis more as a general framework to understand human behavior than as a therapeutic technique. Wilde (1968) wrote: “It is naïve to think that psychoanalysis is just a therapeutic method for the neurosis, because. . . its theoretical foundations have gone beyond psychopathology and became the discipline of reality, the science of the unconscious, the oracle of the human destiny. . . [Psychoanalysis] corresponds to a *Leitprinzip* of action, to a *Weltanschauung* that pretends to have universal validity” (p. 21).

Wilde defended “lay psychoanalysis.” He considered that psychoanalysis is not an exclusive property of psychoanalysts. Therefore, he defended the idea that a psychologist (not a formed psychoanalyst) could use the psychoanalytic framework instead of the psychoanalytic therapeutic techniques.

However, Wilde did not assume all the theoretical assumptions of Freudian psychoanalysis. On the one hand, his personal religious beliefs led him to reject what he called the deterministic and mechanistic tenet of psychoanalysis, and on the other hand, Szondi’s theoretical influence allowed him to elaborate a particular conception of human motivation (Wilde, 1968; Wilde & Giraldo, 1964).

Lipót Szondi was a Hungarian psychiatrist, nonorthodox psychoanalyst, and professor of psychology. His main book is *Self-Analysis*, and his psychology is known as “fate or destiny psychology.” Szondi’s approach is based on a systematic drive theory and identified eight drive needs (not just the Freudian sexual drive). These drives represent hereditary archetypes and are present in all individuals in different proportions. Fate analysis assumes that a person’s life unfolds in a series of elections: One chooses an occupation, acquaintances, partners, family, and so on. The Szondi test pretends to identify these basic drives and identify the person’s tendencies (personality). However, Szondi’s approach is not as deterministic as it may appear. As Wilde (1968) points out: “In his book *Self-analysis*, Szondi shows, without any doubt, the influence of the personal self in assuming individual responsibility, it means, free will, and furthermore on the existence of a superior being, named God, who has an important role in our decisions. . . Men may swim against the stream of the circuit of their ancestors, but only through the humanization of the hereditary drives. . .” (p. 34).

Probably it was Guido Wilde the first Colombian psychologist who introduced clinical psychology as a “new profession.” He considered that clinical psychology derived from psychometrics and dynamic psychology. Its subject matter is the study of personality using different techniques (interviews and tests) to understand pathologic behavior to contribute to the treatment and prophylaxis of mental diseases. The clinical psychologist assists the psychiatrist in diagnosing mental syndromes and collaborates with him in the therapy of various disorders (Wilde, 1963).

According to Wilde, clinical psychologists need to have solid theoretical and scientific foundations and rigorous practical training and, at the same time, have specific personality characteristics with a reasonable degree of personal maturity and cultural education. Wilde emphasizes the relevance of a solid education in general psychology, biology, and philosophy. In this sense, he recognizes the progress in the education of clinical psychologists at the National University of Colombia and at the Pontifical Javeriana

University, the only two psychology programs in the country at that time.

Several considerations are worth mentioning:

1. The basic structure of the education of psychologists, in general, is still relevant.
2. In Wilde's time, dominant theoretical approaches in psychology were psychodynamic, which is different today in Colombian psychology.
3. Although the primary function of clinical psychologists was the psychological assessment to assist psychiatrists in the diagnosis, psychotherapy is at the present time an essential function for psychologists.
4. This way of looking at the profession of clinical psychology brought Wilde much criticism from psychiatrists who considered psychotherapy as a task reserved to physicians.
5. In any case, Guido Wilde was one of the first Colombian clinical psychologists who contributed with his writings, professional practice, and teaching to developing this area of professional psychology.

As it was said before, Guido Wilde dedicated more than 20 years of his career to "Industrial psychology" (currently identified as "Organizational psychology"). His thinking on this area of applied psychology was also a subject of his writings.

For Wilde (1968), the subject matter of industrial psychology is human behavior in job contexts. Its primary purpose "is that each person devotes him or herself to the type of job to obtain the best performance with the least tension and more wellbeing and advantage for him or herself, for the company and society" (p. 14).

Wilde points out that human behavior (including emotional, affective, cognitive dimensions) is always present in all company areas. That means that individual performance requires intellectual knowledge and practical competencies and emotional maturity, and self-strength.

Industrial psychologists use different instruments for staff selection and assess the workers' motivation, conflicts, frustrations, etc. In doing

their job, industrial psychologists use interviews and psychometric and projective tests to assess intelligence, aptitudes, social and emotional maturity, and the possible incidence of mental disorders.

