Preface

Towards a Global Psychology

Thomas Teo
York University
Toronto, Canada

Latin America is a psychological *terra incognita* for many psychologists from Northern America and Europe. A look into textbooks of psychology and its history shows significant lacunae regarding Latin American contributions. Very few Latin American names or projects, if any, are mentioned, and those that are introduced are considered merely extensions of European psychology, such as Latin American psychoanalysis or liberation psychology, albeit with their own unique voices. They do not represent the complexity, diversification, and originality of psychology in this region, and they reflect only segments within a vast theoretical and practical landscape. It is fair to label this situation epistemic ignorance in the English-speaking world regarding the multiversity of Latin American psychology. An important first step to overcoming this ignorance is to begin with a biographical approach in historiography. Such an analysis also sets the conditions for engaging with psychologists who do not have a connection to the North, or whose works were never translated or published in English, a language that was not always welcome in South America because of its imperializing connotations. For these reasons, this biographical encyclopedia is an extremely important event, unprecedented in its focus and its breadth. The Encyclopedia encourages psychologists from the North to engage in epistemic reflexivity about their own limitations regarding psychological matters and to confront the supremacist assumption that knowledge of the history of psychology in the so-called center is sufficient. Epistemic ignorance that is displayed so often in the discipline and profession of psychology, including in the history of psychology, is harmful and detrimental to the development of an international psychology that is not caught up in neoliberal criteria of academic success that reflect the very culture from which they emerged. This Encyclopedia should become a standard resource for thinking about Latin American psychologists and their ideas and, as such, will contribute to the possibility of a truly global psychology that is not based on assimilation but on mutual learning processes.

Introduction

Ana Maria Jacó-Vilela
Hugo Klappenbach
Rubén Ardila
Editors

The history of psychology in Latin America seems to be in good health. Far away are the times of isolated studies on the development of psychology in the region, such as those of Beebe-Center & McFarland (1941), Margaret Hall (1946), Carl Hereford (1966), or Morton Bertin (1974) or locally the efforts of Lourenço Filho (1939) or Foradori (1938, 1954), and the later ones by Rubén Ardila (1968, 1971a, 1986), Rogelio Diaz Guerrero (1986, 1994), Reynaldo Alarcon (1994, 2000), Ramon Leon (1981, 1982, 1993), or Antonio Gomes Penna (1981, 1992) between the late 1960s and the turn of the century. On the contrary, in the last three decades, historical research in the region has multiplied, solid teams have been formed, and archives and documentation centers have been opened, demonstrating a sustained effort to maintain high standards of research in the field of the history of psychology. Although a significant part of the historiographical production has been published mainly in Spanish or Portuguese and for this reason is little known outside the region and outside Spain and Portugal, there has also been a significant increase in publications in English. Among them, only in the last 3 years, both in books (Ardila, 2018; Massimi, 2020a; Ossa et al., 2021), in encyclopedia articles (Campos, 2021; Miranda et al., 2020; Klappenbach et al., 2021; Massimi, 2020b), and of course in articles in refereed publications (Araujo & Jacó-Vilela, 2018; Campos & Lourenço, 2019; Capella-Palacios, & Jadhav, 2020; Dadico, 2021; Dagfal, 2018; Facchinetti & Jacó-Vilela, 2019, Fierro, 2018; Fierro & Araujo, 2021; Fierro et al., 2018; Lambe, 2018; Lopez et al., 2021; Salas et al., 2019; Sant’Anna et al., 2018; Veto, 2019).

There is a distinctive characteristic in the approach to the history of psychology in Latin America in this Encyclopedia. It is precisely a *biographical* encyclopedia. The use of the biographical genre has been a constant in historiography. In the past, it could be questioned because of the wide range of perspectives that dominated it, from the almost literary story, the hagiography until the rigorous social inquiry based on diverse sources (Loaiza Cano, 2004). It could also be argued whether or not biography implies a return to individuality in history (Romero, 1945). However, the biographical genre has been recognized as one of the privileged forms of historical analysis. Indeed, at least five possible types of historiographical approaches have been pointed out, considering five differentiated objects of study:

- “a) a history of the *scientific theories* considered psychological;
- b) a history of the *individuals* who have contributed to the development of psychology;
- c) a history of psychological *techniques* (from the history of mental tests to the history of listening and interpretation, or more broadly, the history of the psychoanalytical technique);
- d) a history of psychological *practices* (from the history of applied psychology to the various interventions in the most varied fields of the discipline);
- e) a history of psychological *institutions* (understanding as such not only scientific or professional societies, but also the history of university programs, the history of journals or publishing houses, etc.)” (Klappenbach, 2006, p. 111; translation is ours).

The history or biography of relevant individuals in psychology, then, has been a common approach since at least 100 years ago. In 1912, Benjamin Rand from Harvard University published *The Classical Psychologists*. Of the 43 authors included, the vast majority were part of the philosophical “long past” of psychology. Only three authors were related to the new psychology: Wundt, James, and Stumpf (Rand, 1912).

In 1932, Carl Murchison published the famous third volume of the *Psychological Register*. In fact, it did not include biographies; its purpose was only to provide an index of the “complete academic and bibliographic records of the individual” (Murchison, 1932, p. ix). For this purpose, he selected 2,400 psychology individuals from at least 40 countries. Interestingly, he listed at least 4 Latin American countries and 32 authors: 7 from Argentina, 14 from Brazil, 4 from Ecuador, and 7 from Uruguay.

Also Robert Watson, in his well-known work *Great Psychologists: From Aristotle to Freud*, like Benjamin Rand, began with Thales, Hippocrates, Plato, and Aristotle. However, his selection of biographies already exceeded 50 individuals and it can be verified that it included the most relevant individuals of the late nineteenth and early twentieth centuries: Brentano, Wundt, Ebbinghaus, Muller, Külpe, Galton, Spencer, Morgan, Charcot, Bernheim, Ribot, Janet, Binet, William James, Titchener, Stanley Hall, McKeen Cattell, Pavlov, Watson, Kohler, Wertheimer, Koffka, Freud, Adler, and Jung (Watson, 1963).

In 1979, Raymond Fancher published his *Pioneers of Psychology*. Each chapter included one or two authors, starting from Descartes to the figures of Watson, Piaget, and Skinner (Fancher, 1979). In 2016, he had published his fifth edition, which already included a new chapter, number 13, with biographies specific to cognitive psychology (Fancher & Rutherford, 2016).

In the same direction, but with a much broader scope, was the *Portraits of Pioneers in Psychology* series. Over the course of a dozen years, it compiled almost 120 biographies, from classical figures such as Leibniz, Wundt, Watson, or Bartlett to more contemporary individuals. The first volume included 22 biographies (Kimble et al., 1991); the second, 21 (Kimble et al., 1996); the third, 20 (Kimble & Wertheimer, 1998); the fourth, 21 (Kimble & Wertheimer, 2000); the fifth, again 20 (Kimble & Wertheimer, 2003); and the sixth,

17 (Dewsbury et al., 2006). Under the same premises, soon after, *Portraits of Pioneers in Developmental Psychology* was published (Pickren et al., 2012). Just like the previous series it was promoted by the Society for General Psychology, that is, the Division 1 of the American Psychological Association. A distinctive feature of all these works is that it was heavily biased towards Anglo-Saxon authors, especially from the United States. The absence of Latin American biographies is striking, with the exception of Helena Antipoff, included in the last of the aforementioned books, in which there was also a concern to include more European biographies (Pickren et al., 2012).

Interestingly, an earlier survey of pioneers in psychology took place precisely in Latin America. In 1971, one of the Editors-in-Chief of this Encyclopedia, Rubén Ardila, published *Los Pioneros de la Psicología* (Pioneers in Psychology). The work included 13 biographies, all of them corresponding to twentieth-century individuals besides Wundt (Pavlov, Freud, Watson, Claparède, Myers, Piaget, Thrustone, Hull, Piéron, and Skinner). In addition, the work included two biographies corresponding to Latin America, José Ingenieros and Mira y Lopez. The last one, although living in Spain since he was 2 years old (he was born in Cuba of Spanish parents), developed the final part of his work in Brazil (Ardila, 1971b). Biographies of both authors, of course, are also included in our Encyclopedia.

Leonard Zusne, of the University of Tulsa, published three books that included some kind of biography. In 1975, he published *Names in the History of Psychology: A Biographical Sourcebook*, a work that included biographical sketches of 526 persons who had contributed to the development of psychology since antiquity (Zusne, 1975). In 1984, he published *Biographical Dictionary of Psychology*, which the same author considered to be a second edition of the previous one (Zusne, 1984). The criteria for the selection of the individuals who deserved a biography were similar and were based on the study previously carried out by Annin, Boring, and Watson (1968). All those names that in that study had obtained a certain score (11 points out of a total of 27) were included, in addition to some very old additions and others who died after 1967. The Latin American presence was limited to Mira y Lopez (Zusne, 1984). Finally, in 1987, Zusne published *Eponyms in Psychology: A Dictionary and Biographical Sourcebook*. The work incorporated 852 eponyms from the field of psychology and related disciplines, 60% of which were not found in other psychology dictionaries. In incorporating these terms “it presents a short biography of each eponym, the name giver, with a list of sources of additional biographical information” (Zusne, 1987, p. vii). No less than 520 biographical traces were presented.

After the second volume of the *Portraits of Pioneers in Psychology* series was published, another book was published under the title *Biographical Dictionary of Psychology*. The dictionary included more than 510 biographies, which emerged from a highly complex methodology that combined names drawn from books on the history of psychology or introductory psychology, encyclopedias, and even citation indexes (Sheehy et al., 1997). Although the encyclopedia explicitly intended to “represent the practice of psychology worldwide and includes entries on psychologists whose influence may not be particularly well-known to North American and European psychologists”

(Sheehy et al., 1997, p. ix), once again the lack of psychologists from Latin America can be seen. A couple of names can be found from Spain, Japan, France, Belgium, Italy, Greece, but not from Latin America. Not even those who were forced to leave Europe and found refuge in countries of the region (Mercedes Rodrigo, Antipof, Mira y Lopez, Waclaw Radecki, Blumenfedl, Szekely, among others, all of them included in our Encyclopedia). Naturally, this does not discredit the scope of a work that had the merit of standardizing the model of each biography and of adding some particularly useful indexes. Shortly afterwards, Noel Sheey published *Fifty Key Thinkers in Psychology*. Three important differences can be noted in relation to the biographical dictionary. First, the work was limited to only 50 authors, all of them from North America or Europe. Second, the biographies were longer. And third, the criteria by which these 50 authors were included were not made explicit (Sheehy, 2004).

Also in Latin America, a *Diccionario Biográfico de Psicología Contemporánea* (Biographical Dictionary of Contemporary Psychology) prepared by two prominent academics from the Ricardo Palma University of Peru was published. The work included biographical details and the work of more than 160 personalities related to psychology. Among them, there were 11 personalities from Peru, 8 of whom are also part of our Encyclopedia (Alarcón, Amorós Terán, Chiappo Galli, Honorio Delgado, Estrada de los Ríos, González Moreyra, Pollit Burga, and Thorne León) (Sanchez Carlessi & Reyes Romero, 2002). And once again in Latin America, the academic from the University of Nueva León in Mexico, Cirilo García Cadena compiled in 2017 the work *Great Psychologists of the World*. It included 21 outstanding international psychologists, among them 8 Latin Americans: 5 from Mexico, 2 from Argentina and 1 from Colombia. 7 of them are part of the *Palgrave Biographical Encyclopedia*: Ardila, Chavez, Cortada de Kohan, Diaz-Guerrero, Lafarga-Corona, Ribes Iñesta and Rimoldi (García-Cadena, 2017).

Well-known psychology encyclopedias have also included short biographies of people who have contributed to psychology. Thus, in 1985, the *Encyclopedia of Psychology*, edited by Raymond Corsini, included in the 4th volume, edited by William Sahakian and Robert Lundin, approximately 650 brief biographical entries. The South American authors were really very limited; only Mira y Lopez from Brazil, Plácido Horas from Argentina, and Rubén Ardila from Colombia. And even when biographies of authors from Mexico increased significantly, there were less than ten (Eduardo Almeida, Enrique Aragón, Castaño Asmitia, Ezequiel Chávez, Díaz Guerrero, Dávila García, Mercado Domenech, Ribes-Iñesta, Rafael Nuñez) (Corsini et al., 1984). With the exception of the last mentioned, all the others have entries in our Encyclopedia.

For its turn, Kazdin's *Encyclopedia of Psychology* included about 400 short biographies in its 8 volumes. Once again, the Latin American presence was reduced to small entries for Ingenieros and Mouchet, both from Argentina, and Varona from Cuba (Kazdin, 2000). Separately, in 2012 Robert Rieber edited his *Encyclopedia of the History of Psychological Theories*, which included 325 entries of approximately three different types. First, it included "subject matter entries" which "cover practically all the important theories." Second,

institutions that contributed to the development of psychology. And third, no fewer than 250 biographies. Once again, only one Latin American author can be found, Enerio Rodriguez Arias from Dominican Republic, who is of course part of our encyclopedia (Rieber, 2012).

On the other hand, we will not examine the many autobiographical histories in psychology, since the criteria for the selection and elaboration of the contributions are quite different. For this reason, we will not analyze the series initiated by Carl Murchison in 1930, *History of Psychology in Autobiography* (Murchison, 1930), which in 2002 had already published nine volumes. Nor of that series begun by Theophile Stanley Krawiec in 1972, *The Psychologists* (Krawiec, 1972), which amounted to three volumes until 1978. Not even the only volume of *Historia de la Psicología Iberoamericana en Autobiografías* (History of Ibero-American Psychology in Autobiographies) (Klappenbach & León, 2012).

It has been pointed out, in the case of a dictionary on pioneers of psychoanalysis in South America, that “their research and hypotheses were ignored by English-speaking colleagues because they wrote in Spanish and were rarely translated” (Steiner, 2015, p. xxix). The six parts into which Steiner divided his work included biographies of some of the pioneers in Argentina, Brazil, Chile, and Uruguay, many of whom are also part of our Encyclopedia: Arminda Aberatury, Virginia Bicudo, José Bleger, Angel Garma, Adelheid Koch, Marie Langer, David Liberman, Durval Marcondes, Matte Blanco, Pichon Rivière (Steiner, 2015).

In any case, a salient feature of all these encyclopedias and dictionaries is that they have hardly considered biographies of Latin American authors. In that sense, our Encyclopedia fills a gap in the international literature.

Of course, in Spanish and Portuguese there have been some outstanding antecedents to this *Biographical Encyclopedia*. In Argentina, Italo Américo Foradori (1944) had published a book that included 11 biographies of the first individuals devoted to psychology in Argentina: four belonging to what he called the “School of La Plata,” six corresponding to the so-called “School of Buenos Aires,” plus the biography of Amadeo Jacques (1813–1865), author of an early work entitled *Psychology in the Mid-19th Century* (Jacques, 1923). In fact, that work constituted the first part of the *Manuel de Philosophie à l’usage des Collèges* (Handbook of Philosophy for the use at Colleges), published in Paris in 1846 for school use. Jacques had written the Introduction and the Psychology (Jacques et al., 1846/1847). Most of those 11 names are part of our Encyclopedia (Ingenieros, Piñero, Mercante, Senet, Calcagno, Mouchet, and Korn).

Undoubtedly the most important antecedent was the *Diccionario Biográfico da Psicologia no Brasil: Pioneiros* (Biographical Dictionary of Psychology in Brazil: Pioneers), edited by Regina de Freitas Campos. The work included 200 biographies that were relevant to the history of psychology for one of the following reasons:

- “a) publications of impact in the area;
- b) pioneering activity in education and training;
- c) outstanding activity in the organization and development of important institutions in the area;

- d) importance in opening new fields for psychologists' practice;
- e) consistent and original activity in research and intellectual production, giving preference to people who meet more than one of these criteria.” (Campos, 2001, p. 21; translation is ours)

For its part, in 2018, in Puerto Rico *Psicólogos Destacados: Trayectoria Profesional y Visión de la Psicología Puertorriqueña* (Outstanding Psychologists: Professional Trajectory and Vision of Puerto Rican Psychology) was published. Only senior colleagues were included, meaning people at least 60 years old. The outstanding psychologists had to meet one of four criteria: (1) To have received the Lifetime Achievement Award from the Puerto Rican Psychological Association (APPR). (2) To have been president of APPR with a recognized trajectory in research. (3) To have received the Psychologist of the Year Award. (4) “Be internationally recognized for their research or publications in their area” (Martínez-Taboas et al., 2018, p. x). Thirty names were selected and asked themselves to write their biographical note based on a guide covering six topics. Only a small number of those 30 outstanding psychologists are included in our Encyclopedia: Bauermeister, Cangiano-Rivera, Cirino-Gerena, Herrans-Pérez, Roca de Torres, and Santiago -Negrón. This is precisely because the criteria of the two works differed.

An interesting case was the work of María Inés Winkler, *Pioneras sin Monumentos: Mujeres en Psicología* (Pioneers without Monuments: Women in Psychology), which analyzed the history of women in psychology in three countries, the United States, Argentina, and Chile. The work included biographies of 15 women, 5 from each country. The Chilean and Argentinean women included several who were born in European countries but worked in Argentina or Chile (Helena Jacoby, Fernanda Monasterio, Marie Langer, Bondiek de Guzmán, and Susana Bloch). Six of the ten Latin American women are part of our Encyclopedia, five from Argentina and one from Chile (Aberastury, Cortada de Kohan, Labarca, Langer, Monasterio, and Tobar García).

For its part, the *Diccionario de Psicoanálisis Argentino* (Dictionary of Argentine Psychoanalysis), even though it was not exclusively a biographical dictionary, but also a dictionary of terms and concepts, included numerous short biographies of psychoanalysts (Borensztein, 2014). And in a coincident direction, in 2019 Alejandra Taborda and Elena Toranzo began publishing the series *Biografías, Historia de Relaciones Significativas* (Biographies, History of Significant Relationships), which reached six volumes the following year. While the first volumes were devoted to international psychoanalysts, the last two volumes included biographies of four Argentine psychoanalysts, all of them included in our Encyclopedia: Marie Langer, Arminda Aberastury, David Liberman, and Silvia Bleichmar (Moreira & Winograd, 2020; Ostrovsky & Herrando, 2020).

In Argentina, we should also must mention as a precedent the *Enciclopedia Argentina de Salud Mental* (Argentine Encyclopedia of Mental Health), an online initiative of the Aiglé Foundation, which has now reached its ninth edition. Although most of its around 500 entries are related to concepts in the field, they have included around 15 biographies, some of them also included in our Encyclopedia: Bermann, Cortada, Krapf, Pichon-Riviére, Piñero and Reca (Fernandez Alvarez & Bregman, 2022).

There is a precedent that cannot go unmentioned even though it is not a biographical dictionary, but a dictionary of institutions, the *Diccionario Histórico de Instituições de Psicologia no Brasil* (Historical Dictionary of Psychology Institutions in Brazil). First, because the work evidenced, once again, the remarkable level of the historiography of psychology in Brazil (Jacó-Vilela, 2011). And second, because the elaboration of the entries for the 265 institutions included involved a collective work of more than 200 authors, at the same time that the writing of each entry followed common guidelines, characteristics that, as we will develop below, were analogous in our Encyclopedia.

Taking into account all these prestigious antecedents, we can proudly affirm that *The Palgrave Biographical Encyclopedia of Psychology in Latin America* constitutes a unique work of its kind, considering some of its characteristics.

First of all, its *quantitative* aspect, as there are 589 biographies in the Encyclopedia. Among the editors-in-chief, we established three central criteria for an individual to be included in the Encyclopedia. First of all, we set a *time criterion*, since we considered personalities who were deceased or who, exceptionally, were born in 1945 or earlier. A second criterion was to include individuals who had contributed to the *field of psychology*, even if they came from related fields, such as education, medicine, law, anthropology, sociology, philosophy, theology, or religion. This was quite frequent the further back in time we went, especially prominent figures from the nineteenth century and the first decades of the twentieth century. And although from the 1960s and 1970s onwards it became increasingly common for contributors to the field of psychology to have a university degree in psychology, it was also not uncommon to find people from related fields. And a third criterion, of course, related to the *relevance* of the individual. We know that relevance could be estimated by different criteria. In the Encyclopedia, we considered at least some of the following: (a) having been an individual with *relevant scientific work*, through publications in books or journals; (b) having developed recognized psychological *tests* or *techniques*; (c) having been prominent in the *teaching* of psychology, whether in university or other settings; (d) having been prominent in the *organization and development of institutions* of psychology, whether they were journals, scientific societies, professional organizations, training or assistance institutions, or others. The difficulties inherent in such a consideration were not lost on us. For one thing, the criteria of relevance in these four dimensions are indeed incomparable. For this reason, the editors-in-chief, together with the section editors, drew up possible lists which, in many countries, we submitted for evaluation to external judges. And it was interesting to note that those theoretical difficulties about the scope of relevance gradually gave way as we selected the names to be included. It was possible to see that, even among judges from different backgrounds, there was a reasonable consensus on relevant individuals from very different practices.

In several countries, some of the first psychology graduates were recognized as relevant for the paths they opened in the profession, even though many of them did not seem to exhibit a significant scientific work. In any case, it is necessary to make it clear that the list of 589 individuals included in this work, even though it seems very extensive, is by no means complete. We are

aware that the list is limited and numerous relevant individuals would deserve to have been present in the Encyclopedia. This limitation was due to three main reasons. The first, that we had to manage an encyclopedia that, when printed, had a reasonable number of pages. The second, that in the case of some initially selected individuals, it was not possible to find the author able to write his or her biography. Or even having found him or her, finally the invited author could not write the biography, in some cases due to the limitations of access to libraries, archives, and documentation centers generated by the Covid-19 pandemic. And the third, that research in the history of psychology is not yet sufficiently widespread in all the countries of the region.

A second characteristic that makes this work unique is related to the *geographical scope* of these biographies, which cover individuals from 20 countries in the region, since of the 21 countries in the region, only we have not been able to find a Section Editor for Haiti. It is often the case that many works devoted to Latin America actually focus on the study of the larger countries in the region, such as Mexico, Brazil, Colombia, or Argentina. In our Encyclopedia, there are biographies of relevant individuals from Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Puerto Rico, Uruguay, and Venezuela. This grants an enormous diversity and, if the term is allowed, a representativeness of the contributions of great individuals to the development of psychology in the region. On the other hand, the book also includes some biographies of individuals from outside the region who, even if they had not settled in the region, contributed decisively to the development of psychology in Latin America through their visits.

A third characteristic of the originality of the Encyclopedia lies in the collective and plural work with which the biographies were first conceived and then produced. In the 20 countries mentioned, we had the advice, collaboration, and follow-up of associated editors (Section Editors). Generally one per country, although there were two in Ecuador and Argentina and three in Brazil. In turn, together with these 23 associate editors, we have called on 442 authors from many different countries and regions. A couple of authors published 14 biographies each, a few 4, 5, or 6, and the vast majority only 1 biography. And of course, some biographies were written by two or more authors, in one case by six authors.

This plurality, too, helped to delineate a fourth characteristic of the work. The editors-in-chief prepared a guide for the authors that established *a set of standards common to all the biographies*. Of course, this was not intended to limit the creativity or personal bias that each author was likely to bring to each biography. Rather, we wanted all the biographies to have a few common features beyond other differences. Among these common guidelines for all the biographies, we established a common format that included the following parts:

1. Last name and then the first name of the biographed individual.
2. First name, last name, and institutional affiliation of the author(s) of the biography.

3. At the beginning, date and place of birth and date and place of death of the biographer, as precisely as possible.
4. Key words. With the indication that at least the following criteria should be taken into account: (a) country or countries to which the individual contributed; (b) area or field of activity or theoretical approach (e.g., child psychology, organizational psychology, psychoanalysis, etc.); and (c) other specificities (e.g., foundation of publications; founding of professional or scientific organizations; leading role in professional or scientific organizations; participation in the planning, organization, or management of undergraduate or graduate psychology programs in university settings; establishment of training programs outside university; creation of tests; and so forth).
5. The biography itself, for which at least the following aspects were suggested: (a) summary information on studies and academic degrees achieved, if possible with an indication of the years and institution in which he/she studied and an indication of the academic degrees and distinctions achieved; (b) paragraphs devoted to presenting his or her professional or academic career, mentioning institutions, places, written productions (books, journal articles of which the main ones may be included in the Selected Works section), and other types of achievements (founding institutions, founding societies and journals, editing them, coordinating study groups, and so forth); and (c) if possible, a final paragraph devoted to clearly indicating the contribution of the individual to psychology of his or her country or of Latin America as a whole. This paragraph should be essentially expository and avoid as far as possible the presence of excessive superlative adjectives.
6. Selected Works of the individual in APA style, up to a maximum of 10 works, as it was not possible to include complete bibliographies. Selected Works include the main books or journal articles.
7. References. Up to a maximum of 10, in APA style, which could include both references to works by the biographed individual and any other relevant secondary bibliography.
8. We also agreed on a maximum length of 1000 words, excluding keywords, main works, and references. Individuals of notable relevance could be up to 2000 words in length.
9. Considering the need to avoid misunderstandings in the appropriate names of institutions when translated into English, we agreed that the first time the biography mentions names of institutions (e.g., institution where he studied, institutions where he worked, names of journals) they should appear in the original language and immediately, in brackets, the names translated into English.

Acknowledgements

We would especially want to acknowledge all the people who have contributed to making this *Encyclopedia* possible. First of all, each of the country Section Editors. They not only contributed to the selection of most of the individuals but were also involved in the day-to-day task of monitoring and reviewing the biographies. Their work has been generous and enthusiastic. Second, of course, to the authors of the biographies. The task of reviewing the biographies, in most cases, was a really hard process. It required an initial review of an original version in Spanish or Portuguese and, subsequently, a review of the English version. In some cases, it was necessary to revise a biography two or even three or four times. The authors always did this with enthusiasm and commitment. Special thanks also go to the expert judges who were consulted and who disinterestedly contributed to the final selection of the individuals included in the biography. Special thanks also to Lic. Mildred Velasco Blancas, graduate student of Social Psychology at the Universidad Autónoma Metropolitana Iztapalapa (Metropolitan Autonomous University of Iztapalapa), also a full-time professor of English at the Instituto Politécnico Nacional (National Polytechnic Institute), who translated or revised the entries from Mexico.

And last but not least, a special thanks to the entire editorial team at Palgrave and its platform, Meteor. First of all, our appreciation goes to Ruth Lefevre, for her enormous commitment to the Encyclopedia and her constant willingness and kindness to resolve our queries, comments, and requests. Special thanks also go to Nivedita Baroi who initially collaborated with Ruth Lefevre, and mainly to Navjeet Kaur, who replaced her later. They also provided their commitment and kindness throughout the project. Special thanks also go to the editorial production team, especially Mohanapriya Caliamourthy who was always attentive to galley proofs and to the differences between first names and last names or compound last names in Spanish and Portuguese, which are different from English. The enthusiastic and highly professional support of the entire Palgrave-Springer team was fundamental for this Encyclopedia to be finally published.

A

Aberastury, Arminda

Born *Buenos Aires, (Argentina), 24 September 1910*

Died *Buenos Aires, (Argentina), 13 November 1972*

Marcela Borinsky
Universidad de Buenos Aires, Buenos Aires,
Argentina

Keywords

Argentina · Child psychoanalysis ·
Adolescence · Technique · Child libidinal
development

The trajectory of Arminda Aberastury is inseparably linked to the history of childhood psychoanalysis in Argentina. She inaugurated a new field of practices within Argentine psychoanalysis incorporating heterogeneous ideas and work styles. She translated Melanie Klein (1882–1960) into Spanish for the first time, and she published some of the first papers on children’s psychoanalysis at the *Revista Argentina de Psicoanálisis (Argentine Journal of Psychoanalysis)*. In 1948, she was in charge of teaching the first Child Psychoanalysis Course at the Asociación Argentina de Psicoanálisis (Argentine Psychoanalytic Association). She published her most important work, *Teoría y Técnica del psicoanálisis de niños*

(*Theory and Technique of the Psychoanalysis of Children*), in 1962 where she established the guidelines of clinical practice with children. She actively took part in the development of psychoanalysis in Uruguay and Brazil by lecturing, supervising analysts, and contributing with publications. Since 1974, the Departamento de niños y adolescentes de la Asociación Psicoanalítica Argentina (Department of Children and Adolescents of the Argentine Psychoanalytic Association) takes its name as a posthumous tribute to her founding work in this field.

Arminda Aberastury was born in Buenos Aires on September 24, 1910. She was the fourth daughter and the only woman of the marriage of Pedro Aberastury and Arminda Fernandez. She studied to be a teacher and earned her degree in 1929. Then, she completed her professional training as a pedagogue in the Universidad de Buenos Aires (University of Buenos Aires) in 1933. She met her future husband through her brother Federico, friend and fellow student of Enrique Pichon-Rivière (1907–1977) (Winkler & Wolff-Reyes, 2005). They had a long courtship and married in 1937 sharing love, work, and psychoanalysis since the beginning. They were both active in the process of professionalization of psychoanalysis in Argentina (Balán, 1991).

She was in charge of the translation of Melanie Klein’s chapter on the early development of the superego in children, which was published at the inaugural issue of the *Revista Argentina de Psicoanálisis (Argentine Journal of*

Psychoanalysis) in 1943. In 1948, together with Betty Garma (b.1918), they translated into Spanish the Klein's book, *Psicoanálisis del niño* (*Psychoanalysis of the Child*). The English psychoanalyst showed enthusiasm about the favorable reception of her ideas in Argentina as she expressed in a letter to Aberastury dated April 11, 1948: "As you can imagine, it satisfies and greatly comforts me to know that my book is useful for other practitioners and I am happy to know that, through you, the analysis of children is developing, and even flourishing in Argentina" (Fendrik, 1993, p. 42. Translation is mine).

In 1950, Arminda Aberastury presented the general principles of a project on the image of the body in children that would later be transformed into her first book: *El juego de construir casas. Su interpretación y valor diagnóstico* (*The game of building houses. Its interpretations and diagnostic value*). This book is generally overlooked in the history of child psychoanalysis. However, it is worth noting the way the author brings together her clinical observations highlighting the role of the libido in the structuring of a bodily self, based on the contributions of psychoanalysts away from the official canon like Paul Schilder (1886–1940) and Erik Homburger (1902–1994).

She travelled to Europe with her husband Enrique Pichon-Rivière in 1951. She personally met Melanie Klein. Later in Paris, she taught at the Serge Lebovici (1915–2000) Seminary, and she presented her research on body image at the Françoise Dolto (1908–1988) Seminary. In 1957, she travelled again to Paris where she presented a communication on the stages of child libidinal development to which she added a new phase of her authorship called "previous genital phase." This phase would be located before the anal phase articulating dentition, gait, and genitality in the infant.

In 1962, the children's psychoanalyst published *Teoría y Técnica del psicoanálisis de niños* (*Theory and Technique of child psychoanalysis*) where she established the rules that correspond to child psychoanalysis, stipulated the characteristics of the interviews with parents, the ways to diagnosis, how to set up an office, and

what games and toys to be chosen. She exemplified based on clinical cases of hers or from her collaborators, and she told the history of child psychoanalysis in Argentina as a story in which she was the main participant. At the same time, she defined a theoretical-therapeutic device for the analysis of children in private practice. She participated in the process of social expansion – which characterized this period of Argentine psychoanalysis – with the development of new therapeutic methods for the public sphere. Among them, the therapeutic groups of mothers from a preventive point of view, the need for professional dialogue with pediatricians, and the pediatric dentistry groups for children (Borinsky, 2004; García Renoso, 1990).

Although she promoted and encouraged new forms of psychotherapy and the therapeutic group work with parents, she maintained until the end of her days a determined commitment to individual practice with the child, keeping the parents away from the analytical setting. The contact with the parents was made at the beginning of the psychoanalytic treatment and only exceptionally met them again until the culmination of it. This commitment was the basis of her firm belief in the transformative potential of the child to mobilize the whole family environment.

In 1969, she participated as official speaker of the First Argentine Congress of Child and Juvenile Psychopathology held in Buenos Aires. She also was invited by Brazilian psychoanalyst Fábio Leite Lobo to teach childhood and adolescence psychoanalysis together with Mauricio Knobel and Eduardo Kalina. In Brazil, the traces of her teaching motivated several of her disciples to publish her contributions on the adolescent issue as a posthumous work.

In addition to the books already mentioned, she published an illustrated book dedicated to the lay reader about childhood games (Aberastury, 1968), two books together with Mauricio Knobel (1922–2008) and her disciples about adolescence (Aberastury & Knobel, 1971; Aberastury et al., 1971), and in two other books, she summarized her contributions to child psychoanalysis in Argentina (Aberastury, 1971, 1972). She passed away on September 23, 1971.

Adis Castro, Gonzalo

Born *Guatemala, 28 December 1927*

Died *San José, (Costa Rica), 8 June 2004*

Benjamín Reyes Fernández

Universidad de Costa Rica, San Pedro, Costa Rica

Keywords

Costa Rica · Clinical psychology, Medical psychology, Epidemiology of mental health · Founder of Psychological and Psychiatric Institutions

Gonzalo Adis Castro was born in Guatemala, but naturalized Costa Rican. His father was Greek, and his mother was Mexican (Brenes Chacón, personal communication, May 15, 2020). Gonzalo Adis Castro spent his childhood and teenage years in the province of Limon, on the Costa Rican Caribbean coast. He completed his high school studies at Liceo de Costa Rica (High School of Costa Rica), in the province of San Jose. Once he finished, he traveled to the USA to continue with his university studies (Brenes Chacón, Personal communication, May 15, 2020). In 1952, he obtained the bachelor's degree in psychology from Indiana University, and in 1957, he got his PhD degree in clinical psychology from Berkeley University, California (Brenes Chacón, personal communication, May 15, 2020; López-Core, 2013).

After returning to Costa Rica, Dr. Adis Castro developed an academic and professional career. He was the first qualified psychologist in Costa Rica (Brenes-Chacón, 2004; Flores-Mora, 2010) and, since there was no professional psychology association, in this Central America country, at the time, in order to practice clinical psychology, and on the recommendation of officials from the Hospital Nacional Psiquiátrico (National Psychiatric Hospital), he became a member of the *Colegio de Médicos y Cirujanos de Costa Rica* (Costa Rican Physicians and Surgeons Association) (Flores-Mora, 2010; Brenes-Chacón, 2017). When the *Colegio de Profesionales en Psicología de Costa Rica* (Professional Psychology Association of Costa Rica) was finally created, in 1977, Dr. Adis Castro became its first member.

On the initiative of Dr. Adis Castro, in 1957 the *Departamento de Psicología Clínica* (Department of Clinical Psychology) was founded at the National Psychiatric Hospital of the *Caja Costarricense del Seguro Social* (Costa Rican Social Security Fund; CCSS, for its initials in Spanish) (López-Core, 2013). This became the first psychology department for the public health care system in the whole country. The department combined psychological assessment activities with treatment, research, and participation in community activities. In 1979, under the direction of *Don Gonzalo*, as he was known, the residency program of the Department of Clinical Psychology was formalized, in which specialists in clinical psychology began their training in Costa Rica (Adis-Castro, 1991; López-Core, 2013). *Don Gonzalo* left the department's management and retired in 1990. Although, Adis Castro kept practicing private clinical psychology for many years until his death, being the only psychotherapist in the country for a certain period.

In the academic field, in 1957, after obtaining his PhD, Dr. Adis Castro began working in the "evaluation committee" at the *Universidad de Costa Rica* (University of Costa Rica; UCR for its initials in Spanish). This university, founded in 1940, is the oldest university in Costa Rica (González, 2014), and is the one that provided the Central American country, in many fields, including psychology, with its first scientific studies and its first professionals. At the UCR, in

1961, Dr. Adis Castro founded and became the first director of the *Centro de Investigación Psicológica* (Center for Psychological Research), which became the *Instituto de Investigaciones Psicológicas* (Psychological Research Institute; IIP, for its initials in Spanish) in 1969 (Villalobos-Pérez et al., 2015; Adis-Castro, 1994). This was the first scientific department in Costa Rica focused on psychology. It was, under his lead, that the Academic Aptitude Test was created and began to be applied. This is a psychometric, standardized test used for the admission of students to the UCR, and its first version was formulated in 1958 (Adis-Castro, 1994).

Dr. Adis Castro remained at the direction of the IIP for about 16 years (Adis-Castro, 1991). As a researcher, he made valuable contributions with studies on mental health epidemiology in Costa Rica and Latin America (e.g., Chile and Peru), and studies and reflections on clinical psychology, medical psychology, illness perception, history of psychology, and of the teaching of psychology in Costa Rica, university admission processes, among others. He participated in the first efforts to adapt and validate psychological tests in Costa Rica (Adis-Castro, 1994). In many of his studies he was an international collaborator with other researchers, such as the Chilean psychiatrists José Horwitz (1908–1978) and Juan Marconi (1924–2005).

Dr. Adis Castro was also one of first professors at the *Escuela de Psicología* (School of Psychology) at the UCR, founded in 1976 (Brenes-Chacón, 2017; Flores-Mora, 2010). He also taught courses on medical psychology, psychiatry, and clinical psychology at the School of Medicine and at the Graduate Study System of the UCR (López-Core, 2013).

After retiring, and still in his private practice, Dr. Adis Castro welcomed with openness the challenge of designing a program for the training of psychologists from a professional master's degree in a private Costa Rican university, the *Universidad de Iberoamérica* (University of Ibero America; UNIBE, for its initials in Spanish), and with which he participated until his death in 2004. On his name the UNIBE created the *Clinica de Atención Neuropsicológica* (Neuropsychological Care Clinic) (Cortés-Ojeda & Lobo, 2016).

Psychologist training

Born in Spain, naturalized Brazilian, Isabel Adrados Ruiz is an important character in the process of institutionalization and consolidation of professional psychology in Brazil, notably in Rio de Janeiro. She started University in 1936 at the age of 16. However, her training was interrupted by the beginning of the Spanish Civil War (1936–1939). Adrados was on vacation in Portugal when the conflict broke out, and only after three years, she was able to return and reunite with her family. She obtained her degree in the College of Philosophy and Letters at the *Universidad de Madrid* [University of Madrid] (1943). Later she began her psychological practice in the field of professional orientation, at the *Instituto Virgen de la Paloma* [Virgen de la Paloma Institute] (Adrados & Madruga, 2006). Adrados also graduated in nursing from the College of Medicine at the *Universidad de Madrid* (1950).

Adrados and her husband Francisco Campos (?–1982) moved to Brazil in 1951. The couple was invited by Emilio Mira y López to join the team of psychologists at the *Instituto de Seleção e Orientação Profissional* [Institute of Selection and Professional Orientation Guidance] (ISOP), an autonomous organ of the *Fundação Getúlio Vargas* [Getúlio Vargas Foundation] (FGV) in Rio de Janeiro. Adrados became the head of the Child Guidance Sector and dedicated herself specially to research Projective Techniques (Dias, 2001) while Campos assumed the position of vice-director of ISOP and head of the Professional Selection Division.

Adrados' work at ISOP was marked by an intense activity as researcher and teacher of training courses in psychological assessment, professional orientation, and psychodiagnosis, specially in the Rorschach test, on which she published six books. The first of them, entitled "*Teoria e Prática do Teste de Rorschach*" ["Theory and Practice of the Rorschach Test"] (Adrados, 1967a), became an important textbook about the instrument and has several editions in Brazil.

She published various works on the Rorschach and its relation to other personality tests – such as Emilio Mira y López's *Psicodiagnóstico Miocinético* [Myokinetic Psychodiagnosis].

Most of her works were published in *Arquivos Brasileiros de Psicotécnica* [Brazilian Archives of Psychotecnics]. One of her most important works was "*Respostas de espaço em branco no teste de Rorschach e sua correlação com o PMK e a Entrevista Psicológica*" ["Blank space responses in the Rorschach test and their correlation with the PMK and the psychological interview"] (Adrados, 1967b) that won the first Emilio Mira y López Monographic Award, from ISOP.

In the field of psychologist training, Adrados worked at the *Universidade Federal do Rio de Janeiro* [Federal University of Rio de Janeiro] (UFRJ), whose undergraduate course was created in 1964. Adrados founded the *Divisão de Psicologia Aplicada* [Applied Psychology Division] (DPA) of the *Instituto de Psicologia* [Institute of Psychology] (IP) of UFRJ (1967), psychological school service that currently bears her name (Ferreira, 2011). There she held the positions of director and internship supervisor. Dias (2001) points out that, during this period, Adrados supervised fellows from several Latin American countries, under the auspices of UNESCO.

In addition to her roles as researcher and teacher, Adrados was also involved in the politics of psychology. From 1974 to 1977, she took part in the first Plenary of the *Conselho Regional de Psicologia do Rio de Janeiro* [Rio de Janeiro Regional Council of Psychology] (CRP-RJ) and eventually became the president of the Council. Moreover, she was honored as a corresponding member of the *Academia Paulista de Psicologia* [São Paulo Academy of Psychology] (1998) and worked as a psychotherapist, focusing on psychodiagnosis.

Adrados was part of the first generation of professional psychologists in Brazil. That generation contributed to the institutionalization of psychology as a profession and to the development and expansion of this field. She played an important role in the areas of professional training, both the practical training offered by the courses and internships at ISOP and the university training at the IP/UFRJ.

He began his early studies in Santa Clara, Las Villas. In 1921, he continued his studies at the Universidad de la Habana (University of Havana) and graduated in Philosophy and Letters in 1924 and the following year he graduated in Law. In 1926 he became Assistant Professor of Historical Sciences at the Escuela de Filosofía y Letras (Faculty of Philosophy and Humanities), University of Havana. Between 1928 and 1931, he enrolled in several postdoctoral courses at the North American University of Columbia. In 1929, his book *Tratado de Psicología General (Treatise of General Psychology)* was published, which presented a systematic study of human behavior in two volumes (Agramonte, 1935), and in 1939 the first edition of his textbook *Compendio de Psicología (Compendium of Psychology)* was published (Agramonte, 1948). Both publications had a strong impact on the education of high school students in the country. In 1932 he taught several summer courses in psychology and philosophy at the University of New York and began to collaborate assiduously in the magazine *Bohemia* (Segura-Suárez, 2003).

In 1941 he obtained by opposition the university chair of Psychology, Sociology, and Moral Philosophy at the University of Havana, and under his direction the first laboratory of experimental Psychology in Cuba was founded (Bernal del Riesgo, 1955).

From 1947 to 1949, he was appointed Cuban ambassador in Mexico, where he was elected Member of the Academia Nacional de Ciencias (National Academy of Sciences), corresponding member of the Academy of Geography and History and Honorary Member of the Asociación Nacional de Abogados (National Association of Lawyers).

In 1947 he was appointed professor of Sociology and Military Psychology at the Escuela Superior de Guerra (Superior School of War) in Havana, a position he held until the *coup d'état* of March 1952.

In 1947 he became dean of the Faculty of Philosophy and Humanities at the University of Havana, and a few years later vice-rector. In August 1952 he went into exile in Mexico (de Armas et al., 1984).

On January 1, 1959, he was appointed Primer Ministro de Relaciones Exteriores (First Minister of Foreign Affairs) of the Gobierno Revolucionario Cubano (Cuban Revolutionary Government), a position he held until July when he resigned, and in May 1960, he emigrated to Puerto Rico where he taught as a visiting professor until 1969 when he was appointed professor. In 1984 at the Universidad de Puerto Rico, recinto Río Piedras (University of Puerto Rico, Río Piedras campus), he was honored for his outstanding work by the main American universities on the occasion of his eightieth birthday. He spent the last years of his life in Miami, Florida, where he died.

He was a politician, philosopher, and sociologist, but played an important role in the teaching of psychology. The program elaborated and the bibliography were based on a systematic study of human behavior. The theories contemplated are: psychology as a science of behavior and its methods, reactions, learning, and personality. He contributed to the knowledge of psychology that

was being developed at the international level, specifically the behavioral psychology of John Watson (1878–1958). He founded the first laboratory of Experimental Psychology which corresponded to the program of that course. Experiments were carried out so that students could deepen the theory through practice. He is recognized in Cuban psychology as the best exponent of the behaviorist approach (Segura-Suárez, 2003).

Aguayo Sánchez, Alfredo Miguel

Born *Ponce, (Puerto Rico), 28 March 1866*

Died *Havana, (Cuba), 30 April 1948*

María Elena Segura Suárez

Centro de Estudios Martianos, Havana, Cuba

Keywords

Cuba · Pedagogical psychology · Paidology · Education

Alfredo Aguayo completed his elementary studies in his hometown, and at the age of 13, he moved with his family to Cuba, where he finished high school education and began his university studies. He obtained his Law Degree in 1892, his Doctorate in Pedagogy in 1903, and also his degree in Philosophy and Letters in 1906, all of them at the Universidad de La Habana (University of Havana).

In 1906, he became Assistant Professor of the School of Pedagogy, and a few years later, in 1912, he became Full Professor of the Escuela de Pedagogía (School of Pedagogy) (Segura-Suárez, 2003).

He directed the chair of Pedagogical Psychology, School Hygiene, and History of Pedagogy at the School of Pedagogy of the University of Havana in 1909. In 1912, he created the first Laboratorio de Paidología (Paidology Laboratory) attached to the School of Pedagogy, where he began his research work in 1916. In the School of Pedagogy, he was professor of the course Pedagogical Psychology from 1914–1915 to 1929–1930. He was considered the most representative in the teaching of such course in the country for his knowledge of this branch of Psychology. In 1915, he assumed the position of director of the School of Pedagogy.

He was president of the Congreso Nacional del Niño (National Congress of the Child) and president of the Asociación Pedagógica Universitaria (University Pedagogical Association). He belonged to the Academia Nacional de Ciencias Pedagógicas (National Academy of Pedagogical Sciences) and was a member of the Sociedad de Geografía de Cuba (Cuban Geography Society). In 1929, the University of Havana closed its doors due to the political events of that time, so he decided to create the Pedagogical Academy of Havana in 1931. When the University reopened in 1934, he dedicated himself to research until 1938 (Bernal del Riesgo, 1955).

The University of Havana honored him as “Professor Emeritus” in 1938, and the Universidad de Puerto Rico (University of Puerto Rico) awarded him the degree of Doctor Honoris Causa in Pedagogy in 1940 (de Armas et al., 1984). In the same year, the government of Mexico awarded him the “Ignacio Altamirano” medal for teaching merit.

The main contribution of Alfredo Aguayo was in the teaching of Pedagogical Psychology, applying the main existing approaches at the international level. He was influenced by functionalism and the pedagogical approach of Paidology, whose objective was the scientific study of children in educational settings. The curriculum covered practical work aimed to the physical and mental measurement of Cuban children (Bernal del Riesgo, 1967).

The fundamental functions of the laboratory were of an experimental nature: to study the genesis and development of the mental and physical processes of Cuban children and young people, to determine varieties and types of children’s mentality, and to carry out experiments of a psychopedagogical nature. He is considered, together with Enrique José Varona (1849–1933), the founder of the teaching of psychology in Cuba.

Aguilar, Augusto

Born *Alianza, Honduras, 10 September 1935*

Rolando Ardón Ledezma
National Autonomous University of Honduras,
Tegucigalpa, Honduras

Keywords

Honduras · Industrial psychology · Institutions creation

Psychologist, graduated in 1968 from the Universidad Nacional Autónoma de Honduras,

UNAH (National Autonomous University of Honduras), being awarded as the best student of the promotion. In 1971, he completed his master's degree in Psychology through the Universidad Nacional Autónoma de México, UNAM (National Autonomous University of Mexico). In 1978, he obtained his Ph.D. in Indonesia with the thesis "Psychologist Functions in Salary Administration." Later, he completed a licensing in Pedagogy and Education Sciences in the UNAH.

He joined the Department of Psychology at the UNAH in 1967, leading it for two terms, between 1988 and 1992, before his retirement. He achieved the organization and enabling of the "Alfred Binet" classroom, contributed in the organization of the modular system of the Psychology Program and enabled post-graduate scholarships for Psychology teachers.

He was also professor of Education Science in the Escuela Superior del Profesorado Francisco Morazán (Francisco Morazan Superior Professor School), in the Academia Militar (Military Academy), and the Armed Forces of Honduras from 1979 to 1982.

He also performed different professional activities: in 1972, in partnership with the Psychologist Hilda de Lagos, he founded the first Psychological clinic of Honduras, He was co-founder of the first Industrial Psychology Office in 1976 and made the adaptation of the OTIS superior model test in 1968, through a nationwide investigation which has been used in several institutions of the country.

He worked as the official Psychologist for 16 different Honduran national soccer teams from different age categories between 1967 and 2002, starting in 1966, while he was still a last year undergraduate program student and the first professional to work as a Psychologist in the soccer branch.

He has also played an important role in the creation and institutionalization of psychology associations in Honduras. He has been a founding partner of the Asociación Hondureña de Psicólogos (Honduran Association of Psychologists), in 1976, of which he was president for

seven periods between 1976 and 1982. This association was very relevant because there was no Board of Psychologists in Honduras.

Aguilar was responsible for writing the Organic Law of the Colegio de Psicólogos de Honduras (Psychologists Board of Honduran) (1982) and the Fee of the Honduran Psychology Professional (2012). He was a founder of the Colegio de Psicólogos de Honduras, COPSIH (Psychologists Board of Honduras) in 1982, who presided over 12 non-continuous periods from 1986 to 2020, being this the outcome of the work he had begun since 1961 as a member of the group that created the Psychology undergraduate program together with Manuel Antonio Cortes, José Ángel Calix, Obdulio Chinchilla, Torrezió Chinchilla, Livio. As the President of the Psychologists Board during eleven periods, he assumed the responsibility of obtaining funds for the construction of buildings for the Board (administrative and clinical), served in loans matters and other needs of the Board members, and created more chapters in other places of Honduras.

Another important activity carried out by Aguilar was the organization of events, such as congresses, courses, and training for both psychologists and students.

Interested in the approach of the psychology of Honduras to the psychology of other places, in 1974 he founded the chapter in Honduras for the American Psychology Association.

He was head of the Departamento de Orientación y Selección de Personal del Instituto Nacional de Formación Profesional (Department of Personal Selection and Orientation at the National Institute of Professional Training) and was named as Executive Director in the periods 1982–1983 and 1994–1997.

He also had an important political action, through which he has held various positions such as Vice Minister of Public Education of Honduras (1984–1985), Deputy to the National Congress of Honduras (1990–1993 and 2002–2004), General Secretary of the Supreme Electoral Court (2004–2005), Chief Justice of the Supreme Electoral Court (2006–2009), and current advisor of the National Congress of Honduras in electoral matters.

Aguilar also serves as a consultant to Honduran institutions and companies. He is an active member of the Consejo de Expertos Electorales de Latinoamérica, CEELA (Council of Electoral Experts of Latin America), since 2009, which engages in consulting, conferences, and election observation in the countries of Latin America.

Paraguay · Character · Noetic therapy

José de Jesús Aguirre Escobar completed his elementary studies in the city of Caazapá until the fifth grade of elementary school, then went on to the Colegio Cristo Rey (Christ the King School) in Asunción at the age of 12. With the help of the Jesuits, he went to study at the Colegio San Miguel (Saint Miguel High School) in Córdoba, Argentina. In the same city, he studied philosophy. Aguirre entered the Compañía de Jesús (Society of Jesus) taking his first vows in 1941 and received priestly ordination in 1953. He also studied at the universities of Lyon, France, and Louvain, Belgium. He obtained the university degrees on Philosophy and Theology and Doctor in Psychology. In 1959 he completed his studies

in Applied Psychology at the University of Louvain (García, 2011) and then returned to his native country. In 1963 the undergraduate Program in Psychology began at the Universidad Católica (Catholic University) in Asunción, where Dr. Aguirre joined the teaching staff, thus also began both their professional and scientific work.

Many important initiatives are associated with him, including being one of the founders of academic and professional psychology and one of the first professors to teach in the country's psychology departments (García, 2011). During the first half of the 1960s, Aguirre introduced the scientific study of personality psychology in Paraguay, taking as a basis for his studies the characterological theory of the French psychologist René Le Senne (1882–1954) (García, 2012).

The Father Aguirre, one of the first professional psychologists in the country, proposed a variety of psychotherapy that he called *noetics*. Congruent with the pastoral training of its author, the model has strong roots in a vision for the human being of a spiritualist nature (García, 2012). The research on personality finds its most complete example in the studies he carried out in the 1960s, following the typology model proposed by Gerard Heymans (1857–1930) and Enno Wiersma (1858–1940), later modified by Le Senne (García, 2014). He worked with Paraguayan samples of more than seven hundred people (García, 2021) and presented his results in the book *Character and Intelligence* (Aguirre, 1966).

Aguirre's most important contributions to Paraguayan psychology were the study of the predominant characters in this country, the construction of national scales of intelligence and aptitude tests, among them the Raven, the D48, the G36, the Toulouse Concentrated Attention, Dispersed Attention, Auditory Memory, and Visual Memory tests. Also, the creation of a system for interpreting the Rorschach projective test. Likewise, the publication of psychology books for high school students (Aguirre, 1967) and the creation of a school in his hometown, Caazapá. Aguirre was a therapist and due to his contributions in terms of test scales, we can highlight his importance for the psychological evaluation in the country, training his colleagues and disciples. He also stood out for his good command of hypnosis.

Aguirre applied the theory of the Dutch philosopher Gerard Heymans and his collaborator the psychiatrist Enno Dirk Wiersma with the modifications introduced a few years later by the French psychologist René Le Senne. James O. Whittaker and Sandra J. Whittaker, renowned American psychologists, launched the fourth edition of their book *Psychology* in 1987, where they mention the works of Latin American authors with two mentions of Paraguayan authors (Aguirre, 1987; García, 2014), echoing the works of the Dr. Aguirre in his research reflected in the work *Carácter e inteligencia. Un estudio de tipología paraguaya* (Character and intelligence: A study of Paraguayan typology) (Aguirre, 1966). Needless to say, the significance of this fact, as it is an international textbook.

Aguirre was also a prolific writer, with several literary works in addition to scientific ones. His scientific works are, in addition to the aforementioned *Carácter e inteligencia* (Aguirre, 1966), *Manual de interpretación del Rorschach* (Rorschach interpretation manual) (Aguirre, 1990a), *Genética humana y el sentido de la cultura en el hombre* (Human genetics and the sense of culture in man) (Aguirre, 1977), *Psicología del amor* (Psychology of love), (Aguirre, 1993), *Terapia noética* (Noetic therapy) (Aguirre, 1990b), as well as fourth, fifth, and sixth year psychology texts (Aguirre, 1967).

His literary works are: *Pa'i Chimi* (Father Chimi), novel, *Más allá de la muerte* (Beyond death), novel, *Campesino sin tierra* (Landless peasant), novel, *Enferma de madre* (Sick of mother), novel, *Iporante mi sargento* (Okay my sergeant), war diary, *El habitante del silencio* (The inhabitant of silence), essay, *Huellas en sueño* (Traces in a dream), stories from Caazapá, *La sombra* (The shadow), short story, *15 poemas hacia la luz* (15 poems towards the light), poems, *Mundo de sombras* (World of shadows), short story, *Canto a la raíz* (A song to the root), poems from Caazapá, *De sombra a sombra* (From shadow to shadow), poems, *Azahar y poemas del olvido* (Azahar and oblivion poems), dramas, and *La incubadora* (The incubator), drama. *La incubadora* is an unpublished manuscript dealing with the relationship between intrauterine life and personality development.

The Father Aguirre was General Director of the Christ the King School in Asunción. He was also a tenured professor of General Psychology, Developmental Psychology, and Genetic Psychology at the Universidad Católica de Asunción (Catholic University at Asunción). Then, he was also the Director of the Psychological and Teaching Cabinet of the Facultad de Filosofía de la Universidad Nacional de Asunción (Faculty of Philosophy of the National University of Asunción), Director of the Centro de Investigación y Orientación Psicológica, C.I.O.P. (Center for Research and Psychological Orientation, C.I.O.P.), Chaplain and Director of the Department of Psychological testing of the Colegio Militar “Francisco Solano López” (“Francisco Solano López” Military College), Director of the “Crist the King” Professional Guidance Center. He was President of the Sociedad Paraguaya de Psicología (Paraguayan Society of Psychology) and a member of the Interamerican Society of Psychology.

Aguirre’s contributions go beyond the academic, scientific, and literary aspects, since some sculptures were erected in his hometown, due to his influences. Aguirre was a lover of nature and life, he enjoyed painting, he was awarded for his literary work *The pry* at an international level, and he was recognized Beloved Son in 1998 by the Municipality of Caazapá (ABC Color, May 5, 2007), for his permanent contribution to culture and community ventures. He was recognized at the Second University Congress of Psychology, in the city of San Lorenzo.

The main avenue in his hometown bears his name, as well as the school he founded. He died on May 3, 2002, in Asunción, a fact marked by mysticism, for having predicted to his relatives that the time of his departure was close to him.

Alarco Von Perfall, Claudio

Born *Lima (Peru) August 20, 1941*

Alfredo Zambrano-Mora

University of Lausanne, Lausana, Switzerland

Keywords

Peru · Germany · Psycholexicography

Psychologist, son of the prominent Peruvian philosopher Luis Felipe Alarco Larrabure (1913–2005), Claudio Alarco von Perfall studied at the *Pontificia Universidad Católica del Perú*

(Pontifical Catholic University of Peru, PUCP, Lima) and since 1962 he carried out complete studies of psychology, philosophy, and philology at the Universities from Freiburg and Cologne (West Germany) obtaining the Ph. D. in 1979.

At the University of Cologne Alarco has been a teacher in the philology department for more than 20 years, and also a psychologist in the psychological service of the Catholic institution Caritas, also in Cologne, treating Spanish immigrants. Although he resides in Germany permanently, every year he returns to Peru to spend a season.

Apart from his teaching work in Germany and the lectures he gives in Lima on each of his visits, Alarco has stood out as an author at the beginning of his career in the field of clinical psychology and psychological tests. As a result of a long stay in Ibiza (Spain), he published a book dedicated to the culture and psychological environment of that city.

Later, he has concentrated on the history of psychology (especially in the work of William L. Stern, 1871–1938) and especially in the field of psycholexicography, of which he is one of the few specialists both in Peru and in Latin America. Three important dictionaries are the result of his interest in psychological terminology: one dedicated to sexuality, and another two, dedicated to Individual Psychology, by Alfred Adler (1870–1937), and that of Carl Gustav Jung (1875–1961), the same ones that have had a very favorable reception in the Spanish-speaking context. The dictionaries dedicated to Adler and Jung are unique works in Ibero-American psychological literature.

During his stay in Lima, in the summer of the Southern Hemisphere, Alarco usually gives lectures aimed at the general public – organized by different cultural entities – in which he integrates philology, philosophy, and psychology, with special emphasis on Adler's theories and Jung,

Reynaldo Alarcón entered the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM) in 1945 and obtained a B.A. in 1955 and a Ph.D. in 1956. In his *alma mater*, he met who would be his teacher and the most important person in his academic life, Dr. Walter Blumenfeld (1882–1967), who taught Experimental Psychology.

Alarcón developed his teaching career at his *alma mater*, teaching courses such as School Assessment, General Psychology, and was the founder and principal professor of the chairs of Theory of Psychological Measurement, Intelligence Testing, Psychological Research Methods, and the Test Construction Seminar, among others. He was also a professor at the *Universidad Peruana Cayetano Heredia* (Peruvian University Cayetano Heredia), *Universidad del Sagrado Corazón* (Sacred Heart University), and in Arequipa at the *Universidad Nacional de San Agustín* (National University of San Agustín), both undergraduate and graduate. In recent years, he has served as principal professor at the *Universidad Ricardo Palma* (Ricardo Palma University).

Alarcón was head of the Department of Psychological Research of the National Psychopedagogical Institute (*Instituto Psicopedagógico Nacional*) of the Ministry of Public Education (1956–1964), director of the Psychopedagogical Institute of the Faculty of Education of the UNMSM (1965–1968), and head of the Department of Psychology from his *alma mater* (1969–1971, 1977). In September 1974, he assumed the presidency of the *Sociedad Peruana de Psicología* (Peruvian Psychological Society). In the same way, he was director of Evaluation of the Universities of the National Interuniversity Commission (1977–1981), director of the Office of Training of Scientific and Technological Personnel of the *Consejo Nacional de Ciencia y Tecnología* (National Council of Science and Technology) from 1984 to 1985, and general director of the *Instituto Nacional de Investigación y Desarrollo de la Educación* (National Institute for Research and Development of Education) from 1985 to 1987.

He was also president of the First Peruvian Congress of Psychology (Alarcón et al., 1976), of the XVII Inter-American Congress of Psychology (Lima, 1979) and Honorary President of the XXIX Inter-American Congress of Psychology (Lima, 2003). In 1992, the *Colegio de Psicólogos del Perú* (Board of Psychologists of Peru) awarded him the “National Prize for Psychology” and in 1998 the “Area Prize for Psychological Research.” In 2000, the same institution awarded him the “Millennium Psychologist” Award, recognizing him as the most important Peruvian psychologist of the twentieth century. A year later, the Ricardo Palma University awarded him the degree of doctor *honoris causa*, and in 2015, he received the award from the Rubén Ardila Foundation for Scientific Research in Psychology.

One of his main areas of research was psychometric research. He conducted a study on the relevance of the intelligence test P.V. by Th. Simon (1873–1961) for Peruvian schoolchildren from popular areas (Alarcón, 1951), studied the various components of intelligence (verbal and nonverbal) with the California Mental Maturity Test, Abbreviated Form, Intermediate Series, 1950 (Alarcón, 1961), and the quality and

problems of personality adjustment in Lima schoolchildren (Alarcón, 1962). Thanks to these investigations, Alarcón received the National Prize for the Promotion of Culture “Toribio Rodríguez de Mendoza” (1965).

Alarcón has studied the history of psychology in Peru in repeated publications, also addressing the development and present state of the discipline at the Latin American level (Alarcón, 1997). Proof of this are his contributions about the theoretical orientations of Latin American psychology, its main methodological characteristics, and the study of the contributions of its main figures (especially, his teacher Walter Blumenfeld). Another area of interest has been the reflection on what psychology has done and what it can do in the study of human behavior in situations of poverty. His central concern has been to combine the complexity of psychological phenomena with a rigorous methodology that guarantees the verification of the processes involved (Jáuregui et al., 2015).

In the last years of his life, he actively worked on studies on the psychology of happiness and the ethnopsychology of Peruvians. For Alarcón, positive psychology is the study of internal world, focusing on the so-called positive phenomena such as joy, well-being, gratitude, love, and happiness. Thus, positive psychology rests on the scientific method that allows knowledge of the internal world through its objective expressions, collected through scientific inference. On the other hand, Alarcón’s ethnopsychological work is located within this Latin American line of research, focusing on the national identity and the psychology of Peruvians. The result of this work is his book *Psychology of Peruvians in time and history* (Alarcón, 2017).

León (2003) has pointed out four basic features of Alarcón’s psychological thought: (1) his obsession with objectivity, (2) his insistence on the human being, (3) his social commitment, and (4) the philosophical streak of his work. Alarcón’s work encompassed various themes with a common note in all of them: his concern for doing psychological research, with all the rigor of the scientific method, with a wide and deep use of

quantitative methods and with a great social commitment (Caycho-Rodríguez, 2013).

Alberini, Coriolano

Born in Milan, Italy, November 27, 1886

Died in Buenos Aires, Argentina, October 18, 1960

Clara Alicia Jalif de Bertranou
Universidad Nacional de Cuyo/CONICET,
Mendoza, Argentina

Keywords

Argentina · Philosophical psychology ·
Axiogeny · Logogeny

Alberini's parents emigrated from Italy to Argentina a few months after his birth, settling in the city of Buenos Aires. He attended elementary school at School No. 1 Casto Munita in the Belgrano neighborhood and high school at the Colegio Nacional de Buenos Aires (Buenos Aires National High School), in the same city. In 1906, he simultaneously enrolled in the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) and in the Facultad de Derecho y Ciencias Sociales (Faculty of Law and Social Sciences), both at the Universidad de Buenos Aires (University of Buenos Aires). In the latter, he

studied up to the fourth year and finally opted for philosophy. He graduated as a professor of philosophy in 1911. Between 1912 and 1924, he edited the *Revista de la Universidad de Buenos Aires* (Journal from the University of Buenos Aires). He was vice-dean of the Faculty of Philosophy and Humanities at the University of Buenos Aires between 1921 and 1923 and dean in three periods: 1924–1927; 1931–1932; and 1936–1940. He was also vice-rector on two occasions: 1928 and 1940, although he also served as rector between 12 May and 16 October 1941.

He began teaching at the university in 1918 as an assistant lecturer in Psychology II. He later became a full professor of Psychology II and Introduction to Philosophy. He also taught logic, and gnoseology and metaphysics at the Facultad de Humanidades y Ciencias de la Educación (Faculty of Humanities and Educational Sciences) at the Universidad Nacional de La Plata (National University of La Plata), from 1921 and 1923, respectively. His work extended to the Faculty of Law and Social Sciences at University of Buenos Aires, where he taught a philosophy course for incoming students. On the other hand, he promoted the modification of the curricula of the Faculty of Philosophy and Letters, by structuring the programs with new courses. He was a member of the University Reform Movement (1918). After 1939, with the creation of the Universidad Nacional de Cuyo (National University of Cuyo), he advised the authorities on the courses required for philosophical studies. Such university organized the *I National Congress of Philosophy* in 1949 in which he acted as vice-president of the Committee of Honour and Technical Secretary. In 1946, for health reasons, he had resigned his professorships (Pró, 1960).

He was a member of editorial boards, public and private associations, and institutions, in whose creation he collaborated, such as the *Colegio Novecentista* (Noucentista Society), where he wrote the *Manifiesto Liminar* (Preliminary Manifesto), the *Academia de Filosofía y Letras* (Academy of Philosophy and Humanities), and the *Sociedad Kantiana* (Kantian Society) in Buenos Aires in 1929 and one of the founding members in 1930 of the *Sociedad de*

Psicología de Buenos Aires (Buenos Aires Society of Psychology). He was also member of the Editorial Board of the *Journal de Psychologie Normal et Pathologique* (Journal of Normal and Pathological Psychology), founded in 1903 in Paris by Pierre Janet (1859–1947) and George Dumas (1866–1946); of the journal *Nosotros* (Ours), a cultural magazine from Buenos Aires edited from 1907 to 1943; and contributor to the *Enciclopedia Italiana* (Italian Encyclopedia), of which Giovanni Gentile (1875–1944) was the editor. Alberini was official delegate of Argentina to the *International Congress of Philosophy* (Harvard University, Boston, 1926); Doctor *Honoris Causa* of the University of Leipzig (1937); and member of the *Instituto de Psicología* (Institute of Psychology) of the Faculty of Philosophy and Humanities at the University of Buenos Aires, in 1931, where he was responsible for the Section Philosophy and Psychology (Gotthelf, 1969). He was recognized as Officer of the Orden Nacional de la Legión de Honor (National Order of the Legion of Honour) in Paris, 1929, and Commander of the Crown of Italy in 1941, among other national and international distinctions (Pró, 1960).

During his formative years, positivist perspective still predominated, but Alberini never adhered to these ideas, although he was not unaware of the merits of scientific advances. He can be considered one of their first critics of positivism even before obtaining his degree. The human being was not an accessory or secondary phenomenon of physical-mechanical processes. In this sense, he was nourished by readings that included Kant (1724–1804), Nietzsche (1844–1900), Dilthey (1833–1911), the German neo-Kantians, Henri Bergson (1859–1941), Charles Renouvier (1815–1903), Maurice Blondel (1861–1949), Ernst Mach (1838–1916), Léon Brunschvicg (1869–1944), Émile Meyerson (1859–1933), Paul Langevin (1872–1946), Federigo Enriques (1871–1946), Émile Boutroux (1845–1921), Octave Hamelin (1856–1907), Benedetto Croce (1866–1952), Giovanni Gentile (1875–1944), William James (1842–1910), Félix Krüger (1874–1948), George Dumas (1866–1946), Eduard Spranger (1882–1963), Wilhelm Wundt (1832–1920), and Harald

Höfding (1843–1931), among various philosophers, psychologists, and epistemologists, contributing with their own points of view.

He began to write papers and essays during his university studies as part of his academic requirements, some of which were published early on, such as “El amoralismo subjetivo” (Subjective amoralism, 1908), “El pragmatismo” (The pragmatism, 1910), “La pedagogía de William James” (The pedagogy of William James, 1910), and “La teoría kantiana del juicio sintético a priori” (Kantian theory of a priori synthetic judgment, 1911). Later, when he was a student of Horacio Piñero (1869–1919), he wrote “Determinismo y responsabilidad” (Determinism and Responsibility), a monograph published in 1916 in the book *Trabajos de Psicología Normal y Patológica* (Works on Normal and Pathological Psychology).

In the first decades of the twentieth century, psychology was part of philosophical studies, a period that has been characterized as the stage of “philosophical psychology,” situated between 1916 and 1941 (Klappenbach, 2006). At the University of Buenos Aires two courses were taught. The first one dealt with clinical and physiological studies and the practice of experimental methods. In the second, higher mental processes, their relations to other philosophical disciplines, and their pedagogical and social applications were analyzed (Klappenbach, 2006). Thus, when competing in 1919 for the position of assistant professor of Psychology II, Alberini wrote a paper that is the most representative of his thinking on the subject, which he places within biological psychology, “Introducción a la axiogenia” (Introduction to axiogeny), published in 1921 (Alberini, 1921/1973d). The word *axiogeny* is a neologism meaning the genesis or origin of *value*, as opposed to *axiology*, which for Alberini was the study of values from a deontological point of view.

In contrast to positivism, which had extended the mechanical interpretation of facts to the social, psychological, and spiritual world, axiology establishes a fundamental difference, for the spiritual and cultural world are teleological, aim at ends, and are susceptible to change, according to human freedom. Alberini developed six *theses*:

1. axiological psychology, in order to contribute to the solution of the conflict between logicists and psychologists, must investigate the axiological elements of knowledge in order to discern the axiological from the objective. Only in this way can rationality be determined;
2. evaluation is not peculiar to man, but to all beings and therefore it can be unconscious;
3. the problem of value is above all psychological and biological;
4. through the notion of value, biology is reduced to psychology;
5. personality is not an epiphenomenon;
6. only a profound examination of the axiological aspect of judgment will make it possible to overcome subjectivism and thus to found autonomous thought. (Alberini, 1921/1973d, p. 150)

Knowledge, both animal and human, has a biological origin and function. Value is, on the other hand, any teleological or directional attitude, conscious or unconscious, motor or contemplative. It resides in the mind, animal, or human. All living beings, including plants, evaluate, so that the genesis of value is in the mental life and is confused with it; the mental is the essence of life itself. Thus, all organic individuality is mental. *Axiogeny* and *psychogenesis* are two sides of the same coin. But individuality needs to persist, and this is made possible by memory, the most general feature of living matter. It is in turn a phenomenon identical to finality and individuality. For Alberini, the definition of life is psychological, since memory, individuality, heredity, and organic teleology can be identified.

Alberini emphasized that vital phenomena are characterized by the process of irritability, the primordial note of the protoplasm. This is a rudimentary form of sensibility, which some authors use indifferently. It consists in the faculty of reacting to external or internal stimuli by modifying its own form, position, or intensity of the vital processes. Its purpose is to protect the cell against what is harmful to it and to promote nutrition and growth, as well as to ensure the preservation of the species. It is a teleological property which also applies to plants.

Biogenic and psychogenesis are identical terms and psychogenesis implies *axiogeny*. Life has its first manifestation in the elective character of irritability or the ability to react to stimuli. The organism, in order to live, selects, and this process

is already present in plants, as evidenced by the chlorophyll function. If life is a psyche, its main feature lies in evaluation. Thus, life cannot have an exclusively mechanical and utilitarian explanation. Its adaptation to the environment is not passive or purely conservative, as it tends to surpass or improve itself: Its perpetuation supposes a selection of stimuli, where there is always evaluation, and this evaluation is a function of the organic *telesis* (Alberini, 1921/1973d).

On the basis of these characterizations, Alberini considered that knowledge is not necessarily conscious. It would probably be impossible to state at what moment in phylogenetic evolution the consciousness of individuality appears, but it is known that in lower beings there is a trophic craving or need for food, and this supposes an evident discriminating aptitude that is the origin of knowledge (Alberini, 1921/1973d). Conscious or unconscious, knowledge is a modality of the mind, and already in irritability there is an embryonic form of it.

On the other hand, consciousness exists in many lower beings and, obviously, in human beings. Its first manifestation is inner hedonic perception, for pleasure and pain presuppose consciousness. In turn, hedonic consciousness perceives in the form of judgment, of vital affirmation, prior to all conceptualization. Alberini stated: “Undoubtedly consciousness is, fundamentally, a judgmental activity, but not all judgmental activity is consciousness. The illusion lies in forgetting that consciousness is judgment about judgments, but these, in the form of tendencies, i.e., motor values, may be prior to the emergence of consciousness. When consciousness emerges in the phylogenetic and even ontogenetic line, it encounters a complex of teleological activities which, strictly speaking, are already lived judgments. Therefore, as we see it, judgment is prior to representation, or rather, there is no representation that is not judgment. Representation exists only in the form of virtual or explicit judgments” (Alberini, 1921/1973d, p. 183). In this sense, representation is a more or less stable system of qualities organized by the vital thesis in the form of attention to life.

Attention, conscious or unconscious, is an abstractive faculty. Abstraction is something

connatural to life itself, for the aforementioned irritability is the germ of abstraction and a distant ancestor of human mentality. Judgment supposes this selective activity of abstraction in the movement toward the vital thesis.

For Alberini, value in its most elementary form is expressed in a vital reaction. From this axiogenic background, *logogeny* (*logogenia*), rationality, is born, but when the biological evolution culminates in the form of personality, *logos*, despite being ulterior, ends up penetrating, organizing, and founding the same value pathway. Rationality is its crowning achievement and is in turn the only instance capable of explaining this process, which the human being can no longer divest himself of. There is an ascending sense in which *logos* is the essence of the human personality and is the supreme value, capable of recognizing and creating them (Alberini, 1921/1973a).

Human life is a unity where “biological individuality becomes self-consciousness, i.e. personality,” which is also “efficient self-consciousness.” Personality is the center of freedom, which is always someone’s, i.e., subjective. It is also always limited because it is given in space-time. This personality is made up of freedom and an axiological form. More concretely, it is society that transforms psychological individuality into a person, and this in turn is projected to the objective and universal in the moral order and in culture, within a historical environment that encourages communities and nations (Alberini, 1941/1973e).

Alberti, José León

Born *in Buenos Aires, Argentina*

Died *in Buenos Aires, Argentina*

Lucia Rossi

Facultad de Psicología, Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Argentina · Experimental psychology · Psychometrics · Laboratory · Labor Laws

Head of the Laboratorio de Psicología Experimental (Laboratory of Experimental Psychology), of the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities), at the Universidad de Buenos Aires (Buenos Aires University), since June 1926. First, to accede to that office, in June 1919 Alberti competed for the Assistant Professor position, in charge of experimental activities at the laboratory, and in May 1922, he was admitted as Vice Head of that laboratory (Gotthelf, 1969). He taught the practical course with topics on nervous tissue, brain and its localizations, sensibility – cutaneous, visual, auditory, and gustatory-cenesthetic – and activity.

Some of his main publications were the following: *Psicocronometría experimental: reacción refleja y reacción voluntaria. Tiempo en que se cumplen algunos procesos psicofisiológicos* (Experimental psychochronometry: reflex reaction and voluntary reaction. Time in which some psychophysiological processes are fulfilled) (Alberti, 1921), *Psicofisiología experimental: Un nuevo esfigmo-termo-pletismógrafo* (Experimental Psychophysiology: A new sphygmo-thermo-plethysmograph) (Alberti, 1922), *Búsquedas experimentales acerca de los fenómenos psicoeléctricos* (Experimental research on psycho-electrical phenomena) (Alberti, 1935), and *La actividad eléctrica del cerebro humano* (The electrical activity of the human brain) (Alberti, 1938).

From 1930, at the Instituto de Psicología (Institute of Psychology) directed by Enrique Mouchet (1886–1977), he was responsible for the psychometry section, while continuing with the Laboratory activities (Falcone, 2015). His work continued to be published in the Journal of the Institute, *Anales del Instituto de Psicología* (*Annals of the Institute of Psychology*). In addition, in 1931 Alberti compiled the papers that reflected “the teaching and research activity of the Laboratory...” and published them in the Archives of the Laboratory of Psychology in a single issue, where many of his articles were collected (Gotthelf, 1969).

He devoted himself to the experimental investigation of electrical phenomena, in the psychometric field, using psychotechnical measuring devices. In an attempt to achieve accurate

measurements, Alberti sought to adapt laboratory equipment, overcome their errors, and reach non-fallacious conclusions in the research. He succeeded in introducing modifications to the Lehmann plethysmograph that allowed researchers to overcome difficulties such as keeping the temperature of the measuring instruments constant (Alberti, 1922).

From 1922 to 1931, he was Head of the Psychology Laboratory at the Instituto de Psiquiatría (Psychiatric Institute) of the Hospital Nacional de Alienados (National Mental Hospital) in the city of Rosario. This institution, directed by Dr. Lanfranco Ciampi (1885–1963), was the headquarters of the Child Psychiatry Chair, Experimental Psychology and Psychiatry, of the Faculty of Medical Sciences at the Universidad Nacional del Litoral (Litoral National University) in the city of Rosario, Santa Fe province (Papini, 1978). With Dr. Arturo Mo (1884–1944), they organized the Laboratory and the practical part of the courses using the Mental Recorder designed and created by both of them (Mo & Alberti, 1922). The *Boletín del Instituto Psiquiátrico de la Facultad de Ciencias Médicas de Rosario* (Bulletin of the Psychiatric Institute, Faculty of Medical Sciences, Rosario), an organ of diffusion of the institutional activity, contains several of his publications published between 1929 and 1931. In these texts, Alberti equated psychotechnics with psychometry (Rossi, 2005).

In 1926, he was appointed Head of the Laboratorio de Psicofisiología (Psychophysiology Laboratory) in the Labor Legislation course, at the Facultad de Ciencias Económicas (Faculty of Economic Sciences), University of Buenos Aires. He was called by the Socialist congressman Alfredo Palacios (1880–1965) who was the Professor of that Chair. Alberti organized that laboratory into three sections: (1) Psychochronometry, where he used the Mental Recorder created with Dr. Arturo Mo; (2) Psychophysiology, where he applied the Sphygmograph-Thermo-Plestimograph, a device of his own design that measured pulse-breathing and mental processes; and (3) Psychodynamics, where Mosso's ergograph was complemented with myographs of the forearm. In his course, he worked on thematic novelties such as physical and psychological fatigue, affective life and

physiological processes, and psychic phenomena. The students culminated the course with a monograph that was published by the Student Association, as a way of contributing to the knowledge of modern working conditions in workshops and factories.

For the study of fatigue at work *in situ*, in partnership with Alfredo Palacios, he embarked the Laboratory's instruments on the boat *El Pampero*. The aim of that task was to scientifically support the parliamentary debate for the 8-h workday labor law, which was finally passed in 1929 (National Law 11.544). José Luis Alberti personally directed the field research of the study of labor fatigue among the workers of Obras Sanitarias de la Nación, in the Buenos Aires neighborhood of La Boca. Three measurements were taken daily: before the start of the workday, during the workday – every 3h – and at the end of the workday. Fatigue values were measured and quantified with the Mosso Ergograph, among other instruments. The study showed an exponential increase in the tendency to accidents after 8 h of work.

With the beginning of the *coup d'état* in 1930, he was removed from his institutional university positions.

In 1930, he presented, in coauthorship with Lanfranco Ciampi, "Reflex psychogalvanic" at the Second Latin American Conference of Neurology, Psychiatry and Legal Medicine in Rio de Janeiro and "The psychogalvanic reflex in some dementia states" at the Society of Neurology and Psychiatry of Buenos Aires.

In 1933, in the chair of Psychiatric Clinic at the Hospicio de las Mercedes (Hospice of the Mercedes), whose tenured professor was Gonzalo Bosch (1885–1967), he was appointed Head of the Laboratorio de Psicopatología (Psychopathology Laboratory) and taught the Psychopathology course. He had already worked with Bosch the Psychiatric Institute in the city of Rosario.

In the prominent work *La Psicología en la República Argentina* (La Psicología en la República Argentina) (Foradori, 1935), José León Alberti stands out as one of the signatories of the Foundation Act of the Society of Psychology. He was also appointed Treasurer between 1930 and 1932. In the Public Sessions, he presented the

paper *Exploración gráfica de la atención en algunas psicopatías y reflejo psicogalvánico* (Graphic exploration of attention in some psychopathies and psychogalvanic reflex) in coauthorship with Ciampi. In October 1932, he was appointed Secretary of the Society for the following biennium, where he debated with Osvaldo Loudet (1889–1983) and Leon Jaschewsky.

He was one of the main figures of experimental psychology conceived as a laboratory activity. He placed psychology in continuity with physiology, in which the psychic phenomenon cannot be studied in isolation by itself, but in relation to the anatomical-physiological structure, to the biological mechanism that gives rise to it.

Albizu-Miranda, Carlos

Born on September 16, 1920 in Ponce, Puerto Rico (PR)

Died on October 6, 1984 in Houston, Texas, USA

Irma Roca de Torres

University of Puerto Rico, Río Piedras, San Juan, Puerto Rico

Keywords

Puerto Rico · Tests and measurements · Founder of Graduate University

Carlos Albizu-Miranda studied his elementary school in continental United States of America (USA), but he completed his high school education in his native town at Ponce High, a highly regarded public school in Puerto Rico. Immediately, he entered the University of Puerto Rico, Río Piedras Campus, where he graduated with Bachelors of Arts in Education degree in 1943 with a double concentration in psychology and history. After graduation he joined the US Army and served his compulsory time in World War II as an Assistant Psychologist.

After the war, in 1946, he registered at the University of Minnesota to pursue graduate studies in Clinical Psychology, but could not finish his degree due to personal reasons. He returned to Puerto Rico and worked at the Office of Vocational Rehabilitation of Veterans Administration, first administering psychological tests to veterans and later as director of the Office. In 1950 he returned to his graduate studies, this time at Purdue University at Indiana, where he obtained an MA in Experimental Psychology in 1951 and a PhD in Clinical Psychology in 1953.

After his graduation he returned to Puerto Rico, becoming among the first clinical psychologists in Puerto Rico with a doctoral degree. Only Teobaldo Casanova had finished earlier, and Jorge Dieppa also finished in 1953. Immediately after his graduation from Purdue University, he joined the teaching staff of the Department of Psychology at the Faculty of Social Sciences of the University of Puerto Rico in Río Piedras (UPR-RP) teaching undergraduate social sciences students. UPR-RP at that time did not offer graduate studies in Psychology. He was responsible for teaching a laboratory course in experimental psychology and also mentored students who were planning to continue graduate studies in Psychology in the USA.

He was very excited about developing a graduate program of studies in psychology in Puerto Rico and participated in numerous committees at UPR-RP. With that aim in mind, his main interest was to train psychologists in Puerto Rico to treat our people taking into consideration our cultural context. At this time, it was very important for him

to develop a graduate program in Psychology that would take into consideration diversity and socio-cultural differences of Puerto Ricans (Albizu-Miranda & Matlin, 1967; Prewitt-Díaz, 2010).

Discouraged by the time it was taking to develop the Psychology Graduate Program at UPR-RP, he organized with Norman Matlin an independent professional school of Psychology in 1966, the first in Puerto Rico and the Caribbean to offer a master's degree in Clinical Psychology (Santiago-Negrón et al., 2006). This professional school, Psychological Institute of Puerto Rico (*Instituto Psicológico de Puerto Rico*), is today known as Carlos Albizu University (CAU) and graduates the majority of psychologists in Puerto Rico. It has a second campus at Miami, FL, which is one of the institutions that graduates most Hispanics with doctoral degrees in the USA. In 2015, it opened a third campus at Mayagüez, PR.

Albizu-Miranda dedicated most of his time to developing this university, its curricula, its research program, its aims and objectives, and its accreditation by APA, in summary everything needed for the development of an excellent academic center (Ardila, 1985). He believed that the development of a graduate program in Psychology in Puerto Rico was critical because he saw Puerto Rico and Puerto Rican Psychology as a bridge between Psychology in the USA and psychology in Latin America (Ardila, 1985).

According to Salvador Santiago-Negrón and his colleagues (2006), the purpose of CAU was to develop clinical psychologists at master's level with the adequate skills to treat the Puerto Rican population taking into consideration its bio-socio-cultural background. Today both institutions, at San Juan and Miami, are accredited by APA and offer multiple master's and doctoral degrees in Psychology and other disciplines.

Dr. Albizu-Miranda's work influenced other areas besides Puerto Rico. He helped organize the National Hispanic Psychological Association, today called National Latino/a Psychological Association, and was its first president from 1980 to 1982. He actively participated in APA, where he was a fellow, and in the Interamerican Society of Psychology. He was a visiting

professor at the University of Wisconsin and at the University of Maine.

Many organizations have recognized Carlos Albizu-Miranda's work (Roca de Torres, 2006). Among them, in 1978 the National Coalition of Organizations for Human Services and Mental Health bestowed on him an award for his contributions to mental health. The following year, the Puerto Rico Psychology Association gave him an award for his contributions to Psychology development in Puerto Rico. In 1980, APA recognized him for his contributions to education in Psychology in Puerto Rico and the Caribbean. He was also recognized for these contributions by the Hispanic Psychological Association, today named Latin(a) Psychological Association (Wennerholm, 1985). Posthumously, in 1987 he received the Interamerican Award in Psychology, for his contributions to the Hispanoamerican Psychology (Roca de Torres, 2006).

Carlos Albizu-Miranda's life is a story of love between this Puerto Rican psychologist, his discipline, and the people of Puerto Rico (Albee & Santiago-Negrón, 1987; Boulon, 1990). Those of us who were his students remember him for his demanding academic requirements but his warm interest in our development as human beings and our commitment to our community. As he always said "besides knowledge there is always love."

Albuquerque, Therezinha Lins de

Born *in Recife (Brazil), in 1926*

Maria Cláudia Novaes Messias and Ana Maria Jacó-Vilela
State University of Rio de Janeiro (UERJ), Rio de Janeiro, Brazil

Keywords

Brazil · School psychology · Educational guidance

Therezinha Lins de Albuquerque studied pedagogy at the Faculdade de Filosofia (Faculty of Philosophy) at the Universidade de Recife (University of Recife), now the Universidade Federal de Pernambuco (Federal University of Pernambuco), graduating in 1949. Two years later, in 1951, she moved from Recife to Rio de Janeiro, and in 1952, she started an internship at the Centro de Orientação Juvenil (COJ) (Youth Guidance Center).

This institution had been created by the Ministério da Educação e Saúde (Ministry of Education and Health), in 1946, as part of the Seção de Orientação Social (Social Orientation Section) of the Divisão de Proteção Social (DPS) (Social Protection Division) of the Departamento Nacional da Criança (DNCR) (National Children's Department), and was planned by Emilio Mira y López and Helena Antipoff, with the collaboration of Elisa Dias Veloso, who was the director until 1967. It attended adolescents, later also children, providing psychological diagnosis, professional orientation, and psychotherapy, as well as family orientation. It was the first public youth guidance clinic in Latin America, where interdisciplinary work was carried out, and it functioned as an important internship and training field for professionals in cooperation with other assistance, teaching, and research institutions. From 1960 on, she intensified the use of psychotherapy, mainly of analytical nature, and group attendance, besides the use of psychodiagnostic tests such as

the Thematic Apperception Test (TAT), the Rorschach, the Myokinetic Psychodiagnostic (PMK), the My Hands Test, and the Binet Test. In 1952, Therezinha was appointed as an education technician by the Ministério da Educação e Saúde (Ministry of Education and Health), and she remained working at COJ. In 1968, when Elisa Dias Veloso stepped down, she took over the coordination of COJ, remaining there until 1977.

At the same time, at the request of Anísio Teixeira, then director of the Instituto Nacional de Estudos Pedagógicos (INEP) (National Institute of Pedagogic Studies) of the Ministério da Educação (Ministry of Education), where she was originally assigned, Therezinha took over the Psychology Office in 1955, in which he worked with Maria Helena Novaes de Mira, coordinating it until 1967. This was part of a pilot project of INEP, implemented in a school in Rio de Janeiro, the Guatemala School, with the objective of offering, besides the regular curriculum, intellectual, emotional, and social assistance to the students and their families. It started its activities in 1955, by applying psychological tests to the students, at the request of the teachers.

When Therezinha took over the direction of the Gabinete de Psicologia Psychology Office, she implemented changes in its profile, proposing that the results of the tests would be part of a set of tools that would include a psycho-pedagogy service with orientation to the teachers' activities. Its main objective was to develop a work that would take into consideration a global view of the child, including the social context, the family, and the community, in addition to the school, to include a broad understanding about the potentialities of the students and centered on the relationship between them and the teachers. After these changes, the Psychology Office was renamed as Serviço de Orientação Psicopedagógica (SOPP) (Psychopedagogical Guidance Service), also including a medical and a social service professional, in 1956. However, it was extinguished by INEP in 1967. This experimental project was a pioneer of school psychology in Brazil and became a center of internships in both teaching and psychology, coming from the first psychology classes at the Pontifícia Universidade Católica do

Rio de Janeiro (PUC-RJ) (Pontifical Catholic University of Rio de Janeiro). In 1954, she started her teaching career as a psychology professor at the Social Institute of the School of Social Service at PUC-RJ, and between 1958 and 1961, she became a full professor of the psychology course at the same university, the first one in the country. From 1958 to 1960, she worked, still at PUC-RJ, in the Specialization Course in Educational Orientation. Her experience in educational orientation led her to give courses on the theme in Minas Gerais, in 1957, and in Recife, Pernambuco, in 1963.

In 1972, she was a teacher in the IV Specialization Course in Pediatrics at the Instituto Fernandes Figueira (Fernandes Figueira Institute), of the Fundação Oswaldo Cruz (FIOCRUZ) (Oswaldo Cruz Foundation), an organ of the Ministério da Saúde (Ministry of Health) that, in 1969, after the extinction of the DNCr, took over the COJ as one of its organs. She participated as teacher of clinical psychology and internship supervisor of the Specialization Course in Clinical Psychology of the Instituto de Psicologia Aplicada da Pontifícia Universidade Católica do Rio de Janeiro (PUC-RJ) (Institute of Applied Psychology of Pontifical Catholic University of Rio de Janeiro), in 1976, in agreement with the Centro de Estudos de Antropologia Clínica (CESAC) (Center for Studies in Clinical Anthropology), created in 1972, with other collaborators. She was a teacher at the Instituto de Psicologia (Psychology Institute) of the Pontifícia Universidade Católica do Rio Grande do Sul (PUC-RS) (Pontifical Catholic University of Rio Grande do Sul) in the Extension Course about “Supervision in Psychology” and in the Specialization Course in School Psychology, in 1984. Between 1985 and 1986, at the same PUC-RS Institute, he taught courses in the Specialization Courses on “Supervision in Psychology,” “School Psychology,” and “Psychotherapy of the Adolescent.” As a result of her work and experience, Therezinha was part of the study group of the Associação Brasileira de Psicologia Aplicada – ABPA (Brazilian Association of Applied Psychology) for the elaboration of a document about the training of techniques in the field of clinical psychology, in 1973. She was also part of the group of

the Associação Brasileira de Psicologia Escolar e Educacional – ABRAPEE (Brazilian Association of School and Educational Psychology), in Rio de Janeiro, between 1991 and 2001. She published three books, dealing with the experience of the Escola Guatemala (Guatemala School) and the SOPP. Therezinha has also worked in the formation of the Conselho de Psicologia (Psychology Council) system, being elected secretary in 1974 and, between 1977 and 1979, elected the first president of CRP-5, in the first election of Conselho Federal de Psicologia (CFP) (Psychology Councils) in Brazil. In 1980, she was elected vice president of the Conselho Federal de Psicologia (CFP), and still in 1980, she was appointed to represent the CFP at the VII National Health Conference. Therezinha retired from INEP in 1983, but she continued her teaching activities, as well as her activities of psychological care and supervision in clinical and school psychology in her private office, which she had started in 1969, until 1995.

Department of Psychology, Universidad de las Américas Puebla (UDLAP), San Andrés Cholula, Puebla, Mexico

Keywords

Mexico · Neurosciences · Psychophysiology of language

Víctor Alcaraz enrolled at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) to study psychology in 1959 (Parra et al. 2013). During his studies at the UNAM, he was part of the group “Galileo Galilei” together with Serafin Joel Mercado Doménech (1939–2017), Emilio Ribes Iñesta (born 1944), and Lauro Bonilla, among others, who were seeking to orient their training in psychology with a more scientific approach. He received his PhD degree at the Université de Paris where he studied the electrophysiology of language and did his postdoctoral work at the Laboratory of Psychophysiology of Московский государственный университет (Moscow State University).

Already in his professional life, in 1963, at the end of his degree, and in the process of elaborating his thesis, he was invited to participate in the creation of the psychology career at the Universidad Veracruzana (Veracruz University), in Xalapa, Veracruz. Víctor Alcaraz proposed a curriculum, and from this, in the same year, the first degree in psychology in Latin America that integrated basic science with applied or translational science was created.

In 1973, when he returned from Paris from his graduate studies, he tried to create, with Emilio Ribes Iñesta, the Instituto Latinoamericano de Ciencia y Tecnología del Comportamiento (Latin American Institute of Behavioral Science and Technology) in Santiago, Chile. However, due to the military coup that overthrew Salvador Allende (1908–1973), this was not achieved (Mateos Morfín and Flores Aguirre 2019). After this attempt, with Emilio Ribes and Florente López (born 1940), they asked their professor Luis Lara Tapia (1930–2000) for the rent of a house, where they created the Laboratories of Psychophysiology Practices of the Facultad de Psicología (Faculty of Psychology) of the UNAM. At the same time, he joined the UNAM as a professor of neurophysiology and psychophysiology in the same year. In addition, he leads the seminar of Neurophysiology of Thought and Language. Two years later, in 1975, he founds the master's degree in Brain Plasticity at the Universidad Autónoma Metropolitana – Xochimilco (Autonomous Metropolitan University) (UAM-X).

In 1982, he founded the Centro de Investigaciones Cerebrales (Brain Research Center) at the UNAM. The following year he founds the master's degree in Neurosciences at the Facultad de Estudios Superiores Iztacala (Faculty of Higher Studies) (FES-Iztacala), and the following year, he receives the National Award for Research in Psychology from the Consejo Nacional de Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP). In 1987 he receives the Ordre national du Mérite (National Order of Merit Award) from the French government. It is also worth mentioning the prize awarded in 1989 by the International Federation of Social Science Organizations (IFSSO) in Tokyo, within the framework of the event: “9th IFSSO General Conference. Changes in Academic Policy: Social Sciences in a Changing World.” The IFSSO gives him a recognition for his work “The impact of new technologies on society.” A summarized version of this work is later published in the journal *Fundamentos y Crónicas de la Psicología Social Mexicana* (*Foundations and Chronicles of Mexican Social*

Psychology) (Alcaraz Romero 1989; V. M. Alcaraz Romero, personal communication, June 17, 2020).

He created and served as coordinator of the Laboratories for the High Academic Requirement Program of the Facultad de Psicología (Faculty of Psychology) of the UNAM, in 1993, and founded the Instituto de Neurociencias (Institute of Neurosciences) at the Universidad de Guadalajara (University of Guadalajara) in 1994. Other honorary positions and recognitions he has received are President of the Sociedad Mexicana de Análisis Experimental de la Conducta (Mexican Society for Experimental Behavior Analysis), President of the Sociedad Latinoamericana de Neuropsicología (Latin American Society of Neuropsychology), Member of the Advisory Council on Science of the Presidency of the Republic, Director of Dirección General de Educación Superior de la Secretaría de Educación Pública (Institutional Development of the General Directorate of Higher Education of the Ministry of Public Education) (SEP), Vice President of the Comisión Latinoamericana de Ciencia y Tecnología de la Comisión Económica para América Latina y el Caribe (Latin American Commission on Science and Technology of the Economic Commission for Latin America and the Caribbean) (CEPAL), Director of International Affairs of the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACyT), Tribute and Recognition by the Universidad de las Américas Puebla (University of the Americas Puebla) for his academic career in the field of Psychophysiology in 1998, Researcher of the Sistema Nacional de Investigadores (National System of Researchers) Level III, Premio Nacional de Ciencias y Artes (National Award of Science and Arts) in 2003, and the Recognition “Dr. Emilio Ribes Iñesta” in 2019, among others.

In addition to his work as a scientist, his literary talent was recognized in 1996: he was awarded in the IV Contest for the Publication of Literary Works organized by the Universidad de Guadalajara (University of Guadalajara), Mexico. The prize obtained is for his novel *Al acoso del sueño* (On the prow of a dream). According to

his words, this is the genre known as anti-novel; because for Alcaraz, life does not have a structure for itself, but each person gives it. In this case, the character of the novel seeks the evanescent substance of dreams, sometimes crystallizable in achievements, sometimes ungraspable (*Gaceta Universitaria* 1997).

His most relevant contributions are oriented to the study of thought and language. He has theorized about learning in order to elucidate some processes that allow the acquisition of new answers, including communicative answers of the human being. He also stands out for his contribution to the analysis of behavioral losses due to brain injuries and has created innovative techniques for the recovery of neuropsychological functions. This work has been reflected in the authorship of about 10 books and more than 120 articles published in indexed scientific magazines.

Brazil · Psychiatry · Psychology of the exceptional · Foundation of institutions

Helio Alkmim studied at the Faculty of Medicine of the University of Minas Gerais, currently the Federal University of Minas Gerais (UFMG), and graduated in 1952. He specialized in neurology

and psychiatry between 1953 and 1958, at the Northwestern University, Chicago, Illinois (USA).

After returning to Brazil, in 1958, he became the headmaster of the third section of the Raul Soares Institute, a psychiatric hospital in the city of Belo Horizonte. At the same time, he started a project with the psychologist Helena Wladimirna Antipoff, aiming at offering humanized psychiatric care at the Pestalozzi Society of Minas Gerais and at the institution Fazenda do Rosário (Rosario Farm), in Ibirité. The aim was to build a psychiatric clinic on the premises of Fazenda do Rosário that would offer patients comprehensive, preventive care supported by a multidisciplinary team. In 1960, he started providing specialized care to children and young people, at both Sociedade Pestalozzi and Fazenda do Rosário. This project was presented by Hélio Alkmim at the Sixth National Congress of Neurology, Psychiatry, and Mental Hygiene, held from August 26 to September 1, 1962, in Belo Horizonte.

He took part of the foundation of the Clínica Nossa Senhora de Lourdes in 1959. There he proposed to offer open-door psychiatric care, a model of treatment less restrictive than the hospital treatments of the time, which allowed a free circulation of inmates. In 1961, he was invited to participate in the foundation of the public hospital Galba Veloso, in the state of Minas Gerais. He became the first headmaster of the institution right after it and started operating in the following year. He remained in that position until 1963. On the same occasion Dr. José Geraldo Albarnaz (1923–2015), professor of neurology at the UFMG Medicine course, invited him to assume the psychiatry discipline at that school, which he carried on for a period of approximately 5 years. Alkmim also dedicated himself to his private clinic practice and treat patients with various disabilities free of charge. In January 1966, Alkmim taught classes and coordinated the medical part of the first *Intensive Course for Exceptional Childhood* held at Fazenda do Rosário: Instituto Superior de Educação Rural (Higher Institute of Rural Education) (ISER) in Ibirité (Minas Gerais), at Grupo Pedro II, and at the Medicine school of UFMG, in Belo Horizonte (Minas Gerais). The

course was supported by the Pestalozzi Society of Minas Gerais, with the cooperation of the Ministry of Education and Culture through the National Campaign for Education and Rehabilitation of the Mentally Handicapped, the Secretary of Education, Health, Interior, and Social Service of the State of Minas Gerais, ISER, and UFMG. Several topics were approached such as neuropsychiatry, psychophysiological aspects and changes in children, adolescents, adults, and elderly people, psychoses, child dependence, phobias, cerebral palsy, behavioral changes, personality disorders, and case studies (Lourenço 2017, Moretzsohn 1989).

In 1972, together with Helena Antipoff, Alkmim structured the Rural Civilization for Culture and Leisure Project (CIRCULA) and in the following year the project of the Milton Campos Association for the Development of Gifted People's Vocations (ADAV). For Alkmim (1988b), ADAV represented the possibility of offering gifted children and young people the development of their potential and talents, fostering leadership skills, good customs, and extracurricular enrichment through contact with the environment and culture, favoring a happier, more balanced and productive society. The projects developed at ADAV aimed at nature conservation, art and craft activities, ecology, regional folklore, scouting, and literary contests, among others, approaching various vocations. Alkmim believed that, in addition to intelligence, other aspects should be considered in gifted children and young people, such as skills, differentiated interests and performance in studies, work, community, and home, stimulating them into creative activities, problems-solving, and leadership.

Hélio Alkmim, along with Daniel Iretzky Antipoff, Helena Antipoff's son, also worked at the Helena Antipoff Documentation and Research Center (CDPHA) and at the Helena Antipoff State Foundation, institutions created in the 1970s to keep alive Helena Antipoff's memory and works. In 1973, he became the headmaster of the Psychiatry Residency at Raul Soares Institute. Before retiring in 1985, he worked for several years in the teaching and training team of the Hospital Foundation of the State of Minas Gerais (FHEMIG). Very closely linked to the Catholic

Church and religiosity, in 1998 he decided to join the Secular Franciscan Order.

Helio Alkmim's great contribution to Brazilian psychology consists of his performance in the assistance to children and adolescents with disabilities and to gifted ones in a multidisciplinary perspective in which he emphasized not only the development of cognitive skills, but also the contact with nature, development of artistic skills, and most diverse cultural experiences. He also played an important role in preserving the legacy of one of the most relevant figures in the history of Brazilian educational psychology, Helena Antipoff, of whom he was a friend and tireless collaborator.

Allende Navarro, Fernando

Born *Concepción, Chile, 28 June 1891*

Died *Santiago, Chile, 4 October 1981*

Francisco Reiter Barros

Faculty of Psychology, Universidad Alberto Hurtado, Santiago, Chile

Keywords

Chile · Psychoanalysis · Freud · Chilean Psychoanalytical Association · Clinical psychology

Fernando Allende Navarro is usually considered as the first Chilean psychoanalyst with recognized training and the introducer of the psychoanalytic practice in Chile (Arrué, 1991; Núñez, 1981). He did his secondary years in the city of Concepción (southern Chile), at the *Colegio Alemán* (German School), the *Seminario Conciliar* (Conciliar Seminary), and at the *Liceo de Concepción* (Lyceum of Concepción), where he completed them in 1909. Later, he continued his higher education with a medical training in Europe (Neghme, 1981). He married Josefina González Vial, with whom he had five children (Campos Harriet, 1981).

He began his university studies at the Faculty of Medicine of the *Universiteit Gent* (University

of Ghent), Belgium, between 1911 and 1913, where he obtained his degree in Medicine, Surgery, and Childbirth, awarded with Great Distinction in the tests. There, he started the first year of his doctoral studies, following courses as an intern at *La Bilosque* Hospital; however, the First World War, in 1914, interrupted the regular activities at the University and the Hospital (Neghme, 1981).

Later, after a stay in London, Allende Navarro entered the *Université de Laussane* (University of Laussane), Switzerland, resuming his medical studies there, taking his final exam in 1919. Subsequently, he dedicated himself to neurology and psychiatry, being a student at the Institute of Brain Anatomy of the University of Zurich, under the direction of Constantin von Monakow (Campos Harriet, 1981; Neghme, 1981; Núñez, 1981). There, Allende Navarro held both positions as assistant at the Institute of Cerebral Anatomy and as physician in charge of the Division of Psychotherapy at the Institute of Physiotherapy of the University of Zurich, as well as being a neurologist at the Polyclinic of Nervous Diseases of the same university (Núñez, 1981).

While in Europe, Allende Navarro maintained close contact with Eugene Minkowski, Hermann Rorschach, and Raoul Mourge. During the time he was a student of Eugene Bleuler in Switzerland, he trained as a psychoanalyst, being Emil Oberholzer his didactic analyst (Núñez, 1981; Ruperthuz, 2012). Later, once he returned to Chile, Allende Navarro maintained active contact with Europe: he held an epistolary exchange with Sigmund Freud himself (Casaula et al., 1991; Freud, 1933/1982). When the *Société Psychanalytique de Paris* (Paris Psychoanalytic Society) was founded, he was admitted as an associate member (Ruperthuz, 2012).

Allende Navarro returned to Chile from Europe in 1925, validating his Medical degree in the *Universidad de Chile* (University of Chile) in 1926. He devoted himself to psychiatry and the practice of psychoanalysis, and between 1930 and 1959 he was the medical director of the *Clínica Psiquiátrica del Carmen* (Carmen's Mental Hospital) and the *Clínica Psiquiátrica de Santa Marta* (Santa Marta's Mental Hospital). He also

maintained an activity linked with other fields of knowledge, such as history and genealogy. He was part of several Chilean and foreign scientific societies; among them, the Swiss Society of Neurology, the Swiss Society of Psychiatry, the International Psychoanalytical Association, the *Société Française de Psychanalyse* (French Psychoanalytical Society), the *Academia Chilena de Historia* (Chilean Academy of History), the *Sociedad Chilena de Medicina Legal* (Chilean Society of Legal Medicine) (of which he was a founding member), and the *Sociedad Chilena de Ciencias Naturales* (Chilean Society of Natural Sciences) (Campos Harriet, 1981; Neghme, 1981; Núñez, 1981).

Once having returned to Chile, Allende Navarro published his dissertation (*El valor del psicoanálisis en la policlínica. Contribución a la psicología clínica* [The value of psychoanalysis in the polyclinic. A contribution to clinical psychology]) in 1925, in the University of Chile, setting an important milestone in the arrival and dissemination of psychoanalysis in Chile (Ruperthuz, 2015). It is considered one of the first psychoanalytical publications by a Spanish-speaking psychoanalyst (Arrué, 1991). In his thesis, he brought together his psychoanalytic and psychiatric experience developed in Switzerland and addressed many of the technical and theoretical problems of psychoanalysis in a convincing, criterious, clear, and undogmatic way (Núñez, 1981). He is pointed out as the first Spanish-speaking physician to join the International Psychoanalytical Association (Campos Harriet, 1981) and as the first formally trained psychoanalyst to arrive in South America (Ruperthuz, 2015). It is for these reasons that he is considered one of the main initiators of psychoanalysis in Chile, before its institutionalization with the creation of the *Asociación Psicoanalítica Chilena* (Chilean Psychoanalytic Association) in 1949, of which he was a founder member together with Ignacio Matte Blanco (who was in analysis with Allende Navarro), and the subsequent beginning of the “official history” of psychoanalysis in Chile from that moment on (Ruperthuz, 2017; Vetö & Sánchez, 2017).

He completed teacher training studies with a Language and Literature specialty at the Higher Teacher Training College Benavente of Puebla in 1965. At the beginning of his career, he dedicated himself to teaching in elementary, junior high school, and teacher training schools. His experience as a teacher led him to become interested in “psychology as a fundamental scientific basis of educational tasks” (Almeida 2003, p. 4), which is why he studied for a degree in psychology at Universidad Nacional Autónoma de México (UNAM) (National Autonomous University of Mexico) in the Distrito Federal, wherein in 1968 he obtained the professional title with the thesis Psychosocial processes in a middle school

group (Almeida 1969), under the supervision of José Luis Curiel Benfield (1916–1994).

He decided to specialize in social psychology after working in private schools in southern Mexico. He identified that the psychological problems of parents, teachers, and students linked intimately to their sociocultural context. At that time, there were no specialized postgraduate degrees in social psychology, so he chose to study a Master in Occupational Psychology at UNAM. During this period, he had Carlos Gómez Robleda Pelayo (nephew of José Antonio Gómez Robleda, 1904–1987) as a professor, who was also a former student of the Ph.D. in Social Psychology and Personality at Cornell University of New York, same that would influence Almeida's desire to train in such a house of studies later.

Almeida completed his doctoral studies in Social and Personality Psychology at Cornell University in New York, where he received the advice of Urie Bronfenbrenner (1917–2005)—author of ecological systems theory—and his formal thesis director was Henry A. Alker (born in 1937). In 1976 he obtained the Ph.D. with the thesis *An experimental intervention program for the development of competence in Mexican sixth-grade school children*. Subsequently, he carried out post-doctoral studies in 1992–1993 at this same institution, sponsored by the Fulbright Scholarship, coordinated by the Department of State of the United States of America. During the period of this post-doctorate, most of his theoretical contributions point out “the importance of generating human ecologies that allow the development of children and young people in favorable conditions for the psychological processes described by theories of reinforcement, social learning, attribution, and attachment” (Almeida 2004, p. 4).

During 1978 and 1979, Almeida tried to replicate his doctoral research in three different contexts: the Nahua indigenous community of San Miguel Tzinacapan, the mestizo community of Cuetzalan (both in the northern sierra of Puebla), and the Napoles neighborhood in the Distrito Federal. This experience introduced him to the complex relationship between mentalities and

the forms of organization and collective action characteristic of each context.

Since 1977, Almeida settled in the Tzinacapan community, where he, along with an interdisciplinary academic group, worked together in research projects and community participation. Since 1973, the group responds to the name of Proyecto de Animación y Desarrollo (PRADE) (Animation and Development Project), an NGO consisted of mestizo people emigrated from urban contexts to Tzinacapan (Patiño 2017). Among the members of PRADE was who would later be the wife of Eduardo Almeida, the sociology Ph.D. María Eugenia Sánchez Díaz de Rivera (June 29, 1942), with whom he shares a large part of his academic and activist contributions.

Almeida's family settled for 13 years in Tzinacapan. During that time, they collaborated to create a network of independent organizations that fight for popular autonomous development and recognition of indigenous communities' human rights, among them the commission “Takachihualis,” founded in collaboration with peasant actors and social promoters in 1989.

In 1988 he founded a degree in Political Science at the Universidad Iberoamericana Puebla (UIA) (Iberoamerican University-Puebla). He also played a crucial role in opening the Master's in Social Psychology at the Benémerita Universidad Autónoma de Puebla (BUAP) (Meritorious Autonomous University of Puebla) in 1989. He was a professor of a research seminar at the Faculty of Psychology of UNAM in the 1981 and 1996 periods. Currently, Eduardo is attached to the Department of Health Sciences at the UIA-Puebla. He is also a member of the Sistema Nacional de Investigadores (National System of Researchers) of the Consejo Nacional de Ciencia y Tecnología (CONACYT) (National Council for Science and Technology), a state agency dedicated to the promotion of scientific and technological activities in Mexico.

In 1980, Almeida was awarded the Wilhelm Maximilian Wundt medal (1832–1920) at the XXII International Congresses of Psychology (IUPsyS). In 2005, he became the first Mexican

to obtain the International Humanitarian Award from the American Psychological Association (APA). That same year, the Consejo Nacional para la Enseñanza e Investigación en Psicología (CNEIP) (Council for Teaching and Research in Psychology) in Mexico awarded him the National Prize for Psychology. In 2013 he received recognition for his pioneering activity in the field of Community Psychology in Mexico from the UNAM Faculty of Psychology.

Almeida's work was vital in the creation of the first specialized programs in social psychology in Mexico and the politicization of their contributions and the discussion of their ethical implications, in such a way that his contributions articulate in what he recognizes as a network of research, action, and commitment (2003, p. 1).

The comprehensive vision of psychosocial work proposed by Almeida has been influencing both the institutionalization of social psychology in university settings and its direct connection with processes of collective organization and social bonding that respond to the urgent needs of the most disadvantaged minorities (Almeida and Núñez 2015).

Almeida's fight for indigenous rights and the recognition of cultural diversity interwove with the consolidation of a Latin American social psychology, which starts from the synergy between popular and scientific knowledge. His work is an example of the plural ways in which research, vocational training, and social commitment can articulate in practices that make people's autonomy plausible.

Alva-Canto, Elda Alicia

Born *in México City, on March 20, 1944*

Juan José Sánchez Sosa
National Autonomous University of Mexico,
Mexico city, Mexico

Keywords

Mexico · Infant language acquisition and development · Cognition

Alva-Canto studied at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM); there she obtained her Licentiate degree in 1968, her PhD in 2004 (both with honorable mention) the latter under her maiden name as required by Mexican law, and her Master of Arts degree at the University of Texas at Austin in 1970, this under her married name (Wilson).

She began her research activities during her Licentiate degree, training with one of the most

distinguished groups who studied Mexican schoolchildren's personality development in the mid-1960s. The project was directed by two pioneers of this type of research in Latin America, professors Luis Lara Tapia and Rogelio Díaz-Guerrero, and by Wayne Holtzman (born 1923) in the USA and involved the systematic training of Licentiate and postgraduate students.

Scientific research in Latin America has flourished mainly within universities, and the Facultad de Psicología (Faculty of Psychology) of the UNAM has produced a significant amount of research, both basic and applied.

The Infant, Cognition, and Language Laboratory, headed by Alva-Canto, was the first Baby Lab in a Spanish-speaking country; it conducts research projects, and its work includes the training of students as part of their graduate and professional theses and degrees. The laboratory began its research and academic activities in the year 2000, supported by a substantial research grant awarded to Alva-Canto by the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACyT), to fund a longitudinal study of verbal interactions and language development. This influential project focused on the study of preverbal repertoires of infants and preschoolers. The project brought about the introduction of innovative technologies such as specialized software and computer equipment and novel experimental techniques such as the Paradigma Intermodal de Atención Preferencial (Preferential Attention Paradigm) (PIAP) (Alva-Canto, 2007) and the Habituation Paradigm among others. Since then, the laboratory has received research grants from both CONACyT and the Programa de Apoyo a Proyectos de Investigación e Innovación Tecnológica (PAPIIT) (Support Program for Research Projects and Technological Innovation) by the Dirección General de Asuntos del Personal Académico (Office of Academic Faculty Affairs) of the UNAM. These and other sources of support have provided enduring resources to maintain and modernize the laboratory's scientific and academic programs.

Alva-Canto's group of researchers' initial interest has expanded to studying such topics as language comprehension and production, the role

of family and social contexts, cognitive development, category formation, learning, and semantic processing in infants, among others. Not surprisingly, the laboratory's state-of-the-art methods have positioned it as a pioneering effort in Latin America to study mother tongue acquisition and development during the early years of life.

This level of excellence has been possible, thanks to 14 successive UNAM, CONACyT, and Ministry of Education's grants. The laboratory continues generating new proposals and initiatives for the study of language development.

Currently, the laboratory is working with infants between 12 and 48 months of age to create statistical models that interrelate the factors inherent in language. Within a normative development paradigm, ongoing research projects now include parent interviews, psychometric testing, and experiments. Alva-Canto's work remains driven by the continuous production of publications, research seminars, and promotion of activities in a wide variety of venues and media.

She has collaborated academically with leading researchers such as Dr. Kim Plunkett, Luis Castro Bonilla (born 1941), Natalia Arias-Trejo (born 1973), and Dr. Susana Ortega-Pierres (born 1948). With highly productive academic stays in Brazil, Spain, Argentina, and the UK, Alva is a member of such organizations as the Comité de Continuidad (Continuity Council) of the Sociedad Mexicana de Psicología (Mexican Psychological Society) (SMP), founding president of the Colegio Mexicano de Profesionistas de la Psicología (College of Psychology Professionals), and former secretary and president of the Board of Directors of the SMP.

Alva-Canto has contributed papers at the most important scientific and professional meetings of her specialty, among them, several editions of the International Congress of the Society for Research in Child Development, the International Congress of Infant Studies, and the International Congress on Clinical and Health Psychology of Children and Adolescents, as well as several editions of the Congreso Mexicano de Psicología (Mexican Congress of Psychology) and the Congreso Mexicano de Análisis de la Conducta (Mexican Congress of Behavior Analysis).

She is a member of Sistema Nacional de Investigadores (National System of Researchers) (SNI-CONACyT) since 2007. She is also a member of the Programa de Estímulos a la Productividad (Stimuli for Academic Productivity Program, PRIDE, UNAM) since 2009. She has been awarded distinctions such as the UNAM Medal of Merit on three occasions and the Premio Annemarie Brugmann García (Annemarie Brugmann Award) for supervising the winning licentiate thesis with clinical applications in 2012 and 2013. She has directed 57 theses and doctoral dissertations at all higher education levels. Her research has led to the publication of eight books on language acquisition and development in childhood as author or co-author and serving as editor of seven books. Her contribution to Committees that have revised and updated professional curricula has been widely acknowledged. Her radio, TV, and printed press interviews, as well as lectures, seminars, tutorials, and academic projects of various kinds, portray Dr. Alva-Canto's bright trajectory as a scientist, professional, and mentor.

Brazil · Educational psychology · Intelligence tests

Isaías Alves de Almeida, also known just as Isaías Alves, graduated from Faculdade de Direito da Bahia (Bahia Law School) in 1910. Despite his degree in law, he worked in the education field. Since 1905, Isaías Alves was a teacher at Ginásio do Ipiranga (Ipiranga High School) in Salvador, of which he later became a co-owner. His studies in psychology began independently in the 1920s, when he got interested in the use of intelligence tests in schools. Between 1930 and 1931, he studied at Teachers College, Columbia University, NY, funded by Bahia government. There he got a degree of Master of Arts and was certified as an Instructor in Psychology.

He made his first experiments with intelligence tests in Salvador, when he founded the so-called Centro de Pesquisas Psicopedagógicas (Psychopedagogical Research Center) at Ginásio do Ipiranga in 1925. The first results of his work were presented in the third edition of *Teste Individual de Inteligência (1932)* (Individual Intelligence Test), originally published in 1926. In 1928, the Bahia Public Instruction Bureau invited Isaías Alves to teach a course for teachers called “Medidas da inteligência e classificação dos resultados escolares” (Intelligence measurements and classification of school results). In the course, he invited the teachers to use in their students his version of Binet-Simon-Burt test, Porteus Maze test and Ballard test. *Os testes e a reorganização escolar (1930)* (Tests and School Reorganization) presents the results of the experimental application performed in 1929 in Salvador.

In July 1930, he travelled to Teachers College, Columbia University, where he specialized in Psychology. Isaías Alves came back in June 1931, where he worked as a director of instruction in the state of Bahia. In the same year, he became a member of the National Education Board, where he stayed until 1958. In October 1931, he became a Technical Subdirector of Teaching (translated from Subdiretor Técnico de Ensino) in Rio de Janeiro. Afterwards, as a director of the Tests and Measurements section of the Distrito Federal Bureau of Public Instruction, Isaías Alves resumed his experimental work with tests. There, he coordinated the application of Pintner-Cunningham tests, Terman Group tests, and

Lourenço Filho's ABC tests in 1932 and 1933. In July 1933, he was dismissed by Anísio Teixeira, the director of Public Instruction, because of their disagreements about the use of tests in primary schools. Isaías Alves also wanted to secure a position as a professor of Educational Psychology at Instituto de Educação do Rio de Janeiro (Rio de Janeiro School of Education), which led to other disagreements with Anísio Teixeira and Lourenço Filho (Rocha, 2011).

Between 1933 and 1938, he remained working in Rio de Janeiro as a teacher at Escola Normal de Artes e Ofícios Wenceslau Braz (Wenceslau Braz Professional and Normal School, in free translation) and a technical assistant of the National Department of Education. Between April 1938 and November 1942, he directed the Education and Health Department of Bahia State. There he created a Tests and Measurements Section, which was responsible for applying Terman tests and Ballard tests on high school students (Alves, 1939). He was one of the founders of Faculdade de Filosofia da Bahia (Philosophy College of Bahia), which was inaugurated in 1942. There he was the college director and a professor of Educational Psychology. He retired in 1958.

In the psychology field, Isaías Alves is known for the work he developed with IQ tests, for his translations and adaptations of tests, and for the results he published in books and articles. Isaías Alves' work was also important to publicize the idea of using tests as a tool to organize the school system between the 1920s and the 1940s in Brazil. The intersection established by Alves between mathematics teaching and psychology using Edward Thorndike's work is pointed by Rabelo (2018) as another contribution to the field. Alves' adaptations were also used in other educational contexts, as an example we can point the use of Pintner-Cunningham tests in Escola de Aperfeiçoamento de Belo Horizonte (Belo Horizonte Teachers Training School) in Minas Gerais state (Rota, 2016).

As Jacó-Vilela (2014) indicated, Isaías Alves' work is connected to the biology-oriented racialist ideas. He often considered race as one of the elements to classify the children tested in schools.

Other educators, like Noemy Rudolfer, also registered the color/race of their students in their experiments. However, Isaías Alves explored the results of his test applications in tables that established a relationship between race and intelligence. The results of his experimental work with the Binet-Simon-Burt test, Ballard tests, Pintner Cunningham test and Lourenço Filho's ABC test favored white students. His position regarding race inequality that seems evident in these tables is not univocal. Isaías Alves often avoided commenting on the results he expressed in numbers, considered both the US and Brazilian racial debate in his analysis, and highlighted the differences between the two populations (Alves, 1933; Rocha, 2020).

Alves, Pórcia Guimarães

Born *November 9, 1917, Curitiba, Paraná, Brazil*

Died *June 25, 2005, Curitiba, Paraná, Brazil*

Adriano Furtado Holanda and Guilherme Bertassoni da Silva
Federal University of Parana, Curitiba, Brazil

Keywords

Brazil · Educational psychology

Pórcia Guimarães Alves was a Brazilian pedagogue, teacher, and psychologist who developed her activities in Curitiba, the capital of Paraná, Brazil. Daughter of Orestes Augusto Alves and Magdalena Guimarães Alves, Pórcia started working early in her life, beginning her pedagogical activities even before the conclusion of her studies in Pedagogy. She was a student in the first

class of the Faculdade de Filosofia, Ciências e Letras do Paraná (Faculty of Philosophy, Sciences and Arts of Parana), where she graduated in 1941, starting then to teach psychology at the Colégio Novo Ateneu (Novo Ateneu College) and afterward at the Colégio Nossa Senhora do Sion (Nossa Senhora do Sion College), both of them located in Curitiba (Alves, 1988; Cairo, 2013; Ribeiro & Vieira, 2019; Vieira & Ribeiro, 2018).