Given this assessment, industrial psychologists make a psychological report, and the head of personnel makes the final decision. This report must center on the "dynamic interaction between the individuals and their environment, the degree of organization of their interpersonal interactions, the lability of their self-functions, the conditions of their defense mechanisms" (Wilde, 1968, p. 18).

As we can see, the description of industrial psychology reflects the status of this area in the middle of the last century. The main virtue of Wilde's contribution was to introduce and position psychologists in working environments. Many of Wilde's students and colleagues, such as Clemencia Mantilla, Elena Herrán, and Norma Romero, contributed to boost industrial (organizational) psychology to become one of the Colombian psychologists' primary sources of employment.

Today, psychology in Colombia is a well-established science and profession. This author considers that this would not be possible without the participation of figures such as Guido Wilde. In many ways, he was an innovator for his time. He introduced a new profession in different fields, and he contributed to theoretical and practical psychology. Overall, he was an excellent person, very rigorous in his thinking, a true humanist. As his son Tomás says: "My father was a great father and husband, and of course a respected psychologist. If I could go back in time, I would like to be a psychologist like he was."

Professor Geraldina belonged to a generation of professionals, who migrated from education to psychology even before the profession was regulated in the country, and developed the two areas of

knowledge and profession, integrating themes, issues, and producing knowledge that serve to this day for both areas. Professor Geraldina developed her educational trajectory, initially in Mogi das Cruzes (São Paulo): High School (1946–1949), a technical/vocational course (1950–1952) at the Escola Normal Estadual de Mogi das Cruzes (State College and Normal School of Mogi das Cruzes), then in São Paulo, where she did Undergraduate and Graduate Studies at the Universidade de São Paulo (University of São Paulo – USP). The degree was in pedagogy with bachelor's degree (1958–1961) and then a specialization in educational psychology (1962–1965). At this time, she contributed to the formation of the Instituto de Psicologia (Institute of Psychology) at the USP and participated in the legal procedures for the regulation of training and profession in psychology. She studied Doctorate in Sciences, with the thesis: Discrimination of Form and Position with Professor Arrigo Leonardo Angelini as her supervisor and, in 1977, obtained her titular degree with the title: School Psychology – teaching and research, both at the University of São Paulo. From 1982 to 2012, she was technical-scientific advisor at the Universidade Federal da Paraíba (Federal University of Paraíba) and contributed significantly to the consolidation of School Psychology in João Pessoa, Paraíba, enabling the city to currently have psychology professionals working in public schools. From 1987 to 2002, she was professor in the graduate program in psychology of the Pontificia Universidade Católica de Campinas (Pontifical Catholic University of Campinas), in addition to carrying out other academic and scientific activities at the same institution. Between 1969 and 2013, she published 178 articles in scientific journals always related to the theme of education and psychology.

In addition to her scientific contributions, Professor Witter played important political roles in the consolidation of psychology entities, such as the Conselho Federal de Psicologia (Federal Council of Psychology), Conselho Regional de Psicologia de São Paulo (Regional Council of Psychology of São Paulo), and Associação Brasileira de Psicologia Escolar e Educacional (Brazilian Association of School and Educational Psychology). She was president of the Associação

Brasileira de Psicologia Escolar e Educacional (Brazilian Association of School and Educational Psychology) from 1991 to 1997, secretary of the Sociedade de Psicologia de São Paulo (Society of Psychology of São Paulo) in the 1970s, and president in 1996/1997. In 1999, she was president of the Associação Brasileira de Psicologia (Brazilian Society of Psychology) and secretary of the Conselho Federal de Psicologia (Federal Council of Psychology) from 1976 to 1979.

She was a person who showed a commitment to scientific production. She valued orientation activities and sought to organize collective spaces of debates on individual research. Offered opportunities for a large number of master's and doctoral students from all parts of Brazil and Latin America to meet and get to know each other, at a time when graduate studies were not structured in Research Groups. The impact of her performance in the training of psychology teachers throughout Brazil was significant: She supervised more than 254 researchers in postgraduate courses (175 master's students and 79 informed doctoral students until 2004). In 2004, she published an autobiography with information about her life, her production, and orientations. In this publication, she presented her worldview and values that have led to her life.

Always feeding the importance of the process of development of science and the formation of educators, Professor Witter makes explicit the hope of building the future. In her words: "I will continue the journey to the point where the path ends or leads me to other horizons. I'm going to be aware that I didn't do everything I should or could. I tried to do what I could under various circumstances. I'm going to get better on the way. May my account be helpful for others to find, make, and remake their ways. May love be our common denominator at work and outside it" (Witter, 2004, p. 173).

Professor Witter left marks on many people's lives, especially at a time when there were no graduate courses distributed throughout the country. The University of São Paulo, at the hands of Professor Geraldina Witter, trained several researchers from all states of the country and thus helped to build Brazilian psychology.

Colombia · Ukraine · University of Leuven · Educational psychology · Psychometrics

Born in what was then Tsarist Russia and the son of an Imperial Army officer, the October Revolution forced Woyno to flee his country while still a teenager. He studied philosophy, obtaining a bachelor's degree in 1925 and his PhD in 1931 at the Catholic University of Leuven (González, 1977b). Soon after, he left for South America and arrived in Colombia at the beginning of the 1930s. It was in this country where he settled down and where he was recognized as one of the first professionals qualified in psychology to dedicate himself to this practice. It was also this country the recipient of his most valuable contributions in the fields of psychological measurement and education.

The first mention of Woyno's work in Colombia refers to his participation as an advisor, together with the Belgian educator George Lagache (1878–1954), in the *Curso de Información Pedagógica* (Pedagogical Information Workshop), held in the city of Medellín since 1932, with the aim of getting teachers the tools offered by the advances of psychological and pedagogical science. Woyno's presentation of psychological testing and evaluation drove a movement, unfortunately ephemeral, toward the development of psychological measurement in Medellín, whose vehicle was the journal *El Alma Nacional* (The National Soul), which was published until 1936 (Sierra Camacho, 2014).

In 1935 Woyno moved to Barranquilla, Colombia. There, he was recruited for the main official educational center of the city, el *Colegio de Barranquilla* (The School of Barranquilla), where he installed a psychology cabinet, which in addition to offering counseling services to students, began with the application of psychometric tests and its standardization to the local context (González, 1977a, b).

In 1939, the *Escuela Técnica del Atlántico* (Atlántico's Technical School) was created and began its work in 1940 in Barranquilla. From that year until 1949, Wladimiro Woyno served as principal, being in charge of the foundation of the school (Itida, 2015). Later he was the principal of the *Escuela Normal de Antioquia* (Antioquia's Normal School), in Medellín, before arriving in

Bogotá as a professor of the *Escuela Normal Superior* (Superior Teacher Training College) (González, 1977a).

His career in psychometrics must have attracted the attention of the Ministry of National Education, which in 1956 recruited him to lead the Institute of Psychological Studies and Professional Guidance (Rodríguez Valderrama, 1998). There he ran what may be the first psychological study on a large scale conducted throughout the Colombian territory: a survey on vocational guidance that was answered by 5973 high school seniors (González, 1977b). The results of this study were published in the volume *El Bachiller Colombiano y su Porvenir Profesional* (High School Seniors in Colombia and their professional future) (Instituto de Estudios Psicológicos y de Orientación Profesional, 1956). The Institute also had the functions of planning the creation of institutions for students with superior intelligence, advising on the selection of inspectors and supervisors of the country's capital schools, developing and adapting their own technical work material and offering individual advice for vocational guidance (Mosquera, 2002). This last task was carried out through the use of the Strong Interest Test, adapted by the Spaniard Ventura Fontan* whom Woyno had met during his stay in Medellín (Rodríguez Valderrama, 1998).

Woyno was still in Bogotá when he was contacted by Alberto Assa (1909–1996), an educator interested in creating a school in Barranquilla for children with limited resources and superior intelligence, a project in which he was encouraged and advised by Woyno. Consequently, in 1960 the *Instituto Pestalozzi* (Pestalozzi Institute) was founded. From 1963, it was integrated into the College of Education of the Universidad del Atlántico (University of Atlántico) as a center for teachers in training, a function it fulfills until today, although this implied rejecting the original purpose of special education for high intelligence children (Rodríguez Valderrama, 1998; Institución Educativa Distrital Pestalozzi, 2011). The relevant role played by Woyno in the conception of this school is confirmed by the fact that shortly after returning to Barranquilla, in

1964, he was appointed as principal, a position he held until 1969.

In 1963, the year of his return to Barranquilla, he and his collaborator Raúl E. Oñoro Amador launched *Ediciones Pedagógicas Latinoamericanas* (Latin American Pedagogical Editions), a publishing house company devoted to the translation, adaptation, and distribution of psychological tests and psychology books in the national and regional markets. In this regard, it is worth highlighting the adaptation to Spanish of the Kuder Occupational Interest Survey and the Thurstone Temperament Schedule (TTS), which are still the versions distributed in the Spanish-speaking market, through the publishing house El Manual Moderno (Woyno & Oñoro, 1962, 1963, 1988; Rodríguez Valderrama, 1998). Furthermore, Woyno designed, in collaboration with his assistant, José Manuel González, a clinical scale aimed at adolescents, called the *Cuestionario Juvenil* (The Youth Questionnaire, Woyno & González, 1975; González, 1977b).