She was also a university professor, teaching educational psychology at the Universidade Federal do Paraná (Federal University of Parana) from 1951 until 1982, working at the Faculty of Philosophy and at the Faculty of Education, something that granted her the title of Emeritus Professor in 1992. She also worked at the Secretaria Estadual de Educação (State Education Secretariat), between 1952 and 1962. The interest already present in the 1930s, for the work in psychology – notably the theories of Jean Piaget (1896–1980), Alfred Binet (1857–1911), and Édouard Claparède – which instigated the educators at the time, encouraged her to study child and adolescent psychology. This interest took her to participate in the XIII Congresso Internacional de Psicologia (XIII International Congress of Psychology) that took place in Stockholm, Sweden, in 1951 (Ribeiro, 2018).

As one of the organizers of the primeiro Congresso Brasileiro de Psicologia (first Brazilian Congress of Psychology), in 1953 (that took place in Curitiba), she contributed extensively for the regulation of psychology as a profession. The Congress of 1953 launched the first ideas regarding the professional regulation of psychology in Brazil, what resulted in a document delivered to the Ministry of Culture and Education (Statement 412), one of the documents that motivated the Draft Bill 3825-A, of 1958, from which the Law 4119/1962 was afterward derived that regulated the education and profession of psychologists in the whole country. Together with Gabriel Munhoz da Rocha (1915–1999), she represented the State of Paraná in an assembly that elaborated the document related to the project of formation and codification of the profession of psychologist (Baptista, 2010; Jonsson, 2011; Weber & Walter, 1991). After that, she took part in the creation and

establishment of the Conselho Regional de Psicologia (Regional Council of Psychology) of the 7th Region (1974), which at the time united three states of the South of Brazil (Paraná, Santa Catarina, and Rio Grande do Sul), being also its vice-president in 1976. It was from the break-up of the State of Parana in the CRP-08, in 1979, that it obtained the register CRP-08/0019.

Pórcia was founder and director of the first psychology clinic in Parana, namely the Centro Educacional Guaíra (Guaíra Educational Center), in 1956, seeking to assist students with learning difficulties and additionally establishing in the same place the first special class for people with disabilities. Pórcia was founder of the Centro de Estudos e Pesquisas Educacionais (Center for Educational Studies and Research) of the State Education Secretariat, which she led between 1952 and 1962. The Center played a great role in the reformulation of the school's curriculum, its subjects, as well as in the passing method in all states' schools. Being historically known for breaking with fixed traditions in education, the CEPE created an experimental school (1954) that had a major innovative nature in regard to pedagogical matters in a general sense by rethinking the model of mainstream education, from the architecture and furnishing of classes to the reformulation of gender separation's system in the classroom. CEPE's Experimental School was an active laboratory for educational psychology, filling an existing gap in the field of study at the time, since there was no graduation course in psychology in the city (Campos, 2001).

By request presented by the Associação de Proteção ao Psicopata (Association for Protection of the Psychopath), Prof. Pórcia founded in 1961, also in Curitiba, the Escola Mercedes Stresser (Mercedes Stresser School), the latter attached to the state's public system of education, designed to the professional qualification of young people and adults with disabilities. Because she felt constrained by the state's bureaucracy, Pórcia established the Instituto Decroly, now in the private sector of education of Curitiba, that was active between 1962 and 1971, counting with psychological clinic, special classes – being the first institution of Parana that had specific classes

for intellectually gifted children – and specialized service in phonoaudiology and physiotherapy. Professor Pórcia counted on those educational experiences with the assistance of UFPR Pedagogy students, maintaining a constant exchange between professional practice and the university.

Pórcia Guimarães Alves represented a small share of women in the Brazilian society of that time that was educated in universities, pursuing an academic career that resulted in a life course marked by intense involvement with her professional qualification. She left not so many writings, but definitely a major legacy for psychology and education in Paraná, portrayed by her pioneerism both in psychology and in pedagogy, as in the intertwining of these disciplines and, moreover, in the advancement of studies on development as well as in the establishment of innovative pedagogical strategies for her time. As a forerunner of modern education, she was awarded in the 1990s with the title of Emeritus Citizen of Curitiba.

Mariana Agostini de Villalba Alvim, was the daughter of the musician Laura Palha Alvim (1867–1958) and Álvaro Freire de Villalba Alvim (1863–1928). Her father was one of the forerunners in the use of radiology and radiotherapy,

within the medical field, and worked with Marie Curie (1867–1934) in Paris (Cuperschmid & Campos, 2008). In 1929, as a result of her marriage to Portuguese musician João Sampaio Brandão (1908–1952), Mariana Alvim moved from Rio de Janeiro to France. There, she remained for five years studying psychology at the Sorbonne Université and Pedagogy at Collège Sèvigné (Dantas, 1999).

While in the French capital, she attended courses with exponents of psychology, such as Henri Wallon (Child Psychology course, between 1931 and 1933). Wallon was a dedicated bookish of Marxist theories and affiliated with the French Communist Party, which ended up influencing Alvim's studies and political positioning. This made it difficult for her initial years returning to Brazil, which was under the dictatorial – and significantly anticommunist – government of Getúlio Vargas (1882–1954). Considering her proximity and militancy to the Brazilian communist camp, she hid in the interior of the State of Rio de Janeiro. In 1952, she lost her husband to a plane crash (Dantas, 1999).

Despite these setbacks, she completed another undergraduate course at the Faculdade de Serviço Social do Rio de Janeiro (Faculty of Social Work in Rio de Janeiro), in 1941 (Marwell, 1999). Alongside studies in the areas of psychology, pedagogy, and social work, she began her professional life in caring for children and adolescents, initially in public preschool service, as well as in the Central Education Library of the City of Rio de Janeiro (1940–1941). As a result, she acted in the extinct Serviço de Assistência ao Menor (Service for Assistance to Minors) later Fundação do Bem-Estar do Menor-FEBEM (Foundation for the Well-Being of Minors). This service was then an agency of the Ministry of Justice. Alvim was linked to this service on two occasions, from 1941 to 1948 and then between 1957 and 1959, even founding, there, a School of Women's Arts and Crafts (Marwell, 1999).

Alvim is a reference in Brazil with regard to the Carl Rogers' theory (1902–1987) (Gobbi,

Missel, Justo, & Holanda, 2005; Gomes et al., 2004a, 2004b; Tassinari, 1994; Trzan-Ávila & Jacó-Vilela, 2012). She maintained professional contact with this author, creator of the Person-Centered Approach since her first course, in 1945, when she went to the United States to study organizations that offered treatment in the nondirective approach to young people considered “delinquents.” She met Rogers when he then moved to the University of Chicago and was his assistant at its Person-Centered Workshop, in Ashland, USA, in 1976. During her professional performance, she disseminated Rogerian knowledge throughout the institutions where she worked in Brazil (Castelo Branco & Cirino, 2017; Gobbi, Missel, Justo, & Netherlands, 2005; Tassinari, 1994).

She worked in collaboration with Professor Emilio Mira y López, following his courses and others at the Instituto de Seleção e Orientação Profissional – ISOP (Institute of Professional Selection and Guidance) of the Fundação Getúlio Vargas – FGV (Getúlio Vargas Foundation) such as Selection, Guidance, and Professional Readaptation (1946–1947); Psychology and Psychiatry Applied to Psychotechnics (1948), Psychotherapy of Neuroses (1948), Medical Psychology (1949), Critical Analysis of Methods for Exploration of Personality (1949), Experimental Psychology (1950), Rorschach Tests, Thematic Apperception Test (T.A.T.) and Myokinetic Psychodiagnosis (P.M.K.) (1950–1951), Evolutionary Psychology (1951), and Mental Hygiene (1955) (Marwell, 1999; Souza & Cunha, 2001).

ISOP was one of the institutions responsible for following up on Bill No. 3825/1958, which would become the regulatory legislative framework for the Psychology profession in Brazil – Law 4119/1962. Due to her pioneering participation in psychological studies in the country, Mariana was one of the first to register with the Ministry of Education – right after the law was approved. Her registration number is 274, with registration dated December 19, 1963. At ISOP, Alvim takes on the role of psychologist. In 1959

and 1960, she headed the Psychiatric Social Service of the Instituto de Psiquiatria (Institute of Psychiatry) of the former Universidade do Brasil (University of Brazil), in Rio de Janeiro (Gobbi, Missel, Justo, & Holanda, 2005; Marwell, 1999; Souza & Cunha, 2001).

Alvim was also responsible for the creation and coordination of several entities, such as the Associação Brasileira de Psicotécnica (Brazilian Psychotechnics Association) (1949), the Sociedade Pestalozzi do Brasil (Pestalozzi Society of Brazil) (1948) [and the Associação Pestalozzi de Brasília (Pestalozzi Association of Brasília) – 1965], the Sociedade de Psicologia Individual do Rio de Janeiro (Individual Psychology Society of Rio de Janeiro) (1941), and Associação Profissional dos Assistentes Sociais do Rio de Janeiro (Professional Association of Social Workers of Rio de Janeiro) (1946) (Dantas, 1999). With the move of several federal agencies from Rio de Janeiro to Brasília, given the inauguration of the new national capital, Alvim moved to the new city in 1960. In Brasília, it was one of the main disseminators of psychology, being responsible for organizing the Centro de Psicologia Aplicada do Distrito Federal (Center for Applied Psychology of the Federal District) – between 1961 and 1962 – and the Serviço de Seleção e Orientação da Universidade de Brasília (UnB) (Selection and Guidance Service of the University of Brasília), between 1962 and 1965, by inviting the then rector of UnB, the professor Dr. Darcy Ribeiro (Souza & Cunha, 2001).

She established in Brasília, where she remained until the end of her life. Mariana Alvim worked as a psychologist at the Conselho Penitenciário (Penitentiary Council) and the Centro de Seleção e Treinamento da Secretaria de Administração do Distrito Federal (Selection and Training Center of the Federal District Administration Secretariat) (both linked to the Ministry of Justice) until she retired (1965–1967). After this period, she taught classes and worked as a clinical psychologist until 1993. She also had effective participation in movements linked to the Brazilian Psychiatric Reform, being

a signatory to the founding minutes of the Movimento Pró-Saúde Mental do Distrito Federal (Federal District's Mental Health Movement), in 1991 (Dantas, 1999; Marwell, 1999).

In Brasília, she was recognized for her social and scientific contribution, receiving the title of Honorary Citizen of Brasília, granted by the Legislative Chamber of the Federal District, in 1997. “Mariana is and always will be a professor. Not an instructor who stops at the ability to be transmitted, but as someone who, as her other idol, Carl Rogers, wants to cooperate in each one's project, of becoming a person” (Dantas, 1999, p. 180). Mariana Alvim's legacy is not limited to her protagonism in two disciplines – psychology and social work – but is crossed by her pioneering spirit in humanistic psychology, as well as her intense work around a numerous set of institutions in which she worked actively, in addition to her fight for the Anti-Asylum Fight in the Federal District.

Alzate Sánchez, Helí

Born *in Apía (Colombia), 1934*

Died *in Manizales (Colombia), 1998*

Bernardo Useche Aldana
Universidad de Caldas, Manizales, Colombia

Keywords

Colombia · Sexual behavior · Erotic function · Female orgasm

Pedro Guerrero, an eminent Colombian psychiatrist defined Helí Alzate as a “Sheep in wolf’s clothing.” Alzate considered himself to be “a perfect neurotic.” The truth is that due to his erudition and academic scholarship, his lifestyle and philosophy of life, and a certain halo of mystery that surrounded him, Alzate’s personality was fascinating. Dr. Alzate was a pioneer of sexology, sexuality education, and sex therapy in Latin America. With his comprehensive approach, Alzate made significant contributions to the psychological, biomedical, and sociocultural dimensions of human sexuality.

Helí Alzate was born in the small town of Apía, located in the main coffee region of Colombia. Both of his parents were devoted Catholics who raised him in the belief that sexual pleasure is a Devil’s temptation. When he finished his secondary education at the “Deogracias Cardona” High School in the nearby city of Pereira, he was already fluent in English and French, something exceptional in the country at that time. He then moved to Manizales, where he graduated as a Medical Doctor from the University of Caldas. A few years later, he closed his private office and stopped practicing medicine because, as he once confessed, he became convinced that it was not fair to charge poor, sick people for providing the health care they needed. For a brief period, after he studied basic medical sciences in Strasbourg, France, Alzate worked as a professor of biochemistry. At that time, he was interested, among other issues, in lactose intolerance in the

communities of native Indians of the region (Alzate et al., 1969).

For the rest of his life, he devoted himself to his two passions: teaching and doing scientific research at the University of Caldas Faculty of Medicine. Frustrated by the lack of financial support for biomedical research in Colombian public universities, he turned his attention full time to the field of human sexuality. This change to sexuality as his main academic area of interest was not casual: While in France, the more permissive sexual culture made a deep impression on him, a huge contrast with the repressive and double standard sexual mores predominant for centuries in Colombia.

While in France, Alzate had been in contact with Gerard Zwang (1930–) (Ferroul, 2007), a fierce critic of Freudian sexological theories (Zwang, 1985) who had postulated the existence of an independent “erotic function” (Zwang, 1972) and would later become an important influence on Alzate. In fact, the primacy of the erotic function over the reproductive function of sexuality in humans is the pivotal concept of Alzate’s sexological thinking (Alzate, 1987).

After establishing the first course on human sexuality at the University of Caldas Faculty of Medicine in 1968 (Alzate, 1974) and conducting investigations in the field of sexology, Alzate traveled to the USA where he spent 2 years (1971–1972) receiving specialized academic training in couples sex therapy at the Marriage Council and Center for the Study of Sex Education in Medicine at the University of Pennsylvania in Philadelphia. There, he studied under the direction of Harold Lief (1917–2007), a pioneer of human sexuality education for medical students who was developing the Sex Knowledge and Attitude Test – SKAT (Lief & Reed, 1972). Back in Colombia, Alzate adapted and applied the SKAT as pre- and posttests in his courses with medical students. He also did follow-up studies and periodically published the results.

At the core of Alzate’s sexological education in the USA were the Kinsey Reports and the social impact of the Kinsey Institute at Indiana University in Bloomington (Pomeroy, 1972). Once Alzate understood the importance of a behavioral

approach toward sexuality, he adapted Kinsey's methodology for use in his own surveys with university students in Colombia. Kinsey described the prevalence of many women's difficulties to reach orgasm during vaginal coitus. Alzate would eventually undertake experimental research on this controversial topic years later.

Alzate maintained scientific communication with Zwang and Lief all his life. In fact, it was in an issue of *Panorámiques* edited by Gerard Zwang that Alzate published what would be his last article: "La sexologie a l'Université de Caldas, Manizales, Colombie" (Alzate, 1996), a text that constitutes his academic testament.

During a period of 30 years (1968–1998), Alzate systematically developed three main research areas (see selected publications): (1) the sexual behavior of Colombian university students; (2) human sexuality education for medical students; and (3) vaginal erogenicity and female orgasm. His findings in these fields, especially in relation to vaginal erogenicity, remain valid and have regained importance amid current debates.

In his work with university students, Alzate documented gender differences in sexual behavior as well as changes through the years in sexual behavioral patterns and trends. Using the SKAT he demonstrated the effectiveness of "positive sexual education" in changing erotophobic attitudes and acquiring sexological knowledge. Perhaps his most groundbreaking studies in erogenicity are those that provide evidence that it is possible for many women to reach orgasm by stimulating the sensitive areas of the vaginal walls. This was a breakthrough in the long controversy regarding female eroticism involving Freud, Kinsey, and Masters and Johnson and constituted a response to what several feminist leaders called "the myth of the vaginal orgasm" (Gerhard, 2000). These studies brought to light the lack of scientific rigor with which many "sexologists" accepted the existence of the "G Spot" (Ladas et al., 1982) and are a significant addition to sex therapy for women who consult for orgasmic or excitatory problems.

Helí Alzate published four books, but according to the author himself the only one worth studying in detail is *Sexualidad Humana*,

2nd.ed. [Human Sexuality, 2nd edition] (Alzate, 1987). In this book, Alzate's major theoretical contribution is his model of the human sexual function. "The human sexual function may be defined as a culturally conditioned, conscious function, phylogenetically derived from the reproductive function that is primarily exercised in a pleasurable mode (erotic function) by means of body organs or zones of special sensitivity" (Alzate, 1987). Alzate developed a comprehensive model of the erotic function integrated by three planes: psychic or central, somatic or peripheral, and external or behavioral; and five sequential phases: appetitive, relational, stimulative, excitative, and orgasmic. This model overcomes the biological reductionism of the sexual response cycle model of Masters and Johnson (Tiefer, 1991). It establishes through the relational phase a link between love/sexual relationships and desire and orgasm, and it rises above the dualism of mind and body that had characterized psychology since its emergence as a scientific discipline. Unfortunately, and inexplicably, the version of this paper in English was the only one not accepted for publication in a major sexological journal.

In recognition of his work as a researcher, Helí Alzate was invited to become a member of the Editorial Committee of the *Archives of Sexual Behavior*, one of the most important scientific journals in the field, a function that he fulfilled with rigor and dedication for more than 20 years.

From 1968, when he began to teach his course on human sexuality at the Faculty of Medicine until 1997, when a brain tumor forced him to leave his classes, Helí always insisted that without the support of the University of Caldas, his work in defense of sexual pleasure in a very conservative society would not have been possible.

At the end of his days, an impromptu homage was paid to him one night in the newly constructed building of health sciences when dozens of former classmates, lifelong medical colleagues, and current students surrounded the sullen and hardheaded professor and affectionately told him how his teaching had positively affected their personal lives. Alzate's legacy continues in the full-time, 3-year graduate program in

clinical sexology for physicians at the University of Caldas.

Ernesto Mario Amador Barriga was the fifth of the twelve children of Ernesto Carlos Amador Orbeagozo and Elvira Barriga Villalba. “He is a direct descendant of prominent leaders of the independence act of Cartagena de Indias and

grandson of the Guerra de los Mil Días (Thousand-day War) participant, general Adolfo Mario Amador Fernández” (Pardo-Amador, 2019).

The Colombia in which Ernesto Amador Barriga was educated and professionally worked was characterized by strong social tensions. At the beginning of the twentieth century, the country experienced a bloody civil war called the Thousand-Day War with a documented interference of the US government that led, among other political and social situations, to the separation of Panama from Colombia and the Conservative Party government hegemony alternating with the Liberal Party for a long period.

Amador Barriga started his studies at the Instituto La Salle (La Salle Institute) in Bogotá. He entered the Escuela Normal de Profesores (the Normal School for Teachers) in Bogotá, where he acquired the title of pedagogy professor. Later, he entered the Escuela Militar de Cadetes José María Cordova (Military School of Cadets José María Cordova) where he graduated as an officer and made a military career to the rank of major of the army. In 1932, as an active officer of the Colombian Army, he was sent to Leticia, Amazonas, on the occasion of the so-called conflict with Peru.

He studied civil engineering and architecture at the Universidad Nacional de Colombia (National University of Colombia) (Pardo-Amador, 2019). Then, he studied philosophy and letters at the Universidad del Rosario (University of Rosario).

In the 1940s, he traveled to Spain where he carried out inspection practices in the pedagogy section of the Faculty of Philosophy and Letters at the Universidad Central de Madrid (Central University of Madrid). He specialized in psychodiagnosics, professional orientation, professional selection, professionology, and statistics at the Instituto Nacional de Psicotécnica de Madrid (National Institute of Psychotechnics of Madrid) (Pardo-Amador, 2019). In the mid-1940s, he graduated at the Universidad de Madrid (University of Madrid), today, the Universidad Complutense de Madrid (Complutense University of Madrid), and years later, in the United States, he received the title of doctor of psychology and

pedagogy from the University of Chicago – Institute of Engineering and Science of Chicago, Illinois (Pardo-Amador, 2019).

During his stay in Spain, he was awarded with the first research prize at the Consejo Superior de Investigación Científica (Higher Council for Scientific Research) in Madrid (Pardo-Amador, 2019). He settled down in Barcelona and joined the Instituto Psicotécnico de Barcelona (Psychotechnical Institute of Barcelona) where he studied orientation and professional selection (Pardo-Amador, 2019).

In 1936, the National University of Colombia was relocated on a single campus, as an effort to unify its faculties, and dispersed in the urban center of Bogotá. Later, in 1947, the Instituto de Psicología Aplicada (Institute of Applied Psychology) was created under the leadership of Mercedes Rodrigo Bellido. Thereafter, during the 1970s, new academic programs were created for training psychology professionals in several universities both in Bogotá and abroad. With this, the Colombian society, its educational centers, and its companies acknowledged the contributions that the discipline could offer and began to demand its services.

Educational institutions as the National University of Colombia, the Technical Superior Institute, and the Colegio de San Bartolomé (San Bartolome School); official entities as the Contraloría General de la República (General Comptroller of the Republic), the Colombian Army, Ecopetrol, and the Servicio Nacional de Aprendizaje (SENA) (National Learning Service); and private companies such as aircraft companies, financial entities, banks, and industries supported the measurement of human characteristics for their selection processes, both academic programs and personnel incorporation.

That is the context in which Amador Barriga returned to Colombia. On March 22, 1950, he founded the Laboratorio de Psicometría (Psychometric Laboratory) in Bogotá (Ardila, 2019; Urdaneta, 1993). There, in collaboration with the educator Campo Elías Márquez, he offered his professional services on psychometric evaluation for personnel selection. Based on

instruments that measured motor skills, he supported the selection process of drivers for the Municipal Tramway Company of Bogota, as well as the student selection of the High Technical Institute of Bogota. Subsequently, he extended his services to high school graduates who requested support and professional orientation when applying to higher or technological studies.

Eventually, he became professor at the Institute of Psychology in the National University of Colombia, later the Faculty of Psychology. In 1955, in the framework of a contract with the General Comptroller of the Republic's Office, he examined all the entity officials by using psychotechnical tests (Hernández-Vargas et al., 2003). Additionally, he became psychologist at the José María Cordova Military School of Cadets and at the School of Higher Studies of the War Ministry (now the Ministry of Defense) at Bogota.

In 1958, the National Learning Service (SENA) was created. This official entity allowed the state, employers, and employees to jointly implement strategies to train technicians, technologists, and specialists in labors required by the productive sector. Then, during the 1960s, two additional events related to labor conditions of the Colombian workers occurred: the International Labor Organization (ILO) began work in Colombia, and the country had a constitutional reform (1968). These events together strengthened the principle of meritocracy as a pillar to access public posts, as a measure to weaken partisan practices in the appointment of future public servants (Porrás Velásquez, 2016). This resulted in an increase of support for psychometric evaluation in selection processes and a clear boost to Amador Barriga's career (Ardila, 2019).

Between September of 1961 and early 1962, Amador Barriga was the dean of the Faculty of Psychology of the National University of Colombia (Ardila, 1971, 2019, Villar Gaviria, 1965). In 1968, at the Pontificia Universidad Javeriana (Pontifical Javeriana University) of Bogotá, along with the Catholic priest Vicente Andrade, he founded the Administration Program, a precursor to the current Faculty of Economic and Administrative Sciences (Pontificia Universidad

Javeriana, n.d.). He was also a professor at the INCCA and Jorge Tadeo Lozano University in Bogotá.

With the foundation of the Ernesto Amador Barriga Psychometric Laboratory, he brought measuring instruments and techniques to the country, which were implemented for personnel selection and academic programs admissions. Some sources consider that at that point, organizational psychology began in Colombia (Enciso Forero & Perilla Toro, 2004; Henao Granada et al., 2018). The Psychometric Laboratory also served as a model for the creation of private companies years later. Those companies complemented the services of the original laboratory and started to offer them. Currently, there is a wide offer and demand of such professional services in Colombia in both the organizations and educational sectors.

During his tenure at the Psychometric Laboratory and the National Army, Amador Barriga built and standardized more than 100 psychological tests for the Colombian population (Pardo-Amador, 2019). In the early 1970s, Amador Barriga closed his Psychometric Laboratory (Rodríguez Valderrama, 1998).

As noted earlier, Ernesto Amador Barriga not only made an important contribution to psychological measurement but also cultivated and developed several fields such as the militia, engineering, architecture, pedagogy, teaching, philosophy, humanism, music (instrumentalist, arranger, and composer), lyrics, painting, and poetry (Pardo-Amador, 2019).

Amador Barriga's contributions focused on public and private organizations in which he introduced the use of tests for the selection and personnel training. From his academic work, he contributed to train hundreds of professionals in both psychology and business administration and assisted the construction of the bases of what would later be the Servicio Nacional de Pruebas (National Testing Service).

Amar Amar, José Juan

Born in Pucón (Chile), December 5, 1944

Olga Hoyos de los Ríos
Universidad del Norte, Barranquilla, Colombia

Keywords

Colombia · Chile · Developmental psychology · Public policy

José Amar completed his elementary studies at the Escuela Pública de Pucón (Public School of Pucón) and attended high school at the Liceo de Hombres de Temuco (Lyceum for Boys of Temuco), institution where the literature Nobel Prize winner Pablo Neruda (1904–1973) also studied.

Once his secondary studies concluded, José Amar studied pedagogy and history at the Universidad de Chile (University of Chile) in Temuco, where he obtained a degree in elementary education with emphasis on history in 1963. Then, he moved to Santiago, and between 1964

and 1969, he studied psychology at the University of Chile.

He was president of the Student Center at the Lyceum (high school) and served as vice president of the Student Center at the University of Chile in Temuco. In Santiago, he was also president of the Student Center of the Faculty of Psychology for 2 years and a member of the National Council of the Federación de Estudiantes de Chile (Students' Federation of Chile).

At the end of this bachelor's degree in psychology (1969), Amar moved back to Temuco to work as a lecturer in psychology for two local universities: the Universidad Católica de Chile (Catholic University of Chile) and the University of Chile. Amar reminisces that in 1973, at the age of 29, he held a seat at the National Congress of Chile representing the Socialist Party. However, in November of that same year, he had to go into exile in Colombia, after a military *coup d'état* deposed democratic president Salvador Allende (1908–1973) (Amar, personal communication, January 18, 2020).

In January 1974, Amar was appointed full-time professor with exclusive dedication by the Universidad del Norte (University of the North) in Barranquilla (Colombia). When Amar first started, the University of the North was the only higher education institution to offer a degree in psychology in the city, and it had opened just 3 years prior his arrival. According to Amar, during that time, there were only seven psychologists in the whole city, and the process of training new ones had to be done with the support of teachers brought from Bogotá.

At that point, the University of the North's main strength was the training of engineers and business administrators. Since the psychology program emerged and nourished from the study of these fields, greater emphasis was placed on the organizational application of psychology. However, as Amar himself says, "It was a time of many opportunities," and he turned his interest toward other areas such as social and community psychology and developmental psychology. It was around these two fields that he centered his greatest efforts and built his impressive academic career as a lecturer and as a researcher. Indeed, his

work on childhood and vulnerable communities became a cornerstone for the study of early childhood in Colombia.

The study of childhood and community development led Amar to consider the study of sociology as a pertinent discipline required to comprehend the societal problems that had concerned him until then. Thus, he decided to continue his academic training, obtaining in 1976 his third bachelor's degree; this time he graduated as a sociologist at the Universidad Autónoma del Caribe (Autonomous University of the Caribbean), in Barranquilla. Then, in 1984, he completed a master's degree in educational research at the University of the North in association with the Universidad de Los Andes (University of Los Andes). In the year 2000, he obtained his PhD with an emphasis on counseling psychology at Newport University (Boca Raton Campus). Currently, Amar holds the status of "Emeritus" researcher, as ranked by the Ministerio de Ciencia, Tecnología e Innovación (Ministry of Science, Technology and Innovation).

José Amar has been a pioneer in the introduction of science-based public policies aimed at the integral development of children in adverse living conditions. It is particularly renowned that him and his colleagues at University of the North laid the psychological foundations for various intervention programs funded by the Ministerio de Protección Social (Ministry of Social Protection), through the Instituto Colombiano de Bienestar Familiar (ICBF) (Colombian Family Welfare Institute). This work served as grounds for the introduction of policies around household and community welfare (Amar, 1986).

Amar and his research group, in association with the Sociedad Colombiana de Pediatría (National Society of Pediatrics) and the Ministry of Social Protection and through a contract with the Fundación Saldarriaga Concha (Saldarriaga Concha Foundation) conceptually designed the policy titled "Atención Integral a la Primera Infancia de Cero a Siempre" ("Integral Care for Early Childhood from Zero to Forever"). Under Amar's coordination, researchers at the University of the North produced the documents of

cognitive development and socio-emotional development in this policy, which today covers approximately 1.3 million children.

During more than 30 years, he has been the director of the Grupo de Investigaciones en Desarrollo Humano (GIDHUM) (Human Development Research Group), listed as a research group of excellence A1 by the Ministry of Science, Technology and Innovation. During the period 1977–2015, GIDHUM received the support of the Bernard van Leer Foundation (the Netherlands), one of the most prestigious funding bodies for the development of research and intervention models aimed at improving the welfare of children in vulnerable contexts. The products of the GIDHUM were distinctive, as they guaranteed the transference of academic products to the state and the social appropriation of knowledge by the communities. Approximately 250,000 Colombian children living in adverse conditions have benefited from these research activities.

Amar's academic career included the position of dean of the Humanities and Social Sciences Division at University of the North, title he held for 25 years. His performance featured his leadership capacity, ability to manage research, maximization of resources, and his clear understanding of psychology within the social, political, economic, and human context of the Caribbean region. These characteristics allowed him to guide the development of the Department of Psychology and position it among the best ranked in Colombia.

Based on Amar's renowned research career, the Department of Psychology shaped and launched the first master's degree in psychology of the region, which specialized on research in child psychology (2003). Later on, in 2004, the proposal of a doctoral program in psychology was presented to the Ministry of Education, and the University of the North became the first university of the Colombian Caribbean coast and the second in the country to offer a doctoral program in psychology.

Following his post as dean, Amar continued to lead the CIDHUM (Human Development Research Center). He is also head of the strategic research line "Childhood and Youth" at the University of the

North, in which a multidisciplinary group of 57 doctoral trained professionals participate. Moreover, he has continued to direct his scientific efforts toward the implementation of programs that improve the welfare and protection for children, particularly exploring the use of information, communication technologies, and artificial intelligence. One of his projects in this field received the 2018 Martha Arango National Prize as best childhood research performed in the last 5 years.

Amar has received 14 national and international distinctions throughout his scientific life. The following stands out: the National Prize for Scientific Merit, awarded by the Asociación Colombiana para el Avance de la Ciencia (Colombian Association for the Advancement of Science) (ACAC, 2013); the distinction of the Orden de la Democracia "Simón Bolívar" (Order of Democracy "Simón Bolívar"), granted by the Cámara de Representantes de Colombia (House of Representatives of Colombia) (2013); the Premio Nacional de Ciencias del Comportamiento (National Prize of Behavioral Sciences), granted by the Universidad Nacional de Colombia (National University of Colombia) and the University of the Andes (2003); and the recognition of the Organization of American States (OAS) for his work in the *Proyecto Costa Atlántica* (*Atlantic Coast Project*), as one of the most innovative four-year programs of early childhood education in Latin America (1989).

José Amar's intellectual production gathers 14 research books of his own, 30 as a co-author and three as an editor. He has published approximately 90 scientific articles. Both his intellectual production and his professional career have endorsed him to work as a public policy consultant in childhood topics for UNESCO, UNICEF, and the van Leer Foundation, in countries such as Brazil, Chile, El Salvador, Guatemala, Mexico, Peru, Portugal, Spain, and Venezuela.

During the last four decades, José Amar has worked toward developing the psychological discipline in the Caribbean coast of Colombia. In doing so, many behavioral and social scientists have been educated and inspired by his academic achievements, his sensitivity, and his leadership. Without a doubt, his scientific and pedagogic

legacy will continue guiding future generations of academics in the region and nationwide.

Amaral, Lygia Alcântara do

Born *São Paulo (Brazil)*, on *December 29, 1911*

Died *São Paulo (Brazil)*, on *August 27, 2003*

Marina Massi

Brazilian Psychoanalytic Society of São Paulo (SBPSP), São Paulo, Brazil

Keywords

Brazil · Psychoanalysis · IPA · Brazilian Psychoanalytic Society of São Paulo

Lygia Alcântara do Amaral, daughter of Maria Pimenta de Alcântara and José Proença de Alcântara, was born in the city of São Paulo, state of São Paulo, and grew up in São Sebastião do Paraíso, her family's city, in the state of Minas Gerais. At the age of 17, she returned to São Paulo to study at the *Escola Normal* high school, future *Escola Caetano de Campos*, where she graduated as a primary school teacher in 1928.

In 1929, Amaral was appointed to teach at the *2ª Escola Feminina Urbana* (Girls' School) in Presidente Prudente, state of São Paulo. While working as a primary school teacher and with the aim of expanding her education, she enrolled in the Public Health Education course, created by Geraldo Horácio de Paula Souza (1889–1951), a public health doctor and director of the School of Hygiene and Public Health at the São Paulo Hygiene Institute, University of São Paulo (USP).

In 1932, she became a Public Health Educator, member of the School Health Service's Executive Office – a position she would hold until her retirement – and began to attend to children in the School Mental Hygiene Department, under the guidance of Dr. Durval Bellegarde Marcondes, one of the pioneers of psychoanalysis in São Paulo.

In 1939, Amaral became a public health worker and received the Certificate from the Mental Hygiene Service, granted by her advisor. Due to her contact with Dr. Durval Bellegarde Marcondes, she met her colleague Virginia Leone Bicudo, also a public health worker, who became her friend and partner in the discovery of psychoanalysis and in the creation of the Sociedade Brasileira de Psicanálise de São Paulo (Brazilian Psychoanalytic Society of São Paulo – SBPSP), since its beginnings.

In 1944, at Durval Marcondes's house, Amaral joined the São Paulo Psychoanalysis Study Group, formed by Adelheid Koch (with whom she did her didactic analysis), Virginia Leone Bicudo, Flávio Rodrigues Dias (1899–1994), Darcy de Mendonça Uchôa (1907–2003), and Frank Philips (1906–2004). In October 1945, the study group was considered a Provisional Society with Ernest Jones' (1879–1958) consent. Thus, Lygia do Amaral became an associate member in 1949 and an effective member in 1951.

In July 1951, already as a full member of the Provisional Society, Amaral applied for a scholarship from the Brazilian government to study psychoanalysis in London for 6 months, due to her work at the Child Orientation Clinic, organized by Dr. Durval Marcondes in the Mental Hygiene Department. That same year, Amaral accompanied Dr. Adelheid Koch to the XVII Amsterdam International Congress, when the shift of the São Paulo Psychoanalysis Group to SBPSP was officially ratified, and it then became part of the International Psychoanalytic Association (IPA).

During Amaral's studies in England, she had contact with Anna Freud (1895–1982), Melanie Klein (1882–1960), Donald Winnicott (1886–1971), Esther Bick (1902–1983), Isabel Menzies (1917–2008), Martha Harris (1919–1987), and Francis Tustin (1913–1990), and was supervised by Hanna Segal (1918–2011), Beth Joseph (1917–2013), and Hans Thorner (1905–1991). During this same period, between July 1951 and January 1952, she visited several psychiatric centers and hospitals, besides doing a clinical internship at the Tavistock Clinic, where she came into contact with Wilfred Bion's (1897–1979) work on experiences and group dynamics.

In Brazil, in the second half of the 1950s, Amaral taught in the Clinical Psychology Course – part of the Philosophy Department at USP – organized by Durval Marcondes and Anita Castilho Marcondes Cabral. Into this course, she introduced, in 1955, group psychotherapeutic work with first-year students, based on Wilfred Bion's group experiences. In 1959, she became a psychoanalysis educator and, in 1978, actively took part in the structuring of the Child Psychoanalysis Graduation Course, teaching its first graduating class. She was treasurer, secretary, and president of the SBPSP. Amaral underwent reanalysis with Frank Philips and, for a month, five times a week, with Dr. Wilfred Bion, when he was in Brasília, in 1979.

Prof. Lygia Alcântara do Amaral's most important undertaking was her pioneer work in child psychoanalysis, in São Paulo, with her colleague Prof. Virginia Leone Bicudo. Both worked in

attending to children at the School Health Service of the São Paulo Public Hygiene Institute. Later, they made an enormous contribution by creating the Child Psychoanalysis Graduation Course at the Institute of Psychoanalysis in São Paulo, together with enabling psychoanalytic care for children. In São Paulo, Lygia do Amaral pioneered the psychoanalysis of children and mother-baby observation based on the Kleinian approach.

Amorós Terán, Víctor Manuel

Born *Lima, (Peru), 26 October 1930*

Died *Lima, (Peru), 8 August 2005*

David Jáuregui Camasca
Universidad del Sagrado Corazón, Lima, Peru

Keywords

Peru · Clinical psychology · Psychotherapy

Víctor Manuel Amorós Terán was a Peruvian psychologist and psychotherapist. Upon completing his secondary studies, he entered the Escuela Nacional de Bibliotecarios del Perú (School of Librarians of Peru). After his graduation, he joined the Biblioteca Nacional (National Library), and due to his merits, he was invited to be part of the faculty of said School. In 1962, he entered the Facultad de Letras y Ciencias Humanas (Faculty of Letters and Human Sciences) of the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM) to study the specialty of psychology, obtaining a bachelor's degree in 1970 and a doctoral degree in 1986. One of the professors of UNMSM who had the greatest influence on him was Luis Aquiles Guerra (1909–1988).

After finishing his studies, he entered teaching at his *alma mater*, where over the years he taught psychological diagnosis and psychotherapy. In 1966, he entered the Institute for Exceptional Children *La Alegría del Señor* (The Joy of the Lord) as a psychologist, and the following year,

he began his activities as a psychologist at the *Centro de Rehabilitación de Ciegos de Lima* (Center for the Rehabilitation of the Blind in Lima, CERCIL). In 1968, he joined the *Centro Psicológico, Psiquiátrico y Educativo* (“*Psique*” [“Psyche” Psychological, Psychiatric and Educational Center]), a highly prestigious private institution that offered interdisciplinary psychotherapeutic care. It is in this private center where he developed a large part of his clinical work, which was enriched with his care work at the Clínica Psicológica [Psychological Clinic] of UNMSM, founded in 1957 by Luis Aquiles Guerra. He became director of the Clinic in the mid-1980s, and he redirected the psychological service to the less favored community of Lima, obtaining satisfactory results, which would later allow the implementation of similar services at the national level, when he was the dean of the Colegio de Psicólogos del Perú (Board of Psychologists) in 1983 (Jáuregui, 2005).

In 1987, Amorós was elected Dean of the Faculty of Letters and Human Sciences of the UNMSM. Thanks to his work, the Facultad de Psicología (Faculty of Psychology) was created in 1988. After the completion of his teaching activity at his *alma mater*, in 1993, he was awarded the title of Professor Emeritus. Between 1993 and 1996, he was a professor at the Pontificia Universidad Católica del Perú (Pontifical Catholic University of Peru) and between 1994 and 1999 at the Universidad de Lima (University of Lima).

A clinical psychologist and psychotherapist, Amorós was also one of the most active participants in the foundation of the Board of Psychologists of Peru in 1980. He also had an influential teaching work at the aforementioned universities (Alarcón, 2000; Alarcón et al., 1976).

His clinical experience and humanistic orientation in his psychotherapeutic work have been evidenced in his many publications.

Colombia · Nineteenth century · Liberalism

Manuel Esteban Ancízar Basterra's life developed amidst the most profound social changes in nineteenth century in Colombia, during the passage

from the colony to the republic. Son of a Spanish father linked to the colonial administration, he lived during his childhood and youth in the vicissitudes of the conflicts between the American revolutionary forces and the Spanish Crown.

The anti-Hispanic environment generated with the Cry of Independence of 1810 forced the Spanish family Ancízar Basterra to migrate to Cuba in 1821. Manuel Esteban's academic and intellectual training took place in the city of Havana.

The Cuban intellectual context offered a very interesting opportunity for access to enlightened thought. Ancízar studied jurisprudence at the *Real y Pontificia Universidad de San Gerónimo de la Habana* (Royal and Pontifical University of Saint Jerome of Havana) (currently the University of Havana) and graduated from Sagrados Cánones in 1834. His university education based on scholasticism prompted him to seek ideas that were more modern. He attended secret meetings of rebel and pro-independence university groups, supported and inspired by the Masonic ideological movements. He became a Mason in the middle of a great reserve due to the risks of being captured by the colonial forces.

Victor Cousin's (1792–1867) Masonic visions were striking. Ancízar admired French thought for its postrevolutionary development, especially the adoption of Victor Cousin's eclecticism as an official philosophy during the Restoration period. The popular vocation of French thought, its eagerness to endow the people with liberties, and the capacity for self-determination motivated the eclectic initiative. Eclecticism created hybrid ideologies in which popular knowledge is alternated with the great illustrated philosophies to allow people to access ways of thinking close to their sensibilities. The presentation of persuasive arguments would make possible the mental change of the population, the transition from vassal to citizenship.

The education of the people was a constant ideological and political passion of the mason Manuel Ancízar. If the new republics wanted to achieve and sustain their independence within a democratic structure, a system of equality and justice was essential to break with ignorance and illiteracy. Citizens should take ownership of their

rights and exercise their freedoms judiciously, as well as assume their responsibilities in the formation and organization of the state. Freemasonry promoted the values of individualism and the exercise of critical judgment and democratic autonomy.

His interest in psychology was the product of Ancízar's democratic convictions. Bringing the knowledge and experience closer to the people was his main priority. Psychology was considered the modern and enlightened way of promoting citizen access to developments in the modern world. The disciplinary debates in psychology around the origin and evolution of ideas were one of the main attractions. The psychological debates would help reorganize the educational apparatus and the pedagogical forms of the new American states.

In the year 1839, Manuel Ancízar arrived in Venezuela. He witnessed the bleak picture of the new Latin American nations. The Bolivarian project called La Gran Colombia, destined to unite Colombia, Ecuador, and Venezuela in a single nation, entered into a process of secession in 1831. The military initiatives of General Páez in Venezuela and Flores in Ecuador abruptly broke the Bolivarian initiative, and they introduced the possibility of continuing the secession and founding of new nations.

Ancízar was a pacifist dissatisfied with the warpath of the new American nations in shaping their territory and their social, political, and cultural order. This is how the journalist Ancízar expressed himself in the newspaper *El Siglo* (*The Century*) in the city of Valencia in 1842:

If our elders were to be educated for the battlefields, the new generation has to treasure lights for cabinet [library] jobs, on pain of being out of the post that the course of the years has indicated useful to itself and for the homeland (Ancízar, quoted by Loaiza Cano, 2004, p. 49).

The sciences, the arts, the philosophical ideas, and pillars of modernity should make a presence to replace the paths in fact. People endowed with knowledge about their democratic freedoms and fundamental rights should sovereignly debate the founding problems of nations.

Ancízar's (1851) main contribution to psychology was his book *Lecciones de Psicología* (Lessons in Psychology), a modified version of a previous edition *Lessons in Psychology and Morals* published in 1845 in Caracas, Venezuela (Loaiza Cano, 2004). In Colombia, this work has been considered as pioneering, systematically addressing the object of study of the discipline, its theoretical foundations, and main scientific advances in the eighteenth and nineteenth centuries (Oviedo, 2010). The book is characterized for being an annotated translation by eclectic authors: "Of these Lessons [of Psychology] they only belong to me ... the odd explanation, since the background I have taken from the Philosophy Course of Felipe Damirón i ... Cousin's ideas scattered throughout his history of Philosophy" (Ancízar, 1851, p. 1).

Psychology was considered by Ancízar (1851) as one of the forms of knowledge called to replace the arguments of authority, the de facto military measures that imposed an ideological order. The psychological discipline offered the possibility of activating in people the capacity of knowledge, the use of good sense, and the subjective capacity to constitute a sense of belonging to democracy. The cultural values developed by the independence movement should be endorsed by psychological science, so that citizens have the opportunity to assume their leading role in the configuration of modern states. In these terms, it defines the relevance of the discipline in the formation of the historical personality of the peoples:

The philosophical sciences and especially Psychology, are the natural result of a certain need to know that stimulates us to ask ourselves for our impressions, our beliefs and determinations, not content ourselves with the study and observation of the outside world, but also we direct our reflection on ourselves, scrutinizing what our faculties are and how we exercise them, to get to know ourselves and direct ourselves in the performance of our duties, both social and religious ... from where we can draw doctrines of eminent utility, from our homeland, our whole human race (Ancízar, 1851, p. 68).

Psychology appears in the itinerary of the Freemason author and follower of eclecticism as a form of knowledge inherent in the political development of nations. It was difficult to think of the

development of citizenship without the construction of a cognitive subject capable of accounting for his own convictions in the various spheres of state life, from human rights to religious beliefs.

Ancízar (1851) considered psychology as a conceptual construction according to the needs of the peoples. Each society had its own ideas about human nature, the origin of its mental faculties, and the goals that unite social sensitivity. The “eclectic psychology” should be present in the Colombian environment to account for their own ideas and those of others that would make it possible to shape the historical personality of individuals to promote their development. Ideas of the most diverse nature be they religious, scientific, political, etc. should be integrated to make possible the identification of the social goals of a nation and the criteria for constituting citizenship. This is how the author defined the nature and object of psychology:

By psychology we understand the science of the soul insofar as it is manifested by its action through the phenomena of human intelligence, sensitivity and freedom. Some have called it “ideology” quite improperly, since this word means science of ideas, and therefore it designates only a single order of the phenomena of the soul, namely, those of intelligence, seeming to exclude the study of the passions or phenomena of mental sensitivity, and deliberate acts, that is, phenomena of man’s freedom (Ancízar, 1851, p. 59).

The Colombian nineteenth century was a period of civil wars marked by political-religious fanaticism. The conservative party, defender of religious traditions, saw openly Freemason, scientific, and materialist liberal secular ideas as a threat. Catholic tradition defined the human being as a divine creation, endowed with a spiritual dimension. Modern scientific ideas defined the human being as a material entity that can be explained through the laws of nature. The science-religion conflict was deep in Colombia (Oviedo, 2019). Ancízar (1851) promoted the coexistence of the Christian soul with the development of worldly capacities such as intelligence.

People’s education became a reason for civil war (Oviedo, 2014). How to guide the educational system of the state? What should be the purpose of

the educational system: to seek the salvation of the soul or to promote material progress?

Ancízar (1851) considered the possibility of alternating liberal and conservative ideas, through the construction of his own theory about the origin of ideas. The experience of knowledge could not exclude the understanding of religious matters such as the mystical experience of faith. The formation of the state, based on exclusively materialistic ideas, without the presence of religious elements hurt the sensitivity of the population. Likewise, religious hegemony was unacceptable, without the ability to give space to secular visions such as scientific ones. This is how Ancízar criticized religious authoritarianism:

The country has undergone great political changes, which have changed customs and created new public needs, in terms that today’s society has nothing in common with society as it existed before 1810 [...], however, the organization of the clergy remains unchanged with its deeply monarchical character in the midst of a democratic state....

That he [clergy] is molded by his organization and by his living to the political conformation of the country, that he becomes civilizing and progressive, and the goods of the community will be well served by all, and the religious principle will be saved, putting an end to the deaf and dangerous struggle that we see begun between the ideas represented by the ancient Roman clergy, and the ideas and needs of the democratic republic (Ancízar, 1849, quoted by Loaiza Cano, 2004, p. 172).

Psychology was presented as a historical example of synthesis of various ways of thinking. The discipline harbored ideas that were supposed to be historically irreconcilable. Achieving an eclectic thought about the human being was an effort to permanently overcome fanaticism and to give rise to a space of pluralistic and tolerant humanistic thought.

Peregrinación de Alpha (*The Alpha Pilgrimage*) was the title of the following book by Ancízar (1853) oriented by humanist interests. The book had the purpose of carrying out an inventory to know the extension of the territory, its borders, and demographic composition.

In 1850, Ancízar assumed the direction of the “Comisión Corográfica Nacional” (National Chorographic Commission), a state project developed

by the liberal political movements. The Alpha Pilgrimage is the compendium of a series of travel diaries made personally by Ancízar (1853), who traveled the country on the back of a mule to learn about the geographic, racial, and cultural diversity of the population. The book integrated the author's narratives, along with portraits made by cartoonists and the maps of Agustín Codazzi (1792–1859). The graphic and literary descriptions covered topics such as popular customs, religiosity, and music. *The Alpha Pilgrimage* was a true reflection of the interest in strengthening citizen awareness of the nation's human and physical resources. The idea of founding the nation on its indigenous and Spanish roots reflected its eclectic character.

In 1867, Ancízar became the first rector of the Universidad Nacional de Colombia (National University of Colombia), an academic space in which he defended the autonomy and freedom of university thought regarding the religious and political influences of the time. Ancízar's multifaceted career also encompassed work in the field of journalism, initially as the founder of the newspaper *El Neogranadino* in 1848 and later in other media such as *El Correo*, *El Repertorio*, *El Museo*, *El Liberal*, and *El Tiempo*.

Ancízar's senescence was marked by his continuity as a commentator and political observer of state affairs. Having developed a long diplomatic career credited him as an authorized opinion. In 1851, he was commissioned to assume the position of negotiator of bordering treaties with Ecuador; a few years later, he attended to border disputes with Peru and Brazil, amid great debates about navigation on the Amazon River.

In 1870, he participated in the great educational projects of the liberal governments, such as the instructional reform, as director of Primary Public Instruction of the State of Cundinamarca. From his position, he fought for the educational modernization of the country, through the officialization of Pestalozzi's pedagogy as a school model in the country.

Manuel Ancízar was a nineteenth-century Latin American author interested in promoting social progress in the region through the creation

of his own thought. He promoted openness toward the ideas of the modern world, without losing sight of the postcolonial condition of developed regions based on miscegenation and the influence of Catholicism. The attempt to accommodate all cultural visions in a harmonious, peaceful, and tolerant society marked his intellectual development. The idea of an eclectic psychology is one of his most innovative initiatives at the time. Psychology was called to be a discipline committed to social progress, through its participation in the construction of subjects increasingly owners of their mental faculties and their ability to influence their material and social world.

Brazil · Educational psychology · Projective Method of Motive Evaluation · Cross-cultural psychology

The career path of Arrigo Leonardo Angelini (1924–) coincides with important moments in the history of psychology in Brazil. He was a professor at the Institute of Psychology at Universidade de São Paulo (University of São Paulo – USP) and produced an extensive work dedicated to Educational Psychology and subjects such as learning, motivation, and professional orientation.

In 1939, he entered the Normal School to take a teacher preparation course for primary education at Colégio Paulistano (Paulistano School). This episode marked his entry into a field from which he never strayed. At that time, education was an important device to the reception and dissemination of psychological theories and to the establishment of scientific psychology in the country.

He started studying pedagogy in 1942 at the Faculty of Philosophy, Sciences and Languages at USP, which was founded in 1934, having incorporated the Psychology Laboratory of the Normal School of São Paulo, directed by Prof. Noemi Silveira Rudolfer – to whom he attributed his scientific and eclectic psychological training.

During the third year of course, he was appointed to the position of technical assistant at the Railway Center for Professional Education and Selection (CFESP), where he dedicated himself to the activities of“(. . .) research, preparation, application and measurement of psychological tests for the selection of artificers apprentices for the professional courses held by the various

railways in the State of São Paulo” (Witter, 1998, p. 2). Among the tests that were developed and studied at that center, Angelini highlighted the measurement for Brazil of the Thurstone’s Primary Skills tests, which were carried out through wide experimental application. In 1945, he went on to perform the same activities in the Serviço Nacional de Aprendizagem Industrial (National Service of Industrial Training – SENAI), at the time directed by Roberto Mange.

In 1949, with the indication of Prof. Rudolfer to be her first assistant in the Chair of Educational Psychology, he began his teaching career at USP, where he worked for 40 years. In 1951, he specialized in Educational Psychology, which enabled him to apply for a doctorate.

In the year of 1953, he defended his thesis, under the guidance of Prof. Rudolfer. In this work, he used the experimental method, influenced by the studies of Hermann Ebbinghaus (1850–1909) and William James (1842–1910), among others, to investigate the processes of verbal learning. In this study, he stated that the objective of Educational Psychology was to apply the knowledge of General Psychology to the understanding of the learning processes and facilitation of educational action (Angelini, 1953b).

A year later, he presented his Associate Professorship thesis, *The role of interests in choosing a profession*, in which he analyzed Thurstone’s Professional Interests Inventory as a tool of practical and effective qualities in professional orientation (Angelini, 2014a). In the following years, motivation and reflections on educational and professional orientation remained as fundamental themes in Educational Psychology for the individual’s better adjustment: “The choice without any guidance (. . .) is probably the most responsible for cases of maladjustment” (Angelini, 2014b, p. 341).

Also in 1954, he temporarily held the Chair of Educational Psychology due to the retirement of his former advisor and traveled to the United States for an internship at the Department of Psychology in the University of Michigan under the guidance of Prof. John W. Atkinson (1923–2003), with whom he extensively discussed an experimental application project for motive evaluation.

On his return to Brazil, he dedicated himself to the investigation and development of a new technique that reconciled the accuracy of the experimental method, projective techniques, especially the Thematic Apperception Test, and the psychoanalytic theory (Angelini, 1973). The elaboration of the Projective Method of Motive Evaluation is justified by the inadequacy and inconvenience of the application of methods that presented, in their perspective, inconsistent results for the control of motivation.

This work resulted in the thesis *A new method to evaluate human motivation: a study of the motive of achievement*, submitted in 1955, which made him Full Professor of Educational Psychology at USP. The studies on motivation aimed to build psychological tools to help teachers who should be in charge of the efficient social adjustment of their students. However, the analysis of the research results introduced new problems of the method and the ethnocentrism (Angelini, 1973).

These reflections marked his approach to cross-cultural psychology. For him, this new area of social psychology was characterized as one of the most promising fields of investigation: The understanding of human behavior would be expanded, especially in relation to aspects of behavior studied by social psychology (Angelini, 2007).

Cross-cultural psychology contributed to the growing awareness of the regional limits of North American psychology, with the expectation of making psychological research an instrument for the well-being of underdeveloped peoples (Angelini, 1971). However, in their texts, the condition of underdevelopment, marked by deep social and economic inequalities, seems to be separated from its historical causes. The absence of social criticism seems to assume the neutrality of science, and the problems of its results circumscribed to the formal production of knowledge.

Angelini was a visiting professor and collaborator at the School of Psychology at the Central University of Venezuela (1961–1962), at the Department of Educational Psychology at the University of Texas (1967–1968) and at the

Central Psychology Institute of the Faculty of Education at the University of Brasília (1966–1967).

At the Institute of Psychology at USP, he held the position of director on three occasions (1970–1974, 1976–1980, and 1984–1988). It is important to remember that he played a decisive role in the formation of this institute at the time of USP's university reform in 1969 (Angelini, 2009).

He received honors and awards such as the title of Honorary Professor at the University of San Martín, Peru, in 1979; the Wilhelm Wundt Medal, from the Regional Council of Psychology of São Paulo; and the Inter-American Psychology Prize, granted by the Interamerican Society of Psychology.

He participated in several psychology entities, including the Brazilian Psychological Society, the São Paulo Psychology Society, and the Interamerican Psychological Society, when he organized and chaired the XIV Interamerican Psychology Congress, in São Paulo, in 1973. He was the first president of the Federal Council of Psychology (1973–1976), and president of the São Paulo Academy of Psychology, in 1979.

Antillón Milla, Josefina

Born *Guatemala City, (Guatemala), 29 June 1930*

Ana Alicia Cóbar Catalán

Del Valle University, Guatemala City, Guatemala

Keywords

Guatemala · Education · Teacher · Psychologist

Josefina Antillón Milla, daughter of Mariano Antillón and Genoveva Milla de Antillón, studied at Liceo Hispano Guatemalteco (Guatemalan Hispanic Lyceum) where she graduated as a primary school teacher in 1950, continuing her studies at Universidad de San Carlos de Guatemala – USAC – (San Carlos University of Guatemala), and graduated as a psychologist in 1968.

Her professional life was focused on teaching. She started as a teacher at primary level at Liceo Hispano Guatemalteco (Guatemalan Hispanic Lyceum) (1951), at Colegio San Antonio (San Antonio School) (1952), at Colegio Guatemala (Guatemalan School) (1954–1955) and at Colegio Monte María (Monte María School). This period of her life goes from 1954 to 1965. During her university studies, she was recognized as a leader since a very young age. She participated as a member of the Tribunal de Honor de la Asociación de Estudiantes de Artes Liberales

(Honor Court of the Liberal Arts Students Association) (1958), representative of the students of the Escuela de Artes Liberales de la Asociación de Estudiantes Universitarios (AEU) (School of Liberal Arts at the Association of University Students) (1959–1960) and student delegate to the Consejo Superior Universitario (Higher University Council) (1963–1965), both in Guatemala City. She began her career as a university professor in 1972 at the Filosofado Salesiano (Salesian Philosopher). This was the beginning of a long career that led her to teach in institutions such as the Instituto Femenino de Estudios Superiores (Female Institute of Higher Education) (1969–1972), Escuela de Formación de Enseñanza Media (Middle School Training School) – USAC – (1971–1973), in the Escuela de Artes Liberales (Liberal Arts School) at USAC (1969–1974) and at Universidad del Valle de Guatemala (University of the Valley of Guatemala) (1971–2001). In the period 1992–1993, she was a delegate of the Private Universities at the Consejo de Educación Superior (Council of Higher Education).

She was very involved in education, took a course in Evaluation and Test Structuring at the Universidad Del Valle de Guatemala (University of the Valle of Guatemala) in 1970. She participated in the course on “How to conduct a Seminar” with Dr. Jesús María Vásquez at the Escuela de Artes Liberales (School of Liberal Arts), USAC 1961. She studied Statistics, in the Ministerio de Educación (Ministry of Education), 1960, and took an Education Seminar, at the Universidad de San Germán (University of San Germán), Puerto Rico, 1959.

Always showing her enthusiasm and leadership, she continued her activism being appointed President of the Colegio Profesional de Artes Liberales (Professional College of Liberal Arts) (1975–1976), a position that allowed her to continue as a Member of the Tribunal de Honor del Colegio Profesional de Artes Liberales (Honor Court of the Professional College of Liberal Arts) until 1986. She combined her activities as Advisor to the Escuela de Estudios Generales (School of General Studies) (1966–1970) and Secretary of the Escuela de Artes Liberales

(School of Liberal Arts) (1971–1995). Later, from 1981 to 1989, she participated actively in the research area leading the USAC Instituto de Investigación y Mejoramiento Educativo (IIME) (Institute for Research and Educational Improvement). This institution allowed her to find an area where she was widely recognized as a researcher, and during the period 1989–1990, she served as General Director of Research at USAC.

During this time, she was appointed delegate of the USAC at the first meeting of the Consejo Superior Universitario de Centro América (Central American University Higher Council) on “Objectives and Priorities in Research and Teaching at the Universities of the Confederation” in Costa Rica (1985). She was also invited by the Banco Mundial (World Bank) to the meeting on Research in Experimental Institutes in Bogota, Colombia (1984), and participated as a member of the organizing committee of the First Meeting of Universidad del Valle de Guatemala (University of the Valley of Guatemala), Educational Researchers in 1985. She participated actively in the organization of the II Meeting of Educational Research by Universidad Rafael Landívar (Rafael Landívar University) (1986) as a representative of the USAC before the Comisión Interuniversitaria (Interuniversity Commission).

Her contributions in the area of psychology led her to be appointed representative of the USAC at the meeting of researchers from Latin America, in Mexico DF in 1990, and alternate representative of Universidad del Valle de Guatemala (University of the Valley of Guatemala) to the Comisión Guatemalteca de Cooperación (Guatemalan Cooperation Commission) of UNESCO. Her participation continued, and she was a member of the Meeting on Research and Teaching at the Universidad Centroamericana (Central American University), Costa Rica, in 1990. During the same time (1990), she also acted as a representative of Universidad de San Carlos de Guatemala (University of San Carlos of Guatemala) at the meeting of researchers from Latin America, Mexico City.

Her professional career was recognized when she was appointed as a candidate to the Dean of the Escuela de Artes Liberales (School of Liberal

Arts) of USAC in 1987, among other positions she held as a representative of universities in different congresses and in decision-making positions. One of her greatest achievements in the public area was to have held the position of Deputy Minister of Education, in the Ministerio de Educación (Ministry of Education) of Guatemala (1975–1978). Because of her career as a professional and her teaching work, she was recognized in 1995 with the “Orden de las Palmas Magisteriales” (Magisterial Palms Order), an award which is received by any professional in education or with a different degree of who is alive and who has contributed with an exemplary input to the sector through science, culture, and technology. On the other hand, in 2005 she was also awarded the “Orden Francisco Marroquín” (Francisco Marroquín Order), which is an honorary recognition awarded to distinguished educators in Guatemala, every June 25 in which Día del Maestro (Teacher’s Day) is celebrated, by the Government of Guatemala, chaired by then-President Oscar Berger, for her extensive career as a teacher and as a distinguished professional in all the areas in which she served (Facultad de Humanidades, 2016; Registry of individual beneficiaries awarded with the national order “Francisco Marroquín”, (2019)).

Her professional life was focused, from the beginning, on teaching, she is remembered as a great teacher, and in her honor there is the Instituto Privado Mixto de Educación Básica Josefina Antillón Milla (Josefina Antillón Milla Mixed Private Institute of Basic Education), in Guatemala City. Her last phase of professional practice was at the Universidad Del Valle de Guatemala (University of the Valley of Guatemala) as Dean of the Escuela de Ciencias Sociales (School of Social Sciences) (1991–1994), Director of the Department of Psychology (1984–2001), and teacher. At UVG, she is remembered as assertive professional, genuine, warm, and empathetic and with a sense of humor.

Josefina Antillón Milla is remembered as a multifaceted woman (friend, colleague, teacher, researcher, and author) deeply interested in education in Guatemala and as a professional with a high sense of honor and solidarity. Her motto:

“always move forward, never take a step back.” In addition to her values as an academic, her family (J. García de León, personal communication, July 30, 2019). refers to her as a daughter, sister, aunt, and sister-in-law, who is always attentive to family needs, providing her warmth, love, and peace.

Son of the psychologist and educator Helena Antipoff and the journalist Viktor Iretzky (1882–1936), Daniel Antipoff lived in Russia, Germany, and Switzerland in his early years. When his mother came to Brazil in 1929, he stayed at the École Beauvallon, a boarding school in Paris. In 1938, with the imminence of World War II, he moved to Brazil. A year after, he joined the Technical Course in Agronomy, in the city of Viçosa – Minas Gerais state (MG). He began his professional life as an agronomist, in Contagem, a city in the same state. In 1943, he began studying Philosophy at the University of Minas Gerais (nowadays the Federal University of Minas Gerais). He married Otília Braga Antipoff in June 1944 and moved to the city of Patos de Minas – MG, responding to an invitation to organize an agricultural school for teenagers.

Later on, in 1951, Daniel and Otília Antipoff moved to Belo Horizonte, and Daniel started working for the Serviço Nacional de Aprendizagem Comercial (National Service for Commercial Learning) (SENAC). As a technician at SENAC and a student in the Philosophy course, he did an internship program in Rio de Janeiro with Pierre Weill and began to learn the application of psychological diagnosis techniques, which, afterwards, he would use in his work, which involved the professional guidance of salespeople. While in Rio de Janeiro, he was authorized to monitor the activities performed by psychologists from the Instituto de Seleção e Orientação Profissional (Institute of Professional Selection and Guidance (ISOP), supervised by Emilio Mira y López. Daniel also took part of conferences given by Mira y López at the Serviço de Orientação Profissional (Professional Guidance Service (SOSP), an organization similar to the ISOP that Mira y López himself had created in Belo Horizonte in 1949, at the request of the Secretaria Estadual de Educação (State Secretary of Education).

In the early years of SOSP, Mira y López gave conferences in the month of July, which was the vacation period (Antipoff, 1997). Later, in 1956, he joined the course on “Experimental Psychology” taught by André Rey at the Instituto Superior de Educação Rural (Rural Higher Education Institute) (ISER). The course focused on general psychology and learning psychology, dealing with subjects such as genetic psychology, mental development, learning psychology and psychopathology, and differential psychology. Based on the course taught by André Rey, the Sociedade Mineira de Psicologia (Minas Gerais State Psychology Society) was created and Daniel was its first Secretary General, from 1956 to 1958 (Reunião Preparatória da Sociedade Mineira de Psicologia, 1956; Sociedade Mineira de Psicologia, 1957; Preparatory Meeting of the Psychology Society of Minas Gerais State, 1956; Minas Gerais State Psychology Society, 1957). Daniel Antipoff’s interest and performance in the field of psychology rose from these experiences.

Thus, still in the 1950s, he opened a psychology office in Belo Horizonte, taking care mainly of children with intellectual disabilities, teenagers undergoing professional guidance processes and undergoing psychodiagnostic tests through medical referrals.

Between 1950 and 1951, he worked at SOSF, where he was in charge of the application and interpretation of psychological tests. The Military Police hired him in the following year to carry out a survey on the effectiveness of personality tests to be used by the Minas Gerais Department of Officer Training. After this contract, he began working on psychotechnical tests for drivers at the Departamento de Trânsito de Minas Gerais (Traffic Department of Minas Gerais) (DETRAN-MG). At DETRAN-MG, he formed a team in charge of establishing the criteria to apply driver's exams. In 1951, he also worked on the installation of a Professional Guidance Office linked to the National Service for Commercial Training (SENAC), where he worked until 1972.

In 1963, he and his family moved to São José dos Campos – SP, to work at the Instituto Tecnológico da Aeronáutica (Airforce Technological Institute) (ITA). He worked for 20 months at this institution, providing psychological assistance to students, carrying out meetings with advisor professors and group psychotherapy, among other activities. In 1964, after the accidental death of his eldest son in the sports facilities of the ITA and with the difficulties that began to impose themselves on his work due to the surveillance that the institution was subjected to, due to the Military Coup that occurred in the country that year, Daniel returned to Belo Horizonte and resumed his activities at SENAC and at his clinic (Antipoff, 1997; Lourenço, 2001).

A few years after, 1970, he took a postgraduate course on the education of exceptional children at the University of Denver in the United States. In 1972, living what he himself called an “existential crisis,” Daniel walked away from his activities in Belo Horizonte and settled in the city of Niterói-RJ. For approximately 1 year, he worked as a technical assistant at the Centro Nacional de Educação Especial (National Center for Special

Education) (CENESP), in Rio de Janeiro–RJ. In charge of surveying national institutions that provided assistance to children considered to be well-endowed, he also began to be interested in this area (Antipoff, 1997).

Once again, Daniel Antipoff returned to Belo Horizonte in 1973 resumed his clinical activities and joined the Instituto de Psicologia Aplicada (Institute of Applied Psychology) (IPAMIG). IPAMIG was accredited by DETRAN to carry out the psychotechnical examination of candidates applying for a driving license, as well as to be in charge of personnel selection services for companies, clinical, vocational, and professional examinations and psychotherapy for children, adolescents, and adults. During this same period, Daniel Antipoff applied for a registration at the Conselho Regional de Psicologia de Minas Gerais (Regional Council of Psychology of Minas Gerais) (CRP-04) and became the psychologist number 175 in the State of Minas Gerais.

Along with Otília Antipoff, Daniel supported the foundation and activities of the Milton Campos Association for the Development and Assistance to Vocations of the Well-Endowed (ADAV). Considered the newest work of Helena Antipoff, ADAV was founded in 1972 and, during school vacation periods, it offered workshops, lectures, and courses for gifted children and young people.

The Antipoff couple also founded the EDUC School, in 1978, aimed mainly at assisting children considered to be talented or well-endowed. At EDUC, Daniel and Antipoff monitored the children's development individually and emphasized the proposal of activities that allowed the development of their creativity, with an emphasis on playing outdoors and freedom of expression (Antipoff, 2017).

Daniel Antipoff was also one of the founders of the Centro de Documentação e Pesquisa Helena Antipoff (CDPHA) (Helena Antipoff Research and Documentation Center (CDPHA) in 1980 and was the honorary president of the institution until the date of his death. The CDPHA aims at preserving Helena Antipoff's work and divulging her legacy, what is still being done with the support of the Helena Antipoff Foundation and the

Federal University of Minas Gerais, besides sponsoring the Helena Antipoff Annual Meeting.

Daniel Antipoff played an important role in the history of psychology in Brazil and, especially, in the state of Minas Gerais. He was one of the pioneers in psychological assessment for the purpose of selecting candidates for a driver's license and, alongside his mother and wife, in diagnosing, monitoring and educating the gifted child. In the administration of CDPHA, he established partnerships that became fundamental for the preservation and divulgement of Helena Antipoff's legacy.

Helena Antipoff was the daughter of Vladimir V. Antipoff (1862–1927), officer of the infantry regiment of the military district of Vilno, and the pedagogue Sofia Antipova (?-?). She lived with her family in Grodno, in the province of Minsk, which at that time belonged to the Russian empire, until 1901, when her father was transferred to Saint Petersburg, the then capital of Imperial Russia. In this city she attended a private secondary school directed by Lyubov Stepanovna Tagantseva (?-?), a renowned educator.

In addition to classical studies, the students were encouraged to participate in the cultural life of the city. At the same time, dissatisfaction with the tsarist regime was growing in the country, and Antipoff participated in a movement that demanded political change, the setting up of a parliament, and greater social justice. In 1908, she attended a Marxist study group and participated in educational experiments with adult workers. Her father, who had been promoted to general, was alerted by the authorities about these activities. Vladimir and Sofia then decided that their daughter should proceed with her studies in Paris, to where Helena and her mother and sisters emigrated in 1910 (Masolikova & Sorokina, 2017).

Helena commenced her higher studies, having attended seminars of influential intellectuals in the areas of philosophy and psychology such as Henri Bergson (1859–1941), Pierre Janet (1859–1947), and Théodule Ribot (1839–1916), at the *Collège de France* and the Sorbonne itself. She then became interested in the study of psychology. In 1911, she did an internship in the psychology laboratory of the *rue Grange-aux-Belles*, connected to the Sorbonne, under the orientation of Théodore Simon (1873–1960), participating in the studies on the mental development of children in the public schools of Paris using the Binet-Simon metric intelligence scale. It was here that she met Édouard Claparède (1873–1940), who was in Paris to communicate the foundation of the Jean-Jacques Rousseau Institute in Geneva, the first school of educational sciences established in Europe. Helena decided to specialize in

education and left for Geneva, enrolling in the first class of the recently created institute. Under the orientation of Claparède, she continued her studies on the mental development of children in the psychology laboratory of the University of Geneva. In July 1914 she obtained her diploma in educational sciences.

Between 1915 and 1917 she lived in Gijón, in Spain, carrying out activities as an educator and published articles to divulge the perspective of the New Education in the local press. She returned to Russia in 1917, to care for her father who had been wounded in the First World War. She started living again in Saint Petersburg, where she married the writer and journalist Viktor Iretzky (1882–1936), by whom she had a son Daniel Iretzky Antipoff. About this time, in an article subsequently published in Switzerland, Antipoff related that, after the Communist Revolution of 1917, the Russian government had decided to assume the monopoly of the education of all children, with the object of promoting the formation of a mentality compatible with the new regime. To this end institutions throughout the country were created to take in children delivered there by their parents. The children were put through examinations in medical-pedagogical posts that had been set up, and Antipoff provided services as a resident psychologist in two of these posts, in Petrograd and in Viatka. Utilizing the natural method of observation proposed by the Russian psychologist Alexander Lazurski (1874–1917), she had perfected the psychological examination of children and adolescents in their daily context and proposed ways of orientating their education. Still in the Soviet Union, she became associated with the experimental psychology laboratory in Petrograd, founded by Alexandre Petrovich Nechaev (1870–1948), and published studies on the measurement of the mental level of children, and on the effects of that “extraordinary period of war, revolution, hunger and terror” on the mental development of children between 4 and 9 years old. One of the pieces of research on the mental level of children was subsequently published in the *Archives de Psychologie*, in Geneva, and in

Brazil. In 1922, Viktor Iretzky was exiled, because of differences with the Soviet government about freedom of expression. Antipoff and her son left the Soviet Union on the pretext of visiting institutions for mentally deficient children and adolescents in Germany, with a document attesting to this objective given to them by Nechaev, and thus they met him again in Berlin in 1924.

In Berlin, she worked in an institution for children's education, but soon decided to return to Switzerland, where she obtained a Nansen passport (for stateless foreigners) and became Édouard Claparède's assistant at the Jean Jacques Rousseau Institute, at that time part of the University of Geneva. There she lectured psychology and undertook research into intelligence and psychomotricity, whose results were published in the periodicals *Archives de Psychologie* and *Intermédiaire des Éducateurs* (Murchison, 1929). One of these works, on the genesis and development of the sentiments of compassion and justice in children, was cited and discussed by Jean Piaget (1896–1980) in the book *Le jugement moral chez l'enfant* (Piaget, 1932).

In 1929, Antipoff was invited by representatives of the government of Minas Gerais, Brazil, to lecture educational psychology and direct the Psychology Laboratory of the Escola de Aperfeiçoamento de Professores (Teacher Training College) in Belo Horizonte (one of the first laboratories in this area installed in the country), collaborating in setting up the teaching reform that was being undertaken at the time (The Francisco Campos-Mário Casassanta Reform), inspired by the ideals of the New Education movement. In her activities at the College, she undertook a very full program of research into the working of public schools and on mental development, into the ideals and the interests of her students from Minas Gerais, with a view to providing a basis for educational planning. The results of investigations on the level of mental development shows that the students' intelligence quotients varied in accordance with the level of social well-being of the families they came from.

Starting from these observations, Antipoff proposed the concept of "civilized intelligence" to interpret the results of intelligence tests, considering the considerable impact of the social and cultural level of those examined in these results.

Becoming aware of the existence of children needing special care led her to propose to a group of intellectuals, educators, doctors, and religious leaders, the creation, in 1932, of the Sociedade Pestalozzi de Minas Gerais (Minas Gerais Pestalozzi Society), an institution for the treatment and education of individuals that had deviated considerably from their age group in relation to intellectual abilities and aptitudes: in other words, those with mental deficiency. At that time she was innovating when she adopted the expression "exceptionals" to refer to these individuals. In 1935, the Pestalozzi Society participated, jointly with the state government, in the foundation of the Pestalozzi Institute, for the education of exceptional individuals.

In 1940, the Pestalozzi Society expanded its activities, and set up an educational institution for exceptionals at the Rosário Farm, located in a rural property acquired in the municipality of Ibirité, 26 km from Belo Horizonte. The idea was to promote the education of exceptional children in the country, teaching them agrarian or cattle raising professions, as Brazil at the time offered multiple opportunities for work in the rural area.

In 1943, Antipoff founded the chair of educational psychology in the Faculdade de Filosofia, Ciências e Letras (Faculty of Philosophy, Sciences, and Letters) of the UNiversidade de Minas Gerais (University of Minas Gerais) (the Universidade Federal de Minas Gerais (Federal University of Minas Gerais) from 1965 on), lecturing this discipline on teacher training courses. Between 1944 and 1949, she lived in Rio de Janeiro, taking up a position in the Departamento Nacional da Criança (National Children's Department), at the Ministry of Education and Health. Between 1945 and 1947, she had an important role in the visit of the doctor and psychologist Emilio Mira y López (1896–1964) to Brazil, and was the intermediary in his contracting by the

Getúlio Vargas Foundation. Still in Rio de Janeiro, she organized the Centro de Orientação Juvenil (Juvenile Guidance Centre) in 1946, together with Mira y López, as a mental hygiene clinic for the psychological treatment of children and adolescents sent to them as a result of complaints at school or considered maladjusted, and directed the institution until 1949. In 1945, together with a group of collaborators, she founded the Sociedade Pestalozzi do Brasil (Pestalozzi Society of Brazil), designed to attend to and educate exceptional individuals in the country's capital.

In 1949 she returned to Minas Gerais at the invitation of the State Secretary of Education, Abgar Renault (1901–1995), to set up a service of guidance for rural schools and promote the technical training of teachers for rural education utilizing and expanding the already existing structure at the Rosário Farm. In 1951, she obtained Brazilian citizenship and, in 1953, took over again the chair of psychology at the Universidade de Minas Gerais (University of Minas Gerais). From this time on, and in parallel with her activities at the University, she led extensive educational undertakings at the Rosário Farm.

The training of teachers for rural education was initiated at the farm in 1948, with the offer of training courses for teachers already working in public schools focused on the education of the rural population in Minas Gerais. In 1955 the Instituto Superior de Educação Rural (Higher Institute of Rural Education – ISER) was set up in the grounds of the Rosário Farm, with the support of the Ministry of Education and Culture and of the educator Anísio Teixeira. In the courses offered at this institution, Antipoff put into practice innovations in the pedagogical processes, inspired by the perspective of active education, of teamwork and of preparation for democracy.

In 1956, at the Higher Institute of Rural Education, the educator promoted the visit of the Genevan psychologist André Rey (1906–1965) to deliver a course of further education in experimental psychology to a group of professionals interested in training in psychology and in scientific advances in the area. In the same year, this group, at the suggestion of Rey, founded the

Sociedade Mineira de Psicologia (Psychology Society of Minas Gerais), of which Helena Antipoff was the first president. The society was active in the movement to promote the regulation of the profession of psychologist in Brazil, which resulted in the promulgation of Law 4.119, of 27 August 1962. Helena Antipoff and some students and professionals who were already active as psychologists promoted the creation of training courses for psychologists at the Pontifícia Universidade Católica de Minas Gerais (Pontifical Catholic University of Minas Gerais) (1959) and at the Universidade Federal de Minas Gerais (Federal University of Minas Gerais) (1963).

Concern with psycho-diagnostics led Antipoff to prepare a projective instrument for the evaluation of personality and of interests based on a piece of writing about “My hands.” Inspired by Alfred Binet, who studied the psychic tendencies of his two daughters through their writings, and by Alexander Lazurski, who advised psychological observation in daily activities, Antipoff proposed the theme of the hands as an expression of psychological tendencies, the prolongation of thought, of intelligence, and the expression of creativity. With the examination of the results of the test, one obtained a general view of the tendencies of the personality and temperament of the subject. She had started research into the test in 1943 and published her first version in 1948.

In the last years of her life, Antipoff turned her attention to the education of the gifted, well aware that in Brazil, the precarious nature of the conditions of life and the faults in the selective and excluding educational system provoked a loss of a large contingent of talented people, who could, if they were better guided, contribute to the country's development. In this way the idea of the creation of the Associação Milton Campos para o Desenvolvimento das Vocações (ADAV) (Milton Campos Association for the Development of Talent and Vocations of Gifted People – ADAV) was born, in 1972, using as resources a prize received by the author from an association of São Paulo industrialists. The proposal of the ADAV was to offer activities for enriching and developing creativity and talent to selected

students from the public schools in the Belo Horizonte metropolitan region.

Also in 1972, the Federal University of Minas Gerais granted Helena Antipoff the title of Professor Emeritus, for her contribution to the development of psychology and the sciences of education, and for her work in establishing institutions of great relevance in these areas in Brazil.

The library that belonged to the author, the manuscripts, and testimonies of her activities in the numerous institutions that she founded or in which she participated as a psychologist and educator throughout her long and productive career are preserved by the Helena Antipoff Documentation and Research Center (www.cdpha.pro.br) in the Helena Antipoff Museum, headquartered in the Helena Antipoff Foundation, located in the town of Ibirité, in Minas Gerais, and in the Helena Antipoff Room, at the Federal University of Minas Gerais. Her biography and some of the publications are part of the Educators Collection of the Ministry of Education, and are available at the site <https://www.netmundi.org/wp-content/uploads/2020/06/Helena-Antipoff.pdf>. Further information on the trajectory and intellectual production of Helena Antipoff can be found in Campos (2001, 2012a, b; Antipoff, 1975; Campos & Lourenço, 2002, 2019; Helena Antipoff Foundation 2014) and Masolikova and Sorokina (2017), witnesses to the relevance of her work in psychology and education.

Antipoff's work in Brazil, in the areas of psychology, basic education, special education, and rural education, displays her evolution marked at the same time by close contact with intellectuals active in the construction of psychology and to the sciences of education in the twentieth century, and the sensitivity to the human suffering produced in the moments of great social tension that she lived through in Europe and in Brazil. In this way her work led her to mobilize the resources that she disposed of, both intellectual and humanitarian, to propose practical alternatives and new syntheses that could promote better conditions of life for excluded groups, such as children and adolescents, abandoned people, low-income families, as well as exceptional and deficient individuals.

Thus, her work is characterized at the same time by theoretical density and a pragmatic spirit, always experimenting with new procedures, analyzing the results, and proposing renewed forms of activity.

Brazil · Psychology of the exceptional · Gifted people · Development of institutions

Otília Braga Antipoff started attending a school designed to major teachers named *Escola Normal Oficial* in Visconde do Rio Branco, in 1932, graduating in 1935. She taught child psychology and school hygiene at the same institution until 1944, when she married Daniel Iretzky Antipoff (1919–2005) and moved to the city of Patos de Minas. Once settled in that city, she started teaching psychology at the *Escola Normal Oficial* of Patos de Minas, which she did from 1946 to 1949.

According to Antonini and Lourenço (2001), upon returning to Belo Horizonte in 1949, she developed activities as a “teacher-psychologist” at the Medical-Pedagogical Office of the Belo Horizonte Pestalozzi Institute, where she also worked as a technical assistant in charge of the administration of psychological tests in the recently founded Professional Orientation and Recruitment Service (Serviço de Orientação e Seleção Profissional) (SOSP), an applied psychology service installed at the Minas Gerais State Education Institute (Instituto de Educação do Estado de Minas Gerais) (IEMG).

While working as a nonaccredited psychologist and interested in furthering her studies in psychology, in 1956, she attended a course on comparative experimental psychology of learning and application to education, carried out at the

Higher Institute of Rural Education (*Instituto Superior de Educação Rural (ISER)*) and at *Fazenda do Rosário (Ibirité)* by the teacher André Rey from the University of Geneva. Along the course, she gathered a group of professionals who developed the organization of a society of psychologists in the state of Minas Gerais. In the following year, she became a founding partner in addition to being the second secretary of the recently created Psychology Association of Minas Gerais State (*Sociedade Mineira de Psicologia*) (Arquivos do Centro de Documentação e Pesquisa Helena Antipoff, 1956).

In 1960, she enrolled in the first Psychology course in Minas Gerais at the Faculty of Philosophy, Sciences, and Letters Santa Maria, currently the Pontifical Catholic University of Minas Gerais (PUC Minas). She attended the course for 3 years and completed her training at the University of São Paulo (USP).

Otília Antipoff worked as a clinical psychologist in the city of São José dos Campos, SP, in 1963 where she founded and coordinated the School of Arts of the Airforce Technological Institute (*Escolinha de Arte do Instituto Tecnológico da Aeronáutica (ITA)*), complying with the patterns of the pioneering Brazilian School of Art (*Escolinha de Arte do Brasil*). In 1964, returning to Belo Horizonte (Minas Gerais state), she became a founding partner of the Institute of Applied Psychology of Minas Gerais (IPAMIG), exercising the position of psychologist in charge of the psycho-pedagogical orientation of special classes and head of the clinical sector of that institute from 1973 to 1986.

She taught special didactics and vocational guidance classes together with Daniel Antipoff at the II Pro-Childhood Exceptional Meeting, held at *Fazenda do Rosário (Ibirité)* and Belo Horizonte (Minas Gerais), in July 1966. She was an intern at the Psychology Laboratory of the Higher Institute of Rural Education (*Instituto Superior de Educação Rural ISER*), under the supervision of Helena Antipoff. From 1969 to 1973, she participated in the Postgraduation in Emendative Education, teaching subjects in

special didactics and psychology at *Fazenda do Rosário*.

In 1971, she participated in the First Brazilian Seminar: Gifted people's Education, sponsored by the Department of Complementary Education of MEC. It was part of the "CIRCULA Project" (Rural Civilization, Culture and Leisure), which from 1973 on offered summer camps for gifted people, including children from the state rural hinterland areas, and members of a less-favored social class. During the years 1973–1975, she participated as an assistant in the research carried out by Helena Antipoff on the psychological test called "Teste MM" (My Hands). She worked as a teacher at the Belo Horizonte Faculty, teaching psychology during 1973. In the same year, she became a founding partner of the Milton Campos Association for the Development of Vocations (ADAV), the first institution in Brazil in charge of the education of gifted and talented people. She was the vice president of this institution and was responsible for the Psychology Department.

In 1978 Otília Antipoff became one of the founders of the Educ School, which offered early childhood education and elementary education up to the fourth year, with the aim of providing students individualized education and integral development based on their vocations and talents, solid human relationships, security, and feelings of happiness. In 1980, she took part of the foundation of the Helena Antipoff Documentation and Research Center (CDPHA), which aims to preserve the memory of Helena Antipoff and her works. During the 1990s, she was one of the founders of Escola da Serra in the city of Belo Horizonte and in the same period she was also one of the founders of the Minas Gerais section of the Brazilian Association for Gifted People. She was the president of this section from 1996 to 1998. In 2002, she became a founding partner of the Brazilian Council for Giftedness (ConBraSD), in the city of Lavras, MG.

From 1958 on, Otília Antipoff addressed lectures at congresses in Brazil and abroad. She attended postgraduate courses in group dynamics and human relations at USP and in psychodrama at the Faculty of Philosophy, Sciences, and Letters

Santa Maria de Minas Gerais, where she attended Pierre Weil's courses (1924–2008). In São Paulo she did psychoanalytic training, with Prof. Bernardo Blay (1919–1993). She participated in the Education course for the gifted people, taught by Professor Erika Landau (1931–2013) at the University of Israel. She made improvements in psychodrama, with Prof. Anne Ancelin Schutzenberger (1919–2018), from the University of Paris, in Sorbonne.

Otília Antipoff, together with her husband Daniel Antipoff, contributed to Brazilian Psychology, dedicating herself, above all, to the application of psychology to the education of the “exceptional,” focusing on the gifted ones. She built educational spaces for the integral development of talented and gifted individuals and some of her works were taken as references for the education of these people. Furthermore, she also dedicated her efforts to preserving the work and memory of Helena Antipoff in Brazil.

Colombia

Keywords

Colombia · Psychology training · Higher education

Juan Alberto Aragón was the grandson of Arcesio Aragón León, historian, lawyer, and university professor, and son of Victor Aragón Pardo, also a lawyer. Both of them wrote on the history of Cauca, a region in the south of Colombia, known as a center for culture and education in the country (Sánchez González & Sandoval-Escobar, 2013).

Juan Alberto spent his childhood in Popayán, Barranquilla, and later in Bogotá, where he finished high school at the Liceo de Cervantes [The Cervantes Lyceum]. Attracted by leftist ideas, after finishing high school, he joined the Juventud Comunista Colombiana [Colombian Communist Youth], where he found the opportunity to get a scholarship by the Colombian Communist Party to carry out psychology studies in Poland. He received the title of Bachelor of Science in Psychology at the University of Warsaw, Poland (1968). After that, he specialized in Experimental

Clinical Psychology (1970), also at the University of Warsaw, Poland, under the direction of Janusz Reykowski (1929–), founder and first director of the Psychology Institute of the Polish Academy of Sciences (Álvarez, 2018; Sánchez González & Sandoval-Escobar, 2013). He described his thesis as the dynamic of the reaction to stress as a causal factor of psychosomatic disorders (Aragón, 1970).

During his last year in Poland, he worked in a psychiatric hospital under the direction of Adam Frączek, who was studying the interaction of intellectual and emotional processes. Frączek asked Aragón to replicate the studies of Herman A. Witkin (1916–1979) to corroborate the relationship between cognitive styles and neurotic disturbances and study the correspondence between the cognitive categories and the categories described by Jean Piaget (Aragón, 1970). Aragón did not explain in his post the extent of his work on that area.

He devoted his life to higher education. After completing his studies in Poland, he returned to Colombia in August of 1970. Rubén Ardila, Chair of the Department of Psychology at the Universidad Nacional de Colombia [National University of Colombia], invited him to join as a full-time professor. After a year at the National University, he became Chair of the Department, and 1 year later (1972), he left the institution. He was appointed Associate Professor at the Graduate School of the Universidad Pedagógica Nacional [National Pedagogical University], and later (1973) he held the Directorate of the Research Center while serving as a professor in the Department of Psychology of the Universidad de Los Andes [University of Los Andes]. He was also a professor at the Universidad Libre [Free University] in Bogotá (Álvarez, 2018).

His interest in education led him to undertake administrative positions in this field. In 1974 he was appointed Deputy Director of the Instituto Colombiano de Pedagogía (Icolpe) [Colombian Institute of Pedagogy]. During this same period, he was Director of the United Nations Development Programme – UNESCO program “COL-32,” performing duties related to curriculum research and curriculum reform (Motta & Sandoval, 2009).

Later, the Department of Pedagogy of the Universidad Nacional de El Salvador [National University of El Salvador] invited him to teach their Higher Education Technology program. Between 1977 and 1978, he was a researcher at the Evaluation Division of the Universidad Nacional Abierta de Venezuela [National Open University of Venezuela].

Aragón’s most significant contribution to higher education was the foundation (1981) and consolidation of the Fundación Universitaria Konrad Lorenz [Konrad Lorenz University Foundation], dedicated to the training of psychologists. He was the President of that institution between 1981 and 1999 and later between 2003 and 2013. As Rector of the Konrad Lorenz University Foundation, Juan Alberto Aragón Bateman was primarily responsible for academic development and selection of professors, sometimes from other relevant universities, sometimes young graduates of the same institution, with exceptional qualities for research, for the study of human behavior, and in general for teaching.

Aragón’s interest in mathematics, in the use of technology in research and education, science in general, and in psychology in particular, led him to seek the integration of curricula and the development of interdisciplinary work in every project he undertook.

He served as an expert consultant for the Organization of American States (OAS) in the Multinational Training Systems Development Project. Also, he was a founding member and first president of the Asociación Colombiana de Instituciones Universitarias Privadas (ACIUP) [Colombian Association of Private University Institutions] (Motta & Sandoval, 2009).

His teaching expertise was mainly developed in the fields of philosophy of science, research methodology, behavior modification techniques, learning, evolutionary psychology, personality, and experimental psychology.

At the committees and academic groups in which he participated, Aragón Bateman sharply questioned participants with the sole interest of generating knowledge. Several aphorisms gave him recognition among his peers: “We decide to improve every day, pursuing the goal of scientific knowledge and community service,” and

“Companies made by humans are dignified not for being perfect and unalterable – they never are – but for their goals, objectives and the tenacious decision of self-criticism and constant improvement.” “The situation of ideological and socio-economic uncertainty in today’s world makes it necessary to make higher education as one of the institutions that carry on its shoulders the task of illuminating the paths for the future.”

He created the journal *Suma Psicológica* in 1992, and in 2008 he acquired for his institution the *Revista Latinoamericana de Psicología* [*Latin American Journal of Psychology*], one of the most prestigious psychology journals in the region.

Among the awards received by Juan Alberto Aragón, the following ones stand out: The *Estrella al Mérito Académico* [*Great Star Academic Award*] by the Konrad Lorenz University Foundation, *Condecoración por Mérito Cívico* [*Civic Merit Award*] by the National Police of Colombia, and Tribute by the Asociación Colombiana de Facultades de Psicología [Colombian Association of Faculties of Psychology], among others (Motta & Sandoval, 2009).

The contribution that Juan Alberto Aragón left to the academic community in psychology, to the Colombian higher-education system, and in general to the country was undoubtedly possible due to his intellectual qualities and his characteristics. Among them, stand out his discipline, generosity, recognition for others’ work, and concern for the well-being of collaborators.

Mexico · First laboratory of psychology · Experimental psychology

Enrique Aragón attended the National Preparatory School (ENP) and the National School of Medicine (ENM) where he became a surgeon and obstetrician in 1904. He developed an early interest in psychology, psychiatry, and neurology and obtained his doctorate from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) with the thesis “El fondo emocional de la histeria: las conexiones psicofísicas” (“The Emotional Background of Hysteria: Psychophysical Connections”) (Aragón, 1931).

He taught for 36 years at numerous institutions. Particularly outstanding were his courses on experimental psychology at the ENP, the Escuela Nacional de Altos Estudios (National School of Higher Studies) (ENAE), and the Faculty of Philosophy and Literature and the establishment of

the first laboratory of experimental psychology in Mexico in 1916.

He was dean of the Facultad de Filosofía y Letras (School of Philosophy and Literature) (1933-1938) and, briefly, interim president of UNAM in 1934. In 1936, he created the Instituto de Psicología y Psiquiatría (Institute for Psychology and Psychiatry) that, although short-lived, attests to his interest to bring psychiatric practice and psychology together.

In 1897, Aragón attended the first courses on experimental psychology in Mexico offered by Ezequiel Chávez. Based on his class notes, he published *La Psicología (Psychology)* (Aragón, 1902), where he presents an overview of late nineteenth-century European psychology (Colotla and Jurado, 1983) and Ezequiel Chavez's eclectic perspective on psychology that included rigorous experimental methods alongside a philosophical approach to psychology (Escobar, 2016).

According to Colotla and Jurado (1983), his writings would fill ten volumes, but only two have been published: *Mis 31 años de Académico: Tratados de Neurología y Psiquiatría (My 31 years in Academia: Treatises on Neurology and Psychiatry)* (Aragón, 1943) and *Historia del Alma (History of the Soul)* (Aragón, 1944), as well as his translation of the conferences Pierre Janet delivered in Mexico (Janet, 1997).

In 1925, while evaluating the functioning of the psychiatric hospital La Castañeda, he found deficient clinical histories and a lack of research at the hospital (Sacristán, 2010). As a solution, Aragón created a medical record in which the psychiatric evaluation of “mentally ill and nervous people” included tests conducted in the laboratory of experimental psychology, such as chronoscopy (reaction time) and esthesiometry (sensory exploration).

In 1900, kymographs, cardiographs, and plethysmographs arrived in Mexico to set up an experimental physiology laboratory at the Escuela Normal de Maestros (Normal School for Teachers) (ENM). As a technician in the laboratory of medical physics and medical natural history (1905) at the ENM, Aragón probably was familiar with these apparatuses.

In 1902, Porfirio Díaz announced the purchase of laboratory equipment from Germany for the psychology courses at ENP and the ENM.

This equipment, however, was not used until 1916. Aragón was appointed professor of psychology at the ENP in 1906, but his courses were mostly theoretical. Aragón's effort to create a laboratory in the ENP was harshly criticized in a published review that mentioned that there was “not even a thermometer” in the alleged laboratory (Díaz y de Ovando, 1972, p. 532).

As professor of psychology at the ENAE (1916), he requested the transfer of the laboratory equipment stored at the ENP and received it himself in April of 1916, at the now Palace of Autonomy, where he imparted courses on general and special psychology.

On June 21, 1916, the laboratory was operational with the apparatuses acquired in Germany from Ernst Zimmermann, who fabricated the equipment for Wilhelm Wundt (1832–1920). The instruments included a Hipp chronoscope for exhibitions and a myograph similar to the one used by Helmholtz to measure the speed of the nerve impulse, among others (see Escobar, 2014).

The laboratory was formally inaugurated in October 27, 1916, in a public event where Aragón carried out three demonstrations following the most traditional Wundtian experimentalism and a couple of demonstrations of physiological psychology (see details in Escobar, 2016).

Starting in 1935, the laboratory was relocated numerous times (Ruiz-Gaytán, 1954), but it functioned even after Aragón passed away in 1942.

Isolated from the advances in experimental psychology in the rest of the world, the demonstrations conducted in the laboratory remained unchanged for many years. In a short film from 1941 (*Filosofía y Letras*, 1942), Aragón conducted practically the same demonstrations as the ones presented at the laboratory's inauguration, with the addition of two demonstrations of memory phenomena, not previously described (see Escobar, 2016).

Rogelio Díaz-Guerrero, who learned about the importance of experimental psychology during the

courses in Aragón's laboratory (Carrascoza-Venegas, 2003), became the head of the laboratory in 1948. In 1949, part of the original equipment was transferred to the physiology laboratory of the College of Psychology, where Víctor Alcaraz, Augusto Fernández Guardiola, and Raúl Hernández Peón conducted research, and in 1956 to the Instituto de Estudios Médicos y Biológicos (Institute of Medical and Biological Studies) (Valencia et al., 1983). Today, part of the apparatuses of Aragón's laboratory is exhibited at the Palace of Medicine. Some others, including the Hipp chronoscope, are safeguarded at the Facultad de Psicología (Faculty of Psychology) at UNAM.

Although some original research was conducted in Aragón's laboratory (e.g., Aragón, 1939, 1941), it was fundamentally a teaching laboratory: the first cadres of professional psychologists were trained in the laboratory (David Pablo Boder, Guadalupe Zúñiga, Luz Vera, and Palma Guillen).

Aragón's laboratory was a safe haven for different perspectives of psychology. Given his psychiatric training and eclectic intellectual attitude, Chávez's influence, psychoanalysis had a place in the laboratory from the beginning. Similarly, American functionalism was influential to bring into the lab an interest on Darwin's evolutionary theory and psychological measurement, leading to the Spanish translation of Terman's Stanford-Binet test.

Psychology in Mexico with Aragón became a heterogeneous discipline, a mixture of psychoanalysis, psychotechnics, philosophy, and some demonstrations of experimental psychology. Also eclectic, but with a more solid scientific training, Díaz-Guerrero, a few years later, reoriented Aragón's laboratory toward the study of phenomena and principles of learning and transformed it in a more fertile ground for original research. Scientific psychology in Mexico owes much to Enrique O. Aragón and his lab.

Born *Tupiza, (Bolivia), 27 January 1945*

Tomás E. Palacios Martínez
Universidad Central de Venezuela, Caracas,
Venezuela

Keywords

Venezuela · Intellectual disability · Down syndrome

He studied in Tupiza and La Paz, Bolivia, graduating from high school in 1962. He studied Philosophy and Letters at the Escuela Normal Superior de Chosica (Chosica Higher Normal School), Peru (1964–1966), and at the Universidad Mayor San Andrés (San Andrés University), Bolivia (1970), a program that he did not finish because his desire to study Psychology led him to move to Venezuela, since such program did not exist in Bolivia at that time. In 1973, he entered the Universidad Central de Venezuela (Central University of Venezuela) (UCV) and there he obtained a degree in Psychology in 1978.

That same year, after graduating, he obtained a scholarship from the Venezuelan government through the Fundación “Gran Mariscal de Ayacucho” (“Gran Mariscal de Ayacucho” Foundation), which allowed him to pursue a master’s degree in Mental Retardation at the University of Keele, England. His Master of Science (M.Sc.) degree thesis was “Social Competence in Mental Retardation with the P.A.C. System – Progressive

Assessment Charts – by H. C. Gunzburg (1930–2000),” who advised him on the assessment of social skills of people with intellectual disabilities (PcD).

In 1980, once he returned to Venezuela, he directed for 4 years the Instituto de Educación Especial “Miranda” (Special Education Institute “Miranda”) in Los Teques, Miranda State, and during that time he used the Progressive Assessment Charts to assess social skills in people with cognitive disabilities. In 1984, he founded FIPSIMA (Formación Integral Psicoeducativa Masroua-Aramayo) [Comprehensive Psychoeducational Training], an institute dedicated to the care of people with intellectual disabilities and an internship center for university students, which operated for 15 years, during which time he consolidated his theoretical-academic training.

He began his work as a professor at the School of Psychology of the UCV (1981), teaching an elective course about disability, and remained in charge of it until 2006.

He obtained the degree of Magister Scientiarum in Psychology of Human Development at the Facultad de Humanidades y Educación (Faculty of Humanities and Education) at the UCV (1986), applying Feuerstein’s Instrumental Enrichment Program (PEI). The United Nations Organization (UN) financed the presentation of this program in Israel, where he studied the L.P.A.D. (Learning Potential Assessment), which postulated a modifiable vision of intelligence. Parallel to his teaching practice at the UCV, he taught at the “Monseñor de Talavera” University College (1982–1991), Colegio Universitario de Psicopedagogía (University College of Psychopedagogy) (1983–1986), and at the Universidad Pedagógica Experimental Libertador (Libertador Experimental Pedagogical University), Center “Los Dos Caminos” (1989–1991), located in the city of Caracas.

Manuel Aramayo was the first psychologist to obtain the degree of Doctor in Psychology from a Venezuelan university. He developed the work called “The Family of the PcD,” at the University of California “Los Angeles” (UCLA), where he studied the eco-cultural model developed by Thomas Weisner (1943–) and Ronald Gallimore

(1938–). In 1996, he was entrusted by the School of Psychology of the UCV, the organization of the Simon Project of educational computing – a pioneer in the provision of computer services for people with different types of disabilities – later transformed into the Computer Laboratory of the same School.

In 1999, he completed the postdoctoral program in disability at Manchester Metropolitan University, England. He focused his work on the Social Model – the new paradigm of disability – where he received support from Mike Oliver (1945–2019) who promoted the reconceptualization and overcoming of the Medical Model of Disability. As part of his postdoctoral work, he published an “Institutional Disability Guide,” translated a book on Social Skills, and participated in organized groups of PcD in Manchester, which are among the forgers of the social model of disability; during this same year (1999), he was at the Research and Access Unit of the Universidad de Valencia (University of Valencia), Spain, and the “Mikelsen Center” in Copenhagen, Denmark. In 2005, he became Full Professor at the UCV and retired from active teaching in 2006 but remained 10 years collaborating *ad honorem*.

In 2008, he founded the Center for Disability Studies (C.E.D.I.S.C.) at the Universidad Monteávila (Monteávila University), in Caracas. In 2009, at the same university, he inaugurated the Diploma in Autism and directed it until its 12th cohort; in 2011, he created the Specialization in Psycho-educational Aspects of Autism, which he coordinated until 2018. The most outstanding work was developed at the School of Psychology of the UCV (1996) by activating, together with Pablo Guzmán, a movement aimed at the attention of the growing student population with disabilities that had been ignored by the UCV, an initiative that was joined by the professorship staff. The efforts generated the expected results, and in 1997, the University Council proceeded to create the Comisión para la Integración de estudiantes con Discapacidades (Commission for the Integration of Students with Disabilities), whose

coordination was in charge of Dr. Aramayo. Among the achievements of this commission is the normalization of the admission of students with disabilities, the adaptation of spaces to facilitate and improve accessibility and movement on campus for students with restricted mobility, expansion of medical services and academic support to students with disabilities, achieving their integration and incorporation into university life (Aramayo, 2013).

From 2001 onwards, activities of welfare, educational and cultural nature were developed in UCV spaces, whose main participants were people with different types of disabilities, thus consolidating a Volunteer Group, which received the Student Merit Award for this work. These pioneering actions laid the foundations and were the starting point for other universities in the country to establish similar policies.

He left the coordination of the Commission and created the Cátedra Libre Discapacidad (Chair Free of Disability) in the UCV (2000), a space to support students and the experience of teaching, research, and extension that has produced 16 degree works in the area of disability, qualitative research with 11 law students with disabilities that served to rethink and adapt the English social model for Venezuela, given that the sociohistorical determinants did not allow automatic extrapolation. The results of this work were presented in various academic events in the area held in Puerto Rico, Argentina, Chile, Bolivia, Ecuador, Peru, Spain, and England (Aramayo, 2005).

For his extensive and important teaching and professional work, Dr. Aramayo received several awards, including the “Stimulus to the Researcher” in 1997 and 1999; the support given by the National Council of Academic Benefits (CONABA) in 1998 and 1999; and the “José María Vargas” Order for Teaching Merit in 2001. In 2004, the University Council of the UCV awarded him the Order de la UCV for his outstanding work dedicated to the rescue, respect, and attention of the disabled population. It was 42 years exalting the role of the psychologist

through a professional and teaching practice devoted to people with disabilities in the country and the world.

Since 2018, he resides in Argentina, being part of the Institute of Family Sciences of the Austral University, in charge of the courses “Interdisciplinary Intervention in the Family of PcD” and “Violence and Disability” dictated in the master’s Degree *Intervención en Poblaciones Vulnerables* (Intervention in Vulnerable Populations). He developed many writings and published a bibliography referring to the subject.

Universitaria, Medellín, Colombia

Keywords

Colombia · Existential psychology ·
Psychology training · Ethics

Enrique Arbeláez began his education at the Jorge Ramón Posada School in his hometown, where he stood out for his academic achievements. Later, he moved to Medellín to continue his secondary education at the Seminario Menor de la Arquidiócesis (Minor Seminary of the Archdiocese); there begins his exploration into Western philosophical thinking. Upon finishing high school in 1960, given his inclination toward reasoning about existence, truth, and ethics, he began studies in philosophy at the Seminario Mayor de Medellín (Major Seminary of Medellín), Antioquia, in 1961. He studied in depth the writings of existentialist philosophers such as Søren Kierkegaard,

Jean-Paul Sartre, Nicolás Berdiaev, and Emmanuel Mounier, who influenced several of his philosophical writings about human existence (Arbeláez, 2010). His inclination toward serving others and interest in priestly life motivated him to continue his studies in theology at the same institution in 1964. His education in this discipline was based on the Thomistic and scholastic vision and, subsequently, in modern theologians like Hans Küng.

His education in theology and philosophy, as well as his reflective thinking about the human condition from an existential approach and his inclination for teaching, led him to begin a career as a professor in the faculties of psychology and theology of the Universidad Pontificia Bolivariana (Pontifical Bolivarian University) in 1973. His role as an advisor in seminars and religious communities in the region allowed him to integrate interdisciplinary pedagogical, theological, research, and existential knowledge during the following years. Subsequently, his writings reflected the constructivist, existentialist, and Christian anthropology approach as the foundation of his vision of the human being from the personal, the intersubjective, and the transcendent (Arbeláez, 1999, 2011; Arbeláez et al., 2014). In 1972, he began studies in psychology at the Universidad de San Buenaventura (University of San Buenaventura), Medellín, where he obtained a degree in psychology in 1977. In 1975, he was appointed school principal of the Colegio Militar Girardot [Girardot Military School], Antioquia, the same year he began his work as director of the Department of Psychology of University Welfare of the Pontifical Bolivarian University, a position he held until 1979. In 1977, he served 8 years as director of the Department of Selection and Human Resources of the Asociación Bancaria de Colombia (Banking Association of Colombia) and as advisor to more than 40 companies, which gave him broad visibility in the Antioquia region. In 1983, he began his work as a professor of psychology at the University of San Buenaventura, Medellín; his dedication and the profound and impressive work of his teaching years catapulted his nomination and appointment as dean of the Faculty of Psychology, a position he

held between the years of 1995 and 2003. Three years after beginning his work at that institution, the government council of the Franciscan community conferred on him the “Order of San Buenaventura” in the category of “Academic Distinction” in 1998.

An important achievement during his administration was the transition to an alternative, flexible, and collective construction curricular model, which broke with the conventional logic and dynamics of the traditional curricular organization and called for reflection to rethink professor and student practices, consistent with the social and political responsibility of the academy toward society. During this same period, he led the creation of graduate programs in organizational psychology, pastoral psychology, cognitive therapy, and psychology applied to law and a master’s degree in clinical psychology, which contributed to the development of new education and professional performance scenarios for psychologists in the region. Similarly, his interest in enabling the growth of psychology in other regions of the country led him to direct the creation of psychology programs in the Colombian cities of Armenia, Ibagué, and Valledupar.

In 1997, he assumed the vice presidency of the Asociación Colombiana de Facultades de Psicología (Ascofapsi) (Colombian Association of Psychology Faculties). There, he proposed and implemented actions leading to prevent the proliferation of academic programs without the required qualifications, an important challenge of psychology in Colombia until today. The emphasis of his management was focused on safeguarding the title of “Psychologist” in the undergraduate programs in psychology of the country.

Starting in 2000, Enrique Arbeláez received multiple recognitions by the community of psychologists at both the regional and national levels. Among them, the Universidad Cooperativa de Colombia (Cooperative University of Colombia) gave him an honorable mention for academic excellence (2000–2005); the University of San Buenaventura acknowledged his excellent performance as dean and academic director, for positioning the psychology program at the national

and international levels and achieving the first high-quality accreditation by the Colombian government (2004); the Colegio Colombiano de Psicólogos (Colpsic) (Colombian College of Psychologists), Antioquia Chapter, granted him the distinction in the “Life and Work” category for his contributions to the development of psychology in the region (2008); and in the same year, he was appointed national president of the Division of Bioethics and Psychological Deontology of C. The emphasis of his tenure was to encourage interest in the implementation of bioethics in the work of psychology. He promoted the creation of bioethics committees in different psychology programs of the country, this being one of his relevant achievements. During this period, he was the organizer of different national and regional events on bioethics.

In 2012, the University of San Buenaventura granted him the “Distinguished Graduate” recognition for his human and professional quality (Universidad de San Buenaventura, 2017), and three years later, it conferred him the title of Doctor “Honoris Causa” (Universidad de San Buenaventura, 2015) as an expression of recognition of his merits and his academic and humanistic trajectory of excellence in the region. Currently, he serves as an advisory member of bioethics committees and as an advisor at the University of San Buenaventura, Medellín.

Enrique León Arbeláez Castaño has dedicated his life to reflect on epistemological issues of psychology, being one of his main contributions the unconventional conceptual articulation of disciplines such as psychology, theology, philosophy, and anthropology, which are reflected in his literary productions and in the curricular proposals he led. His contribution toward the education of several generations of psychologists from a Franciscan pedagogy with scientific rigor, but equally open to different epistemological approaches, allowed a plural and broad vision of psychology in the region. He has been characterized for combining in his worldview a scientific gaze of human behavior with a humanistic emphasis which has been reflected in the curricular

contents and, in the way he treats people, regardless of their social position, race or gender.

Colombia · Neuropsychology · Neuroscience

On September 4, 2016, when Alfredo Ardila turned 70, he decided to give us an invaluable present with the following dedication: “To all my dear colleagues and friends, with whom I have shared this extraordinary and incomprehensible adventure that is known as life.” He left us his autobiographic open-access electronic book: *Neuropsychology as a way of life* (Ardila, 2016). Alfredo Ardila was a generous human being who surprised us with his laudable e-book instead of waiting for his friends to give him some birthday gifts. In ten pages, he expressed his deep, lifelong interest in brain function and organization and the evolutionary human mental acquisition. He focused mainly on language and consciousness phylogenetic, anthropological, and historical development. Moreover, in five pictures, he expressed his devoted compromise with his academic friendliest, maintaining an encouraging loyalty. He shared a selection of his more appreciable papers about these issues, published with his nearest partners.

Ardila received his secondary school degree in 1964 at the Colegio La Salle in Pereira (Colombia). His schoolmates remember him as the brainiest student in the group. Ten years later, in 1974, Alexander Luria wrote a letter to Ruben Ardila, saying: “your brother is a charming and gifted boy – describing his most recent student, he really will be an excellent and outstanding worker.”

Alfredo Ardila obtained his Psychology degree from the Universidad Nacional de Colombia

[National University of Colombia] in 1969. After that, he taught the first course of psychophysiology at the Pontificia Universidad Javeriana [Pontifical Javeriana University] (Bogotá–Colombia), where he read the first of Luria’s books, published in English in 1966: *Higher cortical functions in man*. After finishing the book, he decided to pursue graduate studies on cerebral explanations about complex mental functions, such as language, memory, motor, and perceptual recognition. He took advantage of a collaborative postgraduate studies program between Colombia and the Union of Soviet Socialist Republics (USSR). “I took a decision, which would look like traveling to a different planet,” he wrote (Ardila, 2016). He met Luria in the Psychology Faculty of Moscow State University in 1972. After a brief conversation, during which Ardila should decide between working with Sokolov on experimental psychology or working with Luria in a clinic setting with brain lesioned patients, he took the second option: to work in clinical neuropsychology. Then he studied action as the underlying explanation of the cortical organization related to complex mental functions and the clinical changes caused by focal brain damage. He assumed neuropsychology as a way of life during the following 48 years. He stayed in Moscow State University between 1972 and 1976, supervised by Alexander Luria at the Burdenko Institute, assessing and discussing patients 3 days a week. He received a doctoral degree in neuropsychology from Moscow State University in 1976.

Upon returning to Colombia, Ardila worked as a professor of the Psychology Department at the National University of Colombia. He attempted to initiate a research program, including the following themes: cerebral asymmetry and cortical functions, and attention. Later, he spent 1 year in Caracas, Venezuela, and soon, he moved to Mexico to the Universidad Nacional Autónoma de México [National Autonomous University of Mexico], where he continued his work on cerebral asymmetry. In 1980, he returned to Colombia.

Between 1980 and 1987, Alfredo Ardila began his generous knowledge dissemination of clinical neuropsychology in the Colombian Institute of

Neurology in Bogotá. A generation of Colombian clinical neurology and neurosurgery residents from Bogotá and Medellín began to learn about neuropsychological evaluation and diagnoses of patients with brain damage. Almost all residents who had the opportunity of rotating with Alfredo Ardila became amazed at his ability to exam the patients with only a pencil, some sheets, and a set of small everyday objects (keys, coins, paperclips, eraser, blocks, rings, dices, and cards). After 10–20 min of assessment, he had a neuropsychological diagnosis at the patient's bedside. He established the relation to the brain lesion, observed the CT scan images, and determined the complete functional explanation of each symptom. Then, the programs of clinical neurology established an elective rotation of clinical neuropsychology. Also, students of the different psychology programs initiated their learning of neuropsychology with Alfredo Ardila through conferences, seminars, research projects, and courses, as he received invitations to teach at many psychology programs in the country. Thanks to his contributions, neuropsychology became part of the curriculum in most Colombian psychology programs.

In 1981 he organized the First International Congress of Neuropsychology at the Colombian Institute of Neurology, Bogotá, with nearly 700 attendees from 14 countries. He also founded the Colombian Association of Neuropsychology with his disciples and served as its first president (1983–1985). He published a book collection in Spanish, widely used in biopsychology and neuropsychology courses in Latin America.

In 1987 Alfredo Ardila traveled to Miami. He worked for 2 years in the Miami Institute of Psychology and the Caribbean Center for Advances Studies, creating a bilingual neuropsychological center and a journal for Spanish-speaking Latin-American researchers living in the USA and Puerto Rico. Three volumes and six issues of the *Journal of the Caribbean Center for Advances Studies* were published between January 1986 and December 1988. During this visit, Ardila contacted many neuropsychologists of the American Neuropsychological Model, based on the cerebral connectivity approach proposed by

Norman Geschwind, taking Karl Wernicke's schemes of the brain white matter connections, and using the standardized test of the psychometric behavioral approach for measuring cognitive abilities. He started to familiarize himself with the neuropsychological batteries, widely used in the USA, Puerto Rico, and Mexico, including the Luria and Nebraska Neuropsychological Battery, the Halstead-Reitan Neuropsychological Battery, the Wechsler Memory Test, and the Boston Aphasia and Related Disorders Examination.

In 1989 Ardila returned to Colombia to work on two ambitious projects: Creating an institution for patients with neuropsychological problems and developing the first master program in clinical neuropsychology in Latin America. Despite his titanic efforts, the project for a master's program on clinical neuropsychology, presented with the Konrad Lorenz University Foundation, was rejected by the Colombian Department of Higher Education. Their main argument for the decision was that the graduate program on neuropsychology should be supported by a medical institution in addition to a psychology program.

During this period, he published several new books: *Brain Organization of Language and Cognitive Processes* (Ardila & Ostrosky, 1989); *Diagnosis of Brain Damage: A Neuropsychological Perspective* (Ardila & Ostrosky, 1991); and the first edition of his best-known book in Latin America, *Clinical Neuropsychology* (Ardila & Rosselli, 1992).

Still convinced of the necessity for a graduate program in neuropsychology, in October of 1991, he donated all collected documents of his proposal for a master's program to a group of neuropsychologists in Medellín. A new program presented by the Faculty of Psychology from the Universidad de San Buenaventura-Medellín [University of San Buenaventura-Medellín] and the Faculty of Medicine and the program of Neurology at the Universidad de Antioquia [University of Antioquia] was finally approved in December 1992. Alfredo Ardila was its first director between October 1993 and September 1995. He was also the supervisor of the first seven Masters on Neuropsychology trained in the region. It represented the culmination of one of his dreams. While he

was the director of this program, he sat as the first South American member of the board of governors of the International Neuropsychological Society (1993–1996) and was also president of the Latin American Society of Neuropsychology (SLAN) (1991–1995). In these roles, Alfredo guided the creation of other training programs on neuropsychology in Latin America.

Ardila proposed a theoretical guideline for education in neuropsychology: the evolutionary neuropsychological model. This model put together Luria's clinical theories about the qualification of neuropsychological syndromes, Geschwind's connectionist and psychometric model, and the structural factor components of human intelligence (see Ardila, 2016). In December of 1995, after receiving the offer of the UCLA Neuropsychiatric Institute to work with the famous neurologist and neuropsychologist D. Frank Benson (1928–1996), Alfredo Ardila decided to emigrate to the USA.

While waiting for his appointment to UCLA Neuropsychiatric Institute, he worked again in the Miami Institute of Psychology and the Caribbean Center for Advances Studies in 1996. He began writing a book with D. Frank Benson: *Aphasia: A Clinical Perspective* (Benson & Ardila, 1996); unfortunately, Benson became severely ill of advanced cancer and died on October 12, 1996. This event changed Ardila's academic plan. He decided to continue working at the Miami Institute of Psychology and the Memorial Regional Hospital in Hollywood, Fla., where he felt like working in the Colombian Institute of Neurology. He also worked at the University of Miami from 1996 to 2002 as an adjunct associate professor at Jackson Memorial Hospital. He additionally worked as an adjunct professor at the Florida Atlantic University from 1999 to 2002. In 2002 he obtained a position at the Florida International University (FIU). He published several books in this period: *Neuropsychological Rehabilitation* (Ostrosky et al., 1996); *Child neuropsychology* (Rosselli et al., 1997); *Neuropsychology of learning disorders* (Ardila et al., 2005); *ENI; Child Neuropsychological Assessment* (Matute et al., 2007); *Speech and language disorders in bilinguals* (Ardila & Ramos, 2007); *Child*

developmental neuropsychology (Rosselli et al., 2010); *International Handbook of Cross-Cultural Neuropsychology* (Uzzell et al., 2013); and *Dysexecutive Syndromes* (Ardila et al., 2019).

He was one of the most prolific and most-cited Colombian scientific authors, with more than 500 articles and book chapters in indexed publications, more than 21,000 citations, and an H Index of 75. In 2020 alone, he published over 35 papers, including one about the dysexecutive symptoms observed in COVID-19 patients (Ardila & Lahiri, 2020). During his career, he received several academic awards and recognitions. He obtained the ABPN status in 1996. He also was named as honorary professor at the School of Medicine, University of Chile; honorary member of the School of Medicine, University of Antioquia; and visiting professor at the Faculty of Psychology of the Moscow State University, among others.

He was one of the founders of the Latin American Association of Neuropsychology (ALAN), created in 1999 in Cartagena (Colombia) during the first "Congreso Internacional Cerebro-Mente: La Integración." He served as ALAN's first president (1999–2003). He was also the president of the Hispanic Neuropsychological Society (1999–2001). Alfredo's passion and main goal were to develop and strengthen neuropsychology in all the countries of Latin America. His last mission with ALAN was creating a society of societies with no membership fee and an open electronic journal in Spanish (*Revista de Neuropsicología, Neuropsiquiatría y Neurociencias*). He wanted to establish "an open library, accessible to students and professionals worldwide and from all disciplines," and a bi-annual low-cost conference. Today, these remain the core values and activities of ALAN.

When he turned 70, he decided to leave other gifts: an open web page with most of his scientific production and a fund for one annual scholarship for Latin-American students of neuropsychology. We may conclude that five desirable characteristics were gathered in Alfredo Ardila's personality: generosity, simplicity, cleverness, loyalty, and conscientiousness.

Rubén Ardila was born in Santander, Colombia, but he grew up in the “coffee region” of the country, within a family of coffee merchants. Ardila was the eldest of five children. As an adolescent, he was an avid reader of science, poetry, and literature. This background led to an early questioning of religion, making science the main source of explanation for the widespread interests he held in natural phenomena (Ardila, 2012a).

Ardila attended high school in the city of Pereira. In 1960, he was admitted to the Faculty of Psychology at the Universidad Nacional de Colombia (National University of Colombia) in Bogotá. During his formative years, he was constantly unfulfilled with the education he was receiving, which resulted in an autonomous search for knowledge. The autonomy he gained in his early years and the capacity he acquired to be a self-learner were a cornerstone in his life to become a productive and independent academician, despite the obstacles he faced in an uncondusive environment.

At the National University, Ardila found himself in a psychology program which was mostly based on psychoanalysis, psychiatry, and limited

psychological science. However, his university experience was also enveloped with a rich academic life in art, mathematics, and science (Ardila, 2012b). It is worth noting that at the time, the university was surrounded by an influential political backdrop, as were many universities in Latin America due to the impact of the Cold War, and the idealistic undertone of social change, frequently associated to socialism and the Cuban revolution (see Garzón Vallejo, 2020). This becomes relevant, considering that political discourse sometimes overshadowed academic life, replacing it and leading to opposition toward science, especially within the social sciences. One of the exceptions to the general unscientific approach to psychology in the faculty was Mateo V. Mankeliunas, a Lithuanian priest and psychologist, with a strong background in scientific psychology. Mankeliunas supervised his undergraduate thesis and was instrumental in forging a positive influence on Ardila's view of psychology (Ardila, 2012a). Ardila received his degree of psychologist in 1964, and for the following two years, he traveled extensively around the world and had some professional experience in Colombia, including his first leadership position (as treasurer) at the Federación Colombiana de Psicología (Colombian Federation of Psychology), founded in 1954 (Ardila, 1973a). He also taught courses in experimental psychology and history of psychology at the National University of Colombia.