Concluding his period as principal at the Pestalozzi, Woyno promoted an educational project with similar purposes to those that initially led to the creation of that school: the training of children with superior potential. To this end, he carried out negotiations with the Rotary Club and with the city's Office of Education. As a result, both entities committed to finance in equal parts a new school that, with the name of Fundación Humboldt (The Humboldt Foundation), started operations in 1970 (Polo, 2016). This school was the first institution of this nature in Colombia. It is also the oldest active, because, under its new name of Alexander von Humboldt Educational Institution, it continues functioning and standing out as one of the best in basic education in Colombia (Patiño, 2018) and being recognized as the one that "educates the geniuses of the country" (Revista Dinero, 2016). Although the press reports do not recover Woyno's name, such acknowledgments to his educational project are testimony to the legacy of this psychologist who despite being born in distant lands is part of the history of Colombian psychology and education.

A tireless worker, in 1975 he assumed the position of Dean of the Faculty of Psychology at the Universidad Metropolitana (Metropolitan University) of Barranquilla. He held this position until his death, 2 years later (González, 1977a).

Y

Yampey, Nasim

Born *on November 19, 1920 in Paraguay*

Died *on 2001 in Buenos Aires (Argentina)*

Ofelia Martínez

Centro de Documentación y Estudios (CDE),
Asunción, Paraguay

Keywords

Paraguay · Argentina · Psychoanalysis ·
Culture · Migration

Nasim Yampey was Paraguayan, a son of Syrians, from the city of Hermel (today in the Lebanese territory), who arrived at the country in 1915 (Martín Romano, personal communication, October 19, 2020). He was a Doctor in medicine and surgery, pediatrician, psychiatrist, psychoanalyst, and writer (Yampey, 1991). He was the first Paraguayan psychoanalyst to join at the International Psychoanalytical Association (IPA). He was trained professionally in Buenos Aires and it was there that he developed most of his career. He began his medical practice in 1945, taking a particular interest in pediatric and general mental health problems (Smulever, 2001). His main interest ended up being the development of psychoanalysis. He was a full member in a training function of the Asociación Psicoanalítica Argentina (Argentine Psychoanalytic Association)

(APA) and a professor at the Instituto de Psicoanálisis (Institute of Psychoanalysis) (Yampey, 1991). He was also a part of the writing committees of specialized journals such as *Acta Psiquiátrica y Psicológica de América Latina* (Psychiatric and Psychological Report of Latin America) and the *Revista de Psicoanálisis de la APA* (APA Journal of Psychoanalysis), in which he published numerous articles (Smulever, 2001).

In the sixties, he worked as a psychiatrist at the Hospital Teodoro Álvarez (Teodoro Alvarez Hospital), Hospital Rawson (Rawson Hospital), and Hospital Israelita (Israelite Hospital) in the city of Buenos Aires. In the latter one, he was the Head of the Neurological Service and the Pediatric Psychiatry Section. In 1982, the Centro Paraguayo de Estudios Sociológicos (Paraguayan Center of Sociological Studies) (CPES) published in Asunción a compilation of texts written during that time (1960–1966) under the title of *La iniciación en la investigación psicoanalítica* (The initiation into psychoanalytic research) (Yampey, 1982b). The author pointed out in his introduction that “these brief contributions bear witness to the passage of the author from the pediatric field to the psychotherapeutic field and from dynamic psychiatry to psychoanalysis. Some of these initial lines of inquiry were later pursued with greater depth and more rigorous methodology in the psychoanalytic setting” (Yampey, 1982b, p. 17). In 1966, he published in Buenos Aires *El niño que rabió. Poemas infantiles para adultos* (The child that got angry.

Children's poems for adults), about which he stated: "more than a vein or a specifically poetic attitude, these poems are a pale reflection, sometimes literal, of the daily dialogue that the professional task of the one who composed them, allows him to maintain with those children who suffer" (Yampey, 1984, p. 7).