In January 1967, Ardila entered the doctoral program of experimental psychology at the University of Nebraska-Lincoln. It is within this context of graduate school in the United States that several important events happened in Ardila's life; the following year, he got married to Ana Lucía González, with whom he fathered David, his only child. That same year, he published an article titled "Psychology in Latin America" in the prestigious journal *American Psychologist* (Ardila, 1968).

Ardila recognized that psychology in the Latin American region was unknown to psychologists in other parts of the world and understood this had to change. While completing his doctoral dissertation, he planned the publication of the *Revista Latinoamericana de Psicología* (*Latin American*

Journal of Psychology), which has been one of the most prestigious scientific journals in Latin America. The first volume of the *Latin American Journal of Psychology* was published in January 1969. It was sponsored by the Fundación para el Avance de la Psicología (Foundation for the Advancement of Psychology) founded by Ardila, until 2008, and it is currently owned by Fundación Universitaria Konrad Lorenz (Konrad Lorenz University Foundation). Ardila was the editor of the journal between 1969 and 2004. He also founded *Avances en Psicología Clínica Latinoamericana* (*Advances in Latin American Clinical Psychology*) of which he was the editor between 1982 and 2004. This journal is currently published by Universidad del Rosario (Del Rosario University) in Colombia under the title *Avances en Psicología Latinoamericana* (*Advances in Latin American Psychology*) (Ardila, 2012b).

In 1969, Ardila also completed his book *Psychology of Learning*, published the next year. It underwent 27 editions and reprints and was used for a long time as a textbook in Latin America and Spain, before other current textbooks in the area, originally published in English, were translated into Spanish.

Shortly after returning to his country from graduate training, he was appointed chair of the Department of Psychology at National University of Colombia (1970), where he promoted scientific (and especially experimental) psychology as a new standard of training for psychologists. Given the historic importance of that program, others followed suit and pursued changes in curricula, slowly moving away from speculative approaches and the psychiatric influence. By mid-1972, he accepted an offer to organize the Program of Psychology at Universidad de Los Andes (University of Los Andes). During those years, Ardila led a group of psychologists, some of them also returning to Colombia from doing graduate work abroad, in the promotion of scientific psychology and the experimental analysis of behavior. They supervised the first theses in experimental psychology using animals and humans as subjects, at both the basic and applied research levels (Gutiérrez, 1999). This far-reaching work of promoting scientific psychology, especially in behavior analysis at the

time, was one of Ardila's endeavors over the next decades which extended to the entire Latin American region.

In 1976, he shifted from the University of Los Andes to Universidad Santo Tomás (Saint Thomas University) to create a master-level graduate program in clinical psychology. This was a controversial proposition in two ways: first of all, at the time, the institution did not have an undergraduate program, so for some colleagues, creating a graduate program seemed premature; secondly, the program admitted psychologists and students from other professions which casted doubt on the qualifications of those students to offer clinical services. Some of the community questioned this approach to professionalization of psychology in Colombia, but there were no regulations in Colombia concerning graduate training at that time. In any case, the creation of that program encouraged the foundation of other graduate programs in the country in the following years. That master's program continues being offered at the present time.

Ardila began a prolific life as a writer with *Psychology of Learning* in 1970. He was able to publish one and in some cases two books per year, in addition to many articles in national, regional, and international journals. Some of his books have been translated into other languages. Five decades after receiving his PhD, he has published 35 books as an author, co-author, or editor. His books have addressed a wide range of topics, introducing some areas of psychology into the Spanish-speaking psychological community, for example, *Psychology of Work* (Ardila, 1972b) and *Homosexuality and Psychology* (1998). Other books have been the result of research studies, presented in a more general manner as books, such as *Psychology of Colombian People* (1986a) and *Psychological Impact of Nuclear War* (1986b). In general, Ardila's contributions have been focused in the following areas: (a) *experimental, comparative, and physiological psychology* (e.g., Ardila, 1971, 1973b); (b) *history of psychology in Latin America* (e.g., Ardila, 1973a, 1986c); (c) *epistemological issues of psychology* (e.g., Ardila, 1988, Bunge and Ardila, 1987); and (d) *international status and the future*

of psychology (e.g., Ardila, 1972a, 1984, 2002). In the same way, a wide range of topics have been addressed in over three hundred articles, including social issues, ethics, and the role of psychology in modern society (for an extensive review of Ardila's work, see Flórez Alarcón, 2003).

With such varied production, it becomes necessary to undertake the fact that Ardila has not centered in a single problem or area of psychology, as many contemporary scientists have done. First, the context in which Ardila developed his career was one of a developing psychology, in which research and professional opportunities were limited to the areas of clinical and educational psychology, and there were constrained opportunities for independent work. Thus, much of Ardila's work consisted of expanding the horizons of psychologists in Colombia and the entire Latin American region, mainly through his publications and research work. It is possible, however, that the main reason for the variety of his publications comes from his broad knowledge, particularly in science, and specifically the behavioral sciences. Perhaps such extensive interests would be less apprehensible in today's society, but it should be kept in mind that the pivotal time he entered the discipline in our region fits well with his interests and high working capacity to make contributions in a number of psychological areas.

Ardila has held leadership positions as founder, president, vice president, or member of the board of directors, in a number of academic and professional organizations, including the Colombian Federation of Psychology, Colombian Society of Psychology (CSP), Colombian Association for the Advancement of Science (ACAC), Interamerican Society of Psychology (SIP), Latin American Association of Behavior Analysis and Modification (ALAMOC), International Society for Comparative Psychology (ISCP), International Society of Clinical Psychology, International Association of Applied Psychology (IAAP), and International Union of Psychological Science (IUPsyS).

Rubén Ardila's contributions to psychology have been acknowledged through many awards: the award from the Spanish Society of Psychology, Interamerican Psychology Award, Lifetime

Achievement Award from the Colombian College of Psychologists (Colpsic), Laureate of the International Academy of Humanism, International Award from the Association for Behavior Analysis (ABA), American Psychological Association (Div. 52) Award for Distinguished Contributions, National Award for Scientific Merit (ACAC), American Psychological Association Award for Distinguished Contributions to the International Advancement of Psychology (APA), and American Psychological Association Presidential Citation.

He also received honoris causa doctorates from Universidad Ricardo Palma (Ricardo Palma University), Perú; Universidad Inca Garcilaso de la Vega (Inca Garcilaso de la Vega University), Perú; and Universidad Nacional de Rosario (National University of Rosario), Argentina.

Rubén Ardila has made a lasting impact in psychology in the Latin American region. While studying in his home country, he found a need for a psychology based on scientific principles and evidence. His training in experimental psychology, as the main source for those principles, shaped his view of psychology in theoretical terms. The recognition of a lack of unity and the possibility of influencing psychology beyond the borders of his own country, reaching a larger audience in what is known as Latin America, gave him a purpose and a horizon that has guided his work during his entire professional life. Despite substantial differences in the development of psychology in Latin America, Ardila bet on the idea that it was necessary to promote a scientific approach to the discipline and the profession in the whole region. For example, in 1974, within the context of the XV Interamerican Congress of Psychology in Bogotá, Ardila organized the First Latin American Conference on Training in Psychology, which led to the adoption of a model inspired in the Boulder Conference on training in psychology (1949). *The Bogotá Model*, however, was a regional construction based on the work of participants from most countries in the Latin American region that centered on training and professional practice (Ardila, 1975).

Ardila also showed the rest of the world the growth of psychology in Latin America. He did so

through the study of history of psychology in Latin America. His work constitutes the basis for much of what is today a fruitful area of research in Argentina, Brazil, Chile, Colombia, Perú, and other countries of the region.

His aim for integrating Latin American psychology to the international community resulted in an effort to improve the representation of the countries in the region in organizations at the international level. His participation in the governing bodies of academic and professional organizations has contributed to a recognition of Latin America as a promising region for psychology. Ardila shared this objective with other representatives in Latin American Psychology such as Horacio Rimoldi (Argentina) and Rogelio Díaz-Guerrero (Mexico).

Rubén Ardila begins and ends his autobiography with the final words of a poem composed in 1915 by the Mexican writer Amado Nervo (1870–1919):

Life, you owe me nothing, Life, we are at peace!

In the same poem, Nervo writes the following:

Because I see at the end of my rough way
that I was the architect of my own destiny

Rubén Ardila has been an architect of his own destiny, and he has also been one of the architects of psychology in Latin America through his research, his construction of psychology programs and professional organizations, and his ongoing support for psychology students but, mostly, through his publications that have reached and made a real impact on people at various levels.

Guatemala · Argentina · Educational psychology · Organization of psychological institutions

The son of Mariano Arévalo Bonilla and Elena Bermejo de Paz, he studied at the Escuela Normal Central de Varones (Normal Central School for

Males) in Guatemala, graduating as a teacher in 1922 and completing his high school studies in 1925 at the Instituto de Jalapa (Berrocal Soto, 1966). He studied higher education with a scholarship from the Argentine government; in 1927, he travelled to Argentina to study at the Universidad Nacional de La Plata (National University of La Plata, UNLP). In 1932, he graduated as a Professor of High School, Normal and Special Education in Philosophy and Education, and in 1934, he obtained his doctoral degree in philosophy and educational sciences, with a doctoral dissertation on *La pedagogía de la Personalidad* (Pedagogy of Personality) (Arévalo, 1974).

He returned briefly to Guatemala; however, dissatisfied with the Ubico dictatorship (1878–1946), he returned to Argentina, where in 1937, he was appointed Professor of Literature at the Universidad Nacional de Tucumán (National University of Tucumán), which had recently begun to be administrated by the national Government. In the same year, he moved again to La Plata; in August, he was appointed Secretary of the Facultad de Filosofía y Ciencias de la Educación (Faculty of Philosophy and Educational Sciences) at the UNLP, during the deanship of Alfredo Calcagno (1891–1962). In October 1939, through a public selection, he won the position of Assistant Professor of Educational Sciences in the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the Universidad de Buenos Aires (University of Buenos Aires), where he would be in charge of the Seminar on Adolescent Psychology (Arévalo, 1974), without leaving the UNLP.

Arévalo was President of Guatemala after the 1944 elections from 1945 up to 1951. For this reason, his political work has been sufficiently analyzed and valued, both in the years close to his administration (Alvarez Elizondo, 1947; Ordoñez-Argüello, 1951) and in more recent years (Carrera, 2000; Luján Muñoz, 2004). However, Juan José Arévalo's contributions to psychology have hardly been studied, even in well-documented works on the history of psychology in Guatemala (Aguilar, 1999; Aguilar & Recinos, 1996; Cárcamo-Duarte & Escobar-Martínez, 2015). Of course, Arévalo emphasized the

relationship between political and economic problems in general and educational and psychological problems. His doctrine of *spiritual socialism* was based on what he called the *psychological freedom of the individual and moral and psychological integrity* (Arévalo, 1946). However, while recognizing the close relations between Juan José Arévalo's political thought on the one hand, and educational and psychological thought on the other one, we consider it possible to analyze Arévalo's specific contributions to psychology.

The one who did recognize Arévalo as one of the pioneers of psychology in Guatemala was Ítalo Américo Foradori (1905–1969), one of the first historians of psychology in Latin America. Foradori considered that Arévalo had understood “man and the world from the angle of a pedagogy founded on the philosophy of values and the person” (Foradori, 1954, p. 178; translation is mine). Foradori also highlighted Arévalo's stay at the Universidad Nacional de Cuyo, UNC (National University of Cuyo). In the small city of San Luis, he had taught Psychology and organized the Instituto Pedagógico (Pedagogical Institute), dependent on the UNC, in “whose scheme psychology plays an instrumental and formative role of great importance” (Foradori, 1954, p. 182; translation is mine). He also pointed out that in Tucumán, Arévalo was in charge of the psychology of adolescence and pedagogical psychology course (Foradori, 1954).

It is possible, then, to consider at least three contributions of Juan José Arévalo to psychology. First, the psychology of adolescence, in which Arévalo demonstrated his qualities as an acute observer of human behavior. Second, the psychology of personality in connection to values and axiology. And third, his contribution as an organizer of institutions related to psychological research. Arévalo also ventured into general psychology, child psychology, and social psychology, especially his interest in the study of leadership.

The *psychology of adolescence* was one of the psychological topics that most interested Arévalo. First of all, he considered the existence of a *psychological law*, in the “sense that it is rigorously fulfilled although it happens under different appearances” (Arévalo, 1941, p. 60; translation

is mine). According to this law, adolescence moves between two experiential extremes, which he called the *axiological curve*. These two extremes are the moment of abandonment and withdrawal from the world, which Arévalo called *evasion*, and the second, the moment of restitution or, as he called it, *return*.

Arévalo analyzed four characteristic notes of adolescence: the transience of expressive phenomena; personal instability; the contradictory character of behavior; and the will to deceive. However, in his opinion, these notes should be considered as *secondary characteristics* and his intention was to find the *primary characteristics*. In his analysis, these primary characteristics were based on those two fundamental stages: *evasion and return*. With regard to *evasion*, he considered that it was initiated by the awareness of sexual maturation, which led to two attitudes: *surprise and suffering*. The withdrawal and avoidance occurred because in the early adolescence, the adolescent noticed how difficult it was for the adult environment to deal with the problem. Immediately the affections emerged and, thirdly, the *biting and analytical criticism* of everything that surrounded the adolescent, accompanied by an intransigent morality. Nevertheless, Arévalo did not judge the stage of evasion as entirely negative; it was also a time of alliance with peers, which would lead to various forms of friendship.

The *return*, in turn, also involved four distinct but intimately linked moments. Firstly, the discovery of the individual self, megalomania, egocentric swaggers. Secondly, the moment of discovery of an adult to imitate, that is, the discovery of the master. Thirdly, the discovery of love. As Arévalo put it, love with a capital letter, sublime love, not mere flirtation or a passing flirtation. And fourthly and lastly, the discovery of action, of personal efficacy. Arévalo stressed that some of these moments might not be overt and that the chronological period in which they unfolded was uncertain.

As Arevalo himself pointed out, his theses on adolescence emerged neither from the experimental laboratory psychology nor from field surveys; rather, they were elaborations based on acute

observation of the issue. At the same time, it was based on the work of the most prominent authors on the field at the time, since Arévalo was extremely up-to-date in his bibliographical references: Spranger (1882–1963), Charlotte Bühler (1893–1974), Pierre Mendousse (1870–1933), and Maurice Debesse (1903–1998).

The second field of psychology that interested Arevalo was the *psychology of personality and values*. Arévalo emphasized the need to conceive of personality as a hierarchical organization that pursues the achievement of certain goals or values. Starting from biological conceptions, he pointed out that individual life as a personality begins with an animal nature, but is then pushed towards the achievement of its dignity. In this context, he identified four hierarchically ordered supreme values: pleasure, power, knowledge, and being: “the personality organized according to the purpose *pleasure* is an empire of the general sensuality (low or ennobled according to the cases) which gives the tone to the behaviour; the personality which evaluates as supreme thing the *power* admits a remarkable predominance of the will, the best instrument in its case; the person whose life in an inextinguishable craving for *knowledge* gives to the intelligence the total administration of his acts, and, finally, who seeks a pure realization of his *being* subordinates everything to the domain of the pure spirit” (Arevalo, 1937/1957, p. 191).

Arévalo considered that starting from this axiological hierarchy, on which he would insist again 2 years later (Arévalo, 1939) “one can continue the development until one can constitute, already in truly psychological fields, a whole characterology” (Arévalo, 1937/1957, p. 191). His hierarchical proposal evidenced his debt to the work of Max Scheler (1874–1928) and especially Hugo Münsterberg (1863–1916), one of the authors that Arévalo analyzed in detail, particularly because, even when he questioned his voluntaristic idealism, he also proposed an “elaborate table of pedagogical values” (Arévalo, 1939, p. 64). 64), which began with knowledge and training to finally conclude in inspirational values, those that “give meaning and significance to the world” (Arévalo, 1939, p. 43; translation is mine).

Arévalo's considerations on the psychology of values also evoked the work of Coriolano Alberini (1886–1960), one of his professors in La Plata, even if he also differed from it. For Alberini, the central aspect of psychological life was assessment and evaluation. Arévalo, for his part, considered that axiology was not called upon to grant “imposing systems of values but to provoke in the soul of each individual a particular reorganization of behaviour on the basis of his own experiences” (Arévalo, 1939, p. 75; translation is mine). For this reason, in the educational field, axiology should not be a content to be developed in children, not even in adolescents, but in adults, even if it was necessary to underline the importance of values in the constitution of the personality.

Arévalo's third contribution to psychology was his role in *organizing institutions that promoted psychological research*. In 1941, he was appointed by the National University of Cuyo, which had been created 2 years earlier, as Technical Director of the Escuela Normal de Maestros Juan Pascual Pringles (Juan Pascual Pringles Teacher Training School), which depended on the university and was located in the small city of San Luis. At the same time, this position included the responsibility of organizing a Pedagogical Institute. Three months after his appointment, Arévalo presented the project of the Institute for consideration by the university's Superior Council. In his autobiography on his time in Argentina, Arévalo acknowledged that he had already drawn up the ideas for such an institute, although he had thought of them for his native country (Arévalo, 1974). And when he became President of Guatemala in 1945, Arévalo promoted the creation of a Faculty of Humanities, in terms reminiscent of the Instituto Pedagógico (Pedagogical Institute) at San Luis (Arévalo, 1947).

Arévalo organized the Pedagogical Institute on the basis of four major departments: (1) of higher studies; (2) of psycho-pedagogical research; (3) of library and publications; (4) of physical, social, and artistic culture. With regard to the Department of Psycho-pedagogical Research, it specified that it was to carry out “psycho-pedagogical research on children and young people in the Cuyo region”

(Universidad Nacional de Cuyo, 1941, p. 11). To this end, it would have a laboratory with “the indispensable instruments for fundamental explorations” (Universidad Nacional de Cuyo, 1941, p. 12), since at the same time it would “promote, classify and analyze collective surveys taken on children, young people and adults in the region, connecting the problems with broader questions of anthropology, biology, psychology and sociology significant for education” (Universidad Nacional de Cuyo, 1941, pp. 12 and 13). And finally, “it will address the clinical study of all those individual cases ... and will organize a medical-pedagogical clinic to attend free of charge all consultations concerning irregularities or abnormalities of a psychological order in pre-school, school and out-of-school children in the city” (Universidad Nacional de Cuyo, 1941, p. 13; translation is mine).

The Pedagogical Institute organized by Juan José Arévalo would be the germ of one of the most outstanding university programs in psychology in Argentina, the psychology program in San Luis, which functioned in the dependencies of the National University of Cuyo from 1958 up to 1973 and since 1973 precisely at the Universidad Nacional de San Luis (National University of San Luis), created that same year.

Mexico · Organizational psychology · Administration

He is a Psychology graduate from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) in the 1963 class. In 1969, he received at the Berkeley University of California a master's degree of Administration. He completed a master's degree in Psychology at the UNAM (1974), a doctorate in Social Psychology awarded with an honorable mention from the Facultad de Psicología (Faculty of Psychology) (FP), and a doctorate in Administration Sciences from the Facultad de Contaduría y Administración (Faculty of Accounting and Administration) (FCyA) (2005).

He is a referral for organizational psychology in Mexico and Latin America, working for very prestigious publishers. He has completed approximately 22 books related to human resources administration, quality of life at work, and research in the field of administrative and behavioral sciences, which have been considered mandatory textbooks in a large number of universities. Similarly, he has published more than 60 specialized articles in national and international magazines that document specific aspects of human behavior in organizational settings.

He was a teacher at the Escuela Nacional Preparatoria (National Preparatory School) (ENP) of the UNAM from 1962 to 1965. At the same time, starting in 1967 he taught Industrial Psychology at the FCyA and at the FP and later in the masters and doctoral programs with topics related to research in social sciences field. Since 2002 he

has collaborated as a teacher at the Universidad Autónoma de Morelos (Autonomous University of Morelos) (UAEM).

His work has been recognized with the Medalla de Plata Gabino Barreda al Mérito Universitario (Gabino Barreda Silver Medal for University Merit) by the UNAM in 1981. The Asociación Mexicana de Capacitación de Personal (Mexican Association for Personnel Training) awarded him the Premio Nacional (National Award) for his contributions in training workers. In 2003, the UAEM awarded him with the distinction of Doctor Honoris causa for his contribution to the development of Psychological and Administrative Sciences. The Colegio de Psicólogos del Perú awarded him in 2010 a diploma for his contribution to psychology in Latin America, in 2010 the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP) awarded him the Premio Nacional (National Award) for his contributions to Psychology, and the Universidad Nacional Mayor de San Marcos (National University of San Marcos) (UNMSM) of Peru granted him the degree of Honorary Professor (2015). And in 2017, the UAEM paid him tribute for his invaluable professional career.

He has been a member of the Sistema Nacional de Investigadores (National System of Researchers) (SNI) since its foundation, in 1984, and in 1999 he was awarded Level III; his lines of research are quality of life, human behavior and organizational effectivity student performance, personality, and work.

Among his professional works, he chaired the Sociedad Iberoamericana de Psicología del Trabajo in 1989 y las Organizaciones (Ibero-American Society of Work Psychology and Organizations) and the Asociación Mexicana de Capacitación de Personal (Mexican Association for Staff Training) from 1996 to 1997; through these he promoted the professionalization of consulting work, as well as connecting university students to business activity.

The effort made by Dr. Arias Galicia persistently for almost 60 years, in the training of psychology professionals who work in the organizational field, is an obligatory point of reference in the history of this area of application and a model behavior of comprehensive efforts in training, teaching, and research in psychology in Latin America. His scientific production is the most obvious example of his contribution to the development of psychology. His scientific productions speak for themselves about his outstanding academic career.

Guatemala · Pedagogical psychology ·
Indigenous · Mayan cosmogony

The son of a wealthy family, Jorge Luis Arriola Ligorria lived his childhood in a shared village by mestizos criollos and Indigenous people, which allowed him to observe, from a very early age, the behavior of the Indigenous population which, later in his most important work, he described as “Unique, but no less humane” (Ordoñez, 1995).

Arriola Ligorria’s humanist vocation originated in his hometown, populated mainly by members of the K’iché ethnic group. It can be inferred that this early experience aroused the later interest of the professional to study and explain possible relationships between cosmogony, collective behavior, and scenarios of colonization and socioeconomic exclusion that, to this day, characterize the daily life of the native peoples of Guatemala (Ordoñez, 1995).

In 1925, he got a scholarship to study in “La Sorbonne” University, in Paris, France. So later in 1929, he assists to Lausanne University, in Switzerland, to study pedagogic psychology. He finished his courses that same year and went back to Paris to graduate in “La Sorbonne,” as a PhD in psychopedagogy (Arriola, 1990).

Back in his country, he worked as Director of the Education Ministry Psychology Lab, conducting research dedicated to “determining the psychological profile of Guatemalan children, in order to adapt the methods of Pedagogical Psychology, both in the indigenous race and in

the mestizos” and to “consider in educational plans the population differences produced by the climate, environment and ethnological factors that are decisive in Psychology” (Nuestro Diario, 1930).

In 1932, as a preview of his work devoted to developing profiles of the development of intelligence in the Indigenous population of Guatemala, he published a short essay, with the aim of “explaining, from the psychological point of view, his interpretations of some passages of the Popol Buj, strictly adjusted to scientific criteria” (Arriola, 1930).

His main contribution to the psychology development in Guatemala was made in 1933, when he published his first book named “Indigenous Psychology Essay” with a foreword made by PhD Carlos Federico Mora, psychiatrist and pioneer of the mental health in Guatemala. This work showed his interest to comprehend the “other,” represented by the Indigenous population (Ordoñez, 1995).

With this objective and supported by the work of Jean Piaget (1896–1980), Arriola explored some concepts of the Mayan cosmogony about the origin of the Universe, the action of the magic word, the religion of the current Indigenous people and their psychological interpretation, the problem of death, and the expression of these concepts in the development of the thought of the Guatemalan Indigenous people. From his observations, he concluded that “the Indian has a different conception of the Universe, in a certain way, from the Western one, which acts according to the order that marks the psychological development and is preserved, following the proposal of Jean Piaget, at the level of magical thinking and pre-logical operations” (Arriola, 1933 p 8). This work is part of the collection of the Virtual Legal Library of the Institute of Legal Research of the Autonomous University of Mexico – UNAM (Ordoñez, 1995).

Between 1930 and 1944, he served as a professor of psychology, in public and private secondary schools in Guatemala City. In this same period, the founding of the Faculty of Humanities of the Universidad de San Carlos de Guatemala took place. Arriola was part of its body of

professors, alongside Juan José Arévalo (1904–1990). However, the Faculty was suppressed in 1933, by Jorge Ubico (1878–1946), Dictator of Guatemala from 1931 to 1944, in retaliation for a university strike, in which Jorge Arriola participated. This and other movements were precursors to Ubico's overthrow, on July 1, 1944, and to the Revolution of October 20, 1944, which brought to Guatemala processes of social and economic development known as the "10 years of democratic spring in Guatemala" (Ordoñez, 1995).

In November 1944, as Minister of Public Education of the Revolutionary Government Council, Jorge Arriola wrote and signed Decree 17 for the Universidad de San Carlos de Guatemala autonomy (Ordoñez, 1995).

In 1945, he was a Guatemalan delegate to the second part of the First Preparatory General Conference of the United Nations, in London. Later that year and until 1947, he collaborates with Juan José Arévalo Bermejo's Government (1945–1951) as Plenipotentiary Minister of Guatemala in Portugal. Far along till 1949, he did the same job, this time in Italy. From 1949 to 1951, he worked as the Guatemalan Ambassador in El Salvador. Then, from 1951 to 1953, he was designated as the Social Assistance and Public Health Minister in the Jacobo Árbenz Guzmán's Government (1951–1954). Toward the end of 1953 until 1954, he served as diplomatic ambassador to Brazil, and in 1955, he participated as organizer and secretary general of the "Guatemalan Social Integration Seminar," on which he worked later as secretary-general until 1963 (Arriola, 1990).

From 1958 to 1963, he was director of the National Indigenous Institute and the Guatemalan Social Integration Seminar. From these positions, he promoted State policies aimed at creating better living conditions for Indigenous peoples and promoted projects in line with the Inter-American integrationism of the epoch (Ordoñez, 1995).

From 1964 to 1966, he was Director of Publications of the Faculty of Humanities of the Universidad de San Carlos de Guatemala. Again, in the diplomatic corps of Guatemala, from 1967 to 1969, he served as Ambassador to Costa Rica, and from 1969 to 1970 in Italy. At the end of 1970,

he returned to Guatemala and rejoined the Universidad de San Carlos de Guatemala as a professor in the Faculties of Humanities and Law until 1985 (Arriola, 1990).

For all his efforts and contributions to the development of humanistic sciences and culture in Guatemala, he received multiple decorations, among which the following stands out: Golden Quetzal of the Association of Journalists of Guatemala (1962); "Orden Francisco Marroquín" For distinguished teachers from [Education Ministry] (1986); Medal of Honor for Merit from the Ministry of Public Health (1986); Mariano Gálvez Medal, from the Mariano Gálvez University (1994); and Order of the Quetzal (the highest decoration awarded by the Government of the Republic of Guatemala (1995). His remains rest in the city of Antigua Guatemala.

In his hometown, Astrada studied at the Colegio Nacional de Monserrat (Monserrat National School) then attended the Facultad de Derecho y Ciencias Sociales de la Universidad Nacional de Córdoba (Faculty of Law and Social Sciences of the National University of Córdoba), from which he did not graduate. In 1926, that same university called for a contest to improve the studies of philosophy abroad. He obtained the scholarship with the essay “The epistemological problem of current philosophy” and traveled to Germany where he stayed between 1927 and 1931. There he studied in close relationship with Husserl (1859–1938), Scheler (1874–1928), Hartmann (1882–1950), and Heidegger (1889–1976), philosophers whose work inspired several books by Astrada. He also studied with Karl Reinhardt and Walter Otto. In addition, the German experience allowed him to conduct a long-term intellectual dialogue with Wilhelm Szilazi (1889–1966), Karl Lowith (1897–1973), Hans-Georg Gadamer (1900–2002), Nicola Abbagnano (1901–1990), and Eugen Fink (1905–1975), among others (David, 1999). Astrada had the chance to meet several of them at the First National Congress of Philosophy in 1949 in Mendoza (Argentina), where he was a key figure. In that opportunity, Juan Domingo Perón (1895–1974), the President

of the Nation, addressed the congress in his closing speech.

Astrada was a part of the most radicalized group of the University Reform movement together with Saúl Taborda (1885–1994) and Deodoro Roca (1890–1942) (David, 1999), and he was its official speaker in 1919 and 1932. Between 1920 and 1921, he was a professor of psychology at the Colegio Nacional de La Plata (National School of La Plata). He returned to Córdoba and was Director of Publications at the Facultad de Derecho y Ciencias Sociales (Faculty of Law and Social Sciences) until 1927. In 1931, he won the position of Director of Courses and Conferences at the Instituto Social de la Universidad Nacional de Rosario (Social Institute of the National University of Rosario). In 1936, he was appointed assistant professor of history of modern and contemporary philosophy at the Universidad de Buenos Aires (University of Buenos Aires). In 1937, he obtained the chair of ethics at the Universidad Nacional de La Plata (National University of La Plata). In 1947, he was professor of gnoseology and metaphysics and director of the Instituto de Filosofía de la Facultad de Filosofía de la Universidad de Buenos Aires (Institute of Philosophy at the Faculty of Philosophy of the University of Buenos Aires). During those years, he founded and directed the journal *Cuadernos de Filosofía (Philosophy Papers)*, a journal that frequently featured the contributions of leading Argentine and European philosophers. In 1952, he returned to Europe and gave lectures at the universities of Rome, Turin, Fribourg, and Heidelberg. In 1956, he both retired from his chairs at the Universidad de Buenos Aires (University of Buenos Aires) and undertook his third trip to Europe, invited by the University of Moscow. There he lectured at the Academy of Sciences and the Marx-Engels-Lenin Institute. Between 1959 and 1962, he was hired as professor by the Universidad Nacional del Sur (Southern National University). In 1960, on his trip to China, he gave lectures in Beijing and Shanghai and met with Mao Tse-Tung (1893–1976). During the last years of his life, in collaboration with his beloved disciple Alfredo Llanos, he directed the

philosophical collection “Paideuma” of the Juarez Publishing House.

Despite being a great receptor, interpreter, and disseminator of contemporary European philosophy, which he deeply knew from his very roots, we can place Carlos Astrada in the line of Latin American thought committed to – what Walter Mignolo (2008) called – the geopolitics of knowledge. In a context defined by political vicissitudes that demanded him to constantly revise his own work, his central philosophical concern was rooted in Latin American political and epistemological perspectives, with the conviction that their future could not depend on any other philosophy than the one well founded on South American historical experiences. Indeed, he stated that “everything imitatively assimilated from a culture, which has not been encouraged to develop, can only be external, peripheral assimilation” (Astrada, 1948a, p. 35). Furthermore, he argued that “Latin America, or better, Amerindia, melting pot and crossroads of civilizations, puts also its bow towards the future to integrate itself in a new historical world or renewed from its roots” (Astrada, 1967, p. 18). He developed the idea of *genius loci*, which means that no one can be something from the *topos uranos*, but only from his land, his time, and his historic landscape. Astrada (1963) claimed a thought attached to the territory where the collective and individual human existence makes sense, and from there he enunciated his philosophical position.

Especially taking into account Astrada’s *Mito Gaucho* (1948a), Arturo Roig (1993) analyzed that our author’s work was coherent with the Argentine thought of the late 1930s. The latter was characterized by attributing a positive value to barbarism, in reference to Sarmiento’s old dichotomy between civilization and barbarism. Therefore, the attributed positivity of the north-central culture, which had been hegemonically understood by the generation of 1837 as that which was to replace native barbarism as the only way to achieve sociopolitical progress in Argentina and Latin America, was reconsidered. From a positive conception of barbarism, Astrada claims that the political people must be the foundation of the State, and therefore, as the

protagonist of history, it must take the power of society. He is the “new man,” stated Astrada (1948b), the one who has found himself and has stopped wandering aimlessly in the geographical extension of Latin America and can now take charge of designing his epistemological, ethical, and political destiny, outside the dependence of the constraining capitalism. It is important to emphasize the strong bond and adhesion of Astrada with Peronism, especially in the first years of the administration, of which he even became its official spokesman. Carlos Astrada justified the third position of neutrality assumed by Argentina facing the Second World War, in a 1947 dissertation at the Naval War Academy with President Perón (Astrada, 1948c; Bustos, 2012). According to Horacio González (1999), Astrada was convinced of the capacity of the new leader, whose emergence had a great popular assent, unprecedented until then in Argentina, to change the history of dependence on a destiny of cultural and political sovereignty. However, in the second edition of the *Gaucho Myth* of 1964, in his added Introduction, Astrada clearly stated his distance from Peronism (Bustos, 2011).

Carlos Astrada was one of the introducers in Argentina of the psychology of structure, as Eugenio Pucciarelli (1937) called it, which ranged from Gestalt to the psychology of totality of the “second” Leipzig School. In 1945, Astrada compiled a series of works by Felix Krueger precisely under the title *Structure and Psychic Totality*. In the foreword to that book, Astrada stressed the importance of collective and social processes in structuring the immediacy of psychic totality (Astrada, 1945/1969).

Chile · Social psychology · Community psychology · Community intervention · Mental health

Domingo Asún was born in Santiago, Chile, in 1943. He attended high school at the *Instituto Nacional* (National Institute), which was a relevant educational institution in Chile since its independence. After graduating in 1962, he entered the psychology program at the *Universidad de Chile* (University of Chile). His childhood and early education took place during a period of profound transformation in the university and society, concurrent with the sociocultural and political changes that marked the country and the region in the postwar period. In addition, Asún's studies began when social psychology was becoming a field of great value for social and

community intervention, but which, on the national scene, had been developed with an individualistic and experimental approach (Montero, 1989).

Asún finished his degree in 1969. After that, he completed specializations in public health, mental health, and sociology. In 2000, he started a master's degree in social psychology at the *Universidad de La Serena* (University of La Serena) in Chile. Asún's sociological background was affected by the Latin American Dependence Theory because he was part of various intellectual networks (Asún, 2005). On the other hand, he trained with Dr. Juan Marconi, the promoter of community intrapsychiatry.

After the coup in 1973, Domingo Asún committed himself to popular education, mental health initiatives, and collaborated with groups inside and outside of psychology. During this time, he faced political violence and provided protection to colleagues persecuted by the regime of Augusto Pinochet. For this reason, among others, he became a member of the *Asociación Latinoamericana de Psicología Social* (Latin American Association of Social Psychology) [ALAPSO] (Asún, 2007). Following this trajectory, he was elected president of the *Colegio de Psicólogos de Chile* (Association of Psychologists of Chile) in 1981 and 1984, a period that coincided with the majority of the National Days of Protest against the civil-military dictatorship (1983–1986). During this period, Asún courageously denounced the extensive use of violence to repress civilians (Luco, 2016) and joined the Human Rights Commission of the Federation of Professional Associations and the Association of Psychologists of Chile as a founding member. From the early 1980s through the first half of the 1990s, he co-organized the National Congresses of Psychology.

At the end of the decade, he collaborated with the *Asociación Chilena de Psicología Social* (Chilean Association of Social Psychology) [ACHIPSO] to help colleagues and others living in exile return to Chile.

At that time, he was also interested in the structural situations that defined the poverty of urban youth, so he participated in networks of the *Comisión Chilena Pro-Derechos Juveniles*

(Chilean Commission for Youth Rights) [CODEJU] and in the interventions of different catholic organizations in Santiago (Cottet et al., 1992).

In 1982, he became dean of the Faculty of Psychology at *Universidad Diego Portales* (Diego Portales University) and directed it until 1997, fostering new lines of training that were previously absent in the country. Shortly before his death in 2015, he was distinguished as an honorary professor in recognition of his key role as founder and leader of the Faculty of Psychology for 15 years.

Additionally, following the return of democracy in 1993, Asún was invited by the *Ministerio de Salud* (Ministry of Health) [MINSAL] to participate in the commission to support the incorporation of psychologists into the primary level of health care, a milestone in the development of public health and psychology in Chile (Unger, 2017).

From 1998 until his death, Asún continued his academic career in undergraduate and graduate programs at the University of Chile, *Universidad de Santiago de Chile* (University of Santiago de Chile), *Universidad de Artes, Ciencias y Comunicación* (University of Arts and Social Sciences), *Pontificia Universidad Católica de Valparaíso* (Catholic University of Valparaíso), *Universidad Academia de Humanismo Cristiano* (University Academy of Christian Humanism), and *Universidad de Valparaíso* (University of Valparaíso), where he was director of the School of Psychology from 2002 to 2004, impacting the development of community psychology in the Valparaíso Region.

In early 2000, he helped create the network of Community Psychology educators, a precursor of the *Sociedad Chilena de Psicología Comunitaria* (Chilean Society of Community Psychology) that was founded in 2014. Unfortunately, he was unable to integrate due to his health problems. He continued to collaborate with social psychologists from Chile, Latin America and Spain, and contributed to various publications including scientific articles, books and book chapters.

In 1985, he was awarded the Sergio Yulis Prize by the *Sociedad Chilena de Psicología Clínica* (Chilean Society of Clinical Psychology) for the

construction of solidarity networks in the period of the military dictatorship (1973–1990) and for his effort to create scientific networks and promote intellectual exchange. Thirteen years later, in 1998, he was awarded the Premio Nacional de Psicología (National Psychology Prize), the Chilean Association of Psychologist's highest honor. In 2016, 1 year after his death, the first Community Mental Health Center in Valparaíso was inaugurated in his name.

Asún remained attentive to the main trends of social and community thinking, based on honest and fertile work, inspiring the several generations of clinical, social, and community psychologists. With all these resources, connections, and actions, Professor Asún made a unique and distinctive contribution in several emerging areas of psychology and health sciences in Chile: community mental health, social psychology, political psychology and community social psychology. Because of his tireless determination to link psychology with a critique of human development, we believe that he exceeded academic and scientific interests, and can be considered an intellectual in the fullest sense of the word (González, 2004; Unger, 2017).

Psychoneuroses

Antônio Austregésilo Rodrigues de Lima was born in Recife in the Northeast of Brazil where he attended the School of Arts, having participated in the artistic literary movement there. In addition to being involved in difficulties, typical of poverty and Afro-descendants, he also had too many difficulties in speaking. At the age of 16, he arrived in Rio de Janeiro to study medicine, obtaining a degree in 1899 with the thesis of clinical study of delirium.

Further on, Austregésilo assumed the chair of clinical propaedeutic, continuing the debates taking place in Brazil, involving psychoanalysis, psychology, psychiatry, and neurology. In a few years, he became the first full professor of neurology, member of the Academy of Medicine, and the first professor of this area in Brazil. Sworn in as a professor of neurology at the Faculty of Medicine of Rio de Janeiro (currently the Faculty of Medicine of the Federal University of Rio de Janeiro), he created the Department of Neurology in 1912.

Antônio Austregésilo is considered one of the first doctors ever interested in psychoanalysis in Brazil, having published his first book in 1919, entitled "Sexuality and Psychoneuroses." It is the result of his work with psychotherapy that accompanied him for more than four decades and would give rise to an original idea that would combine neurology and psychoanalysis for the study of hysteria, which Austregésilo paid special attention to.

With Henrique Roxo and Juliano Moreira, he took psychoanalytic theory to the heart of the debates of the early twentieth century as a diagnostic technique capable of obtaining new answers regarding mental illnesses. In 1908, references to Freud were already found in his writings.

Initially, in an essay written by Austregésilo, he expounded some conceptions about the category hysteria, stating that Freud and Breuer's sexual theory of hysteria would be absurd, because according to this conception, it would be found in hysteria more sexual coolness than eroticism. According to him, psychoanalysis presented itself simply as another theory. Nevertheless, from the works of Freud, the development of ideas and theories about this neuropathic state was seen.

However, in 1914, Austregésilo took up Freud's theory in his discussions of nervous weakness, where he stated that, in contrast to what he had said in 1908, in certain situations hysteria, the neurosis of fear, are states that leave from a genital point. According to Austregésilo, psychoanalytic theory was not absolutely accurate on this issue, but it would often show that the genital, material, or moral element, jealousy, mystical eroticism, and perversion would be present in the personality of the weak nervous.

One of the main points presented by Austregésilo is the discussion on issues involving sexuality and psychoneuroses. He understood that Freud's ideas were quite clear and acceptable. The experience as a neurologist and psychiatrist legitimized his belief that almost all psychoses had sexuality issues as an important factor. Austregésilo was interested in clarifying the relationship between sexuality and human life, in light of Freud's psychoanalytic theory. He understood that sexual instincts gave rise to human good and evil, but sex life was neither good nor evil, but the result of a biological fatality.

In 1912, Austregésilo de Lima founded two magazines of great scientific relevance, both nationally and internationally – the *Brazilian Archives of Medicine* and the *Brazilian Archives of Neurology and Psychiatry*. He represented Brazil in several international scientific events in neurology. He became a correspondent member of the Academies of Sciences of Lisbon, Medicine of Paris, and Medicine of New York and an honorary member of all medical associations in Brazil and South America.

Austregésilo de Lima exerted an important influence on the Brazilian scene, in addition to medical circles. In the broader cultural horizon, he joined the Academia Brasileira de Letras (Brazilian Academy of Letters), main institution of Brazilian intellectuals at the time in 1914, and became its President in 1939. In the specific field of psychology, he exercised influence mainly by his works focused on discussion of mental illnesses and for his role as a professor for several people (such as Nise da Silveira), who would later participate in new developments in psychological science in the country.

Ayala Silva, Julio Ramón

Born *Asunción (Paraguay)* on **April 7, 1938**

Died *Asunción (Paraguay)* on **March 18, 2020**

Eusebio Manuel Ayala-Biancotti
Universidad Nacional de Asunción, Asuncion,
Paraguay

Keywords

Paraguay · Mental health · Test monologue-K and Dialogue-K in action

Julio Ayala completed his secondary studies at the Colegio Nacional de la Capital (National High School of the Capital), his studies in Psychology began at the Universidad Nacional de Córdoba (National University of Córdoba), Argentina, and culminated at the Universidad Católica “Nuestra Señora de la Asuncion” (Catholic University “Our Lady of the Assumption”), obtaining a *Licenciatura* in Psychology in 1967. The *Licenciatura* is an academic degree similar to the Bachelor’s that requires at least 5 years of study and near 30 courses. Passionate about his profession, Ayala traveled to Buenos Aires and Córdoba (Argentina), Porto Alegre and São Paulo (Brazil), Kansas and Los Angeles (United States); Madrid (Spain) and Florence (Italy), looking for obtaining more learning. Thus, he also studied a Posgrado de Ética y Teología (Postgraduate Degree in Ethics and Theology) at the Catholic University of Asunción between the years 1998 and 1999. In 2001, he took a specialization course in the Pensamiento Personalista y Comunitario (Personalist and communitarian Thought) at the same university.

He taught at the Catholic University from 1967 to 2003 in the Department of Psychology. He was a Professor at the Instituto de Enfermería y Obstetricia “Dr. Andrés Barbero” (Institute of Nursing and Obstetrics “Dr. Andrés Barbero”), from the Universidad Nacional de Asunción (National University of Asunción). He was also Professor of the Postgraduate Course in Clinical Psychology at the Universidad Nacional de Villarrica (National University of Villarrica) and Professor of the Postgraduate course in Psychological Assessment in different areas of Psychology. The courses that he dictated were those of Psychopathology, General Psychology, Psychological Research, Clinical Psychology of Children and Adolescents, Projective Techniques, Institutional Psychology, Personality Development, among others.

Ayala was also a founding member of the Sociedad Paraguaya de Psicología (Paraguayan Society of Psychology) and its President in the period 1973–1974. Likewise, he was the founder of the Department of Psychology of the Colegio Internacional (International School) and a member of the Guidance Team of this institution from 1969 to 2007. He was also the founder of the Instituto

Psicopedagógico DENIDE [Derechos del niño en desarrollo] (DENIDE [Rights of the developing child] Psychopedagogical Institute), where he practiced clinical psychology with children and adolescents with intellectual disabilities (from 1967 to 1979). From 1972 to 1981, he was Academic Director and Clinical Director of the Instituto Médico-Psicológico (Medical-Psychopedagogical Institute, IMESI); thus, he was also Director of the journal *Temas* (Themes) at the same institute.

He was Director of the Instituto Superior de Psicoterapia Psicoanalítica (Higher Institute of Psychoanalytic Psychotherapy) of the Sociedad Paraguaya de Psicoterapia Psicoanalítica (Paraguayan Society of Psychoanalytic Psychotherapy) (1977–1978). He likewise was Director of the Instituto Emmanuel Mounier (Emmanuel Mounier Institute), an institution associated with the Catholic University (from 2000 to 2020). Ayala was an advisor to several private companies, a former consultant for the Pediatrics Chair of the Hospital de Clínicas (Clinical Hospital) and former Director of the Servicio Psicológico de la Facultad de Filosofía y Ciencias Humanas (Psychological Service of the Faculty of Philosophy and Human Sciences) at the Catholic University (Ayala, 1991). He was President and Member of some board of directors of a number of psychological societies.

As a researcher, he lectured in numerous communications at national and international courses, conferences, and congresses. Professor Julio Ayala is also the author of the books *Salud mental en el Paraguay, Infancia y adolescencia* (Mental health in Paraguay: Childhood and adolescence) (Ayala, 1991; García, 2006, 2015a), and *Persona y acción personal y comunitaria* (Person and personal and community action) (Ayala, 2013).

He was the creator of the psychological tests *Monólogo-K* (Momologue-K) and *Diálogo-K en acción* (Dialogue-k in action), a verbal-graphic projective technique directed to children. In conjunction with this, Ayala was the author of numerous research papers, published in books and journals at the national and international level (Argentina, México, Spain). In addition to university teaching, he has devoted himself to the

practice of psychotherapy of children, adolescents, and adults, as well as to the research and publication of his works.

We cannot fail to mention that Professor Julio Ayala was in charge both of the psychology office and the students of psychology who had to apply tests and the making of psychodiagnostics, among other activities, to the patients of the Chair of Pediatrics and Childcare of the Clinical Hospital (García, 2015b), a hospital school that is in dependency of the Facultad de Ciencias Médicas (Faculty of Medical Sciences) of the National University of Asunción. These works began in 1977, in charge of the Catholic University (Ayala, 1991).

It is important to highlight also that Ayala was a pioneer in different issues that concern the work of psychologists in Paraguay, with regard not only to research and creation of spaces for professional development, but also to dissemination, as mentioned below: “The phenomenon of alternative therapies and its complex relationships with psychology were addressed for the first time in a workshop on ‘Considerations of ethics in the practice of psychologists’, an event organized by the Paraguayan Society of Psychology on November 23, 1995 and where psychologists Oscar Serafini, Julio Ayala and José E. García acted as panelists” (García, 2011).

He has participated in debates on controversial issues about contraception, responsible parenthood, and family planning together with the Christian Family Movement along with great professors and pioneers of psychology in Paraguay such as Oscar Serafini (1931–2021), Carlos Ramírez (1930–2004), Juan María Carrón (1934–2020), Agustín Carrizosa Alfaro (1921–1975), and Andrés Rivarola Queirolo (1911–1999), in times when these topics were considered taboo (Alonso, 2015).

Some of the distinctions and recognitions received by him were for the “50 years of the founding of the Paraguayan Society of Psychology” in recognition as a founding member (2016). He was distinguished by the Asociación Paraguaya de Recursos Humanos (Paraguayan Human Resources Association) (APARH) at the Encuentro Nacional de Recursos Humanos (National Human Resources Meeting) (1995).

Ayala obtained the “Honorable Mention for Contributions to Psychology in Paraguay,” awarded by the Organizing Committee of the 3er. Congreso Universitario de Psicología (3rd. University Congress of Psychology), sponsored by the Department of Psychology of the Faculty of Philosophy of the National University of Asunción and the Interamerican Society of Psychology (SIP) (1998).

He was recognized as Emeritus Professor by the Catholic University “Our Lady of the Assumption” (2010). This same year he received the “Verbo Veritatis” Award in Human Sciences from the same University (2010).

Professor Julio Ayala died in the city of Asunción on March 18, 2020.

Mexico · Experimental analysis of behavior · Behavioral problems

Hector Ayala was an outstanding and prolific researcher of national and international psychology. He obtained his bachelor's degree at the Facultad de Psicología de la Universidad Nacional Autónoma de México (Faculty of Psychology of the National Autonomous University of Mexico) (UNAM). He completed his master's and doctoral studies at the University of Kansas and received a scholarship at the doctoral level from the Organization of American States (OAS); he achieved his doctorate degree in 1974 with Montrose M. Wolf as his mentor. This trajectory allowed him to consolidate professional competences in child psychology and development, from the perspective of behavior analysis. He participated in academic seminars with internationally recognized authors such as Patterson, Suskind, Lazarus and Bijou (1908–2009).

In his learning at the University of Kansas from 1968 to 1974, he consolidated a specialized training through the influence of scientific contributions of Skinner and Watson and experimental psychology that guided his decision-making and contributions based on evidence to generate findings in the science of psychology.

At university level, he taught the subjects of learning and memory and motivation and emotion and at high school level was also a teacher as a laboratory technician. One of his priorities in the research was the precise measurement of variables and behaviors to be modified, emphasizing the control in the conditions and ability for the use and application of measurement instruments. His mastery of research allowed him to position himself as research coordinator at the Faculty of Psychology at the UNAM. He was assigned to be in the positions of general editor of the *Revista Mexicana de Análisis Conductual (Mexican Journal of Behavioral Analysis)* and as president of the *Sociedad Mexicana de Análisis de la Conducta (Mexican Society of Behavior Analysis)*.

In psychology, he contributed by offering answers in response to (1) academic needs in the professional training of the psychologist, in undergraduate and graduate, to consolidate their competent performance to reduce various psychological problems; (2) measurement of variables, for the adaptation of intervention strategies and protocols in problems that afflict childhood, adolescence, and adult life; and (3) incidence in adaptive social behaviors that contribute to the well-being of the individual, the family, and the community.

He highlighted his productivity by research findings on aggressive behavior in children and antisocial behavior in adolescents and implemented the use of token economy in children with retardation and autism, and its results were spread internationally in London at the 19th International Congress of Psychology (ICP) in 1969. He participated in designing and implementing programs for behavioral modification in special education settings on language development, enuresis, and self-destruction. He also implemented behavioral educational technology procedures in community educational scenarios in preschool, primary school, and high school. In his role as director of a residential psychiatric institution in the Department of Mental Health of the State of Massachusetts at Boston in 1986, he evaluated the application of behavioral modification techniques in adults with psychiatric

disorders under hospitalization to promote integration into the community.

He designed, applied, and measured the impact of behavioral modification strategies in the rehabilitation of delinquency in the Teaching Family Model by participating as a “parent-teacher” in the first home for women in Kansas where he incorporated measures of social validation to evaluate the satisfaction of the participants with the program. Based on the success to modify behaviors, he received an invitation to disseminate the program in Texas, at the University of Houston, where he established six programs, two homes for women with criminal behavior, and three programs for adolescents returning from the correctional and a residential program for the blind with delay; all these are based on the Teaching Family Model. In the Office of Justice of Mexico, in its turn, he founded the *Unidad de Ciencias del Comportamiento (Unit of Behavioral Sciences)*.

He established links between national and international collaboration agreements networks to address behavioral problems in schools through intervention programs for parents, children, and teachers. In the Faculty of Psychology at the UNAM, he designed, promoted, and consolidated, at the undergraduate and postgraduate levels, the professional training through supervised practice in scenarios where services are offered from different areas of psychology, health, educational, social, and organizational, to strengthen the competence of psychologists who implement effective psychological strategies to solve problems or psychological needs. In problematic addictive behavior, he established agreements with institutions in charge of impacting public health in our population. Based on the international collaboration, he obtained evidence of the efficacy in Mexican population of the moderation program in the consumption of alcohol for problem drinkers.

Ayala Velazquez was a pioneering researcher in the design, adaptation, evaluation, and validation of prevention, intervention, and treatment programs in addictive behavior that demonstrate solid efficacy to modify the consumption of drugs: positive parenting in children with problems of

conduct to prevent starting of drug use in the adolescence.

He was the founder of the Residency in Psychology of Addictions in the master's program at the UNAM, where he served as academic head from its foundation until his death favoring specialized training at the postgraduate level of psychology professionals in addictive behavior, and was a doctoral tutor of programs for adolescents who initiate in drug use and alcohol, cocaine, tobacco, and marijuana use and for drug dependence.

These programs are those offered in the services of the Centro de Prevención en Adicciones "Dr. Hector Ayala Velázquez" (Addiction Prevention Center "Dr. Hector Ayala Velázquez") that depends on the Faculty of Psychology of the UNAM (<https://sites.google.com/view/cpahavpsicunam/inicio>) and that bears his name in tribute to his contributions to favor the recovery of this problem. Additionally, and based on agreements with public health institutions, these intervention programs were adopted for their implementation in the 340 units of primary care centers for addictions in Mexico.

"He received many awards due to his dedication to academia: the Clay Moore Award for Distinguished Research on Developmental Disabilities (Toronto, 1990), Reconocimiento por Servicios Impartidos en Orientación Educativa (the Recognition for Services Rendered to Educational) Guidance (Mexico, 1993), Premio Nacional a la Excelencia en Servicios Sociales Comunitarios (the National Award for Excellence in Community Social Services) (Mexico, 1999), the highest level of membership within Sistema Nacional de Investigación de México (Mexico's National Research System) (Mexico, 2000), Distinción al Mérito Universitario (the University Merit Distinction) (Mexico, 2001) and Premio Nacional de Psicología (the National Award of Psychology) (Mexico, 2002)" (Bruner, 2003, p. 21).

Dr. Emilio Ribes Iñesta (1944) paid him a posthumous tribute at the XVI Mexican Congress of Behavior Analysis held in October 2003 with the conference named Dr. Hector Ayala's Master Class: The Movement Is demonstrated by Walking.

The home in which Eusebio Ayala born was that of a peasant family in the interior of Paraguay, very humble and poor. He was the natural son of Abdón Bordenave, a French citizen, and Casimira Ayala, a Paraguayan woman who conceived him when he was only 19 years old. She, in all probability, was illiterate (Amaral, 2000). The childhood was very hard and suffered, full of deprivation of all kinds, at a time when the country strongly resented the negative effects left by the War Against the Triple Alliance, a warfare that lasted from 1865 to 1870, and whose culmination had occurred only 5 years before his birth. The general panorama of the region in which Ayala spent his early years was very precarious, since it was limited to a few ranches, a church and the main square (Llano, 1998), all in the context that imposed extreme physical isolation, without having passable roads to freely move to other sites.

After completing primary studies in his hometown, he moved to Asunción to continue his high school education. His adaptation to city life was immediate and forever affected his personality, tastes and customs (Durand de Ayala, 1990). He entered the Colegio Nacional (National College) on March 4, 1890 (Peña Villamil, 1993), and remained at that institution until 1896, when he completed his studies. The National College was

the main educational institution of the time in Paraguay, producing graduates who became social leaders who influenced the political and cultural life of the country. Ayala was one of the best students of the school and in the Psychology's course he obtained a qualification of 10, the maximum in the grading system of the time, in the final exams of the period 1893–1894. In 1893, without completing his high school education, he entered the program of Perito Mercantil (Commercial Expert) (Peña Villamil, 1993). At that early stage in his academic training, his intellectual interests ranged from philosophy to psychology. In the latter, the figure with the greatest influence on his thinking was the French psychologist Théodule Ribot (1839–1916), as well as the British philosopher Herbert Spencer (1820–1903) and the German naturalist Ernst Haeckel (1834–1919) (Benítez, 1959). Ayala taught at the National College, in the chairs of Psychology, Logic and Moral, and General Philosophy. There he introduced the reading of Ribot's works among his students. He also taught National History at the Escuela Normal de Maestros (Normal School of Teachers) (Amaral, 2000; Velilla Laconich, 1992).

He carried out university studies in the field of Law at the Universidad Nacional de Asunción (National University of Asunción), under the influence of his friends, who had chosen the attorney as their area of professional performance (Durand de Ayala, 1990). In 1904 he graduated as Doctor of Law and Social Sciences. Ayala's life was lavish in the cultural, educational and political spheres. He was the first director of the *Revista del Instituto Paraguayo* (Journal of the Paraguayan Institute), a publication of great importance for the promotion of science and culture in Paraguay at the beginning of the twentieth century, and edited between 1897 and 1907 by the institute of the same name. In this journal, articles by various authors were published that had great relevance for national psychology (García, 2014). Ayala was a professor of Sociology in the Law School at the National University, replacing the first historical professor who was Cecilio Báez (1862–1941), and preceding the third of them, Ignacio A. Pane (1881–1920). But unlike both,

he did not leave any text for the course's teaching. On June 26, 1926, he reached the zenith of his university career when he assumed the position of Rector of the National University of Asunción, which he held until his resignation on March 19, 1928 (Velilla Laconich, 1992).

His career in diplomacy and politics began with a trip to France in 1900 to serve as Secretary of the Paraguayan embassy in that country (Peña Villamil, 1993). Throughout his life, Ayala made 28 trips to the old continent (Benítez, 1959). His political life was very intense. A prominent member of the Liberal Party, he held various positions, such as Minister of Foreign Affairs, for the first time in 1908, and then at another future times (Llano, 1998). In 1909, he obtained a seat in the National Congress. But his most outstanding performances in public life are related to the two occasions in which he held the presidency of the republic, the first from 1921 to 1923, when, as a senator, he was elected by the National Congress before the emergence of a serious institutional crisis, and the second one between 1932 and 1936, in which he was overthrown by a military movement. As the president, Ayala fought the Chaco War against Bolivia, between 1932 and 1935, and in recognition of his leadership, he was popularly baptized as *the president of victory*, although he also had implacable critics. But after his overthrow, he had to avoid an assassination attempt and then jail for 7 months, in the extreme condition of incommunicado prisoner (Durand de Ayala, 1990), which Peña Villamil (2011) described as “unworthy”. Later, he went into exile, dying in the city of Buenos Aires in 1942. His remains were left in the Chacarita cemetery, in the Argentine capital (Cardozo, 1952), until they were returned to Paraguay on September 29, 1992, after the end of the dictatorship of Alfredo Stroessner (1912–2006), which lasted from 1954 to 1989.

Ayala's contributions to psychology run on three axes: (1) perception and its relationships with thought; (2) theorizing on reflexes, and (3) the study of the will. An article from 1905 entitled “El proceso de la ideación y desenvolvimiento ulterior de la perceptividad” (The process of ideation and subsequent

development of perceptivity), published in the *Anales de la Universidad Nacional* (Annals of the National University) (Ayala, 1905) is of special relevance. The names of Herbert Spencer, Alexander Bain (1818–1903), Charles Richet (1850–1935), Giuseppe Sergi (1841–1936), Théodule Ribot and Wilhelm Wundt (1832–1920) are mentioned. Ayala differentiated between sensation, as the mind's first identifiable manifestation, and idea, which is its immediate effect. The sensations produce physical modifications or adjustments in the brain. By entering the field of consciousness, they are transformed into perceptions. The process of elaboration of perceptual images constitutes the foundation for the development of thought, whose evolution originates from nervous irritability, as in the phylogenetically simpler species. Also, ideas are associated with language. Abstraction, as a higher process, is derived from the action of mental images. Likewise, linguistic signs have an essential function for the development of memory. Ayala's perspective in studying the thought was strongly evolutionary, as well as associationist (García, 2005).

In 1952, a book entitled *Patria y libertad* (Homeland and freedom) was published posthumously, including an essay entitled "La voluntad" (The will). Among various other topics and devoid of any technicality, Ayala described reflexes and their action on physiological processes, such as visceral responses and involuntary musculature, and the unique relationship with automatic responses such as respiration and blood circulatory processes. Man is a being in progressive development in which instincts predominated during the first stages of the species. Later in evolution, what Ayala called *energía psíquica* (mental energy) arises, which gradually leads to the appearance of intelligence and, concomitantly, to the process of free will, which does not exist in primitive man. This is how the phenomenon of consciousness also arises, seen as an essential human capacity, and which gives rise to the will, which was the highest expression of life, and not intelligence, as is usually assumed. Ayala (1952) also alluded to subconsciousness, but not in the Freudian sense of the term, but rather

designating the automatic physiological operations of the nerves and their consequent muscular reactions. Therefore, while the reflexes are blind and unreflective, the will generates calculated, measured and precise movements (Ayala, 1952). In turn, emotionality produces effects on the generation of reflexes, although the will has an inhibitory force on them. These theoretical expositions on thought and perception, reflexes and the action of the will were the first made by a Paraguayan author, and they justify the importance of Ayala for the history of psychology in this country.

Juan Enrique Azcoaga was born on October 7, 1925, in the city of Venado Tuerto, in the south-west of the Province of Santa Fe, Argentina. Despite the fact that, in those years, this town was small, it had access to a rich and updated

library, due to the family commerce. As an only child, he shared his passion for reading with his parents with whom he discussed the news of the main newspapers of the time. It was in these newspapers that also began his interest in the emergence and strength of the changes brought about, especially in higher education by the student movements in Córdoba and Buenos Aires (Azcoaga, 2015; Rossi, 2016).

He began his elementary studies (1931) at the Escuela Normal (Normal School), a public school in his hometown. However, because his parents considered that this establishment was not suitable for their educational expectations, they later changed him to a private Catholic school, called Escuela Sagrado Corazón de Jesús (Sacred Heart of Jesus School). Later, he studied at the newly created high school of the city (1938), Colegio Nacional (National High School), where he carried out an important social activity together with his schoolmates. Juan Azcoaga indicated that he was thinking of doing higher studies in engineering; however, his father transmitted to him his desire to fulfill his dream of carrying out studies in the field of medicine (Azcoaga, 2015; Rossi, 2016).

In 1944 he began his studies at the Faculty of Medicine of the ancient Universidad Nacional de Córdoba (National University of Cordoba) (UNC), located in the capital of the province of the same name. When he was 18 years old, he became member of the Argentine Communist Party; he carried out student activities in different organizations, reaching the position of General Secretary of the Federación Universitaria Argentina (Argentine University Federation), which gathered the student organizations from all national universities across the whole country. On the other hand, since the beginning of his studies, he showed an interest in authors of the renowned Russian physiology, which were directly or indirectly related to Pavlovism, which resulted in his interest to start researching such topics. Thus, already in 1945, he became research assistant in the chair of Pathological Anatomy, in charge of Dr. Ferdinando Strada (1872–1968), Italian specialist hired by the UNC in 1913 to

organize the Museum of Pathology (Azcoaga, 2015; Garcia, 2012).

In 1949, Azcoaga obtained the degree in Medical Surgeon. After some attempts in clinical medical and research activities in the city of Córdoba, which were frustrated by a sociocultural context contrary to parallel professional and political activities, he was called by the army to carry out activities as a medical reservist in the city of Concordia, province of Entre Ríos. There, in the early 1950s, he met José Itzigsohn (1924–2018) and Jorge Thénon (1902–1985), two very important personalities in the circulation of Soviet thought in Argentina, who would be a fundamental guide for his later postgraduate studies.

After a political-ideological setback with some authorities, his contract with the army ended. Thus, Azcoaga moved to the city of Buenos Aires, where he specialized in neurology and in histology of the nervous system and neuropathology in the neurology and pathology services of the Pedro Fiorito Hospital in the city of Avellaneda, contiguous to the city of Buenos Aires, where he would carry out important experimental research from the perspective of the Russian neurophysiology. In 1957, he defended his doctoral dissertation *El hipotálamo del recién nacido* (The Hypothalamus of the Newborn), for which he obtained a gold medal from the UNC (Garcia, 2012).

His academic career as a professor was developed at the Universidad de Buenos Aires (Buenos Aires University), mainly in the Psychology Program, where he began participating in the teaching of Biology and later moved to the areas of Neurophysiology and Neuropsychology and, in the last few years, Behavioral Biology. He was also involved in the three levels of graduate university programs in Argentina: Specialty programs, Masters and Doctoral programs in the interdisciplinary area of Neuropsychology. In such area, he is considered a reference, especially in the field of experimentation and theoretical discussion, particularly of Pavlov's theories, classical Neuropsychology, and the historical-cultural conception of higher psychological processes proposed by Vigotsky (1896–1934) and Luria (1902–1977)

(Ferrerres & Armele, 2017). He maintained contact and intellectual exchanges, first by epistolary means and later in a personal way, with Leontiev (1903–1979) and Luria. With the last one, he signed agreements for the training of scholarship holders, of whom only Marta Shuare obtained the degree of doctor, being one of the two Argentines with higher studies in the area of psychology in the Soviet Union (Garcia, 2012; Shuare, 1987, 1990). His scientific publications covered three core themes, which Azcoaga (2007) himself defined in his Curriculum Vitae. His publications in the field of *morphology of the nervous system*, from 1955 to 1989, are oriented to discuss Russian and Anglo-Saxon experimental and physiological doctrines of the nervous system, as well as results of neurological research, which places him as one of the leaders in the field. A second area of publication was those papers referring to *learning*, from 1971 to 1995, mainly based on the discussion of the theories of normal and pathological learning, getting to investigate the field of psychology and pedagogy. The third field, *neuropsychology*, from 1960 to 2011, was represented by works focused mainly on the phenomenon of language, which was theoretically analyzed following the approaches from Pavlov to Vigotsky, as well as those papers centered in the analysis of the field of pathology.

Juan Azcoaga received great honors and recognition for his research, his publications, and his scientific career in general, among them, the Konex Prize, the “Alexander von Humboldt” Medal from the Akademie der Wissenschaften der DDR and the Medaille d’Or from the Societé pour l’Encouragement au Progrès (Azcoaga, 2007). In addition, he deserved the appreciation and respect of a large part of the community dedicated to the field of Neuropsychology, in which he still maintains his influence (Feld, 2017; Ferreres & Armele, 2017).

Azevedo, Fernando de

Born *São Gonçalo do Sapucaí (Minas Gerais, Brasil)* on April, 2, 1894

Died *São Paulo, State of Sao Paulo (Brasil)* on September, 18, 1974

Maria Cristina Soares Gouvea
Federal University of Minas Gerais,
Belo Horizonte, Brazil

Keywords

Brazil · Universalization of education · Educational reform

Fernando Azevedo participated in the reformers movement, a group of Brazilian intellectuals who, in the first half of the twentieth century, focused their efforts on building a national education project promoting the modernization and democratization of schools. Such intellectuals sought to act as social planners (Vidal, Soma, and Abdala, 2020). Anchored in scientific theories, they formulated not only a diagnosis of the country's problems but strategies to overcome them, acting directly in State policies.

Graduated in Law in 1918 from the Faculty of Law of São Paulo, he initially dedicated himself to teaching. He first worked as a substitute teacher of Psychology at Teacher Training College in Belo Horizonte (capital of the state of Minas Gerais), in 1922, becoming, in 1923, a teacher at Teacher Training College of São Paulo, where he taught literature and Latin until 1927. In institutional spaces, four actions condense his trajectory: the educational reform of Rio de Janeiro, then capital of the country, in 1927, the formulation of the Manifesto of the Pioneers of Education in 1932, the writing of the work in three volumes: *Cultura Brasileira* (Brazilian Culture), published in 1943 and academic performance in the construction of a Brazilian sociology.

The elaboration of the educational reform of the federal capital (Rio de Janeiro), carried out when he assumed, in 1927, the position of General

Director of Instruction. That reform had been developed in the context of the consolidation of a republican country, strongly federalist, in which schooling was understood as the main civilizational strategy, a condition for the modernization of the country.

Seeking a renewal of education, segments of republican intellectuals (so-called reformers) invested efforts in promoting educational reforms in different Brazilian states. Such reforms were informed by the influence of liberal ideas, in defense of the democratization of education.

The reform carried out by Fernando de Azevedo was based on a perspective founded on the sociological functionalism of Emile Durkheim (1858–1917) and on the philosophical and pedagogical pragmatism of John Dewey (1859–1952). Those references anchored his reflections on the role of educational democracy in the country's development and the construction of pedagogical strategies for its realization.

Its main axes were the proposition of a school closely linked to the community, which would fight poverty, having work as the main educational principle, with qualified teachers trained in modern pedagogical theories.

His performance was brief, having been removed from the role of Director General of Instruction, after the Revolution of 1930, which established a new central and nationalist regime in the country. However, reformers and a significant portion of the intelligentsia sought to reorganize their strategies, placing themselves as interlocutors of the new regime. They tried to work on a national education reform that understood schooling as a fundamental tool for social justice and progress in the country.

To this end, in 1932, under his leadership, a group of 26 intellectuals launched the “Manifesto dos Pioneiros da Educação: reconstrução educacional no Brasil: ao povo e ao governo” (Manifesto of the Pioneers of Education: educational reconstruction in Brazil: to the people and the government) in defense of a public, compulsory, secular, free school, identified with modern pedagogical theories. The Manifesto expresses a liberal perspective of meritocratic education, according to which, by guaranteeing universal access to primary education, schools could

neutralize the effect of economic inequalities, promoting individual skills.

Psychology assumes centrality in the pedagogical project of the new school, providing both the theoretical foundations for understanding individual differences, explanatory of the different learning abilities, and the technical instruments for its measurement.

The knowledge of child psychology theory (that characterized development as universal and biologically sustained process), referred to the promotion of children's interest in a school whose fundamental pedagogical principle was the centrality of the student in the organization of processes educational.

The dissemination of the manifesto and its principles, as well as the actions of its signatories, gave psychology a central role in the construction of an education based on scientific principles. Knowledge of the child's development processes and individual differences measured through psychological tests should form the basis for organizing the pedagogical work. In this sense, these were the axes of teacher training in Normal Schools and higher education courses. Fernando de Azevedo contributed to the dissemination of psychology, acting in the direction of the do Instituto de Educação de São Paulo (Institute of Education of São Paulo), until 1938, and publishing foreign and national authors in the coordination of the (Biblioteca Pedagógica Brasileira) Brazilian Pedagogical Library, at the Companhia Editora Nacional (National Library Press), from 1951 to 1965.

The sociologist's third outstanding action was the writing of the work in three volumes: *A Cultura Brasileira* (Brazilian Culture), published in 1943. Azevedo builds an original historiography of the country, having as its object the formation of Brazilian culture and its transmission through education. Azevedo develops his sociological perspective of understanding the relationship between individual and society, seeking to analyze how, through socializing processes of cultural transmission, social bonds are established.

By approaching Brazilian culture, it sought to identify its uniqueness, anchored in the dialogue between sociology, anthropology, and psychology. To this end, he built a characterization of

the collective psychology of “Brazilian man” (Alves, 2010), defined by what he called “anarchic individualism,” which explains both the so-called backwardness of the country and the condition for overcoming it. For Azevedo, through the development of solidary, collectivist, and collaborative practices in the spaces of cultural transmission, like schools, this characteristic of the Brazilian man would be re-signified.

The fourth outstanding action focused on academic performance, although he continued working on political action. From 1938 onward, he became a professor of Sociology at the Universidade de São Paulo (University of São Paulo), where he assumed, from 1941 to 1943, the direction of the Faculdade de Filosofia, Ciências e Letras (Faculty of Philosophy, Sciences, Literature, and Language). At the same time, in 1942, he assumed the direction of the Centro Regional de Pesquisas Educacionais de São Paulo (Regional Educational Research Center of São Paulo). He was also president of the Sociedade Brasileira de Sociologia (Brazilian Society of Sociology) and the International Sociological Association, between 1950 and 1953. He retired from the University of São Paulo in 1961, becoming professor emeritus at the institution. His rich and diverse written production led him to be elected as a member of the Academia Brasileira de Letras (Brazilian Academy of Literature) in 1968.

Azevedo’s trajectory is characterized by a coherence based, in intellectual terms, on a humanist perspective, on the dialogue with different disciplines and fields of knowledge, even if centered on sociology. In political terms, for militancy in defense of the democratization of education, anchored in a liberal perspective of universalizing a school that promotes the individual development of students.

Enzo Azzi started his studies at a local school, having coursed secondary school at a Salesian facility. Having finished his classical studies, Enzo worked as a guardian for a Salesian middle school until 1941, when he entered the *Curso de Medicina e Cirurgia* (Medicine and Surgery Course) in Parma, Italy. Graduated in 1947, Enzo coursed his residency at the *Instituto de Doenças Nervosas e Mentais* (Nervous and Mental Disease Institution). His thesis discussed hallucinations.

At his advisor's invitation, P. Antonello (?-?), Enzo worked as Volunteer Assistant at the University's Neuropsychiatry Clinic. At the same time, he took a specialization course in psychology and pedagogy at the Turin *Ateneu Salesiano* (Salesian Athenaeum), where he began his experimental research with children on stereoscopic perception. Already doctor, Enzo was nominated by the Director of the *Instituto de Psicologia Experimental de Turim* (Institute of Experimental Psychology of Turin), Professor Giacomo Lorenzini (?-?), to implement a laboratory of education and research in experimental psychology at the recently founded, at the time, *Universidade Católica de São Paulo* (Catholic University of São Paulo), now Pontifical Catholic University of São Paulo (PUC-SP).

When in Brazil, Enzo fully dedicated himself to psychology while waiting for the recognition of his medical degree, which only happened in 1970 (CRM 17.428). Enzo installed the *Instituto de Psicologia e Pedagogia* (Psychology and Pedagogy Institute), an academic unit directly stringed to the Rector, in 1952, around the same time that he is hired at the *Faculdade de Filosofia, Ciências e Letras de São Bento* (School of Philosophy, Letters and Human Science of Saint Benedict Faculty) to teach scientific psychology to students of philosophy and general psychology, as well as educational psychology for pedagogy students.

In 1950, he worked at the *Faculdade de Serviço Social* (Social Services College) and in 1951 at the *Universidade Católica de Campinas* (Catholic University of Campinas), lecturing disciplines that comprised children and learning, adolescence, and personality.

Thus, his research at the time, with the exception of a few articles published in psychiatric journals, focused on the psychology of children and adolescents. Committed to research and its diffusion, he created and directed a *Boletim de Psicologia Experimental* (*Bulletin of Experimental Psychology*) during 1952 and 1954, a bulletin which gave way to *Revista de Psicologia Normal e Patológica* (*Journal of Normal and Pathological Psychology* (RPNP)) in 1955. Enzo Azzi directed RPNP until its last issue in 1973. He was also responsible for the creation of the *Monografias da RPNP* (*RPNP's Monographs*), publishing the doctoral theses of PUC-SP professors. Among them are those of Ana Maria Poppovic (1928–1983), Joel Martins (1920–1993), and Silvia Maurer Lane (1933–2006).

As its publications reveal, the Institute distanced itself from the original project, without losing, however, its commitment to the School and education. From 1956 to 1958, the Laboratory would serve as an internship space for students of educational psychology at the *Universidade de São Paulo – USP* (University of São Paulo – USP). Besides that, the Research Sector of IPUC-SP maintained, until 1964, agreements with the *Secretaria de Educação do Estado de São Paulo* (Secretary of Education of the State of São Paulo), who commissioned professors in the Institute for research and internships.

Enzo Azzi collaborated, as a technical advisor, with the *Secretaria de Educação* (Secretary of Education) and the *Juizado de Menores de São Paulo* (Juvenile Court of São Paulo), in the areas of educational and vocational guidance (1954–1965), and headed an agreement between PUC-SP and the *Serviço de Doenças Mentais do Ministério da Saúde* (Service of Mental Illnesses of the Ministry of Health) during the period of 1962–1969. He created and directed in IPUC-SP the *Cursos de Especialização em Psicologia Clínica* (Specialization Courses in Clinical Psychology, in 1958) and *Psicologia Organizacional* (Organizational Psychology in 1959) that required monograph, internship, and dured 3 years.

At FFCL (São Bento), he founded in 1962 the *Curso de Fonoaudiologia* (Speech Therapy

Course) which had a duration of 3 years, and in 1963, the Curso de Psicologia (Psychology Course) a 6-year course with two graduating terms, one on the 4th year for the bachelor term and another as a requirement for the psychologist diploma, in three areas: educational, clinical, and organizational). In 1966, he took on classes in medical psychology at the Faculdade de Ciências Médicas da Santa Casa de São Paulo (Faculty of Medical Sciences of Santa Casa – São Paulo), where he became head of the Psychiatry Department, after being recognized as a medical doctor.

From 1967 to 1969, he directed Faculdade São Bento (Saint Benedict College), having collaborated with the experiments of paritary direction in some courses in 1968, which resulted in a process that led the Military Government in place to demand "investigate his subversive actions." He left the direction of the School when the University Reform imposed by Institutional Act 5 led PUC-SP to incorporate its various aggregate units, creating new courses, among them the psychology one. It was a result of the integration of São Bento with the Faculdade de Filosofia, Ciências e Letras *Sedes Sapientiae*

(*Sedes Sapientiae* School of Philosophy, Sciences and Letters).

Enzo Azzi had never forsaken his foreign relationships, specially Europe – where he had the opportunity to experience internships and time in institutes, laboratories, and psychological clinics during the establishment of IPPUC-SP. He was a correspondent and a reviewer on Brazilian Research for the Psychological Abstracts of APA, besides some Italian periodics and universities (France and Australia).

These relationships resulted in receiving researchers and professors for courses and lectures at PUC-SP, in addition to exchanges with RPNP, which made the University Library a reference at the time. In his journal, he kept alive, until the end, a section of reviews of articles and books, mainly foreign ones. He was a full member of the Sociedade Interamericana de Psicologia (Interamerican Society of Psychology), the Associação Internacional de Psicologia Aplicada (International Association of Applied Psychology), and the Sociedade Internacional de Hipnose

Clínica e Experimental (International Society of Clinical and Experimental Hypnosis).

In Brazil, he was a founding partner of several entities, including the Sociedade Brasileira de Psicologia Religiosa (Brazilian Society of Religious Psychology) and the Associação Brasileira para o Estudo Científico da Doença Mental (Brazilian Association for the Scientific Study of Mental Illness). He held positions in boards such as the Sociedade Pestalozzi de São Paulo (Pestalozzi Society of São Paulo) years of 1953–1954 as well as the Sociedade de Psicologia de São Paulo (São Paulo Psychology Society) during the period of 1961–1964. He was part of the Commission's: Code of Ethics of the Society of Psychology of São Paulo; Examination of Requirements for Registro Profissional de Psicólogo do Ministério da Educação (Professional Registration of Psychologists of the Ministry of Education) 1962–1963; Cinema e Revista e Publicações, para o Juizado Privativo de Menores de São Paulo (Cinema and Magazine and Publications, for the Private Juvenile Court of São Paulo); and Combate à Deficiência Mental do Ministério da Educação (Combating Mental Disability of the Ministry of Education in 1966). He was a member of the First Superior Council of the Foundation for Research Support in the State of São Paulo. Married to Maria Lúcia Barbosa, he had three children.

Rodolpho attended middle school as an intern at Colégio Militar of Rio de Janeiro (Rio de Janeiro's Military School) and high school at Colégio

Mackenzie (Mackenzie School) in São Paulo. At the age of 20, he worked as a proofreader for the newspaper *O Estado de S. Paulo (The State of São Paulo)*, a time in which he was already involved in political discussions. His major was in Philosophy from the Faculty of Philosophy, Sciences and Letters (FFCL) from Universidade de São Paulo – USP (University of São Paulo – USP). Place where, in 1954, Rodolpho was a supernumerary assistant on the Ethics professorship. He married in 1953 to Mariza Antonia Gurgel Azzi (1932–1974), with whom he had two children: Ricardo Gurgel Azzi (1954–) and Roberta Gurgel Azzi (1956–). He then took two public exams for the state secondary teaching: Philosophy and Sociology.

He was a Sociology teacher in Pirajuí (SP) in the second semester of 1954, from where he left for a higher education contract at the Universidad Nacional de Paraguay (National University of Paraguay), during the years 1955–1956. Back in Brazil he taught Philosophy at the Instituto de Educação de Guaratinguetá (Institute of Education in Guaratinguetá), state of São Paulo. He stayed there until early 1957 when he was hired as Professor of Psychology at a newly created isolated Institute of USP in São José do Rio Preto, countryside of São Paulo, remaining there until December 1960. In 1961, he returned to São Paulo to work as the first assistant to Professor Fred Simmons Keller (1899–1996), from Columbia University, who was in Brazil to teach Comparative Psychology and Experimental Psychology at USP, and whose book on *Learning* (1954) he had used with Pedagogy students at the FFCL at São José do Rio Preto.

Rodolpho was a renowned professor in Experimental Psychology, and the condition provided an invitation to found a Psychology Laboratory for the newly established Escola de Administração de Empresas da Fundação Getúlio Vargas (School of Business Administration at Fundação Getúlio Vargas), in São Paulo, where he taught from March to October 1961. His work at USP, with Professor Keller, led to the opportunity, under his coordination, to participate in the country's first experiment in *Behavior Analysis* (Azzi et al., 1963).

In 1963, he received two research grants from Fundação de Amparo à Pesquisa do Estado de São Paulo – FAPESP (São Paulo State Support Research Foundation), among the first approved projects in the Human and Social Sciences in the institution. During this period he was also Technical Advisor for Psychology at FAPESP, member of the Sociedade de Psicologia de São Paulo (SPSP) (São Paulo’s Psychology Society) and of Associação Brasileira de Psicólogos (ABP) (Brazilian Psychologists Association), in which he participated as General Secretary during the biennium 1963–1965. In October 1961, he was hired by USP as an Instructor and had his position held available to be part of Universidade de Brasília (UnB) (University of Brasília – UnB). This movement was a recommendation of Professor Carolina Martuscelli Bori (1924–2004) who herself was invited by Darcy Ribeiro (1922–1997), and was responsible for setting up a Psychology Department at the recently founded institution.

Rodolpho Azzi, along with Carolina Bori, worked in the planning and implementation of the UnB’s Psychology Department. For this reason, he made two trips to the United States to visit Universities and Hospital Laboratories, such as the Institute for Behavioral Research in Washington and the Psychology Department at the University of Arizona, where he lectured on “Teaching Psychology at UnB” and “The problems of Psychology in Brazil.”

At UnB, he was Assistant Professor at the Psychology Department from April 1963 to October 19, 1965. A group of 15 professors was summarily dismissed by Laerte Ramos de Carvalho, the Dean at the time appointed by the Military Government (Salmerón, 1999). Back in São Paulo, he was reintegrated at USP, in the Department of Social and Experimental Psychology, where he stayed until November 1969. Rodolpho himself described his professional experience outside the teaching profession, indicating his trajectory with various activities.

He worked a job in 1952 as an assistant of the Marketing Department of Good-Year (São Paulo) for almost a year, in 1961; an analyst at Marplan

(Market Research, São Paulo); and, for a semester (December 1965–July 1966), he worked at Instituto de Estudos Sociais e Econômicos (Institute of Social and Economic Studies – INESE, São Paulo). In 1967 he was an expert writer for the São Paulo Metro Project (HMD). Moreover, between 1969 and 1972, he was the Director of Azzi & Marchi Ltda.

Throughout 1969, he was also an advisor for Psychology Programs at TV-Cultura (São Paulo). As a result of his removal during the military dictatorship, Rodolpho worked sporadically after the closing of the company Azzi & Marchi Ltda. At the time of his death, he was living with Maria Tereza Araújo Silva (1939–) and had a son, Diego Araújo Azzi (1981–). Even though the dictatorship and its modes of action led to the interruption of his two academic and business careers, his contribution is recognized in the two fields. On the one hand, his addition to Market Research led Azzi & Marchi to a place in history on the research of consumer behavior in Brazil. On the other hand, in Experimental Psychology, he took part in the settlement of Behavior Analysis in Brazil. He was the author and co-author of articles and collaborated on translations of important work in this area.

Cecilio Báez was a multifaceted Paraguayan intellectual, contemporary of the 1900 generation, who dedicated himself to law, journalism, teaching, and politics; in this last field he stood out as one of the founders of the Centro Democrático (Democratic Center) or Partido Liberal (Liberal Party) (1887), several times a member of parliament, minister, and even president of the Republic (1905–1906). In the intellectual field he mainly excelled in the legal, social, and the humanities: especially in sociology and history. He was the first university professor of sociology chair in the country (Silvero, 2011).

He is considered one of the representatives of positivist liberal thought in this country, being his most famous controversy the one that disputed in the press with the nationalist intellectual Juan E. O’Leary (1879–1969) between 1902 and

1903. In this intellectual debate, he argued that the sociohistorical conditions of authoritarian governments psychologically conditioned the Paraguayan to submission, showing interest in a certain explanation of social psychology, as opposed to O’Leary’s rhetoric of nationalist and warrior exaltation.

This debate also took place in the tensions between tradition and modernity, between nationalist revisionism and positivism, respectively. It was so important that it is considered a watershed moment or milestone within the social sciences and humanities in the country, even permeating all fields of Paraguayan social knowledge (Brezzo, 2011).

Báez grew up in a country with many deficiencies and social problems derived from the Paraguayan defeat in the War Against the Triple Alliance (1864–1870). He was one of the first graduates of the insipient higher education that began in the country at the end of the nineteenth century, both from the National High School, where he received a high school diploma in science and letters, and from the National University where he studied law, receiving a law degree. He was a professor in that high house of studies, as well as a dean and rector of it.

The lack of specialists in various sciences made it frequent that, at the end of the nineteenth century and the beginning of the twentieth century, Paraguayan intellectuals undertook various studies or incursions in fields in which they did not have a full training; the field of psychology in

the country would not be an exception. Baez's approach to psychology would be eminently positivist.

Báez also wrote a sociology manual, named *Introducción al estudio de la Sociología* (Introduction to the Study of Sociology) (1903), that was an introductory basis to his chair on such topic at the university, in which he also became interested in social psychology (García, 2018). These interests in the social, as a precursor of sociology in Paraguay, led him to write about the relationships between psychology with law and morality. He made favorable criticisms of the work of other Paraguayans who were dedicated to the psychological field, such as the case of Diógenes Decoud (1857–1920) and his studies on brain surgery (García, 2005, 2009).

Regarding Báez positivism, this line of thought had a very strong influence in the Río de la Plata region since the end of the nineteenth century, where it was the hegemonic thought of the social sciences and humanities – although not the only one – and influenced other contemporaries of his such as Ignacio A. Pane (1880–1920). However, with the great popularity that the discourses around revisionist nationalism obtained, mainly in Paraguay before and after the Chaco War (1932–1935), as well as the gradual emergence of other theories and approaches, made that positivism and the thoughts of Cecilio Báez were relegated to the background, as they are considered “foreign” ideas. This type of Paraguayan academic nationalism affected and delayed for decades the development of the social sciences and humanities (Fuentes-Armadans, 2018).

Mexico · University of Mexico · Psychology in México · Management of institutions

James Mark Baldwin graduated in psychology from Princeton University in 1884, he received a scholarship to continue his studies in Germany (between 1884 and 1885), and he studied in Leipzig with Wilhelm Wundt (1832–1920) and in Berlin with Friedrich Paulsen (1846–1908).

Upon his return from Germany in 1885, he worked at Princeton as a French and German instructor at the Theological Seminary. His interests in the nascent psychological discipline were finding their way as he translated into English an introductory text to German psychology, written by Théodule-Armand Ribot (1839–1916), and shortly after wrote his first article. In 1887, Baldwin married Helen Hayes Green (1864–1963), the daughter of the president of Princeton Seminary. At Lake Forest College, he published the first part of his *Handbook of Psychology*, in which he drew attention to the new experimental psychology of Weber (1795–1878), Fechner (1801–1887), and Wundt. (1832–1920).

In 1889, he moved to the University of Toronto to take up the position of Professor of Logic and Metaphysics and founded the first psychology laboratory in Canada. Between 1889 and 1901, he would see the birth of his daughters Helen (1889) and Elizabeth (1901) whose development was followed and recorded systematically to eventually be published, in 1894, *Mental Development in the Child and the Race: Methods and Processes*, perhaps his most ambitious work, that greatly influenced psychologists of the stature of

Jean Piaget (1896–1980) and Lev Vygotsky (1896–1934).

His initial career was one of the most prolific among his contemporaries. In 1892, he traveled to France to establish contact with Jean-Martin Charcot (1825–1893) at La Salpêtrière Hospital, with Hippolyte Bernheim and to visit Pierre Janet's laboratory. The same year, in London, he became Vice President of the *International Congress of Psychology*, and the following year, he would be offered a professorship in psychology at Princeton and the possibility of founding a laboratory. Between 1897 and 1898, he chaired the American Psychological Association (APA). In addition, he founded the *Psychological Review* and the *Psychological Bulletin*, the first in collaboration with James McKeen Cattell (1860–1944).

In 1903, he would take the offer of John Hopkins University and move to Baltimore, Maryland (USA), to take up a position as professor of psychology and philosophy. He reopened (albeit for a brief period) the Laboratory of Experimental Psychology which was founded in 1884 by Stanley Hall (1844–1924). However, it would be in 1908 when his academic career would take a definitive turn. As Wozniak and Santiago-Blay (2013) have documented extensively in detail, Baldwin would be arrested during a raid on an African-American house of prostitution, and despite his insistence on his moral and legal innocence and despite all the charges that they had risen against him were discarded, the threat of scandal motivated the directors of John Hopkins to demand his resignation. Shortly afterward, he would leave for Paris with his family.

But it is precisely in this last period that Baldwin establishes his relations with Ezequiel Chávez and Justo Sierra (1848–1912) in Mexico. Baldwin visited Mexico in four different times. The first two to fulfill diplomatic missions and the last two to teach the psychosociology class at the Escuela Nacional de Altos Estudios (National School of Higher Studies) (ENAE) that would be founded as an extension of the Universidad Nacional de México (National University of Mexico) (UNM) in 1910. His legacy during his time in Mexico has been debated (Gallegos, 1982–1983; Contreras and González, 1985b; Rodríguez Preciado, 2014), but it deserves a detailed review.

The visits of 1906 and 1909 were intended to share with Mexican officials his views on the project of founding the University. As recounted by Díaz y de Ovando (1972), it was noted in the newspaper that: “Professor Baldwin’s extensive work was written with the intention of making known the true situation of Mexico in its material and educational aspects. The article praises Mexican institutions and the progress of the Mexican people.” Likewise, it was pointed out that the purpose of the study had been “To end the ignorance that exists in the United States regarding the degree of culture reached by Mexicans” (p. 257). Lines later, he recognized Ezequiel Chávez as named by consensus “The first psychologist in Mexico.”

In 1908, it would be Chávez who would visit the USA to learn about the methods and study plans of the universities that allowed him to do so, and he would stay for a few days with the Baldwin family.

On March 28, 1909, Baldwin would visit the country for the second time and would stay until May 3. Toward the last days before his departure, the newspapers of the time and the intellectual groups of the city would gather to listen to the renowned professor during three lectures on the organization of American universities. The talks would be held in the auditorium of the Escuela Nacional Preparatoria (National Preparatory School) (ENP) (Rodríguez Preciado et al., 2019) for which he would be paid \$ 300 Mexican pesos. From the good impression he left by, the Ministro de Instrucción Pública (Minister of Public Instruction), Justo Sierra, would offer him a position at the University if he decided to return, which in fact motivated in the newspapers the misunderstanding that he would be appointed Rector of the University. In the last days prior to his departure, he was appointed Mexico’s representative at The Darwin Celebrations held at Cambridge in an official letter issued on May 7 and received by the Subsecretario de Relaciones Exteriores (Undersecretary of Foreign Relations), Federico Gamboa. The payment to Baldwin for the representation would be \$150 USD.

Professor Baldwin’s arrival date in 1910 is imprecise, in large part because he did not arrive in Mexico from the USA by train, as the rest of the

representatives would do for the Centennial and Inauguration parties of the University, but from Europe as a representative of the University of Oxford, which recently had conferred him a *Doctorate Honoris Causa*.

As had been agreed, between 1910 and 1912, Baldwin was appointed *extraordinary professor* at the ENAE, and in both years he taught the psychosociology class, in addition to teaching another on the history of philosophy in the second.

Regarding Baldwin’s influence on Mexican psychology, Gallegos (1982–1983) and Contreras and González (1985b) had the opinion that to the extent that he did not found any institution or carry out research or publications regarding his work in Mexico, it cannot be stated that it did indeed leave any mark on the development of the psychological discipline in the country. However, it is known that as a result of the courses at the ENP, he prepared and published *The Individual and Society* (1911). In addition through the revision of the changes that were implemented in the psychology class of the ENP, particularly in the 1913 and 1914 programs, that include an Introduction on Psychosociology (Rodríguez Preciado, 2014), the distance from Edward Titchener’s (1867–1927) approaches and the definitive demarcation that he makes toward psychophysiology (which is recorded in a memorandum attached to the program) suggest a determining influence, which is confirmed by the directions taken by the thought and work of Ezequiel Chávez.

James Mark Baldwin could have been one of the most important North American psychologists if he had he not gone through that 1908 incident (Wozniak & Santiago-Blay, 2013), which led to the demand for his resignation from John Hopkins University and definitively marginalized him from North American universities.

Forced to emigrate with his family to Paris, he resided there until 1934, when he would see the end of his days.

Keywords

Brazil · Argentina · Schizodrama · Institutional movement

Gregorio Franklin Baremblytt graduated in medicine from the Faculdade de Medicina da Universidade de Buenos Aires (College of Medicine of the University of Buenos Aires) in 1961, specializing in psychiatry. He completed training in psychoanalysis and postgraduation in sociology by the Escola de Psicologia Social (School of Social Psychology), founded by Enrique Pichon-Rivière (1907–1977). He is a free professor at the Universidad Nacional de Buenos Aires (National University of Buenos Aires). Baremblytt settled in Brazil in the 1970s. His intense militancy in mental health constitutes a relevant history in Brazilian psychology. He is considered one of those responsible for presenting the currents of the institutionalist movement in the field of study of social psychology in Brazil (Hur, 2014; Duarte et al., 2012; Jacó-Vilela & Oliveira, 2018).

He was associated with the Asociación Psicoanalítica Argentina (Argentine Psychoanalytic Association) (APA), founded in 1942. The institution, markedly traditional, formed two dissident groups: Documento (Document) and Plataforma (Platform). Baremblytt joined the Platform that was known for its anticapitalist and

anti-imperialist influence. Baremlitt and other Argentine psychoanalysts questioned psychoanalytic practice in the reproduction of the capitalist system and defended insurgent paths within this field. By political motives and by the disagreement of its mode of operation, they broke with the APA after holding a dissident forum at the XXVI International Congress of *International Psychoanalytical Association* (IPA) (Duarte et al., 2012; Jacó-Vilela et al., 2012; Hur, 2014).

With the departure of the APA, Baremlitt remained on the platform that then took a more markedly interdisciplinary outline. In 1973, Baremlitt organized a group to study the work of Deleuze (1925–1995) and Guattari (1930–1992) entitled *The Anti-Oedipus*, and this contact fostered the discussion about schizoanalysis in Argentine territory (Hur, 2014). With the dictatorial government in Argentina, some movements diluted, and in 1974 the Platform was closed. In the same year, Baremlitt founded the *Escola de Psicologia Freudiana e Socioanálise* (EPFSO) (*School of Freudian Psychology and Social Analysis*) which closed its activities in 1976 (Duarte et al., 2012; Jacó-Vilela et al., 2012; Hur, 2014).

Baremlitt, one of the left-wing militant Argentine psychoanalysts, tried to go into exile in Venezuela, having been denied entry by that country's Navy. He arrived in Brazil in 1977 and went to Rio de Janeiro, where he met Chaim Samuel Katz and Luiz Fernando de Melo Campos. Together, they founded the *Instituto Brasileiro de Psicanálise, Grupos e Instituições* (IBRAPSI) (Brazilian Institute of Psychoanalysis, Groups and Institutions) in 1978, fruit of the *I Simpósio Internacional de Psicanálise, Grupos e Instituições* (I International Symposium on psychoanalysis, groups, and institutions), which besides having guests active in psychiatric reforms in other countries was also a reference in the diffusion of the institutionalist movement in Brazil. IBRAPSI aimed to contribute to the endeavor for Brazilian psychiatric reform. IBRAPSI focused more intensely on institutionalist and schizoanalytic practices than psychoanalytic practices. From the transit between these practices, Baremlitt launched in 1984 the book *O inconsciente institucional* (The institutional unconscious) in which it gathers the contributions

produced in the second symposium of IBRAPSI (Jacó-Vilela, 2011; Lima, 2012; Hur, 2014; Jacó-Vilela et al., 2012).

With the closure of IBRAPSI activities, Baremlitt moved to Belo Horizonte in 1993 where he has lived since; that year, he also founded the *Instituto Félix Guattari* (IFG) (*Felix Guattari Institute*), honoring one of the founders of schizoanalysis. Subsequently, the associates of the Institute decided to change the name to the *Fundação Gregorio Baremlitt* (FGB) (Gregorio Baremlitt Foundation) that has another unit in Uberaba, state of Minas Gerais. Still in 1993, at the same location of IFG, the first *Centro de Atenção Psicossocial* was opened (CAPS) (Psychosocial care center) in Belo Horizonte, CAPS Maria Boneca. Self-management and self-analysis guide the work in this place; the very name of the CAPS was suggested by one of the users (Hur, 2014; Balieiro & Flecha, 2018).

In recognition of his work in the Brazilian anti-manicomial movement, Baremlitt received in 2009 the title of honorary citizenship in Minas Gerais. In 2010, in the municipality of Frutal in Minas Gerais, he built the *Instituto Gregorio Baremlitt* (IGB) (*Gregorio Baremlitt Institute*) offering courses and carrying out social and clinical interventions. It also houses the *Cursinho Popular Gregorio Baremlitt*, a social pre-entrance exam project that aims to promote the democratization of access to the University (Balieiro e Flecha, 2018; Hur, 2014). His most recent work, released in 2020, is the book *Schizodrama: theory, method and technique-clinics*, written in partnership with Margarete Amorim and Domenico Hur.

Anita Paes Barreto, educator and psychologist, had an extremely important role in the institutionalization of psychology in the state of Pernambuco, northeast region of Brazil. In 1924, she obtained a degree in teaching. Soon afterward, she started working as an elementary school teacher dedicating herself to special education.

In 1925, Barreto began her psychological practice in the recently created *Instituto de Psicologia do Recife* [Psychology Institute of Recife], at the invitation of its director, Ulisses Pernambucano. Barreto’s studies and research in psychotechnics were aligned with the Institute’s objectives: evaluation of schoolchildren, especially those with learning difficulties or high abilities; professional selection and orientation of candidates for public service; and psychometric evaluation with diagnostic purposes in psychiatric patients at *Hospital da Tamarineira* [Tamarineira Hospital]. Barreto served as the director of the institute in the years 1927–1928 (Medeiros, 2011a).

In 1931, Pernambucano created the *Serviço de Assistência a Psicopatas de Pernambuco* [Pernambuco’s Assistance Service for Psychopaths], a daring project of open mental health service, seeking to overcome the hospital-centric model. The institute became part of this service,

and Barreto was one of its main collaborators. During the 1930s, Barreto coordinated a series of studies. Among them were the Pernambuco's review of the Binet-Simon-Terman Scale – a work that took 10 years to be completed – and the study about the public-school children's vocabulary in Pernambuco (Hutzler, 1987). Those works were published in the *Arquivos da Assistência a Psicopatas de Pernambuco* [Archives of Pernambuco's Assistance to Psychopaths] and in the *Neurobiologia* [Neurobiology] journal (periodicals created by Pernambucano).

Barreto was the principal of *Escola Aires Gama* [Aires Gama School] from 1941 to 1957. In her first year serving as the principal, the school was converted into a specialized institute for special education and psycho-pedagogical assistance (Medeiros, 2011b). In 1947, it was renamed to *Escola Especial Ulisses Pernambucano* [Ulisses Pernambucano Special School].

Barreto got her Bachelor of Education in 1948, it was the first class of educators that graduated at *Faculdade de Filosofia do Recife* [College of Philosophy of Recife] where she became a faculty member from 1949 to 1954. Barreto also worked as “first psychologist” of the *Clinica de Conduta* [Behavioral Clinic]. Besides providing psychological services, the clinic offered internship opportunity for student teachers – who practiced psychological assistance before psychology became an undergraduate course (“Anita,” 2000; Silva, 2011). Barreto had the collaboration of Hungarian psychologist Béla Székely (1899–1955) in the creation of this clinic. She also served as a university lecturer at the Pernambuco School of Social Work and at the University of Recife (now the Federal University of Pernambuco) from 1955 to 1969.

With a Catholic background and a history in the Church's social action movements, Barreto combined his professional work with political and social militancy in the popular movements of the 1950s and 1960s in Pernambuco. He headed the Municipal Secretariat of Education of Recife (1959–1962), the Foundation for Social Promotion (1963), and the State Secretariat of

Education (1963–1964) of Pernambuco, in the administrations of Miguel Arraes as mayor (1959–1962) and governor (1963–1964). He also participated in the Popular Culture Movement (MCP) (1960–1964): an initiative that articulated educators and intellectuals around the dissemination of education and popular culture in the peripheries and interior of the State. During the same period, the literacy method of educator Paulo Freire was systematized through activities associated with the MCP.

As director of the MCP Education Division, Barreto was responsible for training numerous “lay teachers” in order to multiply the number of students and classrooms, implanted in religious temples and parish halls, gyms, clubs, and even private residences (Rosas, 1986). The whole experience of the MCP was considered “subversive” by the dictatorial forces that usurped power in 1964, to which they deposed and arrested Governor Arraes. Barreto was herself imprisoned for 17 days in April 1964 (Rosas, 2001).

Anita Paes Barreto's trajectory is very representative of the first contingents of psychology professionals (especially women) in Brazil: coming from education backgrounds, in which they had contact with the theoretical study in psychology, they inserted themselves in the spaces of psychological research and practice of the most distinct areas, as they were being created. To this “in-service training,” they later added specific university training, as well as teaching, as the undergraduate university courses emerged.

In 1997, Barreto was awarded by the Federal Council of Psychology with a medal entitled “Recognition of Brazilian Psychologists for their contribution to the development of Psychology as Science and Profession” (“Anita,” 2000).

Guatemala · Art · Clinical psychology · Mental health

Jaime Arturo Barrios Peña was born in the home of General José María Barrios Estrada and María Luisa Peña Chinchilla, along with his nine siblings. He was the grandson of Justo Rufino Barrios Auyón (1835–1885), a military man and politician who served as a two-term president of Guatemala from 1873 to 1885. At the young age of 12, Barrios Peña lost his parents, becoming an orphan. The tragedy of losing them changed his life radically, making him a person more understanding of suffering and with a greater capacity for empathy, qualities that he developed throughout his professional life. He was trained as a teacher at the Normal Institute for Men in Guatemala City and then worked at that school as well. His ideals led him to actively participate in the civic-military movement that overthrew the de facto government of General Federico Ponce Vaidés in 1944 and fought for free elections (Barrios-Carrillo, 2009).

Barrios Peña graduated from the Universidad de San Carlos de Guatemala (University of San Carlos of Guatemala, USAC) with a medical degree. The president of Guatemala, Dr. Juan José Arévalo (1904–1990), awarded him a scholarship to continue his studies at the Universidad Autónoma de México (Autonomous University of

Mexico, UNAM) where he completed his Master's degree and Doctorate in Psychology with a Suma Cum Laude distinction (Lafuente, 2009). During his stay in Mexico, he established friendships with renowned artists, philosophers, and intellectuals (Barrios-Carrillo, 2009).

After the 1944 Revolution that overthrew Jorge Ubico and the Military Junta that he appointed after his resignation, a new project of society was sought and Barrios Peña returned to Guatemala to join its Alma Mater in 1955. He was later appointed Director of the Reformatory of "La Ciudad de los Niños" (The City of Children), an institution of the judicial system for children and juvenile, where he applied methods of rehabilitation that were previously unknown in Guatemala. In this institution, he formed a multidisciplinary team with psychologists, doctors, psychiatrists, and social workers for the study of individual cases (Aguilar & Recinos, 1996). He then continued his work at the Guatemalan Institute of Criminology, where he applied similar methods of rehabilitation, but with adult prisoners.

Later in life, he became a career diplomat for 18 years and served as ambassador for Guatemala in different Latin American countries. He obtained a doctorate in international law and diplomacy at Universidad Tadeo Lozano in Bogotá. He served in missions in Colombia, Costa Rica, and Argentina. During his tenure in Costa Rica, in January 1974, he became a member of the committee for the draft Regional Convention on the Recognition of Studies and Diplomas in Higher Education in Latin America and the Caribbean, sponsored by the United Nations Educational, Scientific and Cultural Organization (UNESCO) (Barrios-Carrillo, 2009).

Barrios Peña was a pioneer of psychology in Guatemala and Central America. Together with his colleague Fernando de León Porrás (1921–2005), he introduced the field of clinical psychology to the country and introduced his book, *Psychological and Psychopathological Aspects of Uncertainty* (Barrios-Peña, 1949a), an essential reading in Latin America that he had previously published in Mexico. In 1957, he published an article where he conceptualized the field of clinical psychology as an applied science

that could not be reduced solely to the study and treatment of psychopathologies. During this period, psychotechnics was generally used as the main form of applied psychology and, thus, Barrios Peña pioneered a new way to see clinical psychology in his home country and beyond. In that same paper, he recognized the value of a psycho-bio-social model for understanding people, no matter their health status, whether psychopathological or in psychic balance. He considered the importance of seeing clinical psychology as a humanistic science that seeks the meaning of interpersonal relationships, recognizing that psychic production is immersed in the cultural and environmental elements of the person.

His greatest contribution to mental health in his country was the founding of the Liga Guatemalteca de Higiene Mental (Guatemalan League of Mental Hygiene) on March 25, 1952, together with César Meza, a Guatemalan psychiatrist who specialized in the United States and was a member of the Sociedad de Neurología y Psiquiatría de Guatemala (Society of Neurology and Psychiatry of Guatemala). The goal of the League was to respond to the mental health care needs of the Guatemalan population and its birth was influenced by the post-World War II mental health movement, which focused on prevention and the humanization of psychiatric care services. Barrios Peña became its first president and the League's library bears his name (Barrios-Carrillo, 2009). It is important to note that the birth of the Mental Hygiene League in Guatemala occurred much later than in other Latin American countries.

Between the years of 1954 and 1956, the League went on hiatus due to the political turmoil that Guatemala was experiencing at that time. Jacobo Arbenz Guzmán, a democratically elected president, was deposed with the help of the USA and the CIA in 1954. This put an end to the period known as Diez Años de Primavera (Ten Years of Spring) that saw a decade of progressive legislation between 1944 and 1954.

Barrios Peña was an accomplished scholar and worked in institutions of higher learning in several countries. Together with Fernando de León Porrás, he was part of the multidisciplinary team of the Sección de Orientación y Selección

professional del Departamento de Bienestar Estudiantil (Professional Orientation and Selection Section of the Department of Student Welfare) created in 1959 at USAC (Aguilar & Recinos, 1996). He served as a professor at UNAM, USAC, and Universidad Tadeo Lozano in Bogotá. He was also a guest professor at higher education and research centers in Mexico, Canada, the United States, El Salvador, Costa Rica, Colombia, Argentina, Belgium, and France (Murió Jaime Barrios Peña, 2009).

In the academic field, he created the first national projective test, published, and used by USAC as an instrument for university-level professional orientation. He described it as “a research technique that would greatly facilitate the knowledge of the course of psychosocial evolution of the individual” (Barrios-Peña, 1964, p. 9).

Another of Barrios Peña’s great contributions was the creation of the Interamerican Society of Psychology (SIP). He presented the proposal in Mexico City on December 17, 1951, when a group of representatives from Argentina, Canada, Brazil, the United States, Colombia, and Mexico met and endorsed it (Gallegos, 2013). He was part of the First Steering Committee as one of the three Associate Vice-Presidents of SIP (Gallegos, 2013) and was responsible for drafting the SIP’s statutes, a task he was unable to complete (Gallegos, 2012). According to Gallegos (2012), he was also among the distinguished scholars invited to the First Interamerican Congress of Psychology held in 1953, in the city of Trujillo, now Santo Domingo, Dominican Republic, at the suggestion of Oswaldo Robles (1904–1969), a member of the organizing committee and in charge of selecting the Spanish-speaking participants.

Barrios Peña was a prolific author. He published 23 books and numerous articles on psychoanalysis, education, anthropology, and art (Lafuente, 2009). In one of his early psychoanalytic works, *The Concept of Individuation in Personality Anomalies; Thematic Apperception Test, T.A.T.*, Barrios-Peña (1949b) reflected about three central elements of psychology, personality, anomaly, and individuation and offered guidelines on the use of the projective test T.A.T. for the

study of personality. His work *Considerations on the Szondi Test* (Barrios-Peña, 1950) reproduced a course dictated at UNAM in the Faculty of Philosophy and Letters in the second semester of 1950. In *Psychology of personality: Integration of Personality and Educational Process*, he explained the ways in which the educational system of Guatemala was encouraging certain personality traits (Barrios-Peña, 1961).

He was a multifaceted man, with a great interest in art. Together with architect Roberto Aycinena, they founded the School of Architecture at USAC. Inspired by the pictorial work of Guatemalan students and artists, he wrote a book in which he profiled several Guatemalan artists and interprets their work.

Through the combination of the disciplines that Barrios Peña dominated, which were psychology, psychoanalysis, philosophy, anthropology, and art, he built the concept of “Anthropocinetics” or a dynamic vision of the human being. His proposal reflected on the Latin American being, contemplated from its historical roots, from a cultural perspective, integrating art and the condition of *mestizaje* (Barrios-Carrillo, 2009).

Towards the end of the 1980s, he emigrated to Sweden. After several years of work with elderly immigrants in his new country, he received the “Personality of the Year” award, Rinkeby Award in 1988. This award earned him further recognition from the European Union. He died in the city of Stockholm, Sweden at age 88 on November 1, 2009, of a heart attack (Lafuente, 2009). Many of his books were published in Spanish by Fenix Publishing House in Stockholm.

Batlle Santiago, María Altagracia

Born on April 4, 1944, in San Juan, Puerto Rico

Juana Myrtea Rodríguez González

University of Puerto Rico, San Juan, Puerto Rico

Keywords

Puerto Rico · Clinical and Health Psychology · Family Therapy

María Battle was the child of Gladys Santiago Prieto, a Puerto Rican executive secretary, and Luis A. Batlle-Mena, a businessman from Puerto Plata, Dominican Republic. Her father died when she was 7 years old, and she was brought up in her maternal grandparents' home and was influenced by her grandfather, an attorney and public notary who liked to discuss classical literature and history after dinner. She has four siblings, three from her father's previous marriages, Luis Antonio, Rosa María, and Carmen Nydia Batlle, and one from her mother's second marriage, Gladys María Cruz. She studied in a private parochial school in San Juan, Santa Teresita Academy. In 1965, she graduated with a Bachelor's degree from the College of the Sacred Heart majoring in Art and Psychology, where she was awarded the Art Medal for her thesis, *An illustrated (in colored*

ink) *psychological and political study of Dante's Inferno*.

María Batlle got married in 1965 and had four children, Gloria María, Gerardo Luis, Luis Arturo, and Eric Rafael, which she brought up by herself since divorcing in 1976. She started graduate studies at the Institute of Puerto Rican and Caribbean Studies, in San Juan, PR. In 1974, she obtained a Master's degree in Art Education from New York University. She worked as an art teacher in various public schools in San Juan, some in impoverished areas, where she became aware of the needs and social problems of the children and youth in these communities, which ranged from abuse, addictions, domestic violence, and extreme poverty. Although art education was a good resource to aid this population, she decided to continue her studies in Psychology.

In 1979, María Batlle started her Master's degree program in Clinical Psychology at the University of Puerto Rico, Río Piedras Campus (UPR-RP), and in 1982 graduated and became a psychologist. For her thesis, she studied *Levels of depression and hostility in three groups of patients: oncology, hemodialysis and general ophthalmology*. She pioneered the work of the clinical psychologist in the rehabilitation of this population and in the Oncology Hospital in San Juan, Puerto Rico.

In 1982, María Batlle started as instructor and coordinator of Behavioral Sciences at the Family Medicine Residence Program in the School of Medicine of the University of Puerto Rico. At this time, it was unusual to include a clinical psychologist in the Faculty of a School of Medicine. In this position, she helped develop several important curricula: clinical interventions in behavioral sciences, community interventions of the family medicine residents, and family therapy. During this decade, she also started her private practice with Dr. Carlos Guevara, her mentor, and other psychologists, practice she maintained until 2015. For a few years, she also shared an office with a family physician which offered an innovating variety of services to its patients. She also worked as an assistant professor at UPR-RP, coteaching in therapy courses.

In 1992, María Batlle completed her PhD in Clinical Psychology at UPR-RP. Her internship at the same institution was under the supervision of Drs. Guillermo Bernal and Carlos Guevara. Her dissertation project was a combined research on Family Medicine Residents' skill development on a 3-year curriculum in the systemic management of the family with a family member with an advanced cancer process.

While working at the Family Medicine Residency Program and using a curriculum in Family Therapy she developed, Dr. María Batlle trained physicians from the University of Puerto de Hierro in Madrid, from Universidad del Este in the Dominican Republic, and from other institutions in Brazil and Venezuela. She was later recruited by the Residency Program in Family Medicine of the University of Texas in Galveston to train faculty members from various Latin American countries in Family Therapy.

In 1993, Dr. Batlle became a faculty member of the Family Medicine Residency Program at San Pablo Hospital in Bayamón, PR, ascribed to the Central Caribbean University. As a faculty member, she developed a curriculum for community services, worked as moderator and troubleshooter for group therapy meetings, and offered lectures on crisis intervention, management of the advanced illness process, quality of life, management of burnout, and post-traumatic disorders, among others.

Stimulated by her quest for knowledge in order to make herself a better therapist and teacher, Dr. Batlle pursued in 1994 a Postdoctoral Program in Family Therapy and Family Medicine about supervision for supervisors in the Psychiatry Department of Strong Memorial Hospital and Family Medicine Residency Program in Rochester, New York. When she finished those studies, she was hired by the Department of Psychology at UPR-RP to teach psychology courses for undergraduate and graduate students and supervise practical experiences. At the same time, she also worked as a psychologist at UPR-RP's counseling center. The following year, she worked as a clinical psychologist at Psychology's practicum center and as supervisor to doctoral interns.

In the late 1990s and early 2000s, Dr. María Batlle continued her academic work this time at Carlos Albizu University, teaching and supervising doctoral interns. Moreover, she was recruited by community federally funded service groups to work as a clinical psychologist. The circle in her professional development closed: she returned to the impoverished community where she had her first job experience, as an art teacher, which had stimulated her to continue her studies in Psychology. She now returned fully trained as a psychologist offering her professional services to persons who had been diagnosed with AIDS at the program *Manantial de Vida* (Spring of Life), both at Luis Llorens Torres Housing Project and at Sabana Village Apartment Center. She also offered her clinical services to groups of women who had been subjected to family violence. In order to be more effective in her clinical treatments to this population, she became certified as a Level 3 Counselor in Psychoactive Substance Abuse at Caribbean Central University.

Although Dr. María Batlle has devoted herself to clinical services and academics, she has participated in some research projects: Identification of HIV/AIDS patients, Impact of Spirituality in Health, Impact of HIV/AIDS, and The Family Context.

She has volunteered as psychotherapist and family and couple therapist at the Oncology Hospital and the Municipal Hospital, in crisis intervention at a gas explosion that destroyed a Río Piedras store and killed and affected many persons and at a disaster intervention with the American Red Cross when a hotel burned up with hundreds of persons inside, many of which died, and as lecturer on ethics, advance illness process, the process of dying, family systems theory, and family art therapy among other themes.

During her professional life, she has received many awards and recognitions for her work: the Gabriel Smilkstein, MD, Innovation in Clinical Teaching Award, for her curriculum in Family Therapy and Family Medicine in 1996 at Hindsdale Teaching Hospital; Outstanding Achievement Faculty Member Award given by San Pablo Hospital in 2000, for her curriculum and publications; Supervisor of the Year at Carlos

Albizu University, awarded by student's vote in 2010; and various acknowledgments and recognitions for Excellent Teaching given by Family Medicine residents from 1986 to 2004 and from the American Red Cross recognizing her volunteer interventions with fire victims at a hotel, among others.

In 2020, secondary to the novel coronavirus (Covid-19) pandemic, Dr. María Altagracia Batlle Santiago is considering the possibility of dedicating herself to painting and Puerto Rican and Caribbean Studies. She spends her time reading, painting, and listening to classical music. Maybe at this time, she can reach her adolescent dream of studying painting in Paris.

Battro, Antonio María

Born *in Mar del Plata, Argentina, on February 6, 1936*

Ramiro Tau
Université de Genève, Geneva, Switzerland

Keywords

Argentina · France · Switzerland · United States · Brazil · Genetic epistemology · Perception · Cognition · Education · Neurosciences · Informatics · One Laptop per Child · Ceibal (Uruguay)

Antonio María Battro graduated in Medicine from *Universidad de Buenos Aires* (University of Buenos Aires), Argentina (1957), and completed his Doctorate in Psychology from *Université de Paris* (University of Paris) (1960), France, with a dissertation on perception and eye movements (Battro, 1960). He also obtained a Certificate in Mathematical Logic from the *Universität Freiburg* (University of Fribourg), Switzerland (1962) and a doctoral degree in Medicine from the University of Buenos Aires (1985) on the topic of the uses of computers to improve learning in children with disabilities (Battro, 1985).

His activities were deployed in different public and private institutions in South America, the United States, and Europe (Tiramonti, 2016). In Argentina, he joined the *Hospital de Clínicas José*

de San Martín (Clinical Hospital José de San Martín) *de la Universidad de Buenos Aires* (University of Buenos Aires) (1955–1958) and in the 1980s the *Hospital Italiano* (Italian Hospital) and the IOM (Oral Model Institute). He became a researcher at the CONICET (National Council for Scientific and Technical Research) (1965–1971) and contributed to the UNESCO project “Growing up in cities,” with a study on the “Perception of the urban environment in Salta.” In 1965, he co-founded the CIF (Philosophical Research Centre of Buenos Aires). For the period 1992–1993, he was appointed a member of the *Fondo Nacional de las Artes* (National Endowment for the Arts), Argentina. Since 2000, he has been a member of the *Academia Nacional de Educación* (National Academy of Education), and in 2021 he became a member of the *Academia de Medicina* (Academy of Medicine) of Córdoba. In Brazil, he was a visiting professor at the universities of São Paulo, Araraquara, Rio de Janeiro, Rio Grande do Sul, Porto Alegre, Federal do Paraná, Curitiba, and the Getulio Vargas Foundation (1973–1980). In the United States, he was visiting scholar (1997) and visiting professor (2002–2003) at the Graduate School of Education, Harvard University, and a Mentor of the Ross Institute (2003).

During his many stays in Europe, he carried out formative, research, and executive activities. The publication of his doctoral thesis at the University of Paris carried out in the laboratory directed by Paul Fraisse (1911–1996) caught the attention of Jean Piaget (1896–1980), who in 1965 invited him to join the International Centre for Genetic Epistemology (1967–1968) (Battro, 1965). His contact with the School of Geneva resulted in a series of publications on Piagetian thought and in different studies on the development of deontic logic in children. In the same period, Battro was Associate Director of the LEEC (Laboratory of Experimental and Comparative Psychology) at the *École Pratique des Hautes Études* (Practical School of Higher Education) in Paris (1979). A few years later, also in France, he was visiting researcher at the *Centre Mondial Informatique* (World Computer Center) (1983). Later, in Italy, (2005) he was appointed

Co-Director, with Kurt Fischer, of the ERICE (International School on Mind, Brain and Education) and was nominated as a member of the Pontifical Academy of Sciences of the Vatican (2003). Additionally, he was involved in several international organizations. In 1988, he headed the agency “Battro & Denham,” for the analysis of educational phenomena, in particular for disabled persons. In 2003, he co-founded the Mind, Brain, and Education Society and its scientific journal and, during 2005–2015, he became the Education Officer of the One Laptop per Child project (OLPC). He also contributed at the *Fundación Ceibal* (Ceibal Foundation), in Uruguay, to implement informatics in all public schools of the country.

During his career, he received several grants: the French government doctoral scholarship (1958–1959), the University of Buenos Aires scholarship (1959–60), the Leonard Nelson Foundation grant (1964), and Guggenheim (1968), Fulbright (1972), and Eisenhower (1986) fellowships. In addition, he was awarded the Daniel Goytía Prize of the Argentine Association for the Progress of Science (1969), the National Science Prize of the Ministry of Education of Argentina (1970), the Mira y López Prize of the Getulio Vargas Foundation of Brazil (1979), the Silver Laurel Prize of the Rotary Club Buenos Aires (1985), and the Konex Prize of Argentina (1986).

In his work, it is possible to recognize an effort to coordinate biological and psychological knowledge in three major areas, firstly, that of the development of perceptual and cognitive processes. To this end, he appealed to logical and mathematical models, such as chaotic models, fractals, and non-Euclidean geometries. Secondly, he has explored the conditions and strategies for special education, supported by computers and communication technologies. Finally, part of his intellectual production covers the field of neuroscience, analyzing brain processes in learning contexts.

In Argentina and in the Spanish-speaking world, he was one of the main spreaders of Piagetian thought. In addition, he was a pioneer in the use of computers for initial education and, more

recently, he promoted the large-scale distribution of computers in schools, inspiring several governmental programs for the provision of laptops in Latin America and other regions of the world.

Bauermeister, José Jorge.

Born *on December 27, 1943, in Cayey, Puerto Rico (PR)*

Nery-Jo Fernández Ortiz^{1,2}, Kevia Calderón Jorge^{1,2} and Ross M. Guerrero Pizarro²

¹Universidad Interamericana de Puerto Rico, Psych Wellness Center, San Juan, Puerto Rico

²Asociación de Psicología de Puerto Rico, San Juan, Puerto Rico

Keywords

Puerto Rico · Clinical psychology · Attention deficit disorder · Development of psychological instruments

José J. Bauermeister is the son of Fernando Bauermeister, a farmer, and Providencia Baldrich, a teacher who influenced him to study Psychology when she commented about the needs of her students. He begins his elementary education in a parochial school in his hometown and transferred in fifth grade to a private religious school managed by the Jesuits in Cuba. Because of the Cuban Revolution of 1959, he returned to Puerto Rico and graduated from high school in Cayey. He has been married to Mercedes Marrero since 1968 and has three sons – Jorge, Fernando, and José – and three grandchildren.

José J. Bauermeister studied psychology in the Social Sciences Faculty at the University of Puerto Rico, Rio Piedras (UPR-RP), graduating in 1965. He studied a doctorate in clinical psychology at Florida State University, with a grant from the Veterans Administration, graduating with a PhD in 1970. His dissertation was *Positive reinforcement: further tests of the Premack theory*.

Dr. Bauermeister has been characterized by his clinical and investigative work in the field of psychology, about attention deficit hyperactivity disorder (ADHD), both locally and internationally. He was a professor at UPR-RP, from 1970 to 2000, year in which he retired from his work as a professor. From 1973 to 1978, he occupied the position of Director of the Department of Psychology of the UPR-RP. As a professor he taught

numerous undergraduate and graduate courses including Experimental Psychology, Behavior Modification, and Psychology of Learning, among others. He supervised hundreds of students in their practicum work and mentored their research work in theses and dissertations. He worked constantly in developing the curricula for the graduate program. During his years as Director, he supervised the revision of the Master's Program in Psychology to offer a program that responded to the needs of mental health services in Puerto Rico (Bauermeister, 2018).

At the beginning of his career, he devoted his research to studying anxiety problems and translated and adapted to Puerto Rico several instruments constructed by Dr. Charles D. Spielberger (1927–2013), among them *Inventario de Ansiedad-Rasgo* (State-Trait Anxiety Inventory) and *Inventario de Ansiedad-Rasgo para Niños* (State-Trait Anxiety Inventory for Children) (Bauermeister, 2018). In 1979, Dr. Bauermeister developed el *Inventario de Auto-evaluación sobre Exámenes* (Inventory of Auto Evaluations about Tests) and a program of inoculation against stress with his then doctoral student, Mildred Vera.

In 1976, he initiated his private practice, an experience that according to him helped him better comprehend the impact of attention deficit hyperactivity disorder (ADHD) and the specific learning problems in children, their families, and their teachers. He became interested in this condition and developed with his students an inventory to evaluate preschool and school behavior of children. He was also an Adjunct Professor of the School of Psychology Program at Temple University, from 1982 to 1985, in a consortium developed by Dr. Laura L. Herrans, of UPR-RP, and Dr. Irwin Hyman (1935–2005), from Temple University to provide doctoral education in School Psychology to a group of Puerto Rican psychologists.

In 1992, Dr. Bauermeister had joined the team of Behavioral Sciences Research Institute of the Medical Sciences Campus of the University of Puerto Rico, which is directed by Dr. Glorisa Canino (1946). While there, he published with internationally recognized researchers about factor structure, prevalence, clinical characteristics,

family profile, persistence in development, gender differences, and cultural aspects of ADHD. Later in 1998, he joined the Research Unit of the University Center for Service and Psychological Studies in the Psychology Department of the UPR-RP, where he studied with his colleagues the symptomatology, probable causes of ADHD, and its treatment.

Dr. Bauermeister has occupied many important positions during his lifetime. From 1983 to 1985, he was vice president for Central America and the Caribbean of the *Sociedad Interamericana de Psicología* (Interamerican Society of Psychology). He was a member of the APA committee to grant scholarships to minority students. He has been a member of the Committee for the Integrated Services Program of the Global Program for Mental Health in Children, sponsored by the World Psychiatric Association and the World Health Organization. He is also a member of the International Medical Council of the Project of the Federico Hoth of Mexico Foundation and the Scientific Advisory Commission of the Spanish Federation of Associations for Aid to Attention Deficit and Hyperactivity.

Dr. Bauermeister has been recognized and bestowed multiple awards for his valuable worldwide contributions to the field of psychology. The Dominican Society of Pediatrics distinguished him as an honorary member. He also received the II award “Together for the Association of Attention Deficit and Hyperactivity-Impulsivity” of Murcia, Spain. He, as well, received the “A Lifetime of Achievement” award from the Puerto Rico Psychology Association. He was inducted into the Children and Adults with Attention Deficit Hyperactivity Disorder (CHADD) Hall of Fame, which supports children and adults with ADHD in the United States. He was elected as a distinguished member (*Fellow*) of the American Psychological Association (APA) for his outstanding international contributions to psychology.

In his work and commitment to scientific dissemination, he has written and published more than 80 scientific articles in professional journals. In 2014, he published the third edition of the book on hyperactive children which is currently published in Spanish and Portuguese. This book

is an information guide written for parents, teachers, and professionals. One of his main achievements was collaborating with colleagues in the training of Puerto Rican psychologists and the development of scientific knowledge of psychology in Puerto Rico.

In 2002, he was invited to be a member of the Integrated Services Committee of the Presidential Program on Child Mental Health of the World Psychiatric Association and the World Health Organization. This committee was entrusted with designing a treatment program for maladjusted behaviors of external manifestation and internal manifestation. The objective was to train teachers, social workers, pediatricians, and other professionals so that they could use this program in those communities or countries that did not have human resources to treat these mental health problems in children. The treatment program designed in Egypt, in Lebanon, in a Bedouin community in Israel, and in Brazil was implemented to study its feasibility and incorporate the changes recommended in these studies. From all this effort, the manual of the designed treatment program was prepared, which was written in Chinese, Arabic, and Portuguese. This manual was translated into Spanish free of charge by the Peruvian Association for Attention Deficit and Puerto Rican colleagues (Bauermeister, 2006).

In the last 20 years, he has had the privilege of giving conferences to parents, educators, and colleagues on different cities of Spain, as well as in Andorra, Mexico, Peru, Argentina, Colombia, Egypt, the United States, Nicaragua, Costa Rica, and Panama. The main theme has been understanding children with difficulty self-regulating their behavior and ways to help them overcome this difficulty.

Federación de Psicólogos de Venezuela,
Universidad Católica Andrés Bello, Caracas,
Venezuela

Keywords

Venezuela · History of psychology · Organized psychology

Erik Becker Becker studied elementary and high school in Caracas from 1950 to 1961. He obtained a scholarship for a Diploma in Social Development and European Politics (1963–1965) from the European Community and the Konrad Adenauer Foundation.

He studied at the Universidad Católica Andrés Bello (UCAB) (Andres Bello Catholic University), Caracas, where he obtained a degree in Psychology in 1974. He studied a Diploma in Social Psychology at the University of Ann Arbor, United States, in 1975. He taught at the Instituto Universitario (University Institute) of the Asociación Venezolana de Padres y amigos de niños excepcionales (Association of Parents and Friends of Exceptional Children, AVEPANE) during the 1980s.

He carried out intense research activities in the field of social psychology, which led him to travel for several years throughout Venezuela, to investigate and obtain information regarding the idiosyncrasy of the Venezuelan people, their

psycho-cultural values, and comparison “among themselves” of the different regions of the country, with emphasis on the population of pre-Columbian and Afro-American origin, and especially in the marginal areas of Caracas. All this information was analyzed and shared in the Chair of Psychology of the Venezuelan, which he taught for several years at the University Institute AVEPANE.

In 1975, he began his career in the psychologists’ guild as President of the Colegio de Psicólogos de Venezuela (Board of Psychologists of Venezuela), until 1978, the year in which – thanks to the laborious and consistent work of several professionals of psychology and law professionals – the draft Law for the Practice of Psychology was developed and presented to the Venezuelan Parliament (Olavarría et al., 1976). The law was finally approved and published in the *Gaceta Oficial de la República de Venezuela*, extraordinary issue 2306 of September 11, 1978 (Official Gazette of the Republic of Venezuela) (Congreso de la República de Venezuela, 1978). Under the above, he was the first President of the new Federation of Psychologists of Venezuela (formerly the Board of Psychologists of Venezuela), during the period between 1978 and 1985.

In 1981, thanks to the coordinated work of psychologist Sigrid Mattar (1940-) and legal advisor Dr. Juan José Bocaranda (1937-), a proposal for a Code of Professional Ethics for Venezuelan psychologists was drafted (Sigrid Mattar, personal communication, September 19, 2020). It was finally approved in the National Assembly on March 29, 1981 (Becker, 1981/ 1985; Canga, 2021).

During his administration, he managed to obtain land and the construction of the buildings that currently make up the headquarters of the Venezuelan Federation of Psychologists in Caracas. He also contributed to organize the creation of the Instituto de Previsión Social del Psicólogo (INPREPSI) (Institute of Social Welfare of the Psychologist) in 1981. He carried out hard work at the national level oriented with a particular objective, the organization of the psychologists’ guild throughout the interior of the country, laying the foundations for the development of the psychologists’ boards in each of the states of

Venezuela (Erik Becker, personal communication, August 18, 2020).

Internationally, he promoted the attendance of psychologists at several international meetings and congresses. He particularly represented Venezuela in the Congresses of the International Union of Psychological Science (IUPsyS): XXI in Paris (1976), XXII in Leipzig (1980), and XXIII in Acapulco, Mexico (1984). In 1981, he promoted an important meeting of psychology in Venezuela, with the presence of the full board of the IUPsyS, with whom it was possible to develop activities with different universities in the country.

He published three editions of the book *Directorio de la Federación de Psicólogos de Venezuela* (Directory of the Federation of Psychologists of Venezuela), which gathers all the information inherent to the guild of psychologists in Venezuela, including its history, its legislation, and all its guild components (Asociación Venezolana de Psicólogos, 1957/ 1985; Federación de Psicólogos de Venezuela, 1985).

He stimulated, supported, and encouraged the creation of several associations and scientific societies in the field of psychology, such as 1978: School Psychology and Sports Psychology; 1979: Industrial and Organizational Psychology and Oriented and Organizational Psychology; 1981: Behavioral Analysis; 1982: Alderian Psychology and Road Psychology; and 1984: Sexological Psychology and Aeronautical Psychology (Ivan Linares, personal communication, September 20, 2020).

He contributed to promoting the creation of new schools of psychology in other universities in the interior of the country: The first of these was the School of Psychology at the Universidad Rafael Urdaneta, in Maracaibo, Venezuela, in 1978, which became the third school of psychology in the country for the time and the first outside Caracas. Later in 2019, he supported the creation of the School of Psychology at the Universidad de Los Andes, Mérida (Canga & Yáber-Oltra, 2015).

Together with Psychologist María Isabel Parada (1951-) and other colleagues, in 2010, he cofounded the organization Psicólogos Sin Fronteras de Venezuela (PSF-Vzla) (Psychologists Without Borders of Venezuela), where he

served as Director of International Affairs, and currently as its Honorary President.

In other areas, he held various positions in the Venezuelan and international public administration: Ambassador of Venezuela to Bulgaria (1991–1994), Yugoslavia (1994), and Germany (1994–2002); Director of Cultural Relations and Director of Information of the Ministry of Foreign Affairs; Deputy to the Director of Protocol of the Ministry; Permanent Secretary of the Qualifying Jury of the Diplomatic Staff; President of the Staff Welfare Fund of the Ministry of Foreign Affairs; and Secretary-General of the National Commission of UNESCO in Venezuela. From 1998 to 2012, he was the Dean of the Latin American Group of Ambassadors to Germany (GRULA). He was Vice President and Councilman of the Municipal Council of the former Sucre District, Caracas (1979–1985).

Ad honorem, he also served as President of the Humboldt Cultural Association, Caracas (2013–2016). President of the Latin American and Caribbean Federation of Friendship with the Chinese People (2015–2017). Vice President of the Venezuelan Friendship Association with the Chinese People (since 2008). Vice President of the Venezuelan-Austrian Center -CEVENAU- (since 2013). Director of International Relations of the Public Policy Center IFEDEC (since 2012). An active member of the AVILA Opinion Group (since 2006). The latter is a group of diplomats, academics, researchers, and scholars of international relations and social sciences who meet to evaluate, discuss, listen to experts, and record their views on national developments.

Portugal · Brazil · Phenomenology · Teaching

Maria Fernanda Seixas Farinha Beirão was born in Pinhel, a medieval city at Portugal's east-central border with Spain. She lived and studied most of her youth in Coimbra, at Praça da República (Republic Plaza), where she obtained her Bachelor's and Master's Degree in Historical-Philosophical Sciences from the Universidade de Coimbra (University of Coimbra), a training that granted her a degree in Psychology. She served as

a professor of History of Psychology, Psychological Theory and Systems, and Phenomenological Psychology at the Pontifícia Universidade Católica de São Paulo – PUCSP (Pontifical Catholic University of São Paulo) from 1964 to 1995.

During her graduation at the University of Coimbra, she established contact with the professors Alexandre Fradique Morujão (1922–2009) and Julio Fragata (1920–1985), who had access to the Husserl Archives at the University of Louvain, founded in 1939, in Belgium, and contributed significantly for the introduction of Phenomenology in the Universidade de Braga e Coimbra, in the 1960s. This Archive “(...) manages and organizes Husserl’s philosophical estate, which comprises the original manuscripts of the posthumous works, his private library of Philosophy, letters written by him or addressed to him and documents relating to his life and academic course” (Van Breda & Boehm, 1956, p.103). During this period, Maria Fernanda Seixas Farinha Beirão began her studies on Husserl’s Phenomenology, a philosophical influence that accompanied her throughout her subsequent trajectory.

She arrived in Brazil in 1961, sent by the ecclesiastical order Opus Dei, from which she left a few years later. In 1964, she was hired as a professor for the discipline of History of Psychology by the Italian physician and psychologist Enzo Azzi (1921–1986), director of the Institute of Pedagogy and Psychology of the PUCSP, and, later, one of the founders of the Faculty of Psychology at PUCSP together with Anieli Meyer-Ginsberg (1902–1986).

During her years as a professor of this discipline, Maria Fernanda Seixas Farinha Beirão introduced the studies of Phenomenology, based on works from Edmund Husserl (1859–1938) himself, Maurice Merleau-Ponty (1908–1961) and Andrés Dartigues (1930–2019). She was recognized as a critic of the foundations of Psychology. She has trained a large number of students, who becoming professors at the university, and were direct participants in the insertion of phenomenology as a mandatory discipline in the formation of Psychology at PUCSP (Perosa, 2019). The various students who made up her study groups, upon graduation, were hired by the university and influenced changes in the curriculum

for the incorporation of phenomenological texts and authors in the mandatory subjects of the Psychology course in this institution.

In 1970, she defended her doctoral thesis in the Postgraduate Studies Program in Clinical Psychology at PUCSP, with the thesis *The experience of the Space and Time in Artistic Creation* (Beirão, 1970), a study that presents a phenomenological analysis of creation artistic through the categories of spatiality and temporality in its analysis, constituting a new theme for research in psychology. Despite the scarcity of peers, with rare exceptions, such as Joel Martins (1920–1991), from the Education Center of the same university, she continued to produce and publish studies that sought to present and deepen the understanding of a phenomenological position in Psychology; she stated: Psychology has the double aspect of being a science of human subjectivity, as a way of being affected by the world (...) and a science of the world, as a place where human beings live and which has a world mean for them.” (Beirão, 1992, p. 137)

Maria Fernanda Seixas Farinha Beirão assumed the chairs of History of Psychology, Theories and Systems of Psychology and later Phenomenology in the Psychology course at the PUCSP. In the role of teacher, she constituted a group of student-monitors and, later, with them, she founded the Centro de Estudos Fenomenológicos de São Paulo (Center for Phenomenological Studies of São Paulo) (CEF). Ahead of CEF, she published a series of articles in books that brought together the studies carried out by the group: *Fundamental Themes of Phenomenology* (1984), *Life and Death* (1988) and *Life, Death and Fate* (1992). In these 10 years in which the group has published these books, it is possible to observe a tendency of the participants and of Maria Fernanda Seixas Farinha Beirão toward a Clinical Psychology and a growing influence of the work of Martin Heidegger (1889–1976) in the constitution of a Phenomenology-Existential as an approach to Psychology.

The first book, *Themes Fundamentals of Phenomenology*, was published in partnership with Joel Martins (1920–1993), who would become dean of PUCSP. The text consists of a set of articles that discuss the fundamentals of

Phenomenology and its interactions with Psychology and Education. The relationship between Beirão and Martins remained active after the book was published; Joel Martins also participated in CEF and contributed with articles to subsequent books. In the above-mentioned book, an influence of the French Phenomenology of Maurice Merleau-Ponty (1908–1961) and Jean Paul Sartre (1905–1980) can already be observed.

In the book *Life and Death*, in addition to the organization, revision and editing, Maria Fernanda Seixas Farinha Beirão wrote the article *Alienation and Solitude: an existential pat* (Beirão, 1988), in which she presents the existentialist influence of Søren Kierkegaard (1813–1855) and its reading in modern phenomenology. It also presents the connections with the nihilism of Friedrich Nietzsche (1844–1900); through the concept of anguish, it addresses human suffering, clinical psychology and the link to Martin Heidegger (1889–1976) work.

In 1992, she organized and published the continuation of the 1988 book, *Life, Death and Fate*, in which she wrote two different articles: *Existence: a place for meaning or experience of the absurd? – The Suicide*, in which she deals with the existential perspective for understanding finitude and its impact on the Psychology object of study; and the text *Husserlian Critique of Positivism and Its Repercussion on Psychology Today* (Beirão, 1992), in which she takes up Husserl's work to think about the consequences of Phenomenology for the construction of a Psychology based on methodological rigor.

In addition to her publications, Maria Fernanda Seixas Farinha Beirão was responsible for the expansion of the Phenomenology disciplines in Psychology courses, developed a very plural and democratic identity in the organization of her courses and is still mentioned and remembered by her students, many of them professors at PUCSP and in other courses, in addition to directly influencing and being a reference for entities such as the Associação Brasileira de Daseinsanalyse (Brazilian Daseinsanalyse Association), FenoΣGrupos (FenoΣGroups), among others.

The discussion that she proposed to psychology and science, in addition to characteristics of

her personality, earned her a growing group of Psychology scholars who somehow came to have Phenomenology as a reference for Psychology as a science and profession. They say: “The proposal for Phenomenological Essays on LIFE and DEATH arose from a meeting of the members of the Center for Phenomenological Studies, where the content of a Phenomenology that follows paths that are not strictly limited to questions of knowledge, whether scientific or philosophical” (Beirão et al., 1988, p. 07).

The influence of Maria Fernanda Seixas Farinha Beirão extended to other faculties, in which she also taught, such as the Universidade de Mogi das Cruzes (University of Mogi das Cruzes) (UMG) between the 1970s and 1980s, which at the time built a Psychology curriculum with a faculty of origin from Universidade de São Paulo (University of Sao Paulo) (USP) and PUCSP and in which several professors began their careers.

Maria Fernanda Seixas Farinha Beirão also organized poetry reading groups, in which several students, colleagues, and acquaintances participated. She is also remembered as a poet. She even published a book under the pseudonym of Clarice Seixas: *Drafts from a shaky self: between the songs of the mermaid and the corners of love and passion* (Seixas, 1994).

The way in which Maria Fernanda Seixas Farinha Beirão formed study groups and tutoring, the charismatic way in which she welcomed and encouraged her students, the rigor in presenting the fundamentals of phenomenology and other approaches to psychology were aspects that determined the paths of Phenomenological Psychology in Brazil. The phenomenological approach aimed at methodological criticism, clinical therapy, psychopathology, and the discussion of contemporaneity were influenced by her thought, work and especially her role as a teacher. She died in 1995, having lived and taught Psychology, Philosophy, and Poetry in a very authentic and impactful way.

Belén Espinosa, Inés

Born *August 27, 1945, in Santurce, Puerto Rico*

Leila Crespo Fernández
Universidad Interamericana de Puerto Rico,
Recinto Metropolitano, San Juan, Puerto Rico

Keywords

Puerto Rico · Clinical Psychology · Violence · Ethics and Religion

Inés Belén was the only child of the marriage of Rosa María Espinosa Pérez and Enrique Ludovico

Belén Trujillo, a lawyer who gave her a protected and privileged childhood. From her maternal grandmother, she learned about Puerto Rican culture and customs; from her mother, respect for God and interest in everything spiritual; and from her father, fascination with education, knowledge, professionalism, and a healthy sense of humor.

She is the mother of Mirka Joan, the eldest of her daughters, who in life was a human rights activist, particularly for the LGBTTI community and HIV patients, serving in her final years of life as director of UN-AIDS in Honduras and Nicaragua. Elizabeth Eunice, her second daughter, is a determined woman and entrepreneurial manager, mother of her grandchildren, Gabriel and Valeria. Danza Yadira, the youngest daughter, followed in the footsteps of both parents in the field of Psychology and currently serves as an elementary school educator. Her stepdaughter, Lucelenia, is a public school teacher, as well as a union leader with cooperative vision and management.

Dr. Belén attended her primary grades at a parochial school, *Colegio La Milagrosa* (Virgin of Miracles Parochial School) in Río Piedras, and then completed her elementary school at Josefita Monserrate de Sellés, an avant-garde private school at that time. She attended middle and high school in traditional private parochial schools: *Colegio Espiritu Santo* and *Colegio San Antonio*.

As a college student, Dr. Belén obtained her bachelor's degree with major in Psychology at the University of Puerto Rico-Río Piedras (UPR-RP). After a brief stint at UPR's Law School, she transferred to the Department of Psychology, where she obtained a scholarship to study a master's degree in Psychology.

Although she had not finished her studies, from 1970 to 1975, as part of the scholarship agreements, she was assigned to work as a psychologist for the Department of Social Services in the Centers for Psychosocial Treatment for Children and Adolescents. In that period, on the recommendation of the program director, Dr. Astrid Oyola, and the consultant, Dr. Carlos Varona, she decided to study a Doctorate in Clinical Psychology at the Caribbean Center for Postgraduate Studies, today *Universidad Carlos Albizu* (Carlos Albizu

University), where she finished her MA in 1975 and obtained her PhD in 1977. Academic and personal interactions with the colleagues and professors led her to develop a particular vision of Psychology as a science and as a profession that allowed her to understand the way in which the will or the decision processes operate in the human acts.

Dr. Belén has dedicated most of her professional life to the training psychologists. For 37 years, she was a committed university professor at the Metropolitan Campus of the Interamerican University of Puerto Rico (Inter-Metro). In addition to teaching, she undertook and held various administrative positions as director of the Department of Psychology, acting dean of the Division of Behavioral Sciences and Professions, assistant dean of Studies, and assistant to the executive vice president. In 2002, she took on the challenge of being the first director of the reconfigured School of Psychology in three academic levels: baccalaureate, masters, and doctorate. During her long professional career at the Inter-Metro, she participated in various academic-administrative and academic committees and was a member of the Academic Senate, organized and participated in multiple local congresses, symposiums, workshops, and conferences at local and international events.

Interamerican University bestowed on her the distinction of *Exemplary Professor* on more than one occasion, and she was recognized in *Who's Who in America's Teachers* for the achievements of her long and productive career. She has publications in professional journals and textbooks that are recognized as mandatory references in Psychology classes of different universities. She has published articles and given lectures related, among others, to the impact of violence and its effect on the behavior of children. She was an advisor to the Congress for the Control of Exposure to Violence on Television, convened by Senator Charlie Rodriguez, when he presided over the Senate, to recruit government agencies and private organizations, set limits on the exposure of violent elements, and require warnings of content in the programs on television.

Together with her husband, psychologist Miguel A. Rivera-Renta, she conducted the following research: *Until death do us part. . . Murder as maximum expression of domestic violence: The case of men who murder their partners*. This study, conducted in various prisons in Puerto Rico, consisted of in-depth interviews of men convicted of the murder of their partners.

In other areas of her professional career, Dr. Belén has been a member of the *Asociación de Psicología de Puerto Rico* (APPR, Puerto Rico Psychology Association) and the American Psychological Association. Throughout her long professional career, she has held various positions in the APPR, both in the Board of Directors and in working committees, with special emphasis on ethics committees, both at APPR and at the Examining Board of Psychologists of Puerto Rico. She was part of APPR's Board of Directors during the approval of the law regulating the Psychology profession, Law 96 of June 4, 1983, and was part of the First Ethics Committee of the Examining Board of Psychologists. Due to her interest in ethical aspects, she participated in the elaboration of the original Code of Ethics of the Psychologists' Examining Board, in its first revision, and in subsequent revisions of the APPR Ethical Code.

In 2006, Dr. Inés Belén, her husband Miguel Ángel Rivera-Renta, and her daughter Danza Yadira Rivera-Belén developed a center for the practice of Psychology with a Christian approach: Center for Psychological Services Migdamil. The idea to form such a center came from their spiritual formation and at the request of Christian churches for psychological services integrating the spiritual perspective of the participants. This Center functioned until her retirement from the Interamerican University in 2013, although she continues to be active in the profession. She has collaborated with the *Nacer* Project for young pregnant women. She has taught the Ethics course at the Gurabo Campus of the Ana G. Méndez University, and she is a member of the 2019 APPR Ethics Committee that revises the current code.

Dr. Inés Belén is recognized by her students, colleagues, and acquaintances for her vertical defense of human rights and for her tenacious

dedication to the ethics of the profession of Psychology in Puerto Rico.

Fr. Antal Benkő (also known as Fr. Antonius Benkő) was born in the town of Pécs, located southwest of Hungary. The years of study led their way through the classrooms of the Jesuit Pius Secondary College during the 1930s, a route that led him to the Degree course in Philosophy, at the Higher School of Hungarian Jesuits, and Degree in Theology, training completed in 1948, at the Pontificia Università Gregoriana, in Rome. After priestly ordination, in the second half of the 1940s, he invested the next years of his life in the completion of the undergraduate courses in psychology (studies that continue with the doctoral course in applied psychology) and Philosophy, both at Université Catholique Louvain (Lima, 2009; Paiva, 2017).

In the mid-1950s, Fr. Benkő goes on to live in Brazil and teach at the Faculdade de Filosofia Nossa Senhora Medianeira [Faculty of Philosophy of Our Lady Medianeira], in Nova Friburgo, until 1959. These first years in national territory are of great importance for his training and professional practice. Starting in 1957, he takes over the direction of the Instituto de Psicologia Aplicada [Institute of Applied Psychology] (IPA), after the invitation of Fr. Alonso (1901–1990), Dean of the Pontificia Universidade Católica do Rio de Janeiro [Pontifical Catholic University] (PUC-Rio) (Paiva, 2017). It was an occasion in which the psychology course, created by Hanns Lippmann, is transferred from Santa

Casa to the newly opened campus in Gávea, as well as being taught during the day (Lima, 2009; Féres-Carneiro, 2013).

A little less than 3 years later, he creates the Centro de Orientação Psicopedagógica [Psychopedagogical Guidance Center] (COPP), which gives rise to the current service of applied psychology (Cerezzo & Silva, 2001). It is believed that, during the 1950s and 1960s, the involvement of students with internships aimed at the first counseling of young people, from the perspective of the Person-Centered Approach, portrays a direct influence of Fr. Benkő. This reading is attributed to the Jesuit's own professional trajectory in the field of vocational guidance, as well as the fact that the Youth Orientation Center (COJ) is one of the spaces of great demand for students for internship, the first public clinic for guidance of young people in Latin America and one of the few fields available for learning professional performance (Jacó-Vilela & Degani-Carneiro, 2015; Féres-Carneiro, 2013).

It should be worth noting that, throughout these first actions of the Jesuit, he continues his studies by doing his postdoctoral studies, between 1958 and 1959, at Loyola University Chicago and Fordham University (Cerezzo & Silva, 2001). His relationship with the field of psychology begins to have new chapters when, in 1962, based on ordinance 227, of the Ministry of Education, he integrates, together with psychologists Arrigo Angelini, Pedro Parafita Bessa (1923–2020), and Carolina Bori, the Committee of Registration of Psychologists. The present committee, aimed at evaluating the applications for professional registration of psychology and chaired by Lourenço Filho (Féres-Carneiro, 2013), only in the first year of operation, receives 1511 applications for professional registration (Filho, 1971).

Around the recognition of the profession and training of the professional, Fr. Benkő defends a religious conception of psychology from which man is taken in his completeness and endorsed on the basis of spiritual values. With this idea, also shared by Mother Cristina (1916–1997) and Enzo Azzi (1921–1986), although it did not have a more effective impact on the debates and definitions around the legislation regulating the

profession, Fr. Benkő nourishes the desire that such a conception results in the emergence of a spiritualistic scientific psychology – a kind of fourth power (Baptista, 2009). Among the articles of his authorship that illustrate this position, there is a highlight by “Psychology of Religion” (1975), an integral publication of a broad empirical research under the title of “Psycho-social aspects of religiosity in the State of Guanabara” (Paiva, 2017).

Together with the Associação Brasileira de Psicologia Aplicada [Brazilian Association of Applied Psychology] (ABPA), between 1964 and 1967, he assumed the vice presidency and presidency, as well as the advisory board, functions held by illustrious professors of psychology, such as Antônio Gomes Pena, Lourenço Filho, and Aroldo Rodrigues (ABPA, 1969). His participation in the construction of Brazilian psychology revealed new moments throughout the 1960s. Between March and October 1966, he taught at the University of Brasília, while in the following year, after about 10 years as the head of the psychology department, he left the direction of IPA. These actions precede his participation as effective councillor of the 1st Plenary of the CRP/05 – Regional Council of Psychology of 5th Region – between 1974 and 1975 (Lima, 2009; Féres-Carneiro, 2017).

It is worth mentioning that his teaching practice and participation in positions at different institutions occur concomitantly with his expressive investment in theoretical production in the field of psychology. Psychological tests and examinations, religious and priestly vocation, mental health and childhood, educational guidance, and training of clinical psychologists, among others, stand out among the topics addressed by Fr. Benkő between the 1950s and 1980s through published articles and books. This contribution was added, in 1967, to his participation in the reform that introduces the departmental structure and the credit system at PUC-RJ, and which creates the Master's degree in psychology (Cerezzo & Silva, 2001).

These facts are limited to the assumption of certain positions assumed by Fr. Benkő, such as technical consultant of the Federal Council of

Education and Advisor to the National Council of Education in MEC. These professional performances seem to have been of significant value for their participation in the officialization of new undergraduate and graduate courses, for example, as was the Postgraduate Course in Education of the Pontifical Catholic University of Rio de Janeiro (PPGE/PUC-Rio). The charismatic figure with which many identify him added to his availability and ability in the construction of dialogues with different institutions, professors, and researchers of the time – Zaia Brandão (1939), among others – and contributes to Pe. Benko to be seen as an important intellectual in the field of human sciences (Dauster, 2015).

In the last years of Fr. Benkő in Brazil, in the first half of the 1970s, before his trip to Austria, he took over the direction of the newly created Department of Theology, as well as, between 1972 and 1975, the academic vice-rectory of PUC-RJ. After becoming an Austrian citizen in 1981, he started teaching at the Pázmány Péter Catholic University in Budapest from 1996 (Cerezzo & Silva, 2001). On November 11, 2013, 13 days before his death, Fr. Benkő gives an interview to Ricardo Torre de Araújo, associate professor in the Department of Psychology at PUC-RJ. After the request of the interviewer to leave a message to everyone by celebrating the 50th anniversary of the psychology course, Pe. Benkő diz: “The message that I would give, God also gave us the psychic homeland. But also the psychic homeland is not the last. This psychic homeland shows us the overcoming of the material homeland [...] of the material field of man. Overcome and find here also an appropriate position to help the other so that he himself can more freely, more fully love God and, consequently, . . . love others” (Benkő, 2013).

Bermann received part of his high school education at the Sarmiento National School and part of it at the National School of Buenos Aires (Fitó, 1998). He attended at the Facultad de Medicina de la Universidad de Buenos Aires (Faculty of Medicine at the University of Buenos Aires, UBA) (1913–1919), where he met Alicia Moreau (1885–1986), Juan B. Justo (1865–1928), and other important socialists, such as Enrique Mouchet (1886–1977). Meanwhile, he carried out numerous activities within the university and obtained his diploma as a professor in high school education in hygiene and physiology from the UBA (1917) and his medicine doctoral degree in 1919. He also pursued doctoral studies in philosophy, which he did not complete (1913–1918).

Bermann began his intellectual training within the perspective of the so-called generation of 1880.

In 1916, Bermann was within the group that founded the first *Universidad Libre Argentina* (Argentine Free University). He took part in an intense political activity within the university environment, being a founding member of both the University Extension Commission of the Argentine Medical Circle and the Students Center of Medicine of Buenos Aires, also serving as president of the Students Center for Medicine and the Federation of Cultural Associations (FAC). In this period, Bermann relativized positivism and adopted a matrix of thought from which he will not distance himself during his career. He initially adopted the positivist ideas of José Ingenieros (1877–1925) but later criticized him in his commitment to somatic determinism (Argañaraz et al. 2004). He took the influence of French clinic and opposed the Spanish vitalism that came to induce a strong criticism of hegemonic positivism (Ferrari 2010, 2014). Bermann was one of the first progressive psychiatrists to adhere to psychoanalysis. Two great influences deeply marked him: on the one hand, the positivism embodied in the figures of José Ingenieros, Horacio Piñero (1869–1919), Christofredo Jakob (1866–1956), Aníbal Ponce (1898–1938), and Nerio Rojas (1890–1971) (Klappenbach 2006); on the other hand, an antipositivist perspective outlined in the figure of Alejandro Korn (1860–1936) and in

particular the contact, in 1916, with the lectures dictated by Ortega y Gasset (1883–1955), whom he criticized anyway (Ferrari 2010). In this framework, he had a first approach with the city of Córdoba, participating in the university reform, a movement for the democratization of university education with a Latin American scope.

In Bermann's eventual psychiatric practice, a reeducational and social pragmatic tinge later took shape. Something that can be observed in his initial publications on *Determinismo en la ciencia y en la vida* (Determinism in science and life) (Bermann, 1920), and mainly in the two volumes on *Menores Desamparados y delincuentes en Córdoba* (Abandoned minors and delinquents in Córdoba) (Bermann, 1933). Bermann participated as a Member of the International Institute of Anthropologie in Paris, Fourth Section: Psychology, Sociology, and Criminology (1924); Bermann's interest in tackling the problem of criminality, as a result of the effects of the habits that a society infringed on the morality of individuals, became an axis of his entire trajectory (Celentano 2006). In 1925, he began to work as a physician at the Hospital de Niños de Córdoba (Children's Hospital of Córdoba), with Prof. Juan Orrico, for child neuropsychiatry. A year later, he published his work *Toxicomanías* (1926) while writing about his teacher José Ingenieros (Bermann, 1926). In 1930, he made a study trip to the main European psychiatric centers and became one of the few Latin American physicians to visit Sigmund Freud. Meanwhile, he assumed as Full Professor the chair of Legal Medicine and Toxicology at the Universidad Nacional de Córdoba (National University of Córdoba), which he held from 1928 to 1936 (Fitó 1998). In 1936, he traveled as an international brigadist to participate in the Spanish Civil War, where he had a prominent role in the organization of war psychiatry. That same year, he created and directed the journal *Psicoterapia* (Psychotherapy), a fundamental scientific organ of progressive Spanish-speaking psychiatry. In 1941, Bermann published *Las Neurosis en la Guerra* (The neurosis at war) (Bermann, 1941), devoted to his experiences in the Civil War, where a disenchantment with psychoanalysis can be appreciated, although he maintains his interest in the theory (Scholten and Ferrari 2018). Psychoanalysis became part of other

interventions that were not psychoanalytic in what can be considered Bermann's eclecticism. After the Second World War, he participated in the teams of the World Health Organization to establish the conceptual bases of the new movement of mental health.

In 1951, Bermann founded the *Revista Latinoamericana de Psiquiatría* (*Latin American Journal of Psychiatry*), in which were published several papers related to psychotherapy and comparative psychiatry and socio-psychiatry (Vezzetti, 2006a, b). The journal was a highly politicized medium; this led to the resignation of one of the editorial secretaries, the Peruvian Honorio Delgado, who did not agree with the journal's political objectives. In the 1960s, Bermann published a compilation of his works in the book *Nuestra Psiquiatría* (Our Psychiatry) (Bermann, 1960). In 1962, the Neuropathic Institute, directed by Bermann, held the first *Jornadas de Psicoterapia* (Psychotherapy Conferences), which became an important event of scientific meeting where a great variety of theoretical approaches were exhibited (Bermann, 1964). Toward the end of his life, he published another compilation of his most outstanding works (Bermann, 1966) and a memoir of his visit to Mao's revolution in his *La salud mental en china* (Mental Health in China) (Bermann, 1970). This last work was translated into Italian and gives an account of the political itineraries throughout his career. Although initially he placed himself in socialism, he later showed sympathy for Stalin's Communist Party, finally joining the *new left* of the 1960s (García 2012).

Gregorio Bermann has been a prominent actor in progressive Latin American psychiatry, establishing professional and political links with a large part of Latin American countries. He had important participation in various Latin American institutions congregating psychiatrists, and being an active member of the *Sociedad de Psiquiatría y Neurología* (Society of Psychiatry and Neurology) from Chile, the American Psychiatric Association, the *Sociedad de Higiene Mental del Brasil* (Society of Mental Hygiene of Brazil), the *Sociedad Cubana de Neurología y Psiquiatría* (Cuban Society of Neurology and Psychiatry),

the Academia Nacional de Medicina de Colombia (National Academy of Medicine of Colombia), and Member of Honor of the Liga Venezolana de Higiene Mental de Venezuela (Society of Mental Hygiene of Venezuela). He was also a member of the Société Médico-Psychologique (Medico-Psychological Society) from France and of the progressive movement of *L'Evolution Psychiatrique* (The Psychiatric Evolution) also from France.

Died *Santa Clara, (Cuba), 4 January 1975*

Elizabeth Salgado Cabeza
Universidad de La Habana, Havana, Cuba

Keywords

Cuba · Psychology · Research · Education

He attended high school at the Colegio de Belén in Havana and graduated from the Instituto de Segunda Enseñanza (High School Institute) in 1919 with a high school degree in Science and Literature. In that year, he enrolled at the Universidad de la Habana (University of Havana) to study two undergraduate programs: Civil Law and Philosophy and Letters. He had outstanding results in both programs, and at the same time, he obtained numerous ordinary prizes in courses such as History of Spanish Literature and Psychology. He obtained his doctoral degree in Civil Law in 1923 and his doctoral degree in Philosophy and Letters in 1928 (Universidad de La Habana, [n.d.](#)).

His undergraduate thesis in Philosophy and Letters was entitled *La Psicología de José Ingenieros (The psychology of José Ingenieros)* (Universidad de La Habana, [n.d.](#)). José Ingenieros (1877–1925) was a renowned Argentine psychologist and sociologist who influenced the University Reform of 1918 in his country.

Bernal, together with Julio Antonio Mella (1903–1929), played a leading role in the revolutionary struggle of the 1920s in the student context. He led the Renovación (Renovation) group that promoted the university reform of 1922, which was named after a similar movement in Argentina (Louro-Bernal & Bernal, 2013). He actively participated in the organization of the Congreso Nacional Revolucionario de Estudiantes (National Revolutionary Congress of Students) of 1923, in which he presented the conference “Los principios, la táctica y los fines

de la revolución universitaria” (The principles, tactics and ends of the university revolution) (Bernal del Riesgo, 1923). Together with Mella, he was an architect of the founding of the Universidad Popular “José Martí” (José Martí Popular University), the Liga Anticlerical (Anticlerical League), the Instituto Politécnico Ariel (Ariel Polytechnic Institute), and the Partido Comunista de Cuba (Communist Party of Cuba) (Louro-Bernal & Bernal, 2013). As a result of the revolutionary work deployed in these years, he had to leave the country in 1930. His stay in Vienna, Austria, as a political exile, was an ideal context for his professional training as a psychologist.

After his return to Cuba, he worked as a professor of General and Civic Psychology at the University of Havana, which earned him recognition in teaching and scientific circles, endorsed by his publications in both branches of knowledge (Louro-Bernal & Bernal, 2013).

Between 1949 and 1962, he developed an important foundational work. In 1949, he participated together with Pedro Cañas Abril (1902–1992) and Gustavo Torroella (1918–2006) in the creation of the Oficina de Psicometría y Orientación Vocacional del Ministerio de Educación (Psychometry and Vocational Guidance Office of the Ministry of Education) (Bernal del Riesgo, 1951; Oliva, 2013). He created the Sociedad Cubana de Psicología (Cuban Society of Psychology), of which he was the first president in 1954. Bernal was included within the Professional Directory of the society as clinical psychologist (Gallegos, 2017). Likewise, the *Revista Cubana de Psicología* (Cuban Journal of Psychology) appeared during this period, publishing its first issue in 1955.

In 1962, the Faculty of Psychology was created at the University of Havana, under the University Reform of the same year. Bernal actively participated in the design of the Reform and was part of the commission in charge of the elaboration of the first study plan implemented in the faculty (Corral, 2011, 2012). In 1964, he moved to the Central University of Las Villas, in Santa Clara, where he continued teaching until his death (Louro-Bernal & Bernal, 2013).

He participated in the founding of the Sociedad de Hipnosis (Society of Hypnosis), the Sociedad de Psicología Aplicada (Society of Applied Psychology), and the Sección de Psicología de la Sociedad de Anunciantes (Psychology Section of the Society of Advertisers). In addition, he was vice-president of the Interamerican Society of Psychology and was a member of the Executive Committee of the Sociedad Latinoamericana de Psicología Profesional (Latin American Society of Professional Psychology) (Louro-Bernal & Bernal, 2013).

His research work was prolific, with around 52 titles dedicated to Psychology, among them, *Iniciación a la Psicología* (Introduction to Psychology) (Bernal del Riesgo, 1936) “Psicoterapia y Desarrollo” (Psychotherapy and Development) (Bernal del Riesgo, 1974), throughout his professional life, from his graduation until his death.

A transcendental contribution of his work was the sagacious *Cubanosofía* (Cubanosophy), included in his book *Cuestiones futuras de la enseñanza en Cuba* (Futures issues of teaching in Cuba) (Bernal del Riesgo, 1944), in which, he considered the identity of the Cuban as a historical, psychological, and social construct. He formulated textbooks of an extraordinary comprehensive character, as is the case of *Psicología Humana* (Human Psychology) (Bernal del Riesgo, 1946), which covered topics related to all areas of psychology, in an orderly and dynamic discourse. One of his most important works was *Errores en la crianza de los niños* (Errors in the Upbringing of Children) (Bernal del Riesgo, 1970), in which, from a colloquial approach to the reader, he exposes the results of years of clinical practice and scientific activity.

He is considered one of the most important Cuban psychologists, for his educational and research work. His contributions were oriented to the search for a national psychology, which overcomes the vision of restrictive schools and theories, and allows one to understand the national idiosyncrasies. In addition, he was one of the psychologists who initiated the transition of psychology towards the revolutionary proposals of the time.

Jaime Bernstein was the son of Ukrainian Jew immigrants who arrived to Argentina in the early years of the twentieth century. In 1937, he began a major in pedagogy at the Facultad de Filosofía y Letras (School of Philosophy and Literature) of the Universidad de Buenos Aires (University of Buenos Aires, UBA) where he graduated in 1942 (honors diploma) with a dissertation on “Adlerian Psychology and Education.” Before graduation, between 1941 and 1942, he had been a member of the Sigmund Freud Institute, founded by Bela Székely (1882–1955), a Hungarian psychologist specialized in the ideas of Alfred Adler and in the

theory and the application of mental tests. While he was doing his training with Székely, in that institution, Bernstein became deputy head of the pedagogic section, where he gave courses on the Rorschach test and on child intelligence. He also started a clinical activity with pedagogic orientation. In 1952, he took a study trip to England, France, Italy, and Spain (Bernstein, 1959; Castillo, 2014).

Concerning his professional and academic career, very early, from 1943 to 1945, he was assistant professor in the seminar of *Psicología Aplicada a la Educación* (Psychology Applied to Education), at the Philosophy Department of UBA. He would become director of that seminar between 1945 and 1947. From 1948 to 1951, Bernstein headed the *Departamento de Psicología Educativa de la Dirección de Psicología Educativa y Orientación Profesional* (Educational Psychology Department of the Educational Psychology and Professional Guidance Direction) of the province of Buenos Aires. In that institution, schoolteachers were trained as “educational assistants.” They helped in the organization of homogeneous classes, creating special groups for “gifted” children and for those who had learning difficulties. In the schools, they also carried out “psycho-pedagogical guidance,” including diagnosis, treatment, and even the referral of students with behavioral problems. In this manner, during Peron’s first mandate (1946–1952), Bernstein contributed to the diffusion of psychological theories and practices in the educational realm (Bernstein, 1959; Rodríguez Sturla, 2001).

In parallel, from 1945, he played an important role as editor, after founding the publishing house Paidós, with his partner Enrique Butelman (1917–1990). At first, they exploited the field of child psychology, not very developed in the Spanish language. However, very rapidly, their catalogue included other domains, such as mental testing, projective techniques, dynamic psychiatry, new psychological theories, and psychoanalysis. Paidós would also consider sociology, economics, and politics, not to forget history and philosophy. By 1965, this informal business was no longer a small one. Paidós had already published 485 titles and it had sold over three million copies in Latin

America and Spain. Not only Bernstein co-directed this process but he was also responsible for different series – “Psychotherapy and Education,” “Psychometrics,” “Contemporary Educator,” “Medical Psychology,” “Psychopathology and Psychosomatics,” “Parapsychology,” among others. He edited, wrote prefaces and notes, and had translated – many times with the help of his wife, Analore Steintal de Bernstein – nearly 230 books, including the first Spanish version of tests such as those of Gesell, Rorschach, Goodenough, Raven, Murray, Bellak, and Rapaport (Klappenbach, 2001; Steintal de Bernstein, 2007; Dagfal, 2009).

In 1955, after president Perón was overthrown, Bernstein began an active academic career as professor and executive staff. At the end of that year, in the city of Rosario, he was appointed as chair of “Educational Psychology,” in the Facultad de Filosofía (School of Philosophy) of the Universidad Nacional del Litoral (National University of the Littoral). At that moment, he also joined an advisory commission in charge of the elaboration of a new curriculum to “reorganize” the first psychology program that had been created in Argentina, in 1955, right before the *coup d'état*. In 1956 he became the head of the Instituto de Psicología (Institute of Psychology), as well as professor in charge of the chair “Psychometrics and Psycho-diagnosis.” In 1957, when a psychology program was also founded at UBA, he was appointed as chair of “Psychology II.” In 1959, he obtained two more chairs: “Educational Psychology” and “Projective Techniques,” while his partner and friend, Enrique Butelman, became head of the Psychology Department. In 1959, Bernstein was appointed head of the Vocational Guidance Department of UBA, the first one of its kind. After the *coup d'état* of 1966 (when the military took direct control of the universities and many professors and researchers had to emigrate), Bernstein resigned to all his academic posts. In 1984, four years before his death, he was appointed as numerary member of the National Academy of Education (Ascolani, 1988; Gentile, 2003; Steintal de Bernstein, 2004).

As for his main contributions, Jaime Bernstein represents one of the rare cases of continuity between the psycho-techniques developed in Argentina during the Peronist period – linking the world of work with the educational field – and the clinical psychology with psychoanalytic orientation that extended itself very rapidly during the 1960s, right after the creation of the first psychology programs. Through his multiple activities as professor, executive staff, and editor, he played a decisive role in the construction of a large public for a “new psychology.” Although he never wrote a book of his own, it can be said that his works (hundreds of pages) are scattered in his long prefaces, his detailed comments, and his erudite notes in the books published by Paidós under his supervision. Likewise, not only did he play a key role at the beginnings of two of the first psychology programs in the country, but he also backed the first students in the defense of the right to practice psychotherapies for nonphysicians. He was an atypical pedagogue, as interested in the psychological aspects of education as in the possibilities of a new professional role for psychologists, in which the evaluation and treatment of personality were of an utmost importance (Dagfal, 2009).

Puerto Rico · Functional diversity evaluations · Neuropsychology

Zayda Ruth Berríos Pagán was the oldest and only girl of five children, whose parents were Hortensia Pagán Luna and Brígido Berríos Rodríguez. She was born in Santa Isabel, a small town in southern Puerto Rico (PR), where she went to elementary school. She was a very bright student, but extremely uneasy and difficult to control. Her teachers, wise and compassionate, allowed her to develop her talents and helped control her constant activity. They suggested advancing her to a higher-grade level in school, in order to provide more challenging academic material, as a way of keeping her more focused.

As she grew older, she developed a great sense of responsibility with which she was able to create a record of academic excellence that brought her to the University of Puerto Rico, at Río Piedras (UPR-RP) and UPR-Medical Sciences Campus. In the 1950s, after 5 years of studies, she completed a Bachelor's Degree in Science in Physical and Occupational Therapy.

As soon as she graduated, Zayda Berríos started working as an occupational therapist at the Cerebral Paralysis Clinic of Puerto Rico's Health Department. Later, she transferred to the Medical Sciences Campus of the University of Puerto Rico, where she did outstanding work at the Day Care Center for Children with Emotional Disturbances. It was there where she began offering clinical services to autistic children within a

neurological conceptual framework that challenged the psychoanalytical theoretical perspective of the time in Puerto Rico.

Zayda Berríos was not satisfied with only working the physical development of the children she served. She knew she needed more knowledge, especially about learning processes in children with functional diversity and was accepted by New York University (NYU), where she obtained a Master's of Arts specialized in Special Education in the early 1960s.

She returned to Puerto Rico, and in the mid-1960s, Zayda Berríos, joined Dr. Carlos Albizu Miranda, Dr. Norman Matlin, and a small group of colleagues in the development of the Puerto Rican Institute of Psychology, a private academic institution that offered master's degrees in psychology, centered on the development of psychological science for Puerto Ricans. This institution is now known as Carlos Albizu University (UCA). At this institution, in 1969, she obtained another master's degree, in sciences, majoring in clinical psychology.

In 1973, one of the authors of this biographical profile, Haydeé de Jesús, remembers that at Dr. Berríos' working center, psychologists were trained in an interdisciplinary approach, considering the human being as a whole entity, taking into consideration medical, neuropsychological, and even physical and occupational therapy aspects (de Jesús, 2010). She is thankful to Dr. Zayda Berríos for providing this comprehensive perspective to psychological services because it allowed her to analyze the results of the Wechsler Scales with a more detailed lens and to interpret children's behavior more profoundly. According to Dr. de Jesús, Dr. Berríos stressed the importance of integrating a child's performance in verbal and nonverbal tasks with walking patterns, use of the nondominant hand, facial characteristics, movement in general, and even a "child's look." As Dr. de Jesús remembers, she learned "that there were no children that could not be evaluated, but instead there were professionals who lacked the skills to evaluate these children. With this perspective in mind, the psychometrics spectrum was broadened in spectacular ways, turning itself into a challenge to any psychologist responsible of obtaining an adequate evaluation of each referred child. These integrated, wholistic evaluations led

to more appropriate diagnosis and conclusions, and the development of clear and specific recommendations. For this perspective in evaluation, we are very grateful" (de Jesús, 2017, p. 44).

In 1975, Zayda Berríos became interested in children diagnosed with autism spectrum disorder and coordinated the first training about autism for parents and professionals. This workshop was offered by parents of children with autism and professionals from the USA. In 1976, Zayda Berríos received funds from the *Junta Puertorriqueña de Deficiencias en el Desarrollo* (Puerto Rico Board of Developmental Deficiencies) to develop the first summer camp for children with autistic spectrum disorders with a focus on individual attention, within a psycho-neurological framework.

In the 1980s, challenged by the need to amplify opportunities to Puerto Rican children with functional diversity, Zayda Berríos enrolled in a PhD graduate program in clinical psychology at UCA in San Juan, PR. She successfully finished this program of studies in 1985 and graduated upon defending the dissertation: *Children with acute illness and associated stress effects*. In the year 2000, as a culmination of her academic training, she obtained a Certification in Neuropsychology. This represented a closure in the *gestalt* about the human being that she had started exploring as a young professional in the field.

Dr. Zayda Berríos was a member of many professional organizations: American Association of Pediatric Neuropsychology, Diplomate of the American Board of Pediatric Neuropsychology, National Academy of Neuropsychology, Puerto Rico Psychological Association, Association of Pediatric Psychology, and Puerto Rico Board of Developmental Deficiencies. The International Biographical Center at Cambridge, England, bestowed on her the twentieth Century Award for Achievement Illuminated Diploma of Honor in 1992. In 2006, she was honored by the Association of Pediatric Psychology for services to functionally diverse children in PR.

After her "retirement," Dr. Berríos continued working as a psychologist in the Neuro-Developmental Program of the Medical Center in San Juan, PR. She maintained her private practice as a clinical psychologist and pediatric neuropsychologist and continued active until the end of her productive life.

In synthesis, Dr. Zayda Berríos' personal and professional life are proof of the dedication and hard work of a woman that was committed to the continuous development of her profession and her pledge to share her knowledge with zeal and veracity. As the world-known Spanish philosopher and writer, José Ortega y Gasset once stated: "A teacher grows when his disciple excels him." That was precisely her goal with us, and it is our mission to continue her legacy in the field of psychology in Puerto Rico.

Berta, Mario

Born *in Montevideo, Uruguay, August 30, 1920*

Died *in Montevideo, Uruguay, May 30, 2009*

Gustavo Laborde
Universidad de la República, Montevideo,
Uruguay

Keywords

Uruguay · Experimental psychology · Creation of psychology course

Mario Berta was born in Montevideo where he trained as a psychiatrist in the Medicine Faculty in the Universidad de la República (University of the Republic). He focused on research, the practice, and the teaching of psychology, psychiatry, and psychotherapy. In his training, his passage through the Clinical Guard of the Vilardebó Hospital stands out in 1946, back then the only psychiatric hospital in Uruguay, managed at that time by Dr. Alfredo Cáceres (1900–1970) who made it possible for the encounter with psychology to occur early rather than late.

In 1948, he took on a job as an assistant of the Psychology Laboratory in the Psychiatric Clinic of the Medicine Faculty, a position he held until 1949. Subsequently, he presented various courses about psychology training in the Humanities and Science Faculty at the Universidad de la República. In 1950, he presented a course about Experimental Psychology, in 1951 a course about Psychological Cornerstones of Psychoanalysis, and a year later a course about Psychology of Personality. Over that same period (1951–1953), el Dr. Horacio Rimoldi (1913–2006) was also in the Humanities and Science Faculty, summoned by the Dean Justino Jiménez de Aréchaga (1910–1980) with the purpose of creating the Psychology Degree. Dr. Rimoldi never could nail down his proposal because of resistance he found in the university space, specially by a certain sector of medicine linked with the development of psychology.

In 1953, Dr. Mario Berta was a founding partner of the Sociedad de Psicología del Uruguay (Uruguay's Psychology Society), an institution that set out to "pursue the development of Psychology as both a science and a profession" (Sociedad de Psicología del Uruguay, 1993, p. 3). In 1956, he actively participated in the creation of the Psychology Degree and of the Psychology Institute, taking on the job as its first director. Berta elaborated the first curriculum in psychology, including the Freudian psychoanalysis and the Jungian analytical psychology in higher education, despite his considering that the basis and structure of the psychology field "responds more to scientific-natural interests and less to the scientific-spiritual tradition" (Berta & Silvera, 1958, p. 10).

In 1958, amid a controversy between Uruguay's Psychiatric Society and professionals of psychology concerning psychotherapeutic practice, he published *Limits and field of action of Psychology in relation to Psychiatry*, a report directed toward the Psychiatry Society. There, he proposed that psychology and psychiatry presented "many aspects in common and points in common" (Berta & Silvera, 1958, p. 3), but he acknowledged that both disciplines possessed a doctrinaire, technical, and formative separation. He added that in the practice "the psychologist has specific, well delimited zones of action that corresponded to what we can call the psychological toll of mental health (professional orientation and vocational guidance, psychology applied to the worker, the child, the social group, etc.)," and in the intermediary cases, "the intimate and group collaboration, of psychiatrists and psychologists," was suggested (p. 7).

In the 1970s, Mario Berta was awarded a Scholarship from United Nations and an Artigas Scholarship from the "Universidad de la República" to perform studies about European Psychology Education (1959–1960). During his stay in Paris, Ginebra, and Zurich, he participated in various specialty conferences and personally met multiple significant prominent people at the time: Gaston Bachelard (1884–1962), Charles Baudouin (1893–1963), Jean Piaget (1896–1980), and Leopold Szondi (1893–1986), among others. He also contacted Robert Desoille (1890–1966) who trained him in the "directed daydream" technique ("Rêve Eveillé Dirigé") during 1959 and 1960, through personal interviews, didactics, and assistance to his seminars.

On his return from Europe, in 1960, he kept an epistolary personal relation with Desoille, and in that same year he founded the Uruguayan Group of "Rêve Eveillé Dirigé," which presented the first work about directed daydream in Uruguay and in Uruguay's National Medical Congress. Subsequently, the Uruguayan Group researched on the relation between "Directed Daydream" and the action of certain hallucinogens, especially LSD 25, resulting in the publication of the paper "Directed psycholysis" (1964), presented in the Sociedad de Psiquiatría de Uruguay (Uruguay's

Psychiatric Society) and edited by the Psychology Institute (1965). Berta was founding s and integrated the Uruguay's Directed Daydream Society (1999), where he was distinguished in recognition of his contribution to the development and dissemination of such technique.

In 1966, Berta resigned the position of Director in the Psychology Institute while in a climate of dispute related to the direction of the Institute, where political and academic views opposed, especially in regard to the autonomy of psychology in relation to medicine, specially psychiatry.

In 1967, he was elected President of Uruguay's Psychiatry Society, where he organized Uruguay's First Psychiatry and Mental Hygiene Workshops.

During the military-civic dictatorship between 1973 and 1984, the Psychology Degree of the Humanities and Science Faculty of the "Universidad de la República" closed its doors (in 1973) not to open again. Its closure decreed by the University auditors was accompanied by a consult to different actors about the necessary level of a future space for psychologists university education, and finally in 1975 the Psychology University School was created in the "Universidad de la República," of which Berta was its first director. Berta highlighted in a report (Berta, 1981) that the creation of the Escuela Universitaria de Psicología (Psychology University School) "meant an acknowledgement of the importance of Psychology as an autonomous discipline and a real progress in its teaching and training inside of the University" (p. 1), opposed to what various psychology collectives upheld, the weakening of the professional training, and the repositioning of the psychologist's work under the medical influence.

Mario Berta published various books and works in French; alone or in collaboration, his performance in a European level led him to be designated as an Official Rapporteur in the International Psychotherapy Congress held in Paris (1976) about the subject "¿Existential values or symptom reduction?" He was Honorary Academic of Medicine's National Academy (2003) and Honorary Partner of Uruguay's Logotherapy Society (2004). His scientific

production in addition to being relevant for its time stands out because of its amplitude and theme variety.

Paraguay · Paraguayan ethnography · Psychology of the Guarani · Paraguayan agriculture · Meteorology and botany

Mosè Giacomo Bertoni, also known as Moisés Santiago Bertoni or as “the wise Bertoni” (in recognition of the work carried out by him in so many different fields), would become one of the greatest naturalist scientists, anthropologist, botanist, and writer in Paraguay.

His interest in the natural and social sciences manifested itself early in his life so much so that, in 1874, at just 17 years old, he founded with his mother the first meteorological observatory in his hometown, Lottigna, which revealed an important area of knowledge, which accompanied him throughout his life.

After studying two semesters of law, in 1875, at Geneva University, he resumed his original interest and, in 1876, entered the Faculty of Natural Sciences of the University of Zurich, where he met the student of biochemist Eugenia Rosseti, with whom he married and had “a profuse offspring” (Del Carmen Quevedo, 2001), and with whom he moved to South America in 1884 (Ramella & Ramella-Miquel, 1985), with six children (one daughter died previously in Switzerland).

He first settled in Argentina, where he stayed until 1887, while waiting for deciding to move that year to Paraguay, where he had his six other children, totaling 13 sons.

His work was as prolific as his descendants, on the most different subjects that make up the various possible views in the natural and social sciences. As Zubizarreta (2011) comments: “His scientific activity scary. He investigates, builds collections, writes his Physical and Economic Description of Paraguay, a monumental work of whose 17 voluminous volumes only four have been published to date.” In total, there are more than 400 articles and essays (Ramella & Ramella-Miquel, 1985).

In 1896, he founded the *Escuela Nacional de Agricultura* (National School of Agriculture) of Trinidad (near Asunción) and also the *Estación Agronómica* (Agronomic Station) of the now called Puerto Bertoni. Without official help and without sponsorship, he acquired a small printing press in that city (idem) and goes on to publish his own materials and fascicles of the *Anales Científicos* (Scientific Annals), highly valued both in Asunción and in North American and European cities, through his publishing house called *Ex Sylvis* (which, translated from Latin, means “From the forest”).

Later recognized by one of the presidents of Paraguay (provisional from 1923–1924 and constitutional from 1924–1928), José Eligio Ayala (1879–1930), who had also studied at the University of Zurich, went on to finance his publications, with which Bertoni could finally have official support for the publishing of their works and scientific knowledge on Paraguay, such as courses on meteorology, astronomy, medicine, agriculture, botany, archeology, and ethnology, especially on the Guaraní indigenous (Del Carmen Quevedo, 2001; Zubizarreta, 2011).

These meteorological studies (recording, in the 42 years in which he lived in Paraguay, data related to wind, air temperature, frequency of rainfall, and humidity) inspired the creation of the Registro Nacional Paraguayo (Paraguayan National Registry) (República de Paraguay, 2020).

His extremely exact rainfall calendar became so popular that it was incorporated into Paraguayan culture in general, to the point that common calendars included annually, with different colors, those careful records known as the

“*Calendario Bertoni*” (Bertoni Calendar), which was used to plan various events (such as parties, barbecues, camping, etc.) on days without rain; it increases its precision. Only deforestation and global warming caused the *Calendario Bertoni* to lose its validity and, as a consequence, to cease to be incorporated into the common calendars in recent years, after more than 50 years of use.

Now, in that profusion of works that make up the historical record of his experience in Paraguay, the absence of a specific mention to psychology as a science is striking, although psychological descriptions permeate several of Bertoni’s works, among them, specifically, the formidable anthropological study included in his *Descripción Física, Económica y Social del Paraguay* (Physical, Economic, and Social Description of Paraguay) (Bertoni, 1927a), which he called the *La civilización Guaraní* (The Guaraní Civilization), and in which he consciously faced all prejudice related to it, since it was the study of an indigenous partiality that he elevated to the degree of “civilization,” as he titled his work, that prejudice that he describes as: “Malice, ignorance, incomprehension (. . .)” (Bertoni, 1927b, p. 12).

According to García (2014), the omission of psychology as such in his works was absolutely intentional, due to its disagreement with the then modern definition, which he describes, at the beginning of Volume II, as “the modern disaster of the concept of psychology,” which treats the “science of the soul” as something to be measured in the laboratory “by means of weights and measures, and various dynamometers” (Bertoni, 1956, p.161).

However, psychological issues occupied a special portion in the Part II of his work on the Guaraní people, when Bertoni (1956) associates them with morals. Bertoni recognized the high sense of morality in Guaraní people, together with a high moral and mental sensitivity, lived in a paradisiacal daily life, free of tensions and violent emotions (García, 2014, pp. 61).

Finally, there are also many criticisms of Bertoni’s anthropological descriptions, “contaminated” by a personalist ideology, which,

according to some, makes him a controversial author.

But, as García (2014) emphasizes very well: "(...) we have the certain fact that, without psychology being his main orientation, he was the first in this country to deal with understanding the mentality of the Guaraní, even with the limitations recognized by himself (...). *This fact alone already makes him a character worthy of a detailed historical analysis*" (García, 2014, pp. 63–64, emphasis added). Such, then, is the singular importance of Bertoni for psychology in Paraguay.

withdrawn from public service by the corporate military coup shortly after the 1964. She joined the Brazilian Psychoanalytic Society of Rio de Janeiro (SBPRJ) in 1965 (S. B. Vianna, personal communication, April 22, 2020). In 1970, she became an Associate Member of SBPRJ, where she coordinated the course “Study of the work of Karl Abraham.” In 1976, she became a full member of the SBPRJ.

Her life was marked by the articulation between psychoanalysis and politics. She participated in the campaign *O Petróleo é Nosso* (The Oil Is Ours), for the nationalization of oil supplies, in the late 1940s. Although a biographer claims that she joined the Brazilian Communist Party (PCB) in 1964 and left in 1968 after the Prague Spring incidents, her son claimed that she joined the PCB in 1950, leaving her ranks in 1981 (S. B. Vianna, personal communication, April 22, 2020). Her house was used for communist meetings, of which several were persecuted politicians and murdered during the dictatorship (Konder, 2000), as well as hiding in the underground Giocondo Dias (1913–1987), PCB general secretary, and Marco Antonio Coelho (1926–2015) (S. B. Vianna, personal communication, April 22, 2020). She attended to former political prisoners and still participated in the Amnesty movement.

Since 1973, intense controversies have happened within the SBPRJ. Vianna became well known for having been one of the main responsible for the circulation of complaints about the participation in torture by the lieutenant-physician Amílcar Lobo (1939–1997), candidate for Psychoanalytic Society of Rio de Janeiro (SPRJ) member. At the time, he was in a didactic analysis with Leão Cabernite. Still, in the same year, the Argentine psychoanalytical magazine *Cuestionamos 2: Psicoanálisis Institucional y Psicoanálisis sin Institución* (We Question 2: Institutional Psychoanalysis and Psychoanalysis without Institution), organized by Marie Langer and Armando Bauleo (1932–2008), published a note reproduced from the newspaper *Voz Operária* (Worker’s Voice) n° 102, from the PCB. In this newspaper, in a report entitled “We identified some torturers in Guanabara,” Amílcar

Lobo is held responsible as one of the members of the torture group. The newspaper’s editor was hidden underground in Helena Besserman’s house (Vianna, 1995). The complaint has spread, and figures in psychoanalysis exchange letters about it. In 1973, the president of the International Psychoanalytical Association (IPA), Serge Lebovici (1915–2000), wrote to the president of SBPRJ, Walderedo I. de Oliveira, to find out about what happened. The president of SBPRJ responded saying that it was a misunderstanding. In 1974, at a conference of Wilfred Bion (1897–1979) at the Institute of Psychiatry of the Federal University of Rio de Janeiro, Helena Besserman Vianna asked “what would you do if you were wanted by a client who wanted to be a psychoanalyst and had been involved with torture?” (Vianna, 1995). In the same year, after her car parked in front of the SBPRJ, its engine was manipulated so that it could explode. A bomb was found in it (Araújo, 2020). About these episodes, one of the psychoanalysts involved stated: “Dr. Helena Viana had been to hell and back” (Pellegrino, 1988). Amílcar Lobo (1989), in his book, reported that one of the solutions proposed to him by his military superiors was to place a bomb in the office of Helena Besserman Vianna. In the same year, a graphotechnical exam was ordered by a judicial expert. In 1975, the SBPRJ Council accused her of her handwriting being the one at the end of the newspaper *Voz Operária* (Workers Voice) (Vianna, 1995). They took advantage and accused her of having plagiarized articles and ideas from different psychoanalysts. She denied it. At the meeting, she was forced to enter without her purse and noted that one of those present held a folder with the initials of the Department of Political and Social Order (DOPS). Under allegations of ethical and moral reasons, her request to enter the category of full member was rejected, and the Council decided to keep the matter confidential. A Council helper asked her to burn all letters and minutes involving the case. In 1975, she went to London at the International Psychoanalysis Congress. She requested a meeting with the IPA Executive Council, where she presented her defense, and showed the letters exchanged and read the charges

against her. While waiting for the meeting, she received several calls with threats directed at her family: “Find out what happened to your children in Brazil” (Jornal do Brasil, 1986b).

Finally, in 1976, she became a full member of the SBPRJ. In 1980, the theme of torture was rekindled within the SBPRJ, and a series of meetings, which were known as “Assemblies of Crisis,” were instituted. She was accused of failing to keep her oath of not referring to what happened. Walderedo I. de Oliveira accused her of wanting to set up a police investigation to harm a colleague. The crisis was spread into the Rio de Janeiro Psychoanalytic Society (SPRJ), another psychoanalytical society linked to IPA. In 1981, in Paris, she delivered documentary evidence on the participation of Amílcar Lobo to the ex-president of IPA, Serge Lebovici. A letter from the psychoanalyst Hélio Pellegrino reporting the cases of torture to former political prisoners was included. In 1986, Helena Besserman and Hélio Pellegrino gave statements to *Jornal do Brasil* (Journal of Brazil) (1986a), which were published alongside an interview with Amílcar Lobo in an article entitled: *Psychoanalysis of Torture* (1986b). Only in 1993, the IPA Executive Committee required SPRJ to exclude Leão Cabernite from membership, and to cancel his membership. In 1987, she published an article in the newspaper of *Grupo Tortura Nunca Mais* (Torture Never Again Group) (GTNM / RJ) in Rio de Janeiro.

Concerning her writings, two stand out. Her publication of 1991 brought the lecture of Margarete Hilferding (1871–1942), a doctor who attended the circles of the “Psychological Society of Wednesdays” at Freud’s house and who, in 1911, was the first woman to participate in the Psychoanalytic Society of Vienna. In the 1995 book, she reported the story involving Amílcar Lobo’s case at SBPRJ. In a country that did not recognize its practices, Helena Besserman Vianna contributed to the public denunciation of a known participant in torture, and that was inserted within the Brazilian psychoanalysis. She never negotiated principles to ascend within the profession. Not by chance, in 2000, she received the Chico Mendes’s Medal from GTNM/RJ, and in an

interview with Coimbra (2005), she declared: “I never abandoned my Marxist ideals.”

development · Moral education

Angela Maria Brasil Biaggio was born in Rio de Janeiro in 1940. During her high-school years, she received teacher training to become a primary school teacher. One of those years was spent as an international exchange student via American Field Service (AFS), in a regular high-school in the United States (USA) (1958–1959). Back in Brazil, she finished her teacher training with an internship in a favela in Rio de Janeiro. From 1960 to 1964, she studied Psychology and got her bachelor's degree at Pontifícia Universidade Católica do Rio de Janeiro (PUC-Rio) (Pontifical Catholic University of Rio de Janeiro).

In April 1964, Professor Angela Biaggio moved to the USA to pursue her postgraduate degrees at the University of Wisconsin-Madison. She obtained her Master's degree in Educational Psychology (1964–1965) under the supervision of Julian C. Stanley (1918–2005). Afterward, she did her Ph.D. in Developmental Psychology (1965–1967), with Robert E. Grinder (1929–2012) as her advisor (Nelsen et al. 1969). Returning to Brazil in September of 1967, Angela was one of the few psychologists in the country with both degrees. From another perspective, that shows Brazil was at an incipient state in training and research in Psychology when Angela Biaggio returned with what is contemporarily considered a standard career for a Professor in the area.

In 1968, Professor Biaggio started to teach Psychology at her *alma mater* PUC-Rio. Between 1970 and 1971, she went back to the USA, becoming Associate Professor in the Department of Psychology at Minnesota State University-Moorhead. In January 1972, she was back in Brazil to work at Universidade de Brasília (UnB) (University of Brasília). In December of that same year, she moved to Porto Alegre (state of Rio Grande do Sul) to become a faculty member of the Master's program in Psychology at Pontifícia Universidade Católica do Rio Grande do Sul (PUC-RS) (Pontifical Catholic University of Rio Grande do Sul). In February of 1974, she moved to Rio de Janeiro to work alongside Professor Aroldo Rodrigues (► "[Rodrigues, Aroldo Soares de Souza](#)") at PUC-Rio until December 1980 (Biaggio and Rodrigues, 1971).

In 1981, Angela returned to Porto Alegre. There she was admitted as Professor at Universidade Federal do Rio Grande do Sul (UFRGS) (Federal University of Rio Grande do Sul), assigned to the university's School of Education (FACED). She taught Educational Psychology courses at the graduate and postgraduate levels and was in the Postgraduate Program in Education faculty. She became Full Professor (highest rank in the federal higher education career) in the 1980s. Around 1986, a group of psychology professors with Ph.D. from USA universities invited Angela to help in planning a new postgraduate program in Psychology at UFRGS. By 1987, she was among that program's permanent faculty and officially transferred from FACED to the Psychology Department. The Postgraduate Program in Psychology (PPGPSICO) quickly ascended to be the top program in the country. That was certainly due in great measure to Professor Biaggio's national and international relevance and scientific production (Denmark, 1998).

In 1994, Angela spent a sabbatical period (postdoctorate) at the University of Notre Dame (Indiana, USA) (Biaggio, 1997). She retired from the Psychology Department in 1995 but kept active international partnerships in research (USA, Chile, Portugal, Germany, and Norway), as well as supervising theses and dissertations at PPGPSICO until her passing in 2003.

As a scientific researcher in Psychology, Angela's career led to a recognized contribution to developmental psychology, personality, and psychological assessment. In Brazil after her Ph.D. in 1968, she proceeded to investigate the applicability of Lawrence Kohlberg's (1927–1987) model of stages in moral judgment to the Brazilian culture (Biaggio, 1975; Biaggio et al., 1998). In addition, from that perspective, she looked into relationships between moral judgment and constructs such as cognitive dissonance, locus of control, anxiety, religious participation and affiliation, Law students, the complexity of language structure, guilt, parental attitudes, attitudes toward ecology and peace, and other personality variables (e.g., Biaggio, 1984, 1992, 2013). Of relevance was her work on the Brazilian-Portuguese versions of the Moral Judgment Interview (MJI) (Biaggio, 1975) and the Sociomoral Reflective Objective Measure (SROM) (Biaggio & Barreto, 1991).

Professor Biaggio employed the moral dilemmas debating technique proposed by L. Kohlberg and his colleague Moshe M. Blatt (1941–) when she taught moral development at FACED. She translated and adapted into Brazilian-Portuguese a series of moral dilemmas based on the dilemma manual developed by Kohlberg's research team. With her collaborators and students, she created new dilemmas related to themes closer to Brazilian society (Biaggio et al., 1999). During her sabbatical time at the University of Notre Dame, she learned about applying the “just community” approach, designed by Kohlberg, observing the YES Program (Biaggio, 1997). She sought to apply that concept on her return to Brazil in Porto Alegre schools. During that same period, she rekindled her interest in universal themes, which she started to address intensively, until her passing: ecological issues and peace promotion. With those themes in mind, she sought to design an intervention program in schools to improve moral reasoning by discussing moral dilemmas with ecological and pacifist content (Biaggio et al., 1998, 1999). In 2002, she created the Peace Attitudes Scale (PAS), which she developed together with her adaptation of the Defining Issues Test-2 (DIT-2) for the Brazilian-Portuguese (Biaggio, 2013).

Alongside her interest in moral development and moral education (Biaggio, 1999), Professor Biaggio made important contributions to personality psychology and psychological assessment throughout her career. Her studies and research were also published through the books *Psicologia do Desenvolvimento* (Developmental Psychology) (first edition in 1975, a bestseller in Brazil, currently in its 24th edition) (Biaggio, 1988) and *Pesquisas em Psicologia do Desenvolvimento e da Personalidade* (Research on Developmental and Personality Psychology) (Biaggio, 1984). The translation and adaptation into Brazilian-Portuguese of several scales stand out, among them psychological instruments from her partnership with Professor Charles D. Spielberger (1927–2013): the IDATE – State-Trait Anxiety Inventory (Biaggio & Spielberger, 1980) and the STAXI – State-Trait Anger Expression Inventory (Biaggio & Spielberger, 1994).

Two of her books are remarkable in the psychological bibliography in Brazilian-Portuguese: *Psicologia do Desenvolvimento* (Developmental Psychology) (Biaggio, 1988) and *Lawrence Kohlberg: Ética e Educação Moral* (Lawrence Kohlberg: Ethics and Moral Education) (Biaggio, 2002). In this later work, she presented Kohlberg's theory and legacy, described some of her studies based on his theory, and included the unprecedented publication, in Brazilian-Portuguese, of two texts written by Kohlberg himself.

On May 22nd, 1998, in the Foundation Act of the Brazilian Society of Developmental Psychology (SBPD, currently Associação Brasileira de Psicologia do Desenvolvimento – ABPD), in the city of Gramado (Rio Grande do Sul), she received an homage and was acclaimed Honorary President. She took compromise in spreading the creation and achievement of the society to the international scientific community. In 2003, during the fourth meeting, and just a few days after her passing, a posthumous tribute took place in the city of João Pessoa (state of Paraíba). She planned to go to the meeting and present a research paper (the abstract was published in the conference proceedings).

Professor Biaggio brought researchers together for collaboration from different parts of a continental country such as Brazil. Her research study

on ecology and peace, for example, presented data from the Amazon region (Amazonas), the north-east (Paraíba), the south (Rio Grande do Sul), and the southeast (Minas Gerais and coastal Rio de Janeiro). In addition, Angela encouraged the Brazilian Association of Research and Postgraduate Studies in Psychology (*ANPEPP*) to organize symposia. Indeed, she actively participated in nearly all ANPEPP's meetings and was the founder of the ANPEPP's research group called "moral development," currently known as "psychology and morality."

Throughout her career in Brazil, she was a consultant to the government funding agencies Coordenação de Aperfeiçoamento de Pessoal de Nível Superior (Coordination for the Improvement of Higher Education) (CAPES), Conselho Nacional de Desenvolvimento Científico e Tecnológico (Brazilian National Council for Scientific and Technological Development) (CNPq), and Fundação de Amparo à Pesquisa do Estado do Rio Grande do Sul (FAPERGS). When CNPq organized the first committee for the area of Psychology between 1976 and 1978, Biaggio was one of the area's representatives. She was also senior researcher of CNPq from 1977 until the end of her career. At CAPES, she represented Psychology on the CAPES evaluation committee from 1990 to 1993.

It would not be an exaggeration to say that in the 1980s and 1990s, Professor Biaggio was one of the Brazilian researchers in Psychology with greater recognition abroad. Her involvement with scientific associations was very active and productive. Angela was Member (1964–2003) of the Sociedad Interamericana de Psicología (SIP) (Interamerican Society of Psychology) and Member (1969–2003) of the American Psychological Association (APA), becoming a Fellow of Division 15 – Educational Psychology in 1995. She joined the Association for Moral Education (AME) in 1990 as Member and intensively participated in many conferences, coordinating symposia and presenting her research studies (1990–2003). In November 2002, she went to Chicago (USA) for the 28th Annual Meeting of AME. She chaired a symposium she had proposed, during which she presented her latest paper about the assessment of moral issues and

peace attitudes. She was also a Member of the American Educational Research Association (AERA), the Society for Research in Child Development (SRCD), and the International Society for the Study of Behavioural Development (ISSBD). In addition, she was a disseminator to other countries in the history of Psychology in Brazil and research trends (Biaggio, 1987, 1993, 2000; Biaggio & Benko, 1975).

Angela Biaggio was an active Member of Sociedad Interamericana de Psicología from the moment she joined the society in 1964 and attended her first SIP meeting and presented a paper. She was Executive Secretary for South America from 1974 to 1976, joined the Editorial Board of the *Interamerican Journal of Psychology* in 1975, and was Vice-President for South America from 1976 to 1981, again Executive Secretary for South America from 1981 to 1983, President of the International Scientific Committee for the XXII Interamerican Congress of Psychology held in Buenos Aires in 1989, and President of SIP from 1991 to 1993. Angela's dedication and contributions to SIP were outstanding and helped foster psychology integration in the American continent.

Jorge Milton Ausonio Bianchi was born on January 25, 1930, in the city of Nogoyá, in the southwest of the province of Entre Ríos, Argentina. However, by his childhood he was already

living in the city of San Miguel de Tucumán, capital of the province of Tucumán, Argentina, where he would carry out his first studies at the Escuela Obispo José Agustín Molina (Obispo José Agustín Molina School) (Anonymous, 2017; Terán, 2011).

In the early 1950s, he began his higher education at the Universidad Nacional de Tucumán (National University of Tucumán) (UNT). Initially, he enrolled in two programs: the Licenciatura en Psicotecnia y Orientación Profesional (Undergraduate Program in Psychotechnics and Professional Guidance and the Licenciatura en Ciencias de la Educación (Undergraduate Program in Educational Sciences). In 1952, while studying the course Introduction to Psychology taught by “Ricardo Moreno”, he received important impressions regarding the psychological science that would determine his choice for the first program for his future (Anonymous, 2012). This program was the precursor of the Psychology Program and had a multidisciplinary and generalist education, which was divided in three disciplinary fields. The first one specific in psychology, through courses on experimental psychology and social psychology, among others; a second field oriented to social knowledge in general, supported by courses on sociography and political economy, among others; and the third one, a group of courses in the field of biological science, where students received education in anatomy and physiology, industrial and mental hygiene, among others (Rossi, 1997).

Bianchi rescued this broad education in a cultural context of expansion of the UNT, where he participated in academic activities with highly regarded professors such as Benjamín Aybar (1896–1970), director of the Program, “Oscar Oñativia” (1919–1995), Diego Pró (1915–2000), Manuel Gonzalo Casas (1911–1981), Carlos Rodríguez Zelada, Konstantin Gavrilov (1908–1982), “Juan Dalma” (1895–1977), among others. As a student, he attended the First Argentine Congress of Psychology, where he met national psychology personalities, such as “Plácido Horas” (1916–1990) and “Horacio

Rimoldi” (1913–2006), and international ones, such as Gordon Allport (1897–1967) and Mariano Yela (1921–1994) (Bianchi, 2014; Rossi, 1997). All this motivated him, after obtaining his university degree in 1956, to direct his interests to the field of university teaching and research.

His teaching activity began in the field of psycho-statistics and measurement theory, experimental psychology, and scientific research methodology in the Psychology Program at the UNT. Later, he taught Medical Anthropology in the Faculty of Medicine at the same university, specializing in the field of epidemiology in the 1990s. He was also a Graduate Professor in the field of research methodology, in different universities along the whole country. Already in the early 1960s, he collaborated with Juan Dalma in many scientific researches on the *theory of the psychological density of the population* and *dyspsychobiosis*, which were oriented with an original proposal toward interdisciplinary studies in the intersection of statistics, demography, sociology, and psychology (Dalma, 1957; Dalma & Bianchi, 1963, 1964; Pró, 1979; Terán and Bianchi, 2016). Later, between 1969 and 1972, he made an important contribution with “Horacio Rimoldi” at the Psychometric Laboratory of Loyola University, Chicago, United States. There he attended conferences of important psychologists, such as Jean Piaget (1896–1980); and participated in research oriented to psychological measurement and problem-solving (Terán, 2011).

Due to his type of training, his interests extended to a wide range of topics, and he has published in different fields. Among the most relevant, we find those articles aimed at interdisciplinary discussion, taking up again theoretical elements of Dalma and discussions of ancient philosophy relate to psychology (Bianchi, 1999, 2007). On the other hand, we find contributions on the discussion of the teaching of research methodology (Bianchi & Casado, 2000); finally, in the biomedical field, he participated in written productions related to the cardiovascular system (Bianchi et al., 1986) and the pathology of Chagas (Herrera et al., 2003), the latter receiving several awards (Bianchi, 2004).

Another relevant aspect of his academic life was his great performance in the university political administration. He was in charge of the Psychology Department, in 1971 and between 1977 and 1979, and director and coordinator of the Psychometric Research Laboratory of the Faculty of Philosophy and Humanities of the UNT between 1970 and 1981. He directed the Academic Department of Human Sciences of the Universidad Nacional de Santiago del Estero (National University of Santiago del Estero), between 1981 and 1983, and finally he was the director of the University Education Program at UNT, between 1995 and 2001.

Bianchi also took part of a wide variety of associations and societies such as the Society of Criminal Sciences and Legal Medicine of Tucumán, the Academy of Political and Legal Sciences of Tucumán, the Argentine Association of Behavioral Sciences, which he presided between 1994 and 1995, among others. Finally, we must point out that he received several recognitions, such as his appointment as Member of the Academic Council of the Juan Dalma Study Center, of the Miguel Lillo Foundation; his appointments as Professor Emeritus; and as Member of the Honorary Committee of the Centennial of the UNT; among others.

Virginia Leone Bicudo – sociologist and the first nondoctor psychoanalyst in Brazil – was the daughter of Theóphilo Júlio (who adopted the family name Bicudo according to the costumes of the postabolitionist era when the sons of former slaves adopted the names of their former masters

since they did not possess a family name) and Giovanna Leone (a white Italian immigrant). Coming from a humble origin, her path as a black woman can be pointed out by the fact her grandmother, on her father's side, Virginia Júlio, was born as a slave since she descended from Africans who were brought to Brazil. This process went from the beginning of the sixteenth century until 1888, year of the abolition.

Virginia Bicudo had access to education thanks to her father's encouragement. He was supported by the Bicudo family when he was still a child and could study, which was rare for black people at the time. He encouraged his daughter to study because he himself, years before, had been successively failed by a particular professor who did not accept the entrance of a black person into the medical school. Thus, she knew that her father was not accepted in the medical course because he was black (Teperman & Knopf, 2011). She finished the normal course in 1930 at the Escola Normal Caetano de Campos (Normal School), obtaining a certificate that allowed her to teach primary education. She worked as teacher at the Grupo Escolar Carandiru e Consolação (Primary School) until 1931, when she started the course of Health Educators of the Escola de Higiene e Saúde Pública of São Paulo (School of Hygiene and Public Health of São Paulo). This course was founded on the context of the hygienist movement, and its goal was to graduate professionals in the hygiene area with focus on prevention (Maio, 2010). Virginia concluded the course in 1932, made internship in the area in 1933, and after that, gave classes of hygiene at educational establishments in São Paulo.

Virginia enrolled at the Escola Livre de Sociologia e Política (ESLP – College of Sociology and Politics) in 1935 and started her undergraduation in 1936. In 1937, she had her first contact with social psychology and with the studies of Freud thanks to professor Noemy da Silveira Rudolfer (1902–1988), expressing her interest in psychoanalysis. Then she got in contact with the psychoanalyst Durval Marcondes, who recommended her the German and Jewish psychoanalyst Adelheid Lucy Koch, who had arrived in Brazil the year before (1936), running away from

Nazism. At that time, members of the Associação Brasileira de Psicanálise (Brazilian Association of Psychoanalysis) were looking for qualified psychoanalysts for the International Psychoanalytical Association (IPA) to train Brazilian analysts. In this context, Virgínia was considered as one of the first women to make analysis in Latin America (Abrão, 2014), and one of the pioneers on the dissemination of the psychoanalytical knowledge in Brazil.

She concluded her undergraduation and obtained the title of bacharel in political and social sciences in 1938, being the only woman among the undergraduates. The need for psychological protection for the problem of the rejection of racism and the search for explanations concerning social issues were the key elements that led her to sociology and psychoanalysis, as Virgínia herself admitted years later (Bicudo, 1994).

The mental hygiene field covered the studies of mental health with the education and psychiatry area, and Virgínia was very active in this circle. In 1940, she took the position of “visitadora psiquiátrica” (psychiatry home visitor, function also performed by Lygia Alcântara Amaral, who referred to herself as a health visitor) of the Serviço de Higiene Mental Escolar (SHME, Mental Hygiene Service for Students), a type of home care attendance program created by doctor Durval Marcondes in this same year (Maio, 2010). The SHME was linked to the Secretaria de Educação of São Paulo (Secretary of Education of São Paulo, an education office of the city), and its role was to assist children with psychiatric problems. The role of the psychiatry visitor consisted in making a background of the children’s lives (through the contact with the parents and teachers) and directly observing the family and school daily routine of these children. This way, she would be able to advise parents, teachers, and even perform psychotherapeutic activities.

Virgínia Bicudo became part of the teaching staff of the College of Sociology and Politics (ELSP) on March 13, 1940, as a professor of mental hygiene and psychoanalysis. Virgínia herself proposed the inclusion of the studies of mental hygiene at the ELSP, contributing with the propagation of psy-knowledge and its academic

institutionalization in subsequent decades (Maio, 2010). A significant data of this period was the fact that Virgínia, in her record as employee at ELSP, was classified as “white.” This fact is a vivid illustration of the question that has crossed her research path throughout her life, since it highlights, among the many strategies for whitening the Brazilian population, the erasing of the blackness of those who eventually gain prominence and protagonism.

She obtained approval to begin the Master’s degree course at the Department of Sociology and Anthropology of ELSP on August 21, 1942, with the project: “Study of awareness of race between blacks and mestizos of São Paulo,” having professor Donald Pierson (1900–1995) as her supervisor. He was the representative of the Chicago School of Sociology. Her dissertation concerning the attitudes of blacks and mestizos was defended in 1945. This paper, the first master’s dissertation about the racial issue in Brazil (Teperman & Knopf, 2011), was born from the studies and interviews with about 30 people, and its goal was to know the racial attitudes of blacks and mulattos of São Paulo. Her analysis used the variables of color and social status in the interviews with individuals of middle and lower class.

From a psychosocial point of view, Virgínia Bicudo understood race as a sociologic factor, breaking with predominant idea at that time, that saw race as a biological factor. This way, the social racial attitudes were an expression of culture understood as a dialogical relation among different groups. Bicudo believed that in order to know the racial attitudes of a specific ethnic group, it was necessary to observe the reactions of the other group with which they interacted. Following this perspective, she drew a panorama demonstrating the different aspects of the awareness of color between blacks and mulattos from the different classes (middle and lower), pointing out that the discriminatory attitude of whites in relation to people of color influenced the attitude of blacks and mulattos themselves. As a result, the attitudes of black people varied between: denial of their color through strategies of whitening their skin, escape of the racial conflict and subservience to the white, and finally, the awareness of the

prejudice of color (resulting from the conflict between a necessity of self-affirmation of personal values, on the one hand, and the search for acceptance from the group of the whites, on the other).

The conclusion of her research showed that the prejudice of color continued to be practiced even in relation to blacks and mulattos of the highest social status (Bicudo, 1945). This vision represented a counterpoint to the theories that indicated the prejudice of social class as a main structural factor of uneven relations. Her contribution was to show that the prejudice of color – expression used by Virgínia in her research – was more preponderant than the prejudice of class.

In 1944, Virginia Bicudo participated in the foundation of the Grupo Psicanalítico de São Paulo (Psychoanalytic Group of São Paulo), headed by Adelheid Koch, together with Durval Marcondes and other psychoanalysts. In the same year, the group was acknowledged by the International Psychoanalytical Association (IPA), and in 1951, it was changed to the Sociedade Brasileira de Psicanálise de São Paulo (SBPSP – Brazilian Society of Psychoanalysis of São Paulo), an organization in which she worked assuming many important roles.

In 1950, Virginia took part in the UNESCO Project, aimed at investigating racial relations in Brazil. Her research in the project resulted in a report concerning the racist attitudes of students of scholar groups, published in 1955 (Gomes, 2013). While she was still a part of UNESCO Project, she participated in the Commission for the Study of Black Women in São Paulo.

During the Latin American Mental Health congress in 1954, Virgínia and Lygia Alcântara do Amaral, also a psychoanalyst and educator, were accused of charlatanism by doctors who participated in the congress. They claimed Virgínia and Lygia were not doctors and therefore were illegally exercising medicine by practicing psychoanalysis. At that time, Virgínia's work already had national repercussion, because since 1950 there was a weekly program on Excelsior radio, which, in 1954, expanded to a column for the *Folha da Manhã*, a morning newspaper. Both initiatives in these medias with a huge audience, the radio

program and the newspaper column, received the same name – “Nosso Mundo Mental” (Our Mental World) – and they sought to share information about the principles of mental health, having the psychoanalytics studies as reference. Subsequently, she published this material in a book.

Bicudo traveled to England in 1955 to improve her studies in psychoanalysis on the courses of the British Society. During this period, she kept discussing psychoanalysis. She even broadcasted to Brazil (thanks the stations of short waves of BBC) some of the lectures, with special attention to the interview she did with John Bowlby (1907–1990), director of the Tavistock Centre Child and Family. She returned in 1959 and introduced the “Teaching Child Psychoanalysis” specialty at SBPSP, assuming the role of director of the Psychoanalysis Institute in 1961.

She became professor at the Universidade de Brasília (University of Brasília) in 1970 and founded the Grupo Psicanalítico de Brasília (Psychoanalytic Group of Brasília), and next the Instituto de Psicanálise de Brasília (Institute of Psychoanalysis of Brasília), keeping, at the same time, her work at SBPSP (Musatti-Braga, 2018). She contributed to the creation of the *Jornal de Psicanálise* and the *Revista Brasileira de Psicanálise* (both *Brazilian journals of psychoanalysis*), being part of this last one between 1967 and 1979.

She joined the board of the first Conselho Federal de Psicologia (Federal Council of Psychology). She took office as vice president in December 20, 1973. In the early 1990s, Bicudo left the University of Brasília, and from that point on she only worked in São Paulo, in the clinic and supervision activity. She passed away in 2003, after she stopped attending clinically.

United States · Mexico · Child behavioral therapy · Behavioral analysis in children with disabilities

Sidney W. Bijou, son of French immigrants, studied electrical engineering at Lehigh University in 1928. Dissatisfied, he gave up his sports scholarship in the same career in the first year. After this, he requested his transfer to the University of Florida in Gainesville, to study business administration, where he graduated in 1933; however, it was during those years that he began to be interested in psychology.

Between 1934 and 1937, he studied a master's degree in psychology at Columbia University, in New York, where he began his studies in behaviorism by Robert S. Woodworth (1869–1962). Between 1939 and 1941, he pursued his doctoral studies at the University of Iowa where he was strongly influenced by Kenneth W. Spence (1907–1967), who followed the motivational and hypothetical-deductive theories of Clark L. Hull (1884–1952). In 1961 he made a stay with Burrhus F. Skinner (1904–1990) at Harvard University, which helped him consolidate his studies and experimental programs in children with and without disabilities (Giraldo, 2009).

Throughout his life, Bijou obtained numerous distinctions and recognitions, among them, some research awards by the American Association on Mental Retardation (AAMR), three recognitions from the American Psychological Association (APA) for his contributions in different areas of

psychology, and the maximum award from the Association for Behavior Analysis International (ABAI) for their involvement in the international development of behavioral analysis (Morris, 2009). He was also given the Behavioral Analysis Distinguished Work award by the Society for the Advancement of Behavior Analysis (SABA). His professional career began after completing the master's degree in State Hospital and Mental Hygiene Clinic in Farmhurst, Delaware, where he worked until 1939, developing along with Joseph Jastak (1901–1979) the wide-range achievement test (Jastak & Bijou, 1941), which today is in its fourth version. He worked in the Wayne County Training School in Northville, Michigan, from 1941 to 1945 where he applied behavioral analysis for the development of adaptive behaviors to children with disabilities. He took a break from his work with Michigan when he enlisted in the Air Force Psychological Service during World War II. He worked as an assistant professor at Indiana University during 1946 and 1948. He was an associate professor and director of the Institute of Child Development from the University of Washington since 1948, where he developed for around 18 years, a program for the behavioral development for children with and without disabilities. He was the director of the Child Behavior Laboratory in the University of Illinois between 1964 and 1975, where he retired as an emeritus professor. He collaborated with the doctoral programs on special education in the University of Arizona (1975) and in the behavioral analysis in the University of Nevada between 1993 and 2001, as well as in other postgraduate programs in America (Giraldo, 2009).

Some of Bijou's main contributions to psychology include nearly 100 scientific articles in specialized journals on child development, special education, behavioral analysis, and clinical psychology. Likewise, "Child development" (Bijou & Baer, 1961, 1965, 1967) was his main work, in which, in three volumes that were developed with Donald M. Baer (1931–2002), they presented their main postulates, largely assuming the theories and methods of operant conditioning and interbehaviorism applied in child development.

He was the first editor of *Journal of Experimental Child Psychology*; he was a part of the

American Psychological Association (APA), of the organizing committee of what is now the Association for Behavior Analysis International (ABAI), where he was elected the third president. Next to his wife, Janet Rose Tobias (dead in 2000), they created the scholarships that carry their names to support the new researchers in child development and behavior analysis. He was a consultant of the Behavioral Modification Commission, as well as to multiple universities in South America, Europe, and Japan in the training of postgraduate courses, the creation and development of specialized conferences, and the formation of groups of experts in behavioral analysis (Giraldo, 2009).

Bijou is considered as one of the main founders of behavior analysis in Mexico, largely influenced by Starke R. Hathaway (1903–1984) and Orval H. Mowrer (1907–1982) who had collaborated in Mexico promoting a collection of books and a series of conferences. In 1967 he decided to spend his vacations in Veracruz and share a few days with the Xalapa Psychology Group, with whom a few months before he had met in Illinois (Ribes, 2009).

In his first stay in Mexico, Bijou gave two seminars: one on rehabilitation through behavioral analysis and the other on the role of behavioral analysis in special education, where the idea of training students skilled in behavioral analysis and research in applied psychology was implanted. It was in 1969 when Universidad Veracruzana (University of Veracruz) (UV) offered the first master's degree in Spanish in behavior modification, which had a fundamental support from Bijou, who was a key piece in the development of the program and the participation of analysts such as Charles Bohris Ferster (1922–1981), Todd Robert Risley (1937–2007), Jay Spencer Birnbrauer (1934–2017), among others, including Bijou himself as a graduate instructor.

He was one of the main drivers of the dissemination of behavioral analysis through conferences and congresses. In 1971, the first International Symposium on Behavior Modification was held in Xalapa, where Bijou and Emilio Ribes Iñesta organized the program, which at the time, had the remote presidency of Burrhus

Skinner, largely due to the intervention of Bijou himself. In that first edition of the symposium, there were representative figures of behaviorism such as Teodoro Ayllon (born in 1929), Charles Ferster (1922–1981), and Montrose Madison Wolf (1935–2004), who could also be seen in some of the 11 editions of the symposium that were carried out in different Latin American countries and in which Bijou was an active part of the organizing committee.

In 1974 the first Mexican Congress of Behavior Analysis was held in Xalapa, Veracruz, where the three Mexican universities offering behavior analysis programs at the time, the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), the Universidad Autónoma de San Luis Potosí (Autonomous University of San Luis Potosí) (UASLP), and the UV, sponsored the event. Bijou and Jacob R. Kantor (1888–1984) received a tribute prepared by the three universities that awarded them a gold medal for their contributions to behavioral analysis.

Bijou also contributed along with Kantor and William N. Schoenfeld (1915–1996) as expert advisers in the development of the new study program of the then Escuela Nacional de Estudios Profesionales – Iztacala (National School of Professional Studies) (ENEP-Iztacala) (UNAM) in 1975. This collaboration was essential for the implementation of a behavioral module in the first six semesters of training in clinical psychology and research. Seven years later, he had a participation in the First Biennial Symposium on the Science of Behavior at the ENEP-Iztacala, where he gave his lecture on language and behavior, a subject that became his line of research since then until the day of his death (Ribes, 2009).

In 1992 Bijou participated as an invited lecturer in the Second Biennial Symposium on the Science of Behavior, in the First Colloquium on Interbehavioral Psychology, and in the First International Congress on Behaviorism and Behavioral Sciences, all held by the Universidad de Guadalajara (University of Guadalajara), being one of the last times he set foot in Mexico. However, in 2000 he was awarded the *Honoris Causa* Doctorate by the UV and the International Congress Committee on Behaviorism and Behavioral

Sciences for his contributions to the study of behavior in Mexico (Ribes, 2009).

Bijou clearly influenced Mexican behaviorists who today lead the methodological and technological development in the country, such as Florente López who created the Centro de Entrenamiento y Educación Especial (Center for Training and Special Education) based on the Bijou model in Washington, Ely Rayek (born 1945) with child-rearing practices and the formation of the International Symposium on Behavior Modification, Victor Manuel Alcaraz who was by his side throughout the process of shaping the postgraduate degree in the UV, and of course Emilio Ribes Iñesta, who was in close contact with Bijou from the first contacts with the Xalapa Psychology Group, until the delivery of the award for the *Honoris Causa* Doctorate at his home in Reno in 2000.

Bijou became one of the pioneers in behavioral analysis in Mexico, especially in the development of children programs, as a trainer of the main behaviorist figures in the country through his seminars, conferences, and the development of postgraduate programs. He died at the age of 100 on June 11, 2009 in Santa Barbara California in the company of his children Robert and Janet, with whom he lived since late 2000, following the death of his wife in Reno (Giraldo, 2009).

Argentine Psychiatrist and Psychoanalyst. He studied medicine in the city of Rosario, province of Santa Fe (Argentina). Later on, he did his psychiatric internship in the province of Santiago del Estero (Argentina). He worked with Gregorio Bermann (1894–1972) and collaborated as a

psychiatrist in the *Revista Latinoamericana de Psiquiatría* (Latin American Journal of Psychiatry), from where he took the ideas of Emilio Mira y López (1896–1964) and Enrique Pichon-Rivière (1907–1977) (Falcone, 2001). Finally he settled in Buenos Aires where he was a full and didactic member of the Asociación Psicoanalítica Argentina (Argentine Psychoanalytic Association) (APA). He was also a founding member of the Asociación Argentina de Psicología y Psicoterapia de Grupo (Argentine Association of Psychology and Group Psychotherapy), and in 1956, he joined the American Group Psychotherapy Association.

The psychology program was created at the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) (UBA) in 1957, and Bleger began to teach in 1959 the second course of *Introducción a la Psicología* (Introduction to Psychology). He introduced psychology as a human science (neither philosophical nor natural science). In this course, Bleger developed the concepts of behavior, personality, and professional field (Rossi, 1995). That same year he inaugurated the first chair on Psychoanalysis in the Facultad de Filosofía y Letras y Ciencias de la Educación (Faculty of Philosophy and Humanities and Educational Sciences) at the Universidad del Litoral (Litoral University) in the city of Rosario, Argentina. At the Buenos Aires University, from 1960 to 1967, he taught the courses of *Psicología Institucional* (Institutional Psychology) and *Psicología de la Personalidad* (Personality Psychology).

He was member of the Communist Party although his membership ceased after he published his book *Psicoanálisis y dialéctica materialista* (*Psychoanalysis and Materialistic Dialectics*) (Bleger, 1958). Still, he remained a communist militant, acknowledged for his Marxist critique of psychoanalysis and his discussions of Freud's instinctive theories and narcissism.

He published six books which were highly influential in his time, some of them remain being a reference nowadays: *Teoría y práctica del narcoanálisis* (Theory and Practice of Narcoanalysis) (Bleger, 1952); *Psicoanálisis y dialéctica materialista* (Psychoanalysis and Materialist Dialectics) (Bleger, 1958); *Simbiosis y*

Ambigüedad (Symbiosis and Ambiguity) (Bleger, 1962); *Psicología de la conducta* (Psychology of Behavior) (Bleger, 1963); *Temas de Psicología (Entrevista y grupos)* [Psychological Issues (Interview and Groups)] (Bleger, 1964); and *Psicohigiene y Psicología Institucional* (Psychohygiene and Institutional Psychology) (Bleger, 1966).

His most representative work was *Simbiosis y ambigüedad* (Symbiosis and Ambiguity), where he dealt with ambiguous personalities. He contributed the concept of ambiguity, from which he explained the dynamics of primary narcissism, autism, and identification. It played a key role within the Latin American psychoanalytic movement of the twentieth century. In the field of mental health, he incorporated a new perspective by transforming the individual-centered approach to a social-centered approach. He took psychoanalysis as a field of research that enables its true social possibilities. He contributed to a different reading of psychoanalysis in which he understood the individual as part of a social group.

On the other hand, in *Psicología de la conducta* (Psychology of Behavioral), he dedicated his work to his former professor Enrique Pichón Riviére (1907–1977) and it is addressed to students, professors, specialists, and readers interested in the problems of the psychology of his time. He focused on the idea of critically rethink and rework in psychology.

His very well-known *La Entrevista Psicológica, su uso en el diagnóstico y la investigación* (Psychological Interview, Its Use in Diagnosis in Research), published in 1964 as a chapter within *Temas de psicología (entrevista y grupos)* [Psychological Issues (Interview and Groups)], became a classical work for any kind of interview for psychologists and psychoanalysts.

Between 1957 and 1961, he was a member of the editorial committee of *Acta Neuropsiquiátrica Argentina* (Argentine Neuropsychiatric Act). And in 1962, when the journal's name was changed to *Acta Psiquiátrica y Psicológica Argentina* (Argentine Neuropsychiatric and Psychological Act), he continued being part of the editorial committee (Kirsch & Rodríguez Sturla, 2006). Among

his publications in this journal his renowned article about the *Psicólogo clínico y la higiene mental* (The Clinical Psychologist and the Mental Hygiene) (Bleger, 1962). In this paper, he distinguished the fields of action of the clinical psychologist and indicated the need to go out and meet people in the course of their daily work, outlining the profile of the psychologist dedicated to prevention. He has also published many other papers including: *Enseñanza de la psicología* (Teaching of Psychology) (Bleger, 1961) and *Formación de Psicoterapeutas de Grupo* (Training of Group Psychotherapists) (Bleger et al., 1963), both in the *Revista de Psicología y Psicoterapia de Grupo* (Journal of Psychology and Group Psychotherapy); *Simbiosis. Estudio de la parte psicótica de la personalidad* (Symbiosis. Study of the Psychotic Part of Personality) (Bleger, 1964) and *Teoría y práctica en psicoanálisis. La praxis psicoanalítica* (Theory and Practice in Psychoanalysis. Psychoanalytic Praxis) (Bleger, 1969), both in the *Revista Uruguaya de Psicoanálisis* (Uruguayan Journal of Psychoanalysis); and *Psicología de la alienación* (Psychology of Alienation) in *Cuadernos de Psicología Concreta* (Concrete Psychology Journal) (Bleger, 1972).

He was one of the important figures of the second psychoanalytic generation in Argentina. He stood out for his intense interest in political and social problems. Despite his premature demise, he left an extensive legacy that made it impossible to separate theory from practice. He was a pioneer in the interpretation and adaptation of psychoanalysis to Spanish.

Silvia Bleichmar studied at the Universidad de Buenos Aires (National University of Buenos Aires), graduating as a sociologist in 1971 and as a psychologist in 1972. As a result of the last civil-military dictatorship, she moved to Mexico in 1976. During her exile, she completed her PhD in Psychoanalysis at the University of Paris VII, under the direction of Jean Laplanche (1924–2012). His topic was the justification of the primal repression as real and not mythical, therefore enclosable in the effective history of the subject, in particular in the times of childhood. She defended her thesis in 1983 and returned to Argentina definitively in 1986, after directing UNICEF projects to assist child victims of the 1985 earthquake in Mexico. In Argentina in 1994, she directed the project of psychological help to those affected by the bomb that destroyed the Jewish Mutual, Asociación Mutual Israelita Argentina, AMIA.

She received the Platinum Konex Award in Psychology (2006) and the Diploma of Merit in Psychology (2006). She was declared Illustrious Citizen of the Legislature of the Autonomous City of Buenos Aires in 2007, the year of her death.

Invited professor at several national and foreign universities, during her exile in Mexico, she founded the journal *Trabajo del Psicoanálisis* (The Work of Psychoanalysis) of which she was the director for 12 issues. She also taught in

different cities in Argentina, at university post-graduate courses in Córdoba and Rosario, as well as in the Universidad Nacional de La Plata (National University of La Plata, UNLP). In 2013, the “Cátedra Libre Silvia Bleichmar” (Silvia Bleichmar Open Course) was created in the Faculty of Psychology at the Universidad Nacional de Rosario (National University of Rosario). She left a large amount of unpublished work that is still being published, in particular manuscripts from her seminars that are being edited and compiled by her former partner, Carlos Schenquerman and her daughter, Marina Calvo, both psychoanalysts.

Although the greatest public recognition is linked to the clinic with children, it should be clarified that her proposal is strictly a valid model for the practice of a psychoanalytic clinic in general, not exclusively focused on a certain type of patients or ages. From 1996 to 2007, the year of his death, he taught an annual and systematic open seminars, the first years at the Hospital de Niños Dr. Ricardo Gutiérrez (Ricardo Gutiérrez Children’s Hospital) and later at the Armenian Society, both in the city of Buenos Aires, with an average attendance of 200 students each year. The publications that are still in edition and press correspond to the abstracts of the classes taught in that environment, published so far by the publishing houses Amorrortu and Paidós (Bleichmar, 2000, 2009, 2011, 2014, 2016 and 2020).

Her production can be systematized in two main categories of texts: on the one hand, the *metapsychological* ones, in which there is production and development of psychoanalytic ideas and concepts linked to what constitutes her theoretical-clinical model. On the other hand, another set of texts, the *essays* where the author critically reflects on Argentine society, from the phenomena linked to educational institutions, through the training of psychologists and psychoanalysts to macroeconomic crises such as the one that occurred in 2001 in Argentina (Plotkin & Visacovsky, 2007).

She regularly published articles and essays in newspapers and cultural magazines of mass circulation, production that positioned her as an outstanding intellectual in the public sphere. Her seminars on “The construction of the ethical

subject” and “Shame, guilt and modesty” may be considered a real contribution to a project of reconstruction of subjectivity and ethics in Argentina today (Viguera, 2019).

Her best known books are: *En los orígenes del sujeto psíquico* (On the origins of the psychic subject) (Bleichmar, 1986) – the result of her doctoral dissertation – *La fundación de lo inconciente* (The foundation of the unconscious) (Bleichmar, 1993), *Clínica psicoanalítica y neogénesis* (Psychoanalytic clinic and neogenesis) (Bleichmar, 2000), *No me hubiera gustado morir en los 90* (I would not have liked to die in the 90s) (Bleichmar, 2006), and *Dolor País* (Country pain) (Bleichmar, 2002), several of them translated into other languages and published in France and Brazil.

Bleichmar’s main contribution lies in the elaboration of her theoretical-clinical psychoanalytic model, which studies and distinguishes both the production of subjectivity and the constitution, organization, and functioning of the mind, which allows the research of the contact points between both dimensions. This perspective constitutes a problematizing reading within current psychoanalysis that operates as a positive heuristic (Lakatos, 1978).

The distinctive marks of her work were: the historical-experiential perspective that regains the value of what is eventual, traumatic, and singular of the subject from its origins; and a psychic model open to the real that implies that the past can be recomposed from new inscriptions and events linked both to randomness and to the effects of the psychoanalytic work.

Her work based on the reception of Jean Laplanche’s developments placed her as part of an intellectual movement known as post-lacanismo (Urribarri, 2009), popularized in Argentina by the journal *Zona Erógena* (The Erogenous Zone), created by a group of psychology students at the University of Buenos Aires.

Blumenfeld, Walter

Born on *Neuruppin (Germany), June 12, 1882*

Died in *Lima (Peru), June 23, 1967*

Ramón León

Universidad Ricardo Palma, Lima, Peru

Keywords

Germany · Peru · Experimental psychology

Walter Blumenfeld was a German psychologist, who in 1935 was forced to emigrate to Peru, a country in which he established the foundations of psychology as a science and as a profession.

Born into a Jewish home, he first studied engineering at the Technical University of Berlin, graduating as an electrical engineer in 1906. After some years of practicing his profession, he returned to the classrooms, this time at the University of Berlin, to study psychology and philosophy. In 1913, he completed his studies with a doctorate under the direction of Carl Stumpf (1848–1936) with a work in the field of psychophysics of vision (Blumenfeld 1913), which is considered a classic study of the area.

After participating in the First World War, at the beginning of the 1920s, he served as a teacher at the Technical University of Dresden, where he carried out research in the field of psychophysics of vision and psychotechnics, but also theoretical studies on epistemology of psychology, judgment, and logical sense. However, he was forced to leave his teaching position after the racist laws enacted by the Hitler regime.

After an unsuccessful search for a professional position in Europe at the time, Blumenfeld accepted an offer from the Universidad Nacional Mayor de San Marcos (UNMSM), in Lima (Peru), to direct an Institute of Psychology and Psychotechnics and teach courses in experimental psychology at the Faculty of Letters. In August 1935, he arrived in Peru, without knowing the

language and without having any previous life experience in the Latin American world. Until the end of the 1930s, he worked in the functions assigned to him and progressively learned the language, but over time, he faced underground anti-Semitism, the misunderstanding of the students of the Faculty of Letters who did not value his conception of psychology as an experimental science and the enmities of professors who, because of their sympathy toward national socialism, their anti-Semitism, or their envy, intrigued to separate him from the University. Amid the uncertainty, Blumenfeld explored possibilities of relocating to another country. Peruvian colleagues and friends get the Faculty of Sciences of the UNMSM to welcome him as a teacher.

In 1941, he assumed directive functions in the recently created National Psychopedagogical Institute (*Instituto Psicopedagógico Nacional*), whose director was Luis Aquiles Guerra, a Peruvian psychiatrist trained in Germany. He also continued at the UNMSM (Faculties of Science and Education), and already in possession of a good knowledge of Spanish, he actively published until the end of his days. Toward the end of the 1940s, he proposed a *vergleichende Ethnopsychologie* (what today could be a form of cross-cultural psychology, Blumenfeld 1952) as a result of his psychological studies of the Peruvian population.

Concentrated while living in Germany in the field of psychophysics of vision and psychotechnics, in Peru (in the absence of experimental psychology laboratories), Blumenfeld worked with inventories and psychological tests and wrote on subjects of general psychology (Blumenfeld 1946). In his last years of life, he intensified his philosophical reflections on the philosophical anthropology of Martin Buber (1878–1965) and ethics.

Blumenfeld laid the foundations for the objective psychology approach in Peru (Alarcón 1994, 2000) and, through his long teaching work, formed the cadres that would later play an important role in the establishment of psychology as a profession in the Andean country (Reynaldo Alarcón, Violeta Tapia, among the most important).

His book *Introduction to Experimental Psychology* (Blumenfeld 1946), which reached

several editions, is the first work which presents in Peru the experimental aspect of psychology in a systematic way (León 1983).

According to Russian historian and Boder's nephew Vadim Chernykh (Chernykh, 2009), Boder's birth name was Pavel A. Michelson, but he adopted the name David Pablo Boder when he arrived in Mexico in 1919. It is not known why he changed his name. Still as Michelson, Boder studied psychology with Wundt (1832–1920) at Leipzig University for one semester in 1905–1906, and he later studied at the Medical Faculty of PsychoNeurological Institute at St. Petersburg with Russian neurophysiologist Vladimir Bekhterev (1867–1927), who had founded the Institute in 1907. Chernykh informs that Boder studied with Bekhterev from 1908 to 1913, failing to receive a diploma because of long-term non-payment of fees. Chernykh adds that Boder was 31 at the time of his second marriage to Nadejda Chernykh (he had been married at age 21 but divorced keeping custody of their daughter). Michelson and Chernykh were teaching in the Division for Public Education in Omsk, Siberia,

teaching courses at the railroad station. In the early summer of 1918, the Soviet power in Siberia was overthrown, and Michelson was arrested and imprisoned in the Omsk prison. However, in December a group of rebels seized the prison and released many political prisoners. In the list of released prisoners was Pavel Michelson (Chernykh, 2009).

Upon his release from prison, Michelson and his wife decided to immigrate to America, with his daughter Elena. Unfortunately, Nadejda died soon after they arrived in Mexico. Boder and his daughter resided in Mexico City for the following 6 years. At some point after his arrival in Mexico and for unknown reasons, Michelson changed his name to Boder, and beginning in 1920, he enrolled at the Escuela de Altos Estudios de la Universidad Nacional de México (School of Higher Studies of the National University of Mexico). The following year he began taking psychology courses with Enrique O. Aragón (1880–1942). As requirement for Aragón's courses, Boder had to prepare written papers, or "theses," one of which consisted of the translation from the German original into the Spanish language, of Sigmund Freud's work on psychoanalysis, when Freud's work was still largely unknown in America. His second thesis was a study on emotions, where he "measured surfaces of light and shadow in the faces of sad and happy subjects, as a contribution to the study of the plastic of emotions." His work remains unpublished, and the little information available is found in a description of the findings from Aragón's laboratory (Aragón, 1939/1943).

Shortly after he took Aragón's psychology courses, Boder became an assistant in Aragón's Laboratory of Experimental Psychology (see Colotla & Jurado, 1983). 1 or 2 years later, he was teaching psychology courses at the same university, and during this period, he worked actively in the translation and adaptation of diverse psychological tests to the Mexican population, when he was in charge of the Sección de Psicotecnia y Probación del gobierno del Distrito Federal (Section of Psychotechnics and Probation of the Government of the Federal District, currently, Mexico City). This "psychotechnical" department

was established on February 1, 1923, and some of its main accomplishments were the adaptation of the Stanford version of the Binet-Simon intelligence test (Boder, 1925) and Haggerty's Delta 1 test (Boder, 1928). During this time Boder was also Director de Investigación Psicológica del Colegio de Agricultura en Chapingo (Director of Psychological Research at the Agricultural College at Chapingo) and worked at the Academia de Policía (Academic School of Policemen), administering psychological tests to aspirants for positions in the police force (Valderrama et al., 1997). It should be noted that Boder not only translated and adapted several psychological instruments into the Spanish language, but he also founded the first but short-lived Mexican psychology journal, *Boletín Psicotécnico* [Psychotechnical Bulletin], in 1925.

Boder left Mexico in 1926, likely for several reasons: (a) in 1925 he married Dora Neveloff, an American citizen with extensive family in the United States; (b) his petition for admission to the National University of Mexico medical school was twice rejected by the university council because of lack of academic documents attesting his preliminary education; (c) the psychotechnical department he helped establish was closed down by the government in that year; (d) the Facultad de Altos Estudios de la Universidad Nacional (Faculty of Higher Studies of the National University)—where Boder was teaching at least one course—ran out of funds in 1926, and the professors agreed to continue working without pay; and (e) in July 1926 a civil war erupted in Mexico when religious authorities called the people to protest reforms undertaken by President Plutarco Elías Calles (1924–1928) (Valderrama et al., 1994).

Boder's greatest impact on Mexican psychology was to promote interest in psychological testing and applied work, but he also played an indirect role in the establishment of the trial system for minors *Tribunal para Menores* (Tribunal for Underage Offenders) since he influenced his student Guadalupe Zúñiga to convince the authorities to establish such Tribunal, with a psychologist as one of its members (Zúñiga, 1984). Boder's sojourn in Mexico was relatively short-lived, and

his work was largely ignored by many Mexican psychologists until more recent work has underlined his achievements (e.g., Colorado Luna, 2008; Jurado et al., 1989).

After Boder left Mexico, he decided to settle in Chicago, Illinois. He initially worked at the Hospital Michael Reese, completed his master's degree at the University of Chicago in 1927, and started a teaching career at the Lewis Institute (now Illinois Institute of Technology, IIT). He received his PhD in psychology from Northwestern University in 1934 and was Head of the Department of Psychology and Philosophy at the Lewis Institute from 1935 to 1940. He was named Emeritus Professor at the same Institute in 1952, and that year he moved to California as associate researcher at the University of California at Los Angeles. He remained at this post until his death.

In addition to his pioneering work in applied psychology in Mexico, Boder had at least two other major accomplishments during his career in psychology. The first was the development of the Psychological Museum in Chicago that he ran between 1937 and 1957 when it was closed down because of lack of funds. Many of the instruments collected by Boder in the Psychological Museum are now part of the David P. Boder Museum Collection of the Archives of the History of American Psychology at the University of Akron (see Popplestone & McPherson, 1994). Benjamin (1979) summarized Boder's efforts to establish and run the Museum and his role in other activities to show psychological events and phenomena to laypeople in general in national exhibitions and fairs.

His second major accomplishment was the recording of the experiences of individuals displaced during the Second World War, in their own language (Boder, 1949). He took advantage of the magnetic wire recorder that had recently been developed by Marvin Camras at the Armour Research Foundation that was the research institute of IIT. After 1 year of preparation, Boder traveled in the summer of 1946 carrying "a Model 50 wire recorder, 200 spools of carbon steel wire, and an assortment of converters and transformers" (Boder, 1949, p. xii). As Popplestone and McPherson (1994) indicate,

Boder “is probably the first person to take oral histories, but this priority is generally unknown” (p. 95). Further details of Boder’s influence in this area are provided by Colotla and Jurado (2014).

Rodolfo Hugo Bohoslavsky graduated with the degree of “*Bachiller*” (a secondary school degree) from the Colegio Nacional de Bahía Blanca (National High School of Bahía Blanca) in 1959. Then, he moved to the City of Buenos Aires to study the undergraduate program in psychology at the Facultad de Filosofía y Letras de la Universidad de Buenos Aires (Faculty of Philosophy and Humanities from the University of Buenos Aires, UBA).

His career as a teacher began in 1962, when he started to work being still a student as a teaching assistant *ad honorem* in the course of Psychology Introduction. In 1963, he held the degree of *Licenciado* (a 5-year university degree) in psychology, and he was appointed as an associate professor, also *ad honorem*, together with another graduate *Licenciada* Marta Berlín, in the course of Fundamental Psychology depending on the Psychology Department of the abovementioned faculty. While he was studying for his degree, he worked also *ad honorem* in the Departamento de

Orientación Vocacional (Vocational Guidance Department) dependent on the Rectorate of Buenos Aires University. And, moreover, he achieved a paid appointment when he obtained his undergraduate degree (Universidad de Buenos Aires. Facultad de Filosofía y Letras, 1962-1966). In this area, he became a disciple of Nicolás Tavella (1918–1994), Nuria Cortada de Kohan (1921–2013), and Irene Orlando (1913–1977 missing), among others, and, thus, he could count on colleagues like Sara Slapak (1942-), Diana Aisenon, Marta Brea, and Nora Stum, among others (Cortada de Kohan, 2014). Subsequently, he applied for a position and was appointed as Section Chief with part-time dedication.