In 1974, a group of mental health professionals from Asunción, among them psychiatrists, psychologists, psychopedagogues with a psychoanalytical orientation, who had previously been developing training activities and meetings, invited prominent Argentine psychiatrists and psychoanalysts. Such invitations were the first steps to establish in Asunción, advised by the APA, a local institution that provided psychoanalytic training. On behalf of the APA came Dr. Nasim Yampey, who was in charge of structuring the Instituto Superior de Psicología Dinámica (Higher Institute of Dynamic Psychology) (ISSID), the first institution dedicated to the systematized teaching of Psychoanalysis according to the parameters of the IPA in Paraguay, and directed by Yampey. For 3 years, psychoanalysts from the APA traveled monthly, giving seminars, analyzing and supervising. In the 1970s, the country experienced one of the most violent repressive waves of the long dictatorship of Alfredo Stroessner (1954–1989), and at that juncture it was not possible to sustain ISSID, since the repression was fierce. On one occasion, Dr. Yampey and Dr. Elsa Díaz de La Greca were arrested and interrogated by the Police of the dictatorship about their activities in Asunción. International pressure was necessary for his release. The professionals continued to train despite the police raid on the ISSID premises, which did not manage to hold on for much longer. However, the links, both with professionals and with psychoanalytic institutions, not only lasted, but were consolidated. The psychoanalytic training of the professionals of Asunción was given, among others, by doctors Carlos Vispo (1939–), Alfredo Gazzano and Carlos Barredo, the latter standing out especially, who also traveled regularly to Paraguay for 19 years (Cristaldo et al., 2009).

Towards the end of the 1970s, Yampey founded in Buenos Aires, together with Gela Rosenthal and Mario Smulever, the Grupo de Estudios Psicoanalíticos sobre Mitos de América Latina (Group for Psychoanalytic Studies on Myths of Latin America) (GEMPAL), a subject that he was passionate about, opening at APA a space for study and research in which numerous psychoanalysts contributed, sharing his interest, and marking an important line of research within the APA. From there, he coordinated several national and international symposia, holding the Congreso Internacional de Psicoanálisis de los Mitos (International Congress of Psychoanalysis of Myths), held in Argentina in 1996.

In the 1990s, he created in Buenos Aires, together with other colleagues, the Centro para el Estudio y la Prevención del Suicidio (Center for the Study and Prevention of Suicide) (CEPS), a nonprofit scientific institution that was part of the International Association for Suicide Prevention (IASP). As director of CEPS, Yampey represented Argentina in the International Association for the Prevention of Suicide (Yampey, 1992).

Yampey gave a very important impulse to the beginnings of psychoanalysis in Paraguay. Later, in his theoretical journey, his works on myths starting from the Guarani and extrapolating them to other mythologies of the region promoted a new reading on the construction of national identities. His contributions to the study of culture, migration, and transculturation processes have also been relevant in the scientific literature on Paraguay. He has published several articles on Paraguayan migration to Argentina, especially in Buenos Aires, from a psychosocial and psychoanalytic perspective (Yampey, 1982a, b).

Chile · Behavior therapy · Experimental psychology · Sexual behavior

Sergio Yulis Nemirovsky was born in Santiago, Chile, on July 28, 1936. He is the son of Jewish

immigrants; his father was born in Besarabia and his mother in Odessa, both of which were later absorbed by the former Soviet Union. His primary education was in the Instituto Hebreo (Hebrew Institute; 1944–1947). He was part of the Hashomer Hatzair movement, along with his future wife Frida Kaplan.

He was the psychologist who introduced behavior therapy in the psychotherapy courses of what were then the only two Chilean universities that offered degrees in psychology in the 1970s, the Universidad de Chile (University of Chile) and the Pontificia Universidad Católica de Chile (Pontifical Catholic University of Chile). During his academic life he maintained a solid interest in the study of sexual behavior, its etiology and the treatment of dysfunction, as well as advancing behavior therapy. Some of his ideas on these subjects are summarized in two of his publications (Yulis, 1974, 1977).

His main characteristics included his way of approximating knowledge of psychology from a scientific perspective, his rigor as a teacher, mentor, professional, and researcher, and his ability to translate the findings of his research into clinically relevant facts (Quezada et al., 2014).

Dr. Yulis studied psychology (1958–1962) and philosophy (1959–1961) in the Universidad de Chile. He obtained his PhD degree in clinical psychology from the University of Iowa in the USA in 1968, financed by a Fulbright Scholarship (Quezada et al., 2014). After receiving his doctorate, he was an assistant professor in the University of Iowa, and then became the director of the Psychology Service of the Mental Health Clinic in Norristown, Pennsylvania (Dubrovsky & Harris, 1980). In 1970 he was chosen as the director of the psychology department of the Pontificia Universidad Católica de Chile. He held this position until the beginning of the military dictatorship led by Augusto Pinochet Ugarte after the *coup d'état* of the democratically elected President Salvador Allende Gossens on September 11, 1973.

While he was the director of the Psychology School of the Universidad Católica de Chile, he introduced the scientific method in the experimental psychology courses of the first years of the

program and led research on the efficacy of behavioral therapy and on sexual therapy. In spite of several controversies, in this period he studied a number of sexual dysfunctions from a cognitive behavioral perspective and the techniques of Masters and Johnson (1966, 1970) in ambulatory and hospital patients (Dorna, 1982).