After the *coup d'état* that deposed the government in 1966, public universities were intervened and numerous professors were expelled. In the Universidad de Buenos Aires (University of Buenos Aires), the police violently dislodged many university buildings, an event which was known as “*The Night of the Long Sticks*.” So, this situation led to Professor Bohoslavsky stepping down from all his university positions (Lucía Rossi, personal communication, September 27, 2019).

Between the years 1965 and 1967, he studied group psychology under the guidance of the PhD José Itzigsohn (1924–2018), and as guiding psychologist, he developed studies about the operating group or groups in vocational guidance (Universidad de Buenos Aires. Facultad de Filosofía y Letras, 1962-1966).

From 1968, with the intervention of the Asociación de Psicólogos de Buenos Aires (APBA) (Buenos Aires Psychologists Association), selection processes were carried out to fill the vacant positions in the psychology undergraduate program at Universidad de Buenos Aires (Buenos Aires University) (Sara Slapak, personal communication, October 12 and 29, 2019). Bohoslavsky was selected as a full professor (temporary) for two courses, Psychology of the Personality and Introduction to Psychology in the same program. One year later, he was also appointed for the same courses, but on that occasion in the Universidad Provincial de Mar del Plata (Provincial University of Mar del Plata), nowadays Universidad Nacional de Mar del Plata (National

University of Mar del Plata) (Jorge Colapinto, personal communication, October 16, 2019).

The publishing house Nueva Visión released in 1971 his book entitled *La orientación Vocacional: La estrategia clínica* (Vocational Guidance: The clinical strategy), the starting point of his outstanding work in Argentina and Brazil. This work proposes a key twist in the study of the vocational guidance, with a special focus on the personality of the consultant and not so much on the results of measuring instruments. This approach considers the personal interview as the main tool of the guidance psychologist. Bohoslavsky discussed the guidance with the so-called *actuarial modality* and his own approach, which he called the *clinical modality*. In short, he proposes to move from *how much* score he or she obtains and *what* he or she chooses, to *who* he or she is and *how* he or she chooses (Bohoslavsky, 1971). From this perspective, the interview is a key link for the psychologist in order to carry the guiding process forward. As well as, it is important to mention the assigned value, during the whole process, to the guiding psychologist's ethics and the guided individual's active role as the author of his or her own election (Gavilán, 2017).

This new perspective of guidance from a psychoanalytic approach promoted that psychologists and professionals of other disciplines embraced this proposal and, at the same time, resulted in more interest in the guidance field (Gavilán, 2001). In the second edition of the book, published in 1974, “*Lo vocacional. Teoría, técnica e ideología*” (The vocational. Theory, technique and ideology), the author modified some of the aspects above. However, the text that achieved a wider dissemination and reading was the first edition, with 26 editions in Argentina up to 2019 and other 13 editions translated into Portuguese. In this first proposal, the social context becomes more and more important. The subjectivity construction is crossed by the imaginaries of those days, and the subject, through his or her interaction, search, and communication with the guiding psychologist, can lead to a vocational election.

In the context of the democratic aperture in 1973, he restarted his teaching and professional activities in the Universidad de Buenos Aires,

with an appointment as associated professor at the initial cycle of vocational guidance in the Departamento de Psicología de la Facultad de Filosofía y Letras (Psychology Department of the Faculty of Philosophy and Humanities). At the same time, he went back at the Departamento de Orientación Vocacional (Vocational Guidance Department), where, under the guidance of the references abovementioned, his interest in such professional practice had been increased (Universidad de Buenos Aires. Facultad de Filosofía y Letras, 1962-1966). Among the numerous authors who have referred to Bohoslavsky's work, we may mention Rascován (2004, 2013), Müller (2005), Ardila (1986), Ribeiro (2013), Ilvento (2000), and de Almeida and Melo Silva (2011), among others.

In 1973, he was invited by the State University of São Paulo to prepare various meetings devoted to teacher training. It is there when his research, academic activity that developed throughout his career, began to focus in the group activity, both in vocational guidance as in institutional relationships.

Due to a new *coup d'état* which took place in Argentina on March 26, 1976, he definitely settled down in Brazil, and he continued his activity in that country, where he was already a well-known professional. Because he had a previous heart condition, he could not formally enter as a stable professor at the State University of São Paulo. But he carried his work forward with the professors of such university, as well as through private activities in his areas of competence: the vocational guidance and the group dynamics in the institutional interactions (Ivette Phía Lehman, personal communication, October 18, 2019).

Likewise, the scholar Bohoslavsky declared his interest in the theater. In 1967, he worked as an assistant director in the play *La mar estaba serena* (The sea was calm), a play interpreted by the Argentine actors Norman Briski (1938-), Eduardo Pavlovsky (1933-2015), and Víctor Laplace (1943-). He was also a professor in charge of the Psychology and Theatre Seminar from the Institute of the UBA (Abel Bohoslavsky, personal communication, September 30, 2019).

In spite of his early death at the age of 35, his works and publications are still part of the

recommended bibliography in the courses of Vocational Guidance and Educational Psychology in Latin America, especially in Argentina and Brazil.

Brazil · Educational psychology · Laboratory creation

Manoel Bomfim began his medical training in Bahia but transferred to the Faculty of Medicine of Rio de Janeiro, where he graduated in 1890. He worked as a doctor for a few years, assuming, in 1896, the position of deputy director and, soon after, director-general of the Pedagogium, an institution created in 1890, with the purpose of “promoting reforms and improvements in national education, through professional training and the improvement of public and private teachers” (Gabler, 2018). Then, in 1906, he created and directed the first Experimental Psychology laboratory in Brazil, in addition to teaching courses. He also founded the journals *Education and Teaching*, an official magazine of the Directorate of Public Instruction, created in 1897 (Gontijo, 2010), and *Pedagogical Magazine*, published by the Pedagogium, between 1890 and 1896 (Fernandes, 2004; Gontijo, 2010). He was professor of pedagogy and psychology at the Normal School of Rio de Janeiro; to deepen in psychology, he went to Paris in 1902, where he developed his studies with Georges Dumas (1866–1946) and Alfred Binet (1857–1911), with whom he planned the creation of the Pedagogium laboratory. He was director of the Public Instruction of Rio de Janeiro, then capital of the Republic.

Bomfim’s work is extensive, covering multiple areas of knowledge and different means of publication. He has written about the History of Brazil and Latin America, Sociology, Geography, Medicine, Zoology, and Botany, in addition to having written, in coauthorship with Olavo Bilac (1865–1918), renowned Brazilian poet, textbooks on Portuguese Language; the analysis of these works shows mastery of content and a critical view of what was produced at the time in various areas of knowledge. Among his various writings, articles written for the press, historical and sociological works, and textbooks on education and psychology stand out. In newspapers, he was a vehement defender of the dissemination of education for all, based on scientific knowledge, as a way to obtain freedom, without which the construction of a democratic society would not be possible. His dedication to psychology studies is due not only to the fact of teaching the discipline called pedagogy and psychology, but to the

intrinsic connection he recognizes between them, which is expressed in his written work in these areas. For Manoel Bomfim, education is a condition for the humanization process; he says: “Man, as a product of nature, does not exist: it is education that forms him, (...) it is education that socializes man” (Bomfim, 1897/1932, p. 15), and to make it concrete, it considers psychology as one of its most important foundations.

For psychology to fulfill its function of supporting the educational process, it is necessary to know how child development takes place, the basis for pedagogical action, which should aim at the integral formation of the personality, especially its adaptive potential. In the wake of officialdom, he considered that the ability to adapt is what gives human beings power over nature. However, consciousness, mediated by language, is what makes possible the intervention on nature, performed by intelligence, a superior psychological function, which is eminently psychosocial. He affirms: “All superiority of the human species is, therefore, in this socialized psyche, which allows to condense in each individuality, in each conscience, the experience of all the others; and education becomes the form of psychic transmission of adaptive processes and capacities” (Bomfim, 1915, p. 13). Personality, in turn, depends on educational action, and this is dependent on it, as it is understood as a synthesis of conscious activity, in a constant process of change and fundamentally social.

It is possible to affirm a historical-social conception of psychism in Bomfim, based on materialism, whose substrate is neurophysiological, but which is constituted in the process of socialization, that is, in the relationships established between humans, a conception that goes against to what was hegemonic in psychology and in neurology itself at the time, because, for him, the functioning of the brain is complex, integrated, and plastic. In short, Bomfim understood psyche as a totality, multidetermined, as a process and changeable, based on historical, social, and neurophysiological determinations.

The knowledge of the psyche required the extrapolation of the strict knowledge of psychology and required the contribution of different methods, knowledge of the various manifestations

of social reality and other areas of knowledge. He states that the study of complex phenomena, such as the psyche, must make use of multiple resources, such as “personal observation, laboratory experimentation, philosophical criticism, linguistic research, historical investigation (...). Artistic production, literary work [...], historical institutions, religion, language [...]” (Bomfim, 1923, p. 42); thus, “the study of the psychic nature, in man, must be carried out in a perfect convergence of sociology, archeology, linguistics, history, morals [...]” (Bomfim, 1923, p. 42). The originality of Bomfim’s psychological conceptions is not an isolated fact in the set of his work and his political positions. Aguiar (2000) considers him a rebellious and radical thinker, an intellectual who, in the various areas of knowledge he wrote about, showed that he followed contemporary European intellectual production, with a deep and critical reading. This domain of knowledge, however, expands in the interpretation it gives to the process of historical constitution of the Latin American reality in general and in Brazil in particular, covering itself with significant originality, inaugurating the called Brazilian “radical thinker” (Ribeiro, 1993). One cannot fail to highlight his vehement defense of abolitionist and republican ideals and in particular his uncompromising combat against racist thought and practices, hegemonic in his time. It is noteworthy, however, that his ideas about psychology and education, in addition to being coherent with his conceptions of human beings and society, explained in other works, show an original and advanced conception, especially with regard to the constitution historical, social, and cultural aspects of the human psyche.

About Manoel Bomfim, says Darcy Ribeiro (1993, p. 11): “Reading it, I found myself facing an entire original thinker, the greatest we Latin Americans have generated. A fully mature thinker.” His work in general and particularly his contributions to psychology and educational psychology have been, albeit belatedly, recognized for their originality, especially for their conception of psychism as a multidetermined phenomenon, whose constitution is a product of the relationships that are established between the subject and society, culture, history, and art, among

other determinations, which materialize the totality of the human being.

Keywords

Brazil · Teaching technology

He did his early studies, which included Latin, French, and Philosophy in his birthplace, the current town of Rio de Contas. In Salvador, he was enrolled in the Colégio Conceição (Conceição School) and there he attended the Humanities course. He then enrolled in the Faculdade de Medicina da Bahia (Bahia’s School of Medicine), which he attended until the fifth year, later transferring to the Faculdade de Medicina (Medical School) in Rio de Janeiro, where he received his doctoral degree in 1847, with the thesis “Propositions on medical sciences” (Blake, 1883; Alves, 1936). Then, returning to Bahia, he practiced medicine for a short time as a clinician and surgeon in Salvador and later in the Vila da Barra do Rio Grande, current city of Barra. There he founded the Colégio Ateneu Barrense (Ateneu Barrense School).

In 1856, he took over as General Director of Public Instruction of the Province of Bahia, equivalent today to the position of State Secretary of Education. During his administration, he discouraged the use of corporal punishment in schools, trying to get teachers to replace it with moral punishment, without making explicit what he was referring to. In this way, he obeyed the provisions of the General Law on Elementary Education, granted by Dom Pedro I in 1827. It is noteworthy that in the nineteenth century, the most frequent punishment was the use of the palmer.

Retiring from his position as General Director of Instruction, on February 3, 1858, he founded the *Gymnasio Bahiano* in a colonial house in Barbalho, neighborhood of Salvador, which soon had to be transferred to a small farm in the suburb of Barris, where the Central Library of the State of Bahia currently operates (founded on May 13, 1811). In this school was enrolled the elite of Bahia's society, especially the poet Antônio de Castro Alves (1847–1871) and the jurist Ruy Barbosa (1849–1923), characters of national renown.

It is worth mentioning that the article XXIII of the *Gymnasio Bahiano's* Program stated that: the director of the *Gymnasio* intended that the students be served exclusively by free servants. That is, 30 years before the abolition of slavery in Brazil (Alves, 2000). The Internal Rules of Procedure of the establishment deal with "Punishments" which will consist of standing or kneeling, deprivation of recreations, with obligation to write text to be defined, suspension of scheduled exits, fasting of bread and water, imprisonment, and, as a last resort, expulsion. The last three could only be defined by the school principal.

In 1870, Borges moved to Rio de Janeiro, seat of the Imperial Court. There, in 1871, founded the *Colégio Abílio* (Abílio School) in the Laranjeiras neighborhood; in 1881, he founded one in Barbacena, Minas Gerais; and in 1883, again in Rio de Janeiro, in Botafogo neighborhood.

A clear sign of his concern with the quality of teaching was the "Multiple School Apparatus" or "Fractional Arithmometer," invented by him,

considered by some authors as the forerunner of teaching technology in Brazil. Borges presented the Arithmometer at the Pedagogical Exhibition of Rio de Janeiro, held on September 28, 1883, under the presidency of Count D'Eu (1842–1922), justifying the creation by his concern with the learning specifically of fractions and that was expanded to include other learning (BORGES, 1884).

The Baron of Macahubas was the first Brazilian educator of international renown. He left a vast production: 10 books, 13 didactic texts, a set of material against physical punishment in schools and another for the improvement of the quality of education in Brazil. He was one of the first to call the government's attention to the education of the intellectually handicapped as well as to the creation of an "articulate language" chair for the deaf-mute.

His insertion as a pioneer of Brazilian Psychology is due to his concern with the teaching-learning process, evidenced both in the production of didactic material suitable to Brazilian students and in the elaboration of teaching equipment, with instructions for its use, at a time when Psychology was not yet dedicated to the analysis of these issues. This performance seems to be supported a posteriori by the Swiss epistemologist Jean Piaget (1896–1980).

Programmed teaching

Carolina Martuscelli Bori was a Brazilian psychologist and educator known for her contributions to the development of the psychological science in Brazil. Her contributions are mainly allocated in two different moments in the country's history of the science: first in the 1930s with the introduction of psychology in Brazilian universities subordinated to other areas of knowledge such as philosophy, education, medicine, and engineering. In this context, those who sought to further their studies in psychology looked for training overseas. Later, in 1962, the occupation was officialized in Brazil, allowing for the creation of undergraduate courses – a landmark of a second moment in the Brazilian history of psychology. Carolina Bori's participation was admittedly essential both in regulating the occupation and training of psychologists, as well as in creating conditions for course offers (Cândido & Massimi, 2012, 2016; Matos, 1998).

She graduated in pedagogy in 1947 at Universidade de São Paulo (USP). Due to her interest in psychology during her undergrad studies, she became assistant professor at the Departamento de Filosofia (Department of Philosophy) at the same university. To further her training, she carried out her master's studies at the New School for Social Research in New York between 1950 and 1951 where she studied experimental psychology, Kurt Lewin's Field Theory (1890–1947) and, mainly, experimental social psychology. In her thesis, she conducted a systematic review of experimental research studies

on the “Zeigarnik Effect” (Martuscelli, 1951). In 1954, she obtained her PhD in Brazil with a theoretical-methodological analysis of research on the “Zeigarnik Effect” under the advisement of Professor Annita de Castilho e Marcondes Cabral (Martuscelli, 1959).

Her contributions in the 1950s are marked by theoretical and methodological studies on experimental psychology and empirical research with a sociological basis (Cândido, 2020). Her political engagement is also an important aspect of her story. Her participation in the process of regulating the occupation and training of psychologists granted her the first psychologist registration number in 1965. She helped to draft the law and was a member of the Comitê de Avaliação de Diplomas (Committee for the Evaluation of Diplomas), which would later grant students the first titles of psychologists in the country.

In the 1960s, she became one of the main people responsible for the dissemination of behavior analysis and experimental analysis of behavior in Brazil. Her participation was essential to form a group of researchers in the field. It was in the concepts of experimental analysis of behavior that she based her proposal in the field of education, known as programmed teaching (Nale, 1998). It is defined as a framework for planning contingencies involved in the acquisition of new behaviors across the teaching-learning process. Therefore, the teacher's role consists in (1) identifying local demands for the acquisition of behaviors; (2) defining behaviors that comprise the learning outcomes; and (3) planning as well as implementing conditions for behaviors to be learned and generalized to everyday situations.

Two landmarks of Carolina Bori's work are (a) developing the scientific bases of psychology and (b) social developing by scientific development. She believed that science is a way to promote social development. This was one of the bases that supported her proposal for education. Thus, she defended the need to apply scientific principles to plan teaching conditions that can promote critical behaviors for students to face everyday situations (Guedes, 2004, 2005).

Carolina Bori was a woman who dedicated herself to the Brazilian scientific scenario throughout the second half of the twentieth

century. Psychology was a relatively small area in number of practitioners, researchers, and institutions. One of her main concerns was to create conditions for psychology to develop in the country as a science. This concern led her to train researchers who would take up training positions for other psychologists. In view of this, Carolina Bori admittedly contributed to the establishment of conditions for psychology to develop separately from other areas and for the need to seek training overseas, both in the experimental, theoretical, and practical fields.

Colombia · Educational psychology · Applied psychology · Pedagogy · Child deprivation

Victoria Bossio-Herrera has the distinction of being the first Colombian to obtain a master's and doctoral degrees in psychology. As many other women psychologists from the first and middle part of the twentieth century, the focus of her work was in applied psychology, specifically educational psychology.

According to Bossio-Herrera, she experienced difficulties with reading when she was a child which motivated her to learn how to overcome her own deficits and later to help children with learning disabilities (Giraldo, 1998). After obtaining her high school diploma, Bossio-Herrera traveled to the country's capital, Bogotá, seeking training in the educational area. She studied for 6 years at the Instituto Pedagógico Nacional (IPN) (National Pedagogical Institute), the most advanced center in education in the country. Under the guidance of Esther Aranda and other teachers, she graduated in 1939. While at the IPN, Victoria Bossio-Herrera realized that love and patience were not enough to help children with disabilities, but scientific training was required. She consulted with Agustín Nieto Caballero, the great Colombian educator, about her interests and the possibility of studying abroad. Nieto Caballero recommended seeking further training at Columbia University in New York, and she did so in 1943. After arriving in New York, Bossio-Herrera established contact with Father López-Grajales, a catholic priest, who was studying psychology. Bossio-Herrera studied with E. L. Thorndike (1874–1949) and applied to the master's program at Teachers College but was rejected as her title at the IPN was not considered a bachelor's degree in psychology or education. Determined to overcome this new barrier, she moved to Illinois (the USA) in 1943.

Victoria Bossio-Herrera was admitted at Northwestern University, a private research university based in Evanston, Illinois, with other campuses located in Chicago. She completed her bachelor's degree in preschool education with an emphasis in child psychology in only 3 years and returned to New York where she was finally admitted to Teachers College in 1946. She received a master's degree in educational

psychology in 1948 and returned to Bogotá as the new director of the IPN.

According to her, the days as a director of the IPN were very conflictive as most teachers were followers of Freud's psychoanalysis and were opposed to the research-based approach to child psychology and education she was trying to implement. After she lost the support of the central government of the institute, she resigned her post and funded a kindergarten where she was able to put in practice all the knowledge acquired while at Teachers College. In addition, Bossio-Herrera was invited by Hernan Vergara (1910–1999) in 1950 to be a professor at the Instituto de Psicología Aplicada (IPA) (Institute of Applied Psychology) of the Universidad Nacional de Colombia (National University of Colombia), founded by Mercedes Rodrigo in 1947 which was the first training center for psychologists in Colombia. At the IPA, she directed the specialization in psychopedagogy, the first in the country (Giraldo, 1989). Years later, her students at the IPA became pioneers and prominent psychologists in Colombia after graduating in 1952 as the first group of 11 licentiates in psychology: Fabiola Aguirre de Jaramillo, Beatriz Carrizosa-Umaña, Paulina Esguerra de Iriarte, Beatriz De la Vega, Magdalena Fetty de Holguín, Cecilia Rodríguez, Diva Montealegre-Rodríguez, Bertha Restrepo-Flórez, Julia Roncancio-Mora, Bernardo Tirado-Plata, and Gabriel Ulloa.

In 1953, she initiated the next stage of her life, pursuing doctoral studies; she traveled to England as a UNESCO student, being one of the few Latin American women who received this distinction during those years. In 1953, she started doctoral studies at the University of Birmingham, the United Kingdom. Those years were a time of study and research on problems related to affective deprivation, separation, attachment, and loss, in the line of John Bowlby's work (1907–1990), and psychopedagogy following Jean Piaget (1896–1980). Cyril L. Burt (1883–1971) was the external evaluator of her PhD dissertation. She received her doctoral degree in 1957.

Just as Mary Ainsworth (1913–1999) introduced the work of John Bowlby in the USA and expanded his work by conducting systematic

studies of attachment between mothers and infants, Bossio-Herrera conducted some studies about child abandonment in Colombia. Unlike Ainsworth, however, the international impact of her work was limited as the material was published in Spanish in the *Revista de Psicología* (Journal of Psychology), published by the National University of Colombia, in the late 1950s. At the time, the distribution of journals published in Spanish was mostly local and did not reach a large readership. During that time, Victoria Bossio was a professor at National University of Colombia. She taught a number of courses, including child psychotherapy and knowledge tests (Universidad Nacional de Colombia, 1958) and coordinated the specialization on psychopedagogy (Roncancio, 1956).

Victoria Bossio-Herrera occupies a prominent place in the history of Colombian and Latin American psychology. Although she is not widely recognized in the world of psychology, her impact in the development of psychology and education in Colombia is extraordinary. According to Ardila (2011), many colleagues, students, and collaborators remember her as a very supportive person, committed to her work, eager to learn, and very well informed about the new developments of psychology worldwide.

México · Experimental analysis of behavior

As a researcher, a mentor of psychologists, and a university administrator at the Universidad Nacional Autónoma de México (UNAM) (National Autonomous University of Mexico), he has been an ardent spokesperson for psychology as a natural science and scientifically based psychological interventions. While in high school, he discovered his true passion when he read Werner Wolff's *Introduction to Psychology* (Wolff, 1959). In 1963 he entered the Colegio de Psicología (College of Psychology) at the Facultad de Filosofía y Letras (FFyL; Faculty of Philosophy and Literature) de la UNAM and obtained his Licentiate in Psychology degree in 1967, with the first thesis on behavior modification in Mexico.

His teacher Hector Capello García introduced him to experimental studies in cognitive dissonance and opened his eyes to neo-behaviorism. Along with classmates Ely Rayek Zaga (born in 1945); Francisco Montes Ahumada (born in 1946); Gustavo Fernández Pardo, one generation above; and Gabriel Vázquez Fernández, Jorge Molina Avilés, Jesús Figueroa Nazuno, and Héctor Ayala Velázquez, one generation below, he made an effort to improve “the impoverished professional training of psychologists” (Bouzas, 2020). In 1963, he and Gustavo Fernández convinced their teacher Luis Lara Tapia to adopt Ernest Ropiequet Hilgard’s book *Theories of Learning* as the textbook for the course on Experimental Psychology (Hilgard, 1966). This group of friends pushed successfully to open a teaching laboratory in the basement of the Tower of Humanities at UNAM, for which they built Thorndike’s problem boxes, shuttle boxes, and an operant conditioning chamber made of wood, with a manual food delivery mechanism, and caught stray cats in the campus surroundings for their experiments.

At the end of 1964, with the support of Hector Capello and Gustavo Fernández, the best students in the course on experimental psychology – Arturo Bouzas among them – visited the University of South Illinois in Carbondale and the State Hospital of Anna in Illinois, where they observed firsthand the application of the principles of learning in behavioral modification; however, getting acquainted with a research-oriented Doctoral Program had the greatest impact on Arturo Bouzas. In 1965, he met Kenneth Wartinbee Spence (1907–1967) and Elliot Aronson (born in 1932), strengthening his conviction that psychology was a scientific endeavor and professional psychology should be built on that foundation.

Before graduating, he was invited by a group of young psychologists, the “Grupo Jalapa,” to start up a Behavior Clinic at the Universidad de Veracruz (Veracruz University) (1966–1968), to treat patients with anxiety disorders and phobias. In those years, Harry Frederick Harlow (1905–1981), Daniel Ellis Berlyne (1924–1976), Orval Hobart Mowrer (1907–1982), Montrose Madison Wolf (1935–2004), and Sidney William

Bijou, among other psychologists, visited the Universidad Veracruzana at Jalapa.

In late 1968, Gerald Davison visited the Behavior Clinic and extended Arturo Bouzas an invitation to pursue a Doctorate in Clinical Psychology at Stony Brook University of New York. There he met Howard Rachlin and, after 6 months of his arrival, he switched to the Experimental Psychology Program. In 1971, with Rachlin’s advice and support, he decided to go to Harvard University.

He became part of the “Pigeon Lab” at Harvard, founded in 1948 by Burrhus Frederic Skinner (1904–1990) and run by Richard Julius Herrnstein at the time. He developed a close personal relationship with Herrnstein – his advisor – and served as his teaching assistant in the Action and Motivation course. Stanley Smith Stevens also had a significant influence in his scientific training, being his role model of what it meant to be a scientist. He got the highest grade for the whole class of first year doctoral students in Stevens’ obligatory proseminar.

Harvard’s intellectual atmosphere and the activity in the “Pigeon Lab” – where six generations of students gathered – instilled in him the importance of ideas, academic collaboration, and intellectual rigor in scientific research (Baum, 2002; Heyman, 2002). On top of his intense experimental work, he became interested in the evolution of behavior, influenced by Edward Osborne Wilson (born in 1929), Richard Charles Lewontin (born in 1929), Robert Ludlow Trivers (born in 1943), Ernst Walter Mayr (1904–2005), and Stephen Jay Gould (1941–2002), among others. Also, the presence of Willard Van Orman Quine (1908–2000), Hilary Whitehall Putnam (1926–2016), and Robert Nozick (1938–2002) in the Department of Philosophy fired up his interest in the philosophy of science. In 1976 he obtained his Doctorate in Psychology and returned to Mexico.

In 1977, after just a few months in Mexico, the stale and dogmatic academic atmosphere he found at the Psychology Department at UNAM, the total opposite of what he left at the “Pigeon Lab,” made him leave for the University of Toronto, Canada. He established himself at the “Chicken House,” a

truly international hub for researchers interested in behavioral ecology, next to the laboratories of Jerry Hogan (born in 1936) and Sara Shettleworth (born in 1943). As a post-doc and Research Associate, he became interested in economics and optimization models to explain behavior and took time to teach at the Psychology Department at the University of Toronto. A talk with an old friend from the “Grupo Jalapa,” Florente López Rodríguez, brought him back to Mexico in 1980.

At the Facultad de Psicología (Department of Psychology) at UNAM, he headed the departmental units of Experimental Analysis of Behavior (1980–1984) and of Experimental Psychology (1991–1993); he headed the Doctoral Program in Psychology (1993); he was the Secretary General (1993–1997); and he was Chair of the Department (1997–2001). As Chair of the Department, he fought for a Curriculum Reform for the teaching of psychology more congruent with his vision of psychology as a science of behavior and promoted professional training as an applied science in professional settings or applied scenarios – rejecting a division of psychology into subdisciplines – with an ambitious pilot program of professional training as part of the core psychology curriculum.

He is recognized as one of the pioneers in the application of the principles of learning in clinical settings and a critical voice against orthodoxy and dogmatism in the experimental analysis of behavior in Mexico. Thru his teaching and research on the study of mechanisms for adaptive behavior, behavioral ecology, and behavioral economics, the use of hierarchical and latent class models in educational assessment, and Bayesian modelling of psychological processes, he helped to advance psychology in Mexico as a science of behavior.

Psychosynthesis

Ferenc Olivér Brachfeld, a Hungarian psychologist, was born in Budapest into a family with people from the art world. He had an early sympathy for the psychology of Alfred Adler (1870–1936). He could not access the University of Budapest since the far-right regime that governed Hungary prohibited him from studying at that University. For this reason, he moved to Vienna to enroll in that University. In this city, he met Adler and became part of his closest circle of followers.

In 1931, Brachfeld arrived in Barcelona, and in 1936, the Civil War broke out in Spain. During the first years of the war, he collaborated with the cultural media of the Republic. However, as a result of the advance of the Francoist forces on Barcelona, he left to leave Spain and went to Paris. In 1942, he returned to Barcelona and resumed the same activities he had been doing before the Civil War.

In 1950, when 8 years had passed since his return from Paris, he had to surrender to the evidence that while the regime of General Franco was in force, he would not be given the opportunity to be a university professor. He finally decided to move to Venezuela. The Venezuelan Ministry of Culture and Science offered him a contract as a professor of psychology at the Universidad de los Andes (Mérida). While he remained in Venezuela, he participated in conferences in various European countries, the United States, and Canada. In 1955, he was elected president of the International Society of Psychology, a position he held for 2 years.

In 1954, his chair at the Universidad de Los Andes was abolished. In 1959, Brachfeld accepted the invitation of the Federal Republic of Germany. For the next 6 years, he had a teaching contract at the University of Münster, in Westphalia. The Ministry of Culture and Education of the Federal Republic of Germany offered him to join the program for cultural and academic exchange of German scientists abroad, specifically with Latin America. Within the framework of this program, he went to Bogotá, where he stayed for 2 years (1965 and 1966) teaching psychology and giving lectures, and later to Quito, during the academic year 1966–1967.

In Quito, in full activity, he unexpectedly died due to a cerebral infarction, when he lacked a few months to turn 60.

During his stay in Barcelona, Brachfeld maintained an intense collaboration with the publisher Luis Miracle and with the Apolo publishing house, which published works on psychology: *The theory of psychoanalysis*, by Jung, with translation and preface by him (Jung, 1935); *The problem of homosexuality and other sexual studies*, by Adler, with his translation and preface (Adler, 1936); and *The meaning of life. New perspectives of individual psychology*, also by Adler, with translation by Brachfeld (Adler, 1941). Brachfeld was closely following the European publications of German, Austrian, and Swiss psychologists.

In addition to this activity as a lecturer, translator, and editor, Brachfeld authored several books on psychology. Among these books, the most outstanding is *The feelings of inferiority*

(Brachfeld, 1936a), his *magnum opus*. This work, expanded and reformed, had four editions in Spain and three unauthorized in Latin America (Mexico, Chile, and Argentina). It has been translated into English, German, French, Danish, and Swedish. The last two editions have been made in Germany and Hungary in 2002.

In 1936, a new book by Brachfeld was published, *The examination of the intelligence of children*. The book is dedicated to Emilio Mira y López. In Venezuela, in 1953, Brachfeld published three works that show us the nucleus of his psychological thought: “Brief history of psychosynthesis” (Brachfeld, 1953a), “From psychoanalysis to psychosynthesis” (Brachfeld, 1953b), and “Medicine and psychosynthesis” (Brachfeld, 1953c).

In conclusion, psychosynthesis seeks to overcome psychoanalysis, without denying it, and to continue it, improving it in various aspects. For Brachfeld, a new turn of a spiral is the best image to explain psychosynthesis.

Ramón León (1977, 2000) has analyzed Brachfeld’s life and work, which give an impression of uninterrupted activity, embodied in an immense number of publications. However, he points out that Brachfeld’s publications are rather bibliographic studies devoted to Adlerian history, literature, sexology, and psychology, with a clear demonstration of scholarship. León concludes that Brachfeld was more gifted for detailed bibliographic work and historical, literary, and psychohistorical research than for experimental work and for psychometric study.

Brachfeld had little influence on the development of psychology as a science and as a profession in South America, but he actively participated in the early years of what is today the most important psychological association in Latin America, the Inter-American Psychological Society. The project that he tried to promote in Venezuela, psychosynthesis, did not have resonance, and, at the time, it must have seemed something exotic.

Brachfeld was a brilliant intellectual. He was a prominent figure as a lecturer, popularizer, translator, writer, editor, etc. However, he aspired to create a working group in psychology and leave behind a school. In Barcelona, it was not possible

due to the Spanish Civil War. The exile forced him to do an informative work, and he could not do a work in psychology. In Mérida, it was not possible either due to the closure of the Institute of Psychosynthesis and Human Relations of the Universidad de los Andes.

Simón Brainsky Lerer was a psychiatrist and psychoanalyst, a psychoanalysis teacher at the Colombian Institute of Psychoanalysis, a university professor of Psychology and Psychiatry, a writer, and essayist. He had a profound and rigorous knowledge of Sigmund Freud's work and contemporary thinkers who went ahead with different interpretations of his work.

In addition to his clinical practice as a psychoanalyst, he dedicated his studies to training

psychoanalysts, psychologists, and psychiatrists in psychoanalytic theory and technique, with a particular interest in Freudian metapsychology and the dialogues of psychoanalysis with art, music, cinema, and literature. During three decades, he was a professor of Psychology and Psychiatry in several universities of Colombia, including the Pontificia Universidad Javeriana [Pontifical Javeriana University], Bogotá, the Universidad del Norte [The University of the North] in Barranquilla, and the Universidad El Bosque [El Bosque University], in Bogotá. In 1977, he received an award for his contributions to the Faculty of Psychology of the Pontifical Javeriana University. On two occasions, he was president of the Colombian Society of Psychoanalysis; he was also president of the Colombian Association of Psychiatry. From the latter, he received the Life and Work Award in 2003. He was a part of the Education Committee of the International Association of Psychoanalysis (API), and a member of the same association's International Ethics Committee (Brainsky, 2005). His conceptual and clinical thinking, and dialogues between psychoanalysis and the arts, cinema, and literature, was reflected in his books, articles, essays, and lectures. A separate chapter deserves his participations in the magazine *Ensayo & Error: Revista de Pensamiento Crítico Contemporáneo [Trial and Error: Magazine of Contemporary Critical Thought]*, in which, in addition to being part of the council of editors, he published psychoanalytic essays in each of its issues (Brainsky, 1998).

Simón's father, Salomón Brainsky, came to Colombia in the 1920s. He hailed from Chzelekhov, Poland, and was both a writer and a carpenter. He published a book of stories: *Gentes en la Noria* (Brainsky, 1945), translated from Yiddish into Spanish by the poet Luis Vidales, in which he portrays the environment of Jewish families in Bogotá at that time. His mother, Ana Lerer de Brainsky, was dedicated to making coats. Simón, in turn, always had the support and accompaniment of his wife, Sulamita Reines, and their four children. Of these, some are physicians, and one of his daughters is a psychoanalyst.

Simón Brainsky studied Medicine at the Universidad Nacional de Colombia [National University of Colombia] and obtained his degree in 1966. He was active in the left Zionist youth groups and the Liberal Revolutionary Movement (Kalmanovitz, 2005). He was a man capable of listening to different points of view, interested in the freedom of the human being, and the importance of understanding men's points of view that lead them to conflict, up to the maximum expressions of violence and destruction. At the end of the sixties, he specialized as a psychiatrist at the Santo Tomás Clinic in Bogotá (Gómez-Escallón, 1984). In this context, he had the opportunity to learn about different approaches and views on human suffering. Later he received his training as a psychoanalyst at the Institute of the Colombian Society of Psychoanalysis – he began his studies in 1973 – with teachers such as Guillermo Arcila, Tufik Meluk, Carlos Plata, Guillermo Sánchez-Medina, Alfonso Sánchez-Medina, and Inga Villarreal. He began his analysis with Luis Yamín. Brainsky was trained in the first psychoanalytic society founded in Bogotá (1956). He actively participated in the consolidation of the psychoanalytic movement in Colombia and in psychologists' and psychiatrists' training (Sánchez-Medina, 1990).

Since then, he began his career as a University professor and psychoanalyst in private practice. As a didactic psychoanalyst – he obtained the degree in 1983 – he trained several psychoanalysts dedicated to clinical practice and gave the seminar on Freud's works at the Colombian Institute of Psychoanalysis. He organized the Colombian Congress of Psychiatry in 1981 and was president of the Colombian Society of Psychiatry during 1981–1982. Between 1980 and 1981, he was editor of the *Journal of the Colombian Society of Psychoanalysis*. In addition to the articles published in different scientific journals on psychoanalysis and psychiatry, his works on the clinical supervision of psychiatric residents in the university service of the San Ignacio University Hospital stand out, as well as the “Medical-psychological study of an associated vital pattern to the appearance and installation of breast cancer,” which was recognized with the second prize

in the scientific contest: “100 years of the Mental Hospital of Antioquia” in October of 1978.

In 1984 and thanks to the encouragement of Graciela Aldana de Conde, head of the Faculty of Psychology and Horacio Taborda, head of the Department of Psychiatry of the Pontifical Javeriana University, and his students and colleagues, Brainsky published the *Manual of Dynamic Psychology and Psychopathology. Foundations of Psychoanalysis* (1984). This book, dedicated to his father, became an essential contribution to the training in psychoanalytic theory and technique of students from different generations of psychology and psychiatry programs in the country. In this text, Brainsky exposes in a didactic and critical way the foundations of psychoanalysis as conceived by Sigmund Freud; he addresses the meta-psychological foundations, the theories of the drive, the Oedipal conflict, psychosexuality, the bases of object relations, the formation of the self and defense mechanisms, and the principles of psychoanalytic technique. Although his starting point is the Freudian contributions, Brainsky delves into the most contemporary developments and contributions to the psychoanalytic bases from authors such as Klein, Bion, Winnicott, Kohut, Kernberg, Grinberg, Bleger, Baranger, and Chasseguet-Smirgel. He argues that psychoanalysis gradually decenters from the patient's place as the subject who suffers, to explore the interrelation between analyst and analyzed as members of the “field” in psychoanalysis.

One of the most relevant and evident characteristics in his contributions is the concern for psychiatrists and psychologists' training, with a broad vision of the human being, which allows them to produce knowledge about the human being and their forms of suffering. The clinician's conception that Brainsky transmitted to his students consisted of a person interested in human productions, capable of conceiving creative alternative ways in the face of the conflicts that living brings.

His next book, *Psychoanalysis and Suffering* (1988) – dedicated to his mother – focuses on the technical and psychotherapeutic approach to depression, psychotic disorders, anxiety, panic,

agoraphobia, and therapy of somatic and terminal patients. His contributions to understanding the subject as a “Global Functional Structure” are reflected and with theoretical and clinical reflections, which cannot be understood – and neither his suffering – from uni-causal logics, but from complex notions such as syndrome. “The human being is much broader and more complex than the disease he suffers,” Simón Brainsky would repeat.

In 1997 Brainsky published his following book: *Psychoanalysis and Creativity. Beyond the Death Instinct* – dedicated to his wife – explores the relationships of the creation processes in the human being and their interplay with the world of drives’ vicissitudes. Brainsky relies on authors such as Freud, Klein, Kohut, Green, Chasseguet-Smirgel, Buber, and Noy to refer to the possibilities of the individual to go beyond the last of the theory of the drives, of the destruction itself; it seems that the meeting of creativity and the Other are precisely the results of these searches.

Regarding Noy (1979) and his contributions from the Psychology of the Ego to creativity, Brainsky takes up his concepts of “good form” in art and the “perfect form” in which the artist, in his creative act, manages to reconcile opposing and contradictory elements. The psychoanalyst asks himself precisely about the possibility of conciliating contrary tendencies in an individual, through the practice of psychoanalysis.

In this book, Brainsky (1997) contributes to the theory of Freudian narcissism. He postulates two specific types of narcissism: a) a “Narcissism at the service of the Self,” or “Inclusive Narcissism,” in which the subject recognizes that, in order to exist, it is necessary to accept the presence of the Other as an autonomous being; the different does not threaten one’s existence, rather it ratifies it, b) an “Excluding Narcissism,” in which the Other is denied to affirm itself as me. The Other only exists insofar as he is an identical mirror of myself, and his asymmetry, his difference, awakens the need to destroy him.

In 2000, Simón Brainsky published his fourth book: *Psychoanalysis and Cinema. Screen of Illusions* – dedicated to his children. He establishes dialogues between the spectator subject of the

films, the film itself, and psychoanalysis. The Kieslowski’s color trilogy, Bergman, and Truffaut are his interlocutors to think about the functions of thought, the dream world, the processes of mourning, sublimation, and creation.

Simón Brainsky’s next book, *Psychoanalysis and Narration*, dealt with the place of narrative at the hands of authors such as J. M. Coetzee, but remains unpublished.

Brainsky was a dedicated teacher. His seminars were spaces for dialogue about psychoanalytic thought, articulations between psychoanalysis and creativity, a conception of the complex human being, and understanding the human problems in our societies. This conception is why he quoted *Hamlet* in the introductory chapter of one of his books: “It is, Horace, that between Heaven and Earth there is more than your philosophy can dream ...”

In any case, he remembered that psychoanalysis is more like the labor of the craftsman, who works in detail and calmly in his workshop on each piece that he carves.

Bravo Valdivieso, Luis

Born *in Santiago de Chile, December 10, 1931*

Carlos Cornejo
Pontificia Universidad Católica de Chile,
Santiago, Chile

Keywords

Chile · Educational psychology · Learning disabilities · Dyslexia · Phonological awareness · History of psychology

Luis Bravo obtained in 1953 his *Bachillerato en Filosofía* (BA in Philosophy) and in April 1961 his *Título Profesional de Psicólogo* (Licensed

psychologist) both at *Universidad Católica de Chile* (henceforth: UC) (Catholic University of Chile). He belongs to UC's first generation of psychologists (Camus & Muñoz, 2017). Until 1962, he was a faculty member both at UC's *Escuela de Pedagogía* (School of Pedagogy) and at the *Escuela de Psicología* (School of Psychology). That year, he started his postgraduate studies at Louvain University, where he obtained in 1964 his *Licencié en Psychologie Appliquée* (MA in Applied Psychology) and his PhD in Psychology in 1968 (Cohl & Cornejo, 2018). From 1964 to 1974, Luis Bravo worked as a clinician at *Servicio de Psiquiatría Intantil* (Child Psychiatry Service) at the *Hospital Luis Calvo Mackenna* in Santiago. In the context of growing social distress, he devotes himself to marginalized children's learning and reading issues (Bravo & Salas, 1972). A faculty member at UC's *Facultad de Educación* (School of Education), Luis Bravo founded UC's *Programa de Educación Especial* (Special Education Program) in 1969 and remained acting as its head until 1989. This position was key as it allowed him to define the professional profile for educational psychologists in Chile, and also ratified him in neuropsychology and didactics. The Special Education Program opened up the way for research on learning disorders and contributed to educating several generations of psychologists, teachers, and psycho-pedagogues. At UC's School of Education, Luis Bravo served as vice-dean from 1989 to 1993 and as dean in 1994; he was a member of UC's Higher Council during the latter year. In 2000, UC granted him the Emeritus Professor title. He was president of the *Asociación Chilena de Psicólogos* (Psychologists' Chilean Association) and one of the founding members of both the *Colegio de Psicólogos de Chile A.G.* (Chilean Psychologist's Society) in 1969 and the International Academy for Research on Learning Disabilities (IARLD). Luis Bravo published nine books, some of which have been reedited, among them, *Trastornos del aprendizaje y de la conducta escolar: Psicopatología de la disfunción cerebral mínima* (1972) (Learning and school behavior disorders: Psychopathology of minimal brain dysfunction), *Lenguaje y dislexias* (2020, sixth edition) [Language and dyslexia], and *Psicología de*

la dificultades de aprendizaje (2018a, ninth edition) [Psychology of learning disabilities].

He contributed to several international edited volumes. He has published in both Chilean and international journals, receiving wide recognition in Chile and Latin America (Velarde-Consoli, 2004). Luis Bravo is a key author in dyslexia and Hispanic children reading disabilities (Gonzales & Tejero-Hughes, 2018; Martínez & Goikoetxea, 2020; Sellés et al., 2018; Strasser & Lissi, 2009). Among his main research findings is having effectively supported the hypothesis stating that first grade reading education predicts future school performance. His research also supports the hypothesis that the most determining literacy variable is phonological awareness, which under optimal conditions can lead to reaching the “reading threshold” (Bravo, 2004). Luis Bravo advocated for research in Latin America and Chile stating that learning difficulties can not only be solely attributed to poverty conditions, but also to shortcomings in psycho-pedagogical strategies. Further along in his career, he underscores the relevance of neuroimaging to survey literacy cognition and its relationship with activity in various brain regions (Bravo, 2014, 2018b).

Being aware of his contributions to early research in Chilean educational psychology, Luis Bravo also offered his input to Chilean history of psychology (Bravo & Tschorne, 1969), an interest he maintained throughout his career (Bravo, 2004). His book *Jesús de Nazareth en la percepción de un psicólogo* (Jesus of Nazareth as seen by a psychologist) was published in 2015. Bravo was given a series of acknowledgments and awards: Honorary Professor of *Universidad Nacional Mayor de San Marcos*, Lima (2005); the Chilean National Psychology Award (1977) granted by *Colegio de Psicólogos de Chile A.G.* (Chilean Psychologists Society); The Sergio Yulis Award (1977), from the Sociedad Chilena de Psicología Clínica (Chilean Society for Clinical Psychology); UC’s Escuela de Psicología 50th Anniversary Founding Member Acknowledgement (2008); distinctions by the Chilean Psychologists’ Society as Founder and Former Head (2010); in 2014 the National Lifetime Award by the *Sociedad Científica de*

Psicología de Chile (Chilean Psychological Science Society; and in 2020 the National Award by the Sociedad Chilena de Historia de la Psicología (Chilean Society for History of Psychology).

Raul Briquet was a physician who graduated from the Faculdade de Medicina do Rio de Janeiro (School of Medicine of Federal University of Rio de Janeiro), where he defended his doctoral thesis on the subject of psychophysiology and pathology musical on January 25, 1911. After completing the course, he specialized in gynecology and obstetrics.

He began his professional career at the Maternidade de São Paulo (São Paulo Maternity Hospital) between 1913 and 1914. In this institution, he had contact with modern techniques for the diagnosis of pregnancy, which resulted in the

publication of his first article on the subject in 1914. He was approved in a civil service examination for the chair of Clínica Obstétrica da Faculdade de Medicina e Cirurgia de São Paulo (Obstetrics Clinic of the School of Medicine and Surgery of São Paulo) in 1925, and, years later, in 1934, he assumed the chair in the department of Clínica de Obstetrícia e Puericultura da Faculdade de Medicina da Universidade de São Paulo (Obstetrics and Childcare Clinic at the School of Medicine of the University of São Paulo).

A member of the circle of São Paulo's intellectual elite in the first half of the twentieth century, Raul Briquet dedicated himself to the study and development of several areas of philosophical and scientific knowledge in the country, among them psychology, social psychology, and psychoanalysis. In this sense, he was a member of the creation of the Sociedade Brasileira de Psicoanálise (Brazilian Psychoanalytic Society) in 1927, alongside characters such as Franco da Rocha, Durval Marcondes, and Lourenço Filho, when he also assumed its vice-presidency. At the institution, he collaborated with the publication of the *Revista Brasileira de Psicanálise* (Brazilian Journal of Psychoanalysis) in 1928 and in the translation of Ernest Jones' work *Da psico-análise: breve introdução ao seu estudo* (What is Psychoanalysis?) in 1930. In 1930, Briquet participated in the foundation of the Sociedade de Filosofia e Lettas de São Paulo (Society of Philosophy and Letters of São Paulo), taking over the Comissão de Estudos (Study Commission). He was a signatory of the Manifesto dos Pioneiros da Educação Nova (Manifesto of the Pioneers of Educação Nova), published in 1932, together with other intellectuals such as Fernando de Azevedo, Afrânio Peixoto (1876–1947), Anísio Teixeira, Júlio de Mesquita Filho (1892–1969), and Cecília Meirelles (1901–1964), among others. On May 27, 1933, he was part of the founding committee of the Escola Livre de Sociologia e Política de São Paulo (Foundation School of Sociology and Political Science of São Paulo), an institution where he inaugurated the first professorship and the first course in social psychology in Brazil, which Briquet taught in the second half of 1933. This course resulted in his book *Psicologia Social* (Social Psychology) in 1935,

considered one of the first works on this discipline published in the country (Araújo, 2021). In 1934, Briquet was an active member of the creation of the Universidade de São Paulo (University of São Paulo), in which he became a professor and member of the University Council. In 1942, he was sworn into professorship 38 at the Academia Paulista de Letras (Brazilian Academy of Letters) based on his publications so far in the areas of nursing, obstetrics, and social psychology. In 1944, a compilation of texts was published that he presented at events between the 1920s and 1940s, on various topics, such as art, literature, music, psychology, sociology, and epistemology. This compilation, named *Palestras e Conferências* (Lectures and Conferences) (1944), received the Carlos de Laet Prize from the Academia Brasileira de Letras (Brazilian Academy of Letters) on June 13, 1946. Later that year, he published a book on the history of education, the result of the course on National Education he taught at the Escola Livre de Sociologia e Política de São Paulo (Foundation School of Sociology and Political Science of São Paulo). At the end of his life, devoting his writings with more emphasis to the medical field, he coordinated the publication of a medical anthology.

Raul Briquet's name is among the other intellectuals responsible for introducing scientific social psychology in Brazil (Araújo, 2021), above all, for having assumed the first chair of this discipline in the country. Despite not having been a social psychologist, dedicating himself professionally to medicine and academically to human sciences (psychology, education, and sociology) and medical (medicine and nursing) disciplines, Briquet played a fundamental role in the birth of social psychology in Brazil when he started the institutionalization process of this field and popularization of texts and researches that were developed in that period (Araújo, 2021). His book *Psicologia Social* (Social Psychology) (1935) presents a textbook format with a structure similar to those published in the United States in the 1930s and 1940s – the first copy of which was *Carl Murchinson's Handbook of Social Psychology* (1935) – addressing topics such as “motivation,” “instinct,” “habit,” “suggestion,” “imitation,” “social self,” “personality,” “ethnic

prejudice,” “leadership,” “public opinion,” “crowd,” and “revolution.” Briquet's handbook presents an extensive bibliography, drawing on classical authors and contemporary researchers such as William James (1842–1910), Pierre Janet (1859–1947), Kurt Koffka (1886–1941), Wolfgang Köhler (1887–1967), Augusto Comte (1798–1857), Wilhelm Wundt (1832–1920), Émile Durkheim (1858–1917), Gabriel Tarde (1843–1904), Sigmund Freud (1856–1939), Ernest Jones (1879–1958), Karl Marx (1818–1883), Gustave Le Bon (1841–1931), Kurt Lewin (1890–1947), Scipio Sighele (1868–1913), Pasquale Rossi (1867–1905), Walter Bagehot (1826–1877), William McDougall (1871–1938), Wilfred Trotter (1872–1939), Ivan Petrovich Pavlov (1849–1936), Kimball Young (1893–1972), Charles Ellwood (1873–1946), Raymond Holder Wheeler (1892–1961), Carl Murchison (1887–1961), Gardner Murphy (1895–1979), and Emory Stephen Bogardus (1882–1973), as well as the Brazilians Oliveira Vianna, Nina Rodrigues, Porto-Carrero, and Arthur Ramos, among others. Despite the diversity of authors and schools of thought, Briquet basically starts from three theoretical-methodological roots to think about the science of subjectivity: Comtian positivism, gestalt, and psychoanalysis. His conception of social psychology presents contradictions in the course of his manual, a fact common to the authors of the period (Araújo, 2021). In general, for Briquet (1935, p. 75) the objective of social psychology would be to understand “the mental genesis of social facts.” However, it would not constitute an autonomous science, as it is methodologically situated between sociology and biology. On the other hand, social psychology would have an important role in the process of social investigation carried out by the social sciences, by pointing out the universal laws resulting from the encounter between social influences and hereditary aspects of the action of individuals.

The influence of positivism in his conception of social psychology was not only due to the search for universal laws of society and the individual but also in the defense of men of science in public life. In this sense, Briquet forged a social

psychology project in line with the interests of the São Paulo intellectual elite representing the Escola Livre de Sociologia Política de São Paulo (Foundation School of Sociology and Political Science of São Paulo), which defended the use of modern science in the training of public managers, as an attempt to solve the obstacles that prevented the modernization of the country in the 1930s (Kantor et al., 2009). Among these obstacles would be the need – strongly defended by the positivist spirit of the period – to develop the race and the Brazilian people through hygienist, educational interventions and by selecting individuals in occupations that were in accordance with their natural aptitudes, that is, the “right man in the right place.”

In addition to the social psychology manual, Briquet published some texts on psychological themes in his book *Palestras e Conferências* (Lectures and Conferences) from 1944, which reflect, among other themes, on the importance of studying the development of adolescents for their effective education, the distinction of psychological types according to the clothing, a reflection on the interpretation of Freud’s dreams, the psychic determinations and the treatment of shyness, and the pioneering spirit of Franco da Rocha in the introduction of psychoanalysis in Brazil. This book also includes the inaugural class he taught at the Escola Livre de Sociologia e Política (Foundation School of Sociology and Political Science of São Paulo), in which he situates the spirit of the São Paulo elite that guided the birth of social psychology as a discipline in Brazil. In his speech, he highlights São Paulo as the favorable state for the emergence of leaders who would lead Brazil toward social justice in accordance with the “supreme destinies of humanity” (Briquet, 1944, p. 212).

Raul Briquet was a polyglot physician and intellectual who dedicated himself to several fields of knowledge in his lifetime, including social psychology. Although he did not pursue his studies on psychology and society, as Arthur Ramos has done, Briquet is among the main names responsible for introducing social psychology in Brazil as a field of research and extension.

Josef Brožek was born in the current Czech Republic. In 1915, when he was 2 years old, his family was deported to Siberia, where they remained until 1920. In the mid-1930s, during his studies at the University of Prague, Brožek became interested in the history of psychology based on the text *Psychologie der Gegenwart* (Contemporary Psychology) by Hans Henning (1885–1946), which held an extensive introductory chapter approaching the development of modern psychology (Brožek and Guerra, 1996a). Excited by the reading, Brožek presented and discussed, in a philosophical seminar at his University, the model presented by Henning on experimental psychology and applied psychology. In 1937, he became a PhD in psychology, presenting the thesis *Memory: Its Measures and Its Structure*. He committed himself to applied psychology, working in the areas of vocational guidance and industrial psychology.

In 1939, he emigrated to the United States of America, due to the problems Czech citizens faced in World War II and the Nazi occupation. In the United States, Brožek worked as a professor and researcher at the Universities of Pennsylvania

and Minnesota. At the latter institution, in 1941, he became a researcher in psychobiology at the Physiological Hygiene Laboratory of the School of Public Hygiene, where he worked with experimental research on visual performance and fatigue, factors involved in coronary heart diseases, and the effects of malnutrition on human behavior (Brožek and Guerra, 1996a; Massimi and Campos, 2004). Due to his work in the field of malnutrition, Brožek was president of the International Conference on Behavioral Effects of Energy and Protein Deficits, held in Washington, USA, between November 30 and December 2, 1977.

In 1959, he moved to Lehigh University, Pennsylvania, as a researcher and professor of history of psychology (Hoskovec, 2004). He became director of the Department of Psychology and Teaching, a position he held until 1963. Between 1979 and 1980, he was Senior Fulbright Research Fellow at Julius-Maximilian-Universität in Würzburg, Germany. Furthermore, concerning Germany, Brožek was a visiting professor at the Universität Passau, where he worked with Werner Traxel (1924–2009) and Horst Gundlach (1944–) as reported by Ramon Leon (2021).

His historical works encompass numerous researches in archives and libraries in the United States and Europe (Massimi and Campos, 2004). One of his best-known investigations approaches the history of the term psychology from the sixteenth century onward, analyzing the spelling of this word in manuscripts from the work of the Croatian humanist Marcus Marulus (1450–1524). The researcher also participated, for 30 years, in a project on the historiography of psychology in which the trends of the study of the history of psychology are analyzed in several countries around the world, such as Canada, United States, Germany, Italy, Switzerland, Soviet Union, and others. The results of this project have been published in several articles and in the book *Historiography of modern psychology* (1980), published together with Ludwig J. Pongratz (1915–1995). Later, in 1998, Brožek published, in coauthorship with Marina Massimi, a Brazilian version entitled “Historiography of modern psychology – Brazilian version,” which includes

chapters by Brazilian and Argentinian researchers (Brožek and Massimi, 1998).

Among the historical studies developed by Brožek, there are some on the life and work of Jan Purjinke (1787–1869), a physiologist of Czech origin, and the studies on applied psychology in Czechoslovakia between the two world wars. Even residing in the United States, the researcher had always kept the focus on the political processes in the Czech Republic and did not neglect the studies on the history of psychology in his country. The Velvet Revolution, which took place in 1989, deposed the communist regime and instituted the parliamentary republic. This movement brought impacts to the Czech Society of Psychologists, which became independent from the Soviet Union guidance, and had to build its own initiatives (Brožek and Guerra, 1996a). During this period of openness, Brožek and his wife Eunice sent books and periodicals to university libraries across the country. Referring to his collaboration with his native country, he kept an exchange relationship with the Institute of Psychology of the Czechoslovak Academy of Sciences for several periods between 1973 and 1992. In 1996, the University of Prague, where the researcher had done his university studies, awarded him a medal for his contribution to Czech Psychology and Anthropology (Hoskovec, 2004).

In 1965, the researcher became engaged in the creation and organization of Division 26 of the American Psychological Association. At the same time, he organized the *Journal of the History of the Behavioral Sciences*, one of the main international journals focused on historical research in psychology (Massimi and Campos, 2004). He also participated in the organization of the International Society for the History of Behavioral and Social Sciences, the current Cheiron. In 1969, this Society organized its first Congress, at Princeton University, in partnership with Josef Brožek and Mary Henle (1913–2007) (Massimi and Campos, 2004).

Brožek, with great capacity for collaborative work and the development of human relations in addition to his ability to understand and speak

several languages, made the historiography of psychology an international topic (Massimi and Campos, 2004). The experience as a member of an exiled family in Siberia, as well as his experience on wars, enabled Brožek to understand that it was necessary to develop common projects between different nations (Woodward, 2004). As reported by Massimi and Campos (2004), Brožek used to take hold of relationship as his work method and, therefore, formed partnerships with several international groups in the field of psychology, building a network of friends and interlocutors with whom he assiduously exchanged correspondence.

In his openness to internationalization, Brožek established dialogues with Brazilian researchers. In 1988, accepting an invitation from Antônio Gomes Penna (1917–2010), he participated – as honorary president – in the first Latin American Seminar on the History of Psychology, in Rio de Janeiro. At that time, he visited the Pontifical Catholic University of São Paulo, where he met Professor Maria do Carmo Guedes (1934–), who coordinated the Center for the History of Psychology, which she had founded. He visited Brazil for the second time in 1996, at the invitation of Professor Marina Massimi.

He was at the Faculty of Psychology of the University of São Paulo, in the Ribeirão Preto campus, where he participated in the Symposium on Research and Scientific Exchange of the National Association for Research and Postgraduate Studies in Psychology (ANPEPP), held in Teresópolis, in the State of Rio de Janeiro.

In this event, he gave a lecture and participated in the organization and performance of the first meeting of the Work Group on the History of Psychology linked to the Association. At USP, Brožek taught an intensive course on the historiography of psychology, presenting various aspects of his historiographical approach that took hold of definitions and concepts developed in the field of psychology, such as the concept that "historical events represent manners of conduct" (Brožek & Guerra, 1996). Adopting the term "conduct" as central to the work of psychology historians, the researcher discussed three

fundamental principles of historical investigation: attention to evidence articulated with theoretical interpretation; the consideration of the *Zeitgeist*, understood as the “spirit of time” from which “an elegant way of interpreting the conduct of individuals and groups of individuals” is produced (Brožek & Guerra, 1996, p. 18); and the adoption of a multifactorial view of historical events and psychological science, considering the complex relationships between actor and context (Brožek & Guerra, 1996). In 1997, he returned to Brazil once more and participated in the Inter-American Psychology Congress and visited the Federal University of Minas Gerais, where he visited the Helena Antipoff Research and Documentation Center, chaired by psychologists Daniel Antipoff (1919–2005) and Regina Helena de Freitas Campos. In 1999, the researcher donated part of his personal collection to the Helena Antipoff Room, established in the Central Library of the Federal University of Minas Gerais, containing a collection of books, periodicals, and unpublished manuscripts related to the history of psychology.

Brožek actively disseminated the history and historiography of Brazilian psychology in the international context. In 1988, he reported, at the University of Bologna, Italy, the studies carried out by Antônio Gomes Penna between the years 1980 and 1987. He published, in the *History of Psychology Newsletter* (1991), a retrospective of the Brazilian historiographical literature of the 1980s, whose center point was the research presented by Marina Massimi in her book *History of Brazilian Psychology: from the colonial era to 1934* (1980). And, in 2003, he published in the *Journal of the History of the Behavioral Sciences* a review on the *Biographical Dictionary of Psychology in Brazil*, organized by Regina Helena Campos and a group of historians of Brazilian psychology linked to the Group of History of Psychology at ANPEPP, the invitation from the Federal Council of Psychology (Campos, 2001).

Working until the age of 89, Brožek decided to cease his professional activities after the death of his wife in 2002. He passed away in 2004 in the city of Saint Paul, Minnesota, in the United States.

 Autónoma de México, Mexico City, Mexico

Keywords

Mexico · Gender perspective · Stereotypes and influence of the media · Master in psychology with a gender approach

Born in Tuxpan (Nayarit, Mexico) on March 19, 1948

Died in Mexico City on April 6, 2015

She originally graduated from a religious school and with an initial technical career to have financial independence. She completed her high school requirements in Tepic, the capital city of the State of Nayarit, and later, she moved to Mexico City (CDMX), where she obtained her bachelor's degree at the Facultad de Psicología (Faculty of Psychology) (FP) at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) in September 1976. She studied her master's degree in Educational Psychology at the University of Pittsburgh, Pennsylvania, on April 22, 1975, and finally, she concluded her doctoral studies in Social Psychology also at UNAM during 2013.

From 1992 to 1993, she was co-founder of the master's degree in Gender-Oriented Psychology at the Universidad de las Américas – Ciudad de México (University of the Americas, Mexico City) (UDLAP – CDMX). And finally, she shared the responsibility in the PAPIIT Project of the UNAM Programa de Apoyo a Proyectos Institucionales de Investigación Temprana (Support Program for Institutional Early Research Projects) on “Testimonios de las Académicas de la UNAM: Trayectorias y Contribuciones” (Testimonies of the Academics from the UNAM: Trajectories and Contributions) in 2007, of the Centro de Investigaciones Interdisciplinarias en Ciencias y Humanidades (Center for Interdisciplinary Research in Sciences and Humanities) (CEIICH) with Dra. Norma Blázquez Graf (born in 1956).

In the words of Bustos (quoted in Trujillo: Video-Posthumous Tribute to Dra. Olga Livier Bustos Romero, 2013): “Try to create awareness, reflection and criticism of a society, which has transcended a significant evolution for equity. Achieve a representative impact to build conscious minds.”

As an expert in the analysis of mass media and gender perspective, in different states of the country, she gave courses to journalists, editors, and columnists, on the importance of a culture free of gender stereotypes in the news media.

From 1984 to 1990, she served as coordinator of the Center for Women's Studies belonging to the FP at UNAM; and from July 1997 to

September 1999, she was also coordinator of the Social Psychology Area of this same institution.

As an activist and leader, her life was committed to education, teaching, and the gender perspective. She presided over the Federación Mexicana de Universitarias (Mexican Federation of University Women) (FEMU) from 1999 to 2000 and, later until 2001, the Colegio de Académicas Universitarias de la UNAM (College of University Academics of UNAM). She was a founding member of the Sociedad Mexicana de Psicología Social (Mexican Society of Social Psychology) (SOMEPSO) and, since its creation, part of its board of directors.

She was member of the Movimiento de Acción Popular (Popular Action Movement) (MAP), and later she joined the Partido Socialista Unificado de México (Unified Socialist Party of Mexico) (PSUM). Her involvement in the organization of networks was permanent as she was a member of the Red de Mujeres y Hombres invirtiendo en Mujeres (Network of Women and Men investing in Women) (Red MIM). She was part of the Network of Researchers for the Life and Freedom of Women, of the Coalición Ciudadana Democracia y Medios [Citizen Democracy and Media Coalition], as well as other initiatives in which she contributed by providing the consistency of her courage and her vision of the future.

She founded and coordinated the Centro de Estudios de la Mujer (Center for Women's Studies) at the FP (1984 to 1990), which years later led to the current Programa Universitario de Estudios de Género (University Program for Gender Studies) (PUEG) at the UNAM. Her main contribution consisted in achieving a space for reflection on the role of the media in teaching and socializing traditional gender roles.

Her academic production published in various books and national and foreign scientific research journals mainly address the situation of women. With her own words, she concludes (Bustos quoted in Trujillo, Video-Posthumous Tribute to Dr. Olga Livier Bustos Romero, 2013): "Being a woman means being full of strengths and aspirations to insert myself in a society and be able to make changes."

Its importance also derives from the curricular inclusion of the psychological vision of gender in

higher education, as well as in the Mexican tradition of Collective Psychology and in the democratization of federal laws on telecommunications.

She was very close to Clemente Ruíz Duran (he was born in 1948), her husband, and to her family. She enjoyed traveling and always sharing with her children Lucía and Daniel Ruíz Bustos, with the joy of being together. She was always kind to deal with – because her laugh was very sharp and she had the quality of being very agile at telling jokes. She always liked to work, learn, and grow with her friends and students and, of course, dance, laugh, sing, and enjoy the Trios, Trova, and Boleros.

Enrique Butelman did not have any college degree; however, he played an important role in the organization of psychology programs in Argentina, particularly in Rosario and Buenos Aires. He was a Professor of History of Psychology and Social Psychology at both universities, and he was also a lecturer at the Department of Social Psychology at Columbia University. In 1962, he got a Ford Foundation scholarship to take part in Social Psychology research at New York University. Together with Jaime Berstein, he founded Editorial Paidós.

As a reader and passionate traveller, he did not tolerate the routine of the academic courses, that is why he pursued his training by following different teachers whose courses he arrived at moved by his curiosity and desire for the accuracy of ideas. He studied neurobiology with Christofredo Jakob (1866–1956), in his Laboratory of Pathological Anatomy at the Hospital de Alienados (Alienate Hospital) in Buenos Aires. He attended the courses of psychology of Coriolano Alberini (1886–1960) and Luis Juan Guerrero (1897–1958). He was a student at the courses Ricardo Rojas (1882–1957) lectured on Spanish Literature of the Nineteenth Century. Butelman also attended courses by Francisco Romero (1891–1962) on Political History and Clemente Ricci (1873–1946) on History of Religions. He also studied Psychology, Philosophy, Sociology, and Jungian Analytical Psychology, with growing deep interest in the latter. He met Carl G. Jung (1875–1961) during his one-year stay at the C. G. Jung Institute in Zurich. As Butelman attended elementary school and high school in Germany and in Switzerland, he spoke fluent German, English, and French since his early youth (Gentile, 2003).

In 1945, with his friend Jaime Berstein (1917–1988), he founded Paidós Publishing House, which was specialized in children's books, education, psychology, and sociology (Klappenbach, 2001). In other words, it was devoted to a new interdisciplinary field which developed growing interest and it was consequently demanded for Spanish spoken literature, which was almost nonexistent by that time. The first book they published was *Conflictos del alma infantil* (Conflicts of the Child Soul) by C. G.

Jung, translated by Ida Germán de Butelman. Paidós became the most important producer of books in the psychological, psychiatric, and psychoanalytical field in the Spanish-speaking world. In 1979, due to the restrictions imposed on culture and the persecution and censorship as a consequence of the military coup d'état in Argentina, Butelman moved to Spain. There he founded Paidós-Ibérica, in Barcelona, and obtained the rights for the publication of the Seminars by Jacques Lacan (1901–1981), which is still a work in progress.

During the decade 1956–1966, a period of brief democracy between the two military coups, Butelman worked intensely with Jaime Berstein on the organization and implementation of the first program of psychology at Argentine university in 1956, in the city of Rosario, and nearly simultaneously, also in Buenos Aires (Dagfal, 2009; Vezzetti, 2008).

Butelman was, what is known today as, a cultural manager, a mixture of pragmatic intellectual, democratic politician (close to the Socialist Party of those years) and a creator of projects aimed, in this case, at the development of psychology as a science and as a profession, that is to say, as a practice attached to the social network and, not only, to the academic field.

From his university practice during that decade, there remains the syllabi of the several courses he offered, such as those on History of Modern and Contemporary Psychology, which he lectured in Rosario between 1957 and 1958. Those documents also reveal that his Introduction to Social Psychology taught in Buenos Aires in 1958 was highly influenced by the theories of Gino Germani (1911–1979) and Kurt Lewin (1890–1947).

He also participated in the Board of Directors of the programs in Rosario and Buenos Aires and had a decisive influence on the preparation of the curricula of both programs, and during the administration of Risieri Frondizi (1910–1985) at the University of Buenos Aires, he was the director of the psychology program between 1958 and 1960.

As an editor, he worked until the end of his days in several areas of Paidós-Argentina and

Paidós-Ibérica. Many of the books on Depth Psychology collections were edited with notes and remarks in which Butelman was erudite and masterful. In 1963 he supervised the Spanish translation of George Brett's *History of Psychology* and enriched that edition with an important body of notes and comments (Brett, 1963). In fact, it was the translation and comments of the Peters' abridged version, in one volume (Peters, 1953), of Brett's famous *History of Psychology*, originally published in three volumes (Brett, 1912, 1921a, 1921b, 1963).

Butelman thought that psychology was a social science and that the psychologist education should be humanistic because of the wide variety of the knowledge that the discipline, involved with the mind and human behavior, should necessarily synthesize and display. This social and humanistic psychology should also be scientific, in a broad sense overcoming experimental and behavioral reductionism.

Annita de Castilho e Marcondes Cabral played an important role in the process of institutionalizing psychology and turning it to an undergraduate major in São Paulo. Her training in psychology began during her teacher-training course at the São Paulo Normal School [*Escola Normal de São Paulo*] (1923–1927), where she had classes with Lourenço Filho. After graduating, Cabral attended a Pedagogical Improvement Course (1928), where she took lessons with Jean Mangué and Noemy da Silveira Rudolfer. Later on, she became a collaborator of Rudolfer at the *Diretoria Geral de Ensino do Estado de São Paulo* (Applied Psychology Service of the General Board of Education of the State of São Paulo) (1931) and at the

Psychology Laboratory of the Normal School, which became the Caetano de Campos Education Institute [Instituto de Educação Caetano de Campos] in 1932. She remained in the laboratory until 1935, working as a coordinator for internship activities in psychological exams at the Mental Measures Section.

After the creation of the *Universidade de São Paulo* (University of São Paulo (USP)) in 1934, Cabral joined the *Faculdade de Filosofia, Ciências e Letras* (College of Philosophy, Sciences and Languages) (FFCL), graduating in the first philosophy class (1938). At FFCL/USP, she had the opportunity to be a student of Claude Lévi-Strauss (1908–2009). In the same period, the Education Institute was absorbed by the university, and Cabral became part of the Faculty of the Philosophy major, working as assistant professor in the sociology and psychology assignments, whose Chairs were, respectively, Roger Bastide (1898–1974) and Jean Mangué (Ghiringhella, 2001).

In 1941, Cabral received the Latin American Fellowship from Smith College (Northampton, Massachusetts), where she studied experimental psychology with James J. Gibson (1904–1979) and Gestalt psychology with Kurt Koffka (1886–1941) and Fritz Heider (1896–1988). In 1942–1943, she complemented her studies with an M.A. at the New School for Social Research. Supervised by Max Wertheimer (1880–1943), her

thesis was entitled “Memory of Forms Back in Brazil”; she defended her doctoral dissertation “The Conflict of Results of Experiments on the Memory of Forms” (Cabral, 1946) in 1945 at FFCL/USP, under Roger Bastide’s supervision.

Cabral worked as the assistant of the Canadian psychologist Otto Klineberg during his stay as a visiting professor in the psychology *signature* at USP (1945–1947). Under his incentive and assistance, Cabral took the initiative to create the *Sociedade de Psicologia de São Paulo* (São Paulo Psychological Society) (SPSP) in 1945, with the objective of gathering professors and researchers of psychology and stimulating the development of this science in São Paulo. Cabral was part of the founding board and presided SPSP in 1948, 1949, and 1953. In 1949, SPSP created the Psychology Bulletin [*Boletim de Psicologia*], one of the first journals specialized in psychology in Brazil (Angelini, 2011).

After Klineberg’s departure, Cabral became the Chair of Psychology at FFCL/USP (1947–1968), expanding the presence of psychology in the philosophy major and emphasizing the Gestalt and social psychology of Kurt Lewin (1890–1947), Fritz Heider, and Solomon Asch (1907–1996). In 1953, she submitted to the Congregation of the FFCL the project for the creation of the Major in Psychology, which occurred in 1957 (first class in 1958). The course was under the responsibility of two professors of psychology at the FFCL: Cabral and Arrigo Angelini (Chair of Educational Psychology). In 1958, Cabral created a Specialization Course in Clinical Psychology together with Durval Marcondes, Cícero Cristiano de Souza (1914–1980), and Aníbal Silveira dos Santos (1902–1979), opening space for the insertion of clinical psychology in the University. Experimental psychology was greatly promoted by the arrival of Fred Keller in 1961, an important disseminator of experimental behavior analysis in Brazil.

Another institutional contribution made by Cabral was the foundation of the *Associação Brasileira de Psicólogos* [Brazilian Association of Psychologists] (1954), an entity that lobbied politically for the regulation of the psychological

profession. Together with SPSP, they drafted a substitute project to the previous regulation project that had been elaborated by the *Associação Brasileira de Psicotécnica* [Brazilian Psychotechnical Association], which was led by Emilio Mira y López and based in Rio de Janeiro. The new project was approved by the House of Representatives, resulting in Law 4119/1962 (Castro & Ghiringhelo, 2011).

With the University Reform, carried out by the Brazilian military regime (1968), the Chairs were extinguished and departments were established. In 1969, The Psychology Institute [*Instituto de Psicologia*] of USP was created, already under university reform. As Cabral had not taken a free-doctoral exam to become a Full Professor, several members of faculty and students requested her to be removed from her position as Chair (Ramoschi-Chiarottino, 2001).

Even though Cabral renounced the position, she remained at the university (by Arrigo Angelini’s invitation) as an assistant professor of the Educational Psychology Department until 1970, when she retired. The eclecticism present in her education (combining gestaltist, experimentalist, and psychosocial influences), as well as the academic and administrative leadership positions she occupied in the 1940s–1960s in mostly male environments, is noteworthy in her academic and professional trajectory.

El Salvador · Organizational Psychology · Human Resources · Ergonomics

Eduardo Erick Cabrera Campos was a pioneer in the field of Industrial Psychology and

Ergonomics in El Salvador. Trained originally as an elementary school teacher, he went on to become a college professor, a high-ranking administrator, and an independent consultant in a career that spanned more than 30 years. With studies in England, he produced the first works on Industrial Psychology in the country and participated actively as an author and as an editorial board member in the most important Psychology journals published in El Salvador. He also helped to shape the professional organization of the field of Psychology and contributed to creating the first ethics code used by Salvadoran psychologists.

Eduardo Erick Cabrera Campos was the son of Virgilio A. Cabrera and Adela Vargas Campos (Margarita de Cabrera, personal communication, October 2, 2020). His father owned a print and worked as a typographer, and his mother worked as a teacher. He completed his elementary, middle, and junior high school studies at Pablo J. Aguirre School (1948–1954) and Isidro Menéndez National Institute (1955–1957), both in the city of San Miguel. Between 1959 and 1961, he received pedagogic training at Alberto Masferrer Normal School in San Salvador and received a degree in elementary school instruction. While teaching during the day, he completed his high school degree at night at Francisco Menéndez National Institute in 1961.

Immediately after finishing his high school degree, Cabrera began his studies in Psychology in 1962 at the University of El Salvador. By then, the Department of Psychology had changed its original 2-year psychometrics professional program to a 5-year undergraduate program (Calderón de Orellana, 2006). Cabrera received his degree in Psychology in April of 1969. Some of his instructors included Francisco Armando Torres and Rodolfo Semsch, who were two of the most advanced students of the program at the time, as well as a number of international professors such as Luis Blanco Pérez (?-?) and Pío Rodríguez (1935–) from Spain, Salvadora Tijerino Rizo (1912–1991) from Nicaragua, and Oscar Cristi Celis (?-?) from Chile.

Cabrera began his academic career at the Department of Psychology as a teaching assistant in 1966 and as professor in 1969. He initially taught courses on Differential Psychology, Experimental Psychology, and Statistics Applied to Psychology. His early interest in Scientific and Experimental Psychology motivated him to continue his graduate-level studies. Like his colleagues Rodolfo Semsch and Francisco Armando Torres, he was awarded a scholarship to study abroad in 1971 at the University of Aston in Birmingham, England. He chose to study at Aston because of its close relationship with companies and industries which would allow him to gain valuable theoretical and practical experience during his training. Between 1971 and 1973, he completed a Master of Science in Applied Psychology with an emphasis in Ergonomics. The Department of Applied Psychology at the University of Aston was fairly new when Cabrera arrived, but it was a thriving academic and applied research place to be back then (see Whitfield, 1972). Cabrera became the second Salvadoran psychologist to complete studies in Work Psychology, after José Santos Ramírez Peña (?-?).

Upon completing his studies in England, Cabrera returned to El Salvador in 1973 and rejoined the Department of Psychology at the University of El Salvador. As a professor during this period, he taught Psychology of Work, Ergonomics, Research Methodology, and Psychology of Learning. Shortly after his arrival, he became chair of the Department of Psychology (1974–1975) and director of the Institute of Humanities and Social Sciences of the Faculty of Sciences and Humanities (1975–1977). In addition to his academic duties at the University of El Salvador, he was an active member of the Board of Directors of the Faculty of Sciences and Humanities (1975–1977), the Superior University Council (1975–1976), and the General University Assembly (1974–1977) (Margarita de Cabrera, personal communication, October 2, 2020).

During the 1970s, El Salvador was experiencing a socially tumultuous period and the University of El Salvador had become an important center of activity for leftist and revolutionary groups. Due to its public nature, military forces

took control of the university in 1972 to disrupt such groups and target influential scholars and activists. As a result, the government closed the main campus for a year between 1972 and 1973. Working under such conditions was difficult, and Cabrera decided to leave the University of El Salvador in 1977 and joined the Department of Psychology and Education at the University of Central America (UCA), a Jesuit academic center that had much less political activity. Rodolfo Semsch had already left the University of El Salvador for similar reasons a few years prior, and Francisco Armando Torres would eventually do the same in 1986. Both of them worked at the UCA as well.

Cabrera taught at the UCA between 1977 and 2004. In the Department of Psychology, his courses included Work Psychology, Psychology Applied to Business, Experimental Psychology, and Research Methodology. In the Master program in Business Administration, he taught Organizational Psychology (1986), and in the Departments of Engineering and Business Administration, he taught other General Psychology courses. Administratively, he became chair of the Department of Psychology (1994–1997), director of the graduation seminary for undergraduate students (1991–2004), and member of the Superior University Council (1994–1995). While at UCA, he also collaborated with José Matías Delgado University's Department of Psychology and designed its Master's degree in Organizational Psychology. He was known by his colleagues not only for his methodic teaching approach but also for his sense of humor.

Cabrera combined his academic and administrative duties with consulting and independent work. As a consultant, he worked on description and analysis of positions, development of salary scales and incentive plans, design of personnel selection systems, and analysis of optimal staffing for organizations like the Central American Institute of Business Administration (INCAE), Inter-American Institute for Agricultural Cooperation (IICA), Inter-American Development Bank, World Bank, Cooper & Lybrand, and Spanish Agency for International Development (AECID), among many others. In addition, he was the head

of Personnel of the National Coffee Institute (INCAFE) (1978–1990) and the director of Human Resources of the Supreme Court of Justice (1998–2002).

The writing output produced by Salvadoran psychologists is generally very low, but Cabrera was fairly active both as an author and as an editorial board member in a number of publications and journals published in El Salvador. In 1971, he was an editorial board member of the *Department of Psychology's Newsletter* at the University of El Salvador, which was published biannually. In its first issue, Cabrera (1971a, 1971b) prepared two articles about the development and organization of the Department of Psychology. His first scientific articles appeared in 1976 and in 1977. He also compiled the first book on Work Psychology and Ergonomics published in the country. At UCA, he participated as an editorial member of the *Bulletin of Psychology* and the *Journal of Psychology of El Salvador*, both produced by the Department of Psychology, as well as the university's flagship publication, *Central American Studies* (known as ECA for its acronym in Spanish). In total, he published nine articles in the *Bulletin of Psychology* between 1981 and 1987 and six in the *Journal of Psychology of El Salvador* between 1988 and 1992. His work focused primarily on human factors and work design (Cabrera, 1983), war and unemployment (Cabrera, 1982, 1985), and Experimental Psychology (Cabrera, 1981), among others topics.

He was a close collaborator of Ignacio Martín-Baró in the editorial board of the *Bulletin of Psychology* and the *Journal of Psychology of El Salvador* and a close colleague of his in the Department of Psychology. He prepared a fictional interview and a eulogy of him (Cabrera, 1990; Cabrera et al., 1990), both published in the *Journal of Psychology of El Salvador*, after an elite battalion killed Martín-Baró with his housemates in November of 1989 at the UCA.

Like his friend and colleague Francisco Armando Torres, Cabrera played an important role in shaping the professionalization of the field of Psychology in the country. He published on this topic as well (Cabrera, 1975, Cabrera, 1984). His advice and leadership were sought

after often, and toward the end of the 1970s, he was elected president of the Salvadoran Society of Psychology for two consecutive periods (1977–1979). Between 1984 and 1986, he was a member of the Tribunal of Ethics of the Salvadoran Society of Psychology. In addition, he lobbied and presented the project of the Psychology Licensure Board to the Salvadoran Legislature, which was approved in 1987. This provided a legal framework to the field as a health profession and created a governing body that authorized and ensured the professional and ethical practice of Psychology in the country. He also contributed to creating the first ethics code used by Salvadoran psychologists. Cabrera was a member of the Salvadoran Society of Psychology, the Interamerican Society of Psychology, and the British Psychological Society.

In July of 2004, in the context of the first regional congress of Psychology organized by the Interamerican Society of Psychology in Guatemala, Cabrera received along with Francisco Armando Torres and Leticia Calderón de Orellana a diploma of recognition for their professional career and commitment to the field in Psychology in El Salvador (Calderón de Orellana, 2006). He died a few months later in San Salvador.

Died *Montevideo, 10 March 1970*

Marcelo Gambini

Facultad de Psicología, Universidad de la República, Montevideo, Uruguay

Keywords

Uruguay · Psychological examination · Psychiatry

Dr. Alfredo Cáceres was a prominent intellectual from Uruguay that was trained in medicine and specialized in psychiatry in the Universidad de la República (University of the Republic). He performed as an assistant in the Laboratorio de Psiquiatría (Psychiatry Laboratory), auxiliary physician and ward physician in the Hospital Vilardebó (Vilardebó Hospital) (Pérez Gambini, 1999; *Revista de Psiquiatría del Uruguay*, 1970). During his medicine studies he met the poet and teacher Esther Correch (1903–1971), with whom he got married and together they promoted the careers of various artists and writers. The marriage organized in their home, gatherings with prominent cultural figures, such as Torres García (1874–1949), Paco Espínola (1901–1973), Felisberto Hernández (1902–1964), and Carlos Vaz Ferreira (1872–1958), among others (Bardesio, 2006; Cabrera Maurí, 2020).

The perspective and therapeutic work developed by Cáceres was characterized by including contributions from the psychology and art fields, distancing itself from the preponderant perspectives of psychiatry at the time. It is so that in the decade of the 1930 he promoted the hiring of Waclaw Radecki (1887–1953) to work in the Facultad de Medicina (Medicine Faculty) in the

University of the Republic. The Polish psychiatrist taught courses and conferences about psychology, created the Centro de Estudios Psicológicos (Psychological Studies Center) in Montevideo in 1936. Cáceres along with the physicians Camilo Payssé (1879–1955) and Julio Marcos (1904–1963) contributed to the reception of the Polish psychologists work, while also promoting the development of the theoretical, clinical, and social aspects of functional psychology.

Alfredo Cáceres studied the artistic manifestations of the asylees and the work of Torres García (Cáceres, 1936, 1938, and 1941), highlighting the psychological tests in which functional psychology and psychoanalysis are articulated, despite not being a practitioner of psychoanalysis (Cáceres, 1938, 1939; Gutiérrez Venturini et al., 2017). In these works he introduces observations about hospital patients and he includes pictures, poems, and other literary productions by the asylees. Cáceres considered that this “doesn’t have any other objective than to highlight and establish the artistic productions that we have observed in the asylees” (1936, p. 58). This unusual interest in the expressive qualities of the asylees was an aspect not equally ranked by other psychiatrists at the time.

His contributions were around labotherapy, the prophylaxis of childhood mental illness and mental hygiene. In labotherapy he looks into the iatrogenic effects of work highlighting the way in which a good work organization can have therapeutic effects. In that field he highlights the role of psychotechnics as “experience, measurement, application and determination of the biological value of the individual in their professional activity; thus, like the effort towards a physiological organization of work” (Toulouse, cited in Cáceres, 1940b, p. 13). Cáceres emphasizes the value of the possibility to guide the patients with childhood mental illness toward social and pedagogic adaptation, posing that the teachers can early discriminate the symptoms of future mental illness in order to adopt children’s behavior in an efficient sense (Cáceres, 1943) and from that action be able to develop a mental hygiene action. The interest for the promotion of mental hygiene was also directed to the workplace. He was concerned

that the inadequate work organization would provoke in the worker morbid tendencies because of fatigue excess or poor dosage of work activity or because of the effect of the bad conditions and circumstances at work, and so he understood that the work had to be addressed “in a scientifically efficient way, in order to correct by the work itself, the tendencies and predispositions that the psychologist had confirmed in the subject” (Cáceres, 1940a, p. 8).

The approach to art, work, and different expressions of psychology with the interest of including them in his therapeutic work in the hospice made him interested with special emphasis in the realization of psychological tests. For the realization of these tests Cáceres applied attention tests (Bourdon, Radecki), intelligence tests (Radecki), and aptitude tests (Radecki); he was dedicated to the study of memory, imagination, tactile sensibility, the conservation, and weakening of judgement. These studies not only did allow Cáceres to get closer to understanding the mental functioning, but they also gave him tools for the personality study, in which it shows the articulation of contributions from William James (1842–1910), Pierre Janet (1859–1947), and Sigmund Freud (1856–1939). This shows that Cáceres, sharing the clinical criteria of his time, used of an eclectic and pragmatic perspective, centered in studying and resolving mental problems and phenomena, without worrying about the possible epistemic coherence problems at the time of articulating contributions from different approaches or theoretical positions (Cáceres, 1936, 1938, 1939).

Cáceres contributed to the development of local psychology providing new contributions in the clinical study of art, the realization of psychological tests and mental hygiene, sowing with Waclaw Radecki and others of his disciples the seed for the development of psychological practice. Cáceres’ contributions manifested over the 1940s, as the Psychological Medical Clinic in the Pedro Visca Hospital shows, directed by the pediatrician Dr. Julio Marcos (1904–1963). In turn, two disciples who were formed around his experiences at the Vilardebó Hospital stand out, Dr. Mario Berta (1920–2009) and Prof. Juan

Carlos Carrasco (1923–2010), who actively participated in the professionalization and institution-ization of psychology in Uruguay.

Born *Havana, 12 January 1941*

Died *Havana, 23 March 2018*

Dionisio Zaldívar Pérez
University of Havana, Habana, Cuba

Keywords

Cuba · Neuropsychology · Clinical psychology · Psych diagnosis

Cairo attended his first studies in Havana. At the end of the secondary education, he enrolled in Accounting at the Escuela de Comercio (School of Commerce). In 1964, he entered the Facultad de Economía (Faculty of Economics) at the Universidad de la Habana (University of Havana), and in 1966, he transferred to the Escuela de Psicología (School of Psychology) at the same University.

He obtained a degree in Psychology in 1971. He directed the Department of Clinical Psychology, the Direction of Scholarships, and the Education Vice-Deanship of the Facultad de Psicología (Faculty of Psychology) of the University of Havana.

In the early 1970s, he traveled to the Union of Soviet Socialist Republics (USSR), where he

obtained the Scientific Degree of doctor in Psychological Sciences in 1979. His research made him the first Spanish-speaking psychologist who developed as a neuropsychologist and to assimilate the contributions of Soviet psychology, as one of the most advanced disciples of Alexander Romanovich Luria (1902–1977), the father of clinical neuropsychology (Arias, 2020).

As a Clinical Psychologist and Neuropsychologist with an extensive academic, research, and assistance experience, he specialized basically in the area of Neuropsychological Diagnosis and Intervention where he developed novel evaluation procedures with a wide practice in the diagnosis of neurocognitive difficulties. He achieved a consistent application of the sociohistorical approach to the knowledge of brain functioning and brain disorders. He is considered the founder of Neuropsychology in Cuba. For his work in this field, he was appointed vice-president of the Sociedad Latinoamericana de Neuropsicología (Latin American Society of Neuropsychology).

In 1984, he assumed the direction of the *Revista Cubana de Psicología* (Cuban Journal of Psychology), and managed to maintain its publication in a stable manner (Arias, 2020).

He was the main Professor of the course on Psychological Diagnosis in the Faculty of Psychology and also the Discipline of Research Methodology. He created the course of Neuropsychology, which today is taught at the Faculty. He was President of the Scientific Council of the Faculty of Psychology.

The vast knowledge achieved in this branch of knowledge, not only spread it nationally. Along with other leading specialists, Cairo was a precursor and promoter of neuropsychology in different Latin American countries such as Mexico, Peru, Bolivia, Colombia, Nicaragua, Paraguay, Brazil, Uruguay, and Ecuador. He maintained professional exchanges with researchers from Spain and the United States and published some articles together (Arias, 2020).

He carried out an extensive work of university extension of Psychology, basically through radio's programs and in the press in which he published more than 100 articles of popular dissemination of Psychology.

He developed several researches on the subject of Psychological and Social Factors, and Human Health, which were the basis for most of his numerous publications and presentations in national and international events and congresses.

In addition to his unquestionable merits as a teacher and researcher, he was always considered a capable professional and an excellent professor.

Calcagno, Alfredo Domingo

Born *in Mercedes, Argentina, October 26, 1891*

Died *in La Plata, Argentina, March 9, 1962*

Ana María Talak
 Universidad Nacional de La Plata, La Plata,
 Argentina

Keywords

Argentina · Psychopedagogy · Experimental psychology · Calcagno Osmisthesiometer and Hafiesthesiometer

In 1905, he obtained his degree of Teacher at the Escuela Normal de Mercedes [Normal School of Mercedes], Province of Buenos Aires, Argentina. In 1910, he obtained the degree of Professor of Middle and High School in Pedagogy and related sciences, in the Pedagogical Section directed by Victor Mercante at the Facultad de Ciencias Jurídicas y Sociales de la Universidad Nacional de La Plata (UNLP) [Faculty of Legal and Social Sciences of National University of La Plata]. In 1911, he obtained a scholarship to study at the Free University of Brussels, Belgium. He obtained the degree of Doctor in Paidological Sciences and returned to Argentina in 1914.

His teaching and research career was mainly concentrated at the National University of La Plata. In 1911, he had been Assistant Secretary of the Pedagogical Section. Between 1914 and 1918, he was the Head of the Laboratorio de Psicología Exeperimental y Psicopedagogía (Experimental Psychology and Psychopedagogy Laboratory) at the Faculty of Educational Sciences created in 1914. In 1916, he was interim professor of teaching practice and other subjects: psychology, anthropology, and general didactics. In 1918, he was Associate Professor of psychology and anthropology. In 1920, he was Academic Advisor. Between 1920 and 1922, he was Professor of the complementary course of Psychology.

In 1922, he was appointed Full Professor of the Chair of Psychopedagogy and Director of the Sección de Ciencias de la Educación en la Facultad de Humanidades y Ciencias de la Educación (Educational Sciences Section at the Faculty of Humanities and Educational Sciences). In 1922, he also was Vice Dean and interim Dean of the Faculty and Dean in the period of 1936–1940. Between 1940 and 1944, he was a Professor Delegate and Vice President in the Superior Council of the University. In 1944, he was elected President of the National University of La Plata, the function of which was interrupted on October 8, 1946, due to the political intervention of the universities during the Peronist government. He returned to academic duties in 1955 until 1959, the year in which he was an Argentine delegate to UNESCO.

Many years before, in 1916, he had been cofounder and president of the University Federation of La Plata, which promoted the University Reform of 1918–1920. He had also been Director of the Departamento de Extensión Universitaria (Department of University Extension) and Consejero General de Educación (General Counselor of Education) in the Province of Buenos Aires. He also founded the first university radio station LR11. His pedagogical activity at other pedagogical levels focused on the annexed primary school of the Instituto de Profesorado Joaquín V. González (Joaquin V. González Institute) in 1909 as an assistant, in the direction of the annexed elementary school of UNLP in 1925 and in the direction of the Colegio Nacional de La Plata (National High School of La Plata) between 1934 and 1937. He founded the *Revista Americana de Educación* (American Journal of Education) in 1946 and organized and directed the Argentine edition of the *Tratado de Psicología* (Treatise on Psychology) by Georges Dumas (published between 1948 and 1958) and the Biblioteca de Ciencias de la Educación (Educational Sciences Collection) (since 1947), all of them edited by the publishing house Kapelusz. He wrote the prologues to the books of that collection, among which the prologue to

the Emilio Mira y López book *Manual de Orientación Profesional* (Handbook of Professional Orientation) (1947) stands out.

His first two publications in the *Archivos de Pedagogía y Ciencias Afines* (Archives of Pedagogy and Related Sciences) were *La imaginación creadora en el niño* (The creative imagination in the child) (Calcagno, 1910) and *Psicología del examinado* (Psychology of the examinee) (Calcagno, 1911a) included in his book *Contribución al estudio de la psicología del niño* (Contribution to the study of child psychology) (Calcagno, 1911b). Other works with which he contributed to general and pedagogical psychology were the following: *Laboratorios de Paidología* (Paidology Laboratories) (1916), *Descripción y técnica de nuevos aparatos de antropología* (Description and technique of new anthropology devices) (1918), *Estudio anamnéstico del educando* (Anamnesis of the Student) (Calcagno, 1921), *La precocidad infantil* (Childhood precocity) (1922), *Los primeros recuerdos* (The first memories] (Calcagno, 1922), *Notas sobre exégesis del lenguaje musical* (Notes on the exegesis of musical language) (1924), *Osmiestesiometría. Su investigación psicopedagógica* (Osmisiesometry. Its psychopedagogical research) (Calcagno, 1924), and *Contribución al estudio de la Hafiestesiometría* (Contribution to the study of the Hafiesthesiometry) (Calcagno, 1925), besides other pedagogical works and proposals for educational laws.

Since 1915, he created more than 30 original devices for research in psychology and anthropology, among which the following 2 stand out: the hafiesthesiometric compass (1926), which solves and overcomes the difficulties of other previous similar instruments of Weber (1795–1878), Spearman (1863–1945), Toulouse (1865–1947), and Vaschide (1874–1907), due to its greater precision, easier reading, and the always equal pressure of the stimulus on the skin; and the osmiesthesiometer (1924) that was applied to the study of the excitation thresholds and olfactory recognition, testing the Weber-Fechner Law and showing that smell deviated from the postulates of the law. Both devices were included in the Zimmermann house catalog of the time.

Alfredo D. Calcagno has contributed to the field of pedagogical psychology or psychopedagogy in Argentina through an empirical and quantitative approach of the issues, with the creation of new measuring devices and the discovery of previously unverified psychophysical relationships in relation to olfactory discrimination and tactile fingertip discrimination. He contributed to the diffusion in the country of relevant foreign works in this field, such as the handbooks by George Dumas (1866–1946), Emilio Mira y López (1896–1964), and Henri Piéron (1861–1964).

Francisco José de Caldas y Tenorio was the fifth child of a large family of 15 children of José Caldas Rodríguez de Camba, a Spaniard born in Galicia, and Vicenta Thenorio y Arboleda, who belonged to a noble family of Spanish origin, born in America. His father reached the rank of captain in the Militia Company of Popayán and was named Subdelegate Judge of Lands of the same province. He was a strong authority figure to Francisco José. He imposed a career on his son, but he was also supportive of his endeavors. He was instrumental in presenting some of his son's writings to Alexander von Humboldt (1789–1859), contributing to creating a connection between the two naturalists before they met personally (Díaz Piedrahita, 2012).

Francisco José de Caldas studied Latinity and philosophy at the Real Colegio Seminario San Francisco de Asís (Royal College Seminary San Francisco de Asís) in Popayán. There, he was influenced by José Félix de Restrepo (1760–1832), a young teacher who arrived in Popayán to teach philosophy. Restrepo taught his classes in a practical way and introduced the curriculum's positive sciences, including geometry, trigonometry, algebra, and experimental

physics. This was a significant discovery for Caldas and directed his interests toward science and away from the scholastic studies common to early education in his time.

In 1788, Caldas moved to Santafé to pursue law studies at the Colegio Mayor de Nuestra Señora del Rosario. Only those of Spanish origin were provided education at the time, so Caldas' family had to demonstrate their genealogy to prove the “purity of their blood.” Francisco José was admitted to “El Rosario” and received a scholarship. He received the degree of *Bachiller en Derecho* in 1792, the first step for the titles of Licentiate and Doctor of Law, which he did not attain.

After returning to Popayán, he taught Civil Law supporting the project to transform the San Francisco College into a university. This project was to fail, and he resigned his cathedra (Amaya & Suárez Lozano, 2018). He was also appointed Padre General de Menores (Father General of Minors) by the city's Cabildo, Junta y Regimiento (Council, Board, and Regiment). This was a public position aimed to protect minors from what were considered social vices at the time. He obtained support from artisans and wealthy families in the city, where he located over 60 children (boys and girls) as apprentices of jobs and trades. This unusual approach reflected an acquired social vision, more in line with his former teacher Restrepo and others seeking a new vision for their society (Díaz Piedrahita, 2012). He was also an assistant at a law firm during this period (Rueda, 1993).

By 1795, with his family's support, he became a merchant and traveled through the territories of Timaná, Neiva, Gigante, and La Plata. He failed in this enterprise, but traversing the Andes Mountains during this vocational attempt offered him a renewed interest in nature and science (Pohl-Valero, 2009).

For Caldas, it was clear that a full-time dedication to the observation and measurement of nature required, in addition to knowledge and the use of a specialized language, the possession of a set of standardized instruments, financing and belonging to a scientific community in which he could share and discuss his findings. Francisco José

surrounded himself with some fellow “criollos” (Spanish-Americans) who shared his academic interests to solve this lack. Caldas managed to organize astronomical and meteorological expeditions with other illustrated criollos and discussed his scientific ideas through a letter exchange. He also requested financial support to acquire texts and instruments that facilitated his scientific work. During this time, he made numerous thermometric, geographic, climatological, astronomical, and barometric observations. He developed a method to measure altitude using the temperature of boiling water as a reference. Although other researchers in Europe had developed similar methods, his isolation and lack of scientific information elsewhere proved his capabilities as an independent and creative scientist, as Humboldt was willing to acknowledge during his visit to the New Granada (Appel, 1994; Pohl-Valero, 2009).

In 1801, Caldas received a copy of the local newspaper *Correo Curioso, Erudito, Economico y Mercantil* of Santafé de Bogotá, recently founded by Jorge Tadeo Lozano (1771–1816). He realized that Guadalupe and Monserrate’s hills’ measurement was wrong and set out to correct this error. He then sent a letter to the editors of the *Correo Curioso* entitled “Observaciones sobre la verdadera altura del cerro de Guadalupe que domina esta ciudad” (Observations on the correct height of the Guadalupe mountain that dominates this city). The diffusion of this communication in a local newspaper had significant implications for the growth and recognition of Caldas as an integral and rigorous intellectual (Appel, 1994). He established contact with José Celestino Mutis (1732–1808), the Spanish naturalist and priest. The latter was the leader of one of the most important botanical companies of the nineteenth century in the territory of New Granada, the Real Expedición Botánica del Nuevo Reino de Granada (Royal Botanical Expedition of the Kingdom of New Granada). Additionally, he captured the attention of two European naturalists who read this text and who happened to be on one of their scientific journeys in the New World. They were Alexander von Humboldt and his fellow traveler, Aimé Bonpland (1773–1858).

On December 31, 1801, after exchanging a couple of letters for some months, Caldas, Humboldt, and Bonpland finally met in Ibarra (current Ecuador). From that moment on, they began a collaboration marked by mutual admiration and exchange of ideas in fields of interest such as meteorology, astronomy, and botany.

Caldas was impressed by Humboldt and delighted to learn as much as possible from these naturalists and made plans to become their travel companion in America. Unbeknown to Humboldt, Caldas began a series of actions to support his aspiration, including seeking financial help and recommendations from Mutis that he was sure would add to the excellent impression Humboldt had of him. Unexpectedly, Humboldt rejected Caldas’ plan and chose instead Carlos Montúfar (1780–1816), the son of the Marquis of Selva Alegre, who had been his host in Quito, to accompany the Europeans in their journey. This decision was a blow to Caldas and his aspirations to become a world-level scientist (Appel, 1994; Pohl-Valero, 2009). The possible causes of Humboldt’s choice have inspired much speculation among historians. The episode shows how much science is susceptible to the different aspects of the human experience and exemplifies the unequal interactions between local and European naturalists (see Amaya & Suárez Lozano, 2018; Nieto et al., 2005).

Humboldt, Bonpland, and Montúfar continued their journey through America, leaving Caldas behind. He remained an associate to the Royal Botanical Expedition, and under the commission of Mutis, he would make significant contributions to this scientific enterprise.

Three years later, still under the tutelage of Mutis, Caldas was appointed by the viceroy as director of the Real Observatorio Astronómico de San Carlos (Royal Astronomical Observatory of San Carlos) based in the city of Santafé. The observatory building would be vital for astronomical science development and later played a role in the independence movement as a place for political action.

As a result of the multiple meetings in which the New Granada society’s relevant characters took part, the *Semanario del Nuevo Reyno de*

Granada (New Kingdom of Granada Weekly) was born, under the direction of Francisco José de Caldas. This cultural magazine aimed to disseminate knowledge and advances related to multiple scientific disciplines such as geography, natural history, economics, and education, among illustrious criollos (Nieto et al., 2005; Pohl-Valero, 2009).

Although Caldas' interests centered on mathematics, astronomy, geography, and botany, scientific disciplines were not as highly defined and separate at the time as they became later in the nineteenth century and especially during the twentieth century. Thus, it is not surprising that his interests were broad and included physical characteristics of the various regions, distribution of plants and animals based on those characteristics related to the climate, and human behavior (i.e., customs, social interactions and organization, virtues, and vices). Such broad interests were common to naturalists, including Humboldt himself, and resulted from an understanding of nature as a unity. Thus, Humboldt's *Cosmos* attempted to integrate all that knowledge into a single opus (Wulf, 2015). Caldas had made plans for an integrated compilation of descriptions of the land, flora, fauna, and human populations for the New Granada, but could not complete such work (Díaz Piedrahita, 2012).

Thus, it should not be surprising that in 1808, Caldas published a work in which he set forth his ideas on how various natural forces altered the physical and moral characteristics of the native beings of the New Granada. This text was titled *Del Influxo del Clima en los Seres Organizados* (*The Influx of Climate on Organized Beings*).

The essay resulted from controversy on climate and its effect on behavior among various authors (i.e., Francisco José de Caldas, Diego Martín Tanco, and Francisco Antonio Ulloa) who published their arguments in the *Semanario*. Current historians have widely interpreted the controversy as an attempt by Spanish-Americans (criollos) to differentiate themselves from other Americas' inhabitants, namely, natives and blacks (slaves). This is thought of as an instrumental

strategy to justify how Spanish-American colonies should be socially and politically organized (Múnera, 1998). Caldas' essay's central argument was that climate has important effects on different aspects of anatomy, physiology, and behavior of humans, including their moral values, work ethics, social interactions, and their sexuality, among other characteristics.

By climate, I mean not only the degree of heat or cold of each region but also the electric charge, the amount of oxygen, the atmospheric pressure, the abundance of rivers and lakes, the arrangement of mountains, forests, and pastures, the degree of population or deserts, winds, rains, thunder, fogs, humidity, etc. The force of all these powerful agents on living beings, combined in every way and in different proportions, is what I call the influence of climate (Caldas, 1808).

He acknowledged that in geography, the climate had a narrower meaning at the time but insisted it was essential to include all these factors in an understanding of the subject. In this sense, this essay is considered as a crucial colonial precursor of literature on the behavioral sciences (Ardila, 2019) and climatology (Pabón-Caicedo, 2019).

Caldas tried to establish patterns but was not clumsy in doing so in a simplistic way. For example, in a note on the relationship between latitude and skin color, he pointed out: "when you only attend to latitude, when you look at nature in parts and in small, when you do not count on all the resources and all its agents, then the law escapes, you see nothing but contradictions, you slander yourself, and you draw monstrous conclusions" (1808, note 16). Thus, defining Caldas as a determinist is, at the very least, to err in the accusation.

Beyond the inferred purpose of the essay, there is a vital role of the arguments he used, in terms of the nature of explanation of behavior, based on scientific arguments and not in terms of religious or popular ones. The text combines observations on distribution and characteristics of plants and some animals, with characteristics of human populations, especially of the New Granada. Caldas' observations are not exempt from prejudices, based mainly on his social and religious

origins. Beyond that, he always sought an order that allowed him to understand the nature surrounding him, including the social nature.

As a naturalist, Caldas recognized that the same factors that affect plants and animals could influence humans. His arguments corroborated anatomical, physiological, and behavioral observations, assuming or inferring connections between these levels of observation.

Caldas addressed problems of human behavior in other writings dedicated to education and also published in the *Semanario*. Consistent with his actions as a juvenile judge many years earlier, he highlighted the need to use pedagogies that interest students, to avoid punishment and violence, and in general to use a reasoned strategy to modify their behavior (Ardila, 2019).

At a personal level, Caldas married María Manuela Barahona on May 13, 1810, before knowing her personally, by proxy. She later joined him in Santafé. They had five children, two of whom died at a tender age (Pohl-Valero, 2009).

During his time as director of the Astronomical Observatory (since 1806), Caldas became involved in the independence movement and was instrumental in the declaration of independence in 1810, both facilitating meetings of the leaders of the movement at the Observatory and as a co-director of the *Diario Político de Santafé de Bogotá* (Political Daily of Santafé de Bogotá).

After the new government was established, Caldas used his knowledge to support the new nation's defense and shaping as a military engineer. By 1812, he grew disenchanted with the government of Antonio Nariño (1765–1823), president of Cundinamarca, who defended a centralist view of government. Caldas supported a federalist view, serving Antonio Baraya (1776–1816). Nariño's government ordered a seizure of his assets, and he was presented as a traitor to the centralist government. He then fled and worked as an engineer in Antioquia until 1814, when Simón Bolívar (1783–1830) took Santafé de Bogotá and called him to organize a military academy in the capital (Díaz Piedrahita, 2012).

In 1816, Pablo Morillo (1775–1837) succeeded in his campaign to reconquer America. Caldas was captured and executed on October 29, 1816, for his participation in the independence movement (Groot, 1889).

Francisco José de Caldas played a significant role as a scientist and citizen in the years leading to the New Granada's independence. As a scientist, Caldas had an integrated view of nature. This may have resulted from his experience traveling the Andes as a merchant and the dynamics of developing a career as a scientist in a context not well suited for intellectual work. His interests were broad, and as such, he made contributions to many areas of knowledge. The literature dedicated to analyzing Caldas' scientific work has centered on some contributions and has mostly ignored others, including his contributions to what today is known as the behavioral sciences, that is, the functional interaction between organisms and their environment. However, this bias is slowly changing and providing new information to understand the ample contributions to knowledge by Francisco José de Caldas, known as "El sabio Caldas" ("The wise Caldas").

Calderón de Orellana, Leticia

Born in San Vicente (El Salvador), December 14th, de 1938

Nelson Portillo

Boston College, Chestnut Hill, MA, USA

Keywords

El Salvador · History of psychology · Disability

Leticia Calderón Alférez de Orellana is recognized as the first woman to obtain the degree of psychologist in El Salvador and as one of the pillars of the field's professional organization in the country. She was one of the founding members of the Salvadoran Society of Psychology and one of the main promoters of the Psychology Licensure Board that gave this profession its independent status from other disciplines and a place in the country's Higher Council of Public Health. As one of the female pioneers in the field, she was the first in several endeavors, including being the first psychologist to work almost exclusively with people with disabilities and the first author to publish a book dedicated to the historical development of psychology in El Salvador, during its institutional period.

Calderón de Orellana was born in the central department of San Vicente. Both of her parents, German Calderón and Sara Alférez de Calderón, worked the land in a rural farm. She completed her elementary and secondary education at the Victoriano Rodríguez and Eucharistic Schools in San Vicente. Then, she moved to the capital of San Salvador to complete her high school degree and receive pedagogic training at Spain Normal School between 1956 and 1958. Here, she obtained the title of urban elementary school teacher. She married Renán Alcides Orellana, a poet, writer, and journalist in 1968. They had five children and two of them are psychologists as well.

Calderón de Orellana's teacher training covered subjects such as general psychology,

pedagogy, and child and adolescent development, which allowed her to learn more about the mental, physical, and environmental aspects of human beings as well as her humanistic vocation. The formal studies in psychology had just begun in 1956 at the University of El Salvador with a 2-year degree in psychometrics. The program was later reformed in 1959 and extended to 5 years to obtain a bachelor's degree in psychology. Calderón de Orellana applied for admission that same year and was a student of psychology while still teaching at an elementary school in the mornings. On May 6, 1966, Calderón de Orellana and six male students obtained their psychology degree. She became the first woman to accomplish such a feat, and this event marked just the beginning of many first times in her professional career.

Although some students decided to further their studies abroad in the early years of the psychology program, Calderón de Orellana opted to stay in the country during her long professional career. By the time she was in the third year of the program, she had begun her clinical practice under the supervision of Ofelia Rivera de Bernal (1923–1912), a professor who had studied in Switzerland with Jean Piaget. Calderón de Orellana administered psychological tests to children at the clinic of the Hogar del Niño, a nursery and orphanage in San Salvador. During her last year of studies, in 1965, she started collaborating with a psychiatrist working at the Hearing and Language Center from the Salvadoran Institute for the Rehabilitation of Disabled Persons (Instituto Salvadoreño de Rehabilitación de Inválidos or ISRI). That same year, she was appointed psychologist at the Musculoskeletal Center and the following one, she began her career as a psychologist at the Hearing and Language Center. In 1990, she was named the coordinator of psychological services at ISRI. In total, she worked in this institution for 27 years. She also opened her private psychological practice and worked primarily with children and adults with disabilities.

Calderón de Orellana dedicated many years of her career to teaching as well. She was an

elementary school teacher from 1959 to 1963, and a part-time professor in the Department of Psychology at the University of El Salvador between 1973 and 1986. At her alma mater, she taught the following subjects: Methods of Psychological Exploration, Projective Methods of Personality, and Psychological Practices. She also taught subjects such as Psychology Applied to the Rehabilitation of People with Disabilities to teachers at the Hearing and Language Center and to physical therapists at the Musculoskeletal System Center. Toward the end of her career, she taught Personality Psychology at the National Academy of Public Security (ANSP) to aspiring police officers.

Since high school, Calderón de Orellana had played leadership roles in different student-run organizations. Her vocation to serve and lead was critical when she became one of the 16 members who founded the Salvadoran Society of Psychology on October 10, 1964. She was designated as Secretary of Public Relations in the First Board of Directors and helped to elaborate the Society's bylaws and to apply for legal status, which were approved and renewed in 1967, 1977, and 2001. She reprised this same position in 1979 for two additional years and was elected president in two non-consecutive periods, 1966–1968 and 1973–1975.

The Society advanced the promotion and development of psychology in the country. It helped the field to generate social relevance and achieve professional autonomy, thus paving the way to form the Psychology Licensure Board in 1987. The Board's main objectives were to authorize and ensure the professional and ethical practice of psychology in the country. Calderón de Orellana was elected as a member of the Board for two nonconsecutive periods, 1987–1989 and 1993–1995, and as its president between 2001 and 2003.

Calderón de Orellana wore many professional hats and participated actively in national and international psychology meetings. In 1967, she traveled to Mexico to participate in the XI Inter-American Congress of Psychology and presented the paper "Current Situation of Psychology in El

Salvador (Calderón Alférez, 1967).” At the request of Carlos M. Malgrat (1918–2016), executive secretary of the Inter-American Society of Psychology (SIP) for Central America and the Caribbean (1967–1969), she completed a comprehensive research paper “On Psychological Tests in El Salvador.” This early contact with SIP was key for her as she became the country delegate for El Salvador in three periods: 1968–1970, 1979–1981, and 1981–1983. In 2004, during the First Regional Congress of Psychology held in Guatemala, Calderón de Orellana received a distinction from SIP for her professional career and commitment with the field of psychology in El Salvador.

In 2006, Calderón de Orellana made one of the most significant contributions to the field with her book *History of Psychology in El Salvador (1928–2005)*. This is the first comprehensive historiographic study of the development of psychology, particularly during its formal and institutional period at the University of El Salvador. The book has been printed four times (2006, 2009, 2018, and 2021). The original content has been revised and the book title in the latest edition was slightly changed to *History of Psychology in El Salvador during the 20th Century* to reflect the changes made.

Calderón de Orellana retired from private practice in 1998 and from professional positions held in various institutions in 2003. Her long trajectory spans for over 40 years and much of her legacy is chronicled with her own words in her book.

Bolivia · Teaching of psychology · Neuropsychology

Dr. Rene Calderón Soria was a Bolivian psychiatrist. After studying at the Escuela San Calixto (San Calixto School, La Paz, Bolivia), run by Jesuit priests, he began medical studies at the Universidad de Chile (University of Chile, Santiago, Chile) in 1941, and continued them at the Universidad Mayor de San Andrés (University of San Andrés, UMSA, La Paz), obtaining the MD in 1948, with the gold medal for his brilliant performance as a student. He specialized in psychiatry at the Universidad de Buenos Aires (University of Buenos Aires, Argentina, 1950), with an internship at the Clínica Psiquiátrica “La Chapelle” (“La Chapelle” Psychiatric Clinic) (Ocampo-Barba, 2017).

In 1951 he returned to Bolivia and won the position of head of the Psychiatric Clinic of the Faculty of Psychiatry at UMSA by a merit contest. In 1951 he founded the first private psychiatric clinic in La Paz, directing it for 10 years.

In 1953 he was professor of general psychology at the Escuela de Servicio Social (School of Social Service) of UMSA. A year later, he was invited to also be a professor of general

psychology at the Escuela de Enfermería de la Clínica Americana de La Paz (School of Nursing at the American Clinic of La Paz).

In 1954 he was a founding member of the Sociedad Boliviana de Psiquiatría (Bolivian Society of Psychiatry), but his interest in psychology was admirable for the time as well as his tireless work for the dissemination of psychological knowledge and the training of human resources health sciences. As psychology was included as a course in the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) of UMSA, Calderón Soria was appointed the first full professor of general psychology (1959–1980).

In 1957 he did a post-specialty in clinical psychiatry through applied practice as a visiting psychiatrist at the “Saint Elizabeth Hospital” in Washington, USA. He returned to Bolivia and assumed the chair of neuropsychiatry at UMSA (1959–1980).

In 1961 he was a founding member and director for 4 years of the Clínica Psiquiátrica “Miraflor” (“Miraflor” Psychiatric Clinic) and 2 years later he was a founding member and president of the Liga Boliviana de Higiene Mental (Bolivian League of Mental Hygiene). In 1964 he made arrangements for the foundation of the Hospital Psiquiátrico “Díaz Romero” de la Seguridad Social (“Díaz Romero” Psychiatric Hospital of the National Social Security Fund) in the city of La Paz. In 1965, he was appointed head of the Department of Psychiatry of the Policlínico “9 de abril” (“9 de Abril” Polyclinic) of the National Security Fund. In 1965 he was cofounder of the *Gaceta Boliviana de Neuropsiquiatría* (Bolivian Gazette of Neuropsychiatry). A year later he founded the Instituto Nacional de Adaptación Infantil (National Institute for Child Adaptation, INAI), an institution dedicated to the care of children with developmental disorders and different needs, which he directed from 1970 to 1976.

In 1968 he was the creator and founder of the Instituto Boliviano de Psiquiatría y Psicología (Bolivian Institute of Psychiatry and Psychology) and the following year he was part of the Commission that developed the project for the creation of the Psychology undergraduate program of the Universidad Católica Boliviana (Bolivian

Catholic University), together with Alberto Conessa and Alberto Seleme Antelo (1935–1977). That same year he obtained a scholarship to Canada for a master’s degree, choosing at that time the area of Psychology and Neuropsychology, completing a postgraduate degree in physiological psychology and biopsychology at McGill University (1970), and at the same time studied experimental psychology at New York University. His research was related to the measurement of cognitive processes (Ocampo-Barba, 2009).

Between the years 1972 and 1975 he was creator and head of the Department of Psychology of the Facultad de Humanidades (Faculty of Humanities) of the UMSA, with the aim of offering the entire faculty and the entire university subjects in service psychology, work that finally led him to found the career of psychology at this university, in 1983.

In 1976 he was dean of the Faculty of Humanities and in 1978 vice chancellor of the UMSA, a university where he reached the degree of emeritus professor in 1995.

He was a founding member of the Colegio de Psicólogos de Bolivia (Board of Psychologists of Bolivia) in 1974.

Rene Calderón Soria was undoubtedly the Bolivian pioneer of neuropsychology and the main promoter of psychology, being professor of the first generations of psychologists in Bolivia (Aguilar, 1983).

Calvo, Isabel

Born *Buenos Aires, Argentina*

Died *Buenos Aires, Argentina, 23 August 1977*

Marcela Borinsky

Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Argentina · Psychology professionalization · Buenos Aires Psychologist's Association (APBA) · Center for Research and Counseling in Psychology (CIAP) · Psychotherapist body image

Isabel Calvo was part of the first graduate's group of the undergraduate Psychology Program at the Universidad de Buenos Aires (University of Buenos Aires). She actively participated in the search for the Argentine psychologist professional profile and took part in the creation of the Asociación de Psicólogos de Buenos Aires (Buenos Aires Psychologists Association) founded in November 1962 to defend the rights of the new professional psychologists (Borinsky, 1999; Klappenbach, 2000). She was its first President from 1962 to 1964.

She committed herself to clinical training and teaching in the Universidad de Buenos Aires (University of Buenos Aires). She was professor assistant in a childhood and adolescent psychology course, and from 1964 to 1966 she was Profesora Adjunta (Associate Professor) of the second course on developmental psychology (Psicología Evolutiva II) (Calvo & Calvo de Spolansky, 1970).

In 1967, after the military government of General Onganía took away the autonomy of the University of Buenos Aires, Isabel Calvo, together

with her sister María Teresa Calvo (1929–2012) and a group of psychologists who moved away from the intervened classrooms, created the Centro de Investigación y Asesoramiento en Psicología (Center for Research and Counseling in Psychology, CIAP), which was the first private institution organized for psychologist to teach, train, and improve the skills of the new psychologists (Carpintero & Vainer, 2004). Showing the same drive as she had demonstrated with the organization of the Buenos Aires Psychologists Association, Isabel Calvo took the leadership of this institution, and she was the General Director during its first years. She was also member of the Asociación de Psicología y Psicoterapia de Grupo (Association for Group Psychology and Psychotherapy).

She wrote several articles and two books in collaboration with her colleagues. She was described by her friends, students, and patients as an open-minded, collaborative, and always ready for team work. She insisted on the importance of dialogue and making the “kitchen” of clinical work visible. Her latest book focused on the body from different approaches both from the perspective of the patient as well as the role of the psychotherapist body image along the psychological treatment process. Isabel died before finishing the postface of the book (Calvo & Riterman, 1979).

Isabel Calvo, as well as her sister Maria Teresa Calvo, is recognized for being one of the pioneers in the creation of professional organizations of psychologists in Argentina. Her participation in the collective book edited in 1973, *El rol del Psicólogo* (The Role of the Psychologist), evidences the central place she occupied in the debates on the definition of the psychologist's profile (Bricht, Calvo, Dimant, Palacios, Pravaz, Calvo de Spolansky, & Troya, 1973). On the other hand, after his death, the homage he received, in the *Revista Argentina de Psicología* (Argentine Journal of Psychology) (Ferrara, 1978), also highlighted his leadership position in the institution, the Buenos Aires Psychologists Association, which edited that journal (Klappenbach & Arrigoni, 2011).

María Teresa Calvo, also known as María Teresa Calvo de Spolansky, was one of the first graduates of the undergraduate Psychology Program at the Universidad de Buenos Aires (University of Buenos Aires). She actively participated in the search for the Argentine psychologist professional profile and took part in the creation of the Asociación de Psicólogos de Buenos Aires (Buenos Aires Psychologists Association, APBA) founded in November 1962. This organization supported the professional and union organization of the first graduated in psychology, and its main objective was to defend the interests of new professional psychologists (Borinsky, 1999; Klappenbach, 2000). She was part of the first directive board.

She committed herself to clinical training and started teaching with José Bleger (1922–1972) with whom she took over his work project for psychologists and defended it on different fronts. “Bleger was our passion” said Tessi Calvo, as she was known by his relatives and colleagues, in an interview carried out in 1995. She was an Assistant Professor teaching a personality course under his direction and collaborated with him in an experimental experience at a shanty town in the Buenos Aires’s city. It was a heavy populated place with serious problems where they worked on prevention in primary care with mothers and children in psychosocial issues (Cremonte & Sincofsky, 1995). She was also supervisor of brief treatments in the Departamento de Psiquiatría infant-juvenil (Department of Child and Adolescent Psychiatry) at the Hospital Penna (Penna Hospital) in Buenos Aires. In 1963, she was also in charge of the Child Psychology course at the Universidad Nacional de Córdoba (National University of Cordoba) (Calvo & Calvo de Spolansky, 1970).

In 1967, after the military government of General Onganía took away the autonomy of the University of Buenos Aires, María Teresa Calvo, together with her sister, Isabel Calvo and a group of psychologist who moved away from the intervened university, created the Centro de Investigación y Asesoramiento en Psicología (Center for Research and Counseling in Psychology, CIAP), which was the first private institution organized for psychologist to teach, train, and improve the skills of the new psychologists (Carpintero & Vainer, 2004). At CIAP, she was Co-Director of the Departamento de Orientación Psicológica (Counseling Department). In 1978, the systematic training began at CIAP with a Graduate School in Clinical Practice, created and directed by María Teresa Calvo. In it, several generations of psychologists and physicians were trained.

In 1975, the result of the work carried out at CIAP was reflected in a book written in collaboration with Isabel Calvo and Frida Riterman de Dimant: *Parejas y familias. Vínculo, diálogo, ideología* (Couples and families. Bond, dialogue, ideology). In this book, they integrated different

perspectives (psychoanalysis, gestalt, existential psychotherapy) through the implementation of different devices: social laboratories, psychodrama, and therapeutic groups.

María Teresa Calvo, as well as her sister Isabel Calvo, is recognized for being one of the pioneers in the creation of professional organizations of psychologists in Argentina. Her participation in the collective book edited in 1973, *El rol del Psicólogo* (The Role of the Psychologist), evidences the central place she occupied in the debates on the definition of the psychologist’s profile (Bricht, Calvo, Dimant, Palacios, Pravaz, Calvo de Spolansky & Troya, 1973).

Brazil · Phenomenology · Chair professor

Son of Luiz Antônio da Silva Campos and Carmelinda Quadros da Silva, Nilton Quadros Campos was born in Rio de Janeiro (RJ), Brazil, on August 23, 1898. He graduated in medicine in 1923 at the then called Universidade do Brasil (UB) (University of Brazil), nowadays Universidade Federal do Rio de Janeiro (Federal University of Rio de Janeiro). After graduating in 1924, he joined the team of psychiatrists as an assistant at the Laboratório de Psicologia da Colônia de Psicopatas do Engenho de Dentro (RJ) (Psychology Laboratory of the Colony of Psychopaths of Engenho de Dentro), under the direction of Gustavo Riedel, where he remained

until 1930. In this institution, which constituted a space for education and scientific production of psychological knowledge in Rio de Janeiro, Nilton Campos became assistant to Waclaw Radecki (Penna, 2001), with whom he published in 1928 a work on experimental psychology (Campos & Radecki, 1928). At the end of this period, he published a text on affective life (Campos, 1930).

Between 1931 and 1933, on a study mission in the city of São Paulo, SP, Brazil, he collaborated with Joaquim Penino in the organization and foundation of the Instituto Médico-Pedagógico Paulista (São Paulo Medical-Pedagogical Institute) and participated in the foundation of the Sociedade de Neuropsiquiatria de São Paulo (Neuropsychiatry Society of São Paulo). Back in Rio de Janeiro, in 1934, he assumed the direction of the Serviço Neuropsicológico da Secretaria de Saúde e Assistência a Psicopatas do Distrito Federal (Neuropsychological Service of the Department of Health and Assistance to Psychopaths of the Federal District), where he worked until 1938 (Motta, 2004; Holanda, 2012). In 1937, he taught psychology and logic at Colégio Pedro II (Pedro II School) in Rio de Janeiro and was a professor of psychology at Escola de Enfermeiras Alfredo Pinto (Alfredo Pinto Nurses School) of the Serviço Nacional de Doenças Mentais (National Service for Mental Illness), as well as taught psychology on the Complementary Course of the Faculdade Nacional de Medicina (National College of Medicine). In 1938 and 1939, he was Full Professor of Educational Psychology at the former Universidade do Distrito Federal (University of Federal District), and between 1939 and 1944, he was Full Professor of Educational Psychology at the Faculdade Nacional de Filosofia (National College of Philosophy) (Mancebo, 2004). During this period, he published some works on personality examination and analysis of affective life (ANM, www.anm.org.br).

From 1944, he held, in replacement of André Ombredane (1898–1958), the chair of General Psychology at the Faculdade Nacional de Filosofia (National College of Philosophy), and in 1945, he took on this chair through a competition (Holanda & Mendonça, 2019), presenting

a thesis on phenomenology (Campos, 1945) (Holanda & Mendonça, 2019). In 1948, Nilton Campos assumed the direction of the Institute of Psychology, since he was already chair of psychology at the National College of Philosophy, having as assistant Antonio Gomes Penna (Centofanti, 1982). His management is praised for its support to the formation of the faculty and expansion of the Institute's bibliographic collection (Schneider, 1999). At that time, his thinking presented important changes, and it is possible to observe the author's leaving from the experimental tradition in psychology that marked his formation and the approximation with the philosophical reflections of the phenomenological school of Franz Brentano (1838–1917) and Edmund Husserl (1859–1938) (Centofanti, 1982; Holanda, 2012). The epistemological debate with Gestaltpsychologie would also be part of this movement, having the author criticize the gestaltist “naturalism” present in the thesis of isomorphism (Holanda, 2012).

In 1951, he published an article (Campos, 1951) in the directory of the Instituto de Psicologia (Psychology Institute) of the Universidade do Brasil (University of Brazil) (Holanda, 2012). That year, he created, in partnership with Antônio Gomes Penna and Eliezer Schneider, the *Boletim do Instituto de Psicologia* (Institute of Psychology Bulletin), a journal that would remain in operation until 1974 (Penna, 2004). In the following years (1953, 1954, and 1958), he published in the Institute of Psychology Bulletin three articles. He influenced, because of his emphasis on a strong theoretical basis, Hanns Ludwig Lippmann in preparing the first psychology degree course in Brazil at the Pontifícia Universidade Católica do Rio de Janeiro, in 1953 (Pontifical Catholic University of Rio de Janeiro) (Baptista, 2010).

In the direction of the Psychology Institute (from 1948 to 1963) at the University of Brazil, Nilton Campos was against the development of applied psychology, an action that at that time was represented by the work of the Instituto de Seleção e Orientação Profissional (ISOP) (Institute of Selection and Professional Guidance) founded and directed by Mira y López (Mancebo, 2004). Campos also took a stand against the autonomy of

psychology in the practice of psychotherapy, considering that psychology should be subordinated to medicine (Castro & Ghiringhello, 2011). In a position contrary to that defended by Mira y Lopez, Nilton Campos was afraid that the creation of the undergraduate course in psychology – which was created at the University of Brazil only in 1965, that is, after his death – could attract the interest of unprepared people. “He was afraid of charlatans, and that is why he resisted this initiative” (Schneider, 1999, p. 356).

In 1960, Nilton Campos published a book (Campos, 1960a) and presented a thesis (1960b) in his candidacy to the Academia Nacional de Medicina (National Academy of Medicine). In 1961, he became Full Member of Chair No. 59 (ANM – Academia Nacional de Medicina, n.d.).

Throughout his career, he joined several Brazilian and international academic societies, including Sociedade de Neurologia, Psiquiatria e Medicina Legal (Neurology, Psychiatry and Forensic Medicine Society), Sociedade Brasileira de Criminologia (Brazilian Society of Criminology), Associação Brasileira de Medicina (Brazilian Association of Medicine), Sociedade de Psicologia de São Paulo (Psychology Society of São Paulo), Sociedade Brasileira de Antropologia e Etnologia (Brazilian Society of Anthropology and Ethnology), International Phenomenological Society, American Psychological Association, Internacional Rorschach Society, and Société Française de Psychologie (French Society of Psychology). He was a founding member of Sindicato Médico (Medical Union) and president of the Sociedade Brasileira de Psicologia (Brazilian Society of Psychology).

There were some psychology societies in Brazil, but this one was founded on June 16, 1942, in Rio de Janeiro and chaired by Cunha Lopes (1891–1973), a physician also associated with the Society of Psychiatry and Forensic Medicine. At the time of its foundation, the society consisted of three sections: psychopedagogy, psychotechnics, and psychopathology (Correio da Manhã, Edition # A14607, 06/17/1942). On August 29 of the same year, Nilton Campos took office as president of the Society, giving a conference at the Associação Brasileira de Imprensa (Brazilian Press Association) (Correio da Manhã, Edition # 14668, 08/27/1942).

In 1957, still under the presidency of Nilton Campos, a Society joined the International Union of Scientific Psychology (Jornal do Brasil, Edition No. 251, 10/27/1957).

On November 3, 1963, after his death, the University Council of the University of Brazil unanimously approved the appointment of the Central Pavilion of the Psychology Institute in his honor (Correio da Manhã, Edition #21952, 03/11/1963). The career of Professor Nilton Campos has recognized importance for Brazilian psychology, with a special impact on the development of phenomenological studies. The production of conceptual foundations of phenomenological and existential psychology in Brazil is attributed to the Nilton Campos's phenomenology, due to its unprecedented dissemination of Husserl in the country. Among the limitations of his thought, the focus his work gave to scientism is highlighted, compared to the modest emphasis given to other important issues for psychology, such as pure or transcendental consciousness, distinction between the natural attitude and the phenomenological attitude, and the problem of phenomenological reductions (Holanda, 2012).

Community mental health · Creator of
academic programs

José Enrique Cangiano-Rivera is the son of José Luis Cangiano Lugo, a businessman, and Leonor Rivera Meléndez. His family is well-known in his native city of Ponce, and his siblings are two brothers: José Luis, a physician; José Ángel, a lawyer (RIP); and a sister, Millie, a journalist. He attended the Universidad de Puerto Rico, Río Piedras (UPR-RP) [University of Puerto Rico], where he obtained a Bachelor's degree in 1965 and a master's degree in Psychology in 1967. He wrote a master's thesis about disciplinary practices of parents of adolescents. José Enrique Cangiano completed the doctoral degree in

Clinical Psychology in 1976 at the *Centro Caribeño de Estudios Postgraduados* [Caribbean Center for Graduate Studies], currently known as Carlos Albizu University. His dissertation focused on perceptions of Puerto Rican mothers and their children about discipline, in two socioeconomic groups.

Dr. Cangiano began his career as a psychologist in public service in 1967 at the Ponce Mental Health Center. There he developed a program for hospitalization of patients with drug abuse behaviors. Later he was appointed Director of this center and of mental health services for the southern region of Puerto Rico.

His academic career began in 1967 at Interamerican University of Puerto Rico, Ponce Campus, as a lecturer in basic psychology. In 1969 he began teaching Experimental Psychology at *Pontificia Universidad Católica de Puerto Rico* (PUCPR) [Pontifical Catholic University of Puerto Rico], also in Ponce. In 1970 he was asked to organize and chair the Psychology Department at PUCPR. He was a professor of Psychology at PUCPR during 26 years; he taught courses in psychopathology, human sexuality, and hypnosis and organized the graduate program in Psychology.

In 1995 he was asked to chair the Psychiatry Department at Ponce School of Medicine and became the first psychologist in Puerto Rico to direct such a department at an accredited medical school. This appointment was a confirmation of the collaboration between psychology and psychiatry that Dr. Cangiano strived to achieve for many years. In his initial experiences in psychological practice, he observed the general perception that psychologists should be assistants of psychiatrists, not equals. Dr. Cangiano persisted in educating other professionals about the role of psychologists and achieved productive working relationships in medical settings. At the medical school, he also identified the need for psychological services in the Southwestern region of Puerto Rico and collaborated in the creation of a new doctoral program in Psychology (PsyD).

In 2009, Dr. Cangiano was appointed Associate Dean of Behavioral Health at Ponce Medical School. At the time, public mental health services were undergoing changes which afforded

opportunities for new programs. He developed Centers for Behavioral Health in six municipalities, to provide services for low-income citizens, with government subsidized medical insurance. He also established the *Centro de Investigación, Prevención y Tratamiento contra la Violencia* [Center for Research, Prevention and Treatment against Violence] which included eight programs to serve the community.

During his career he wrote numerous grant proposals to offer services to various populations in need, among them abused children, children with developmental disabilities, pregnant teens, adolescent victims of crime, and adolescents at risk of violence and alcohol and drug abuse. These proposals were granted by different governmental agencies, including Departments of Health, Justice, Family Services, and Education; Administration of Mental Health and Addiction Services; Women's Advocacy Office; and Industrial Development Corporation. These proposals also created opportunities for practice and employment of psychologists and other mental health professionals.

Dr. Cangiano presided the Puerto Rico Psychological Association in 1977–1978 and was very active in promoting the licensure of psychologists, since at the time the profession did not have legal guidelines to ensure quality of training and practice for the protection of the public. This organization awarded him the two most outstanding honors for colleagues: Psychologist of the Year in 1988 and Lifetime Achievement in 2007.

In 1983 the licensing law for psychologists in Puerto Rico was approved, and Dr. Cangiano was appointed president of the Board of Psychologist Examiners in 1986. He served on the Board until 1992, and, during his tenure, the Code of Ethics for Psychologists was developed.

During 40 years he maintained a private practice providing psychological services for children and adults with a variety of mental health conditions. His main focus is on diagnosing and treating mental, emotional, and behavioral disorders. Some of the common disorders that he has treated are learning disabilities, substance abuse, depression, anxiety, and eating disorders. He performed psychological evaluations for candidates applying to serve as municipal guards, provided

psychological services to incarcerated youth, and served as expert witness in trials at the Judicial Centers of Ponce and Mayagüez (Cangiano, 2018).

José Enrique Cangiano Rivera has performed enduring leadership roles in academic programs, community mental health services, and professional and civic organizations. He has combined these endeavors with a musical career as an organist, clarinet player, and director of musical groups that do presentations for charitable purposes. His unique sense of humor and style of communication is greatly appreciated by the community where he shares his knowledge of psychology for the public good, including assistance during disasters like hurricanes and earthquakes that have affected his native city of Ponce and surrounding areas.

Peru · Psychiatry · Teaching of psychology

Arnaldo Cano was a Peruvian psychiatrist, who studied medicine at the Universidad Nacional Mayor de San Marcos (UNMSM, 1936–1945), graduating in 1946. Disciple of Honorio Delgado, between 1947 and 1969, he worked at Hospital Víctor Larco Herrera, becoming head of service. Also between 1955 and 1962, he directed the psychiatry service of the Daniel Alcides Carrión Hospital (El Callao). In 1951, he joined the Peruvian Army as head of the Psychotechnical Section of the Peruvian Military Instruction Center (*Centro de Instrucción Militar del Perú* (CIMP), currently *Centros Académicos del Ejército*, Army Academic Centers), in charge of the selection exams and counseling of officers and noncommissioned officers. In that position, he remained until 1971.

In 1954, he joined the Pontifical Catholic University of Peru (*Pontificia Universidad Católica del Perú*, PUCP) as a professor, where he became director of studies in the specialty of psychology (teaching, among other courses, general psychology and experimental psychology). After retiring

in 1968 from the PUCP, in 1969, he founded and directed until 1971 the specialty of psychology at the Inca Garcilaso de la Vega University (*Universidad Inca Garcilaso de la Vega*), teaching the courses of psychological methods and general and special psychopathology and also being in charge of the supervision of the sociology specialty. He was also a professor of research methodology at the University of Lima. In 1972, he was appointed executive director of the Center for Population and Development Studies (*Centro de Estudios de Población y Desarrollo*, CEPD), a position in which he remained until 1980, when he became a director of the Peruvian Institute of Social Security (*Instituto Peruano de Seguridad Social*).

From a very young age, he showed great interest in psychology, which by his own declaration he could not study since the specialty of psychology as an autonomous branch in the universities did not exist. That led him to approach Walter Blumenfeld, who taught psychology at the UNMSM. His interest was manifested in the dissemination of psychological tests and in the constant renewal of the psychotechnical tests with which applicants to the Military School of Peru were evaluated, as well as to the School of the Navy of Peru, of which he was an *ad honorem* advisor. Along with his interest in psychology, Cano was also a reader of literary works, especially the novels of Spanish writer Azorín (1873–1967), constantly mentioned in his writings and in his lectures.

Although Cano was not a very productive author, his book *Notes for a Sketch of the Psychology of Aging* (Cano, 1988), published posthumously, is one of the first Peruvian works in the area of psychogerontology. In this book, he deals with the old age from the angle of medicine and psychology but incorporates and integrates reflections of a philosophical nature and sociological approaches.

During his years at the CEPD, he dealt with issues related to the population problems of Peru in several publications. Likewise, he was a pioneer in the emergence of professional psychology in Peru, not only through his long teaching work at two important universities in Lima but

also through articles referring to academic and curricular aspects of training for students, with a perspective oriented to clinical psychology (León, 1998).

Professor Floralba Cano graduated as a psychologist from the Universidad Nacional de Colombia [National University of Colombia] in 1968. Her high school diploma as a certified teacher influenced her teaching style recognized for her methodological rigor, theoretical depth, discipline, demanding requirements, and critical perspective, which makes her one of the pioneers and most respected teachers of psychology in Colombia. The importance of her work as a teacher-researcher is endorsed by the many distinctions granted to her, among which we may cite the National Psychology Award by the Federación Colombiana de Psicología [Colombian Federation of Psychology] (1984); Distinguished Professor (1994) and Distinction to Teaching Work granted by the Universidad del Valle [University of Valle] (2007); Contribution to the Teaching in Psychology by the National University of Colombia (2007); and the National Psychology Lifetime Achievement Award by the Colegio Colombiano de Psicólogos [Colombian Board of Psychologists] (2015). The latter, in particular, endorses the value and significance of her contribution to the discipline.

The teaching career of Professor Cano began in 1969 in the Department of Psychology at the National University of Colombia, the first university to train psychologists in the country and teacher seedbed for Colombia. At first, she was appointed director of the Admissions and Student Management Service; simultaneously she was an assistant professor in the courses of statistics and psychometrics in the program of psychology. At the same time, Cano was head of the technical staff and special services division and in the academic evaluation section of the Instituto Colombiano para el Fomento de la Educación Superior (ICFES) [Colombian Institute for the Promotion of Higher Education], between 1971 and 1978, which made her part of the history of psychological measurement in Colombia. She was also professor, chair of the department, and director of the undergraduate program of psychology at the University of Valle from 1980 to 1997, when she retired.

At the University of Valle, she was also a professor of statistics, psychometrics, research

methodology, educational psychology, organizational psychology, written and observation work methodology, and psychological interview; she was also director and advisor of theses and professional practice in different areas of psychology, which evidences her broad vision and mastery of the discipline. Her teaching career led her to teach at other universities in Colombia such as the Universidad de los Andes [University of Los Andes], psychometrics (1977–1978); Pontificia Universidad Javeriana [Pontifical Javeriana University], epistemology and research methodology (1977); and at Universidad de San Buenaventura [University of San Buenaventura], qualitative research methodology and psychometrics (2009). Thus, Floralba Cano became a national reference in teaching and research, being especially recognized for the quality of her teaching in the areas of psychometrics and research methodology, her overall vision of psychology to which she always referred to as a “multi-paradigmatic discipline,” overcoming in that way the typical rivalry between different psychological approaches. The imprint that she gave to psychometrics teaching was the development of skills on the construction of psychological tests; she emphasized following the logic of the project aiming to understand the fundamental scientific-technical principles of the construction of psychological tests, a basic tool for professional practice and research in psychology.

After retirement, Cano continued contributing to the discipline as an advisor for the Ministry of National Education in the Program for Quality Assessment of Higher Education (1997–1999); she was also consultant of the same Ministry for the Program of Evaluation of Teaching Performance (1999–2000), adviser of ICFES regarding the Examination of State by Competences for Professionals (ECAES; called today Saber-Pro) (1999–2000), and adviser for the Asociación Colombiana de Facultades de Psicología (Ascofapsi) [Colombian Association of Psychology Faculties] in the development of the first exam for the evaluation of competencies in psychology (2003 and 2004). Cano participated in the foundation of Ascofapsi (1984); she was also

co-founder and president of the Latin American Center for Studies in Psychology, co-founder of the International Center for Clinical-Psychological Research, and president of the Federación Colombiana de Psicología [Colombian Federation of Psychology] (1978–1980).

Research projects developed at the University of Valle, National University of Colombia, and mainly at ICFES, resulted in multiple publications in different specialized journals, whose rigor and impact are recognized by the national academic community.

Beyond her legacy as a teacher, the written legacy of Floralba Cano demonstrates the breadth and plurality of her thinking, which allowed her to speak on various topics, among them, the use of statistics in performance evaluation (Cano, 1971) and the controversial issue of the object of study for psychology to which she proposed, somewhat ahead of her time, subjectivity as the answer to that question (Cano, 1988). In relation to psychometrics, she wrote a manual of knowledge tests (Cano, 1996), a manual on the construction of competency tests for psychology, and contributed to the discussion on the concept of competencies (Cano, 2005); she also published an interesting and well-known essay on the value of psychological tests in the legal context, which she wrote attending a request to participate in a congress on psychiatry (Cano, 1983). In the field of education, she wrote about the development and understanding of stimulation in childhood (Cano, 1987) and on cognitive achievement in primary school (Cano, 2006; see Murillo, 2006). In her turn from psychometrics to Jungian psychology, during this latest stage of her life, she has written about consciousness, the symbolic reality of the self, and the constitution of the subject (Cano, 1999). Her importance as a teacher and researcher made her to be repeatedly invited to participate in interviews that were published in several books and journals (Mondragón, 2010; Orejuela, 2008, 2019). Most of her writings were dispersed in multiple national journals, and other valuable writings were left unpublished. Recently, however, a compilation of her most important writings was published in the book *Floralba Cano, Escritos [Flor Alba Cano, Writings]* (Orejuela,

2013), which organized her work for a wider and younger audience.

Professor Cano leaves an indelible mark on the training in psychometrics, statistics, and research methodology among generations of psychologists in the country; many of them are academicians themselves who continue to use her texts as a class reference, transmitting her legacy of clarity, systematicity, and rigor in the field of research methodology. She occupies a unique place and of special affection among her students dispersed throughout the country, which she always referred to under the nickname “chatico” (an affectionate nickname used frequently in the Bogotá region of Colombia) with which she apologized for not remembering their names; in the end, she began to be recognized herself as “the chatica.” Floralba Cano leaves a legacy as a teacher of teachers and is a reference for the discipline in the country; she is one of the few women of her generation who, being already a mother and a certified teacher, was trained in psychology and contributed to the construction of the discipline with quality and rigor, in teaching, research, and trade.

Antonio Caparrós was born in Spain. His father was a republican physician who, after some years of Franco's imprisonment, was able to escape to Argentina in 1947, when his son was 18 years old. Antonio also studied medicine at the Universidad de Buenos Aires (University of Buenos Aires), coinciding his years of study with those of Ernesto "Che" Guevara (1928–1967), whom he met for that reason (Anguita & Caparrós, 1997). He was President of the Centro de Estudiantes de la Facultad de Medicina (Student Center of the School of Medicine) and, after graduating as a doctor, he specialized in psychiatry (Kesselman, 1987). He was married to Martha Rosenberg, one of the pioneers of the national campaign for legal abortion in Argentina, from whose marriage two sons were born, Martín Caparrós (1957), a prominent writer and journalist, and Gonzalo Caparrós (Martha Rosenberg, personal communication, July 13, 2021). He divorced in 1967 and was subsequently in a relationship with Ada Korn, a well-known publisher.

He started his psychiatric practice at the Hospital Neuropsiquiátrico de Hombres (Neuropsychiatric Hospital for Men, nowadays Borda Hospital) and almost immediately became part of the team led by Mauricio Goldenberg (1916–2006), who in 1956 organized the Servicio de Psicopatología y Neurología del Policlínico Aráoz Alfaro (Psychopathology and Neurology Service of the Araoz Alfaro Polyclinic) in Lanús, a suburb 30 min away from the city of Buenos Aires. That service, simply known as "the Lanús" made possible the passage from the neuropsychiatric hospital to the general hospital, as researched by Sergio Visacovsky (2002). As part of this group, he used various therapeutic resources, from psychoanalysis to shock therapies or psychopharmacology, especially from the application of chlorpromazine. Nevertheless, Goldenberg, Caparrós, and their team recommended caution in the use of psychodrugs. Specifically, they recommended that the drugs be associated with occupational therapy or other biological treatments. And, fundamentally, they recommended that any drug treatment should be that drugs should be at the service of individual or group psychotherapy (Goldenberg et al., 1961). In

1958, together with a group of psychiatrists belonging to the Partido Comunista Argentino (Argentine Communist Party, PCA) led by Jorge Thenon, he founded a private clinic, the Clínica Bulnes (Bulnes Clinic), where he also applied from psychotherapies to deep sleep therapy.

In the early 1960s, he was part of the teaching teams for Psychology I and Psychology II courses in the newly created undergraduate Psychology Program in the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the University of Buenos Aires, whose full professor was José Itzigsohn (1924–2018). Itzigsohn joined as a professor in 1962 and Antonio Caparrós in 1964 (Vezzetti, 2016). Although both belonged to the Argentine Communist Party (PCA), both Itzigsohn and Caparrós had distanced themselves from the Pavlovian officialist position of the PCA, held by Adolfo Lértora (1903–1980), Jorge Thénon (1902–1985) and César Cabral (1917–2011). Itzigsohn and Caparrós were also advisors to two of the organic or PCA-linked publishing houses, Lautaro and Proteo (García, 2014). Both publishing houses published Spanish translations of works by Henri Wallon (1879–1962), among them, *Del acto al pensamiento* (From act to thought) with a prologue by Antonio Caparrós (Caparrós, 1964). In 1964, Itzigsohn was elected director of the Departamento de Psicología (Department of Psychology), replacing Enrique Butelman (1917–1990). In 1966, he proposed a new course, General Psychology III, focused on topics of thought and language proposing Antonio Caparrós as professor in charge (Rossi, 2016). In that course, Caparrós introduced central concepts of Vygotsky's *Thought and Language* and Luria's text, "Speech development and the formation of mental processes," which only was introduced into English by Michel Cole in 1969.

Around 1965, Caparrós founded and directed the Instituto de Psicología Concreta (Institute of Concrete Psychology) (Martín Caparrós, personal communication, July 13, 2021). For his part, in 1973 he achieved a tenure position in the General Psychology I course. The program was divided into three initial parts and three "special" parts. The first part was devoted to psychology and the

understanding of man and society. The second one related to economic structure and psychology, ideology and power and psychology; in that part, it included as a required reading Wallon's text, "Sur la spécificité de la psychologie" (On the specificity of psychology). The original French version of that article had been published in 1953 in *La Raison* (The Reason), which Wallon himself had directed since 1951, and was republished 10 years later in an issue of homage to the French psychologist by the journal *Enfance* (Childhood), which Wallon had founded. Translated into Spanish, it was included in the book *Fundamentos dialécticos de la Psicología* (Dialectical Foundations of Psychology), published by Proteo, which compiles most of the articles included in that homage issue of *Enfance* and a couple of papers from a 1959 issue of *Enfance*, dedicated to *Psychologie et Éducation de l'Enfance* (Child Psychology and Education) among them, "Science de la nature et science de l'homme: la psychologie" (Psychology: Science of nature and science of man). The translation of this essay was the first one in the volume edited by Proteo, after the prologue by Antonio Caparrós (Wallon, 1965).

Toward the end of the paper "On the specificity of psychology," Wallon clearly stated both the continuity and the discontinuity between the animal world and the human world insofar as "language and society intervene in man, that is to say, the perceptual world is superimposed on the world of representations and ideas" (Wallon, 1965, p. 41). Caparrós understood that Wallon's ideas made it possible to establish different *levels of integration* between the biological and social levels. In those days, in a collective work presented at the *Segundo Congreso Argentino de Psicología* (Second Argentine Congress of Psychology) held in San Luis in 1965, he took up Wallon's proposals with contributions from Vygotsky and Piaget to argue that mental operations were internalized actions since "the fully developed human psychological level is a higher stage of ontogeny that develops on the basis of and from bodily dynamics" (Korol et al., 1965/1971, p. 183).

In the syllabus of the course Psychology I at the UBA, Caparrós also included as required readings two Round Tables on "Ideology and Concrete Psychology." The first one, which took place in 1965 at the Faculty of Philosophy and Humanities at the University of Buenos Aires and was published in the first issue of *Cuadernos de psicología concreta* (Journal on concrete psychology). José Bleger (1922–1972), Antonio Caparrós, Enrique Pichon Rivière (1907–1977), and León Rozitchner (1924–2011) participated in the debate, which was coordinated by the psychoanalyst Guillermo Ferschtut (1930–2007). The second one took place a few months after the first one and was published in the second issue of *Cuadernos de psicología concreta* (Papers on concrete psychology). Neither Bleger nor Pichon Rivière participated in the second debate. In addition to Caparrós and Rozitchner, Armando Bauleo (1932–2008) joined the activity; on that occasion, the coordinator was Jaime Schust. Both activities have been analyzed on several occasions. Caparrós' interventions reflected the growing importance of political activism in his project of concrete psychology. And it is worth mentioning the questioning, but at the same time the vindications towards Freud, whom he considered the *first concrete psychologist* in spite of his ideological limitations (Avila-Espada, 1987).

That is to say, Caparrós, who in those years had already distanced himself from the Communist Party, coincided partially with the consideration of psychoanalysis that circulated widely in the Communist Parties, whether Soviet, French, or Argentinean. Caparrós considered psychoanalysis as a bourgeois practice and, for this reason, recognized in psychoanalysis "some partial successes," although based on "false ideological premises" (Caparrós, 1971b, p. 10). He also stressed that psychoanalytic theory was the product of the relations of capitalism at a given historical moment. For this reason, he questioned his friend Hernán Kesselman (1933–2019) for promoting the integration of psychoanalysts into the most exploited sectors of society. In any case, he pointed out that if they did so, it would no longer be in their condition as psychoanalysts, but as

political activists. And he did not hide his questioning of the group of psychoanalysts gathered in Plataforma, among them Marie Langer (1910–1987) and Hernán Kesselamn. In his opinion, a national perspective was necessary instead of the support of “scientific internationals” (Caparrós, 1971b, p. 10).

In the mid-1960s, he also pioneered studies related to group psychology from a gender perspective. One of his studies, which deserved international attention, focused on the attitudes and conflicts of married professional women when they assume roles in industrial society far distant from traditional roles (Tumin & Greenblat, 1967).

Antonio Caparrós also formed part of the editorial teams of numerous cultural magazines related to the so-called *new left*. Among them, *La Rosa Blindada* (The Armored Rose), from number five of the magazine. In issue number six, corresponding to September–October 1965, he published a work on moral and material incentives at work, which had also been published in the August issue of *Nuestra Industria* (Our Industry), a magazine from La Habana. Caparrós raised the need to overcome individualism and the need to configure a new type of morality and, of course, a new type of man, in the light of the central opposition between capitalism and socialism (Caparrós, 1965a, b). He also participated in the magazine *Nuevo Hombre* (New Man) in which he deepened on the role of conscience to achieve a socialist society. Along with this, Antonio Caparrós participated with members of the chair of General Psychology II of the UBA in neighborhood activities close to a “psychotherapy in the street” and in which he emphasized that psychology should not be limited to modifying the individual, but above all the society as a whole (Anguita & Caparrós, 1997, volume 2, p. 210).

Antonio Caparrós went into exile in Spain in April 1976 immediately after the beginning of the dictatorship in Argentina. There he received, together with his cousin Nicolás Caparrós (1941–2021), the also exiled Hernán Kesselman (Kesselman, 1987). In Spanish exile, the echoes of Henri Wallon in Antonio Caparrós would not be completely lost, but would undergo a gradual process of hybridization. This gave rise to what is possibly the main work of Antonio Caparrós, the

book he wrote jointly with his cousin Nicolás, *Psicología de la Liberación* (Liberation Psychology) (Caparrós & Caparrós, 1976). The theoretical postulates, from which Caparrós & Caparrós started, had a perspective close to left-wing psychoanalytic theories, from Marxist, Sartrean, and Althusserian concepts. Also, a perspective close to the work of Juan José Hernández Arregui (1913–1974), especially his book *La formación de la conciencia nacional* (Hernandez-Arregui, 1973). From that perspective, they proposed a *psychology of liberation*, conceiving the subject as a free man, but from the dimension of “class struggles,” that is, from the perspective of his class consciousness, his organization, and his struggle for equality. Thus, the objective they proposed was the achievement of an organized society, within the framework of a popular and national consciousness, capable of overcoming dependence and colonization (Caparrós & Caparrós, 1976).

It is important to emphasize that in those years *liberation* was an important topic in diverse areas from philosophy and theology up to social sciences. In such a context, Antonio and Nicolás Caparrós were the first to postulate a *psychology of liberation* in a disciplinary key, as pointed out in the Anglo-Saxon context by Burton and Kagan in their paper “Liberation Psychology: Learning from Latin America,” published in 2005 in the *Journal of Community and Applied Social Psychology*. Subsequently, the postulates of *psychology of liberation* elaborated by the Spanish-Salvadoran psychologist and priest, Ignacio Martín-Baró, had greater preponderance and dissemination, especially after his assassination in 1989.

From the perspective of both Caparrós, an antecedent of *Liberation Psychology* was the creation of the Instituto de Psicología Nacional (Institute of National Psychology), which was organized at the beginning of the 1970s. Within this framework, Antonio and Nicolás Caparrós proposed in 1973 the need to review the roles of therapist and patient on the basis of what they considered the “historically conditioned social totality” (Caparrós & Caparrós, 1973, p. 127). There they emphasized collective *counter-violence-participation* and the conviction that

the “mental health worker should be, above all, a member of the National Liberation Movement” (Caparrós & Caparrós, 1973, p. 131).

Four aspects deserve to be synthesized in Antonio Caparrós. First, the way in which he actively participated in the crossroads between psychiatry, psychology, and mental health that was characteristic of the Argentine *psy culture* since the late 1950s and during the following two decades. Secondly, in that space, Caparrós tried, as few did in those years, to advance in the theoretical foundation of psychology. Thirdly, this allowed him a development that was reflected in the academic universe of psychology. And finally, his unconditional commitment to the searches and struggles of his time and his place.

Capello García is the son of immigrants, a Catalan mother and an Italian father who were harassed for their social democratic political orientations. Both arrived in Mexico in 1934 from Barcelona, during the government of Lázaro Cárdenas (1934–1940). This influenced his perspective on social problems and the importance of framing them in the broadest way. He studied law at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) from 1954 to 1959. He did his master's in Psychology from 1959 to 1961 at UNAM and did other studies at the University of Texas at Austin and doctorate in Social Psychology at the UNAM (1973) with studies at Columbia University from 1974 to 1976. He has participated in various seminars and international congresses and has published many books and articles.

His training as a lawyer allowed him to start studying Criminology. Hence his interest in Psychology, which let him to seek a broader explanation of criminal acts, social deviance, and the subjective elements that converge in the criminal act. He approached Sociology and Anthropology with the same purpose but decided to move towards Social Psychology when it was assumed to be an area of Psychology and not an independent discipline. In the master's program, he received guidance from psychoanalysis, industrial psychology, psychometry, and research methodologies. It is from the latter that he met Dr. Rogelio Díaz Guerrero. Under his guidance, he began to

study the Psychology of the Mexican People from a sociocultural perspective. In this context, he assumes Social Psychology as an independent discipline since 1970.

On a trip to the University of Texas, as a part of the master's program, he established a friendship with Elliot Aronson (b. 1932) and Morton Deutsch (1920–2017), with whom he began a training in experimental social psychology to which Philip George Zimbardo (b. 1933) and Leonard Berkowitz (1926–2016), among others, would also contribute. Through seminars and talks, he broadened his perspective of a research plan in social psychology for Mexico. With other academicians such as Luis Lara Tapia, Ranulfo Moreno, and Rogelio Díaz Guerrero, they elaborated the project to create the Facultad de Psicología (Faculty of Psychology) at UNAM, which was founded in 1973.

During his doctoral studies, he rejoins Deutsch and meets Leon Festinger (1919–1989). He also met Serge Moscovici (Srul Herş Moscovici, 1925–2014) who was a guest professor at Columbia University. There, he had access to an academic debate based on conferences and courses that were given. His critique of American social psychology allows him to agree with Moscovici, who recognizes his approach as an alternative to the individualistic, experimental, and behavioral approach.

In the 1960s León Festinger created and directed the Transnational Committee on Social Psychology of the Social Sciences Research Council accompanied by John T. Lanzetta (1926–1989), Deutsch, and Moscovici (Moscovici, 1989). To this end, meetings were organized in various European cities that resulted in the creation of the European Association of Experimental Social Psychology (1966) and later the *European Journal of Social Psychology* (1971), a similar activity he sought to develop in Latin America, where he found Cappello as well as Aroldo Rodrigues and others (Rodrigues, 2008). In this way and with the same purposes of promoting the production and development of Social Psychology at an international level, meetings were implemented in Montevideo (1969) and other cities in Colombia, Venezuela, and Mexico. The central idea of the Latin Americans was to organize a congress of contemporary social

psychology in different countries and to offer courses and conferences, for which a meeting was implemented in Bogotá, Colombia (1973) (Montero, 1989).

In the dynamics of its diffusion and to the bewilderment of North Americans, the *Asociación Latinoamericana de Psicología Social* (Latin American Association of Social Psychology) (ALAPSO) was formed (1973) with Aroldo Rodrigues as its first president. This would cause psychologists from Colombia, Venezuela, and Mexico to join a series of activities over several years. In 1979–1983 and 1983–1987, Cappello served as president. There he encouraged several students to pursue graduate studies in the United States, Venezuela, Colombia, Mexico, and France. The option was very wide, but many students did not return to their countries of origin, since there were no academic vacancies or the socio-political and economic conditions were not adequate due to the presence of authoritarian regimes in a large part of the Latin American countries. Also, he has incurred in educational research. This has allowed him to publish with other authors and work with research groups from different institutions.

During his life, Cappello has founded various academic organizations and institutional bodies. As a fervent believer in the collectives, he founded the *Departamento de Psicología social* (Social Psychology Department) at the UNAM (1970) at the then Facultad de Filosofía y Letras (Faculty of Philosophy and Literature); in 1982 he founded the *Centro Regional de Investigaciones Multidisciplinarias* (Regional Center for Multidisciplinary Research) (CRIM-UNAM) with Dr. Raúl Béjar Navarro (1937–2010) which led to the creation of other stations in Chiapas, Sonora, and Tamaulipas, where he established his place of residence. There he founded the *Centro Multidisciplinario de Investigaciones Regionales* (Multidisciplinary Center of Regional Investigations) (UAT/UNAM) in 1990. He also coordinated and founded the *Sociedad Mexicana de Psicología Social* (Mexican Society of Social Psychology) (SOMEPSO) in 1986, being its first president, and later founded the *Revista Internacional de Ciencias Sociales y Humanidades* (International Journal of Social Sciences and Humanities) (SOCIOTAM) in 1990.

Cappello is a member of the Sistema Nacional de Investigadores (National System of Researchers) (SNI) of Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACyT). He is a professor at the Unidad Académica Multidisciplinaria de Ciencias, Educación y Humanidades (Multidisciplinary Academic Unit of Science, Education and Humanities) (UAMCEH) of the Universidad Autónoma de Tamaulipas (Autonomous University of Tamaulipas) (UAT). There he leads the Doctorate in Education. In his long career, he has received several awards. He stands out as a member of the Consejo Editorial (Editorial Council) of the *Revista Española de Psicología Social* (Spanish Journal of Social Psychology). He is also a member of Editorial Trillas and Editorial Limusa (both are publishers), a director and editor of the SOCIOTAM journal, and a miembro honorario (honorary member) of SOMEPSO. He also received the Diploma y Medalla al Mérito Académico (Diploma and Medal of Academic Merit) for 60 years of Research and Teaching at the UNAM in 2017. He has been awarded as a Miembro Excepcionalidad Académica (Exceptional Academic Member) of the SNI. He received the Mérito Docente 1ª. Clase del Doctorado de Defensa y Seguridad Nacional de la Universidad Naval (Teaching Merit Decoration. Defense and National Security Doctorate First Class of the Naval University) at Secretaria de Marina (Navy Secretary) in 2018. In 2014 he was granted acknowledgments by the Sociedad Científica Española de Psicología Social (Spanish Scientific Society of Social Psychology) (SCEPS) for his participation in the foundation of Social Psychology in Spain. He was also granted an acknowledgment in 2017 by the SOMEPSO for his contribution to the development of Social Psychology in Mexico.

In his perspective of the development of social psychology, Cappello considers that it must be the product of collective work and of a long-term formation and with enormous discipline. Much of this should be centered on the social and systemic change that all societies are undergoing at the beginning of the twenty-first century, especially Latin American ones. He considers that this has not been studied in depth in a multidisciplinary sense. Therefore, it is necessary to

address one self's problems and offer explanations to them in a broad and comprehensive manner in order to help solve them.

He emphasizes that research has an enormous dependence on Europe and the United States. Therefore, we must try to build our own visions of problems and ways of intervention. He points out that the decline of the social paradigm of neoliberalism leads to a social crisis and a socio-political and economic regression. Definitely, he affirms that the creation of more investigation centers with multi- and interdisciplinary qualities would fortify social sciences. This would allow an interaction between theoretical and practical dimensions and likewise between researchers from different regions or cultures. Social psychology can study, along with other disciplines, disciplinary correspondences. He affirms that it is time to develop a trend for applied social psychology. This implies the professionalization of the psychosocial discipline.

For Cappello "Contemporary social psychology has been characterized by a greater differentiation and international pluralism in its theoretical approaches, as well as increasingly transversal perspectives and methodologies" (Sabucedo, 2019: 17). To this is incorporated the vision of different generations and the sociocultural perspectives of the regions.

Concerned about the dynamics of societies, in his personal hobbies, he likes Mexican songs, the typical food of the different regions. He is passionate about travel and stories of the provinces and interested in international political life and the world economy. Among his many facets is his special love for Spanish cuisine.

Caravedo Carranza, Baltazar

Born *Lima, (Peru)*, 5 March 1915

Died *Lima, (Peru)*, 6 February 1990

Mauricio Borja-Mostacero

Universidad Ricardo Palma, Lima, Peru

Keywords

Peru · Psychiatry · Mental health

Peruvian psychiatrist, son of the psychiatrist Baltazar Caravedo Prado (who was director of the Hospital Víctor Larco Herrera (Víctor Larco Herrera Hospital), a position previously held by Hermilio Valdizán).

After his secondary studies in Lima, he traveled to France where he studied at the Sorbonne (1932–1934), obtaining a Bachelor of Science. Upon his return to Peru, he entered the Faculty of Medicine of the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM, Lima), graduating in 1941. Shortly after, he began working at the Víctor Larco Herrera Hospital and later as a professor of social psychology at the Pontificia Universidad Católica del Perú (Pontifical Catholic University of Peru, Lima), where he was in charge of the Department of Psychology since 1950. He was also a professor at UNMSM, Universidad Nacional Federico Villarreal (Federico Villarreal National University, Lima), and Universidad Peruana Cayetano Heredia (Peruvian University Cayetano Heredia, Lima).

He held the position of head of the Department of Mental Hygiene of the Ministerio de Salud (Ministry of Health) and founded (1952) the Division of Mental Health in that ministry, promoting the interest of doctors in this area. He was also Vice Minister of Health between 1971 and 1972 and part of the Committee of Experts on Mental Health of the World Health Organization.

His scientific output focused on two topics: mental hygiene (as it was called at that time), of which he was a great promoter in Peru, and social psychiatry, being co-author of one of the first Peruvian books in this area that it contained information resulting from field investigations (Caravedo et al., 1963).

Baltazar Caravedo Carranza played a very important role both in the promotion of mental health and in the professional training of psychologists in Peru (Valdivia Ponce, 1964).

Peruvian psychiatrist, **Caravedo Prado** studied medicine at the *Universidad Nacional Mayor de San Marcos* (UNMSM, Lima) between 1902 and 1910, the year in which he obtained his M.D. After serving for a time in the Peruvian army, between 1914 and 1915 he was technical advisor to the *Asilo Nacional de Alienados* (today Víctor Larco Herrera Hospital). Hired since 1912 as a doctor by the Larco family, owner of the Roma estate in the department of La Libertad, in northern Peru, he accompanied Víctor Larco Herrera (1870–1939, an important political figure of

his time, owner of said estate and philanthropist); during an extensive trip to Europe (from July 1912 to February 1914), both visited important psychiatric hospitals in France, England, Germany, and Spain, among other countries. Upon his return, he managed to get Larco Herrera to make important donations to modernize the Colonia de la Magdalena Asylum, which he entered to work as head of the service in 1918.

On the death of the first director of the Asylum, Hermilio Valdizán, Caravedo Prado acted as director on an interim basis, and in 1932 he was appointed medical director of that hospital, remaining in office until his death in 1953.

During his years as director, he promoted the use of modern techniques in the treatment of psychiatric patients. Likewise, influenced by the ideas of Clifford W. Beers (1876–1943), he promoted the mental hygiene movement, being one of the founders in 1933 of the Peruvian League for Mental Hygiene (*Liga Peruana de Higiene Mental*) in 1933, of which he was president from its foundation until his death. Likewise, in 1932 he founded the *Boletín de Salud Mental*, later Peruvian *Archives of Mental Hygiene* (*Archivos de Higiene Mental*), which appeared until the early 1940s. He also set up the National Council for Mental Hygiene.

Caravedo Prado is a very important figure in the history of Peruvian psychiatry as he contributed significantly to the establishment of the specialty and to the dissemination of advances in psychiatry knowledge in his country (Valdivia Ponce, 1964; Mariátegui, 1982).

Carbo Bravo, Segundo Edmundo

Born *Jipijapa, (Ecuador), 16 January 1907*

Died *Quito, (Ecuador), 12 July 2004*

Daniela S. Castro Falconí
Pontificia Universidad Católica del Ecuador,
Quito, Ecuador

Keywords

Ecuador · Educational psychology ·
Educational evaluation

Palabras clave:

Son of Francisco Carbo and Rosario Bravo. He studied in Jipijapa, at the Daniel López School. Later he studied at the Olmedo School (Portoviejo). He finished his secondary education in Quito, at the *Colegio Normal Juan Montalvo* (Juan Montalvo Normal School), where his interest in education emerged, which would become a passion for the rest of his life. Teaching for adolescents and teacher training for young adults was at the center of his work.

In 1930 he graduated as a primary school teacher. He worked as a first grade teacher at the Vicente Rocafuerte School and later was director of the Mexico School. In 1931 he married Leonor Salgado Serrano, a teacher at the *Colegio Normal Manuela Cañizares* (Manuela Cañizares Normal School), with whom he had five children.

In 1932 he entered the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Letters and Education Sciences) of the *Universidad Central de Ecuador* (UCE, Central University of Ecuador) and was part of a small group of teachers who took charge of the first correctional facility for minors, which functioned as a boarding school, attached to the National Police. There they used the Dalton Plan with the students (Pérez-Pimentel, 2019). The method was proposed in 1922 by Helen Parkhurst (1886–1973), and it consists of granting the student freedom of organization and responsibility in following an educational program. They also implemented the work of Learning Workshops. Both methods were novel in the country.

By 1933 he was already a researcher in teaching methods. He obtained a scholarship from the Ministry of Education to study in Brussels (1936), Belgium. However, due to political and economic difficulties in Ecuador, he returned before the year. In Belgium he received training in the use of the method of Johann Friedrich Herbart (1776–1841), (Fuentes, 2019), known as the Formal Steps (*Pasos Formales*), a pedagogical method that promulgated a secular, practical, and humanistic morality. He returned with several contacts and with the foundations for his professional performance.

In 1937 he graduated as a secondary school teacher and entered the Juan Montalvo Normal School as a teacher of Psychology. Later, in 1940, he began to work at the *Instituto Superior de Pedagogía* (Higher Institute of Pedagogy) of the UCE. In this period his interest in psychology arose.

He wrote a book on psychology to be a reference source on psychology for teachers and high school students. A report of the book, prepared by a Special Commission formed by the Ministry of Education (1940) was favorable, and it was recommended as a base material for all the normal schools and institutes of the country in the subject of General Psychology. The book included the comments of different personalities from the Ecuadorian psychological milieu (Emilio Uzcátegui, Miguel Albornoz (1873–1964), José Medina, Juan Pablo Muñoz) and from Argentina

(Gregorio Fingermann, one of the founders of the Argentine Psychological Society).

He collaborated with journals of frequent circulation such as *Educación (Education)* and *Cuadernos Pedagógicos (Pedagogical Notebooks)*. In 1939 he edited, together with Ernel Velasco, a text on evaluation of the mind, and, in 1940, another on performance evaluation. These works show his interest in Educational Psychology or, what we now call, Educational Psychology. An even more specific topic worked on by Carbo was the Educational Evaluation or, as he called it, Instruction Evaluation (Sinnardet, 2000).

Studies on the evaluation of learning objectively constitute perhaps his main contribution to the development of psychology in the country. In those days, objective evaluations were necessary because of the preponderance of quantitative and experimental methods.

In 1944 he was Subsecretary of Education of Ecuador. From 1945 to 1961 he was a Technician of the Inter-American Cooperative Service linked to UNESCO. Probably because of this position and because of his interest in psychology, he was invited to the First Inter-American Congress of Psychology (*Primer Congreso Interamericano de Psicología*), which took place in Santo Domingo (Dominican Republic) in 1953; he was the only Ecuadorian present (Gallegos, 2012).

From approximately 1941 he was Professor of General Psychology, Psychology Applied to Education and Experimental Psychology at the Higher *Instituto Superior de Pedagogía* (Institute of Pedagogy) of Quito. Later, between 1961 and 1963, he was Director of the *Instituto Nacional de Capacitación del Magisterio* (National Institute for Teacher Training). Until 1968 he was in charge of what became known as the *Dirección Nacional de Planificación* (National Planning Directorate). For his passion in pursuing advancements in education, he was awarded the First Class Educational Merit Medal in 1966.

Edmundo Carbo was part of the group of educators who promoted Active Pedagogy in Ecuador. This pedagogy drew on psychology, especially developmental psychology. This pedagogy was the basis of the National Education Plan of that time and promoted socio-psychological research

on childhood. Vast was Carbo's production in this field, both individually and collectively.

María Angélica Carbonell was the daughter of Arturo Carbonell y Migal (1875–1934) and of María Angélica Mas (n/d). Her father was the Director of the Instituto Normal de Varones (Male Teaching Institute) and her mother was a teacher. After completing elementary education, María Carbonell entered the Universidad de Mujeres (Women's University) and then the Instituto Normal de Señoritas “María Stagnero de Munar” (Ladies Teaching Institute “María Stagnero de Munar”) where she graduated as a teacher (Pivel-Devoto, 1990).

Her interest for psychology started to manifest itself early on. Being a sixth-year student at the Ladies Teaching Institute in 1928, she carried out a study about adolescence focusing on the affectivity of the adolescent (Carbonell Mas, 1930). The work corresponded to a monograph presented in the Experimental Psychology course in taught by Sebastián Morey Otero (1894–1939), and by virtue of its amplitude and the observations that he integrated, it was published in 1930 in the *Anales de Instrucción Primaria* (Primary Instruction

Annals) and in the same year in a book's version, *La afectividad del adolescente* (The affectivity of the adolescent) (Pivel-Devoto, 1990).

The Experimental Psychology courses in the teacher training promoted the approach of a group of students to the developments of psychology, and under the influence of Sebastián Morey Otero in 1929, the Asociación Alfredo Binet (Alfredo Binet Association) was created. This association was linked to the Société Alfred Binet-Psychologie de l'Enfant et Pédagogie expérimentale (Alfred Binet Society – Child Psychology and Experimental Pedagogy), created by Alfred Binet (1857–1911) in 1898 with the objective of developing the psychological investigation for educational purposes and disseminate psychology and its applications was raised. The association stopped working for some time and resumed its activities in 1938. In 3rd of September of 1938, the new Board of Directors was elected, with María Carbonell de Grompone as the new president (Louzán, 1939; Sociedad de Psicología del Uruguay, 1993).

Her interest in psychology was combined with his vocation for teaching, and he held various teaching positions in different areas of public education. She was a Philosophy Professor in High School Education, a Child Psychology and Learning Psychology Professor in the Teaching Institutes, a Psychopedagogy of Special Child Professor, and a Psychopedagogy of the Deaf Child Professor in the Instituto Magisterial Superior (Higher Magisterial Institute and Psychology) of the Adolescent Professor in Instituto de Profesores Artigas (Artigas's Teaching Institute), high school education teacher training institution.

In 1939, she published the *Curso de Psicopedagogía* (Psychopedagogy Course) along with Magda Louzán (1908–1982), with whom she shared the teaching of Psychopedagogy in the Teaching Institutes. The work highlights a novel relationship between psychology and pedagogy for Uruguay at that time, stating that: “psychopedagogy is a utilitarian field in psychology that studies the mental processes of the child, the young man, the adult and the human being in a word, regarding education” (Carbonell & Louzán, 1939, p. 7).

In 19th of May of 1942, she took over as director of the Laboratorio de Psicopedagogía Sebastián Morey Otero (Sebastián Morey Otero Psychopedagogy Laboratory), created in 1933. The professor Maria Carbonell de Grompone (1943c) got the position through a competition in which she presented a work titled: *Organización y Plan de trabajo de un Laboratorio de Psicopedagogía al Servicio de los Institutos Normales* (Organization and Work Plan of a Psychopedagogy Laboratory at the service of the Teaching Institutes). Even though she respected the guidelines of its founder, Sebastián Morey Otero, the new Director modernized and departmentalized the Laboratory, organizing it in sections: Section of Teaching Education Psychometry and Psychotechnic, Profesiography Section, Investigation Section, and Psychopedagogy Clinic Section, which had as its main role: “to take care of the students in particular, provided that due to their special conditions, they need an intervention of this kind” (Carbonell de Grompone, 1943, p. 178). The publishing of the *Boletín del Laboratorio* (Laboratory’s Bulletin) started the year after she took over the director’s position. The first edition featured a transcription of Dr. Emilio Mira y López (1896–1964) courses, presented in 1942 in Montevideo and a series of original works that gave an account of the laboratory activities (Carbonell de Grompone, 1943a).

In 1944 and 1945, the laboratory staff participated in the investigation about *El normotipo del niño y el adolescente uruguayo* (The normotype of the Uruguayan child and adolescent), promoted by the Uruguayan state and directed by Dr. Emilio Mira y López. The professor Carbonell de Grompone was a principal collaborator of the investigation, both in her role as the laboratory director and as a professor of the Artigas Professors Institute. The investigation without precedents in the country mobilized an unequalled number of technicians between teachers, physicians, social visitors, and psychopedagogy laboratory technicians, with the purpose of studying the Uruguayan normotype. The investigation consisted in the application of a set of tests and the study of the results and of the characterization

of the measured aspects. 8893 tests were applied and 2243 student files of primary and secondary school were made. The technical team met every week with the objective of organizing the work and analyzing the particular cases that were presented by Mira y López and by Carbonell de Grompone.

In 1953, Jorge Galeano Muñoz (1919–1987), Washington Risso (n/d), and Juan Carlos Carrasco (1923–2010) promoted the creation of the Sociedad de Psicología del Uruguay (Uruguayan Psychology Society, SPU), and Carbonell de Grompone participated in its foundation in 7th of December of 1953 and took part in the first Board of Directors.

In 1962 she founded the Centro Psicopedagógico “Arturo Carbonell y Migal” (Psychopedagogy Center “Arturo Carbonell y Migal”) for the study and orientation of children and adolescents with specific difficulties in learning. That same year, professor Carbonell promoted the creation of a group for the study of dyslexia and organized a course with Suzanne Borel-Maisonny (1900–1995). At the end of that year, she promoted the creation of the Sociedad de Dislexia del Uruguay (Uruguayan Dyslexia Society) and in 1963 they organized an international seminar about Dyslexia in Montevideo. Maria Carbonell specialized in the lecture and along with Elida Tuana (1913–2015) and other professionals they carried out several studies on reading and language.

Her expertise in the psychopedagogy field led her into integrating different international organizations and participating in many missions abroad. She was a delegate of the Instituto Interamericano del Niño (Inter-American Children’s Institute) advising and participating in various Conferences. She was a consultant in Differentiated Psychopedagogy for the Organización Panamericana de la Salud (Pan-American Organization of Health) (1973) and professor of various courses about learning difficulties for the Organización de Estados Americanos (Organization of American States). She was a member of the American Psychological Association, Groupement Francais du Rorschach (French Rorschach Group), Societé

Rorschach Internationale (International Rorschach Society), Interamerican Society of Psychology, International Reading Association, Latin American Rorschach Association, and honorary member of the Sociedad de Psicología del Uruguay (Uruguayan Psychological Society).

Her pedagogic work, original and first in the country and America, allowed progress in the study and treatment of children with specific learning difficulties and her activity stood out for a constant interest for studying, disseminating, and applying knowledge that will benefit the development of children and adolescents.

Cardozo, Ramón Indalecio

Born in Villarrica (Paraguay) on May 16, 1876.

Died in Buenos Aires (Argentina) on April 20, 1943.

José E. García

Universidad Católica, Asunción, Paraguay

Keywords

Paraguay · Active school · Education · Stanford-Binet test

Ramón Indalecio Cardozo completed his elementary studies at the Escuela Municipal de Villarrica (Municipal School of Villarrica), and his secondary studies, both at the Colegio Nacional de Segunda Enseñanza (National School of Second

Education), located in the same city, and at the Colegio Nacional de Asunción (National High School of Asunción). This is because, at the time that Cardozo lived, the last three years of secondary school could only be completed at the capital of the country. When in 1896 the Escuela Normal de Maestros (Normal School of Teachers) was opened in Asunción, Cardozo was one of the first to enroll in its classes, thus initiating high education studies as a school teacher. In reality, the title of Normal Teacher that he obtained upon completion was the only diploma he ever received in his entire life. Later, he returned to his native Villarrica to dedicate himself to teaching children and taking over the direction of the Escuela Graduada de Varones (Graduate School for Men). Cardozo recalls in his memoirs that these were years of many readings and intensive learning of the pedagogy, philosophy, and psychology of his time. The result of those studies was the publication in 1905 of his first book, dedicated to the pedagogy of Johann Pestalozzi (1746–1827).

In February 1921 he was appointed Director General de Escuelas (General Director of Schools), which led him to move to Asunción again to establish his residence. He remained in this position until 1931. During his management period, he was able to promote a broad reform of Paraguayan education, which began in 1922. This was the most relevant and far-reaching institutional action carried out by Cardozo in the pedagogical field. In addition, the reform is remembered as one of the most important that has been carried out in the context of national education (Álvarez-Cáceres, 1989; Quintana de Horak, 1995; Soto-Vera & Velázquez Seiferheld, 2019; Uzcátegui, 1984). The orientation given was identified with the guidelines of the *active school*, a pedagogical line closely linked to psychological knowledge, and which gave essential support to educational practice. The authors of the *active school* were very attentive to the needs of the children and considered them as the center of learning, in contrast to the previous models, which were centered on the teacher. This connection to the active school was the main link with psychology that Cardozo had, and that way he sought to articulate the principles elaborated in Europe with the singularities of Paraguayan children. The main

theoretical influences on his thinking were those of Adolphe Ferrière (1879–1960), Édouard Claparède (1873–1911), Ovide Decroly (1871–1932), Georg Kerschensteiner (1854–1932), John Dewey (1859–1952), and William James (1842–1910), who contributed with knowledge to both psychology and pedagogy.

During this period there were some of Cardozo's most important contributions to psychology, such as a 1923 article on Dewey's pedagogical and psychological ideas. In 1927 he started the edition of *La Nueva Enseñanza (The New Teaching)*, a journal where he wrote frequently and in which some articles of psychological content were also disseminated by various Paraguayan teachers. In its pages, Cardozo published in 1927 a writing on the psychoanalysis of Sigmund Freud and its importance for the education of children, which was reprinted in 1928 as part of a book that also included an essay on William James (García, 2016a). During his time as General Director of Schools, Cardozo adapted the Stanford-Binet test, supported by data from local samples. He introduced several modifications to the original test items in order to adapt it to local conditions, typical of Paraguayan children. This work makes Cardozo worthy of being considered as the founder of psychological testing in this country (García, 2016b).

In October 1930 he received a visit from Adolphe Ferrière, who arrived to the country in order to learn about the innovations that were being carried out within the framework of the active school. Cardozo later wrote a book on the religious and philosophical ideas of the Swiss educator. At the beginning of that same decade, he maintained epistolary contacts with Jean Piaget (1896–1980), who also became attracted for Cardozo's work. However, some disagreements with the Minister of Education due to the scant support for his educational administration led Cardozo to abandon his duties in 1931. Shortly after, he resigned from all his chairs in national institutions, keeping only a few in private schools in Asunción. After this departure, he never again held a public office. During these years of forced retirement, Cardozo dedicated himself to writing his largest treatise: the work in three volumes

entitled *La Pedagogía de la Escuela Activa* (*Pedagogy of the Active School*), the first one of which was published in 1938, while the other two went on sale in 1939. The first of these books was entirely dedicated to the psychological foundations of the active school, and they constitute an authentic treatise on educational psychology, the first to have been published in the country (García, 2006). In this work, Cardozo exposed the adaptations he had made to the Stanford-Binet test a decade earlier. The organization of the book reveals the idea that pedagogy should be based on psychology. In the last years of his life, Cardozo stayed away from public activities, concentrating on writing and working on a small farm that he had acquired in the city of San Lorenzo, near Asunción. His death occurred in the Argentine capital in 1943. Cardozo is, without much discussion, one of the most prominent and productive representatives of psychology in Paraguay, during the period prior to the emergence of psychology as an independent university program and as a profession.

Uruguay · Chile · Critical psychology

Juan Carlos Carrasco Giordano was born at his paternal grandfather's house, located in Millán 2480, in front of the Vilardebó Hospital, a benchmark psychiatric hospital in Uruguay. His whole childhood and adolescence were influenced by daily coexistence with madness. He played in the Hospital park, interacting with the patients admitted there, he talked to them, he watched them rave, he asked them about it, and he wondered about it (Picos 2005; Pupko 2011).

These first experiences led him to enroll in the Facultad de Medicina (Medicine Faculty) of the Universidad de la República in 1943, a career that allowed him to insert himself into university academic life, although he never graduated from it. Only 2 years after registering, he took advantage of his condition as a medical student to go to the Vilardebó Hospital and request the first on-call doctor he found to let him get to know the dynamics of the Hospital, for he was interested in madness as a problem and wanted to study psychiatry. That doctor was Dr. Alfredo Cáceres who took him under his wing in his early studies and practices at the Hospital, in addition to linking him with part of the academic and intellectual world of that time: Carlos Vaz Ferreira, Felisberto Hernández (1902–1964), Paco Espínola (1901–1973), and Carmelo Arzadún (1888–1968), for example. Cáceres served also as a bridge toward his connection with painting, something that influenced him to create his first proposals of work with psychology techniques, and also connected him to Agustín Ferreiro (1893–1960) and Jesualdo Sosa (1905–1982), benchmarks of teacher education in the mid-twentieth century. Especially in Jesualdo Sosa, we find a strong imprint in the work toward child psychology, the expression as an analyzer and engine of educational work, and social transformation.

In 1948, he entered the Laboratorio de Psicología de la Clínica de Psiquiatría (Psychology Laboratory of the Psychiatry Clinic) of the Medicine Faculty, beginning his teaching career and which would later take him to the Child Psychology Course of the Medicine Faculty (1952), and the Licenciatura en Psicología (Undergraduate Psychology Program) at the Facultad de Humanidades y Ciencias (Humanities and Sciences Faculty) (1956). In

those years, he also carried out tasks at the Clínica Médico Psicológico (Psychological Medical Clinic) of the Pedro Visca Hospital and in the División Segunda Infancia del Consejo del Niño (Second Childhood Division of the Children's Council). In 1962, he was appointed Director of the Sección Psicología de la Clínica Psiquiátrica (Psychology Section of the Psychiatric Clinic), former Laboratory, and in 1968 he was appointed Director of the Undergraduate Psychology Program. These last charges held him responsible, until his departure from the country in July 1972 to Santiago de Chile.

Based on his clinical work, and seeing the number of children who were cared for without having early detection of their problems, he founded in 1956 along with Mauricio Fernández the Primer Instituto de Formación Pre-escolar (First Institute of Pre-school Education, today Latinamerican School and Highschool). A mixture of clinical research and formal education space allowed him to display some experiences of creation of clinical tools for diagnosis and treatment, while a group of teachers that were linked to the New School movement led new proposals on the pedagogical level. The intention was to try to know which factors affected the development of boys and girls, in the understanding that they were the origin of the psychic conflicts that affected them, and that they were later seen in clinical care. The intention was to eliminate these factors, or in any case, lessen their effects or control them. After ten years of work experience within the framework of this new institution, they allowed him to affirm that the causes of character conduct disorders or disintegration of the child's personality clearly had an origin of a social and educational nature.

From these spaces, he created, together with his work teams, the Test de Integración Audiomotriz (Audiomotor Integration Test), and a scale of evolutionary development of boys and girls in the preschool stage through painting, a scale that later on would be nominated as the Montevideo Scale. These works were the basis for the creation along with Yolanda Martínez (s/d) of the Dynamic Expressive Technician (diagnostic technique of expression with paintings), which would later lead to dynamic-

expressive psychotherapy workshops. Carrasco also specialized in the use of the Rorschach technique, creating an original and local proposal for its dynamic analysis, which even transcends borders in relation to the phenomenon known as “Carrasco’s sexual shock” (Weile 1991, p. 159). In November 1963, he participated in the foundation of the Asociación Uruguaya de Psicología y Psicopatología de la Expresión, AUPPE (Uruguayan Association of Psychology and Psychopathology of Expression), an association from which Carrasco and collaborators implemented proposals in order to expand their work from training and new practice spaces linked to expression and paintings (for example, the Vilardebó Hospital in 1968). In 1966, he participated in the foundation of the Asociación de Psicopatología y Psiquiatría de la Infancia y la Adolescencia, APPIA (Association of Psychopathology and Psychiatry of Childhood and Adolescence).

Being the pioneers of teaching psychology to various professions (mainly physicians and teachers) in Uruguay, Carrasco’s defense for psychology as a profession was very outstanding. Along with Washington Risso and Jorge Galeano Muñoz (1919–1987), they promoted in 1953 the foundation of the Sociedad de Psicología del Uruguay (Psychological Society of Uruguay), as well as he later was summoned to participate in the foundation of the Coordinadora de Psicólogos del Uruguay (Coordinator of Psychologists of Uruguay) in 1984. In the late 1950s, he became one of the main spokesmen for the responses to psychiatric doctors who watched in psychology, a phenomenon of intrusion in the medical profession. In this sense, his participation in an academic meeting organized by the Psychological Society of Uruguay on November 5, 1960, focused on the discussion about the profession of the psychologist, was highlighted. At such activity, Carrasco requested the updating of the concepts of health and disease that existed at the time, taking in recommendations from the World Health Organization, and broadening the view of concepts restricted to definitions from medical principles.

In the Universidad de la República (University of the Republic), apart from being a reference in the training of Evolutionary Psychology, he is also recognized as a reference of the institutionalization

of the University Extension in the education. He participated in several activities of the Departamento de Extensión Universitaria (University Extension Department) and built training spaces from this university function, coordinating consultation and psychological diagnosis spaces throughout Uruguay in the 1960s.

Carrasco’s point of view was that the University Extension, more than being a relationship function between the University and Society, is the main didactic instrument for university training. The extension is part of an educational and political process, where students, rather than transferring the knowledge produced in the University to Society, learn what the social reality is, in which they will later have to be inserted as future professionals, mainly in the realities of those subjects who live in deprivation and social needs conditions. In this way, university knowledge is confronted with popular knowledge and reality itself. Carrasco stated that: “On the contrary, the university student to which we aspire is far from belonging to the group that uses and speculates with the supposed power of knowledge, and should instead be the custodian of an ethic of knowledge and a rigorous selector of what knowledge contains as a source to build the common good and so that this world could be increasingly a possible and shareable world” (Carrasco 2010, p. 52).

But also at the time, the University Extension was proposed as an action platform for the revolutionary insurrection. From 1969 to 1972, he coordinated a polyclinic of psychological attention from the Undergraduate Psychology Programa of the Humanities and Sciences Faculty in the Barrio La Teja (La Teja Neighborhood) at Montevideo. This Polyclinic also functioned as a Tupamaro Support Committee, a neighborhood action space for the guerrilla organization Movimiento de Liberación Nacional Tupamaros (MLN-T) [National Liberation Movement Tupamaros]. He publicly joined the March 26 Independent Movement (founded among others by Mario Benedetti (1920–2009) and Mauricio Rosencoff (1933–)) as the legal party of the MLN-T, and in those years he participated along with students from the University of the Republic in the construction of the Polyclinic of

the Unión de Trabajadores Azucareros de Artigas, UTAA (Union of Artigas Sugar Workers) in Bella Unión. We know from personal interviews with others involved, as Hugo Cores (1937–2006), that Carrasco and Mauricio Fernández (n/d-2016) provided psychological assistance to the organization Resistencia Obrero Estudiantil, ROE (Workers and Students Resistance), in which Mauricio Fernández was part. Its members were concerned “about the influence of the use and bearing of firearms of their militants and wanted to work on disarmament after an expected victory” (Picos 2005, p. 93). Although Carrasco never admitted this psychological assistance, in July 1972 he was requested by the Fuerzas Conjuntas (Joint Forces) (military and police), within the framework of an offensive against the MLN-T health apparatus. This could be taken as a confirmation that his involvement went a little beyond support for March 26, along with it his silent smile when asked about this “coincidence.”

After being informed of his request, he “is admitted” to the Vilardebó Hospital until he manages to leave for Chile, a country that at that time was living the socialist experience of Salvador Allende (1908–1973). Thus begins a political exile that will last until the end of the Civic-Military Dictatorship that was installed the following year in Uruguay (June 1973–February 1985).

He settles in the capital, Santiago de Chile, and there he serves as Professor of Evolutionary Psychology at the Psychology Institute at the University of Chile. Later on, after the Pinochet Coup (September 1973), he settled in Utrecht (Netherlands), where he joined the Latin American Demographic Center of the United Nations and worked in the area of Comparative Pedagogy at the Utrecht University. It is within this framework that, forced to pause his political actions, he made a synthesis of his experiences of almost 30 years, and takes his proposal for *Psicología Crítica Alternativa*, PCA (Alternative Critical Psychology), to paper. The PCA arises in response to what Carrasco called “available psychology.” Understanding that this (official, current) psychology did not have as its objective the liberation of the human being within the framework of social structures of domination, Carrasco calls for a reformulation of psychology from a

Latin American perspective, politically committed to social transformation, and trying to articulate concepts such as those of “being in a situation,” daily life, and ideology as part of a psychic structure built from social relations and education. In his own words: “Faced with this, an Alternative Critical Psychology proposes: to reformulate the theoretical conceptions (based on a constant practice of confrontation with reality) of the existing relations between the human being and the society in which he lives in; to analyze deeply what is the degree and nature of the influence that the social context exerts on the psychic functioning and determination of behavior; unveil what are the mechanisms of human dependence on social and economic models, the how and why of such dependence, etc., and what are its consequences” (Carrasco 1983/2009, p. 255).

After the fall of the intervention of the Universidad de la República by the Civic-Military Dictatorship, Carrasco was consolidated as a figure of construction of university psychology in Uruguay. He was appointed Director of the Instituto de Psicología de la Universidad de la República, IPUR (Psychology Institute of the Universidad de la República) created in 1985. From there on, he laid the foundations for the creation of the Facultad de Psicología (Faculty of Psychology) in 1994. Retired from university teaching in 1992, he was a member of the Consejo Consultivo de Enseñanza Terciaria Privada (Advisory Council for Private Tertiary Education) at the Ministerio de Educación y Cultura (Ministry of Education and Culture), and Director of the undergraduate Program in Communication of the University of the Republic.

In 1994, he was appointed Professor Emeritus of the Faculty of Psychology, and in November 2006, Doctor Honoris Causa of the University of the Republic. In 2009, the Servicio Central de Extensión y Actividades en el Medio (Central Service of Extension and Activities in the Environment) awarded him a recognition for his career and contributions to the University Extension.

Keywords

Colombia · Neo-Thomistic psychology ·
Twentieth century

Monsignor Carrasquilla, ordained as a priest in 1883, was a promoter of neo-Thomist psychology development in Colombia. He was a professor at the Conciliar Seminary of Bogotá (1884–1926) in the chairs of moral theology, metaphysics and history of philosophy, and law history. He assumed the Rectory of the Colegio Mayor de la Universidad del Rosario (1891–1930), where he founded a magazine (1905), which became the official organ of neo-Thomist philosophy in Colombia. He was Minister of Public Instruction (1896–1897), where he fostered a theocratic educational model. In 1889, he became a member of the Academia Colombiana de la Lengua [Colombian Academy of Language] and a corresponding individual of the Real Academia Española [Royal Spanish Academy]. In 1904, Pope Pius X granted him by pontifical decree the title of sacred theology doctor. In 1915, he was appointed by Pope Benedict XV as domestic prelate (Saldarriaga, 2007).

The historical time of Carrasquilla offered the scenario of a country polarized by the liberal-conservative political bipartisanship. Throughout the nineteenth century, the country debated its spiritual formation amid bloody civil wars (Oviedo, 2014). The anticlerical ideas of political liberalism, which ruled in the period called Radical Olympus (1860–1878), with those of the Regeneration Period (1878–1903) of strong religious influence, entered into controversy.

The Radical Olympus time was characterized by its secular orientation, state management, and public assistance, based on the presence of sciences such as modern experimental psychology. Liberalism consulted psychological science to form autonomous and democratic subjects oriented toward material progress, industrialism, and economic growth, based on the development of their intellect and adaptability (Oviedo, 2019).

Monsignor Carrasquilla was a defender of Church-State unity. This activity contributed to the promulgation of the theocratic Constitution of 1886, in the period of Regeneration. The prominence of Catholicism made possible the celebration of a Concordat with the Holy See (1887), which gave a leading role to Catholic Church in the nation's spiritual formation. The Colombian

State delegated public assistance functions to religious communities, emphasizing education, health, care for the homeless, and other social functions. Priestly pronouncements influenced governments and the masses.

The Regeneration regime affirmed the historical personality of the Colombian people and Catholic morality. The development of the population's intellectual faculties should be based on a psychology that nurtures the spiritual life, together with survival skills (Carrasquilla, 1905).

Catholic Colombia should review the contribution of modern sciences to the development of the nation's spirituality. Modern experimental psychology was a particularly worrisome science due to its materialistic nature since it considered the human being part of the physical world, without soul or will. Physical causes and natural laws were used by experimental psychology to compare human beings with animals and other material entities without considering the free will that finds its remote cause in the existence of the soul. Following one of the points made toward experimental psychology:

I do not know science more incomprehensible than psychology or anthropology taught by authors inaccurate in the way of explaining themselves, and forgetting the principles that follow Saint Tomas Aquino:

The actions are of the person.

The soul is the remote principle of all operations.

Potency is the next beginning.

The stomach and intestines do not digest, the lung does not breathe, the eyes do not see, nor the ears hear ... When I see, the person, the self, is the one who sees, and same eats, imagines, thinks, and loves. And all these operations were carried out by the soul, which is, according to Saint Tomas, vegetative, sensitive, rational. And through the soul, I see, I eat, I imagine, I think, and I want. (Carrasquilla, 1905, p. 108)

Carrasquilla was in favor of a neo-Thomist psychology that assumed the soul as an object of study. He considered necessary a dialogue between the psychology of the soul and the experimental psychology of consciousness to advance a process of adaptation of the discipline to theocratic Colombia's interests. The respect for

spiritual dignity of soul, together with Catholicism's moral values, would promote the formation of the Colombian people's historical personality, citizenship characterized by the sweetness of character, and a tendency toward brotherhood and social equality amongst Christian love and charity. During the nineteenth century, plagued by civil wars, the country required pacifists and believers; in his view, the experimental sciences could bring greater conflicts by feeding the individualistic and materialistic interests promoted by political liberalism.

Carrasquilla followed the example of Cardinal Mercier (1851–1926), who founded the Special Institute of Thomist Philosophy at the University of Louvain (1889), dedicated to the study of sciences such as experimental psychology. The Colegio Mayor del Rosario became the academic headquarters of Colombian neo-Thomism. Students and professors were invited to research and present dissertations on the contrast between the Catholic version of the soul and the developments associated with modern psychological ideas.

In 1891, Carrasquilla's administration made a call for students to present comparative academic works between the monogenic doctrine of sacred writing and Darwinian evolutionism ideas. Defenders and detractors of the evolution doctrine appeared amid arguments brought to the editorial field and into the public domain (Restrepo & Becerra, 1975). Religious and scientific convictions were shown in conflict and extreme forms.

Julián Restrepo Hernández (1917) was one of Carrasquilla's junior professors, delegated to advance the dialogue between the Christian soul and experimentalism's psychological consciousness. Restrepo (1917) took up the study of experimental psychology with a temperate and tolerant spirit; he revised the concept of conscience based on the rigorous reading of the *theological Summa* of Saint Thomas.

Restrepo (1917) viewed with surprise the consideration of human consciousness by experimental psychology as a simple cognitive apparatus oriented to receive stimuli from the external world through the processes of sensation and perception. In the neo-Thomist version, consciousness had other dimensions, such as the spiritual

sensitivity that the human soul has to appreciate its acts and mental states.

Restrepo's neo-Thomist discourse (1917) and Carrasquilla (1905) considered that human consciousness was directed to material knowledge of the universe and the understanding of one's inner life. Consciousness was meant for the knowledge of the soul. One of the properties of the soul was the fact that it was understandable to the conscious self.

In each act of thinking, the subject could intuitively witness the development of his thoughts and memories, emotions, etc. Man was far from other natural beings because he could direct his attention to the operations carried out in the soul:

The knowledge of our personality is an act of conscience, memory, and reflection. Through consciousness, we perceive the evident fact of our existence and our present affections; and by memory, we perceive our past affections; reflection analyzes one and the other, and we come to know the nature of our operations. . . . The operation of consciousness is the self whose perceptible operations comprise our corporeal life and our rational life. (Restrepo, 1917, p. 170)

Colombian neo-Thomism participated in the late nineteenth and early twentieth centuries in the definition of psychology as a science and how to be appropriate in the nation's historical and political conditions. Carrasquilla's biography revealed a Latin American intellectual figure who is setting up a debate on the object of study of psychology in the context of a Catholic country. The idea of integrating psychology and religion was one of the ideas most cherished by Catholic-inspired authors when the reception of science had to do with people's faith.

Carrilho, Heitor Pereira

Born in Natal (Brazil), on March 21, 1890

Died in Rio de Janeiro (Brazil), on May 20, 1951

Allister Teixeira Dias

National Library Foundation, Rio de Janeiro, Brazil

Keywords

Brazil · Forensic psychiatry · Psychiatric asylum

Considered one of the pioneers of forensic psychiatry in Brazil, Heitor Carrilho graduated from *Faculdade de Medicina do Rio de Janeiro* (Rio de Janeiro Medical School) in 1911. His undergraduate dissertation *Contribuição Clínica ao Estudo das Formas Depressivas da Psicose Pré-Senil* (Clinical Contribution to the Study of Depressive Forms of Pre-Senile Psychosis) was based on Carrilho's experiences as an intern student at *Hospício Nacional de Alienados* (National Asylum for the Insane), the main Brazilian psychiatric institution of that period. Heitor Carrilho started working as a psychiatrist at the former asylum in 1913, and in 1917 was officially appointed as “permanent alienist” in the institution.

In September 1918, Carrilho became chief of *Serviço de Alienados Delinquentes* (Service for the Delinquent Insane) of *Assistência à Alienados do Distrito Federal* (Rio de Janeiro Assistance for the Insane), known as “Seção Lombroso” (Lombroso Section). He also became lecturer of Psychiatry at *Faculdade Fluminense de Medicina* (Fluminense Medical School), presenting the dissertation *Estudo clínico das parafrenias* (Clinical study of paraphrenias). During most part of the 1910s, Heitor Carrilho dedicated himself to studying the “delinquent lunatics” (individuals considered to be mad during their criminal proceedings), and the “lunatic delinquents” (individuals considered to be mad during serving their sentence). The doctor also investigated the forensic implications of certain diagnostic categories held by mental patients. During the same period, Carrilho conducted theoretical and practical studies performing exams and writing psychological reports of patients diagnosed as “epileptics,” “paraphrenics,” “schizophrenics,” and “moral deviants.” Differently from some renowned psychiatrists of his time, Carrilho never studied abroad or wrote books. But, thanks to his close relationships with prominent Brazilian psychiatrists such as Juliano Moreira (1873–1933), Antônio Austregésilo (1876–1960), and Ulysses Vianna (1913–2000), Carrilho was well acquainted with the latest theories of psychiatric science, especially the ones headed by German psychiatrists like Emil Kraepelin (1856–1926) and Ernest Kretschmer (1888–1964).

In 1921, Heitor Carrilho was appointed director of *Manicômio Judiciário do Rio de Janeiro* (Rio de Janeiro Psychiatric Prison) – the first Brazilian institution of this nature – by Juliano Moreira. Carrilho held the position until his death, in 1954. During his years working at the institution, he produced a great number of psychiatric reports. In 1930, he funded the journal named *Arquivos do Manicômio Judiciário do Rio de Janeiro* (Archives of Rio de Janeiro Psychiatric Prison), which had been published for more than 30 years. Since Carrilho wrote no books, he publicized his studies mainly through the former journal. He produced varied publications like articles, research results, speeches, psychiatric reports,

jurisprudence, and reports from the *Conselho Penitenciário do Distrito Federal* (Rio de Janeiro Penitentiary Council), of which he had been a member from 1933 until the end of the 1940s. Carrilho was also an active member of the *Sociedade Brasileira de Psiquiatria, Neurologia e Medicina Legal* (Brazilian Society of Psychiatry, Neurology and Forensic Medicine), and in 1941 became president of the entity. During the second half of the 1940s, Carrilho became director of *Serviço Nacional de Doenças Mentais* (Mental Illnesses National Service), which was the most prestigious post of psychiatry during that time. The period he held the position is uncertain though, historiographic research suggests it was between 1946 and 1947. In 1929, he presented the research entitled “*Estudo Clínico das epilepsias emotivas*” (Clinical Study of emotional epilepsies) and became a full member of *Academia Nacional de Medicina* (National Academy of Medicine).

But what indeed defined Carrilho’s intellectual trajectory was forensic research. His expertise in the subject assured him legitimacy and prestige within the legal and criminal fields in Rio de Janeiro. His life had been absolutely attached to *Manicômio Judiciário do Rio de Janeiro* (Rio de Janeiro Psychiatric Prison), which was named under Carrilho after his death.

Heitor Carrilho had also been a member of *Conselho Consultivo e Deliberativo* (Consultive and Deliberative Council) of *Liga Brasileira de Higiene Mental* (Brazilian League for Mental Hygiene) and contributed to journals like *Brazil Médico* (Brazil Medical), *Arquivos Brasileiros de Medicina* (Brazilian Medical Archives), and *Revista de Neurología, Psiquiatria y Medicina Legal* (Neurology, Psychiatry, and Forensic Medicine Review) from Uruguai. Carrilho also had a private practice, where he assisted mentally ill patients. At that time, private medical service was an incipient market in Rio de Janeiro. The advertisements of *Sanatório do Rio de Janeiro* (Rio de Janeiro Sanatorium) announced Carrilho as one of its directors. The private institution was inaugurated in August 1938 and remained open until the 1940s. After Brazil entered WWII, he took part in a project by *Diretoria de Saúde do*

Exército (Army Health Board) to teach psychiatry. The initiative's main objective was to train doctors for the Expeditionary Medical Group.

Throughout his career, Heitor Carrilho became a prominent professional within the penal and criminology fields in Rio de Janeiro. He was broadly respected by important judges and magistrates in personal, intellectual, and scientific spheres. During this period, he engaged systematically with *Sociedade Brasileira de Criminologia* (Brazilian Criminology Society), from which he became one of the fund members in 1933. Carrilho played an important role in developing the Penitentiary Code Project in 1931 and had been the only doctor to participate in law sub-commissions during that period. Heitor Carrilho also engaged with the 1^a Conferência Brasileira de Criminologia (First Brazilian Criminology Conference) (Rio de Janeiro, 1936) and the 1^o Congresso Latino-Americano de Criminologia (First Latin-American Criminology Congress) (Buenos Aires, 1938). He had also been one of *Arquivos Brasileiros de Neuropsiquiatria e Psiquiatria* (*Brazilian Archives of Neuropsychiatry and Psychiatry*) editors. During the 1940s, Carrilho supported the restructuring of the Manicômio Judiciário (Rio de Janeiro Psychiatric Prison) and claimed for the building of *Casas de Custódia e Tratamento Psiquiátrico* (*Houses for Custody and Psychiatric Treatment*), which were envisaged by the penal rules implemented in the period.

Regarding his opinions and ideas, Carrilho backed collaborative work between psychiatrists and jurists as a fundamental aspect for the penitentiary system and penal laws improvement. He also advocated a “biopsychological” perception over crime and endorsed the medicalization of penal justice and penitentiary institutions, mostly inspired by Belgian and German experiences in this field. Besides, Heitor Carrilho aimed to identify the specificities of crimes committed by individuals diagnosed as schizophrenics, epileptics, and neurosyphilitics. He drove special attention to themes such as risk levels and penal responsibility associated to these psychopathological personalities. Finally, Carrilho aimed to study cases known as “passionate crimes” using the forensic psychopathology theories and methodology.

Carroll Morrissey, Joseph Francis

Born *Chicago, (Illinois, USA)*, 31 December 1940

Died *San Juan, (Puerto Rico)*, 20 February 2020

Dolores S. Miranda Gierbolini
Universidad de Puerto Rico, Rio Piedras,
San Juan, Puerto Rico

Keywords

Puerto Rico · United States · Physiological Psychology · Cyberpsychology · Assistive technology

Joseph F. Carroll was born to Mary Morrissey and Lt. Gen. Joseph F. Carroll, originally from Chicago, Illinois. He married Dolores Miranda Gierbolini and had two children and two granddaughters. His children, Joseph Carroll Miranda and Moira Carroll Miranda, both followed their father's interests in technology and education. His granddaughters Sophia Torres Carroll and Kailani Lolita Torres Carroll at an early age have worked and advocated for the autism spectrum disorder population.

Joseph F. Carroll Morrissey studied at the University of Maryland where he received his Bachelor of Arts in 1964 with a major in Natural Sciences. He continued his studies at the Catholic University of America at Washington, DC, where in 1969 he received his MA in Physiological Psychology and in 1970 his Doctor in Philosophy degree with a specialty also in Physiological Psychology. During his doctoral studies, he worked with Dr. William Horsley Gantt (1892–1980), student of Pavlov (1849–1936), and Joseph W. Cullen (1936–1990) in the Psychological Research Laboratory at the Veterans Administration Hospital in Perry Point, Maryland. His dissertation addressed the instrumental conditioning of heart rate using avoidance technique.

Joseph F. Carroll Morrissey initiated his academic and research career interested in instrumental conditioning of the autonomous nervous system. In 1971, he became part of the Faculty of the Department of Psychology of the University of Puerto Rico in Río Piedras (UPR-PR). As such, he contributed to the development of Advanced Physiological Psychology and Statistics courses for the graduate program. He contributed to many student and faculty research and collaborated with the translation to Spanish and adaptation and standardization of the Wechsler Adult Intelligence Scale for a Puerto Rican population.

Dr. Carroll integrated technology in higher education. He created courses under the Programmed Learning format. He applied technologies to the teaching of psychology in the 1970s and cyber technology in the early 1980s at the University of Puerto Rico. He advocated for the use of technology for higher education teaching,

particularly for persons with functional diversity. He emphasized the social responsibility of higher education institutions with diverse populations beyond their walls.

He developed computer applications for persons with vision, speech, and motor impediments. His work was developed at a time where personal computers barely made an entrance to higher education scenarios. As a result of his efforts, various computer centers for faculty and students were created at the UPR in general. His advocacy regarding access to technology for education and research won him recognition among colleagues at the University of Puerto Rico. For many years, he was director of the Academics Computer Center at the UPR-RP. He was also designated as part of the Steering Committee for the Implementation of the Student Information System, which was fundamental for the digitalization of the students' data and registration process. His research developing technology to assist students and professors in academia rendered key accomplishments as a series of projects were developed with his students. In that effort, technology was developed to assist persons with visual, speech, and motor dysfunction.

In 1982, he founded the No Me Joe project geared to help young adults with functional diversity to succeed at high school, university, and work settings, through the use of assistive technology, devices, and services. Throughout these years, he was instrumental in making assistive technology available to many people with functional diversity. He created the first assistive technology course in Puerto Rico with the purpose of developing an individual Psychology of the person with functional diversity and the integration of psychological, physical, and cultural aspects of Assistive Technology (AT) to the person's characteristics. As a service provider, researcher, mentor, or consultant, he was present in just about every AT development that has taken place in Puerto Rico. He was founder of the *Proyecto de Asistencia Tecnológica de Puerto Rico* (Puerto Rico Assistive Technology Project) which has continued his research, service, and creation under the direction of former students.

He was very humble and modest, believing his best legacy was the work of his students who continue creating and applying assistive technology in diverse everyday life spaces. He was committed to the possibilities. His students cite him saying “if it exists, we apply it; if it doesn’t work, we modify it” and if it does not exist, we create it” (M. Lizama, personal communication, March 6, 2020).

Carvalhaes, João

Born *Santa Rita do Passa Quatro (Brazil)*, August 15, 1917

Died *São Paulo (Brazil)*, March 31, 1976

Adriana Amaral do Espírito Santo
Estácio de Sá University, Rio de Janeiro, Brazil

Keywords

Brazil · Sports psychology · Football

João Carvalhaes studied at the Normal School in his hometown and was trained on teaching in 1935. In 1944, he obtained his bachelor’s degree in political sciences at *Escola Livre de Sociologia e Política* (Free School of Sociology and Politics) in São Paulo (Waeny & Azevedo, 2003; Costa, 2006; Hernandez, 2011).

Between 1942 and 1946, he worked at the Canadian company The São Paulo Tramway Light and Power Company Limited, which operated the transportation of passengers in electrical trams in São Paulo. From 1946 to 1970, he filled several positions at the recently created *Companhia Municipal de Transportes Coletivos* (Municipal Company of Collective Transports) (CMTC), starting his practice in the use of psychological tests for personnel selection, still as an experimentation. Between 1947 and 1957, he filled the positions of Technical Assistant of the Psychology and Professional Training Division and Head of the Hygiene and Occupational Safety Division of the Medical Department. In 1957, he became the psychotechnical supervisor in the areas of teaching, selection, and professional training (Waeny & Azevedo, 2003; Costa, 2006; Hernandez, 2011).

At the *Instituto Brasileiro de Segurança* (Brazilian Institute of Security), he was a consultant for psychotechnical aspects between 1959 and 1962. He also worked in other public and private institutions, such as *Phebo*, *Fundação Getúlio Vargas*, *Estrada de Ferro Sorocabana*, *Credicard*, *Banco de Crédito Nacional*, *Instituto de Organização Racional do Trabalho* (IDORT), *Serbank*, and *Viação Aérea São Paulo* (VASP) (Waeny & Azevedo, 2003).

In 1958, he received two tributes from the Ministry of Labor in honor of his work as a psychotechnician: a Diploma of Merit from the Division of Hygiene and Occupational Safety and a Medal for Merit of Occupational Safety (Costa, 2006).

He attended several improvement courses in the field of psychology, among them courses about the Emilio Mira y López’s myokinetic psychodiagnosis test (PMK) – often used in his work with football; the improvement course from *Centro de Estudos Franco da Rocha* (Center of Studies Franco da Rocha), in 1951; courses offered by the *Sociedade de Psicologia de São Paulo* (Society of Psychology of São Paulo), among them the one taught by Hernani Borges Carneiro, in 1952; and a course about Modern Theories on Personality, taught by Carolina Martuscelli Bori, in 1953 (Waeny & Azevedo, 2003; Costa, 2006).

Registered as a professional journalist and licensed in psychology, he published chronicles about boxing – under the pseudonym *João do Ringue* – and about psychology in several journals, especially on “Equipe,” between 1952 and 1957 (Waeny & Azevedo, 2003; Costa, 2006; Hernandez, 2011). This experience in sports, combined with his experience as a psychotechnician, seems to have directly influenced his later work as a sport psychologist.

From 1954 to 1959, he worked at the *Federação Paulista de Futebol* (São Paulo Federation of Football), on the selection and psychological preparation of the candidates for the School of Referees. Until 1961, he carried out the selection of candidates for the Course of Referees and Jury of the *Federação Paulista de Pugilismo* (São Paulo Boxing Federation) (Waeny & Azevedo, 2003; Costa, 2006; Hernandez, 2011).

In 1957, he was hired by *São Paulo Futebol Clube* (São Paulo Football Club), where he spent 17 years working, concluded in 1974, 2 years before his death. Carvalhaes himself considered his work at São Paulo Futebol Clube (SPFC) as the most important work of his career (Carvalhaes, 1974).

In 1958, after negative experiences with the Brazil national football team, and with efforts of the national government to build a national identity using football as one of its main sports, Carvalhaes was invited to work on the multidisciplinary team that ended up being the champion of the 1958 FIFA World Cup, in Sweden. This participation awarded him a Special Medal given by the President of the Republic for the services he provided. However, the presence of Carvalhaes in the delegation was not unanimously accepted, having generated controversies especially due to the lack of knowledge about the work that would be developed. Initially, there had been a lot of bad press about it, but after the team showed positive results on the pitch, media became positive (Ciampa, Azevedo & Waeny, 2001; Waeny & Azevedo, 2003; Costa, 2006). Even after his successful work, however, Carvalhaes had not worked with the Brazil national football team again.

According to Hernandez (2011), after this experience, his last undertaking was in 1963, when he was requested by the São Paulo Boxing Federation to prepare the boxers for the Pan American Games. Also, he supposedly collaborated with the preparation of the players from the São Paulo Basketball Federation who participated in the II Biddy Basketball World Tournament (basketball adapted for children) in Puerto Rico (Waeny & Azevedo, 2003).

His performance in the sports field reflected the Brazilian applied and experimental psychology at the time, with great influence of psychology in the field of labor. At SPFC, he created a laboratory for experimentation and research in psychology, with psychophysiological devices, used mainly to study the football player. In addition to PMK, he used the Human Figure Drawing Test and Army Alpha and Beta Intelligence Tests. His personal collection also included the following: Specific Skills Test, Cultural Fair Intelligence Tests, Thematic Apperception Test, Collective Intelligence Test for Adults, AC Test, Dominoes Test, VIG, UNIT, G36, 16PF, D 48, Pfister’s Colored Pyramids, *IVOTA*, Ribakow Test, Synonyms Test, Illustrated Interest Inventory, Progressive Matrices, and Zulliger test (Waeny & Azevedo, 2003).

He created a psychological test, the JC, whose legitimacy was confirmed by a letter dated June 13, 1955, stating that the material was in the process of analysis by CILEME (*Campanha de Inquéritos e Levantamento do Ensino Médio e Elementar*, i.e., Primary, Middle, and Secondary School Survey and Review) (Waeny & Azevedo, 2003). According to Costa (2006), this same institution had already asked him to send the tests used in CMTC in order to organize a test archive. According to Waeny and Azevedo (2003) and Costa (2006), in 1970 he had another of his tests published: The Test of Digital Dexterity.

He had a vast literary production, with articles published in major newspapers and magazines, as well as in psychology journals, such as *Arquivos Brasileiros de Psicologia Aplicada* (the Brazilian Archives of Applied Psychology). Sixty-four of his articles are unpublished, of which twenty-one are specifically related to sport psychology. He also wrote 19 documents for lectures and

participations in scientific events, of which 12 are clearly focused on sports. Under the alias *João do Ringue*, he wrote 16 papers. Thirty-nine of his articles were published in journals, scientific or not, of which twenty-one can be considered, only observing their titles, as related to sports themes (Waeny & Azevedo, 2003).

He gave many lectures on sport psychology, such as at the *Escola de Educação Física do Estado de São Paulo* (School of Physical Education of the State of São Paulo), and participated in several psychology congresses, presenting works on psychotechnics and sports, such as the 2nd and 3rd International Congresses on Sport Psychology, in 1968 and 1973, respectively (Waeny & Azevedo, 2003; Costa, 2006; Hernandez, 2011).

His participation in psychology institutions and entities was also significant. He was a member of the International Society of Sports Psychology; an effective member and second secretary of the Society of Psychology of São Paulo (1951–1952) (Waeny & Azevedo, 2003; Costa, 2006; Hernandez, 2011); patron of the chair no 22 of the *Academia Paulista de Psicologia* (São Paulo Academy of Psychology), a position occupied by those who have committed themselves to expanding psychology into unexplored horizons (Custódio, 2008). His professional performance in the field of sports was remarkable, bearing fruits, due to its originality and visibility, and his constant concern with publishing materials describing his work, mindful of future generations.

In 1974, 12 years following the regulation of the profession of psychologist in Brazil (Law 4,119/62), after gathering all the supporting documentation that attested to his activities as a psychologist, he obtained his registration number (79) from the *Conselho Regional de Psicologia de São Paulo* (São Paulo Regional Council of Psychology) (Waeny & Azevedo, 2003; Costa, 2006).

In May 2000, João Carvalhaes was honored by the São Paulo Regional Council of Psychology (CRP-SP), the council of his home state, with a comprehensive literary research, data and document compilation, and the elaboration of a commemorative video. CRP-SP also attributed to

Carvalhaes, posthumously, the “Centennial of Scientific Psychology” medal, during the celebration of the 1st Centennial of Psychology as Science (1979), for his contribution to the development of psychology (Waeny & Azevedo, 2003; Costa, 2006).

Venezuela · Experimental behavior analysis · Literacy

Henry Casalta Contasti was dedicated to the construction of psychology as a scientific discipline. He graduated in Psychology in 1961, and in 1979, he obtained the degree of Doctor of Science (mentioned in Psychology), both degrees conferred by the Universidad Central de Venezuela (Central University of Venezuela) (UCV).

In 1962, he received a scholarship from the Consejo del Desarrollo Científico y Humanístico (Council for Scientific and Humanistic Development) (CDCH-UCV) at the Free University of Brussels. In the 1970s and 1980s, he developed teaching activities at universities in Colombia, Peru, Brazil, and the United States. In 1979, he was a member of the Comisión para el Estudio del “Plan de Trabajo de colaboración Científica y Cultural entre la Universidad de la Habana y la Universidad Central de Venezuela” (Commission for the Study of the “Work Plan for Scientific and Cultural Collaboration between the University of Havana and the Central University of Venezuela”).

He worked as a professor at the Escuela de Psicología (School of Psychology) of the UCV and took several training courses for graduates until his retirement (1961–1990). He was the founder of the Chair of Introduction to Psychology and was responsible for it both in the School of Psychology and in the Escuela de Sociología (School of Sociology), the latter from 1961 to 1962. He was a member of the Chairs of General Psychology and Experimental Psychology and was responsible for the Seminar on Personality Theory of H.J. Eysenck at the undergraduate level.

He was visiting professor at the Instituto Venezolano de Investigaciones Científicas (IVIC) (Venezuelan Institute of Scientific Research), professor in charge of the Postgraduate Courses of Behavior Modification at the Universidad Simón Bolívar (USB), of the Course Literacy: A Behavioral Problem, of the Master’s Degree in Education of the Universidad de los Andes (University of the Andes) (ULA, 1983), of the Course of Behavioral Analysis Applied to the Clinic and Behavioral Therapy of the

Postgraduate Course of Psychiatry, of the Facultad de Medicina of the UCV (Faculty of Medicine) (1983–1984); professor and researcher of the Master's Degree in Experimental Analysis of Behavior, of the Postgraduate Course of the Facultad de Humanidades y Educación (Faculty of Humanities and Education) of the same University.

In the academic-administrative field, he was Director of the Escuela de Psicología (School of Psychology) of the UCV (1981–1983), served as Head of the Methodological Department, Head of the Department of Experimental Psychology, and Head of the Department of Fundamental Research of the Instituto de Psicología (Institute of Psychology) of the UCV. He was Professor Representative before the Council of the Faculty of Humanities and Education (1979–1981) and a member of the Consejo Nacional de Investigaciones Científica y Tecnológicas (CONICIT) (National Council of Scientific and Technological Research), specifically of the Comisión Técnica en Ciencias Sociales y Humanísticas (Technical Commission in Social and Humanistic Sciences) (1983), of the Board of Directors of the Asociación Venezolana para el Avance de la Ciencia (Venezuelan Association for the Advancement of Science) (ASOVAC), of the Asociación para el Progreso de la Investigación Universitaria (Association for the Advancement of University Research) (APIU), and the Asociación Venezolana para el Análisis Experimental de la Conducta (Venezuelan Association of Experimental Behavior Analysis).

En el ámbito académico – administrativo, fue Director de la Escuela de Psicología de la UCV (1981–1983), se desempeñó como Jefe del Departamento Metodológico, Jefe de la Cátedra de Psicología Experimental y Jefe del Departamento de Investigación Fundamental del Instituto de Psicología de la UCV. Fue Representante Profesor ante el Consejo de la Facultad de Humanidades y Educación (1979–1981) y miembro del Consejo Nacional de Investigaciones Científicas, específicamente de la Comisión Técnica en Ciencias Sociales y Humanísticas (1983), del Consejo Directivo de la Asociación Venezolana para el Avance de la

Ciencia (ASOVAC), de la Asociación para el Progreso de la Investigación Universitaria (APIU) y de la Asociación Venezolana de Análisis Experimental de la Conducta.

In the 1980s, he participated in the Colloquium to evaluate the scope of the Project of the Organic Law of Higher Education; he was always concerned about student performance and the infrastructure of the UCV.

One of his lines of research was the study of illiteracy; he developed several projects within the framework of the same, among them the Literacy Method L.A.-I (1976), the Instituto Nacional de Capacitación Técnica (National Institute of Educational Training) (INCE) regarding the Literacy Work aimed at the rural population (peasants), and in 1983, he designed the LUCES System (Labor Ucevista for Social Education).

He was distinguished with the Research Award of the Asociación de Profesores (Association of Professors) of the UCV.

He stood out both for his publications in behavioral analysis and his facet as a writer. As a writer, he published a lot of books, among which stand out: *La saga del futuro* (The Saga of the Future) (Casalta, 1989a), *Demonios Cosidos y Aguardando* (Sewn and Waiting Demons) (Casalta 1989b), *Redes de sílice* (Silica Nets) (Casalta, 1990a), *El espejo de Adán* (Adam's Mirror) (Casalta, 1990b), *Y una nube descendió sobre el santuario* (And a Cloud Descended on the Sanctuary) (Casalta, 1997), *El vaso del tiempo* (The Glass of Time) (Casalta 2000a), *El Arca de Urganda* (The Ark of Urganda) (Casalta, 2000b), *La gran quimera* (The Great Chimera) (Casalta, 2001), *Ilusiones y vigilia de Adán* (Adam's Illusions and Vigil) (Casalta, 2002), and *Pais de las hadas* (Fairyland). (Casalta, 2003). His novel *Un Espejo en la mano de Fedra* (A Mirror in Phaedra's Hand) was distinguished with the 6th Miguel Otero Silva Novel Prize in 1999 (Casalta, 1999).

Casanova, Teobaldo

Born on October 1, 1894, in Mayagüez, Puerto Rico

Died on November 21, 1977, in Bayamon, Puerto Rico

Irma Roca de Torres

University of Puerto Rico, Río Piedras, San Juan, Puerto Rico

Keywords

Puerto Rico · Educational psychology · Research and statistics

Teobaldo Casanova was one of the five children born to the marriage of Miguel Casanova Affigne, a farmer and owner of rental properties, and Esperanza Prats Padilla, who had been educated in Spain and wrote poems. He was reared in a very stimulating cultural environment, where school was emphasized and the study of art and music was of prime importance. As Graciela Candelas, one of his daughters, told me, he played the piano regularly throughout his life (Personal communication, July 5, 2005). Teobaldo Casanova attended the elementary and secondary public schools of Mayagüez, Puerto Rico, and entered the College of Agriculture and Mechanical Works (today the University of PR, Mayagüez Campus) where he obtained a Bachelor of Science with a concentration in surveying in 1920 (Roca de Torres, 2006). During this time, he was drafted by the US Army and served as a private during World War I.

Teobaldo Casanova initiated his professional life as a physics teacher in Lares High School where he met his first wife Carmen Luisa Vives Vilella with whom he had three daughters: Graciela, Carmen, and Ileana; all three daughters became renowned professionals and university professors, like their father. Later on, he taught at Caguas High School and worked as an engineer in San Juan municipal government. While undergoing graduate studies in psychology at Columbia and New York University, he worked as an engineer for New York City.

Teobaldo Casanova undertook graduate studies in educational psychology at New York University and obtained an MA in 1929 and a PhD in 1933 (Roca de Torres, 2006). He also graduated from Columbia University with a master's degree in mathematics. An APPR's membership directory from 1955 states that Dr. Teobaldo Casanova studied both educational and clinical psychology. I have not been able to verify this information. His doctoral dissertation studied the relationship between educational psychology and some aspects of education in Latin America and was published in 1934 (Casanova, 1934).

He began teaching at the University of Puerto Rico, Río Piedras Campus (UPR-RP) in 1933, first in the program of extension courses for teachers and for the academic year 1933–1934 in the College of Pedagogy. He used to teach statistics, research, evaluation, and experimental psychology. He used to work in research at the Psychology Lab with his colleague Dr. Néstor Vincenty (1901–1992). He collaborated in research at the Council on Superior Education, where with Antonio Rodríguez he studied the Spanish vocabulary of Puerto Rican students between third and fifth grade of elementary school (Personnel Record, 1933–1950).

My father, Fernando Roca de León (1914–2005), was his student in a statistics course and described him as “an excellent teacher, who taught well and had good relationships with his students” (Personal communication, July 5, 2005). He mentioned that Dr. Teobaldo Casanova had a very good relationship with my uncle Pablo Roca de León and that they worked together in an important research to develop bilingual tests in Texas, and to travel there, they went together by ship. Another person who also remembered Dr. Casanova was Dr. José Cáceres, ex-dean of UPR-RP's College of Pedagogy; he described him as “a scholar, and expert in Psychology, especially in evaluations. He was an authority in his field, he gave many advance courses, but I never took a course with him” (Personal communication, July 16, 2005).

From 1937 to 1939, he had a license from UPR-RP to organize the Office of Pedagogical Research at the Department of Public Instruction

of the government of Puerto Rico and later to work at a similar office at New York City. When he returned in 1939 to his academic work at UPR-RP, he was invited to collaborate with Hershell T. Manuel, from the University of Texas, in a project to develop bilingual tests to evaluate cognitive abilities of children. Several Puerto Ricans collaborated in this project: Pablo Roca de León, Ismael Rodríguez Bou, and Abigail Díaz de Concepción (Roca de Torres, 2006).

Dr. Casanova was a very prolific writer especially in the area of statistics, which was his main subject. His daughter Graciela said that her father was very dedicated to his academic work and that every day “he used to sit at his desk for many hours to write his articles” (G. Candelas, personal communication, July 5, 2005). His curriculum vitae stated that from 1939 to 1944, he had seven statistical articles published in professional journals like, *Journal of Educational Psychology* and *Journal of Experimental Education*. He also published five books and some monographs and articles about crime (Roca de Torres, 2006).

During the mid-1940s, the themes of his research and publications changed from statistics to social sciences and criminology. Maybe this change was due to a transfer of his teaching position at the College of Pedagogy to researcher at the Judicial Studies Institute. This change came as a result of a restructuring of UPR-RP in 1943, change that moved the studies of psychology and the Institute of Judicial Studies from the College of Pedagogy to the newly created College of Social Sciences (Roca de Torres et al., 2003). This institute was then moved to the College of Law. Dr. Teobaldo Casanova directed this institute until 1947 when he was granted several licenses without pay to write a book on delinquency in Puerto Rico. In 1949, he resigned from his tenured position as researcher and director of the Institute of Judicial Studies (Personnel Record, 1933–1950).

After his retirement from UPR-RP, Dr. Casanova opened a private professional office to practice child clinical psychology. According to his daughter Carmen, his office was in Santurce and had many modern developments, including a one-way vision mirror to observe children's behavior (C. Casanova de Roig, Personal

communication, July 11, 2005). Carmen added that her father evaluated children at this office for about 5 years, and then, he finally retired, remarried, and dedicated his time to travel around the world.

During his professional life, Dr. Teobaldo Casanova belonged to several professional associations, among them the American Psychological Association, where he was fellow of Division 5 (Evaluations, Measurements, and Statistics); the American Statistical Association; Institute of Mathematical Statistics; Puerto Rico Psychological Association (APPR, in Spanish); Psychometric Society; and Association of University Professors. He was well respected by his colleagues both in Puerto Rico and the United States. According to psychologist Esther Clavell, “we respected him very much because he was one of the psychologists who published profusely in USA journals” (Personal communication, July 12, 2005).

Dr. Teobaldo Casanova became sick with brucellosis, a rare infection he got in Africa, and was even paralyzed due to this illness, but he recuperated his ability to walk. Nevertheless, his old heart started debilitating, and he had a heart attack in 1976 and died at the age of 82 (I. Casanova de Bras, personal communication, August 10, 2005). He excelled in all aspects of psychological work of his era: teaching, research, publication, clinical work, and collaboration with governmental agencies. His life was an example for those who knew him and a model to follow for future generations of psychologists.

Castañeda Figueiras, Sandra Nicolasa Guadalupe

Born *in Mexico City, on September 10, 1942*

Joel Zapata Salazar
Autonomous University of Coahuila, Saltillo,
Coahuila, Mexico

Keywords

Mexico · Cognitive development · Academic agency · Technological developments

Castañeda Figueiras is an expert in cognition in educational contexts to which she has dedicated a good part of her professional life, and this reflects in her tasks as a researcher and a university professor.

She completed a bachelor's degree in general psychology (1969), a master's degree in general experimental psychology (1982), and a doctorate in experimental psychology (1993) obtaining all three degrees at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), in which she became a full-time, definitive "C" professor in 1975. This institution has served as her professional platform and framework for innovation in cognitive sciences. She belongs to the Sistema Nacional de Investigadores (National System of Researchers) (SNI) of the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACyT) since 1994, which has recognized her high productivity as a researcher, granting her a level II recognition. Between 1999 and 2000, she did postdoctoral studies at the Centro Nacional para la Evaluación de la Educación Superior (National Center for the Evaluation of Higher Education).

During her tenure, she has strengthened her Line of Generation and Application of Knowledge (LGAK), "evaluation and promotion of cognitive development and academic learning in higher education" (UNAM 2013), which deals with human cognition. From this aforementioned line of knowledge, she has derived specific

sub-lines that include both the self-regulatory mechanisms such as the attributional, volitional, emotional, and motivational components, as well as the behavioral elements in complex learning, involving creative methodologies that ensure the ecological validity of the data. In this sense, the following stand out: (a) the evaluation and promotion of cognitive development and complex academic learning; (b) the measurement of cognitive, self-regulatory, epistemological, volitional, and emotional regulation components of self-regulated academic learning in university students; (c) research in the comprehension and production of academic texts; (d) research in the phenomenology of academic agency; (e) technological innovation (app development in academic agency); (f) evaluation and promotion of expertise; (g) evaluation and measurement of learning outcomes; (h) generation of training programs in learning and instructional strategies; (i) the identification of cognitive, affective-motivational, and social predictors of university learning; and (j) research, evaluation, and promotion of cognitive development in the teaching and learning of the sciences, arts, and techniques.

This is how her work with human cognition has led her to innovate in the field, from the use of traditional psychometric techniques to the creation of simulators and virtual environments that facilitate the construction of knowledge and complex learning. This has allowed her to question the efficiency of the curricula at the secondary and higher educational levels; on the other hand, this has also led her to provide elements for the generation of learning environments and cognitive strategies in favor of the optimization of teaching-learning processes (EE) in the binomial of the complex systems that imply students and the contexts in which learning occurs.

Her experience as a researcher has allowed her to delve into the implications of cognition in the teaching-learning processes, analyzing how self-regulated cognitive activity becomes a substantive element to consider for the development of skills, the generation of complex learning, and the construction of psychopedagogical and didactic strategies and educational evaluation.

As a teacher in higher education, both in undergraduate and graduate levels, she has trained students in various academic entities of the UNAM, among which are the Instituto de Investigaciones en Matemáticas Aplicadas y en Sistemas (Institute for Research in Applied Mathematics and Systems) (IIMAS), the Instituto de Investigaciones Biomédicas (Institute of Biomedical Research) (IIBO), the Facultad de Psicología (Faculty of Psychology), and the Facultad de Medicina (Faculty of Medicine). Likewise, she has been part of academic exchanges and taught at the postgraduate level at various universities in Mexico, Latin America, and Spain. These spaces have become the ideal platform for Castañeda Figueiras to interest students in theorizing, in research and in the development of predictive mechanisms of autonomous learning, and in the development of expertise in different areas. Her courses, focused on student autonomy and academic agency, have allowed her to apply her pedagogical model called strategic teaching. On the other hand, her work as a high-quality human resources trainer has led her to direct many doctoral theses to this day. In 2004, together with a group of psychologists specialized in cognition, they created the professional training area: “professional training in Cognitive and Behavioral Sciences” for the undergraduate degree and another for the Specialization in “Evaluation and promotion of Cognitive Development and Complex Learning,” both proposals, within the UNAM programs.

Her renowned work has allowed her to be a founding member and president of the Sociedad Iberoamericana de Pensamiento y Lenguaje (Ibero-American Society of Thought and Language) (SIPL), an evaluating member of different accrediting, evaluating, and certifying bodies at the national and international level and also be part of several editorial boards. In this area, she has directed 14 publications that deal with subjects related to cognition, instruction, and the development of technology applied to evaluation.

In this sense, Castañeda Figueiras acknowledges how incipient the work of psychologists has been in the development of technology applied to the discipline’s own problems, particularly among Spanish-speaking psychologists; on

the other hand, she recognizes the need to generate economic technological resources, accessible to the educational field, at the service of psychological evaluation, research, and intervention.

She has received multiple awards and recognitions, both for her outstanding professional development and for her contributions to the scientific knowledge of her object of study. Among them are three honorable mentions in her training as a psychologist; the “Gabino Barreda” Medal at the end of the master’s degree; the “José Gómez Robleda” Special University Chair, for her work in the development of derivations and technological innovations applied to the educational field; the Premio Nacional a la Enseñanza de la Psicología (National Award for Teaching of Psychology) (2004), granted by the Consejo Nacional para la Enseñanza e Investigación en Psicología (National Council for Teaching and Research in Psychology) (CNEIP), for the “Profile of the Graduate of the degree in Psychology at the national level” and for the design and implementation of the General Exit Exam for psychologists. Likewise, she was awarded the Premio Nacional en Investigación (National Research Award) (2011) by the Sociedad Mexicana de Psicología (Mexican Society of Psychology) for her work on the nature, structure, and phenomenology of the academic agency (Castañeda-Figueiras & Peñalosa-Castro 2016) and for the production of original technological developments, which include intervention programs and standardized, validated, and reliable measurement instruments, both face to face and virtual.

Her academic production is extensive, and it is made up of collective and individual works: books, book chapters, and articles from specialized, refereed, and indexed magazines. It incorporates various technological products and evaluation instruments as well.

In 2012, CONACyT recognized as a “success case” one of her investigations on academic agency in university students (Castañeda-Figueiras et al. 2014). In 2016 she was distinguished with the appointment of Counselor of the Educational Evaluation Council by the UNAM itself.

México · Organizational Psychology

Darvelio Alberto Castaño Asmitia pursued a bachelor's degree in industrial psychology at the Universidad de Monterrey (University of Monterrey) (1960–1964), completed specialization studies in social psychology at the University of Columbus Ohio (1970), and earned a master's degree in philosophy from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico)

(UNAM) in 1973. At the UNAM he obtained the degree of Doctor of Psychology (1982) and the Gabino Barrera Medal for the highest average (1984).

His professional experience began in the 1960s. He was human resources personnel manager of the International Bank and later director of human resources at the Moctezuma Brewery. In 1970 he founded the Castaño-Jusidman Consulting Office and in 1974 the Consultoría en Desarrollo Organizacional y Social (Organizational and Social Development Consulting) (CODESO). Subsequently from 1978 to 1981 he served as deputy director of the Consejo Nacional de Ciencia y Tecnología (National Council of Science and Technology) (CONACYT). He was an appointed director of the Facultad de Psicología (Faculty of Psychology) in University City (1981–1985) in the UNAM. At the end of his period, he served as director of the Centro Universitario de Investigación Exámenes y Certificación (University Center for Research Exams and Certification (CUIEC)) of the UNAM and a personal advisor to Dr. Jorge Carpizo McGregor (Rector of the UNAM, 1985–1989). He served as general coordinator of the Colegio de Ciencias y Humanidades (College of Sciences and Humanities) (CCH) of the UNAM (1986–1988). He was a human resources consultant of the United Nations (UN) and also the president of the Asociación Mexicana de Capacitación (Mexican Training Association) (AMECAP). In 1991 he fulfilled his dream and founded the Instituto de Posgrado en Ciencias y Humanidades (Postgraduate Institute in Science and Humanities) (INESPO) which became the first academic institution where organizational development at the master level was taught in Mexico City.

His valuable experience gained by working as executive supported him in teaching for 46 years. He was an outstanding teacher over different periods of his life: at bachelor and postgraduate level in Universidad La Salle (La Salle University) (ULSA), the Instituto Tecnológico Autónomo de México (Autonomous Technological

Institute of Mexico) (ITAM), the Instituto Tecnológico y de Estudios Superiores de Monterrey (Institute of Technology and Higher Studies of Monterrey) (ITESM), at the University of Columbus, and of course at the UNAM.

Castaño strongly believed that without sharing there can be no possible change, and that is why his contributions to psychology were always oriented to open spaces for research and dissemination of knowledge. He is recognized as the pioneer in the field of organizational development and assessment centers in Mexico, promulgating values of self-development, participation, honesty, and commitment for teachers and students in their practice.

Together with some great professors of the UNAM he participated in the creation of the Department of Work Psychology for the bachelor's degree. Among them should be mentioned Jesús Gómez Robleda, Oscar Méndez Cervantes, Samuel Romero Betancourt, Germán Herrera, Gabriel Santoscoy, and Lucy Reidl Martínez. As principal of the Faculty of Psychology of the UNAM, he created the Women's Occupational Psychology Area and promoted the creation of different academic programs such as Sexuality, Disability, and Psychological Development.

The work scenarios were the natural setting for the coincidence of practice and teaching. This provided the opportunity to see the importance of his humanistic vision in a context dominated by instrumentalism and rationality. Thus, he was a great promoter of psychological perspective in organizations, for example, he gave a definition of a managerial profile of professional training in bachelor's degree, he initiated the participation of psychologists in the AMECAP, and he developed consulting programs such as Organizational Climate, Leadership, and Group Dynamics in the CODESO. He explained how important it is to pay attention to the issue of emotions in organizations, and how to avoid health and social interaction problems. Today these problems are known as professional attrition, stress, and workplace harassment.

As a representative of humanism, he is remembered as a versatile, tireless reader, a lover of art cinema, a fatherly figure, and an accomplished athlete in his youth as a National Bullet Launch Champion.

Dr. Darvelio Alberto Castaño Asmitia was a promoter of psychology in organizations, a pioneer of techniques and knowledge that are used today on a daily basis.

 well-being · Positive psychology

As was the tradition for women of the time, María Martina Casullo graduated as a *maestra normal nacional* (national normal teacher) at the age of seventeen (Rodríguez, 2019; Yannoulas, 1996). She then began to study psychology at the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the Universidad de Buenos Aires (University of Buenos Aires), graduating with a degree in psychology in 1963 as part of the first graduating class of this degree course, which had begun in March 1957.

After graduating, she was admitted to Ohio State University (USA) to study for a PhD in psychology, where she completed all the courses between 1963 and 1964. The following year, she returned to Argentina and married Alberto Zubieta, a surgeon, and moved to Junín, a city in the inner part of the Province of Buenos Aires. The couple had two children, Martín and Elena Zubieta. In July 1974, they divorced, even though there was no divorce law in the country, by virtue of the scope of article 67 bis of Law 2.393. Finally, María Martina Casullo returned to the city of Buenos Aires in 1977 (Elena Zubieta, personal communication, April, 2, 2021).

Already in 1964 and 1965, María Martina Casullo had carried out her first research in the

field of psychiatric epidemiology as a psychologist in the Sección de Epidemiología Psiquiátrica del Instituto Nacional de Salud Mental (Psychiatric Epidemiology Section of the National Institute of Mental Health, INSM) organized in 1957 within the framework of the Argentine and Latin American psychiatric renovation (Chiarvetti, 2008; Visavosky, 2002). Then in 1980, she joined the *Programa de Investigaciones en Epidemiología Psiquiátrica* (Psychiatric Epidemiology Research Programme, PEPSI) at the *Consejo Nacional de Investigaciones Científicas y Técnicas* (National Council for Scientific and Technical Research, CONICET), a program directed by the well-known psychiatrist Fernando Pagés Larraya (1923–2007). His epidemiological work brought together the perspectives of cross-cultural psychiatry, epidemiology, anthropology, and ethnography. Through the PEPSI, Pagés Larraya made an epidemiological map of the mental pathologies existing in our country, which he divided into 25 *cultural isoidias* as named by him (Pagés-Larraya, 1982). In this context, mental illness was understood as a social phenomenon. For this reason, his epidemiological perspective has been defined as a *mental health epidemiology* (Ferrero, 2000).