After the military takeover, Jorge Swett Madge was designated as rector of the Universidad Católica de Chile; he asked Yulis to resign after he opposed the plans to fire a number of professors who were leftists or opposed the military rule. Sergio Yulis went to Mexico but was not allowed to enter, so he went to Costa Rica, where he lived with his family from February to August, 1974. When he arrived he was hired by the Dean of the Facultad de Ciencias Sociales (Social Sciences Faculty) of the Universidad Nacional de Costa Rica (National University of Costa Rica), the Uruguayan Hugo Fernández Faingold, to establish a psychology department of this university according to his advanced vision of scientific psychology at the time; he was its first director. In this period, he taught behavior therapy together with the Chilean psychologist Herman Lucke, who had arrived a few months earlier after escaping the dictatorship in Chile. Yulis had directed the thesis of Lucke (Yulis et al., 1974) for his psychology degree in the University of Chile. The experience and formation of Yulis was quickly recognized in all the academic and professional groups of Costa Rica. Yulis was named honorary member of the Sociedad de Psiquiatría de Costa Rica (Psychiatric Society of Costa Rica), and also member of the Sociedad de Psicología (Psychology Society; H. Lucke, personal communication, November 21, 2019).

Later Yulis traveled to Montreal, Canada, where he became director of the Psychology Service in the Royal Victoria Hospital of the Allan Memorial Institute, and associate professor of the Psychology Department of McGill University (Zagmutt, 1980). In this period, he reached his greatest development and published a large number of papers (see Sect. 1). In addition to his interest in sexual behavior and couples therapy, he researched and treated anxiety and assertiveness disorders and evaluated the effects of

behavior therapy, among other topics. This led him to be chosen as didactic therapist by the Corporation of Psychologists of Quebec (1977) and honorary member of the Sociedad Chilena de Psicología Clínica (Chilean Society of Clinical Psychology; 1978) (Dubrovsky & Harris, 1980). Yulis always wanted to return to Chile. Unfortunately he died on June 5, 1980, due to respiratory failure after a corrective nasal septum operation in the Jewish General Hospital of Montreal (C. Yulis, personal communication, July 28, 2008).

For Yulis, behavior therapy was a revolution in psychology, whose area of application extended rapidly (Yulis, 1974). His efforts transcended through his students, given his “capacity to transfer the principles of behavior to clinical practice and to approach the study of sexual dysfunction from a professional and objective perspective” (Quezada et al., 2014, p. 10). His legacy lives on with the creation by the Chilean Society of Clinical Psychology of the Sergio Yulis prize, which is awarded annually to the most outstanding clinical psychologist in the country.

psychology

She graduated from the Escuela Normal de Maestros (National School of Teachers) (ENM) and studied for a master's degree (1963) and a doctorate in Psychological Sciences at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM). She conducted psychotechnical research and school and professional orientation in France in 1966. Zendejas developed professionally in teaching both in basic education from 1942 to 1946, and in middle and high school between 1946 and 1971 at different times and institutions; as well as in the Instituto Federal de Capacitación del Magisterio (Federal Institute for Teacher Training), the ENM and the Escuela Normal Superior de México (Higher Normal School of Mexico) between 1946 and 1966.

She held various positions in the educational sector, in the Center for Educational and Professional Guidance of the National Institute of Pedagogy, the Department of Educational Guidance of the Prevocational School No. 3 of the Instituto Politécnico Nacional (National Polytechnic Institute) (IPN). In the Secretaría de Educación Pública (Ministry of Public Education) (SEP), she held several positions, among them, head of the Centro Nacional de Enseñanza Técnica Industrial (National Center for Industrial Technical Education); she was also Technical Coordinator of Educational Guidance of the General Directorate of Industrial Technological Education. She was also Executive Secretary of the Unit of Voluntary Promoters of the Centro Nacional de Enseñanza Técnica Industrial (National Council of Science and Technology) (CONACYT) (UNAM, 2007).

She belonged to the Frente Mexicano Pro Derechos Humanos (Mexican Pro Human Rights Front), as technical advisor and director of social research and later to the Academia Mexicana de la Educación (Mexican Academy of Education) (AME). She participated in the National Educational and Vocational Guidance Service as well as in the Escuela Secundaria Experimental Mexicana (Mexican Experimental Secondary School) where she was a pioneer in the incorporation of daily activities to the learning of basic sciences.