In 1984 María Martina Casullo became an *investigadora adjunta* (associate researcher) in the Scientific and Technological Researcher Career at CONICET. Her first project focused on the “Development and validation of psychological assessment techniques for application in epidemiological research.” In this respect, she herself emphasized how her studies on depression, suicidal risk, and psychological distress in adolescents had allowed her to observe both the risk factors that favored the development of psychological disorders and the protective or *salugenic* factors that led to healthy development. Thus, by means of psychological assessment techniques, it was possible to differentiate those adolescents who presented symptoms indicating the presence of psychopathological disorders from those who had reached a certain level of psychological well-being. It should be noted here that this preventive epidemiological perspective adopted by Casullo focused her interest on what the World Health

Organization (WHO) has understood as *primary health care* (Casullo, 1998, 2002).

In the mid-1980s, María Martina Casullo became a leading personality in the field of psychological assessment. In 1987, she obtained the position of Full Professor of the required course *Teoría y Técnica de Exploración y Diagnóstico Psicológico, Módulo I, Cátedra 2* (Theory and Technique of Psychological Exploration and Diagnosis, Module I, Chair 2) within the undergraduate program in psychology at the Facultad de Psicología (Faculty of Psychology) of the University of Buenos Aires (Mariñelarena-Dondena, 2014).

As already mentioned, her research on risk factors in adolescents led her to analyze the protective or health-generating factors that prevent people from falling ill even in the face of adverse environmental situations (Casullo, 1998). Within this framework of ideas, at the beginning of this century, Casullo proposed the existence of “a new paradigm of theoretical and methodological reflection” (Casullo, 2000, p. 341) which she denominated *salugenic or positive psychology*. This was the propitious context for the early reception in Argentina of the *positive psychology movement* initiated by Martin Seligman (1942–) in the United States of America (Mariñelarena-Dondena, 2012; Seligman & Csikszentmihalyi, 2000).

Casullo was one of those in charge of organizing the curriculum of the undergraduate Program in Psychology at the Universidad de Palermo (University of Palermo) in the city of Buenos Aires, which turned this institution into the main channel for the reception of *positive psychology* in Argentina. Both the undergraduate and doctoral programs, the latter of which was directed by María Martina Casullo from the very beginning, included contents linked to *salugenic* or *positive psychology*. Also at the University of Palermo, Casullo began to organize the *Encuentros Iberoamericanos de Psicología Positiva* (Ibero-American Meetings of Positive Psychology), the first of them in 2006, a scientific meeting that brought together the region’s leading researchers in this field (Mariñelarena-Dondena & Klappenbach, 2016).

In her later works, Casullo took up the notion of *capital psíquico* (mental resources), defining it as the “set of factors and processes that allow one to learn to protect oneself and survive, to generate personal strengths” (Casullo, 2005, p. 61). In any case, she highlighted the need to integrate this view with the old medical model focused on the study of mental pathologies. Likewise, as in her epidemiological research, she emphasized the relevance of the social and cultural context in order to understand individual capacities and strengths.

Casullo continued her research until she reached the position of investigadora principal (Principal Researcher) at CONICET in 2005. At the same time, she always continued with her teaching work, and in 2006 she was appointed Professor Emeritus in the Faculty of Psychology at the University of Buenos Aires (Mariñelarena-Dondena, 2014).

Casullo belonged to numerous scientific and professional associations. In 1995, she was one of the founders and first President of the *Asociación Iberoamericana de Diagnóstico y Evaluación Psicológica* (Ibero-American Association of Psychological Diagnosis and Evaluation, AIDEP). She was also a member of the *Asociación de Estudio e Investigación en Psicodiagnóstico* (Association for the Study and Research in Psychodiagnosics, ADEIP), the *Sociedad Interamericana de Psicología* (Interamerican Society of Psychology, SIP), the *American Psychological Association* (APA), the *International Association of Cross-Cultural Psychology* (IACCP), and the *International Positive Psychology Association* (IPPA).

María Martina Casullo contributed enormously to the development of *psychological diagnostic techniques* as well as to the development of *salutogenic or positive psychology* in Argentina. As a corollary to her work, shortly before her untimely departure, she finished editing her book *Practices in Positive Psychology* (Casullo, 2008).

Brazil · History of Psychology · Psychology training · Experimental psychology

Rogério Centofanti was a character with a unique trajectory and original contributions in the field of

historiographical research on psychology in Brazil. From an Italian family background, he lived his childhood and youth in the cities of Santo André and Pedra Bela, in the state of São Paulo. As an adolescent, he demonstrated a lot of intellectual curiosity, even taking courses with a group of friends at the Universidade de São Paulo [University of Sao Paulo] (USP) and at the *Pontificia Universidade Católica de Sao Paulo* [Pontifical Catholic University of Sao Paulo] (PUC-SP), in the context of the political and cultural effervescence of the 1960s. Access to such circles led him to become disinterested in the high school: at the age of 17, he was legally emancipated, leaving his studies at the *Instituto de Educação de Santo André* [Institute of Education of Santo André] and traveling through the interior of Brazil, even crossing the border with Bolivia.

In 1969, after returning to São Paulo, he started the psychology course at the *Universidade de Mogi das Cruzes* [University of Mogi das Cruzes] (UMC). Also during his graduation, Centofanti had another moment of boredom with formal schooling, abandoning the course in the third year (1972), when he left on a trip to “see the world.” He spent time in the Netherlands, Portugal, and Angola, among other places. At the end of that year, he returned to Brazil and, after a period of dedicating himself to other professional activities, he resumed his studies, graduating with a bachelor’s degree in psychology (1978), without attending the so-called “5th year,” corresponding, at the time, to the formation of a psychologist.

Since his student’s times, Centofanti became interested in experimental psychology and its history. In fact, the experimental laboratories of psychology would be his main focus, and the experimental attitude (in the sense of empirical rigor and profound obstinacy in the search for sources) would be one of the main marks of his work.

In the early 1980s, he was instigated by reading Annita Marcondes Cabral’s seminal text “*A Psicologia no Brasil*” [“Psychology in Brazil”] (Cabral, 2004/1950), especially for the mention of the (then) unknown Polish psychologist Waclaw Radecki, creator of the experimental psychology laboratory at the *Colônia de Psicopatas de Engenho*

de Dentro [Colony of Psychopaths of Engenho de Dentro] in 1923, transformed into a *Institutede Psicologia* [Institute of Psychology] in 1932, where the first project for a training course for professional psychologists in Brazil was planned.

Centofanti then left for Rio de Janeiro, during his vacation, and started a real hunt for clues about Radecki. From Radecki's "*Tratado de Psicologia*" ["Treatise on Psychology"], found in a second-hand bookshop, through other sources consulted at the *Biblioteca Nacional* [National Library], he reached Jayme Grabois – one of Radecki's youngest assistants at the Laboratory – and Antonio Gomes Penna, who had heard a lot about Radecki from his master, Nilton Campos, also a member of the team.

The interviews with Grabois and Penna were crucial for the writing of "Radecki e a Psicologia no Brasil" ["Radecki and Psychology in Brazil"] (Centofanti, 1982), published in one of the first issues of *Psicologia: Ciência & Profissão* ["Psychology: Science & Profession"], journal of the *Conselho Federal de Psicologia* [Federal Council of Psychology] (CFP) that would become in the following years one of the most solid and relevant in the field. In addition to this essay, which founded the historiography of Radecki and the Engenho de Dentro laboratory, Centofanti would come back to Radecki in other works, seeking to understand his theoretical system of "affective discrimination."

In the 1980s, Centofanti made a historiography of Psychology, without realizing or claiming it (Centofanti, 2018), in a period in which such field of investigation was not consolidated in the country. Such work can be qualified as one of the "first essays" in History of Psychology in Brazil: here there is a direct and clear reference to the book organized by Mitsuko Antunes (2004). That book was proposed by the Working Group on History of Psychology of the *Associação Nacional de Pesquisa e Pós-Graduação em Psicologia* [National Association for Research and Post-Graduation in Psychology] (ANPEPP) and endorsed by the CFP, in its project "Memória da Psicologia" [Memory of Psychology]. It gathered eight papers published between 1944 and 1988. It is a heterogeneous set of texts, among which the research conducted by Centofanti

preserves "old-fashioned" characteristics (self-taught, voluntarism, essayistic style, basically individual and erudition-centered work) with other "more professional" ones, such as the empirical historiographic production and centered in the work with sources, which would later be developed and consolidated in Brazil by the research community gathered specially around the ANPEPP's Working Groups in History of Psychology and in Social History of Psychology.

His own academic trajectory is quite *sui generis*. In terms of degrees, Centofanti did not pursue a formal academic career: he began an MA in Philosophy of Education (1979) at PUC-SP, which he did not complete. Professionally, Centofanti devoted himself fundamentally to the teaching of Psychology in private institutions in the state of São Paulo: the University of Mogi das Cruzes, his *alma mater* (1979–1993), the *Universidade Brás Cubas* [Brás Cubas University] (1979–1986), and the *Universidade do Grande ABC* [University of the Great ABC] (1979–1984). His teaching mainly covered the areas of Experimental Psychology, History of Psychology, and Psychological Theories and Systems.

Centofanti also dedicated himself intensely to political militancy – notably in the *Partido dos Trabalhadores* [Workers' Party] – and to trade union activism (which earned him dismissals from private education in the 1980s). In the 1980s, he also devoted himself to business consultancy in human resources, in the area of training, as well as (in the 1990s) to management and mobilization work in the *Sindicato de Ferrovários de São Paulo* [São Paulo Union of Railway Workers].

In recent years, Centofanti has delved into other research on the beginnings of experimental psychology: notably the experimental psychology laboratory of the *Escola Normal Secundária de São Paulo* [São Paulo's Normal Secondary School], run by Italian psychologist Ugo Pizzoli (1863–1934). Centofanti never stopped researching, writing, and, above all, investing in the communication of his writings. He moved well between libraries, archives and rare works, as well as through new technologies: in recent years, he created a blog (<https://nadamaisdoqueideias.blogspot.com>) and a podcast, in which

he mixed accounts of lived experiences with reflections on the contemporary. He died at the age of 71 as a result of COVID-19.

Guitarist, dentist, pathologist, art critic, and writer, César arrived in São Paulo in 1912, joined the Personal da Lira musical group alongside conductor João de Souza Lima (1898–1982) in artistic-literary meetings promoted by senator José de Freitas Valle (1870–1958) at Villa Kyriall (Kyriall Village), a well-known redoubt of intellectuals, artists, and politicians from the Belle Epoque of Sao Paulo. During this same period, he entered the Dentistry course at the Universidade Livre de São Paulo (Free University of Sao Paulo). He graduated in Dentistry (1916) and entered the Medicine course (1917), divided between the medicine course and violin classes as a professor at the Salão do

Conservatório Dramático Musical de São Paulo (São Paulo Dramatic and Musical Conservatory Hall).

With the closure of the activities of the Universidade Livre de São Paulo (Free University of Sao Paulo), César moves to medicine course at the Faculdade de Medicina do Rio de Janeiro (Rio de Janeiro Medical School), current Faculdade de Medicina da Universidade Federal do Rio de Janeiro (Medical School of the Federal University of Rio de Janeiro) in 1918. In the early 1920s, still as a medical student of this faculty, he was appointed as the first resident physician of the Laboratório de Análises Clínicas do Hospital do Juquery (Clinical Analysis Laboratory of Juquery's Hospital).

Motivated by the study of the graphic, plastic, and sound production of psychiatric patients and influenced by the books *Expressions of Madness* by the German psychiatrist and art historian Hans Prinzhorn (1886–1933) and *Art and Madness* by the French psychiatrist and archaeologist Jean Vinchon (1884–1964), he began to observe the artistic manifestations of Juquery's inmates, created the Laboratório de Pesquisas Plásticas (Laboratory of Plastic Research), in which he defended the free work of the interns in the choice of themes, techniques, materials, and with the minimum interference of the advisor. For four decades, the Laboratory had been on the participation of artists like as Maria Leontina (1917–1984), Flávio de Carvalho (1899–1973), Aldo Bonadei (1906–1974), Moacyr de Vicentis Rocha (1929–2000), Niobe Xandó (1915–2010), Alice Brill (1920–2013), and Lasar Segall (1889–1957). Osório César and Durval Bellegarde Marcondes, doctors of the Juquery Hospital, are recognized as two of the main Brazilian interlocutors of Sigmund Freud (1856–1939). The duo, mobilized by Freudian theories, participated in the foundation of the Sociedade Brasileira de Psicanálise (Brazilian Society of Psychoanalysis) in Sao Paulo (1927) and the Rio de Janeiro section founded by Juliano Moreira in 1928 (Mendes et al., 2018, p. 26). He published the work *The artistic expression in the alienated: contribution to the study of symbols in art* (1929) which is also considered in

contemporaneity a vital theoretical reference for understanding about the first dialogues about the connections between art and madness, especially in the fields of art-education, pedagogy, psychiatry, psychology, psychoanalysis, and synesthesia.

In the 1930s has undertaken studies in the Europe of which his participation in the experiment of the study of psychic functions (conditioned, unconditioned or natural reflexes) in the Institute of Experimental Medicine and in the 15th International Congress of Physiology in Leningrad, Soviet Union (now St. Petersburg), chaired by Ivan Petrovich Pavlov (1849–1936), deserves to be highlighted. During this period, César approached thinkers such as David Isaakovich Vygódski (1893–1943), Henri Barbusse (1873–1935), Romain Rolland (1866–1944), and Roy Franklin Barton (1883–1947). Osório César and the artist Flávio de Carvalho (1899–1973) organized the “Mês dos Loucos e das Crianças” (Month of the Children and the Insane): exhibitions with drawings by children from public and public schools in Sao Paulo and productions by Juquery's Hospital inmates (1933) at the Clube dos Artistas Modernos (Modern Artists' Club). The exhibition was considered an affront to the conventions on aesthetics, defended by the National School of Fine Arts and one of the milestones in the discussion of concepts about aesthetics and ruptures in the history of art in Brazil, after the *Semana de Arte Moderna* (Week of Modern Art), also known as Week 22. In the genesis of the concept of aesthetics and ruptures in the creative processes in art, he published the book *A arte nos loucos e vanguardistas* (Art in the avant-garde and insane) in 1934, with a preface by Inaldo de Lira Neves-Manta (1903–2000), in which he presented the structure of the teaching and learning process in art education developed in the art workshops at the Hospital do Juquery (Juquery's Hospital) with the insane, based on the free work of the inmates in the choice of themes, techniques, materials, and with minimal interference from the instructor. The work contains a transcript of the Conference given by the writer at the opening of the “Month of the Children and the Insane.” César also published the book *Mysticism and Madness: contribution to*

the study of religious madness in Brazil (1939), which was awarded a prize by the Academia Nacional de Medicina (Brazilian National Academy of Medicine) in 1948 (Jornal do Comércio, 2/7/1948, p. 4).

In the 1940s there were partnerships with doctors and artists, and in this period the residences, coffee shop, studios, galleries, and art saloons were consolidated as important nuclei for cultural integration, especially for modern art, in which artists, intellectuals, and art critics gathered to discuss, debate, and study. Osório César figures among the personalities who stood out as one of the central figures of these groups. César proposed and analyzed artistic productions triggered by the principles of sound plasticity; he fostered the teaching and learning processes in the Escola Livre de Artes Plásticas (Free School of Plastic Arts) at the Hospital do Juquery (Juquery's Hospital) in Sao Paulo; he articulated and disseminated the productions of the insane patients from the Hospital do Juquery (Juquery's Hospital) in Brazil and in Europe. He also published the book *Mystical symbolism in the alienated: a case of graphic mysticism in a paranoid schizophrenic* (1949).

In the 1950s, he concentrated on his studies and research on creative processes, especially in social art criticism, and organized exhibitions and conferences on the art of the insane. The results of his studies and the works produced at the Juquery Hospital were presented at the First International Congress of Psychiatry and at the First Exhibition of Psychopathological Art in Paris (1950). That same year, Vinchon (1950) reissued *Art and Madness*, two musical compositions by the insane at the Hospital do Juquery (Juquery's Hospital), analyzed in the work *The artistic expression in the alienated: contribution to the study of symbols in art* (1929), are inserted as the object of Vinchon's analysis, which legitimizes César's production as an international bibliographic reference. Works by artists from the Hospital do Juquery (Juquery's Hospital) are part of the collections of the Sainte-Anne Hospital Museum of Art and History (MAHNSA), Art Brut Collection ABCD/Bruno Decharme, Art Brut Collection by Jean Dubuffet, Prinzhorn Collection of the Heidelberg University

Hospital. In Brazil, works by Juquery artists are part of the collections of the Museu de Arte de São Paulo (Sao Paulo Museum of Art), Museu de Arte Moderna (Modern Art Museum), the Museu de Imagens do Inconsciente (Unconscious's Images Museum), and the Museu de Arte Osório César (Art's Osório César Museum).

The studies undertaken by Osório César in the fields of art, experimental psychology, and psychiatry contributed greatly to the structuring of the founding concepts of the fields of art therapy, art-education, pedagogy, psychoanalysis, psychology, psychiatry, and occupational therapy.

Mexico · Social psychology · Psychology of the Mexican

Ezequiel Adeodato Chávez Lavista was the son of Doctor Ignacio T. Chávez, who was the principal of the Colegio Preparatorio de Aguascalientes (Aguascalientes High School), and also governor of the State, and Mrs. Guadalupe Lavista de Chávez. His elementary school studies were carried out in his own home. He then continued his studies in Mexico City at the Colegio Anglo-Franco-Mexicano (Anglo-Franco-Mexican School) and the Escuela Nacional Preparatoria (National High School) (founded in 1868, by the decree of President Benito Pablo Juárez García, 1858–1872). He enrolled at the Escuela Nacional de Jurisprudencia (National School of Jurisprudence), obtaining his Juris Doctor Degree in 1891. He started his teaching career while being a student at the law school, teaching Geography, Philosophy, and Psychology (Rovira, 2019).

Ezequiel Chávez distinguished himself by his intense political and academic activity, following his father's example. In 1895, he submitted to the Minister of Justice and Public Education, an

initiative to reorganize elementary schools and another to reorganize the Escuela Nacional Preparatoria (National High School); both initiatives were accepted. He also contributed to reorganize the National Education System. Ezequiel Chávez and Justo Sierra Méndez founded the Escuela Nacional de Maestros (National School of Teachers) (in 1881, Justo Sierra had presented the legislative bill of the “Escuela Normal y de Altos Estudios” [“College of Training and High Studies”], which later became the Escuela Nacional de Maestros [National School of Teachers], in 1925), founded the Escuela de Altos Estudios (School of Higher Studies) (which started operations in 1910 and in 1924, became the Facultad de Filosofía y Letras [Faculty of Philosophy and Literature] of the Universidad Nacional de México [National University of Mexico]), and participated in the refoundation of the Universidad Nacional de México (National University of Mexico) in 1910. In that year, and as recognition for his career, he received the Honoris Causa Doctorate from that University. He later founded the Escuela Internacional de Arqueología y Etnología Americanas (International School of American Archeology and Ethnology), with the collaboration of Franz Boas. He was a member of the Academia Mexicana de la Lengua (Mexican Academy of Language) and of the Academia Mexicana de la Historia (Mexican Academy of History), as well as a founding member of El Colegio Nacional (The National College). In 1915, he presented two legislative bills: one to federalize education and another to grant autonomy to the Universidad Nacional de México (National University of Mexico).

As a politician, Chávez became a deputy of the Congreso de la Unión (Federal Congress) (1911) and Subsecretario de Instrucción Pública y Bellas Artes (Undersecretary of Public Education and Fine Arts) (1905–1911). In the academic world, he was the director of the Escuela Nacional Preparatoria (National High School) (1920) and rector of the Universidad Nacional (National University) on two occasions (1913–1914 and 1923–1924). He distinguished himself by his broad culture and by the diversity of disciplines that he cultivated, ranging from journalism and

poetry to studies on History, Geography, Psychology, and Philosophy. He was also internationally recognized, having taught at the universities of Cincinnati, California, and Madrid. Ezequiel A. Chávez received numerous awards abroad, both from private institutions and governments; among the latter, he was recognized as an Oficial de Instrucción Pública de la República Francesa (Public Instruction Officer of the French Republic), as a Caballero de la Legión de Honor (Knight of the Legion of Honor), and as a Comendador de la Orden del Rey Leopoldo II (Commander of the Order of King Leopold II) of Belgium and was distinguished with the Medalla de Oro (Gold Medal) of the Universität Wien (University of Vienna) (El Colegio Nacional, 2019).

Regarding the introduction of the study of our discipline in Mexico, when he submitted his bill to reform the curriculum of the Escuela Nacional Preparatoria (National High School) in the Cámara de Diputados (Chamber of Deputies) (1895), Chávez defended the incorporation of a Psychology class, stressing that:

[...] Psychology serves every individual, because everyone has to carry out intellectual, emotional and volitional operations; it helps lawyers to understand the criminal conducts, and all those referring to Sociology; it is necessary for doctors to understand mental illnesses; and that it serves engineers, since they are entrepreneurs who are in charge of combining work, forces of nature and capital, to produce: all of the above could not be done properly if the way how the human mind works is ignored [...]. (Ruiz, 1896; as cited in Rodríguez Preciado, 2003, pp. 98–99)

After obtaining the authorization to modify the high school curriculum, the psychology class became part of the academic program of the Universidad Nacional (National University). The subject was taught for the first time in 1897; the first textbook used was *Primer of Psychology* by Edward B. Titchener, which Chávez translated for this purpose. This fact not only impacted one institution, it had national implications, since an educational unification was sought at that time. The study of psychology was introduced to 33 state high schools, and gradually to other educational institutions including training colleges (Álvarez Díaz de León, 2011, p. 33).

According to Álvarez Díaz de León (2011, p. 34), psychology classes had the purpose of raising awareness of the fundamental psychic phenomena and their importance to achieve progress, as well as to develop higher psychic phenomena, by substituting impulses for volitional acts oriented toward social good. The objective sought by Chávez in the psychology course was the training of progressive students, with a scientific attitude to learn mental processes, with the ability to observe, investigate, reflect, develop critical thinking, and foster self-confidence (Hernández, 1981).

The contents of the class underwent several modifications and updates. One of the most important modifications was triggered by the visit and class given by James M. Baldwin (1861–1934) at the Universidad Nacional (National University). Chávez changed the contents of the subject, bringing it closer to social psychology, as he himself points out:

[...] the definition was continuously refined, and at this point the role of Social Psychology was fundamental, because after the course of Psychosociology taught by James Mark Baldwin from 1910 to 1913, the subject matter underwent substantial changes [...]. (Chávez, 1914; as cited in Rodríguez Preciado, 2003, p. 100)

Chávez was convinced of the importance of studying the character of the people and considered this as the “result of all the psychic conditions of individuals, which vary with the peoples” (Chávez Lavista, 1901, p. 81). He is credited (Rovira, 2019) with being the first in contemporary Mexico, to work on the subject of Mexican psychology, focusing on the distinctive features of sensitivity as a constitutive element of the character: “it is not ideas but emotions, that move individuals” (Chávez Lavista, 1901, p. 85). It should be noted that to date, he has been the only one to develop a pedagogical proposal in which he seeks to achieve a harmony between educational institutions, peoples, and their character (cf. Rovira, 2019, pp. 12–13): “It matters, to elaborate the study that does not exist in its particularity; its result will be the scientific institution for the appropriate treatment of the education of the various components of the social entity” (Chávez

Lavista, 1901, p. 83). He regarded education as the only means to solve the problems of Mexico, as a unifier of thoughts and wills and as a producer of future cadres for the life of society based on the principle of the right to justice. In this project, psychology was an indispensable resource (López Ramos, 1997).

At the end of his career, Chávez was recognized as Profesor Emérito por la Universidad Nacional Autónoma de México (Professor Emeritus by the National Autonomous University of Mexico), in 1945. In 1966, on the occasion of the centenary of the Escuela Nacional Preparatoria (National High School), each of its campi was named after an illustrious university student. Campus number 7 was named after him.

The legacy of Ezequiel A. Chávez is still perceived today, especially in the current curriculum of the Facultad de Psicología de la Universidad Nacional de México (Faculty of Psychology of the National Autonomous University of Mexico), which poses the challenge to respond to the various problems and demands for solutions that arise from society through the free discussion of psychological knowledge and professional practice, linked to the social reality where it is inserted (Facultad de Psicología, 2008).

Chiappo Galli, Leopoldo

Born *on Chosica (Lima, Peru), December 17, 1924*

Died *in Peru, March 7, 2010*

Ramón León

Universidad Ricardo Palma, Lima, Peru

Keywords

Peru · Humanistic psychology · Dante Alighieri

Leopoldo Chiappo was a Peruvian psychologist and educator. Formed at the Universidad Nacional Mayor de San Marcos (UNMSM, B. A. 1949, Ph. D. 1951), he continued his training in philosophy and psychology at American and Italian universities for years. The breadth of his interests ranged from neuropsychology to the literature of Dante Alighieri (1265–1321) and from the mystique of San Juan de la Cruz (1542–1591) to Peruvian education, including of course psychology, being one of the founding professors of the specialty of psychology in his alma mater.

He began his research in the field of psychology with neuropsychological research, developing his noetic-perceptual test (Chiappo 1957, 1959). He followed Honorio Delgado when he retired from the University of San Marcos in 1961 and accompanied him in the founding of the Peruvian University of Medical and Biological Sciences (today *Universidad Peruana Cayetano Heredia*, UPCH) in which he fulfilled directive functions. During the years of the military dictatorship in Peru (1968–1975), he worked

in various commissions of the educational reform promoted by the government.

A prolific author, his areas of interest were neuropsychology in his youth and later psychology and its relations with literature and philosophy. In the last 30 years of his life, he concentrated on the study of Alighieri's work and its links with psychology.

A student of the work of Honorio Delgado, Chiappo also taught until his retirement at the UPCH, where he represented the approach to humanistic psychology.

Creator of one of the neuropsychological tests developed in Peru (noetic-perceptual test), Chiappo evolved toward a conception of psychology in which he emphasized the normal and healthy aspects of the personality, integrating in this conception approaches from philosophy, literature, and those of his teacher, Honorio Delgado.

Mercedes Chiqués Torres (María de las Mercedes Inocencia) is the daughter of Miguel Chiqués, a school director, and Rita Torres, a housewife. In 1916, Mercedes married Dr. Clarence J. Walsh and added his last name to hers, as was the tradition in Puerto Rico, becoming Mercedes Chiqués de Walsh. Her marriage was short, as her husband died in 1924. They had three children: Margarita, Alberto, and Rita Walsh Chiqués.

In 1912, Mercedes finished high school in San-turce, Puerto Rico and then studied 2 years at the University of Puerto Rico and Columbia University, but did not finish her bachelor's degree. From 1914 to 1916, she worked as a rural teacher in the public schools of Puerto Rico. From 1916 to 1920, she stayed at home with her husband and small children. In 1920 she worked as a substitute teacher and then moved to the United States where she worked as a substitute Spanish teacher at a high school in Philadelphia from 1922 to 1924, when she returned to Puerto Rico, because her husband died. From 1924 to 1927, she worked as a statistician at the Caguas Sugar Company (Personnel Record, 1927-1963).

In 1927 she started working at the University of Puerto Rico in Río Piedras (UPR-RP), as a researcher in different offices, and in 1929 she was hired by Dr. Fred C. Walters, as a research assistant at the Department of Psychology at the College of Education. In this position, she excelled not only as an assistant researcher/statistician but also as an assistant professor, offering several classes on psychological measurement when Dr. Fred C. Walters and Professor Malvina L. Monefeldt were out of Puerto Rico.

Mercedes Chiqués de Walsh worked with these two researchers and also with Prof. Alfredo Silva Cofresí on the translation of Stanford Binet in 1933 and in the development of the *Prueba Hispanoamericana de Destrezas y Logros, para grados 3-12* (Spanish-American Test of Skills and Achievements) (Álvarez, 2006; Roca de Torres, 2008). Their translation of the Binet was the one used in Puerto Rico to evaluate our children until Pablo Roca de León (1951, 1953) published his translations and adaptations of the Wechsler Intelligence Scale for Children (1949) and the Stanford Binet Intelligence Scale for Children (1937).

Mercedes Chiqués de Walsh name has been included in all the publications about the development of psychology in Puerto Rico. She was an important contributor to the development of the first psychological measurements used in Puerto Rico. She retired from her work at the University of Puerto Rico in 1963 and moved in with her daughter, Rita, to the United States.

Argentine · Italy · Child psychiatry · Experimental psychology · Mental hygiene

Lanfranco Ciampi obtained his medical degree at the University of Rome in 1909, just before he travelled to Barcelona to gain some practice at

their Clinical Hospital. When he returned to Rome, he got his major in psychiatry, in 1913. After he graduated, he had already started his path in child psychology under the direction of the prestigious psychiatrist Sante de Sanctis (1862–1935). As a matter of fact, from 1905, he participated in the Model Institute of Abnormal Children in Rome, where he became deputy director after graduation. He remained there until 1919, while working as a professor in the chair of Psychiatry and the Laboratory of Experimental Psychology led by his mentor at that University. He also became a medical inspector of asylums-schools in that city.

In 1920, Ciampi migrated to Argentina, for unknown reasons. His training with De Sanctis provided him a network of opportunities when he arrived in Buenos Aires. Prior to his arrival, he contacted Domingo Cabred (1859–1929), being subsequently hired by the Consejo Nacional de Educación (National Board of Education) as an advisor on projects on detection and treatment of deficient children in schools (Ciampi, 11/5/1920, Archivo Sante de Sanctis, Correspondencia). He also participated as a member in the Instituto de Criminología de la Penitenciaría Nacional (Criminology Institute of the National Penitentiary), and in the same year he founded his own Instituto Psico Pedagógico (Psycho Pedagogical Institute), quickly incorporated into the National Council of Education. Together with this Institute, he established the children's colony named "Villa Matilde," in the town of Ramos Mejía, on the periphery of Buenos Aires. The name honored his wife, Matilde Teresa Flairoto, formed in Italy in the Montessori method in 1915, and close to socialist women's circles at Buenos Aires, where she became principal of the N°2 National Lyceum of Ladies.

The creation of the Universidad Nacional del Litoral (Litoral National University) in 1919, and a year later its Faculty of Medical Sciences in the city of Rosario (province of Santa Fe), was a first and successful attempt to institutionalize academically his training and production in Argentina. The faculty organizer, Antonio Agudo Ávila (1874–1931), summoned Ciampi and Gonzalo Bosch (1885–1967) to structure the psychiatric

area in the medical curriculum, with whom he also joined the medical board of a local sanatorium. Once there, they proposed an innovative project where Ciampi combined the psychopathological method of De Sanctis that he had mastered, with his active participation in the Mental Hygiene movement that was beginning to settle in the Argentine academic debate. They included three mandatory psychological or psychiatric chairs for medical instruction: Adult Psychiatry, Experimental Psychology, and Children's Neuro-Psychiatry. Actually, the latter is considered one of the world's first experiences that provided academic status to childhood issues within the subject. Combined with it, he proposed the Escuela de Niños Retardados (School for mentally handicapped Children) which served as a clinical observation field. In addition to this, they created the first Hospital de Alienados (Mental Hospital) in the province, which included three laboratories – Biochemistry, Histopathology of the Nervous System, and Experimental Psychology. All these institutions were then gathered under the Instituto de Psiquiatría (Institute of Psychiatry) of the university, created in 1929. This scientific institute also began to publish its own Bulletin, both directed by Ciampi throughout its active years. Through the exchange of this Bulletin, the child psychiatrist activated a wide academic network with European (mainly Italian and French) and Latin American (especially Brazil) magazines and institutions. These interconnections were fundamental to internationalize the Institute and its productions (Allevi, 2018).

Once created the Institute and appointed director, Ciampi actively joined in different academic initiatives of national and international scope: he integrated the Sociedad de Neurología y Psiquiatría de Buenos Aires (Society of Neurology and Psychiatry of Buenos Aires), which gave rise to the Liga Argentina de Higiene Mental (Argentine League of Mental Hygiene). Being its founders together with Gonzalo Bosch, they also paired the Brazilian League as well as. He encouraged the creation of a Comité Femenino Rosarino de la Liga Argentina de Higiene Mental (Women's Mental Hygiene Committee in

Rosario), which collaborated with the Mental Hospital. Ciampi also participated in the Sociedad de Psicología (Society of Psychology of Buenos Aires) and, in 1934, in the Sociedad de Criminología (Society of Criminology), created in that year.

At the beginning of 1935, the weight of his institutional responsibilities in two cities (Rosario and Buenos Aires) impacted on Ciampi's health, and he decided to present his resignation as director of the University Mental Hospital, which was accepted only a year after. However, he continued with academic assignments, conducting the Institute and its Bulletin. From that moment on, he was exclusively dedicated to his private clinics in Buenos Aires and his participation in the Mental Hygiene League. In 1937, and along with Raimundo Bosch, he created in Rosario the Sociedad de Psiquiatría, Psicopatología y Medicina Legal (Society of Psychiatry, Psychopathology and Legal Medicine), and just a few years later, the University appointed him honorary professor.

In 1938, the Mental Hygiene Women's Committee that he had created in 1930 in Rosario promoted the Sante De Sanctis Special School, incorporated into the Provincial Council of Education of Santa Fe in 1942, through Cimapi's intervention. This local institution, unique in its kind, was rapidly complemented with an "Orthopsychopedia" School. In this academic institute, psychiatrists offered special formation for teachers in the detection and approach of mental deficiency and language problems, also sponsored by the provincial State.

Ciampi regularly published papers in medical and pedagogical journals of great relevance and circulation, where we could highlight *Semana Médica* (Medical Week Journal), the *Revista de Criminología, Psiquiatría y Medicina Legal* (Journal of Criminology, Psychiatry and Legal Medicine), *El Monitor de la Educación Común* (The Monitor of the Elementary Education), and, of course, the *Boletín del Instituto Psiquiátrico* (Bulletin of the Psychiatric Institute). In his published research, he sought to install a new approach on childhood as a field for Psychiatry's intervention (1920b; 1931). Anchored in De

Sanctis' category of *demencia precocísima*, he pointed out the specificity of child psyche, differentiating it from the adult one, and even taking some elements of the Freudian theory into account (Ciampi, 1920a, 1922, 1923; Ciampi & Valdizán, 1921). In a context of global discussions on the problem of intelligence, Ciampi's approach to the topic focused on the constitutional foundations of childhood deficiency and speech difficulties (Ciampi, 1922b, 1932; Ciampi & Ameghino, 1924). For this, he proposed not only institutions but also classifications, where he combined his training in consonance with his reading of Kretschmer and the Kraepelin's proposal. Along with Gonzalo Bosch, they undertook a similar initiative in the field of general psychiatry where they intended to unify some Latin American criteria for the classification of mental disease (Ciampi & Bosch, 1930).

To sum up briefly, the arrival and performance of Lanfranco Ciampi in Argentina had considerable consequences on the professionalization of psi studies in several ways. On one hand, he contributed to the development of a childhood disciplinary area, where he was a privileged expert for his training and bond with Sante De Sanctis. Some researchers have also acknowledged his influence in the development of child psychoanalysis (Bloj, 2013), as well as his influence on the growing field of intelligence research (Molinari, 2019). Secondly, due to his institutional position in the promotion of psychiatric studies in the city of Rosario. Finally, for its active participation in the dissemination and establishment of the Mental Hygiene movement (Klappenbach, 1999; Talak, 2005) which was central to constitute a disciplinary field that after 1948 would be renewed towards the one of Mental Health.

Teacher formation

Patria Cintrón was the second of five children born to Antonio Cintrón, a barber, and Juana, a homemaker with no schooling experience. Vieques is a very small island municipality of Puerto Rico. For her parents, education was of prime importance, and both stimulated their children to develop fully their academic potential (Cintrón de Crespo, 2010). Patria Cintrón studied at the elementary and secondary public schools of Vieques, and when she graduated from Vieques High School in 1933, she matriculated at the University of Puerto Rico, Río Piedras Campus (UPR-RP), to study to become a teacher. She believed teaching was an excellent profession that would enable her to help students in their emotional and academic development (Roca de Torres, 2012). She married Agapito Crespo in the late 1930s and added her husband's last name to hers as was typical in countries of Spanish tradition, becoming Patria Cintrón de Crespo.

Patria Cintrón earned a normal school diploma in 1935, the equivalent of an associate degree in education. She was certified as a teacher after two years of university studies, and later, she completed a Bachelor of Arts in Education in the late

1930s. Fernando Roca de León, a fellow student at UPR-RP during her studies, commented about her great capacity for critical thinking, her well-developed intellectual and cognitive abilities, and her commitment to the people of Puerto Rico (F. Roca, personal communication, July, 10, 2005). In 1935, she started teaching in the public schools of Puerto Rico and taught all matters, including being volleyball coach for the school's team.

Motivated by her desire to contribute to fully develop the talents of Puerto Rican children, Patria left for New York in 1946, to pursue graduate studies in education at Teachers College of Columbia University. She obtained her master's degree in 1947 and almost 10 years later, in 1966, her EdD, both in educational psychology. Her doctoral dissertation was a study of female teachers: *Puerto Rican women teachers in New York: Self-Perception and adjustment as perceived by themselves*.

In 1948, Patria Cintrón de Crespo initiated her long career as a college professor at the College of Education of UPR-RP. At this university, she taught a variety of courses: educational psychology, psychometry, psychology of children, psychology of young adult, group counseling, learning theories, and theories of personality, among others. Many of these courses were offered both at undergraduate and graduate level (Roca de Torres, 2012). She was promoted from instructor; to assistant professor; to associate professor; to, finally, full professor. During her academic career, she had the opportunity to direct the Department of Graduate Studies of the Faculty of Education.

Dr. Patria Cintrón de Crespo was a very busy professor, doing research and presenting her research at professional conferences, both in PR and the USA and other countries. She also published professional articles and books. She mentored students and supervised their graduate work and also offered trainings in interpersonal relationships to different organizations. During her long career, Dr. Cintrón de Crespo was very interested in learning about different aspects of psychology and took trainings in individual psychotherapy, family therapy, group counseling,

evaluations, learning theories, orientation, transactional analysis, and T-groups, among others.

In research, Dr. Patria Cintrón de Crespo studied areas related to the emotional development, the concept of self (*yo, ego*), educational theories, and their applications to school. She also focused on members of the teaching profession and examined their attitudes, worries, and problems, both at the personal and at the professional level. Dr. Cintrón de Crespo edited a publication, for Puerto Rico Psychological Association (APPR, in Spanish), about Puerto Rican psychologists and their contributions to scientific research. She published in several professional journals and authored at least four books. One of her more successful books, *Teachers of Public Instruction of Puerto Rico: Sociological and professional profiles*, had two editions in Spanish, which were reprinted ten times, and a translated edition in English. This book was used as textbook in several education courses.

Dr. Patria Cintrón de Crespo taught at UPR-RP for 37 years, until 1985. Upon her retirement, she had been teaching for 50 years, including her period as a school teacher. Her commitment to education was so intense that she was named member of Carlos Albizu University's Board of Trustees, where she served as president for almost 20 years. She retired from this board of trustees in 1999, at age 85.

During her professional life, Dr. Patria Cintrón de Crespo participated actively in many professional associations like Puerto Rico Teachers Association, National Federation of Dominican Teachers, National Education Association, Counseling and Guidance Association, Puerto Rico Psychological Association (APPR), Humanistic Psychological Association, Transactional Analysis Association. It is important to note that these groups include organizations in Puerto Rico and abroad. She was both one of the founders of APPR and presided this organization in 1967–1968 (Roca de Torres, 2006, 2012).

Patria Cintrón de Crespo received many awards for her contributions to education, and

she was named honorary member of a teacher's association at the Dominican Republic; she was invited as visiting professor to the University of

Milwaukee, Michigan. She received a certificate of recognition for her work as president of APPR and a merit award by the Faculty of Education and by the Department of Graduate Studies. Since she was a member of Carlos Albizu University's Board of Trustees for 21 years, she was named emeritus member of this board until her death. Finally, she received a lifetime achievement award by the Miami Campus of the Carlos Albizu University.

Patria Cintrón de Crespo died surrounded by her family and friends. She is survived by her son Rafael Crespo, three grandchildren, and a great grandchild.

Cirino-Gerena, Gabriel

Born on September 29, 1935, in San Juan, Puerto Rico (PR)

Ivonne Moreno-Velázquez
University of Puerto Rico, Río Piedras, San Juan,
Puerto Rico

Keywords

Puerto Rico · Work Psychology · Tests and Measurements

Gabriel Cirino-Gerena is one of five children born to the marriage of Gabriel Cirino González and Ramona Gerena Laurido. His father, who had a High School Degree, was a carpenter and worked most of his life at Fort Buchanan, a US military fort in San Juan. He also had a workshop in his house, where he made dining and living room furniture and repaired television sets and locks. He spent his time inventing, and his favorite phrase was: “Better skill than strength” (G. Cirino-Gerena, personal communication, 2020). In his later years he became a lay leader of the San Juan Methodist Church until his death. His mother Ramona, with an eight grade education, devoted herself entirely to the home, her five children, and to a niece whose mother had died at birth who lived at the home and to her siblings who came from time to time.

Gabriel Cirino-Gerena says that he never thought of becoming a psychologist; he wanted to be a journalist and write in one of the newspapers of the time: *El Imparcial (The Impartial)* or *El Mundo (The World)*. In a summer experience with a commercial firm, he visited various towns in Puerto Rico and was able to see extreme poverty, which motivated him to study something that would help people (Cirino Gerena, 2018). This is how he studied Economics at the University of Puerto Rico, Río Piedras Campus (UPR-RP). He did not like the Psychology courses he had taken because they had a clinical flavor, and presented human behavior from a pathological perspective. Moreover, from his limited vision of Psychology, this discipline dealt with people on an individual basis and he wanted to efficiently impact many people in the least amount of time possible (Moreno-Velázquez et al., 2006). At that time, he did not know about Industrial, Social, or Community Psychology.

Upon completion of his baccalaureate studies in 1954, Gabriel Cirino-Gerena began his career in public service in the Central Office of Personnel Administration (OCAP) as an Administration Technician in Recruitment, Evaluation, and Selection, but was soon called to serve in the US military corps (Cirino-Gerena, 2018). Upon his return from the military service and to his job at OCAP, he was offered a position in the Test Development and Analysis Section, with Mrs. Milagros Guzmán. He did not believe in tests in general, especially in projective tests, which he considered were subjective, and decided not to accept the position, but was told that if he did not accept, they would have to fire the person who now held his previous position, an argument which persuaded him to accept (Cirino-Gerena, 2018; Moreno-Velázquez et al., 2006). Mrs. Guzmán put an Anastasi book in his hands which introduced him to the field of Psychological and Educational Measurements and convinced him that he could work in that area. From his readings and the experiences that followed, he began to see the importance of this area in developing merit-based systems for recruiting and evaluating personnel and dedicated his research

mostly to developing reliable and valid tests to measure different aptitudes and achievements.

Gabriel Cirino-Gerena received a leave of absence and a scholarship from the OCAP to pursue graduate studies in Tests and Measurements at Teacher's College of Columbia University in New York City. Upon completion of his master's degree in 1961, he returned to OCAP as director of the Test Development and Analysis Section. He spent several years in that position and was later named Deputy Director of the Agency. These work and study opportunities led him to experience Industrial/Organizational Psychology and learn about its capacity to impact society, which led him to obtain his doctorate in Industrial Psychology in 1970 at Purdue University in Indiana. His dissertation was the development of a vocational interest scale.

Upon completion of his doctoral degree, Dr. Gabriel Cirino-Gerena continued his public service, this time, from the UPR-RP, where he accepted a position as professor at the Department of Psychology in 1970. At UPR-RP, he taught test development courses, supervised theses and dissertations, and mentored graduate students, especially in Industrial/Organizational Psychology. He retired from UPR-RP as a Full Professor in 1991, but is still working in his private enterprise, in a field in which he has had more than 50 years of experience.

Dr. Cirino Gerena has also been a consultant in Ecuador, Guatemala, Venezuela, and Honduras on projects related to the Human Resources Administration sponsored by the United Nations and the US Agency for International Development. In those countries he helped develop systems of recruitment and evaluation of personnel. He is especially recognized for the development of the Puerto Rican Inventory of Vocational Interests and licensing exams for graduates of different professions, including Psychology. He has published extensively in professional journals and has written three books on topics of psychometrics and personnel evaluation and two books of short stories (*The Absence of Samuel*, 1997, and *The Last of the Black Shirts and Other Stories*, 2009).

During his career, he has organized three private enterprises for Industrial Organizational Consultation and the development of tests and measuring instruments: Gabriel Cirino Gerena and Associates, the Psychometric Corporation, and Test Innovations. The latter was founded in 1991 to fill the need for tests and assessment instruments developed in the Hispanic cultural context. He has developed aptitude, achievement, interest, personality tests, and a number of instruments for the selection of personnel in specific jobs. His firms have recruited industrial organizational psychologists with doctorates and master's degrees. He has examined more than 180,000 students of the public education system per year and thousands of applicants for revalidation exams to practice various professions (including Psychology) in Puerto Rico (Moreno-Velázquez et al., 2006). For more than 30 years, he has developed educational, psychological, and recruiting tests to discover Hispanic talent in Puerto Rico, the Caribbean, Latin America, and the United States.

Dr. Cirino-Gerena was appointed to the first Board of Examiners of Psychologists in which he was selected as President, which led him to be granted the first license of Psychologist (license # 001) in Puerto Rico. He is a member of the Puerto Rico Psychological Association, an organization that recognized his merits and valuable contributions by awarding him the *Psychologist of the Year Award* in 1982, the first year in which that important distinction was awarded. In addition, in 1997 the Industrial/Organizational Society of Psychology of Puerto Rico recognized his contributions along with Milagros Guzmán, Lucy López Roig, and Héctor Puig Arvelo. Also, he was recognized by the Puerto Rico Psychology Association by dedicating him the conventions of 1983 and 2000, the Second Symposium on Psychological Measurement in 1990 and by awarding him the Lifetime Achievement Award in 2016. He has also been awarded Life Status Member of the American Psychological Association and Sterling Circle Member of the Society for Industrial Organizational Psychology. His *Inventario Cirino de Intereses Vocacionales* (Cirino Vocational Interest

Inventory) has been used in Puerto Rico for more than 40 years and has also been used in Latin America. The Carlos Albizu University awarded him the degree of Doctor in Behavioral Sciences, *Honoris Causa*, in 2019.

Dr. Gabriel Cirino-Gerena has been married for many years to his wife Lydia González Aldarondo and has two adult sons: Luis Gabriel and Iván Edgardo. He keeps working at his private corporations, mentoring students, and enjoys writing short stories, playing tennis, and watching baseball games.

Panamá · Clinical psychology

Jorge Cisneros completed his secondary studies at the National Institute of Panama and his bachelor's degree in psychology (1971), a doctorate in clinical psychology (1973), and a postdoctoral degree in drug dependence, violence, and sexuality at the National University of Rosario, Argentina. He obtained professional suitability number

264, through the Technical Council of Psychology of Panama.

He worked at the University of Panama since 1973 as a research professor, where he held various positions: academic planner, director of Technical Assistance of the Vice-Rector for Research and Postgraduate, director of Student Affairs, director of the Department of Psychology, secretary general, academic vice chancellor, and rector advisor. He was advisor to the minister of Education, executive secretary of the Council of Rectors, researcher of the Institute of Criminology, as well as director of research of the Central American Institute for Administration and Supervision of Education.

He also represented Panamanian psychologists in national and international organizations as a member of the Board of Directors of the Latin American Faculty of Social Sciences (FLACSO); the Advisory Council of the National Secretariat of Science and Technology of Panama (SENACYT); the Advisory Council of the Organization of United Nations Educational, Scientific and Cultural Organization (UNESCO) in Panama; the Technical Council of Psychology in Panama (CTP); the Panamanian Academy of Psychology (APP); the American Psychological Association (APA); the Association of Psychologist of Argentines (APA); the Panamanian Association of Psychologists (APP); and the Presidential Commission of Writers of Panama (CPEP).

Specialized in the investigation of personality disorders, behavior, and its modification, in addition, he studied the evolution of female psychology in response to new ways of life and national identity.

He excelled in the narrative and the short story, and his work was being recognized with national awards. He was author of more than 200 articles in national newspapers on sexuality, violence, personality problems, and behavioral disorders associated with drug dependence.

He published 15 articles in specialized journals and 2 books on research methodology; however, his most recognized contribution is the book *Psychology in Panama: Past, Present and Future* of 2004.

He also stood out as a poet, narrator, and essayist in the short story genre, where he was awarded nationally.

The main recognitions to the work of Dr. Cisneros were the First National Prize of literature to Ricardo Miro, Section Novel Year 1989, with the work entitled "The Legacy"; First National Prize for Rodrigo Miro essay in 1999, with the essay "Role of the Panama University in the Reversion of the Canal"; First Prize National Contest of monographic essay in 2010, with the essay "University of Panama, Background and Perspectives," in the framework of the Commemoration of the 75th Anniversary of the Foundation of the University of Panama; and in 2016 recognition for its responsibility, delivery, and extraordinary professional work for 45 years at the service of university education as a professor at the University of Panama.

- University of Campinas (Unicamp), in 1971, with a thesis entitled Psychological Study in Epileptics: Rorschach Test, Interviews and Heredological Anamnesis in 102 subjects. She holds a master's degree in Philosophy of Science with a dissertation completed in 1976 at the Université Paul Cézanne Aix Marseille III, in France, with the title *L'epistemologie d'Auguste Comte comme Fondament d'une Science Concrète: Psychologie Positive* (Auguste Comte's epistemology as a Foundation of a Concrete Science: Positive Psychology), with a postdoctorate in the same university, completed in 1983. She made 17 specializations, 10 of which were within USP. She is currently president of São Paulos Rorschach Society, which uses the “theoretical model of psychic dynamics developed by Aníbal Silveira” (Sociedade Rorschach de São Paulo, 2014), with the theme with which she worked for decades, and has a significant number of publications in books with it. Still, as a psychology student and later as a psychologist, she was part of leftist organizations against the corporate-military dictatorship, which ruled Brazil from 1964 to 1985. Her situation was recognized by USP's Truth Commission as “the longest case of persecution (1973–1980) within that university.”

Her militancy began in the Revolutionary Marxist Organization – Working Politics (POLOP). Her home was the meeting place of the organization and where the newspaper Working Politics went mimeographed. In one of the organizations' internal cracks, she joined the fraction that formed the Communist Labor Party (POC) in 1968. She was arrested for political reasons in 1971. She was handed over to the political police by a fellow professor. Due to her imprisonment, USP asked for her political references for Department of Political and Social Order (DOPS) and did not renew her contract (Coelho, 2019). She was arrested at dawn between 14 and 15 July 1971 and was taken to Operation Bandeirante (OBAN), where she was tortured by Carlos Alberto Brilhante Ustra (1932–2015) (L. M. S. Coelho, personal communication, November 12, 2019). She was transferred to

Lúcia Maria Salvia Coelho obtained a bachelor's degree in psychology in the first class at the University of São Paulo (USP) in 1961 and, in the following year, obtained a licentiate degree. She did a doctorate in Medical Sciences at the State

DOPS on August 23, 1971, where she was tortured again. From her cell, she saw the body of journalist Luiz Eduardo da Rocha Merlino (1948–1971), militant from POC, being placed in the trunk of the car after his torture and murder. The official version would have been that he threw himself in front of a car, but Lucia Coelho was a witness that he entered the prison alive and left dead (L. M. S. Coelho, personal communication, November 12, 2019). She was transferred to Tiradentes Prison on August 26, 1971, where she was imprisoned with other political prisoners in a place known as Maiden's Tower. Tortured again, the torturers asked her: "Come on, teacher, come on, talk about some of your students" (Coelho, 2019). During her incarceration at DOPS, she initiated psychological assistance to other prisoners in a small space inside her cell, which she shared with other inmates; among them was Dilma Vana Rousseff (who years later became the first woman president of Brazil, between 2011 and 2016). Some of them just had been tortured, including the whistleblower who reported her, who, after a torture session, entered the cell during a psychotic outbreak. At that moment, as a psychologist, she was able to ponder the outbreak of her whistleblower and the importance of psychological assistance to her under those conditions. Still, in Tiradentes prison, she continued her attendings to serve political prisoners. Her work was extended to ordinary prisoners when those responsible for the penitentiary system provided a room, where she created a network of psychological assistance in it. After being released from prison and while awaiting her trial, she received telephone threats from someone who presented himself as a colonel, terrifying her with hints about the physical integrity of her children (L. M. S. Coelho, personal communication, November 12, 2019). After this, she worked at Hospital das Clínicas (HC) at USP in the epilepsy sector, where she collected data for her doctoral thesis. She was almost arrested again for attending to a prisoner at HC. After her trial and absolution of the charges, in October 1972, she found herself unemployed again. With the constant threats, the

systematic elimination of leftist militants, and the impossibility of continuing at USP, she went to France. In this period, she completed her master's degree in 1976. When she returned in 1977, she became a professor at the Faculty of Medicine of Jundiaí, teaching neuropsychology. However, her hiring process continued at USP. In 1974, an internal commission in USP expressed itself in favor of hiring her, since there was money available for it, even with the University's contrary claim. In the following years, the USP Truth Commission recognized that, against Lucia Maria Salvia Coelho, "Financial Law was used in the service of political persecution" (Comissão da Verdade da Universidade de São Paulo, 2018), since, even with available funds, she was prevented from being hired at that institution. It was only in 1977 that funds were passed on for the USP's Psychology Institute. The Department of Social and Labor Psychology proposed hiring her as an "assistant professor" (Comissão da Verdade da Universidade de São Paulo, 2018). In 1979, she started to teach at the postgraduate level in social psychology at USP. Her classes were monitored and accompanied by a major to investigate what was said. Her initial contract was approved by the Department and the Institute of Psychology. However, when it was time to present the documentation, her police record was consulted, and her contract was not fulfilled for ideological reasons. While teaching Personality and Culture, she was interrupted by Ecléa Bosi (1936–2017), who stated that she could not continue because the University had vetoed her contract (Comissão da Verdade da Universidade de São Paulo, 2018). The students revolted against it. Lucia Maria looked for the Director of the Psychology Department at the time, Arrigo Angelini, who became the first President of the Federal Council of Psychology, and who held her responsible for being arrested and organizing with leftist groups: "you were a liar, in teaching your classes. [...] And now we cannot be responsible" (Coelho, 2019). He even pressures her to return the salary received (Coelho, 2019). Among the psychology professors, none of them spoke about it (Comissão da

Verdade da Universidade de São Paulo, 2018). Even with money to hire her, the vice-rector in 1980 said that the rectory did not have budgetary resources. Only in 2018, it was proven that “the budget of the Institute of Psychology had the necessary amount to cover the expense of hiring Lucia. After all, the job was not being created at that time; rather, on the contrary, Lucia came to replace a professional who was regularly paid by the University” (Comissão da Verdade da Universidade de São Paulo, 2018). It was also proved that the Security and Information Advisory Office of the Rector’s Office (AESI-USP) was a fundamental instrument of persecution within the USP. In this specific case, it “dispatched a letter addressed to the 2nd Section of the Army’s General Staff, to Military Police, to Federal Police and DEOPS, among other ones, requesting the background of Lucia Maria Coelho” (Comissão da Verdade da Universidade de São Paulo, 2018). Lucia spent some years living between France and Brazil, working in France as a psychologist, but unable to work in Brazil. She completed her post-doctoral studies in France in 1983 and worked in that country between 1984 and 1986. She participated in epileptology clinical meetings at Hospital Saint Paul and as a psychologist in the Pathological Neuropsychology team at the Psychophysiology Laboratory of the Center de Saint and Center de Saint Jérôme. Only in 2018, the USP Truth Commission formally recognized her persecution, which case was considered one of those of “white cassations,” since “there was an impossibility to hire as a way to remove professionals from the University environment, affecting their academic and professional trajectory” (Comissão da Verdade da Universidade de São Paulo, 2018).

Seeking theoretical and methodological explanations and elaborations on the consequences of torture, she looked for Françoise Sironi (1958–) in France, a specialist in Psychology of Torture, who encouraged her to create a group therapy to understand the marks of torture and imprisonment left in the course of these people’s lives. After more than four decades, she brought together women former political prisoners who were incarcerated at the Tiradentes Prison for group therapy about the political persecution and torture that they were subjected to. She still helps in the translation of

Sironi’s book *Bourreaux et victimes. Psychologie de la torture* (Torturers and victims: the psychology of torture), carried out by her son, Sérgio Salvia Coelho (1964–), still doing the note of the edition (Sironi, 2011). Maria Lucia Salvia Coelho’s biography is a microcosm of Brazilian psychology’s history. It is quite significant that the longest case of institutional persecution at USP is from a psychologist, even as the decade-long silence on the subject is a hallmark of psychology in the country.

Victor A. Colotla was the second of nine children of Adolfo and Josefina and completed elementary and secondary studies in his native city. At the end of junior high school, he completed 2 years at the Preparatory School Number 5, in Coapa, just before this school cycle was changed to 3 years. During his preparatory studies, he participated in a cycle of conferences on the philosopher Samuel Ramos (1897–1959), with a topic related to the psychology of the Mexican. In great measure, this was the beginning of his interest for psychology. In 1962 he started studies for a career in psychology within the Faculty of Philosophy and Letters of the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) and completed these studies in 1965. The following year he received the title of licentiate in psychology after defending a thesis entitled “Comparative psychological investigation of concept formation in a group of schizophrenics and a group of normals,” (Colotla 1966). Toward the end of his university studies, he started working as vocational counselor in a preparatory school of the same UNAM and continued working in that job until September of 1967.

In that date, Colotla traveled to Toronto, Canada, for master’s degree studies. He was recently married and with serious deficiencies in the English language. Nevertheless, he was able to complete the required courses (Colotla 1969), worked one summer with cognitive psychologist Endel Tulving (born in 1927), and completed a

thesis on discrimination learning in pigeons – experience that later would be useful to him – and graduated in 1969 at the University of Toronto with the thesis “A test of the role of the negative stimulus in errorless learning.” During the summer of 1969, he applied for a job as research assistant working in the psychology laboratory of Jack D. (Peter) Keehn (1925–1995) in the Addiction Research Foundation of Ontario (now Centre for Addiction and Mental Health). Keehn was interested in studying reinforcement schedule-induced polydipsia in rats, and Colotla was hired immediately because of his experience with operant conditioning. Keehn held a joint appointment as professor in the Department of Psychology of the recently founded York University, in the north of Toronto, and convinced Colotla to enroll in the doctoral program in clinical psychology, which he did in 1970. He completed his studies and defended his dissertation, “Analysis of schedule-induced drinking with ratio schedules of reinforcement,” in 1973 (Colotla 1973).

On invitation from Emilio Ribes Iñesta (born in 1944), Colotla moved in 1973 to Mexico City and started working as professor and researcher in the master’s degree program in experimental analysis of behavior at the Coyoacan laboratory of the Faculty of Psychology of UNAM. The following year he went back and worked at the Toronto Western Hospital where he received training in neuropsychology, and at the beginning of 1976, he accepted a new invitation from Ribes to work with him, but in the Escuela Nacional de Estudios Profesionales – Iztacala (National School of Professional Studies) (ENEP) of UNAM, with the purpose of creating a master’s program on behavioral pharmacology.

During his working period at Iztacala, he was able to start such master’s program on behavioral pharmacology (which was fused in 2003 with the master’s and doctoral program in Psychology, at UNAM), carried out several studies of international impact, and was invited to the editorial board of the journal *Neurobehavioral Toxicology*. His stay at ENEP Iztacala was relatively short, since in 1980 he accepted a position in another UNAM unit, the Faculty of Psychology. During the time he was at UNAM, in addition to being in charge of the master’s program on behavioral

pharmacology in ENEP Iztacala, he was Chair of the Department of Psychophysiology, both undergraduate and graduate levels, and later Head of the Graduate Division, these last posts in the Faculty of Psychology. In addition to his academic activity at UNAM, Colotla was President of the Mexican Society of Behavior Analysis (1977–1978), member of a World Health Organization Expert Committee on Neurotoxicology that was held in Moscow in May 1983 and Secretary of Scientific Events of the Sociedad Mexicana de Psicología (Mexican Society of Psychology) (SMP). During the decade of the 1980s, his activities within the SMP included helping in the foundation of *Revista Mexicana de Psicología* (*Mexican Journal of Psychology*), the beginning of the SMP awards, participation in the elaboration of the first Ethical Code for Psychologists (published by Editorial Trillas), and organization of meetings and other scientific and professional events. He was also General Editor of the *Mexican Journal of Behavior Analysis* (1979–1983) and President of SMP (1987–1991).

It should be noted that in March 1987 Colotla attended a meeting of the International Biosciences Networks Steering Committee in Cochabamba, Bolivia, representing world psychology. The Steering Committee asked the International Union of Psychological Science (IUPsyS), which includes the main world psychological organizations, to name a psychologist in the biosciences to attend their meeting, and Colotla was the invited psychologist, IUPsyS.

Because of personal reasons, Colotla traveled to Vancouver, Canada, in August 1990, where he taught at the Fraser Valley College (now University of the Fraser Valley) and worked as psychologist with WorkSafeBC (1991–2018). Furthermore, he has been active in committees within the College of Psychologists of British Columbia and the British Columbia Psychological Association. As of 2018 his main occupations have been private practice and classes at the University of British Columbia. He is the author of about a 100 review and research articles; and also he has been invited reviewer for several psychology journals, including *Journal of Clinical Psychology*, *Assessment*, and *Psychological Injury and Law*.

Constain Mosquera, César

Born *Popayán (Colombia)*, 25 July 1931

Died *Bogotá (Colombia)*, 21 June 2001

Amelia Teresa Pinzón Torres
Universidad Nacional de Colombia, Bogotá,
Colombia

Keywords

Colombia · Psychopathology · Psychotherapy training

César Constaín Mosquera's father was Adolfo Constaín Delgado, a Mason and Harvard graduate in Business Administration, who had more books than money. His mother was Adelaida Mosquera Caicedo, a lady of Popayán's society, the granddaughter of General Tomás Cipriano de Mosquera, four times President of Colombia, not always by democratic means.

Constaín finished high school at the Colegio San Bartolomé de la Merced in 1949. Then, he began studying medicine at the Universidad Nacional de Colombia (National University of Colombia). Before finishing, however, he realized that his passion was to cure souls rather than bodies, so he moved to Madrid, Spain, and started studying medicine and psychiatry, receiving his training under the supervision of Antonio Vallejo Nájera and Juan José López Ibor (1954).

Upon returning to Colombia, when mental illness was stigmatized, he made his way as a young professional in private practice (1956). In 1962, he became a professor at the National University of Colombia, at a time when mental health was framed between psychology and psychiatry as an object of study and relied on multiple schools, dogmas, and prejudices.

In Bogotá, he worked as a psychiatrist at the Secretaría de Salud del Distrito de Bogotá (Department of Health of the District of Bogotá), as well as in public hospitals and several specialized clinics. He was director of the Department of Psychiatry of the Instituto Neurológico de Colombia (Neurological Institute of Colombia) (1974–1978) and professor of other universities.

Professor Constaín integrated his personal world with that of the academy. In both his house and country villa, he hosted seminars, conversations, readings, and exchange of life experiences. Michele Van Reck, Miloú, his wife and "reason for living," and his children, César, Juan, and Catalina, "his best masterpieces," as he used to call them (personal communication, June 1997), gave time and space to guests, friends, colleagues, and apprentices.

His library, comprised of more than 6,000 titles, included books on history, philosophy, medicine, psychology, psychiatry, mythology, magic, witchcraft, much literature, and historical

artifacts, each with a story. All of them were available to his students, under the penalty of losing the benefit if they did not return the items at the expected time.

For more than three decades, the seminar extended beyond 7:00 pm, every Tuesday, at Constaín's home. He spent countless hours reflecting on and exchanging diverse ideas with the selected members of the seminar. He harmonized these meetings' contents with broad knowledge in many areas, positive feelings, good actions, drinks, and exquisite cuisine. At home, César offered a tender gaze and sharpened his sense of humor and respectful irreverence.

His psychoanalysis with Rosa Tanco Duque and later with Igor Caruso (1914–1981) and Mauro Torres (1928–), combined with his ongoing interest in listening, analyzing, and permanently re-signifying the human experience, transformed his vision of psychopathology towards a dynamic and interdisciplinary orientation. However, in his own words, he "learned more about human nature with a thrombosis (he) survived than with all the processes undertaken" (personal communication, June 1997).

César Constaín spent his time listening to his patients and students. He took notes every day and then collated and enriched with others, with groups, with authors and theories. He asked questions aloud about death, love, the sense of being male or female, communication, and grief. With words and in practice, he taught that the honesty of therapeutic processes is sustained by advances in personal work, especially in the case of the therapist.

The fundamental contribution of Professor Constaín is synthesized, in the words of his disciple Moisés Alfonso Aguirre Torres:

Throughout his career, he broke down barriers and walls that created private territories. Ghosts were diluted. White coats stopped frightening us. We found our way as life-sustaining systems, among the crowd of the corridors that we traveled with doctors, patients, technicians, society, symbols, meaning, action, faith in ourselves, a conviction in our profession.

His contribution is highlighted by opening the clinics' doors by integrating psychology students to medical case meetings. By avoiding the

authoritarian pitfalls of the professions, of segregation among therapists, among mental health workers, by delving into psychological issues that are interspersed with chemical and biological issues in the domain of doctors, chemists, and biologists, to embed them in the social, through the authors of the case, their work, the interdisciplinary commitment. (Aguirre Torres 2001, p. 115)

Constain's presence in the Faculty of Human Sciences of the National University of Colombia was dynamic. Around the 1970s, hard questions and strong divisions reflected on psychological schools and in the academy. Above it all, Constain managed to establish new ways to attend mental health and promote particular experiences to psychologists in clinical training. The creation of initial discomfort characterized them, then understanding and resolution. By the 1980s and 1990s, especially in the Psychological Attention Service of the National University, he strengthened his own experience with individual consultation and research in therapeutic groups, contributing to case study sessions, and mainly writing. In the end, he became a prematurely aged man who had incorporated in his philosophy that "the human being is the object of wisdom, not science" (personal communication, June 1997).

His latest research addressed the importance of the relationship between the pregnant mother and her child in a preverbal setting. All pathologies were nursed there. Thanks to all the handwritten paper, connecting his mind and hand, and no doubt, his heart, three books sneaked their way into the public: *Lines of Thought*, *Dictionary of Psychopathology*, and *Notes of Psychotherapy*.

Lines of Thought, a Process of Constainization (1997) is a jewel illustrated by the artist Dióscórides Pérez, which became the symbol of that particular way of teaching psychopathology. His low voice sharpened the students' ears, mostly to hunt down and write down aphorisms such as:

"Don't stir the family tree too often; otherwise, the great-great-grand black, great-great-grand crazy, or great-great-grand whore will begin to fall."

"The weaker I feel, the rougher I show myself."

"You grow up, and you are given birth to, you start eating salt, and the breast is taken away from you . . . as if living was a sequence of griefs."

"It's not crazy who wants, but who can."

"When everything is over in love and psychotherapy, the technique remains."

"When a woman wants something, God does too."

The aphorisms challenged the listener; they are phrases that still rumble.

Dictionary of Psychotherapy (1997) is a book that invites dialogue with the author because writing it in the first person impels the reader to present their own arguments. It is like a journey that goes through the head of a human being with academic background and professional experience, narrations, and personal reflections on psychotherapy's exercise against 118 concepts that concern mental health.

Psychotherapy Notes (2001) was a posthumous book. In Constain's words, "the book may have been called *Treaty on the Relationships between Men and Women of the Galaxy*, but more modestly, it was called *Psychotherapy Notes*." Consistent with his teachings, the notes expressed without presumption, everything that confronted him with his greatest passion: life, which by necessity it is full of encounters (agreements) and disagreements. It is also that marvelous thing that at the same time has an unpleasant implication: it ends.

César Constain was first and foremost a teacher. He trained several generations of psychotherapists and psychotherapy teachers in Colombia. He showed them that technique is only a small part of a complex process, that the psychotherapist must be well-grounded, beyond the discipline's limits. His actions as a teacher and academician were consistent with that philosophy. When psychology in Colombia was partly a tug of war among psychological theories, often seen as territorial confrontations, César Constain remained a realist. He emphasized the role of psychologists and other mental health professionals in the lives of people who did not care about those conceptual territories but who lived real problems and real lives.

Juan N. Cordero (José Juan Nepomuceno de Jesús María Joaquín Bernardo Maximiliano Inocencio Lugardo Federico Cordero Altamirano) is the son of José María Marcos del Corazón de Jesús Cordero Hoyos (1824–?) and María de Jesús Altamirano Farfán de los Godos (Sanchiz, s.f.); frequently confused with his uncle, the painter Juan Cordero (Juan Nepomuceno María Bernabé del Corazón de Jesús Cordero Hoyos, 1822–1884). He studied at the Colegio de San Ildefonso (San Ildefonso College), in Mexico City, thanks to an academic scholarship he awarded for his good academic performance. After completing his Baccalaureate studies, he entered the Escuela Nacional de Jurisprudencia (National School of Jurisprudence) where he

graduated in 1872. At the end of his studies, he devoted a short period of time to various political positions. Then, he started to practice as an applicant lawyer and additionally performed some sculpture and painting work. In addition, he wrote some works of a scientific, philosophical, and literary nature and collaborated with the national press (Muñoz Fernández, 2017; Rodríguez-Preciado, 2014). He published in the literary field using the pseudonyms “Campanone,” “Escobilla,” and “Marcial” (Manrique de Lara & Monroy, 1946, pp. 47–48).

Subsequently, at the end of the nineteenth century, he published a trilogy in which he made an attempt to establish a relationship between organism, individual, and environment as influencing factors in “normal” behavior (seen as the common/habitual “behavior” form) by that historical moment. The first volume of this trilogy is entitled *Ensayo de vulgarización de psicología fisiológica* [*Essay on Vulgarization of physiological psychology*] (1907), comprising the different organic manifestations of the spirit and the implication of the psychic resource as a consequence of the “Sensory Sensitivity.” The second publication of the trilogy is *La vida psíquica. Ensayo de vulgarización de sociología y política* [*Psychic Life. Essay on Vulgarization of sociology and politics*] (1909), where the “spirit” is studied in interaction with the sensitive subject and the environment in a habitual and unusual way as well as the physical and social factors involved in this relationship. Subsequently the last part of the “Trilogy” in 1910, *Anomalías y sus tratamientos: ensayo de psiquiatría y un sistema efectivo para la defensa social* [*Anomalies and their treatments: Essay on Psychiatry and an effective system for social defense*], rather “abnormalities” (irregularities in the norm/usual/regular/healthy) its forms and treatment in order to return to “normalcy” which cover a full study from the perspective of the individual, to the organic, social, and political (Valderrama, 1985 and Rodriguez, 2005, cited in Navalles-Gómez, 2010).

Of the main contributions to psychology in Mexico, Cordero made a combination between positivism and the mental part of people as components that permeate the social exchanges of

daily life, linking health sciences with social sciences (Rodríguez-Preciado, 2014). Therefore, his scientific, psychological, and social texts mean an important contribution at the time in which he worked, since for his time and possibly the current one, these elements are separated. With his works, the relationship of the organism, the psychological processes linked to it, and the same to society are highlighted: interactions and abnormalities in them. All this was a fertile field for the following authors and their proposals to make sense in relation to what they raised about the link between the health sciences and the social sciences.

Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM). He obtained a Master's Degree in Spanish Letters and a Master's Degree in Educational Sciences, at the Facultad de Filosofía y Letras (Faculty of Philosophy and Literature) (FFyL) (UNAM), in 1945. Subsequently, he obtained his doctorate in Spanish Letters at the FFyL (UNAM). He taught in various educational institutions: in basic education at the Secondary School 21, San Ángel, Mexico City, from 1940 to 1970; at the high school level at the Centro de Estudios Científicos y Tecnológicos No. 5 "Benito Juárez" (Centre for Scientific and Technological Studies) (CECyT 5), commonly known as "Vocational 5"; and at a higher level in the Escuela Nacional de Ciencias Políticas y Sociales (National School of Political and Social Sciences) of the UNAM (in 1968 this School became the Facultad de Ciencias Políticas y Sociales [Faculty of Political and Social Sciences, FCPyS]), in which he taught the course of Social Anthropology and in the Instituto de Investigaciones Sociales (Institute of Social Research) (IIS – UNAM) from 1954 to 1970.

He worked as a teacher, researcher, writer, and eloquent speaker, with a scientific production developed primarily at the IIS in which he worked under the direction of sociologists such as Lucio Mendieta y Núñez (1895–1988) and Pablo González Casanova (born in 1922).

His academic career was marked by interest in the study of original social groups that were in vulnerable situations due to the prejudices of the time. As part of his work as a sociologist and researcher for indigenous groups, he learned Nahuatl, so he was able to conduct firsthand interviews with peasants who were discriminated for not speaking Spanish. His scientific production began with the publication of the book *Estudio de Psicología Experimental en algunos grupos indígenas de México, UNAM, 1954*. In this work, Cornejo Cabrera proposed "to be a starting point or an axis of reference ... that shines light on the autochthonous groups of Mexico, so slandered, both by those who demagogically praise them, and by those who ignorantly disrupt them" (Cornejo, 1953: 6). As part of the research that supports this book, Cornejo applied psychometric

tests to girls, boys, and adolescents of indigenous origin in order to scientifically demonstrate that the differences in development trajectories between the rural and urban population were primarily due to sociocultural context rather than conditions attributable to organic or psychological deficiencies.

It was precisely this book that opened him the doors to the IIS-UNAM where he consolidated his line of research, which was distinguished for having a clear sociographic tradition, measuring and collecting quantitative data in groups of different ethnic origin. His subsequent publications maintained the interest in the study of native peoples and inhabitants of rural areas from a sociological-synthetic perspective (Cornejo, 1965).

As part of his work as a researcher, he carried out an extensive study that included 60 agricultural production communes, known in Mexico as "ejidos" (common land), of the State of Veracruz, Mexico. In order to describe the material and spiritual levels of life of the "ejidatarios" (communal land owners) and through the application of individual and group interviews, Cornejo Cabrera generated a large amount of descriptive data that supported the demographic analyses of the social life of the Mexican ejido zones during the 1960s of the twentieth century.

According to Colmenero (2003), at that time, there is a transition from orthodox sociological analysis towards trends in social analysis with quantitative research methodologies, with an emphasis on sampling and statistics to analyze aspects of stratification and social mobility. Cornejo Cabrera was one of the Mexican researchers with the most articles published in the *Revista de Ciencias Políticas y Sociales* (Journal of Political and Social Sciences) of the FCPyS at UNAM.

In most of his publications, Cornejo Cabrera sought to describe the diverse realities experienced by the inhabitants of rural Mexican areas. His texts included sociodemographic data that give his readers the possibility of having a statistical description of the resources, spaces, and habits that very clearly marked the border between traditional rural life and lifestyles guided

by modernist ideals of the time, primarily those who were encouraged by government efforts for universal access to basic education and health. As a constant in Cornejo Cabrera's work, there is an effort to vindicate the figure of the ejidatarios as workers of the land or the sea whose health and development conditions were primarily linked to nutritional and cultural deficiencies associated with their rural condition, rather than to an innate or class disability.

It should be noted that in his studies he shows himself as a pioneer in explaining the “adolescent uprooting” that left communities without young people. Those who emigrated were particularly adolescents and young people who were interested in continuing their academic careers beyond basic education. It was clear that Professor Cornejo's interest went beyond mere description, but was involved in the explanation of germinal social phenomena that would lead to distinctive demographic processes of the time and resulted from public policies after the Mexican Revolution (1910–1917). It is worth mentioning from what can be seen through his prolific scientific production that Cornejo Cabrera was a forerunner in the study of nonurban social groups in Mexico. This is achieved by the integration of psychometric and sociocultural traditions, in contrast to the rise of the psychoanalytic movement that monopolized the attention in the country since the decade of the 1950s of the twentieth century.

Psychotherapy

Mariano Coronado Castro was part of the first and important cohort of intellectuals, scholars of psychology (José Basileo Acuña, Lilia Ramos, Isaac Felipe Azofeifa, among others) who, coming from different disciplines, laid the academic, educational, and institutional foundations that originated the scientific and professional psychology in Costa Rica from the 1950s. Mentor of the first professional psychologists in the country, Gonzalo Adis Castro (1927–2004) and Margarita Dobles (1905–2010).

His complete name was José Mariano Luis Silverio Mercedes Socorro Dolores de Jesús Coronado Castro. He was the eldest son of the 11 children of Mariano Coronado Jiménez (1862–1934) and Victoria Castro González (1874–1916), a well-to-do family from San José. At an early age his mother died and due to his condition as the oldest son, he was involved in the care of his ten siblings and the support of his father, with an early insertion in the labor market. At an early age he started working in a bank; later, with his brother Roberto, he founded the “Almacén Philco” (Philco Store), then “Coronado y Co” (Coronado and Co). His restless personality led him to study on his own initiative, motivated by a humanistic spirit and great culture. Together with José Basileo Acuña (1897–1992) he founded the Grupo Estudios Krishnamurtianos de Costa Rica (Krishnamurtian Studies Group from Costa Rica), in which Tomás Ortuño, María Eugenia Dengo (1926–2014), Hugh de Pass, Jessie Montejo de Orlich, among others, participated.

Between 1934 and 1936, he achieved financial stability. Already married and with a family, he traveled to develop his intellectual interests. He studied at the Sorbonne, training as a mental hygienist. He took advantage of the academic environment of the old continent to train and attend conferences and international congresses. At this time he befriended the philosopher and thinker Jiddu Krishnamurti, who influenced him in his interest for the person and humanism. At the time of World War II he moved to England, and later emigrated to the United States, where he also frequented intellectual circles. Before returning to his country, he lived briefly in Mexico (Kriebel Coronado, personal communication, 2020).

He returned to his native country in 1943. Even before the beginning of the 1950s, Costa Rica had already laid the foundations of its institutional framework, with a solid social rule of law based on a national pact of social guarantees and with a recently abolished army. Higher education received a boost with the founding of the Universidad de Costa Rica (University of Costa Rica), which implied supporting education as a promoter of the social good.

Mariano Coronado is known as the first mental hygienist in the country and founder of educational psychology in the country (Margarita Dobles, personal communication, 1994). He began practicing psychotherapy as a service to the community, since he never charged for it. Adis Castro first professional psychologist in Costa Rica, recognized in the figure of Mariano Coronado, who preceded him as one of the first psychotherapists (Adis Castro, cited by López-Core, 2015), characterized by a humanistic, supportive, and re-educational approach.

Another early area of Coronado’s insertion was education. His proposals for courses on physical and mental health, both to the general population and to teachers, inaugurated what today we would call preventive work in the area of mental health. In this area he developed an intense work for many years: teaching literacy about health, personal well-being, and, above all, childhood and adolescence. Adis-Castro (1991), one of his disciples, identifies him together with Lilia Ramos (1903–1988), as the precursors of initiatives of courses, seminars for teachers and parental figures on topics such as childhood development, upbringing, and parent-child relationships.

Within the framework of the creation of the Comisión Nacional de Salud Mental (National Mental Health Commission), Coronado formally promoted, from state institutions, courses and seminars on child development and parent-child relationships. He founded in 1950 and chaired until 1964 the National Mental Health Committee in the Ministerio de Salud (Ministry of Health) (Adis-Castro, 2016; Thomas, 1975). From there, a national strategy of “psycho-pedagogical training” oriented to the formation and dissemination of psychology was implemented. These programs were intended to guide both teachers and the lay public. Through this strategy, a 4-year training curriculum was developed and validated in a training process for primary and secondary school teachers.

During the first half of the twentieth century, psychology was seen as a complementary instrument to pedagogy. Although the development promoted by the founders of psychology in

Costa Rica, such as Coronado, was not systematized in an academic degree program, they laid the historical foundations for the development of the psychological discipline (Adis-Castro, 2016), and were fundamental for interdisciplinary work in education. In that direction, the contributions of the first wave of intellectuals, who introduced psychology by different means, were the basis of a theoretical-academic and educational platform, even though they did not generate a new professional profile (Campos et al., 1990).

Mariano Coronado was one of the precursors of academic psychology as a university professor in the Departamento de Letras (Department of Humanities) and in the incipient Facultad de Pedagogía (Faculty of Pedagogy) both at the University of Costa Rica. There he taught the first courses in psychology as a scientific discipline at the university. In the afternoons, together with Edgar Gonzalez (1920–2001), he gave lectures to elementary school teachers. In 1950 he was Vice Dean of the Faculty of Pedagogy and was a member of the University Council of the University of Costa Rica. Together with Margarita Dobles, they promoted the bases for the diffusion of psychology among teachers, opening settings for future professionals in guidance. As Dobles' mentor, he encouraged her to specialize at Stanford University, USA. As an active academic, he participated in the great university reform of 1957. Encouraged by that reform, he proposed the organization of the Departamento de Bienestar y Orientación (Department of Welfare and Guidance) at the University of Costa Rica. Years later, together with Margarita Dobles and later Gonzalo Adis Castro, they shared the Department of Welfare and Guidance of the University of Costa Rica. He offered Dr. Gonzalo Adis Castro, who was returning from Berkeley University, to organize the psychological care service for university students in the Welfare and Guidance Department. A few years later, in 1960, Adis Castro founded the Centro de Investigaciones Psicológicas (Center for Psychological Research) at the same University of Costa Rica, the first psychological research center in the country. Adis Castro himself notes that Mariano Coronado “had the concern that a Escuela de Psicología

(School of Psychology) should be created; a concern that he often shared with us in the meetings of the Welfare and Guidance Department” (Adis-Castro, 2016, p. 39).

Since his return to the country, and with the resources of the time, he articulated a line of work oriented to dissemination and prevention that oscillated between his lessons at the University of Costa Rica and the Escuela Superior de Administración Pública para América Central (ESAPAC, Higher School of Public Administration for Central America) financed by UNESCO. There he was prolific in the writing and elaboration of pamphlets and didactic material for educators and parents (Coronado, 1951). This virtue for the communication and dissemination of psychological science was also manifested in his well-known lectures on psychological topics, on which he lectured in Costa Rica, Central America, and the United States. The national conferences were transmitted live by Radio Universidad de Costa Rica. An audio record of these lectures is kept (Coronado, n.d.).

As an author and theoretician, some of his books were published by Editorial Orion in Mexico: *Introducción a la Higiene Mental* (Introduction to Mental Hygiene) (Coronado, 1955), *Psicología y Salud Mental* (Psychology and Mental Health) (Coronado, 1956), and the first edition of *El conocimiento propio y la salud mental* (Self-awareness and mental health) (Coronado, 1966). In his country, on the other hand, the second edition of *Conocimiento propio y Salud Mental* (Self-awareness and mental health) (Coronado, 1986) was published; also, among others, *El Maestro y la Salud Mental* (The teacher and the Mental Health) (Coronado, 1979), *Aspectos Psicológicos de la Comunicación* (Psychological Aspects in Communication) (Coronado, 1960), *Huellas* (Traces) (Coronado, 1971). He built a theoretical corpus based on the concepts of mental hygiene and mental health, from a humanistic but solidly scientific perspective. Together with Isaac Felipe Azofeifa (1909–1977), José Basileo Acuña (1897–1992), and Juan Trejos Quirós (1884–1970), they wrote and published the first academic and university texts on psychology used at the University of Costa Rica.

The welfare of the human being was the center and axis of his ideas, based on the conviction that science should be at the service of humanity. To this end, he promoted every possible initiative that favored well-being, whether through training, prevention, clinical care, or even public policy. Born at the end of the nineteenth century, having experienced two world wars, and therefore the dizzying first half of the twentieth century, he promoted in his ontological and axiological thoughts, the concern of the effects of modernization on the development of the person and society.

The range of application of his production took him out of the exclusivity of the academy and the university, allowing him to socialize in educational institutions, with parents, as well as with professionals in psychiatry, pedagogy, special education, and social work, inserted in the social network of Costa Rica in the first half of the twentieth century. Both in his vital and academic work, he managed to establish and materialize that mental hygiene and mental health were a matter of social good, of competence of the whole society. He gave a central place to prevention based on training and dissemination, in an innovative and revolutionary way, articulating initiatives that linked the academy and the State with the citizens in an operative way.

His vocation of service positioned him in the public sphere, based on the humanism, sensitivity, empathy, and solidarity that always characterized him. Those who knew him remember him for his honesty, humility, and great human sense. Despite having positioned himself among the top elite of the academic and scientific world of his country, he was always characterized by his generosity in sharing his knowledge and his attachment to the ideals of a better world for people, avoiding academic snobbery and prominence. His last years were dedicated to deepen his personal and spiritual philosophical search in the shelter of his family, whom he loved so much. The coherence between his academic and professional proposal and his personal life was reflected in the memories of his descendants. They remember that although he achieved much visibility and always had a lot of work, he never ceased to be a son, brother,

uncle, father, husband, and grandfather present in the lives of those who accompanied him.

In conclusion, I would like to close this brief biography of my great uncle, with an excerpt from his memorial: “An indefatigable walker along the paths of life, he always marched with his face to the wind, resolute, firm, but wrapped in the silence of sincere modesty. If he were still alive, he would have stopped our hand or muffled our voice so that we would not pay him this homage. That is why we do so in a low voice, so as not to disturb him. . .” (Madrignal Nieto, n/d, n/p).

Argentina · Vocational guidance ·
Psychometry · Pioneer

Nuria Emporia Griselda Cortada was born in Argentina; she completed her education in Spain, where she moved with her parents at the age of 4 years old. In her autobiography, she related that her primary education was anarchic but rich in reading, open to various areas of human life (arts, health, science, history, among others), and included five languages (Cortada, 2012).

The Cortada family returned from Barcelona to Buenos Aires when the Spanish Civil War began; they arrived in the Argentine capital when Nuria was 15 years old. They returned to live in Mendoza, where she finished high school.

On a trip to Buenos Aires, her father took her to talk with Dr. Emilio Mira y López (1896–1964) to obtain vocational guidance. Her interests were varied and included the psychological problems discovered in the texts of Dostoyevsky and Tolstoi; at the end of the interview, Mira points out that if she was interested in psychology, she should study abroad and suggests that she contact Dr. Horacio Rimoldi (1913–2006), who was then beginning his work as a professor and researcher at the Universidad Nacional de Cuyo (National University of Cuyo), in the city of Mendoza.

At the same university, Cortada obtained a degree as Professor of Higher, Normal, and Special Education in Philosophy. At the Institute of Experimental Psychology, created by Rimoldi, Cortada learned statistical techniques; within this framework, she participated in the first standardization of the Raven test in Argentina (Rimoldi et al., 1945) and published her first five scientific articles.

In 1945, she began her work as a Child Psychology professor at the Escuela Normal Pringles (Pringles Normal School) in San Luis (Argentina), 3 h away from Mendoza. The Normal School also depended on the National University of Cuyo. There, she established a deep and lasting friendship with Dr. Plácido Horas (1916–1990).

A year later, she obtained a scholarship to train in clinical psychology at the Institute of International Education of the Ohio State University in the United States. Her adviser was Dr. Victor Raimy (1913–1987) and she had professors such as the statistical specialist Dr. Herbert Toops

(1895–1972). In the United States, he also visited his previous mentor Horacio Rimoldi, who was in Chicago, and there he met Louis Thurstone (1887–1955) and established a friendship that would remain in time with the Spanish psychologist Mariano Yela (1921–1994) (Cortada, 2012).

After 3 years, she returned to Argentina with the degree of Master of Arts in Clinical Psychology, which made her one of the first persons with a specific degree in Psychology within the country (Ardila, 2013), and the person who, in those years, many people asked her what a psychologist was.

Since 1950, she has worked in a vocational and educational orientation center, within the scope of the Ministerio de Educación de la Provincia de Buenos Aires (Ministry of Education at the Province of Buenos Aires). She also taught seminars on applied statistics and test theory in the Philosophy Program at the Universidad de Buenos Aires (University of Buenos Aires), invited by Professor Luis Felipe García de Onrubia (1914–1986) and she standardized the Raven test for the city of Buenos Aires.

In 1952, she obtained a scholarship “estudiante patronée” to study in Paris (France). She worked for 9 months at the Saint Anne Hospital under Dr. Pierre Pichot (1918–2020).

Being one of the first persons with a specific degree, Cortada participated very actively in the First Argentine Congress of Psychology, in Tucumán, in 1954, and the development of the first undergraduate Psychology Program at the University of Buenos Aires (Bersi & Levantini, 2007).

In 1957, she began to teach the course of Statistical Methodology in the new Psychology Program. She became a tenured professor in 1959, maintaining her position until her retirement in 1984. Also, by 1958, she was appointed head of the Department of Vocational Guidance at the same university; all her experience in this field would be condensed in the book *El Profesor y la Orientación Vocacional* (The Professor and the Vocational Guidance) (Cortada de Kohan, 1977).

Between 1961 and 1962, she traveled to New York, United States. She worked at Saint Lawrence State Hospital as a senior clinical

psychologist, conducting psychodiagnostic and organizing operative groups with patients.

In 1964, she specialized in the Educational Testing Service of Princeton, for 2 months; this experience was reflected in her book *Manual para la construcción de pruebas objetivas de rendimiento escolar* (Handbook for the construction of objective tests to measure school performance) (Cortada de Kohan, 1968). The previous year her first book had been published: *Estadística Aplicada* (Applied Statistics), co-authored with José Manuel Carro (Cortada de Kohan & Carro, 1967).

Since 1968, she obtained a position as Full Professor, ad honorem, of the course Methodology of Psychological Research, at the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the University of Buenos Aires.

In 1970, Horacio Rimoldi returned to Argentina and founded the Centro Interdisciplinario de Investigaciones en Psicología Matemática y Experimental (Interdisciplinary Center for Research in Mathematical and Experimental Psychology, CIIPME), within the Consejo Nacional de Investigaciones Científicas y Técnicas (National Council for Scientific and Technical Research, CONICET). Professor Cortada de Kohan became the Center’s Vice-Director. Like other university professors, she suffered the political circumstances that Argentina lived through in the 1960s and 1970s; in those years, she worked as a statistics teacher in the Geography Program at the Faculty of Philosophy and Letters of the University of Buenos Aires. She remained there for approximately 10 years. She taught courses and conferences and continued with the translations of books such as *Experimental Psychology* by Woodworth y Schlosberg (1964), *Statistics* by Yamane (1972), and *Principles of Orientation and Student Assistance* by A. Jones (1977).

After her retirement in 1984, she stayed away from the profession for several years. In 1992, she returned to CIIPME, where she was hired as Principal Investigator. She studied the relationship between intelligence, solving new problems, and educational achievement (Castro Solano, 2001). Thanks to these investigations, she updated her first statistics manual. She published her book

Diseño Estadístico (Statistical Design) (Cortada de Kohan, 1994) and numerous articles in national and international scientific journals.

In 1996, she was appointed Honorary Professor at the University of Buenos Aires and hired as an Advisor in Methodology and Statistics at the Research Institute of the Faculty of Psychology at the same University. Since 1997, she has worked as a contracted professor at the Institute of Psychological Research of the Faculty of Psychology and Psychopedagogy at the Universidad del Salvador (Buenos Aires). Likewise, in 2006 she was also hired as a research advisor at the Dirección de Orientación al Estudiante (Student Orientation Department) at the University of Buenos Aires.

At that time, Professor Cortada de Kohan published her books: *Teorías psicométricas y construcción de tests* (Psychometric theories and test construction) (1999), *Técnicas psicológicas de evaluación y exploración* (Psychological assessment and exploration techniques) (2000), *Test de Aptitud Verbal BAIRES* (BAIRES Verbal Aptitude Test) (2004), and *Teoría y Métodos para la construcción de escalas de actitudes* (Theory and Methods for the construction of attitude scales) (2004). In 2008, she coauthored the book *Técnicas de investigación científica* (Cortada de Kohan et al., 2008).

Her career was recognized by the Asociación Argentina de Ciencias del Comportamiento (Argentine Association of Behavioral Sciences) in 2001, the Aiglé Foundation in 2002, the Cuenca del Plata's University (Corrientes) in 2006, and Foundation of the University of Buenos Aires, in 2011. In 2006, she was also named Honorary Member of the Sociedad Argentina del Estudio e Investigación en Psicodiagnóstico (Argentine Society for Study and Research in Psychodiagnosis) and, in 2007, Honorary President of the Sociedad Argentina de Psicología (Argentine Society of Psychology). She received the title of Emeritus Professor from the Universidad Abierta Interamericana -Sede Buenos Aires (Inter-American Open University, Buenos Aires Headquarters) and the Universidad del Salvador (Salvador's University) Buenos Aires in 2011.

She passed away in Buenos Aires at the age of 91. Until a few months before, she prepared her tenth book in collaboration with other notables of psychology.

Nuria Cortada will be remembered for having been a pioneer of psychology in Argentina and Latin America, as well as a tireless researcher, generous Professor, and outstanding figure in Argentine psychometrics.

Crespo Fernández, Leila

Born on March 19, 1944, in Arecibo, Puerto Rico (PR).

Frances Boulon-Jiménez
University of Puerto Rico, Río Piedras Campus,
San Juan, PR, USA

Keywords

Puerto Rico · Neuropsychology · Tests and measurements · Health psychology · Quality of life

Leila Crespo-Fernández is the youngest daughter of Isaias Crespo Rentas, a lawyer, and Mercedes Fernández García, a Spanish teacher, who were residents of Arecibo, Puerto Rico, during Leila's infancy. Later the family moved to the capital city

of San Juan, where Leila initiated her academic studies at a parochial school near her home. She had two older two sisters: Ligia and Mercedes. Her late husband was Prof. Gilberto Lugo, and her children are María del Rocío García, Javier García, and Coral Gandiaga. She has two grandchildren, Carlos Javier and Francisco Javier Gandiaga.

Leila Crespo-Fernández entered the University of Puerto Rico, Río Piedras Campus (UPR-RP), in 1961 to study Biology and graduated with a BS in Biology in 1965. She began her professional career as a researcher in 1966 at the Nuclear Research Center of the Medical Sciences Campus (UPR-Medicine) where she worked until 1971. In the 1970s she returned to UPR-RP to further her Biology education and earned a Master's Degree in Science Education in 1973 at UPR-RP. In the early 1980s, she reentered UPR-RP, this time to study Psychology. She saw Psychology as a way to help her children who were showing signs of learning disabilities. She completed her MA in 1984 specializing in Academic Research Psychology. For her thesis she developed a training program on relaxation and meditation to manage essential hypertension.

Leila Crespo-Fernández entered the UPR-RP's PhD program in Academic Research Psychology and graduated in 1995. Her dissertation studied the cognitive development, psychological well-being, and health perception of a group of adults, aged 60 and over. The participants attended a municipal health facility. During 2015, she approved specialized graduate courses in School Psychology, at InterAmerican University, Metropolitan Campus (Inter-Metro). She has taken hundreds of continuing education courses, many in the areas of psychological testing. One notable example is a workshop on neuropsychological testing designed in Argentina, which has led to developing several studies in Puerto Rico with neurological tests developed in South America.

While studying for her MS in Science Education, Leila Crespo-Fernández stopped working as a researcher and started teaching Biology at UPR-Bayamón where she worked until 1976 when she decided to take some time to take care of her young children. In 1982, she returned to her

academic career, this time at the Biology Department of Interamerican University, Metropolitan Campus (Inter-Metro). In 2000 she transferred to the Department of Psychology where she continues teaching in 2020. She earned the rank of Full Professor in 1996 and is a member of the Academic Senate since 2008.

Dr. Crespo-Fernández has been recognized as a professor and mentor of hundreds of undergraduate and graduate students. She has received the *Excellence in Teaching Award* by Interamerican University seven times. She was also named *Distinguished Professor* in 1995.

Her research interests include neuropsychology, health psychology, quality of life, and psychological testing, areas she has examined with a variety of populations from preschool children to older adults. Pursuing these themes and others, she has chaired over 100 dissertations and has been a Committee Member in dozens more.

The research projects Dr. Crespo-Fernández has supervised follow two significant tracks: standardization of cognitive tests in populations of different age groups throughout the lifespan and cognitive development of persons diagnosed with neurological conditions, including attention deficit hyperactivity disorder, diabetes, cancer, epilepsy, and other health challenges. She has also written and presented about quality of life measures and a variety of health conditions. These projects have been published in scientific journals sponsored by psychological and medical associations and universities.

Dr. Crespo-Fernández has presented over 50 papers at professional meetings in Puerto Rico, Bolivia, Cuba, Guatemala, México, and Perú. The topics of her presentations include a wide variety of developmental, health psychology, and psychological testing issues. The research she has produced has contributed to enhancing options for psychoneurological assessment in Puerto Rico, by adapting measures created in other countries and suggesting appropriate interventions for various populations – from infants to older adults, patients of common and rare diseases, and chronic conditions.

Leila Crespo-Fernández is a member of the Puerto Rico Psychology Association (APPR),

the Interamerican Society of Psychology (SIP), and the National Association of School Psychologists (NASP). In APPR she has presided the Convention Committee. She also participates in the Garden Club of Puerto Rico, the Horticultural Society, and the Women's Civic Club.

Dr. Crespo-Fernández constantly encourages students and graduates to present their research in local and international conventions, sharing calls for papers and revising their submissions. She has thus promoted the dissemination in South and Central America, of the results of psychological science produced in Puerto Rico and continues to reinforce research, writing, and presentation skills in recent graduates and early career colleagues.

Venezuela · Community-environmental
 psychology · Hermeneutics

Karen Cronick, daughter of Dr. Anne Bosma Cronick and Charles Herbert Cronick, both professionals in psychiatry. So, the subject of mental health was familiar to her since childhood and oriented her intellectual concerns towards the understanding of “what the mind is,” initially influenced by psychoanalysis. She began her undergraduate studies at Case-Western Reserve

University, Cleveland, Ohio, in 1959 and graduated in 1963.

Despite her interest in clinical psychology, the social upheaval resulting from the Vietnam War led her to become a political activist and to reorient her studies towards social issues. In 1960, she worked for the first time in the State Agency in the city of Cleveland in the State of Ohio, carrying out social assistance activities with neglected and psychosocially vulnerable children.

In her last years of study, she married Eduardo Ludeña (January 17, 1940), a theoretical chemist of Ecuadorian origin, with whom she visited several European countries, to evaluate their permanence in some of them. Finally, they decided to look towards the American continent selecting Venezuela as a country of residence, because the Universidad Central de Venezuela (UCV) (Central University of Venezuela) had the necessary equipment to continue processing the data results of the research carried out by her husband.

She attended postgraduate studies at the Universidad Simón Bolívar, from where she graduated with a master’s degree in Psychology (1982). During these studies, she approached behaviorism. She then became interested in the Theory of Causal Attribution developed by Julian B. Rotter (1916–2014). She developed his thesis using a quantitative methodology to study Locus of Control among a group of juvenile delinquents, interned in a state institution.

During her studies, she became friends with professors Euclides Sanchez (1940–) and Esther Wiesenfeld (1949–), both from the Instituto de Psicología (Institute of Psychology) of the UCV. They invited her in 1980 to join the psychosocial intervention project, developed in a popular sector in the northeast of Caracas, whose purpose was the approach of a group of 69 affected families resettled in the “Fe y Alegría” (Faith and Joy) School, an institution that was part of the Integral Popular Education and Social Promotion Movement “Faith and Joy.” The team of psychologists was assisted by specialists from the School of Architecture of the UCV, which provided the affected population the tools that enabled them to build their own houses. The project culminated after six years with 69 houses built by this

population and with the experience of having applied psychosocial tools that contribute to laying the foundations of community psychology in Venezuela.

After completing her master's degree, she worked as a contract professor at the UCV until 1993, when she participated in and won a competitive examination that made her a full professor at the university. Since then, she has been teaching and researching, obtaining tenure as a full-time professor at the Institute of Psychology of the Facultad de Humanidades y Educación (Faculty of Humanities and Education) at the UCV. He taught at undergraduate and graduate levels in various subjects, such as Environmental Psychology, Community Psychology, and Group Dynamics.

She entered the Doctoral Program in Psychology at the UCV (1995). Her dissertation entitled "Los borrachos de costumbre: Un análisis retórico y hermenéutico de la intención" (The usual drunkards: A rhetorical and hermeneutical analysis of intention), defended in 2000, delved into the study of intentionality and developed the theme of alcoholism as a manifestation of self-destructive intentionality, where the choice of Thanatos prevails over Eros (Cronick, 2000). She applied as a methodological strategy the analysis of rhetoric, a method he learned from the British social researcher Michael Billig (1947–).

She wrote and published several books: *Participatory Evaluation: A Constructionist Approach* (2009). *The Hero's Grip* (2018a) where she explored several notions related to the concept of the hero from a comparative and critical perspective, studying the heroic idealizations that inhabit the collective imaginary, as well as their darker meanings. *Intention and Rationality Can we act rationally?* (2018b); *Power and Aesthetics: hermeneutic reflection on some murals of Caracas and Merida in Venezuela* (2018), among other publications.

In 2011, she developed, in the popular community Maitana in Miranda State, a study in which she applied the theoretical principles of environmental psychology and participatory evaluation strategies. The residents of the community conducted an environmental diagnosis for the

control of the leishmaniasis vector, concluding that the vulnerability was in the construction of their homes.

Over 40 years, she has taught courses on psychosocial intervention and assessment, data analysis and interpretation, text analysis and hermeneutics, psychosocial intervention strategies, violence as a social phenomenon, community psychology, and environmental psychology. She has directed numerous undergraduate, graduate, and master's theses. She has presented more than 60 papers in national and international conferences and published more than 30 articles in prestigious national and international journals.

Cruz, José Reynaldo

Born *Habana (Cuba), April 20th 1940*

Josefina Záiter

Universidad Autónoma de Santo Domingo, Santo Domingo, Dominican Republic

Keywords

Dominican Republic · Psychology Training · Community Psychology Programs

José R. Cruz has a degree in psychology from the Andrés Bello Catholic University, Caracas, Venezuela. He completed his Master of Education

studies at Loyola University of Chicago and his doctoral studies at Florida International University.

Among his contributions to the advancement of psychology in the Dominican Republic, the academic training of psychology professionals and professional counselors stands out, having been the director of one of the first psychology departments established in the country. He was the first director of the Orientation and Psychology career at the Pedro Henríquez Ureña National University, Santo Domingo in 1967.

His work in Dominican Psychology acquires significance with the founding in 1974 of “Casa Abierta” (Open House), an institution dedicated to the prevention and treatment of drug addiction in the adolescent population of the Dominican Republic. Casa Abierta also develops care programs in Clinical Psychology; being a pioneer in Community Mental Health programs carried out in neighborhoods and popular sectors of the Dominican Republic.

In 1978, José R. Cruz was appointed as Director of the General Directorate of the Department of Mental Health of the State Secretary of Public Health and Social Assistance of the Dominican Republic, today the Ministry of Health. Under his direction, the integration of psychology to mental health services in hospitals was expanded. The Department of Clinical Psychology led by psychologist Jaime Rijo Campos, the Research Department led by Dr. Enmanuel Silvestre (psychologist) and the Department of Community Mental Health, by Josefina Zaiter (psychologist) was created. Community Mental Health Centers are created, installed in various regions of the country. Which lay the foundations for the development of community psychology in Dominican psychology.

One of the relevant contributions of José R. Cruz to Dominican psychology is represented by the establishment of the first Master's program in Community Psychology, at the Faculty of Humanities of the Autonomous University of Santo Domingo (UASD) in 1979. Being the first coordinator of said master's degree. Regarding the relevance of this master's degree, the following is weighed: “The first study plan of the

master's degree in community psychology revealed the following: theoretical-methodological foundation oriented towards social criticism, integration of subjects and knowledge of the social sciences to deepen in the analysis of social reality and its problems. . .

The content and development of the master's studies in community psychology marked possibilities of ruptures with traditional approaches in psychology and social psychology" (Zaiter, 2011, pp. 383–395). In this way, he made contributions to the advancement of an exercise in psychology, committed to the social problems of the Dominican reality. . .

José R. Cruz's contributions to Dominican psychology are recognized by academic and professional institutions in the Dominican Republic. In 1997 he was recognized as Honorary President of the 30 Years Congress of Dominican Psychology, held in Santo Domingo, and organized by the Dominican Psychology Association, the Autonomous University of Santo Domingo and the Pedro Henríquez Ureña National University. In this event he was in charge of one of the keynote conferences. He received in 2011 recognition by the Universidad Instituto Tecnológico de Santo Domingo, for his career in psychology and professional guidance in Dominican society.

The release of his latest book, "The Phenomenon of Mission and Camaraderie. Roger-Freire for social justice" (Cruz, 2015) was held, in Santo Domingo, at the Pedro Henríquez Ureña National University –UNPHU; in this event, his contributions to education and psychology in the Dominican Republic were recognized.

Currently José R. Cruz, lives in Miami, United States, and works as School Counselor, in Miami-Dade County Public School System, Florida.

Juan Cuatrecasas was the son of José Cuatrecasas y Genis and Carmen Aromir, and the eldest of eight brothers, born to a Christian family (Carpintero et al., 1997; Rodríguez-Arias, 1980). He grew up in Camprodón (Gerona), in the usual climate of the small towns in the Pyrenees.

His father was a pharmacist, mayor, municipal judge, and maximum authority of his town.

He belonged to a family of professional successful men. Among those, José was acknowledged as a prestigious botanist.

It can be stated that not only his formal education trained him to get his degree as a bachelor, but also his whole family environment encouraged him (González-Bueno, 1983; Lardies-González, 1991; Rocamora 1980). All the region of Calatufña was a fertile ground for scientific development in those times, with the previous creation of many psychiatric centers and the medical college of Barcelona in the nineteenth century.

He got his first medical degree in 1922 with an extraordinary acknowledgment, and his pharmacist's degree in 1923, in the *Universidad de*

Barcelona (University of Barcelona). He took both careers simultaneously, with excellent scores as a student.

He got his MD in the *Universidad de Madrid* (University of Madrid) which awarded him the highest honors: *summa cum laude* in 1923. There he was a classmate of Emilio Mira y López (1896–1964). His doctoral thesis on “the metabolic unit” integrated a positivist view and a humanist tradition.

That same year, he applied, contested, and won the position as physician on duty in the Hospital Clínico (Clinical Hospital) of Barcelona.

He founded and led the *Revista Médica de Barcelona* (Medical Journal of Barcelona) in 1924 (Rodríguez-Arias, 1980). He started winning a position as an assistant professor teaching Medical Pathology in the Facultad de Medicina de la Universidad de Barcelona (Faculty of Medicine of the University of Barcelona), in 1925, and eventually became the man in charge for it. Toward 1930, he won a teaching position in Sevilla, and in 1934 he moved again to the Universidad de Barcelona. Since 1933, he was president of the Sociedad de Médicos Hidrólogos de Barcelona (Society of Medical Hydrologists of Barcelona). In 1936, he was a founding member of the scientific journal *Biotécnica. Revista General de Ciencias Biológicas* (Biotechniques. General Journal of Biological Sciences), in Barcelona (Kurowski, 2004).

Due to the civil war (1936–1939), an important amount of artists and intellectuals fled Spain, especially after the victory of Francisco Franco (1892–1975) (Giral, 1994; Tortosa, 1999). But before leaving for Naples, Cuatrecasas himself noticed many of his fellow professors were murdered in Sevilla. In Naples already, the Argentinian consul recommended him to exile in Buenos Aires. So, he moved to Argentina, an important milestone in his scientific production (Peiró & Carpintero, 1981).

Most of his publications were in Spanish (some in *catalán*), while those in English and French are a smaller number. A huge part of his first publications belong to the field of clinic and physiopathology (especially rheumatology and hydrology), almost purely medical. However,

since his exile in Argentina, his interests broaden as he focuses on psychobiology, mainly influenced by humanism and evolutionism from a phenomenological point of view. He was a self-defined psychobiologist (Oñativia, 1991).

In 1937, he worked as professor researcher in the *Instituto de la Psiquiatría de la Universidad del Litoral* (Institute of Psychiatry of the University of the Litoral), in Rosario, after having been received and helped in his exile by the physician from Rosario, Juan Lazarte (1891–1963), also interested in sociology. Thus, he got the chance to insert a positivist, clinical, and experimental developing psychology within the framework of the national university system after the reform of 1918. However, he was not able to get a position of professor in a medical program in Argentina.

His greatest development, the optical brain theory, was achieved after his exile. Inspired by the theories of German neurologist Christofredo Jakob (1866–1956), this theory was summarized by Cuatrecasas himself as a draft of evolutive dynamic integration, stating that visual activity is the main cause for evolutionary development in any other mental process. Toward 1940, he published *Psicobiología del lenguaje* (*Psychobiology of the Language*), one of his main works, about the origin and symbolism of language from an evolutionist point of view, supported by animal psychology and anthropology.

He was also interested in social psychology, a field where he contributed from his medical background. He stated that language is a complex communication system between social and individual aspects.

Cuatrecasas was a full professor in physiology and general pathology in the Universidad de Cochabamba, Bolivia, in 1941. His former mentor Santiago Pi Suñer also known as Santiago Pi Sunyer (1893–1981), brother from August Pi Sunyer (1869–1975) was exiled there, too.

Toward 1956, he was appointed professor in the Universidad Nacional de La Plata, where he taught a course on cultural anthropology. This course had previously been taught by Christofredo Jakob himself, the academic who had such a great impact on Cuatrecasas. In 1969,

he started teaching in Universidad Argentina John F. Kennedy, which made him professor emeritus in 1972 and put him in charge of graduate school in 1980.

In 1972, he published *Lenguaje, semántica y campo simbólico* (*Language, semantics, and symbolic field*), and in his last books; he clearly had a much more philosophical interest, always from a humanist point of view. After the return to democracy in Spain in 1975, he briefly lived back in his homeland and returned to Buenos Aires 3 years later. The Real Academia de Medicina de Barcelona (Royal Academy of Medicine of Barcelona) named him numerary member in 1980. The Instituto de Investigaciones Leprológicas de Rosario (Institute of Leprological Research of Rosario), the Sociedad Argentina de Humanismo Médico (Argentine Society of Medical Humanism), and the Sociedad Argentina de Escritores (Argentine Society of Writers) all gave him awards and recognitions (Kurowski, 2004). After being made emeritus in the graduate school where he taught, he died in Argentina, in 1990.

Forensic psychology

Agustín Cueva Tamariz was the son of Domitila Tamariz Larrea and Agustín Cueva Muñoz, who met in Quito. His father was a public accountant for Ingenio Valdez, a journalist for *El Grito del Pueblo* (*The Voice of the People*) de Guayaquil, and *Secretario de Gobernación del Azuay* (Secretary of the Government of Azuay) and the *Municipalidad de Cuenca* (Municipality of Cuenca) (Pérez Esquivel, 1987). From his father, he inherited the legacy as a collaborator in Ecuadorian newspapers, particularly in *El Comercio* (*The Commerce*), and from his brief political career: he presided over the *Consejo Cantonal de Cuenca* (Cuenca Cantonal Council) for a year (Cordero, 2018). Agustín Cueva Tamariz was orphaned at a very early age, and his older brother, Carlos Cueva Tamariz (1898–1991) – who would be rector of the *Universidad de Cuenca* (University of Cuenca) – assumed the paternal role, taking care of the younger siblings together with his mother, Domitila, Eugenio, and Agustín (Fabián Cueva, personal communication, November 9, 2019).

He met his distant cousin, Marieta Cueva Olea in Quito with whom he married in 1934, and they formed a family with four children: Agustín (pediatrician and poet), María Eugenia, Marcia (architect), and Fabián (lawyer and administrator

of companies) (Fabián Cueva, personal communication, November 9, 2019).

He studied at the *Hermanos Cristianos* (Christian Brothers) school and completed his baccalaureate at the *Colegio Benigno Malo* (Benigno Malo National High School). In 1928, he received the M.D. at the University of Cuenca. During his studies, when he was in the third year of his medical degree, there was an epidemiological outbreak of typhoid fever; he volunteered in Paute. He contracted the disease and overcame it, but his mother, who took care of him, was infected and died (Fabián Cueva, personal communication, November 9, 2019).

In 1933, under the influence of the work written by the Spanish doctor, Gregorio Marañón (*Ideas biológicas del Padre Feijóo*, Biological Ideas of Father Feijóo), he opted for studies in psychiatry, forensic medicine, depth psychology, and sexology in Argentina, a country that marked the psychoanalytic influence of his work (Cordero, 2018; Pérez Esquivel, 1987).

He was a Natural Sciences and Psychology professor at the Benigno Malo National High School from 1926 to 1935. In 1935, he migrated to Quito; at the *Facultad de Filosofía y Letras* (Faculty of Philosophy and Humanities) of the current Central University of Ecuador, he taught literature until 1941. He returned to Cuenca and worked as physician in the Ecuadorian Social Security until 1965. Since 1943, he was part of the *Facultad de Jurisprudencia y Ciencias Sociales* (Faculty of Jurisprudence and Social Sciences) teaching staff of the University of Cuenca (legal medicine, forensic psychiatry) (Cordero, 2018; Galiana, 1974).

He was a member of the *Academia de la Lengua* (Language Academy), of the Board of Directors of the *Casa de la Cultura Ecuatoriana* (House of Ecuadorian Culture), of the *Sociedad de Medicina Legal de Sao Paulo* (Society of Legal Medicine of São Paulo), Brazil. Also, from the *Sociedad de Psicología, Neurología, Psicopatología y Medicina Legal de Colombia* (Society of Psychology, Neurology, Psychopathology and Legal Medicine of Colombia); the *Instituto Panamericano de Geografía e Historia* (Pan American Institute of Geography and

History); the *Asociación Psicoanalítica Argentina* (Argentine Psychoanalytic Association); and the *Asociación Médico Quirúrgica de Quito* (Medical-Surgical Association of Quito). He was an advisor to the *Comisión de Historia de la Sección Nacional del Instituto de Geografía e Historia* (History Commission of the National Section of the Institute of Geography and History) and Director of Publications of the journal *Anales de la Universidad de Cuenca* (Annals of the University of Cuenca).

He received many honorary distinctions. From the Municipality of Cuenca, he received two awards: in 1945, an Agreement and Parchment for a book on biotypology, and, in 1949, the Gold Medal “Fray Vicente Solano” as the best writer of the year. In the same year, the University of Cuenca also awarded him a Gold Medal, recognizing the value of his academic contribution for the work *Introducción a la psiquiatría forense* (Introduction to Forensic Psychiatry, 1968). In 1963, he received the First Class Award for Educational Merit from the National Government Decoration. In 1969, he received the *Pluma de Oro* from the Guayaquil newspaper, *El Telégrafo*, and the Gold Button from the University of Cuenca for his 25 years as chair (Galiana, 1974).

In his academic career, his contributions placed him as a prominent personality in health and, more specifically, in mental health, in addition to the legal sciences and the humanities. His writings and conferences stand out in psychiatry, psychology, jurisprudence, literature, and humanities.

Agustín Cueva Tamariz’s contribution is based on his interest in reconciling different fields of knowledge, such as psychopathology with legal sciences (specifically from criminal and labor law) (Cueva, 1968), literature, anthropology, psychiatry, and psychoanalysis (1965b, a).

In his works, he reflects his conviction for a multi- and interdisciplinary perspective in academia (Galiana, 1974). He took great pains to organize chairs related to the offender’s personality; he fought to discard the conception of the human being as a solely biological entity in criminal studies, thus defending the existence of a close

relationship between morphological and mental characters (Cueva, 1968). He approached the proposals of Hermann Rorschach (1884–1922), Louis Leon Thurstone (1887–1955), Carl Gustav Jung (1875–1961), and Sigmund Freud (1856–1939); with them, he was able to explain, from a psychoanalytic perspective, the role of instinct in the genesis of crime (Cueva, 1968).

On the other hand, it is worth highlighting his interest in analyzing the mental health of the aborigines and the effects of the use of coca in the Andean population (Cueva, 1965a). Also, his contributions on the analysis of the local culture, specifically of the influence of spirituality in Cuencanos as well as the psychobiological reality (constitution and temperament) of the Ecuadorian indigenous (Cueva, 1965b).

Within his contributions to legal medicine, in the workplace, Agustín Cueva addresses mental health according to the middle of the last century’s working conditions. He discusses theoretical aspects about trauma, mental alienation, claim delusion (sinistrosis), and how the worker’s mental states should be considered when practicing law (Cueva, 1946).

Concerning his contributions to psychology and literature, he presents a series of psychoanalytic essays on Ecuadorian personalities who have excelled in the field of science and literature. From the literary and psychoanalytic aspects, Cueva Tamariz analyzes illustrious Ecuadorian figures: Father Fray Vicente Solano (1781–1865), Alfonso Moreno Mora (1890–1940), Medardo Ángel Silva (1898–1919), Manuel J. Calle (1866–1918), Luis Cordero Dávila (1876–1932), Octavio Cordero Palacios (1870–1930), among others.

He does the same in another of his works, but with international literary characters and their texts, hence his contribution to Cervantes’ work and psychopathology, which is compiled through his analyzes on: “La locura del Quijote,” “El sentido psicológico del Werther de Goethe,” “La psicopatología de Nietzsche,” “La psicología de Oscar Wilde,” and “El boceto psicológico de Don Simón Rodríguez.”

His academic production was abundant, becoming a relevant author for various fields, mainly psychology in Ecuador. Agustín Cueva Tamariz, along with his wife, his children Agustín and Marcia, his son-in-law, and his grandson, died in a plane crash on the Quito-Cuenca route, a fact that was confirmed 4 years later when the plane was found in the city of Tena (Fabián Cueva, personal communication, November 9, 2019).

Mexico · Creation of journals · Creation of professional organizations · Management of institutions

He received his elementary and secondary education with the Marist Brothers (Ibargüengoitia, 1995) and at the end of his high school years, having proved his “extraordinary academic background” (González, 1997), Curiel Benfield would be completing his bachelor’s degree in Law and would be titled in 1943 with *El dinero: Fenómeno económico-jurídico* (The Money: Economic-Legal Phenomenon), which he would later publish as a book. Sometime later, he obtained the title of Master in Philosophy, specializing in Psychology in 1944 with the thesis *Meditación sobre la esencia y la existencia de la cultura* (Meditation on Essence and the Existence of Culture), and the degree of Doctor in Philosophy the following year with the thesis *La realización de los valores estéticos* (The Realization of Aesthetic Values) (Robles, 1946; Beuchot, 2004).

As a university student, he participated in several student organizations with various purposes and as a student of the master’s degree in philosophy, he was part of associations within which stand out, mainly, his role as president of the philosophy section of the Asociación Fray Alonso de la Veracruz (Fray Alonso de la Veracruz Association), founded in 1950 by José Vasconcelos and which assumed as its task “the promotion of the sciences of the spirit in Mexico” (La Nación, 1950: 5) and the Mexican Society of Philosophy which was founded in 1953 at the behest of José

Vasconcelos (1882–1959), Eusebio Castro Barrera (1914–2000), and Curiel, himself, who would preside over it from the death of Vasconcelos in 1959 until his own death in 1994. He also participated actively in the publications and academic events organized by both associations. He was an active member of the Interamerican Society of Psychology and the Interamerican Society of Philosophy. He was also the Secretary General of the thirteenth International Congress of Philosophy, held in Mexico in 1963 (González, 1997).

Professor Curiel's merits can be seen in two academic careers, the first as a professor for more than 30 years, mainly in the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), where he started as a teacher in 1944, but also in the Universidad Iberoamericana (Iberoamerican University) (IBERO), where he would begin 10 years later, in 1954, teaching subjects such as Medieval Philosophy, General Psychology, Psychology of Art, History of Philosophy, Currents of Contemporary Psychology, Applied Psychology and Philosophy of Psychological Science, and Professional Ethics (Beuchot, 2004; Curiel, 1962).

Curiel's second and most fundamental academic career would be as a service employee at the UNAM, in favor of the development of Psychology studies in the university environment. His drive would begin in 1938 when, as a recent graduate of the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters) of the UNAM, he was secretary of acts of the commission that determined the six sections into which it would be divided from that year. The second section of those six would correspond precisely to Psychology and would enrich the subjects that were held until then with the following ones: General Psychology, Genetic Psychology, Psychological Laboratory Technique, Psychological Statistics and Nomography, Social and Ethnological Psychology, Comparative Psychology, History of Psychology, Technique for training and estimation of mental tests, Abnormal and Pathological Psychology, Characterology, Contemporary Schools of Psychology, Psychobiography, Mental Hygiene, and a synthetic course of

Psychotechnique (partly related to the experimental and partly to the application to the psychology of work), to offer even the option for the degree of Master of Psychological Sciences (Curiel, 1962).

By 1945, the Department of Psychology (which would be the second, after that of Philosophy) was created at the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters). The Bachelor of Arts in Psychology, which was completed in 3 years, included the subjects of Biology and Human Philosophy, General Psychology, Laboratory Technique, Psychological Statistics, Genetic Psychology, Evolutionary Psychology, Social Psychology, Comparative Psychology, Rational (Philosophical) Psychology, History of Psychology, Characterology, Psychobiography, Pathological Psychology and Mental Hygiene (which integrated a single subject), Educational Psychology, and Adolescent Psychology, in addition to the elective subjects and the chair of Training and Estimation of mental tests. By 1956 a new regulation would be approved for the faculties, and the previous Departments would become Colleges, which would no longer be presided over by directors but by technical secretaries. The following year, the College of Teachers of Psychology elects Curiel Benfield as its technical secretary (Curiel, 1962).