In the SEP between 1972 and 1978, she participated in various positions, among them as coordinator of educational guidance and of the

experimental schools of Secondary Education, Experimental High School, and in the area of Experimental Research. She also collaborated as advisor and researcher in several educational projects for institutions such as the Secretaría de Salubridad y Asistencia (Ministry of Health and Assistance) (SSA) from 1950 to 1954 as well as for the Instituto Nacional de Pedagogía (National Pedagogical Institute) from 1953 to 1958, the vocational schools of the IPN from 1960 to 1967, the Centro Nacional de Enseñanza Técnica Industrial (National Center for Industrial Technical Education) from 1968 to 1970 and the Servicio Nacional de Orientación Educativa y Vocacional (National Educational and Vocational Guidance Service) from 1971 to 1979, and the Organization of American States from 1979 to 1985, the AME.

Between 1950 and 1953, she participated as head of the Family Mental Health Center belonging to the SSA. During this period, she worked with adolescents on issues such as drug addiction, suicide, and pedagogical problems (Zendejas, 1950).

Although she was mentioned (Winker, 2012) as part of the founders of the Interamerican Society of Psychology (SIP), some authors investigated whether she had participated in its foundation, ending up omitting her name because they could not find documents to prove it (Colotla & Urrea, 2006). The positions she did hold within the SIP were as Executive Secretary for Latin America 1957–1959 and Executive Secretary for Central America and the Caribbean from 1959 to 1961.

She received several awards such as the “Moisés Sáenz” award, the Mauro Ernesto Cárdenas Ojeda medal, and is Honorary Life President of the AME. She wrote several poems (Arreola, 2018), in which she writes about her love for life and interpersonal relationships. In addition to this, she taught at the Escuela de Enfermería de la Cruz Roja Mexicana (Nursing School of the Mexican Red Cross), as well as at the Neutral White Cross at the Children’s Club and to medical and nursing staff at the “Maximino Ávila Camacho” Center. Her contribution to psychology is divided into two areas, founder in the fields of training and educational guidance in Mexico and in the line of attention to addictions mainly in adolescents.

Zulen, Pedro Salvino

Born *Lima (Peru) October 12, 1889*

Died *Lima (Peru), January 27, 1925*

Tomás Caycho-Rodríguez

Universidad Privada del Norte, Lima, Peru

Keywords

Peru · Psychology of Gestalt · Bergson

Pedro Zulen studied at the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM) since 1906, obtaining a Bachelor's degree in 1910 and a Ph.D. in 1924. In 1916, he visited Chile, Argentina, and the United States, where he studied psychology and philosophy (Harvard University), which he failed to complete due to health problems. He would return to the United States in 1920 to study library science. Between 1922 and 1925, he took charge of the Library of the UNMSM and began teaching the psychology and logic course at this same university. His concern for the condition of the Peruvian indigenous people led him to be one of the promoters of the Pro-Indigenous Association, as well as founding the journals *El Deber Proindígena* (*The Pro-Indigenous Duty*, 1912–1917) and *La Autonomía* (*The Autonomy*, 1915).

Thanks to Zulen there were in Peru references for the first time of the thought of Bertrand Russell (1872–1870), Wilhelm Dilthey (1833–1911), and Henri Bergson (1859–1941), as well as *Gestaltpsychologie* (Psychology of the Gestalt). His contributions to psychology were given from the chair of Psychology and Logic and the posthumous publication of his classes entitled *Programa de Psicología y Lógica* [Psychology and Logic Program] (Zulen, 1925) basically constituted of the readings of the last course of the same name dictated in 1924 in UNMSM and divided into two parts; the first dedicated to psychology and the second emphasized in logic.

Zulen was a *connoisseur* of the most important psychological currents of his time, pointing out that for behaviorism, psychology is a natural science that does not need to recognize the existence of mental states by themselves or the environment we have to confirm their reality. He was also one of the first diffusers of *Gestaltpsychologie* in Peru, giving importance to the postulates that indicate that the experience is not divided into parts but rather that it is shown in its entirety. On the other hand, he is opposed to the use of the experimental method, arguing that it only studies external manifestations, leaving aside the truly psychological, the internal.

Likewise, Zulen studied the problem of knowledge from a pragmatic perspective, outlining an

educational practice based on pragmatism, which he disseminates in a series of journalistic works (Quiroz et al., 2015).

Mexico · Applied psychology · Penitentiary

In 1921, the Escuela Nacional de Altos Estudios (ENAE) (National School of Higher Studies) granted her the degree of Academic Professor of Psychology, endorsed by José Vasconcelos Calderón (1882–1959), Secretario de Educación Pública (Minister of Public Education) at that time. Obtaining this degree made her the first Mexican woman to hold a degree in this discipline

(Guevara Ruiseñor, 2015; López Suárez et al., 2014). Until before her appearance in history, very few women had had access to formal higher education, so the intellectual production of the time, and history as a consequence, was fully concentrated in the work of men (Aguado Herrera & García Hernández, 2020).

As part of her training, Guadalupe Zúñiga received valuable instruction in experimental psychology in the laboratory of ► **Enrique O. Aragón**. This was one of the memorable spaces of this era due to the demonstrations of psychological phenomena that took place there. Personalities such as ► **David Pablo Boder**, Luz Vera de Córdoba (1881–¿?), and Palma Guillen de Nicolau D'Olwer (1893–1975) were also trained in this laboratory (Escobar, 2016). The work carried out there contributed in good measure to the establishment of psychology as a scientific discipline in Mexico (Guevara Ruiseñor, 2015).

Subsequently, ► **David Boder** started a psychotechnical laboratory in the Mexico City Penitentiary and invited Guadalupe Zúñiga, Eduardo S. Díaz, Esteban Fey, and Agustín Molina R. to work with him. Their work included the translation and standardization of the Terman version of the Binet-Simon intelligence test and the adaptation of Haggerty's Delta 1 test (Aguilar-Morales & Vargas-Mendoza, 2010). According to Zúñiga (1984), the intention of this instance was to defend the neediest prisoners.

Two years after starting to work in the psychotechnical laboratory, Boder left the country (the causes are unknown), and the department was closed. Ernesto Primo Villa Michel, then first Gobernador del Distrito Federal (Governor of the Federal District) (1927–1929), and they agreed to continue the work of this team in the correctional schools. As a result of the efforts of this team, a behavioral clinic was created, which months later became the Tribunal Administrativo para Menores (Juvenile Court) (Zúñiga, 1984).

Thus, on December 10, 1926, Guadalupe Zúñiga Lira was elected by Mr. Villa Michel as the first Judge of the Tribunal Administrativo para Menores (Juvenile Court), a position in which she was given the task of making a psychological profile of the young offender, as well as applying

the Binet-Simon, Descoudres, Bourdon, Toulouse and Pieron, Rorschach, and Toulouse and Vaschide psychometric tests (Valderrama et al., 1994). In addition, she worked on the rehabilitation of what she called “behavioral disorders” present in these minors, so that they could behave according to the values that society expected of a citizen at that time (Cano & Radkau, 1988). She remained in this position for 21 years (Aguado Herrera & García Hernández, 2020).

Simultaneously, she taught psychology at the Escuela de Enseñanza Doméstica (School of Domestic Education) (1920) and psychotechnics at the Escuela Normal Superior (Teacher Training College) (ENS) (1924–1941). She also taught Spanish at the Summer School of the Universidad Nacional de México (National University of Mexico) (UNM) (1925) and Psychology at the Facultad de Filosofía y Letras (Faculty of Philosophy and Literature) of the UNM and at the Escuela de Trabajo Social (School of Social Work) of the Secretaría de Educación Pública (Ministry of Public Education) (SEP) (1925). Subsequently, she began to teach the subject of Measurements of Mental Aptitude and Development (1926) (Cano & Radkau, 1988).

She was also a researcher at the Instituto de Psicología y Psiquiatría (Institute of Psychology and Psychiatry) of the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) (1937–1938) (Valderrama et al., 1994, cited in Aguado Herrera & García Hernández, 2020). At the end of the 1920s, he published in the “Revista El niño” a series of papers entitled “El examen mental individual del niño”, “Los inadaptados a la vida escolar de los internados,” and “Tiempos de reacción del oído y la vista” (Aguilar-Morales & Vargas-Mendoza, 2010).

Derived from her work in the Juvenile Court, clinical work with juvenile offenders arose, thanks to which guidance was provided to the minors and the first School of Social Work in Mexico (School of Social Work in Mexico), the Asociación “Amigos de los Niños” (“Friends of the Children” Association), several clinics for the treatment of human behavior, the Centros de Acción Social Educativa para Mujeres (Centers

for Social Educational Action for Women), and the Patronato Auxiliar de Prevención Social para Menores Infractores (Auxiliary Board of Social Prevention for Juvenile Offenders) were created, the latter with the purpose of taking in minors who, for their benefit, it was determined should not be returned to their families of origin (Zúñiga, 1984).

In 1953 she was elected as Directora de Acción Social (Director of Social Action) of the SEP, with which her work was extended to also contribute to families, as well as to maladjusted and abandoned children (Aguado Herrera & García Hernández, 2020).

It is due to this trajectory that she is recognized as a promoter of applied psychology both in the field of penitentiary and correctional schools, being awarded the Premio Mexicano de Psicología (Mexican Psychology Prize) by the Sociedad Mexicana de Psicología (Mexican Society of Psychology) in 1984 (Aguado Herrera & García Hernández, 2020).