That same year, Curiel would present a project for the renewal and reorganization of studies in Psychology in order to propose the changes that would shape current studies: in principle, he distinguished three levels of training in the discipline: Bachelor's, Master's, and Doctorate. He also pointed out the need to give the degree the professional and scientific character that, in his opinion, already corresponded to it. By means of his project, he also managed to install a Psychological Laboratory in Ciudad Universitaria (University City) (UNAM) that fulfilled the indispensable requirements for the practices, with a view to also opening the paths of research. The document pointed out the need to consider that pedagogical subjects were not compulsory for the Bachelor's level, but for the Master's. It considered the doctorate as the means to achieve the training of researchers and specialists and finally

proposed to convert each doctorate into a Collective Research Seminar (Curiel, 1962).

On April 9, 1960, the Consejo Universitario (University Council) accepted the proposals and recognized the professional level of studies in Psychology. With this, the studies ceased to be a specialization of philosophy, and the profession of psychologist was founded in formal terms. In addition to numerous essays that appeared in *Filosofía y Letras: Revista de la Facultad de Filosofía y Letras* (Philosophy and Letters: Journal of the Faculty of Philosophy and Letters) and more than 150 conferences, he published numerous books.

Dr. Curiel's trajectory is a testimony to the professionalization of psychology in Mexico, but it also shows a generational transition. He was a disciple of Professor Oswaldo Robles Ochoa (1905–1969), an outstanding pioneer of Mexican psychology, who recognized Curiel among his lay Thomist university disciples (although Sanabria, in 1952, points out him as a Catholic). Later, among the students who were trained with Curiel, we should mention Eduardo Almeida (born 1937) to whom he directed his thesis and who would later become a very prominent Mexican psychologist, who later dedicated himself to the study of communitarian social psychology and dedicated part of his career to teaching.

Paraguay · Argentina · Education · Psychology and teaching · Experimental psychology

Although Juan Ramón Dahlquist Caballero was born in Argentina, very soon, his family moved to Paraguay, where he studied elementary school. He graduated from the Escuela Normal de maestros (Normal School of Teachers) in 1901 and then studied for become a teacher at the Escuela Normal de Paraná (Normal School of Paraná), in Argentina, with a grant from the Paraguayan government.

He was Inspector General de Escuelas (General Inspector of Schools) in Paraguay from 1906 to 1910. In 1911, he assumed the direction of the Escuela Normal Mixta (Mixed Normal School), a position in which he would remain until 1920. In 1919, the Asociación Nacional de

Maestros (National Association of Teachers) proposed to the Consejo Nacional de Educación (National Council of Education) the creation of a Normal School for teacher training. The idea was accepted, and the institution was founded privately, dependent on the proposing Association. In February 1921, its opening took place, and for 3 months it was directed by Manuel Riquelme (1885–1961).

In May of the same year, the Normal School merged with the Escuela Normal Mixta, under the name of Escuela Normal del Paraguay (Normal School of Paraguay). The unified institution was assigned to the direction of the normal teacher María Felicidad González (1884–1980), who had replaced Dahlquist in the direction of the Mixed Normal School after he retired. Dahlquist was appointed Professor of Pedagogy at the new teacher training center. Dahlquist returned to Argentina in the mid-1920s, where he continued to write articles and carried out activities related to education.

References to psychology appear in his book *Páginas de un maestro* (Pages by a teacher), published in 1912, in which he alluded to the reception in the field of psychology of Jules Bernard Luys (1828–1897) and Santiago Ramón y Cajal (1852–1934) research on brain physiology; and then, of pedagogical advances related to psychological research (Dahlquist, 1912). The book also contained references on the subject of the education of "abnormal" children; an important text on the history of Paraguayan education, with

an emphasis on the history of teaching; and concepts that guided his performance as Inspector General of Schools. Dahlquist linked psychology to moral education and to the teaching of history, since didactics, in both disciplines, presupposes knowledge of the intellectual evolution of the child.

As García (2014, 2016) points out, Dahlquist proposed in this book the establishment of experimental psychology laboratories for the psychological study of the Paraguayan child, avoiding limiting itself to the simple application of psychological knowledge developed abroad and that were not adapted or validated for the local population. Dahlquist was inspired by the work that, at that time, was being carried out by the Cuban pedagogue Alfredo M. Aguayo (1866–1942) with populations of children in Cuba (García, 2006).

Likewise, the journal *La enseñanza* (The teaching), which he founded together with the teacher Julio Frontanilla (1881–1975) in 1917, included in several issues articles on psychology by Paraguayan educators. Dahlquist also was the editor of *Kavure'i*, a magazine for children, which appeared between 1917 and 1921.

Juan Dalma was born in Fiume, in the multiethnic Austro-Hungarian Empire during the rising of nationalism at the end of the nineteenth century. The political vicissitudes of his hometown as well as contemporary Italian history influenced and are interrelated in Dalma's academic, political, and professional development. In that sociocultural environment, his family of Jewish origin decided to baptize him into Catholicism. In this regard, Perilli (2016) reports that Dalma's letters showed that the option for baptism can be explained by the ideological-cultural climate that Europe was going through rather than by a true religious conviction (Perilli de Colombres Garmendia, 2017).

His secondary education took place in the Fiume State Gymnasium where the teaching,

oriented toward a solid humanistic education, was given in Hungarian, Italian, and German. In 1913, he began his medical studies in Vienna and continued them in Budapest. He served as a medical assistant in the trenches of the First World War. For this mission, in line with his humanist ideals, he was awarded the silver medal for courage. After the war, he resumed his studies at the University of Padua where he received a PhD in medicine and surgery with full vows and honors in 1920 (Dalma, 2008).

The rise of fascism in Italy darkened the future of Fiume as a Free State. Therefore, Dalma went into exile in Reggio Emilia, Italy. There he worked as an assistant doctor at the Institute of Psychiatry and specialized in clinical and physiology medicine, and then in psychiatry. During his stay at Reggio Emilia, he conducted studies in epileptic seizures and wrote an essay on the correlations between experimental psychology and depth psychology (Pró, 2009). He also discovered the naso-facial reflex and worked on hemato-encephalic permeability. He later took courses in Paris with leading researchers including Georges Guillain (1876–1961), Georges Bourguignon (1876–1963), and Henri Claude (1869–1945). Until 1948, he held different roles in scientific institutions, participating in the foundation of some of them. The Fiume Medical Association and its participation in the Italian societies of psychiatry, neurology, and psychoanalysis, among others, may be mentioned. After fighting a new battle against fascism in Fiume, he obtained by national contest the position of Director of the Psychiatric Service, which he organized completely, becoming a pioneer even internationally. He worked as a legal expert in various criminal and civil proceedings. He made valuable contributions to neurology and came into contact with scientists such as Pavlov (1849–1936) and Goldstein (1878–1965).

Europe and humanity experienced dark pre-sages between 1938 and 1939. The shadow of totalitarianism was growing as Italy was coming into racism and established racial laws. Dalma, affected by these decisions, was separated from his positions at Fiume. In 1943, before the German advanced, he fled to Italy. In those

circumstances, he conceived his book *La Verità sugli Ebrei* (The truth about the hebrews) (Dalma, 1945). These pages were impregnated with this extreme life experience. After his arrival at Brindisi, he served as an intern physician at the Civil Hospital. In the immediate postwar period, he began his journalistic, literary, and political-diplomatic activities. As a result of these issues, Dalma arrived in Argentina in July 1948 on a mission to manage aid for refugees through the Red Cross.

In Argentina, he was linked to university referents and was offered a position at the Universidad Nacional de Tucumán, UTN (National University of Tucumán), as organizer of the future School of Medicine. In 1949, he assumed the offered position and married María Paola Urso. In the same year, he organized the School of Medicine and assumed the chair of psychiatry. Tucumán allowed him to start his academic career that had been frustrated in Europe for political reasons. Later, he also worked in the Departments of Neurological Clinic and Psychiatric Clinic. He served as a medical legist teaching courses in psychology and forensic psychiatry for the program of Legist Physician and also remained in charge of the Department of Medical Psychology.

His scientific training and professional experience were manifested in numerous courses on medical psychology, history of medicine, mental hygiene, and neurosis, among others. He was a member of the Editorial Committee and Honor Committee of several prestigious journals and scientific institutions, including the *Revista de Psicología Médica y Psiquiatría* de Barcelona (Journal of Medical Psychology and Psychiatry of Barcelona), *Acta Psiquiátrica y Psicológica de América Latina* (Psychiatric and Psychological Journal of Latin America), the *Revista de la Facultad de Medicina de Tucumán* (Journal of Tucumán School of Medicine), and the *Socium Conditorum of the Collegium Internationale Medicinae Psychosomaticae*, and Honorary President of the Asociación Iberoamericana de Psiquiatría, area latinoamericana (Ibero-American Association of Psychiatry, Latin American area). Dalma participated in innumerable scientific

meetings, presenting the results of his studies and research on psychiatry, neurology, psychology, criminology, and history of science. He also lectured in universities and cultural and scientific centers in Argentina and abroad, such as the universities of Zurich, Rome, Genoa, and Paris. In addition to his own studies, Dalma translated fundamental works such as the *Trattato di Psichiatria* by Binswanger and Siemerling (1927) and *Psiquiatria Social* by Disertori and Piazza (1974).

His solid contributions to psychology were based on his extensive training and knowledge of the different schools of thought of this discipline, on methodological approaches, and on interdisciplinary nature of his analysis. He worked in the lines of dynamic and psychoanalytic psychology. According to Diego Pró (2009), he carried out studies of demogenetics and psychoanalysis, contributing to the theory of the *psychological density of the population*.

His stay in Argentina, from 1948, coincided with the peak of scientific production around the studies of psychoanalytic psychiatry. Among his writings, those referring to Freud and psychoanalysis, the basic concepts of his doctrines, his projections, and his psychoanalytic methods and techniques were of special significance. In his other works, Dalma studied the concept of catharsis in Aristotle (384 a.C.-322a.C.) and Freud (1856–1939), providing an update on this topic. He also analyzed the Oedipus Complex and the problem of incest. In Notes on the Layo Complex (1953), Dalma introduced the problem of the father-son conflict with respect to the mother-wife. This study allowed space for interpretations of paternal behavior and pioneered psychoanalytic literature.

He developed a technique called *electro-galvanic chromatophoresis*, within the field of neuropsychiatry, discovering new reflexes in the sacral-gluteal region, and studied alterations of the spinal cord in epileptics and changes in the voice of schizophrenics. These studies are added to his research on schizophrenia, dementia, neurosis, psychosis, behavioral deviations, and inheritance in mental illnesses.

Dalmau Gavilanes, Francisco

Born *Ambato (Ecuador)*, 14 May 1924

Died *Guayaquil (Ecuador)*, 27 July 2014

Manuel Capella

Universidad de Guayaquil, Guayaquil, Ecuador

Keywords

Ecuador · Medical psychology · Cultural psychology · Teaching of psychology

Francisco Dalmau was born in Ambato, in the Ecuadorian highlands. His father was an industrial businessman from Catalunya, and his mother came from an *Ambateño* family of farmers. His extended family was large, raising him with discipline, but also allowing his participation in diverse cultural and playful activities. His upbringing was in charge of his mother and aunt; he also shared living spaces with working children of indigenous ethnicity. He faced economic limitations, and his mother worked hard in order to afford his education. Dalmau was enrolled at *Pensionado Juan León Mera* – a Catholic boarding school –, and then, *Escuela México*, completing his elementary education in 1938. He then attended *Bolívar High School*, where he enjoyed reading and playing sports. There, he was a founding member of the *Macará Sport Club*. He grew up surrounded by catholic and syncretic cultural influences, political tensions between liberals and conservatives, and syndicalist struggles. These early experiences, as well as episodes lived in further stages of his life, illustrate Dalmau's particular character and contributions (Pérez Pimentel, 2004).

During the 1940s, he enlisted for military service, moved to Quito with aspirations of enrolling in the university, and started a politicised student activism influenced by diverse liberal, Marxist

and psychoanalyst readings (Osborn, 1937). In 1947, he permanently moved to the city of Guayaquil, in the Ecuadorian coast, looking to achieve his academic and professional goals, while continuing his activism (Pérez Pimentel, 2004). There, he studied medicine (circa 1947–1959), obtaining the degree of *psychiatrist* from the *Universidad de Guayaquil* (University of Guayaquil). His undergraduate thesis focused on teenage criminal behaviour (Dalmau, 1983), and, after receiving an award from the institution in 1959, it was published. Albeit Dalmau aspired to obtain a postgraduate degree in child psychiatry, this was not possible, due to an apparent scarcity of such type of programmes at a local level.

Dalmau developed a professional career in Guayaquil that expanded for over six decades, in both institutional contexts and private practice (Pérez Pimentel, 2004). He was an intern during the 1950s, at the *Hospital de Niños Alejandro Mann* (Alejandro Mann Children's Hospital). There, he developed an interest in cultural dimensions of health and illness, and observed inequalities across children from urban and rural contexts, and across those from upper and lower socioeconomic status. After his graduation as a psychiatrist - and throughout the rest of his life - he worked at a renowned institution funded by the *Junta de Beneficencia de Guayaquil* (Guayaquil's Charity Board): the *Hospital Psiquiátrico Lorenzo Ponce* (Lorenzo Ponce Psychiatric Hospital). He started as resident, being latter appointed director of reclusive and therapeutic spaces for women and children at the hospital. In 1965, he was elected as a representative at *Federación Nacional de Médicos del Ecuador* (Ecuador's National Medical Federation), where he presided a commission to discuss “*escalafón médico*” (physician's ranks and potential salaries). He also was a founding member of the *Sociedad Ecuatoriana de Psiquiatría* (Ecuadorian Society of Psychiatry), where he was elected vice-president in 1973, and president in more than one occasion throughout the 1980s.

Dalmau was particularly interested in the diverse ways through which political, economic and cultural contexts influence mental health. Alongside his interest in social deviation

(Dalmau, 1983), he specially explored subjects associated with “folkloric” and “popular” psychiatry (Dalmau, 1988), among others. He contributed to local publications at the University of Guayaquil, and also participated in international congresses of psychiatry held in Latin America, discussing, for example, subjects linked to violence, migration and anxiety (Pérez Pimentel, 2004). At the turn of the twenty-first century, he published a book on *Medical Psychology* (Dalmau, 2001) and a study on children and adolescents living in the streets (Dalmau, 2004). In *Medical Psychology*, Dalmau (2001) presented psychological knowledge useful for a professional practice that he called “comprehensive medicine” (Dalmau, 2001, p. 58). Thus, his work included hegemonic psychological theories, while he also – citing Virchow (1938) – considered that “medicine is a social science” (Dalmau, 2001, p. 49). Coherent with his interests, he discussed content associated to social class, gender, ethnicity, religion and folk illnesses such as “espanto” (fright) and “mal aire” (bad air), among others (Dalmau, 2001, pp. 53–55). Dalmau (2001) stressed the importance of professionals’ own morality, emotions and competences when they consider the influence of social context and the way subjects make “sense” of their suffering (p. 291). In this and other texts, he usually used emic records and cross-disciplinary analysis that articulated academic and colloquial discourses.

Dalmau’s main contribution to psychology may consist in the integration of conventional psychiatric and psychological ideas, with a less orthodox, cross-disciplinary and contextualised approach to suffering and wellbeing. Such contribution was particularly palpable in the context of the University of Guayaquil.

In 1962, a *Escuela de Psicología* (School of Psychology) was created at the *Facultad de Filosofía, Letras y Ciencias de la Educación* (Faculty of Philosophy, Literature and Educational Sciences), emphasising a psychology training which was focused on high-school-level teaching and school counselling (Asociación Escuela de Psicología, 1967; Facultad de Ciencias Psicológicas, 1984). Fortunato Safadi (1925–1972) – a prominent local psychiatrist

who shared some of Dalmau’s concerns – held the position of School Director. What followed was a period of government coercion by a military dictatorship backed by the USA (1963–1966), which interfered with such project. In 1966, the School was restructured, and Dalmau was appointed Director from 1966 to 1972, while he taught courses such as social psychology, criminal psychology and child psychology. He joined Safadi and others in order to make important contributions, including the design of a psychology training programme which – despite still emphasising the educational dimension – considered social and psychiatric perspectives. Dalmau collaborated with students in their achievement of several goals (Asociación Escuela de Psicología, 1967, p.148). Among them, the 1967 students’ organisation of the *I Congreso Nacional de Estudiantes de Sicología* (1st National Congress of Psychology Students), where a proposal for a “unified” training programme with different specialisations was elaborated (Asociación Escuela de Psicología, 1967, p. 86). Students and teachers struggled in order to implement such proposal, which became a reality over one decade later. In 1981, the School was transformed into the *Facultad de Ciencias Psicológicas* (Faculty of Psychological Sciences).

In addition to his specific contribution to the School of Psychology, Dalmau integrated a psychological and sociocultural discourse in several health training programmes at the University of Guayaquil (Pérez Pimentel, 2004). He conducted “group therapy” with students of *medical technology* and young patients; not only through talking – for example, about addiction – but occasionally including the use of a guitar. In 1974, he conducted a course on “psychosocial sciences” for *nursing* students. In 1976, he approached the subject of “group dynamics” at a continuing education programme for university teachers. Since 1979, he supervised field work conducted by students of *medicine*, based on what was then called “ethnomedicine” – or “folk” and “popular” medicine – remembered by them as “Dalmau’s walks” (Dalmau, 1983, p. 19). He taught courses in diverse spaces within the institution, from the 1960s onwards, which included: Child

Neuropsychiatry; child psychology; general psychology; cultural anthropology; social psychology; therapeutic psychopedagogy; and sociology.

Francisco Dalmau argued for a posture which attempted to comprehensively integrate subjective and contextual aspects associated with health - including mental health. From such perspective, he contributed to the institutionalisation of psychology training at the University of Guayaquil, both through his support of key initiatives within the School of Psychology, and through his integration of psychological and sociocultural knowledge in other programmes in the field of human health. He proposed a cross-disciplinary practice, in which professionals speak “the same language” as the subjects they aspire to understand, based on a genuine “human contact” (Dalmau, 1988, p. 225). His work does not seem to have been widely disseminated at an international scale.

Danis, Juana

(Johanna Jucci Sonnenfeld)

Born *Bratislava, Slovakia, 16 March 1922*

Died *Munich, Germany, 8 2014*

Marcela Borinsky

Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Argentina · Psychology professionalization · Buenos Aires Psychologist's Association · Psychosymbology · Germany

Juana Danis was one of the first graduates of the undergraduate Psychology Program at the Universidad de Buenos Aires (University of Buenos Aires). She actively participated in the search for the Argentine psychologist professional profile by working, teaching, and writing on the subject. She took part in the organization and later in the governance of the Asociación de Psicólogos de Buenos Aires (Buenos Aires Psychologists Association) founded in November 1962 to defend the rights of the new profession (Klappenbach, 2000a).

The life of Juana Danis illustrates an incessant movement through the trials and tribulations of the postwar family exile from Europe to South America to finally return to Germany, without forgetting her links with Argentina. She landed with her family in Argentina in 1948, speaking German, Slovak, Hungarian, and English. She traveled with her parents, her husband, and her 2-year-old daughter, and in Buenos Aires, she learned to speak Spanish. Soon after, they emigrated to Chile where she completed her high school studies and began studying biology and

psychology (Tau, 2019). Later, her family moved back again to Buenos Aires, and Juana got into the newly created Carrera de Psicología de la Universidad de Buenos Aires (Undergraduate Psychology Program at the Buenos Aires University). She committed herself to clinical training and started teaching with José Bleger (1922–1972) with whom she took over his work project for psychologists and defended it on different fronts. She carried out her personal analysis with Horacio Amigorena (b. 1935) and studied group dynamics with Fernando Ulloa (1925–2009). She was an assistant professor teaching a personality course under Jose Bleger's direction. In 1969, she published an article on the relationships between psychology and psychoanalysis, in which she attempted to define the specificity of the psychologist's work, for the first issue at the *Revista Argentina de Psicología* (*Argentine Psychology Journal*) (Danis, 1969). This article, which generated a critical response from another contemporary psychologist, Roberto Harari (1943–2009), was referenced by different historiographic works on the professionalization of psychology in Argentina (Borinsky, 1998; Carpintero & Vainer, 2005; Klappenbach, 2000b). Especially, her definition of psychologist's work, as "a midwife of changes in the community where she or he lives," worked as a hallmark of this first group of Argentine psychologists (Danis, 1969, p. 81).

During this period, Juana Danis had a professional exchange with Germany, and at the beginning of the 1970s, motivated by personal reasons and because of the country's political instability, she traveled first to Zurich and then to Munich, invited previously by Binswanger (1881–1966), where she decided to settle down temporarily. She continued aware to the reality of psychology in Argentina by writing and publishing on the subject. Her position in those years became more critical of the power relations in the language of the *psi* disciplines emphasizing the lack of understanding of the body potentiality, action, and life:

Every psychological relationship is sterile if it is confined to couches, armchairs, fixed frames, which allow us to talk 'about' the body, 'about' ideas, instead of letting the body, the idea, speak

in its natural and spontaneous expression. (Danis, 1973, p. 23)

In Zurich, she assisted to a conference by the controversial thinker Friedrich Weinreb on the Bible and the signs, discovering a new world to dedicate with passion in a new journey of her professional life. In Munich, she founded the Institut für Psychosymbolik (Institute of Psychosymbolic) oriented to the study of religion and psychoanalysis, developing a semiotic based on the structures found in the Bible. She organized study and research groups, published more than 30 books in German, and gave hundreds of lectures.

While her strength allowed her, she traveled frequently to Buenos Aires, and in the last 2 years of her life Juana Danis regretted not being able to return. She was always a very studious woman. Her daughter remembers her reading all her life, and even at the end, when her eyes no longer allowed her to read well, she kept going with the help of a magnifying glass (Tau, 2019).

Guillermo Dávila García was one of the early researchers of clinical psychology in México. He is a doctor, psychiatrist, psychotherapist, and neurologist.

He is the son of Guillermo Dávila Domínguez (1880–1962) and Victoria García Besné (María de la Concepción Victoria García Besné) and the grandson of Guillermo Dávila, Isabel Domínguez, Benigno García Benitez, and Victoria Besné, natives of Puebla (Civil registry archives Federal District). He studied medicine at Universidad Nacional Autónoma de México (UNAM) (National Autonomous University of Mexico), graduating in 1925 with a dissertation called “Study of schizophrenia and its different forms.”

After completing his medical studies, he taught psychiatric clinic within the course of medical and surgical pathology in the career of medicine at psychology at the Universidad Nacional Autónoma de México (UNAM) (National Autonomous University of Mexico), an experience that influenced his interest in this discipline, which in 1934 became a specialty (Iturbe 1976).

Interested in mental health, especially in psychopathology, in 1938, he promoted a mental health service in what was then called “Department of Psychopedagogy and Hygiene” of the Secretaría de Educación Pública (SEP) (Ministry of Public Education). Dávila García was a pioneer of the Sociedad Mexicana de Psicología (Mexican Society of Psychology) in 1939 and also among the founders of the Asociación Latinoamericana de Psiquiatría (Latin American Psychiatric Association) in 1950.

He was working at the “La Castañeda” state asylum since he graduated from the UNAM until 1951, during which time he was in charge of the men's observation ward. He also worked at the penitentiary and was one of the pioneers of the Instituto Mexicano del Seguro Social (IMSS) (Mexican Social Security System) where he founded a clinic specializing in psychiatry in 1946. He worked at the children's court and was a psychiatrist in the Lavista Sanatorium (a private mental hospital), in the Department of Social Prevention, at the Instituto de Psicopedagogía (Institute of Psychopedagogy), besides working in his own

private practice (Valderrama Iturbe 1985; Colotla and Urra 2006; Rodríguez de Romo et al. 2008).

At that time, Mexican psychiatrists had to train abroad as there was no institution that offered that possibility within the country. It was then that Guillermo Dávila managed to offer a course supported by the UNAM. In 1951 he was one of the founders, with Werner Wolff (1904–1957), Manuel Falcón, Oswaldo Robles, Eduardo Krapf, and Rogelio Díaz-Guerrero, of the Sociedad Interamericana de Psicología (SIP) (Interamerican Society of Psychology). It was then that they contacted Erich Fromm (1900–1980) (Leon and Rosselli 1975), to train them in the psychoanalytic approach that was in vogue, for which they invited him to Mexico.

He was a professor at UNAM since 1925; and in 1951 he was Director of the Department of Psychology (within the Facultad de Filosofía y Letras [Faculty of Philosophy and Literature], FFyL) at UNAM (1951–1956). By 1956, and due to the initiative of Guillermo Dávila, the specialized doctorate in psychology was established at the Colegio de Psicología (College of Psychology), which was a dependency of the FFyL. He was the founding member and representative of the national council of the Asociación Psiquiátrica Mexicana (Mexican Psychiatric Association) in its beginnings in 1966 (Del Villar 2009).

Dr. Guillermo Dávila García was a promoter of the science of the mind from the beginning of his professional work until his last days.

Mexico · Psychiatry and mental health · Changing care paradigms · Psychiatric associations

He studied Medicine at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) (1939–1944), showing an early interest in psychiatry. During his third year of training, he visited La Castañeda, a mental asylum founded in 1910, and, according to his autobiographical texts, he set out to change the conditions of people with mental illness abandoned in this emblematic hospital (De la Fuente, 2006). It was for this reason that, when he secured a fellowship (1944) to complete his residency in neuropsychiatry (1944–1946), he sought admission to the team of Dr. Abram Elting Bennett (1898–1985) of Nebraska University, leader of a radical change in patient care recognized for his fight against isolationism and the enhancement of psychiatric care services within general hospitals. De la Fuente took graduate courses in psychiatry at New York University (1946) and Columbia University (1946) in New York. On his return (1947), he served as assistant to Dr. Samuel Ramírez Moreno (1898–1951) in his clinical practice and in his Chair at the Facultad de Medicina (Medicine Faculty) (UNAM). He was assistant professor (1947–1957), associate professor (1958–1965), and full professor (1965–2006) of psychiatry at the Facultad de Medicina (Medicine Faculty) (UNAM). He contributed to the creation of the Departamento de Psicología Médica,

Psiquiatría y Salud Mental (Department of Medical Psychology, Psychiatry and Mental Health) of the Facultad de Medicina (Medicine Faculty) (UNAM) and, in 1969, was appointed Head of Department, a post he held until 1991 (Pérez Rincón, 1992). He gave medicine teaching a psychological and humanistic dimension and proposed a training program for psychiatric nurses and psychologists working at institutions and psychiatric social workers (Soberón, 2007).

De la Fuente founded the Asociación Psiquiátrica Mexicana (Mexican Psychiatric Association) (APM) in 1966, serving as its first president. In 1971, he organized and chaired the V World Congress of Psychiatry, held in Mexico City. In his keynote address, he denounced the abusive practices of psychiatry by certain totalitarian regimes. The following year, the World Health Organization (WHO) invited him to join the Expert Committee that interviewed several interned dissidents in the former Soviet Union. From 1971 to 1976, he was Vice President of the World Psychiatry Association (WPA). In 1972, he founded the Consejo Mexicano de Psiquiatría (Mexican Council of Psychiatry) for the certification of specialists. In 1972, he was admitted to El Colegio Nacional (The National College), and in 1973 he chaired the Academia Nacional de Medicina (National Academy of Medicine) (Heinze and Pérez Rincón, 2006; De la Fuente and Heinze, 2012).

He was Director of Salud Mental de la Secretaría de Salubridad y Asistencia (Mental Health of the Ministry of Health and Human Services) (1977–1980), created psychiatry services at general hospitals and health centers, and restored psychiatric hospitals in the public sector (Soberón, 2007).

De la Fuente edited the *Revista Mexicana de Psicología, Psiquiatría y Psicoanálisis* (Mexican Journal of Psychology, Psychiatry and Psychoanalysis) and directed the Psychology, Psychiatry and Psychoanalysis Collection of Fondo de Cultura Económica (Economic Culture Fund). He also founded *Psiquiatría* (Psychiatry), the journal of the Asociación Psiquiátrica Mexicana (Mexican Psychiatric Association) (APM), and *Salud Mental* (Mental Health), published by the Instituto Nacional de Psiquiatría (National

Institute of Psychiatry) (Heinze and Pérez Rincón, 2006).

He was head of the Psychiatry Unit of the Hospital Español (Spanish Hospital) (1963–1977) and a member of the World Health Organization Expert Committee on Mental Health (1973–1982 and 1991–2000) and the UN International Narcotics Control Board (1972–1979 and 1982–1986) (Heinze and Pérez Rincón, 2006).

In 1979, he founded the Instituto Nacional de Psiquiatría (National Institute of Psychiatry) that today bears his name, “as an institution capable of transforming the way of understanding mental illness through research, the translation of scientific findings into programs, best practices for disease prevention and the care of people who fall ill, and public policy recommendations” (Instituto Nacional de Psiquiatría Ramón de la Fuente Muñiz, 2017).

In its first stage of “gestation,” it enhanced biological psychiatry, maintaining its humanistic vocation without losing its social perspective. The words of Doctor de la Fuente, at the first Research and Teaching meeting in 1982, illustrate how he conceived the Institute “I will begin by mentioning two general ideas that guided our work. One is that mental disorders and mental health can only be addressed, both in their study and in their management and prevention, within a conceptual framework enabling one to take into account their biological and psychological components, as well as their roots and social consequences” [De la Fuente, 1982, p. 2]. “I wish to highlight the characteristics of our Institute which are, in my opinion, its capacity to produce while building itself, to have been conceived as an institution with effective interaction with other institutions and to be oriented so that its technical resources are at the service of psychiatry and mental health at all levels of health care” (De la Fuente, 1982, p. 5).

It is because of this multidisciplinary conception that the Institute has research areas (neurosciences, clinical research, epidemiology, and social sciences) and teaching and clinical services supported by an administrative unit.

From 1970 to 1980, he was a member of the UNAM Board of Governors. In 1983 he was appointed Profesor Emérito (Professor Emeritus), and in 1985 he was awarded an honorary

doctorate. De la Fuente’s awards include the “Eduardo Liceaga” prize presented by the Consejo de Salubridad General de México (General Health Board of Mexico) (1988) and the “Dr. Gustavo Baz Prada” Award conferred by the Sociedad Médica de México (Medical Society of Mexico). In 1990, he won the Premio Universidad Nacional en el área de la Docencia en Ciencias Naturales (National University Prize for Natural Science Teaching) (Pérez Rincón, 1992). In 1994, the American Psychiatric Association presented him with the “Simón Bolívar” Prize. He received the Elías Sourasky Award for Medical Merit 2000 from the Fundación Mexicana para la Salud (Mexican Foundation for Health) in 2003 and the “Dr. Ignacio Chávez 2004” prize from the Facultad de Medicina (Medicine Faculty). In 2006, the Consejo de Salubridad General (General Health Board of Mexico) bestowed the “Dr. Guillermo Soberón Acevedo” award on him for the Development of Health Institutions.

Cuba · Philosophy · Psychological ideas · Teaching

To understand the historical meaning of the development of psychological ideas in the ideology and

the Philosophy in Cuba, one must refer to the national formation and political liberation processes in the island, happened during the nineteenth century. It began to arise in that moment a national conscience and the need of psychological ideas to understand the local problems (Segura-Suárez, 2003). Besides, the originate populations had elaborated ideas related with the psyche, allowing that the European thought was not deposited as an absolute truth in the Cuban intellectuals' thoughts (De la Torre Molina, 1998).

In this context, the psychological ideas of José of Luz y Caballero, philosopher and educator in the Salvador School and in San Carlos' Seminar School, where he substituted José Antonio Saco in the course of Philosophy that Félix Varela (1788–1853) occupied previously. In his work, a tendency to the materialism is appreciated. He had entered in contact with diverse tendencies, studying authors like Descartes (1596–1650), Newton (1643–1727), Locke (1632–1704), Condillac (1714–1780), and Bacon (1561–1626). As for the German philosophers, Kant (1724–1804), Fichte (1762–1814), Schelling (1775–1854), and Hegel (1770–1831) maintained a position of rejection. He approached concepts like sensation, perception, reasoning, imagination, among others that cooperated to break up with the theology in the science, without making any division between soul and body. Also, he was precursory of a creative teaching of autonomy in the students.

Luz's psychological ideas are in most of his works. Must be mentioned *Impugnación a las doctrinas filosóficas de Victor Cousin* (Impugnation to the philosophical doctrines of Victor Cousin, 1840); *Filosofía y Pedagogía* (Philosophy and Pedagogy, 1935); *Doctrinas de Psicología, Lógica y Moral* (Doctrines of Psychology, Logic and Morals, 1935); *La Polémica Filosófica* (The Philosophical Controversy, 1946); *Elencos and discursos académicos* (Casts and Academic Speeches, 1950); *Aforismos* (Aphorisms, 1962); and *Escritos Educativos* (Educational Writings, 1991).

A significant fact that involves Luz y Caballero with a historical outstanding meaning in the psychological Cuban thought was the philosophical Polemic of 1838–1840. In such a debate, he proposed his psychological ideas in the understanding

and the human being's definition, entwined in an ethics of liberation ideals. The same ideas were maintained among Félix Varela's followers against Victor Cousin's proposals (Guevara-Valdés, 1984; Ibarra-Cuesta, 2008; Segura-Suárez, 2003; Pruna-Goodgall, 2006). The Cousinians wanted to institute the eclecticism in Cuba, while the Varelians wanted to break up with the scholastic one. The axis of the debate was constituted in a significant way by the Psychology.

The eclecticism exposed a philosophical school, in particular, reborn in the nineteenth century with Victor Cousin, and the elective method, like the Cuban peculiarity attitude and method, was focused on questions linked to the praxis of a social system in development. The elective method found application in pedagogy and in ideology, and was about to reject the scholastic one: it implied all the methods and none method, all the schools and none school. A movement to critical and selective choose in search of practical solutions (Boleda-Gordillo & Rodríguez-Maden, 1992).

Manuel González del Valle (1802–1884) and his brother José Zacarías González del Valle (1820–1851) were competitors of Luz y Caballero. They taught Philosophy at university, following the doctrine of the eclecticism. The first one had published in pamphlet form his text *La Psicología* (The Psychology), according to the doctrine of Cousin. José de la Luz y Caballero, on the other hand, dedicated his courses in the convent in San Francisco to oppose the eclecticism. He defended the work of Félix Varela against the scholastic tradition. It was so much the transcendency of the polemic, for the fact of influencing the way of conceiving education in Cuba, that the newspapers of Havana, Matanzas, Trinidad, and Puerto Principe made an echo of the debate.

In one of the papers against the Psychology according to the doctrine of Cousin, Luz introduced the topic of the conscience, medullary topic in the whole debate. Filolezes, the alias that he used, argued that the conscience had its own characteristics, because it allowed not alone the knowledge of the world but for the possibilities that it opened up to act on him.

For Luz y Caballero, it was clear the relationship between the biological and the social systems in the human being: society was man's natural state; nevertheless, it did not exclude what is due to nature. He also denied the possibility that innate ideas existed, although it has been observed in childhood that certain operations were not learned (Luz y Caballero, 1950). It is also evident in his idea about the unit between knowledge and affection, because all the operations emanated from both desire and thought.

Luz y Caballero put in evidence, also, his empiric and sensualist position as to the process of thought and knowledge. In this approach, the science of conscience needed external experience, otherwise, it was a work in vain for the one who built it (Luz y Caballero, 1946). His position was demonstrated opposite to scholastic and spiritualist approaches. Without studying the external world, without previous data of observation and experience, it was impossible to find psychology and to legitimate it as science (Luz y Caballero, 1946).

As for the theory of knowledge, Luz y Caballero was about articulating arguments from empiricists and rationalists, considering the role that the practice played. He declared that it was necessary to begin with the concrete object and rise to the abstract object, before the theory was the praxis, and in this way, with the progress of the science, it would be fecundated by the theory: an eternal circle of the human knowledge (Luz y Caballero, 1946). Such a position was articulated in the critical elective method that has marked the tradition of psychological Cuban thought until the present time (Viguera-Moreno et al., 2012; Viguera-Moreno, 2018).

Colombia · Training of psychologists · Early childhood education · Psychological measurement

“Measurement [in psychology] is not an end, but a means. And it is a means that must always be in favor of whom one measures. It can never be against them. The measurement cannot be so that we limit people's possibilities, but to guide them within their possibilities.”

Beatriz de la Vega
(Giraldo, 2018a)

Beatriz de la Vega Vargas Vila was part of the first group of professional psychologists in Latin America and graduated from the Universidad Nacional de Colombia (National University of Colombia) on November 28, 1952 (Ardila, 2019). In addition to obtaining a bachelor's degree in psychology, de la Vega carried out postgraduate studies in education in Paris (Pérez-Acosta, 1999) and a master's degree in public health (Giraldo, 2018b).

Her father, José de la Vega Vélez (1889–1945), was a senator for the Colombian Conservative Party and co-founder of the newspaper *El Siglo* (The Century), currently known as *El Nuevo Siglo* (The New Century) (Pérez-Acosta, 1999). This political ancestry was reflected in the fact that Beatriz de la Vega was deputy minister of health during the conservative government of Colombian President Belisario Betancur (1982–1986; see Giraldo, 2018b). However, she was also related to the liberal-anarchist writer José María Vargas Vila (1860–1933), on her mother's side.

Beatriz de la Vega's professional fields were educational psychology, with emphasis on the preschool stage, and psychological measurement (Giraldo, 2018a; Robles Sáenz, 2019). Together with Beatriz Carrizosa Umaña, Cecilia Gómez de Herrera, Diva Montealegre de Rincón, Julia

Roncancio, Magdalena Fety de Holguín, and Paulina Esguerra de Iriarte, in 1953, de la Vega founded the *Centro de Psicología* (the Psychology Center) (de la Vega et al., 1994).

In her professional career, she continued to stand out as a pioneer and leader in various institutions. A few years after graduating as a licentiate in psychology, Beatriz de la Vega succeeded her teachers Mercedes Rodrigo Bellido, Hernán Vergara, and Luis Jaime Sánchez, as director of the Institute of Applied Psychology at Universidad Nacional de Colombia (National University of Colombia), her alma mater. In 1957, she founded the Faculty of Psychology at National University and was its first dean (Pérez-Acosta, 1999). During her term, which lasted until 1958, she had the task of institutionalizing psychology practices and a thesis project as partial requirements for obtaining the title of psychologist (Giraldo, 1993).

In 1962, she joined the Special District of Bogotá, and for six years, she was the director of Observation House No. 2 for homeless children. Her most important leadership role, however, was to have taken part in 2002 in the Board of Directors of the World Organization for Early Childhood Education, OMEP, an entity attached to UNESCO. In this regard, de la Vega founded the Colombian branch of the OMEP: the Asociación Colombiana de Educación Pre-escolar (ACDEP) (Colombian Association of Early Childhood Education) (see Pérez-Acosta, 1999).

The impact of the *Psychology Center* deserves special attention; it operated for more than four decades under the academic leadership of Beatriz de la Vega but also with the daily support of an important group of psychologists who offered preschool education with advanced approaches for its time, such as constructivism and game-based learning, mainly to children belonging to wealthy families from Bogotá (Pérez-Acosta, 1999; Robles Sáenz, 2019), at a historical moment in which mothers began to massively become part of the labor force (Muñoz and Pachón, 1994).

With the support of OMEP and the advice of the influential French-Canadian researcher Madeleine Goutard (author of the classic *Mathematics and Children, a Reappraisal of Our Attitude*;

Goutard, 1964), the *Psychology Center* had the initiative to project its work to the rural area, with the foundation of the *Pelaya* kindergarten (Department of Cesar, northeast of Colombia) in 1970. Goutard visited this project and described it later in the magazine *L'École Maternelle Française* (description translated by Esguerra de Iriarte, 1994).

Another project influenced by the *Psychology Center* was *La Cabaña* (The Cabin) kindergarten, located in a working-class neighborhood of the same name in Bogotá (de la Vega, 1994). It was founded in 1970 with the support of the Dutch colony and the *Instituto Colombiano de Bienestar Familiar* (ICBF) (Colombian Institute of Family Welfare) and was later, in 1980, under the direction of Maty de Restrepo, a preschool pedagogue trained at the *Psychology Center*. Under her administration, children of the Bogotá working class enjoyed a visionary pedagogical model, which was not based on rigid activities under the approval or censorship of the teacher on duty, but on projects that would capture the interests and needs of children such as “the circus” or “the hospital.”

Taking advantage of all this decade-long accumulated experience from the *Psychology Center*, the *Pelaya*, and *The Cabin*, Beatriz de la Vega published a series of notebooks at the end of the 1990s in the Educational Series of *Editorial Norma* to facilitate the learning of reading and writing in preschool, based on drawing as an incentive stimulus for writing lines (de la Vega, 1997).

The constant and pioneering work of Beatriz de la Vega has been a good example for the new generations of psychologists in Colombia and other Latin American countries, who currently enjoy a respected profession, still with challenges (Giraldo, 2018c; Pérez-Acosta, 1999).

De León Porras, Marcos Fernando

Born *Guatemala City, 7 October 1921*

Died *Guatemala City, 15 June 2005*

Aymara de León

Independent Psychologist, Guatemala, Guatemala

Keywords

Guatemala · Psychotherapist · Humanistic psychologist · Professional orientation

Fernando de León Porras was a Guatemalan psychotherapist, educator, musician, and poet. De León Porras was born in Guatemala City in a working class family. The oldest of three children, he was son of Daniel, a rural farmer who had emigrated to Guatemala City to work at the German Embassy, and Ana Maria Porras, a housewife. As a teenager he ran into some psychoanalysis booklets in a public library and organized lectures for his classmates and friends, starting a passion for teaching and psychological issues.

In 1940, at age 19, after graduating as an elementary school teacher from Escuela Normal Central para Varones (Normal Central Male School), he was sent to a remote community, in San Marcos Department near Tacaná Volcano, to teach children and adults read and write. Later he was relocated to La Antigua Guatemala, working as a primary education teacher and as a group leader of the Boy Scout Movement.

In 1946 he married Maria Cristina López Paniagua (1923–1991), his teenage sweetheart, a physical education teacher. They had five children, Marycielo, Fernando, Aymara, Iris, and Sergio. In 2005, at the time of his death, he

counted 11 grandchildren and 12 great-grandchildren.

In 1946 Psychology was not available as a field of study in Guatemala, so he decided to attend Medical School instead. The next year he won a scholarship at Instituto de Seleção e Orientação Profissional (Institute of Selection and Professional Guidance – ISOP), at the city of Rio de Janeiro, Brazil.

After graduating as a psychotechnician in Brazil, he discovered that he could not work legally in Guatemala, because this degree does not exist locally. Then started studies in the recently created Departamento de Psicologia, Facultad de Humanidades Universidad de San Carlos (Psychology Department, Humanities Faculty at San Carlos University – USAC) where in November 15, 1952, he became the first person ever to graduate with a B.S. in Psychology in Guatemala's history.

That same year (1952) he co-founded the first professional psychology practice in the country, with Antonio Román Durán, a psychiatrist from Spain exiled in Guatemala. He also headed the Clínica Psicotécnica (Psychotechnic Clinic) at Departamento de Rehabilitación del Instituto Guatemalteco de Seguridad Social (Rehabilitation Department of Guatemalan Social Security Institute) and cofounded the Liga Guatemalteca de Higiene Mental (Guatemalan Mental Hygiene League) with psychologist Jaime Barrios Peña, medical doctor Cesar Meza and another professionals.

In 1951 he was elected for Guatemalan Congress where he worked to improve education and mental health until July 1954. In 1954, when a military coup overthrew the government, he was forced to exile and choose to go to Brazil.

After a week in Rio de Janeiro, as a result of changing political tides, instead of the asylum they had been promised, he and his fellow Guatemalan exiles were arrested and sent to a clandestine detention camp in the amazon jungle in the State of Amapá.

They remained there for 5 months without contact with the outside world, living under one rule: If anyone tried to escape, everyone will be killed. When it became apparent, the detention was not only illegal, but indefinite, de León

Porras, who was the only one that spoke Portuguese, volunteered to venture through the jungle in an attempt to make contact with the crew of the monthly resupply plane. He managed to reach the landing strip on time and persuade the pilot to take letters from prisoners to their families and drop them at the post office.

One of the letters from de León Porras reached Dr. Emilio Mira y López, his mentor, an eminent psychiatrist from Spain who lived in Brazil as an exile from Franco. Mira y López staged a political and legal campaign that finally set the prisoners free.

Back in Rio de Janeiro, de León Porras continued studies in clinical psychology and psychoanalysis as a preferred disciple of Mira y López. Together they worked at Instituto de Psicologia Medica (Medical Psychology Institute). In 1955–1958, he was appointed Director of Instituto de Seleção e Orientação Profissional from the Serviço Nacional de Aprendizagem Comercial (SENAC) (Institute of Professional Selection and Guidance of the National Service of Commercial Learning) in Porto Alegre, Rio Grande do Sul, Brazil.

In 1958 de León Porras was finally able to return to Guatemala, where he resumed his private practice, created the first Experimental Psychology Laboratory in the country, organized the first Vocational Guidance Service, advised the Ministry of Education for 4 years, and was appointed dean (1952–1954) of the Departamento de Psicologia, Facultad de Humanidades – USAC (Psychology Department at Humanities Faculty – USAC), a position he held again in 1965–1970.

In 1976 de León Porras obtained a M.A. degree in Clinical and Medical Psychology from Universidad Francisco Marroquín (Francisco Marroquin University) and in 1978 he was awarded his doctorate degree.

An “eternal student” as he defined himself, he continued his education (1978–1980), in the fields of Gestalt Therapy, clinical hypnosis, and as a member of Asociación Latinoamericana de Análisis Transaccional (Latin American Transactional Analysis Association).

From 1981 to 1986, he directed the staff of Oficina Técnica de Evaluación y Promoción del Personal Docente of – USAC (Technical Office

for Teacher Evaluation and Promotion at – USAC). In 1986 he was appointed as scientific researcher at Instituto de Investigación y Mejoramiento Educativo – USAC (Research and Educational Improvement Institute – USAC).

In 1995, he cofounded Instituto de Psicología Contemporánea (Contemporary Psychology Institute), a private institution offering different psychotherapy approaches where he serves as Scientific Director until 2004.

In 1998 he started a multiyear collaboration with Universidad Autónoma Metropolitana de México (Metropolitan Autonomous University of Mexico) to bring to Guatemala the first professional training in the field of Transpersonal Analytic Psychotherapy.

De León Porras had a life-long romance with classical guitar, which he started to play since his younger years. A nonprofit he helped create, the Regino Sainz de la Maza Society, presented in Guatemala notorious guitar players such as Andres Segovia and Manuel Lopez Ramos.

Through his teaching career, he inspired generations of psychologists and psychiatrists at different universities from Brazil, Guatemala, and El Salvador.

De Moya, Antonio

Born *Santo Domingo, (Dominican Republic), 1949*

Died *Santo Domingo, (Dominican Republic), 2015*

Josefina Záiter

Universidad Autónoma de Santo Domingo, Santo Domingo, Dominican Republic

Keywords

Dominican Republic · Social psychology · Community work · Psychosocial problems

Antonio De Moya carried out his psychology studies at the University of Puerto Rico, Rio Piedras. He had a master's in psychology from the School of Social Sciences, New School for Social Research, New York, and a master's in Public Health at Hadassah School of Medicine, Hebrew University of Jerusalem, Israel.

He represents one of the Dominican psychologists who promote social psychology, through teaching, research, and the implementation of

social intervention programs. Professor at the School of Psychology at Universidad Autónoma Santo Domingo (UASD), teaching the subjects social psychology, psychology of communication. Professor in the Master of Community Social Psychology, he stood out as a professor of research methodology in social sciences.

He developed important programs for the fight against HIV and AIDS in the Dominican Republic. He was an advisor to national and international organizations, from the Ministry of Health, the United Nations Joint AIDS Program (UNAIDS), and the Pan American Health Organization (PAHO).

He devoted himself to studying Dominican social behavior, the problems of sexuality, and carried out interesting studies on psychosocial anthropology, as well as studies on violence in the young population of popular sectors (see De Moya, 2015).

Through his research work in social psychology, Antonio De Moya (1949–2015) "... gives importance to the creation of the necessary popular and ideological spaces that enable independent or emancipatory development" (Brea, 2015).

The realization of his teaching and professional work, in social psychology, contributes to the exercise of a critical psychology in Dominican society, opening new perspectives to psychology in the Dominican Republic.

From a psychohistorical approach, he carried out important research in social psychology; his studies about the racial problem in Dominican society make it possible to analyze the complexity of racial and anti-Haitian prejudice in the Dominican population.

One of the areas in which his contributions are recognized is represented by the programs he designed to fight HIV and AIDS in the Dominican Republic. He was an advisor to national and international organizations, from the Ministry of Health, the United Nations Joint AIDS Program (UNAIDS), and the Pan American Health Organization (PAHO).

His work as an organizer and advisor to community organizations and social networks has had significance in the application of the psychosocial perspective to social problems; he founded the

"epistemic networks" in the Dominican Republic, from which he encouraged criticism and reflection on the situations of Dominican society.

In 2015, the journal *Perspectivas Psicológicas* [Psychologic Perspectives] of the Institute of Psychology of the Universidad Autónoma de Santo Domingo (UASD) dedicated a special edition to Antonio De Moya, in which he compiled a set of 27 articles of his authorship. This publication represents a recognition of the fruitful work, in social psychology, carried out by E. Antonio De Moya. Edward Martínez, Director of the Institute of Psychology of the Autonomous University of Santo Domingo, referring to the academic work of Antonio de Moya, recognizes the following: "His extensive scientific work is a successful synergy of knowledge derived from Social Epidemiology, Social Psychology and Sociocultural Anthropology" (Martínez, 2015).

De Pilla Ferrari, Giuseppe

Born *Ruffino, La Spezia, (Italy), 25 December 1943*

Nelson Portillo
Boston College, Chestnut Hill, MA, USA

Keywords

El Salvador · Behaviorism · Advertising · Marketing · Substance use

Giuseppe De Pilla Ferrari was a pioneer in the fields of experimental analysis of behavior, animal research, advertising, and marketing in El Salvador. Initially trained as an electronic engineer, he switched to psychology and worked as a full-time college professor and as a researcher during the first years of his professional career. Later on, he combined his academic responsibilities with several positions in the private sector, particularly in the areas of advertising, marketing, and applied research. He was instrumental in designing the first psychology program at a private university and opening the first experimental psychology laboratory that used animals in the country. As the only psychologist teaching behavioral psychology in El Salvador for over 20 years, he produced two extensive manuals that introduced students to key concepts and applications of behavioral analysis.

Giuseppe De Pilla Ferrari was born in the height of World War II in the small village of

Ruffino, La Spezia, in the northern Italian region of Liguria. He was the only child of Faliero De Pilla, an administrative employee at a shipyard in Muggiano, and Mimma Ferrari, a housewife. The area where the family lived was heavily bombarded because the German Kriegsmarine used the city's port as one of its main bases in the Mediterranean Sea. Ravished by the war, the economy was bleak and Mr. Faliero De Pilla made the decision to migrate to Venezuela in 1948. His wife followed him in 1950. As a small child, Giuseppe was left under the care of his paternal grandmother in the neighboring village of Pitelli. He studied elementary school in Pitelli and later on he entered a boarding school administered by the Salesian Order. As a 14-year-old teenager, he migrated to Venezuela along with his grandmother in 1957. The 10-day journey had been very grueling for him due to a viral illness. When he arrived at his destination, he was 10 kilos lighter.

As a newcomer, he could only speak Italian and to avoid interrupting his studies, his parents sent him to the Agustin Codazzi School, a non-accredited school where all classes were taught in Italian. He completed his secondary studies in 1962, the same year that he obtained his Venezuelan citizenship. Inadvertently, his naturalization put an end to his Italian citizenship and he was forced to return to Italy to remedy this issue. Once in Italy, De Pilla went to Genova to study electronic engineering, but he decided to quit after 2 years.

De Pilla came back to Venezuela without a clear career plan. He helped in the Italian restaurant that his parents had opened in Caracas and also worked in a car factory. When many of his friends came to him for advice and emotional support, he considered studying psychology to help people. Because the Central University of Venezuela was experiencing strikes and political conflicts, De Pilla opted to study at the Pontifical Javeriana University in Bogotá, Colombia. He began his studies in 1967 and obtained his degree in 1971. During his fourth year, he worked as an instructor of statistics, and in his last year, he worked as a psychologist in training in the School

of Police. During his studies, he met his future wife, Gloria Bodnar, from Colombia.

Upon receiving their degree in 1971, the couple was invited to come to El Salvador by a former instructor, Jesús Arroyo Lasa SJ (1925–?), a Jesuit priest working at the fairly new University of Central America (UCA) in San Salvador. Arroyo Lasa had taught psychodynamic psychology in the same program in Colombia. The couple had to get married as a precondition to move to El Salvador and both decided to spend their honeymoon in what would become their country for the rest of their lives. They arrived on February 17, 1972. Giuseppe and Gloria had two daughters in El Salvador: Caterina (1974) and Silvana (1978). Giuseppe had his son Giancarlo (2000) with his second wife.

The main task of the De Pilla team was to design and implement the academic program of the new psychology program at UCA. In the process, Giuseppe was appointed chair of the Psychology Department, but in 1975, he returned to Colombia for 2 years to pursue a Master's Degree in Curriculum Evaluation and Research at the National Pedagogical University in Bogotá. His thesis was completed with two other colleagues (one of them was his sister-in-law) under the direction of renowned Colombian psychologist, Rubén Ardila.

Representing El Salvador, psychologists Ángela de Sol and Giuseppe De Pilla attended the First Latin American Conference on Training in Psychology celebrated in Bogotá in December of 1974 (see Gallegos, 2010). This was an opportunity to establish many of the academic standards that were later introduced in several countries following what became known as “The Bogotá Model” or “The Latin American Model” (Gallegos, 2010). The psychology program designed by the De Pillas at UCA was in place for over 20 years, a testament of its quality and soundness.

Ignacio Martín-Baró had been an early De Pilla's student in the 1970s while he completed the same program that they had developed. The student-professor relationship morphed quickly into a relationship of colleagues and friends. Although Martín-Baró was very critical of

behaviorism, they both had great respect for each other as scholars. Nacho, as he was known, was very fond of Caterina and Silvana and one of them had a December birthday. On November 10, 1989, Giuseppe and Gloria hosted an early birthday party to invite friends and colleagues from the Psychology Department at UCA, before breaking for the end of the academic year. This would be the last time that friends and colleagues would see Nacho alive as a major offensive was launched by the guerrilla forces the very next day, followed by his brutal assassination along with other Jesuit brothers and their collaborators on the early hours of November 16, 1989.

When it comes to contributions made to psychology in El Salvador, De Pilla made one of the most significant one by opening in 1978, the first experimental psychology laboratory that used animals for research in the country. Equipped with its own bioterium, the laboratory had computerized Skinner Boxes from Coulbourn Instruments and other tests and devices used to study psychological variables, psychophysiological processes, and the brain. In addition, the laboratory had a large Gesell Chamber and several rooms for meetings and offices. The Skinner Boxes had been donated by the Department of Psychology from Yale University. American psychologist Claire K. Morse (1943–2021), who was a Yale graduate and had lived in El Salvador with her husband, trained De Pilla and helped to set up the equipment. Toward the end of the 1970s and most of the 1980s, the psych lab at UCA was on par with programs that offered a strong research training component.

As the lone leading behavioral psychologist in the country, De Pilla produced two voluminous manuals, *Psychology of Learning Laboratory Manual* (1977) and *Experimental Analysis Applied to Education* (1978), to teach his two signature courses: Learning Theories and Experimental Behavior Analysis Applied to Education. His courses were designed based on behavioral principles and the first one required all students to work with albino rats for a whole semester. Philosophically, De Pilla considered himself a radical behaviorist in order to make a strong impression on his students and colleagues. This marked a departure from his previous training in

psychoanalysis when he studied his bachelor's degree at the Pontifical Javeriana University. Although he was often criticized for this stubborn posture, he was one of the most respected psychologists in the Psychology Department and the field in the country.

As the sociopolitical situation in El Salvador deteriorated 1970s and gave way to a bloody civil war in the 1980s, De Pilla decided to leave UCA as a full-time professor in 1981. He continued as a part-time instructor until 1998, while working in the private sector primarily as a market researcher. When he ventured into marketing, most companies did not have a strong research component, but thanks to his behavioral and research training he became one of the most sought-after experts in the country. He went on to manage marketing research departments in some of the largest advertising firms and companies of his time from 1981 until 2015.

Between 1992 and 1996, he was offered the position of Director of Research and Communication at El Salvador Anti-Drug Foundation known as FUNDASALVA for its acronym in Spanish. He directed research, evaluation, and training, all computer and information systems as well as the documentation and volunteering components. He also worked in the conception, formulation, presentation, and promotion of projects in the antidrug area (i.e., awareness, training, prevention, and rehabilitation). His tenure coincided with the end of the Salvadoran civil war (1981–1992) and programming was offered to victims of it too.

De Pilla was an active member of the Latin American Association of Analysis and Behavior Modification (ALAMOC), and during that period, he was the representative for El Salvador. In 2015, after many years of absence from ALAMOC, El Salvador celebrated the First National Conference on Behavior Analysis, Behavior Modification and Cognitive Behavioral Therapy. During the event, De Pilla received a Recognition Award for his “pioneering, educational, and dissemination work in behavior analysis in the country.”

Although De Pilla penned several academic and nonacademic articles, the majority of his works remain unpublished. His love for

electronics never waned and his knowledge was very helpful when any of the Skinner Boxes broke down or needed to be reconfigured. He also wrote on psychology and electronics, pieces such as Computer ergonomics (1995) and Human behavior and computer learning (n/d). He also produced psychoeducational videos such as “Cyber o no cyber, that’s the question” in the 1990s.

De Pilla formally retired in 2015 when Parkinson’s disease made it difficult to work. Although incurable, his condition improved and he continued working as a consultant for FUNDASALVA and other institutions. As of 2020, De Pilla was asked to design a new psychology program for a private university. Altogether, De Pilla’s professional career spanned more than 50 years.

Peru · Psychiatry · Psychoanalysis · Phenomenology

Honorio Delgado was a Peruvian psychiatrist, considered the most relevant figure in Spanish-speaking psychiatry in the twentieth century.

Born in Arequipa, in southern Peru, he studied primary and secondary school there, as well as Premédicas (at the University of San Agustín), moving to Lima where he completed his medical studies in 1918 at the Universidad Nacional Mayor de San Marcos (San Marcos Major National University, UNMSM), specializing in the field of psychiatry, under the direction of Hermilio Valdizán (1885–1929) whom he always considered his teacher (Mariátegui, 1989, 1993).

Still a medical student, on January 1, 1915, he published an article in the newspaper *El Comercio* with the title “El psicoanálisis” (Delgado, 1915), the first publication on Freud’s doctrine in Peru. From then on, he undertook a very active work to disseminate this doctrine, of which Sigmund Freud (1856–1939) himself (whom he visited for the first time in 1922) becomes aware of it, who mentions it in the second edition of *History of the psychoanalytic movement* (Freud 1914/1957). This dissemination work was accomplished through many of his articles in the *Revista de Psiquiatría y Disciplinas Conexas* (Journal of Psychiatry and Related Disciplines), which he founded in 1918 together with Valdizán, and also through books (one of them, a biography of the father of psychoanalysis, Delgado, 1926). In addition, Delgado made contact with some of the most prominent personalities of the psychoanalytic movement of that time: Karl Abraham (1877–1925), Otto Rank (1884–1939), and William H. White (1870–1937), among others.

During his visits to Europe he also met Alfred Adler (1870–1937), Freud’s dissident and creator of the *Individualpsychologie*, a trend that also arouses his sympathies. Adler, on the other hand, included him as a member of the editorial committee of the *Internationale Zeitschrift für Individualpsychologie* (International Journal of Individualpsychology), the official journal of his movement. With the passage of time, Delgado distanced himself from the Adlerian doctrine, most likely observing that among Adler’s followers there are those who seek to link this doctrine with Marxism.

Toward the end of the 1920s, there was a progressive departure from Delgado with respect to psychoanalysis, showing an increasing interest in the phenomenological approach. This distancing will lead the Peruvian psychiatrist to an increasingly critical attitude toward what he considered to be the excesses of psychoanalysis. Honorio Delgado was influenced by Karl Jaspers’ (1882–1969), Nicolai Hartmann’s (1882–1950), and Ernst Kretschmer’s (1888–1964) ideas.

Upon the premature death of his teacher, Valdizán, Delgado took the chair of psychiatry at the UNMSM, which he maintained for more than

30 years. Since 1922 he has also been a doctor at the Víctor Larco Herrera Hospital, the most important psychiatric institution in Peru. In the practice of psychiatry in that institution, Delgado carried out important research works that are expressed in his numerous articles and books.

Along with all this professional activity, which was complemented by a private practice of psychiatry, Delgado edited two journals: the aforementioned *Revista de Psiquiatría y Disciplinas Conexas* (Journal of Psychiatry and Related Disciplines) and the *Revista de Neuro-psiquiatría* (Journal of Neuropsychiatry), founded in 1938 with J. Óscar Trelles (1994–1990), which continues to be published to nowadays.

A man with a very broad cultural horizon, which extended to philosophy, literature, and history, Delgado published actively until the end of his days.

From his chair of psychiatry and away from psychoanalysis, Delgado proposed a psychiatry with strong biological components but also with elements of a philosophical nature, considering the phenomenological approach (especially) of Jaspers as the most useful. His critics consider that his influence was decisive so that psychoanalysis in Peru did not undergo further development until the 1970s more or less (Silva Tuesta, 1979), but they recognize his important role in the introduction and diffusion of European therapeutic theories and techniques in the Peru (Valdivia Ponce, 1964).

In 1961, on the occasion of a new university law, Delgado (shortly before elected Dean of the Faculty of Medicine of the UNMSM) manifested himself opposed to it, and, when the law came into force, he submitted his resignation to the rector and to UNMSN. He was accompanied by a very large number of professors from the Faculty of Medicine. Shortly after, the Peruvian University of Medical and Biological Sciences (today the Peruvian University Cayetano Heredia) was created, whose first rector would be Delgado.

Although generally not interested in politics, but with conservative positions (his most severe critics accuse him of a pro-Nazi mentality), Honorio Delgado served as Minister of Education

in the government of José Luis Bustamante y Rivero (1945–1948).

The most important Peruvian psychiatric institution, founded in 1982, has him as an eponymous: the Instituto Nacional de Salud Mental “Honorio Delgado – Hideyo Noguchi” (National Institute of Mental Health “Honorio Delgado – Hideyo Noguchi”).

In Peruvian psychology Honorio Delgado represents the philosophical orientation, highlighting the role of intuition and with a limited assessment of the experimental approach. His work *Psicología* (Delgado & Iberico, 1933), written with Mariano Iberico (1892–1974), which has had numerous editions, is a presentation of psychological knowledge from the philosophical perspective, giving little importance to the experienced and underlining the fundamental role of intuition. On the other hand, his *Textbook of psychiatry Course* (*Curso de psiquiatría*, Delgado, 1953), also with several reissues, has been the most important text in the specialty written by a Peruvian.

Denegri, Marco Aurelio

Born *on Lima (Peru), May 16, 1938*

Died *in Lima (Peru), July 27, 2018*

Ramón León

Universidad Ricardo Palma, Lima, Peru

Keywords

Peru · Sexology · Literature · Psychology

Marco Aurelio Denegri studied law at the Universidad Nacional Mayor de San Marcos (Lima) in the 1960s, but did not practice his profession, yet from a very young age, he displayed intense activity in the study and dissemination of sexuality issues in Peru, whose conservative society did not always welcome their work in a positive way.

Denegri was a contributor to several Peruvian newspapers: in his last years, he had a weekly column in *El Comercio*, the oldest newspaper in Peru, and on the (state) television channel 7, he

directed a program of cultural interviews (*La función de la palabra*, The Function of the Word) that was maintained for many years and in which he interviewed psychologists, doctors, poets, and novelists. Already in his youthful years, he used to be invited to academic meetings to present a topic of interest to him. Thus, for example, he lectured on sexual issues at the former *Hospital Obrero* (now *Hospital Guillermo Almenara*) within the framework of the cultural meetings sponsored by Dr. Carlos Alberto Seguin, head of the psychiatry service of that hospital.

His written work (in the form of newspaper articles and in some magazines, as well as in books) is dedicated to philology, literature, and lexicography, but also to little explored areas of Peruvian culture (such as cockfighting, frequent in Peru, and the use of the wooden box as a musical instrument, also very widespread in the music of the Peruvian coast). However, his interest in sexuality was predominant.

In his publications on sexuality, Denegri dealt in a very open way (and with a style that defies the usual norms in Peruvian society) topics almost never discussed in Peru (e.g., pornography, masturbation), which was worth it, especially in the beginnings of his activity as a writer, problems with the government authorities in the years of the dictatorship (1968–1975) of Juan Velasco Alvarado (1910–1977).

Solitary and eccentric personality, Denegri enjoyed in his last years great respect in public opinion, especially for his erudition and for the freedom with which he expressed his opinions about people and events. But among psychologists and psychiatrists, he is also seen as a promoter of the sexological culture in the Peruvian environment, although his contribution was mainly theoretical, since he did not carry out any research of an empirical nature on the matter.

Abigail Díaz Alfaro was born in the rural areas of Puerto Rico surrounded by the lush greenery of our tropical vegetation. Both her parents (Abelardo Díaz Morales and Asunción Alfaro Prats) were school teachers, and her mother was her first teacher in a tiny rural school of one classroom that was typical at the beginning of the twentieth century. She came from a family where women were expected to develop their maximum potential—her grandmother was a farmer and cattle rancher, and her home was the site of many discussions about the importance of women's right to vote (right that was acquired in Puerto Rico in 1935). She had two brothers, one of which was a renowned Puerto Rican writer,

and five sisters, all educated professionals. She was married twice, first to José Buitrago with whom she had one daughter, Cordelia, and then to Gilberto Concepción de Gracia, whose last name, Concepción, she used in her professional life.

Abigail Díaz de Concepción was educated at the public schools of Cidra, Caguas, and Ponce, where she distinguished herself by her cognitive abilities and her skills for writing, oratory, and acting. She was the first honor of her class in several occasions, and after her high school graduation, she received a full scholarship to study her bachelor's degree at Keuka College, a small college in New York. She graduated in 1931 with a Bachelor of Science and a major in biology and chemistry.

For economic reasons, she could not enter medical school, as were her wishes; instead, she returned to Puerto Rico and started working as a high school teacher. She taught many courses—English, physics, chemistry, and mathematics—and using all her histrionic abilities, she produced every day in her classroom a live show where she invited prestigious Puerto Rican persons to speak with her students. During these years, Abigail Díaz de Concepción participated in an educational radio program, *School on the Air Waves*, that offered academic and cultural programs for people who were not attending school. In these programs, she used her multiple skills and was writer, teacher, and actress.

In 1944, she decided to enter Brown University, in Rhode Island, to undertake studies in psychology because she realized the importance of this discipline in the process of learning and teaching. She graduated in 1945 with a master's degree (MA) in experimental psychology. In Brown, she learned about the rigors of research, the quest for truth in the most precise way, and in general a great respect for scientific research as a way of increasing knowledge. For her master's thesis, she did a study with rats about the reaction time on a visual discrimination task, *Reaction time in a visual choice discrimination*.

With her master's diploma on hand, Abigail Díaz de Concepción returned to Puerto Rico convinced that one can be an excellent teacher in

many different ways. She continued her teaching career but moved herself to the Department of Psychology at the College of Pedagogy of the University of Puerto Rico (UPR-RP). She was there for just 1 year, after which she was recruited to go to the University of Texas to work in the development of the *Interamerican Tests Series*, with parallel forms in Spanish and English to measure general ability, language, and other aptitudes. She worked in this project for a year along with Pablo Roca de León, Teobaldo Casanova, and Ismael Rodríguez Bou, Puerto Rican psychologists who had been recruited for this project (Roca de Torres, 1993–1994).

When she returned to UPR-RP, in 1947, she was transferred to the College of Social Sciences, where the psychology courses had been moved due to a restructuring of the university. She was the first professor in this newly formed Program of Psychology in the College of Social Sciences and maintained herself in this program until her retirement, and later on, when a department was organized, she was its first director (Roca de Torres, et al., 2003).

During the early 1950s, she went to Columbia University, in New York City, to initiate her doctoral studies. She obtained her doctoral degree (EdD) in social psychology in 1958. Columbia emphasized her personal perspective that psychology is a discipline that must be at the service of the community and that there are many ways to do research and qualitative methods are adequate ways of doing research. Her doctoral dissertation study is *Resources in the lives and culture of Puerto Rican students which will aid in the understanding and use of basic concepts in Social Psychology*.

After finishing her doctoral degree, she returned to her position as professor at UPR-RP and devoted her time to organizing a psychology program both at an undergraduate and a graduate level. She was the director of the Department of Psychology in 1966, when it became the first program in Puerto Rico to offer graduate studies in psychology. She developed a creative course, *Psychology of Puerto Rican Stories*, that stimulated its students to collect the rich tradition of storytelling from their grandparents and analyze

their *cuentos* (stories) to obtain the popular vision of our society (Roca de Torres, 2006).

Dr. Abigail Díaz de Concepción considered the creation of the Faculty of Social Sciences as one of the factors most important in the development of psychology in Puerto Rico. She firmly believed that teaching of the discipline in relationship with the social sciences permitted psychology to use its knowledge for the good of society. For her, it was important to train psychologists who believe “that all acquired knowledge, must be used for the betterment of our Society” (A. Díaz de Concepción, personal communication, June 10, 1993; translation by author).

Abigail Díaz de Concepción was very active at UPR-RP—teaching, doing research, mentoring students, going to congresses, and presenting papers, among other activities—until 1974 when she retired. During her life, she received many recognitions and awards from different organizations: Department of Psychology, Puerto Rican Psychological Association, Caribbean Center for Graduate Studies, and Keuka College, among others. In 1974, she was named *emeritus professor*, the maximum academic distinction offered at UPR-RP. She enjoyed her retirement for a long time and appreciated attending family and cultural activities and conversing about current issues with her colleagues, friends, and alumni. She died on January 4, 2007, at 96 years of age.

Díaz Insunza, Eloísa Raquel

Born *Santiago, Chile, 25 June 1866*

Died *Santiago, Chile, 1 November 1950*

Hernán Scholten

Universidad de Buenos Aires, Buenos Aires, Argentina

Keywords

Chile · Education · Moral hygiene · Habits · Passions

Eloísa Díaz Insunza was born into a wealthy family and graduated in Humanities at the Instituto Nacional (National Institute) at the age of 15. She studied at the Escuela de Medicina de la Universidad de Chile (Medical School of the University of Chile) and achieved her PhD in Medicine and Surgery on January 3, 1887. Thus, she became the first Chilean and Latin American female physician (Sepúlveda-Carvajal, 2018).

Although she initially worked at the Hospital San Borja-Arriarán (San Borja-Arriarán Hospital), Díaz Insunza focused her professional activity on the scholar environment, adding psychological and pedagogical concepts to medical practice. In 1889, the Minister of Public Instruction, the prestigious hygienist Federico Puga Borne, requested her appointment as Medical Inspector of Hygiene of the Escuela Normal de Preceptoras del Sur (Southern Normal School of Preceptors). In that same institution, destined to train the elite of Chilean teachers, she was in charge of the course on Hygiene. Ten years later, she assumed the position of Medical Inspector of the Public Schools of Santiago. In 1911, the School Medical Service and Medical Inspection of Chile was created and Díaz Insunza was its first director, position she held until her retirement in 1925 (Egaña-Baraona & Monsalve-Bórquez, 2011).

She also participated in the Liga Nacional de Higiene Social (National League of Social Hygiene), the Sociedad Científica de Chile (Scientific Society of Chile), the Consejo Nacional de la Mujer (National Council of Women), the Sociedad Médica (Medical Society), the Consejo de Nutrición Primaria (Primary Nutrition Council), and the Cruz Roja (Red Cross) (Ponce de León et al., 2013).

From a hygienist perspective, Díaz Insunza proposed a medical approach that, rather than targeting each person, was projected towards the family, the school, and society as a whole. In this sense, her conception of health gave a remarkable relevance to the psychological and sociological aspects in order to avoid the decadence of the Chilean race in the face of the threat of degeneration and inheritance (Salas et al., 2019).

As early as 1887, in her graduate dissertation, she characterized her study of Chilean women (based on local statistics of 4600 subjects) as a social concern, while considering the impact of menstruation on both the body and the “moral being” of women (Díaz-Insunza, 1887). In her subsequent publications, which dealt mainly with the school child of the working class in Santiago, her hygienist proposal can be seen with greater breadth and precision.

Among other issues, she especially emphasized the link between education and morality by

pointing out the impact of school on “the way of being” of children, since “in it they learn good manners and sociability” (Díaz Insunza, 1905, p. 56). For this reason, she highlighted the role of hygiene in the mastery of passions and habits, the benefits of which would extend to the home environment and allow for a life of complete harmony and health.

At the First Latin American Congress of Medicine, she dealt more extensively with this issue and argued that, in elementary schools, children should be provided with the necessary instruments for the care of their health, since there “good and bad habits are acquired, (. . .) noble or perverse inclinations, exact or false ideas are shaped” (Díaz Insunza, 1901, p. 119). In this way, she linked again the medical and pedagogical issues with the psychological aspects, with the character and intellectual development of children.

Finally, her project for organizing school medicine in Chile, in addition to the classic considerations regarding cleanliness and physical well-being, includes various references to the nervous pathologies of the students (Díaz Insunza, 1910). For example, she characterized hysteria and epilepsy as contagious diseases and established, as a measure of “school prophylaxis,” that students with these conditions should not be accepted in public schools. In addition, she also stated that individual school inspections should deal meanly with abnormal or retarded students, and pointed out the need to compile detailed statistics on existing cases in each school. In this way, Díaz Insunza, the first Chilean and Latin American female physician, introduced the psychological dimension in medical intervention within the Chilean school organization.

psychology

In his youth, Rogelio Díaz-Guerrero traveled to Mexico City to study the career of Surgeon at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) between 1937 and 1943 (Díaz-Loving, 2006). At that time, interest in Psychology was awakened, a career that he will study simultaneously at the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters) (UNAM) at the same university between 1939 and 1943. Later, he entered Iowa State University where he obtained a Master's degree in Psychology (1944) and Doctorate in Neurophysiology and Psychology (1947).

Among his professors, the influence he received from Dr. Samuel Ramos (1897–1959) and Dr. Ezequiel Chávez (1868–1946) who motivated him to study the Mexican personality stands out. Based on these influences, Díaz-Guerrero assesses the historical-socio-cultural premises and will write the historical-bio-psychosocial theory, antecedent of the ethnopsychology of the Mexican.

He was rigorous in his scientific studies; he reflected his passion for psychology in his 84 works that appeared in specialized magazines and wrote 65 book chapters. He was the author or co-author of more than 30 books, including “Estudios de psicología del mexicano” (“Mexican Psychology Studies”) (1961) and “Hacia una teoría histórico-bio-psico-socio-cultural del comportamiento humano” [“Towards a historical-bio-psycho-socio-cultural theory of human behavior”] (1972).

At UNAM, Díaz Guerrero held academic positions from where he promoted psychology, promoting Mexico as a leader in Latin American psychology. He was a professor for many years at UNAM, a professor of many generations of psychologists who have influenced the innovation of Latin American Psychology. He received the Premio Universidad Nacional Autónoma de México [National Autonomous University of Mexico Award] for Research in the Area of Social Sciences (1987) and Investigador Emérito de la Facultad de Psicología de la Universidad Nacional Autónoma de México [Emeritus Researcher of the Faculty of Psychology of the National Autonomous University of Mexico] (UNAM), as well as was the first psychologist Investigador Emérito en el Sistema Nacional de Investigadores del Consejo Nacional de Ciencia y Tecnología [Emeritus Research in the System National Research Council of the National Council of Science and Technology] (CONACYT).

He received academic recognition throughout his professional career, including the el Premio Interamericano de Psicología [Inter-American Psychology Award] (1975), the first prize awarded by the Sociedad Interamericana de Psicología [Inter-American Psychology Society] (SIP) (the Sociedad Interamericana de Psicología [Inter-American Psychology Society] (SIP) has also established that the Premio Interamericano de Psicología [Inter-American Psychology Award] for professionals who speak Spanish or Portuguese bear the name of “Rogelio Díaz Guerrero”); Doctorate Honoris Causa by the Universidad Nacional Mayor de San Marcos [The National University of San Marcos] (UNMSM, Peru); and, in 2003, the Premio Nacional del Consejo Nacional para la Enseñanza e Investigación en Psicología [National Award from the National Council for Teaching and Research in Psychology] (CNEIP), among many others. He was president of the Sociedad Mexicana de Psicología [Mexican Society of Psychology] (SMP); president and founder of the Sociedad Interamericana de Psicología [Interamerican Society of Psychology] (SIP); honorary member of the International Association for Cross Cultural Psychology (IACCP); and honorary life member of the Executive Committee of

the International Union of Psychological Science (IUPsyS).

As Reynaldo Alarcón (2010) points out, Díaz Guerrero's work can be studied according to four categories: Mexican psychology, cross-cultural psychology, the culturalist orientation of his thought, and the foundation of an ethnopsychology. His most important work was a project in which he invested many years of his life: the psychology of the Mexican. In this work, he defined the cultural factor as a determining factor in understanding Mexican psychology. He questions the universality of personality traits. Personality values are determined in each culture, which is why there must be a sociocultural psychology of personality. Transpersonal psychology has pointed out the difficulty in approaching human generalizations from scientificity.

He visited Peru on several occasions: in 2003, the 29th SIP Congress was organized, presided over by Cecilia Thorne; in this event a symposium was organized in his honor.

His facet as a poet is less known, but no less important. In 1997, he published his book of poetry entitled "Ausencias" ["Absences"], dedicated to his brother, his mother, and his first wife, Ethel.

His second wife, María Lucy Rodríguez, now deceased, published two books of poetry posthumously in 2005: "Andanzas, sueños, viajar y existir" ["Wanderings, dreams, traveling and existing"] and "Poesía de un psicólogo" ["poetry of a psychologist"]. His poetic work is written from 1940 to 2003.

Paraguayan historians did not reach a consensus regarding the precise date and place of birth of Manuel Domínguez, so these data remain subject to a certain degree of uncertainty. According to Centurión (1950), Domínguez was born in the city of Itauguá on June 17, 1869. However, authors such as González (1946), González de Bosio (2000), and Zubizarreta (1961) established that his birth take place in Pilar, a city located on the southern border with Argentina. According to González (1946), it would have occurred on June 5, 1868 (González, 1946), although Zubizarreta (1961) says it was in 1866. The historian Justo Pastor Benítez, who also accepts that the birth happened in Itauguá, points out that the correct year is 1867 (Benítez, 1959). Amaral (2006), who wrote more recently, accepts Pilar as his birthplace, although without providing conclusive data. We know that the family moved to various parts of the country coinciding with Domínguez's early childhood years, before settling in the city of Itauguá, where he spent his childhood years and attended elementary school (González, 1946, González de Bosio, 2000).

However, in subsequent years, he again undertook a trip to move to Asunción, with the aim of continuing his secondary studies at the Colegio Nacional (National High School) (González, 1946, Rodríguez-Alcalá & Pardo Carugati, 1999). In 1891, he began his training as a lawyer at the Facultad de Derecho y Ciencias Sociales (Faculty of Law and Social Sciences) of the Universidad Nacional de Asunción (National University of Asunción) (Centurión, 1950), where he received his doctoral degree in Law. The corresponding dissertation was called *La traición a la patria* (Treason against the homeland), which years later was published as a book (Domínguez, 1959). He taught at the National High School between 1889 and 1904, taking care of many of the subject areas that made up the study plan (Centurión, 1950). Likewise, he held the direction of the school (González, 1946). At the university, he had as his main teaching area the Derecho Constitucional (Constitutional Law), which he taught at the Faculty of Law and Social Sciences. There, he always enjoyed a broad and solid reputation as an

academic. His career at the National University allowed him to reach the position of Rector, which he held between July 1901 and December 1903 (Velilla-Laconich, 1990). But due to unwanted discords, his resignation from his work as a professor was accepted on February 25, 1915, and on March 1, 1916, he ended up leaving the university activity definitively (Amaral, 2006). The reasons had nothing to do with his work as a professor or the commitment shown to both study and research (García, 2012).

As a sign of intellectual versatility, Domínguez ventured into fields such as literature, journalism, literary criticism, and historical research. His talent as a writer led Rodríguez-Alcalá and Pardo Carugati (1999) to qualify him as the first great prose writer of Paraguayan literature. He is also remembered for the great quality of his oratory. In 1900, he took charge of the collections of the Archivo Nacional de Asunción (National Archive of Asunción), the oldest in the region, and became its director. This institutional link strengthened Domínguez's activity as a historian and led him to publish several articles and monographs, most of them in the *Revista del Instituto Paraguayo* (Journal of the Paraguayan Institute), a cultural publication that also had great relevance for psychology (García, 2014), and it was edited between 1896 and 1907. Domínguez was its editor between 1901 and 1903.

The political career of Domínguez was very relevant. Between 1894 and 1904, he was Asesor Jurídico (Legal Advisor) at the Ministerio de Relaciones Exteriores (Ministry of Foreign Affairs) (Monte-Domecq, 1944); he held a seat as a national deputy, held ministerial and diplomatic positions, and served as Vice President of the Republic in 1904 (González, 1946, Zubizarreta, 1961), supporting President Juan Antonio Escurra (1859–1919). During the years prior to the war with Bolivia, he was in charge of preparing the legal arguments for the defense of Paraguayan rights over the Chaco, which is why he has been known as *the lawyer for the homeland* (Centurión, 1950).

Domínguez's connection with psychology is related to his writings referring to the national character of the Paraguayan (García, 2012,

2018). These works constituted a reply by Domínguez to the expressions made in an Argentine newspaper by Charles Ames Washburn (1822–1889), a former North American ambassador in Asunción, who questioned, with apparent malice, the bravery of the Paraguayan troops during the Guerra contra la Triple Alianza (War against the Triple Alliance). Such assertions strongly enervated Domínguez’s thinking, which embodied an exultant nationalism (García, 2021). His response was an essay entitled *Causas del heroísmo paraguayo* (Causes of Paraguayan heroism) (Domínguez, 1903), which was later included in a larger book called *El alma de la raza* (The soul of the race) (Domínguez, 1918). He was very explicit in identifying his approach as an essay in historical psychology. In the paper, Domínguez explained the unique characteristics of Paraguayans, whom he considered very different and even superior, in many respects, to the inhabitants of neighboring countries. This presumed superiority manifested itself mainly in their resilience to adversity and in their ability to cope with extreme suffering and sacrifice, all of which had been verified during the war. Domínguez believed that other peoples of the world would not have withstood the hardships that Paraguayans faced in such circumstances. Likewise, he emphasized numerous characteristics that the Paraguayans would have inherited thanks to the mixture of the Spanish with the Guarani. This perspective of considering the Paraguayan as a superior race must be properly understood within the local context of the time, which sought to raise the national spirit in the face of the defeat suffered in the war (García, 2021).

The contrast of Domínguez’s vision of Paraguayans with the more pessimistic characterizations of many authors from neighboring countries is remarkable, some of whom resorted to concepts such as *racial degeneration* to explain the backwardness suffered by their peoples. In his clarification of the distinctive characteristics of Paraguayans, Domínguez relied on European authors such as Théodule Ribot (1839–1916), especially with regard to race (Ribot, 1873), as well as the works of numerous travelers and explorers who crossed the country and made

descriptions of the fauna, flora and customs of the people. Domínguez called the race “the internal cause,” a fruit of the biological mixture between the Spanish and the Guarani. Likewise, he pointed out three groups of elements that can successfully explain the differences between individuals belonging to different nations: (a) natural causes, (b) ethnic causes, and (c) psychological causes (Domínguez, 1908; García, 2015). Domínguez’s ideas were influenced by the work of naturalists such as the German anthropologist and anatomist Hermann Schaaffhausen (1816–1893), a pre-Darwinian evolutionist who postulated the influence of climate and civilization on the differentiation of human types, in a very similar vein to that Domínguez had defended (García, 2016). Among the psychological contributions made by the author, an article on the relationship between height and intelligence can also be mentioned (Domínguez, 1903b).

The relevance of Manuel Domínguez for psychology is based on his contributions to the study of the national character of Paraguayans, developing the first consistent psychological theorization in this area. However, the subject has not experienced continuity in the investigation of later times. For this reason, Domínguez’s work must always be studied, understood, and valued within its correct historical coordinates.

Carlos Héctor Dorantes Rodríguez studied at the Benemérita Escuela Nacional de Maestros (BENM) (Meritorious National School of Teachers, 1973–1977) and obtained the title of professor of primary education, and then he studied for a degree in Sociology with the subsystem in Social Psychology at the Universidad Iberoamericana (IBERO) (Iberoamerican University, 1984–1987). He completed a master's degree in Sociology (1988–1990) and a PhD in Psychological Research (2007–2009) at the same institution, in Mexico City. At the Sociedad de Psicoterapia Psicoanalítica del Centro, A.C. (SOPPAC) (Center's Psychoanalytic Psychotherapy Society) from the city of León in Guanajuato, he trained as a psychoanalytic psychotherapist (1995–1998).

He was a professor of primary education in Mexico City (1977–1988), later at the bachelor, master, and doctorate levels in different national educational institutions such as the Instituto de Investigaciones en Educación de la Universidad de Guanajuato (IIEDUG) (Institute for Research in Education of University of Guanajuato) (1996–1998) (Dorantes & Matus 1997; Dorantes, 1998), the Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM) (Monterrey Institute of Technology and Higher Education) (1995–2007), (Dorantes & Matus, 2002), Universidad Marista (UMA) (Marist University) (1999–2009), Universidad Autónoma Metropolitana-Iztapalapa (UAM-I) (Metropolitan Autonomous University-Iztapalapa, 2005–2008), Universidad del Valle de México (UVM) (Valley of Mexico University, 2007–2011), Universidad Iberoamericana (IBERO) (Iberoamerican University, 1990–2016) (Luengo & Dorantes, 1990; Vírseda, Servín, & Dorantes, 1995; Dorantes & Matus, 2007; Dorantes & Matus, 2011), and Universidad Intercontinental (UIC) (Intercontinental University, 2015–2016). In Panama, he held the chair of international guest professor at the Universidad Latina de Panamá (Latin University of Panama) from 2011 until the date of his death.

He was a national advisor for Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO (United Nations Educational, Scientific and Cultural Organization)) (2002–2005), and advisor to the Secretaría de Educación Pública (SEP) (Ministry of Public Education, 1985–1988), the Centro de Investigación y Seguridad Nacional (CISEN) (Center for Research and National Security) (2000–2005), the Secretaría del Trabajo y Previsión Social (STyPS) (Ministry of Labor and Social Security, 1999), Instituto de Seguridad y Servicios Sociales de los Trabajadores del Estado (ISSSTE) (Institute of Social Security and Services for State Workers, 2000–2002), Auditoría Superior de la Federación (ASF) (Superior Audit of the Federation, 2002), and Instituto de Estudios Educativos y Sindicales de América (IEESA) (Institute for Educational and Union Studies of America, 1994–1995). He collaborated in the development of the project to create the Índice Mexicano de

Satisfacción del Usuario (IMSU) (Mexican User Satisfaction Index) (IMSU) in 2012. In 2015, he developed a project on the evaluation of the quality of education at the Colegio Tomás Moro (Tomás Moro Institute, 2013–2015) in Mexico City. He was a member of the Technical Council of the International Doctorate in Social Welfare at Boston College and the Department of Health of the IBERO (2011–2016). He also participated as director of research in the Reinserta A.C. foundation (2015–2016), as well as the thesis jury of the contest of the Consejo Nacional para la Enseñanza e Investigación en Psicología (CNEIP) (National Council for Teaching and Research in Psychology, 2000–2016).

He was a participant in the program *Elementary Education on Television* on TV channel 11 of the Instituto Politécnico Nacional (IPN) (National Polytechnic Institute) for 2 years, teaching courses around social sciences for preadolescents, and hosted the radio program *Las Puertas del Paraíso* for Radio Ibero on multiple occasions, with topics on such as proxemia (proximity and distance), addiction management, coping with stress, and gender violence, among others. He was also invited numerous times to the radio program *A fuego cruzado* and the television program *Escuela Para Padres* on TV channel 11 of the IPN, addressing various topics in the family field, in all of them being a diffuser of psychological science.

His main contributions to psychology were made in social psychology, developing materials, strategies, research, measurement instruments with psychometric characteristics, and documents that integrate psychosocial research and statistical analysis in each of the spaces in which he worked (Dorantes & Matus, 2007; Dorantes, 2010; Dorantes & Matus, 2011).

He was associate editor of various scientific publications, among which are *Acta Universitaria*, *Regiones*, *Psicología Iberoamericana*, *Dimensión Educativa*, and *Sociología y Política*. He was member of different scientific societies and associations both nationally and internationally: from the American Psychological Association, from the Asociación Mexicana de Psicología Social (Mexican Association of Social Psychology)

(AMEPSO), from the National Geographic Society, from the Center's Psychoanalytic Psychotherapy Society, from the Sociedad Matemática Mexicana (Mexican Mathematical Society), from the Asociación de Profesores e Investigadores (Association of Professors and Researchers) from the IBERO, and from the Academia de Investigación de Posgrado (Graduate Research Academy) of the UVM.

He was awarded the Medalla al Mérito Académico (Medal of Academic Merit) at the UMA in 2003. He also received a recognition of the quality of teaching work at ITESM-CEM in 2003 as well as recognition for his academic performance and transmission of knowledge in the 2004 Generation of Students of the Degree in International Relations of the IBERO. Moreover, he received the Diploma of University Merit at the IBERO in 2009 and the recognition for his contribution in the didactic pedagogical strengthening of the study programs of the IBERO in the development of teaching texts 2009 (Dorantes, 2010). He obtained the Reconocimiento por el desempeño de la enseñanza (Recognition for Teaching Performance) in the Division of Science, Art, and Technology of the IBERO between 2005 and 2016, 22 consecutive times. He was recognized with the Premio al desempeño docente (Teaching Performance Award) in 2005 and 2013 at the IBERO. In October 2015, he received the Medalla al mérito universitario "Ernesto Meneses Morales" (University Merit Medal) from the IBERO.

He directed countless theses at all levels and areas of higher education. He was a speaker at multiple national and international academic events that took him to various parts of the world: Chile, Argentina, Cuba, Uruguay, Panama, Russia, Ukraine, Brazil, Spain, France, Greece, Egypt, and Italy, among others.

He was a trainer of teachers and professionals in psychology and a tireless teacher with almost 40 years of service for the benefit of many generations in Mexico with unmatched quality as a human being. He is intelligent and respectful feminist, with a sense of humour that he shared with

everyone his kind treatment. He is also passionate about epistemology, statistics, and research (Matus, 2019).

Although the training of human resources is evident as a strong contribution, their training obtained from the Jesuit institution notably influenced their philosophical stance, which, together with sociological and mathematical knowledge, nurtured their contribution to the advancement of psychology. The result of this is perceived in the strengthening of the study plans, in which it managed to establish, even in settings where the clinical perspective was the dominant one, a solid integration, promoting scientific research, and the epistemology of psychology.

Célia Cristina Sodré Dória was the daughter of Pedro Dória and Guimar Sodré Dória. She was the eldest of her six sisters, and niece to Antônio de Sampaio Dória (1883–1964). Her interest toward politics began at an early age, especially for matters of social injustice and the needs of the working classes. Growing up in a family environment gave rise to her restlessness, which only increased with time.

She began her studies in Jaboticabal, at the Escola Normal Santo André (Santo André Normal School), of the Catholic confessional order, afterward being enrolled during middle school as a boarding student at the traditional Colégio Des Oiseaux (Des Oiseaux School), in São Paulo, which was directed by the congregation of Nossa Senhora das Cónegas de Santo Agostinho (Our Lady of the Canonesses of Saint Augustine) (Bandeira, 2019). She obtained her qualification for the Public Magisterium of the State of São Paulo in 1935.

In 1937 she obtained her licentiate in pedagogy and philosophy at the Instituto Superior de Pedagogia, Ciências e Letras *Sedes Sapientiae* (Superior Institute of Pedagogy, Science and Language), in São Paulo, an institution which was associated to Colégio Des Oiseaux, where she graduated in 1940. This institution became the Instituto Superior de Filosofia, Ciências e Letras *Sedes Sapientiae* in 1939, and in 1943 later

becoming the Faculdade de Filosofia, Ciências e Letras do Instituto *Sedes Sapientiae* (College of Philosophy, Science, and Literature of the *Sedes Sapientiae* Institute). Also in 1940, the psychological clinic was founded, and in the following year Célia Cristina became professor of psychology for the Pedagogy Course at the aforementioned institution (Baptista, 2001; Schmidt, 1990).

At the same time, she also entered the convent at the congregation of Our Lady of the Canonesses of Saint Augustine, where she swore her vows in 1942, becoming Mother Cristina Sodré Dória. Afterward she completed a postgraduate course in religious studies. Believing that working with religion would allow her to dedicate herself to social matters, she thought the church should not take care of an individual's soul, but of life on earth. She supposed that any church labeling itself Christian would always be revolutionary (Kehl & Vanucci, 1990). In this congregation she contributed toward structural changes, such as the end of the division of classes, a separation which occurred among sisters of rich and poor families, demonstrated by the different vows they took and their distinct garments.

Working as a teacher and invited to coordinate the Pedagogy Course at the *Sedes Sapientiae* Institute, Mother Cristina began to add to the curriculum subjects such as evolutionary psychology, psychology of personality, differential psychology, and psychopathology, aside from clinical activities in the field of psychopedagogy, vocational diagnosis and orientation, and orientation for parents and teachers (Baptista, 2001; Maldos & da Ciampa, 2002). Her contact with the work of Sigmund Freud (1856–1939) and Karl Marx (1818–1883) was seminal in broadening her thoughts, but she also made her own observations of other related works, as well as about the precepts of Catholicism (Kehl & Vanucci, 1990; Bandeira, 2019).

She obtained her doctorate degree in pedagogy at the College of Philosophy, Sciences, and Languages *Sedes Sapientiae*, with the thesis: *Psychodynamics of Personality Adjustment*, published in 1951. So, she became dean of educational psychology (Bandeira, 2019). In her thesis she

addressed the dynamic organization of the individual's totality, understood as personality, and its adjustment throughout the process of adaptation to an environment (Bandeira, 2019).

In 1953 at the same institution she established Brazil's first theoretical and practical Specialization Course in Clinical Psychology (Sass, 1997), for graduate students of philosophy or pedagogy, and students from the College of Medicine who were interested in psychotherapy. The 3-year course was composed of clinical care sessions by students, supervised by professionals who graduated abroad and autodidacts who taught different subjects, based on different perspectives in psychology (Baptista, 2001; Sass, 1997; Dória, 1984).

The institute developed projects in the field of psychoanalysis, psychodynamics, psychodrama, Gestalt therapy, brief psychotherapy, psychosomatics, Reichian therapy, psychomotricity, the Jungian approach, kinesiology, and ludotherapy. The clinic expanded its infrastructure to attend to those who did not have financial means to pay, as well as opening new spaces for discussions to better attend to those with deficiencies (Baptista, 2001). As a teacher and psychologist she also sought to supply new views on education and work, beyond the clinical. Her work at individual demands and the microsphere, as well as the familial, worried Mother Cristina, who wished to contribute to matters of social justice through a psychology which would be in service of social transformation (Dória, 1984).

Toward the end of the 1950s and beginning of the 1960s, she actively contributed with the regulation of the profession of psychologist in Brazil, highlighting that their operation should go beyond clinical exercise (considering how this was not a practice exclusive to medicine), and the political engagement that psychology should have (Dória, 1984). She considered that psychology and politics should walk hand in hand, and that psychologists should also be concerned with social matters (Schmidt, 1990). After the regulation, she participated in the opening of the Psychology Course at the *Sedes Sapientiae* College, in 1964.

During her academic formation, she taught and participated in courses in Brazil and abroad. In

1959 she began an internship at the “Camp” Hospital in France, and at the “River Pringers” Hospital in Switzerland; in 1962 she went to Belgium to study and offered the course “Psychology and Psychopathology for College Students”; she had internships in clinics in the USA and went to Sorbonne, Paris, where she specialized in psychoanalysis (Bandeira, 2019; Schmidt, 1990). Her studies resulted in several publications.

Her fight alongside students, in the defense of social movements and human rights are essential milestones in Mother Cristina’s history. She believed that the church should also participate in political movements and academic politics. At the end of the 1950s, together with the Juventude Universitária Católica (JUC) (Catholic University Students Youth) and other groups, she had a greater insertion in debates and political actions, which would result in the formation of the movement called Ação Popular, or AP (Popular Action) (Kehl & Vanucci, 1990).

Landmark events such as the Second Vatican Council, the Council of Puebla, and the presence of the Theology of Liberation in Latin American strengthened the work in view of a more just and egalitarian society and the option of the church by the poor (Dória, 1984).

With Brazil’s corporate-military coup in 1964, Mother Cristina’s struggle and resistance intensified. Even under the threat of imprisonment and death, she positioned herself in defense of human rights and social justice. She sheltered political prisoners, torture victims, and exiles; she organized psychological sessions for militants, survivors, and the relatives of those who were imprisoned or murdered, aside from making spaces available at the *Sedes Sapientiae* Institute for the organization of different Leftist groups, turning the space into a political center (Kehl & Vanucci, 1990; Schmidt, 1990; Sass, 1997).

After the university reform in 1968, the *Sedes Sapientiae* College of Philosophy, Sciences, and Literature was formally integrated into Pontifícia Universidade Católica de São Paulo (PUC-SP) (Pontific Catholic University of São Paulo). In 1977 the *Sedes Sapientiae* Institute occupied a new space, and Mother Cristina became the

director, intending on changing society by building a political space for reflection (Sass, 1997; Sousa, 2015). She believed the activities should be guided “by the fundamental lines which consecrate man as the foundation, the reality of Brazilian society as a field for work, and the defense of human rights as a method of liberation towards an end” (Dória, 1984, p. 41). There, courses were developed in the fields of psychology, philosophy, and pedagogy, such as a Course in Psychoanalysis, a popular education sector working with people from low-income neighborhoods; projects in partnership with Movimento Sem Terra, MST (Landless Workers’ Movement), and PróÍndio (pro-indigenous), a commission created to defend indigenous people’s rights; and the Comissão Pastoral da Terra (Pastoral Land Commission) (Sass, 1997). These projects’ importance was recognized by several Latin American institutions, and accomplished with the help of Brazilian popular movements and syndicates.

In 1975, in a partnership with Therezinha Zerbini (1928–2015), Mother Cristina founded the Movimento Feminino pela Anistia (MFPA – Popular Women’s Movement for Amnesty), followed by the creation of the Comitê Brasileiro pela Anistia (Brazilian Amnesty Committee) in 1978 (Greenhalgh, 1997–1998).

As well as being directly involved, she also welcomed the professionals who worked on producing research for “Brazil, Never More,” an important document in the denunciation of human rights violations which occurred during the military-corporate dictatorship. In 1984, she actively participated in the fight for democratization in the country. In 1996 the lower house of representatives of São Paulo created the “Mother Cristina Award for Civil Rights.”

Mother Cristina’s contribution toward psychology as a science and profession and her political engagement in social struggles and the working classes was significant, as well as her developments in the formation and performance of the professional in psychology. Her fight for a just society and her revolutionary perspective are meaningful in the field of Brazilian psychology.

Iracy Doyle Ferreira was a Brazilian psychoanalyst and graduated in medicine from the University of Brazil (UB) in 1935. In the 1940s, she worked at the Child Psychiatry Service of Leo Kanner (1894–1981), and she interned at the service created by Adolph Meyer (1866–1950) at Chestnut Lodge Sanitarium, having received the fellow title in psychiatry (Piccinini, 2010). She completed her postgraduate studies in child psychiatry at Johns Hopkins University in the USA (Coelho & Ernesto, 2001, p. 146). Back in Brazil, in 1943, she founded the Tijuca Nursing Home in Rio de Janeiro (Freitas, 2011, p. 119). Her concern with child psychiatry appeared in those years since she considered at that time that it was “still

in an experimental phase. Its fruits can't be weighed, for the time being, in the balance of statistics, with due rigor" (Doyle, 1946a). Three years later, she returned to the USA and did her psychoanalytic training at the William Alanson White Institute in New York (WAWI) (Rudge, 2011). The didactic analysis was made "with Meyer Maskin, where she was supervised by Clara Thompson" (1893–1958) (Piccinini, 2010). Her practice and theorizing transition, from organicist psychiatry to unorthodox psychoanalysis, was reflected in her publications. Organicist psychiatry appeared in her initial writings in the first half of the 1940s (Piccinini, 2010). After Clara Thompson's supervision, there was a change in her theoretical direction and her intellectual development. She incorporated psychoanalysis and stated: "Psychoanalytic studies allow us to understand, with clarity, the mode of action of emotional conflicts, in different cases of asthma" (Doyle, 1946b). Still in this period, she said: "There is no doubt that the dynamic mentality dominates all the current work of American psychiatry. Certainly, Freud would have reasons to be proud, and could feel rewarded by a long life of work and studies" (Doyle, 1947). In 1949, with her return to Brazil, she became a psychiatry professor at UB. When she made her registration for an exam in a contest at the National Faculty of Medicine (FNM) at UB, she presented a doctoral thesis about female homosexuality. In Brazil, she was the "only intellectual of the first half of the 20th century to study the theme - the origin and cure for female homosexuality" (Silva, 2016).

In December 1952, she founded the Institute of Psychological Medicine (IMP), which was not affiliated with the International Association of Psychoanalysis (IPA), unlike the other psychoanalytic associations that existed in Brazil. The IMP was characterized by the contestation "of a "orthodox" and the "rigidity" of psychiatrist's group of who, in Rio de Janeiro, attempt to an analytical training" (Coimbra, 1995, p. 107). From a theoretical point of view, Iracy Doyle was "dissatisfied with the treatments offered by classical psychiatry, with an organic basis, [and] intended, with the foundation of her clinic, to offer a new type of treatment in the area of mental health" (Freitas,

2011, p. 119). For this, she used dynamic psychiatry and psychoanalysis. The foundation of IMP was made "in the name of pluralism, with an emphasis on sociocultural determination on the psyche and with an enthusiasm for Psychoanalysis as an important practice to alleviate human suffering" (Rudge, 2011, p. 428–429). In its inaugural conference in 1953, she considered the existence of three types of analysts: conservatives, Freudians, or orthodox ones; the moderates; and the liberal ones. She recognized herself as a liberal psychoanalyst, incorporating contributions from Wilhelm Reich (1897–1957), Karen Horney (1885–1952), and Harry Stack Sullivan (1892–1949). She considered the last one "who, after Freud, most contributed to the development of psychoanalysis" (Piccinini, 2010). In her liberal psychoanalysis, she had previously incorporated Erich Fromm (1900–1980) in the discussion of the flexible character of normality, alongside the statements of Freudian psychoanalysis (Doyle, 1950a, 1950b).

She died at the age of 45 without seeing the first IMP class formation, which included Hélio Pellegrino, among others (Rudge, 2011, p. 428–429). With her death, the IMP became a "diaspora: to finish the training, some of them traveled to the United States, other ones joined the two "official" recognized [psychoanalysis] Societies or in its process of recognition by IPA" (Coimbra, 1995, p. 108). The IMP worked until 1984, when its name was changed to the Psychoanalysis Society's Iracy Doyle (SPID), in honor of its founder. During her life, she wrote four books, one of them prefaced by Emilio Mira y Lopez, and approximately 36 articles (Silva, 2016).

Argentina · Childhood and adolescent psychology · Psychology Program · Psychology Professional Association

She obtained the National Teacher's Diploma and studied Literature. Interested in psychology, she enrolled in the Instituto de Psicotecnia y Orientación Profesional (Institute of Psychotechnique and Professional Guidance), founded in 1948 in the city of Tucumán, and directed by Benjamin Aybar (1896–1970), within the framework of work sciences. She obtained a degree in psychotechnique and professional orientation. Later on, she carried out an instruction at the Hospicio de Las Mercedes (Hospice of Las Mercedes), linking herself to Enrique Pichon Rivière (1907–1977). Then she studied with Telma Reca (1904–1979) in Buenos Aires. She studied psychoanalysis in Mendoza, where she traveled regularly to take her analysis, but she had no practice as a psychoanalyst.

Her interest in psychology emerged from her literature teaching work at Santa Rosa School, since 1945. In 1956, she started working as a Professor in the Licenciatura en Psicotecnia y Orientación profesional (Degree in Psychotechnique and Professional Guidance) (Universidad Nacional de Tucumán, 1956–1987). Then, in the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities), she obtained the position of Assistant Professor of child psychology, in 1958. When the undergraduate program in psychology was organized in 1959, she began teaching in evolutionary psychology in 1965. Later, she taught the course of professional guidance and obtained a position as Associate Professor of general psychology, and

she became Director of the Department of Psychology. In her own family home, she created the Psychological Guidance and Counselling Centre for the clinical care of children's and adult's consultations at the beginning of the 1960s. As she became an Associate Professor, she did not carry on with this institution because she fully dedicated herself to university teaching. In 1969, she organized the Colegio de Psicólogos de Tucumán (Professional Association of Psychologists of Tucumán), a landmark for the consolidation of the psychology profession.

The 1976 coup d'état in Argentina interrupted a steady growth of the Psychology Program closing the admissions of new students, expelling professors for political reasons, and persecuting of advanced students, leading to the disappearance of several of them. Olga Doz carried out arduous negotiations for the reopening of the program with the University's Rector, Dr. Carlos Raúl Landa (1919–1993). The administrative request was registered under her last name, a fact that evidences her personal commitment to the cause. Having demanded the removal of psychoanalysis from the curriculum, the new name dynamic psychology was – in the words of Olga Doz – “a successful ploy” (Vallejo, 1995). The reopening for the admission of new students established a quota for 20 students. From 1981, the new curriculum for the undergraduate Psychology Program was implemented. The actions to promote the post-graduate program were fostered by the enactment of Provincial Law 5467 on the legal practice of psychology. In 1983, the Institute for Research in Psychology was created. It was based on previous experience which was called Program 75 that Olga Doz had conducted since 1979 (Consejo de Investigaciones de la Universidad Nacional de Tucumán, 1979). It included a complementary research project under the name of *The Prestige of University Professions*. It fostered several publications about different programs, such as engineering and music (Consejo de Investigaciones de la Universidad Nacional de Tucumán, 1979). Another research project directed by Olga Doz since 1987 was *Las Canciones de Cuna: Significación y Trascendencia (Lullabies: Significance and Transcendence)* which succeeded in the publication *Sobre Canciones de Cuna (About*

lullabies) (Doz de Plaza, 1993). In 1984, the Psychology Program had an increase of 400 students (de Babot, 2006). Olga Doz began her work to transform the Department of Psychology into the Escuela Superior de Psicología (Higher School of Psychology), which was opened in 1988 under her direction. This new step meant a strengthening of the psychologist's professional identity, the autonomy of their competences, and higher hierarchy for the program. It was a process of transition from academicism to a consolidation of the professional profile of the undergraduate program (Doz de Plaza, 1995). The next institutional step promoted by Olga Doz was the organization of the Faculty of Psychology. In the Argentine university system, the faculties represent the highest level of university autonomy. She was interim Dean between 1995 and 1996. In this year, the elections of the definitive authorities took place. She was a candidate and lost, beginning her definitive distancing from the Faculty.

Olga Doz's contribution to psychology in Tucumán lies mainly in her career as a founder and director of the Psychology Program at the university, and as the organizer of the Colegio de Psicólogos de Tucumán (Professional Association of Psychologists of Tucumán), both of them were contributions which brought development and consolidation to the profession of psychologist.

neurobiology

He developed his initial training in Psychology at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), from which he graduated in 1962. Subsequently, he completed his Master’s degree in Psychophysiology at the University of Northern Illinois in the USA, where he graduated in 1964. He continued his Ph.D. studies in Physiology at the Saskatchewan School of Medicine, in Canada, degree he would obtain in 1971. He served as a research assistant in the Department of Physiology Research of the latter.

He returned to Mexico to work as an associate researcher at the Instituto Miles de Terapéutica Experimental (Miles Institute of Experimental Therapeutics) and as a professor at the Facultad de Psicología (Faculty of Psychology) (UNAM). From 1972 to 1973, he stepped into the role of Head of the Psychology Department at UNAM. In 1973 he obtained a scholarship from the Foundation’s Fund for Research in Psychiatry to make an internship as a visiting professor in the Psychobiology Department at the University of Irvine, California, but he declines because he was invited to become part of the Departamento de Biología Experimental (Experimental Biology Department) at the Instituto de Biología (Institute of Biology) at UNAM. In 1974 he was appointed as Head of Department, which in 1979 opened the Centro de Investigación de Fisiología Celular (Research Center of Cellular Physiology) and the Instituto de Fisiología (Institute of Physiology) wherein he was part of the administrative staff (1979–1981) and of the teaching staff as a researcher category “C” until 2005, in which he would be appointed as “Emeritus Researcher.” Later, he serves as the head of Neurosciences Department (1985–1990). He promoted the creation of the Clínica de Trastornos de Sueño (Sleep Disorders Clinic) located in the Hospital General de México (General Hospital of Mexico) and the study of the “Positron Emission Tomograph” (PET) currently located in the research building of the Facultad de Medicina (Faculty of Medicine) in Ciudad Universitaria (University City). Additionally, he conceived and implemented the IMPULSA Program “Multidisciplinary Research: University Program for Leadership and Academic Improvement” (Roblero, 2007).

Drucker-Colín became the first to study the neuroactive peptides involved in the regulation of sleep, proposing the participation of molecules of a polypeptide nature in the regulation of a superior nervous function in the different stages of the sleep-wake cycle. In 1980 he developed the technique of recording unitary activity simultaneous to intracerebral perfusion in animals in free movement in the Department of Anatomy of the Brain Research Institute of the University of California and which he would subsequently implement in Mexico.

Along the same lines, he proposed the excitostatic theory to explain the mechanism of initiation and termination of REM (Rapid Eye Movements) sleep and its function. He proposes that REM sleep occurs when brain excitability increases to reach a “critical” range, which maintains neuronal excitability at an optimal level; depriving it would be the cause of an increase in said excitability to the degree of facilitating discharges known as paroxysmal and even convulsions. When they are above the range, the subject wakes up, and when below, the subject presents the so-called slow wave sleep; in turn the modulation of excitability in the ponto-mesencephalic reticular formation, through direct micro-stimulation or sensory stimuli, is able to modulate the duration and frequency of REM sleep episodes (Roblero, 2007).

In Mexico he began his studies related to the functionality of fetal nerve tissue transplants, thanks to the support of the Ricardo Zevada Foundation. In 1982 he became a pioneer in the experimentation for the evaluation of such transplants to discover if they would promote the recovery of functions lost due to lesions in the adult brain. A couple of years after this work, it is published, and the relationship between the biological clock and the brain state is known, recognizing that it is possible to reconstruct it through this same process (Roblero, 2007). He was also the first to observe that stimulation with magnetic fields induces the neurogenization of chromaffin cells maintained in culture, which had a high functional capacity when transplanted to animals with experimental lesions.

In the early 1990s, he was one of the first to apply the immunohistochemistry of the c-fos proto-oncogene protein as a tool to study brain

activity during sleep, whose purpose was to identify and map the regions of the brain involved in specific physiological regulations, c-fos being an immediate early gene that is expressed in neurons in response to various stimuli (Perrin Terrin, and others, 2016). With these studies Dr. René Drucker Colín positions Mexico for the first time in the field of research on sleep neurobiology worldwide. In the late 1990s, he took the position of Comisionado (Commissioner) of the Facultad de Medicina (Faculty of Medicine) to serve as Jefe del Departamento de Fisiología (Head of the Department of Physiology) (1991–2000). In 1992 he was Coordinador de Investigación y del Posgrado de Ciencias Biomédicas (Coordinator of Research and Graduate Biomedical Sciences) at the Faculty of Medicine. In 2000 he was appointed Coordinator of Scientific Research at UNAM.

Throughout the years Drucker-Colín was recognized as a Miembro Emérito e Investigador Nacional de Excelencia (Member Emeritus and National Researcher of Excellence) of the Sistema Nacional de Investigadores (National System of Researchers), was president of the Academia Mexicana de Ciencias (Mexican Academy of Sciences), and advisor of Science, Technology, and Higher Education in Mexico City. He obtained numerous awards, of which the following can be highlighted: Premio Nacional de Ciencias y Artes (National Award for Sciences and Arts), the Premio Universidad Nacional (National University Award) in the area of research in natural sciences, the Premio Fundación Mexicana para la Salud (Mexican Foundation for Health Award), the Premio Miguel Otero al Mérito en Investigación Científica (Miguel Otero Award for Merit in Scientific Research), and the Premio a la Excelencia Médica (Award for Medical Excellence), both from the Secretaría de Salud (Ministry of Health). He received the insignia of the order of Andrés Bello “First Class,” awarded by the Gobierno de la República de Venezuela (Government of the Republic of Venezuela). Special recognition for his scientific career from the International Behavioral Neuroscience Society, the award from the Academia Nacional de Medicina Doctor Ruiz Castañeda (National Academy of Medicine Doctor Ruiz Castañeda), and even the José Pages Llergo National Journalism Award.

The Universidad Autónoma Metropolitana (Autonomous Metropolitan University) (UAM) recognized him with the *Honoris Causa* Doctorate in 2004, and the Meritorious Autonomous University of Puebla (Benemérita Universidad Autónoma de Puebla) recognized him as Emeritus Researcher in 2006 (Roblero, 2007).

Among the recently published works is *Ciencia y Sátira* (Science and Satire) (2005), which is a compilation of different journalistic articles from two decades of constant struggle defending Mexican scientific research under the thesis that reducing budgets for science, technology, and higher education is to cancel the future of the country as a whole. There is also *México País: Éxito o Fracaso* (Mexico Country: Success or Failure) (2011) where it is reported that the country faces a reality that prevents it from achieving development and democracy. In 2013, in his quest to bring science to society, he moved the Interactive Mobile Museum to diverse neighborhoods in the city, showing scientific experiences through daily life. A year later in 2014, he worked with studies on transcranial magnetic stimulation as a form of therapy for neurodegenerative diseases and prompts the Movement and Sleep Disorders Unit (Rivera, 2017). Finally, three books of the *Pequeñas Dosis de Ciencia* (Small Doses of Science) (2014) are published, which were originally brief radio capsules produced since 2002 by the Coordinación de la Investigación Científica (Coordination of Scientific Research) at UNAM.

Argentina · Cognitive psychology · Cognitive science · Philosophy of mind · Faculty of Psychology · Cognitive Studies Program · Universidad de Buenos Aires

Aníbal Duarte obtained his degree in Psychology [licenciatura en Psicología] at the Departamento de Psicología de la Facultad de Filosofía y Letras, Universidad de Buenos Aires (Psychology Department. Faculty of Philosophy and Humanities, University of Buenos Aires) in 1958, and a

Master of Arts degree at the Graduate School of Arts and Sciences, New York University in 1972. He was married to Adela Leibovich, herself also a well-known psychologist, and they had a daughter, Laura Duarte.

Anibal Duarte was part of the generation that left the university after the repressive incident at the University of Buenos Aires promoted the military government, known as the “Noche de los Bastones Largos” (the “*Night of the Long Sticks*”) in 1966 (Facultad de Psicología, 2012). He went on to study experimental psychology under the supervision of Dr. Murray Glanzer (1922–) at the Graduate School of Arts and Sciences, New York University, USA. Upon his return to Argentina in 1973, he participated in the movement to found the Facultad de Psicología (Faculty of Psychology) at the University of Buenos Aires, writing the rationale for why psychology was a science and deserved its own institutional framework (Facultad de Psicología, 2012). After the Facultad de Psicología (Faculty of Psychology) was created, in 1985, he was one of the first tenured professors and the first Director de Investigaciones (Research Director) (Facultad de Psicología, 2012). He remained a tenured professor at the Faculty of Psychology for many years and was recognized as an Emeritus professor in 2009, shortly before his death. He also taught at the graduate level at the Facultad de Psicología (Faculty of Psychology) and at the Facultad de Filosofía y Letras (Faculty of Philosophy and Literature) de la Universidad de Buenos Aires (University of Buenos Aires) and was a member of research evaluation committees at the University and the Consejo Nacional de Investigaciones Científicas y Técnicas (National Council of Scientific and Technical Research). He was the inspiration and founder of the current Maestría en Psicología Cognitiva de la Universidad de Buenos Aires (Master’s Degree in Cognitive Psychology, University of Buenos Aires).

As for his main theoretical legacy, he introduced to Argentina’s psychological community the view of the mind as an information processing device, cognitive psychology, and its philosophical and methodological consequences (Fischer Luna, 2018). He presented cognitive psychology

as the third big meta-theoretical change in the academic, for example, experimental, study of the mind, after structuralism and behaviorism (Duarte, 1996). Under this view, the mind could be studied as a complex set of structures and processes that perform computations upon representations (Duarte, 1985, 1994, 1996). He defended psychology as an empirical science and directed studies on language comprehension, emotion comprehension, and memory processing. In the philosophical domain, he adopted methodological dualism against (brain) reductionism: The mind emerges from the brain, but consists of a level of explanation on its own. As the computer analogy states this position: The relationship between the mind and the brain is similar to the relationship between software and hardware (Duarte, 1994, 1996).

Professor Duarte had a recognized career in the field of research in basic processes, as principal investigator or director in numerous research projects doctoral theses and scholarships, and the author of papers and book chapters on the subjects of cognitive psychology and philosophy of mind. He linked his cátedra de Psicología General (General Psychology Chair) to the Programa de Estudios Cognitivos (Cognitive Studies Program), a research program where teaching and research assistants gathered to discuss books, papers, and develop research skills. Mainstream Argentine Psychology, both in professional and university settings, was dominated by psychoanalysis and other perspectives that had low regard, and ignored, the type of evidence-based knowledge that international academic psychology adopted since the last part of the twentieth century; in such a context, the Programa de Estudios Cognitivos was an oasis (Burin, 2010). Professor Duarte created and maintained a space for regular meetings and suggested readings, topics, scholarships to apply for. Duarte was a *mentor*, in the full sense of the word, to subsequent generations of researchers in basic processes with an interest in cognitive experimental psychology and philosophy of mind. Successive generations of psychological researchers in Argentina and abroad (in USA, France, or Spain)

owe their career to his initial support, encouragement, and guidance (Burin, 2010).

As a less-known facet, he was also a great connoisseur of literature, and a fiction writer, publishing a short stories book, *Juego de manos y otros relatos* (Hand games and other stories).

Dulcey-Ruiz, Elisa

Born in Bogotá (Colombia), September 1, 1944

Lina Paola Lara Negrette
Universidad Nacional de Colombia &
Universidad de los Andes, Bogotá, Colombia

Keywords

Colombia · Aging · Lifespan · Developmental psychology · Social psychology

As if by virtue of a serendipity, Elisa began her professional career as a psychologist after becoming enrolled as a teacher in the education program at the Universidad de Pamplona [University of Pamplona], Colombia. Her first job assignment was to prepare a conference concerning the “psychological characteristics of adults and older adults.” Its purpose was to share knowledge with high school graduate soldiers who were preparing themselves to teach literacy to this population group all around the region of Pamplona.

During her time studying psychology at the Pontificia Universidad Javeriana [Pontifical Javeriana University] in Bogotá (1963–1967), she took developmental psychology as well as adolescent psychology. However, at the time, adulthood and old age were barely addressed in classes and texts regarding human development.

For that reason, she secluded herself in the library of University of Pamplona for a few days, where she consulted three books that initiated her on the subject: *Literacy in Adults* (UNESCO, 1963); *The Psychology of Ages: From Birth to Death* (Katz et al., 1964), where, for the first time, she found a short chapter, written

by psychologist David Katz, on the psychology of old age. Simone de Beauvoir authored the third book, which Elisa remembers related to adult life, maybe *The Prime Life* (1966). After compiling her notes and reflections, Elisa fulfilled her commitment to share her knowledge on the psychology of adulthood and old age with an entire division of high school graduate soldiers. This is how the topic of old age, and teaching activity, became in a kind of “primacy effect,” which has marked Elisa’s intellectual and professional activity ever since.

Elisa was born in 1944 in Bogotá, where she attended the Colegio de La Enseñanza [La Enseñanza School] for a large portion of her school years (primary and secondary). At La Enseñanza, as at home, Elisa found reading books and writing daily interesting and enjoyable practices. During the presentation of one of her books, *Aging and Old Age. Conceptual Categories (Envejecimiento y vejez. Categorías conceptuales, 2013)*, one of her schoolmates declared that she would not be surprised at all if, someday, Elisa wrote an entire encyclopedia: She was always writing and reading, so it would happen sooner or later. This disciplined and permanent dynamism is perhaps one of her most characteristic traits.

Like she always says when introducing herself, “Elisa Dulcey-Ruiz is a lifelong psychology student,” despite having obtained her degree as a psychologist in 1968. Later on, she got a master’s degree in education (in university teaching and research) at the Universidad Santo Tomás [Saint Thomas University] in Bogotá. She has dedicated more than 50 years to her prolific professional career, focusing on the study of aging and old age, and having achieved national and regional acknowledgment. She has received various awards and distinctions including the *Third Age Award by Advances in Behavioral and Social Sciences – XIV International Congress of Gerontology – Mexico* (1990); *Distinguished Member of the Latin American Committee in the International Association of Gerontology* (1996); the *Colombian Psychology Award – Life and Work* by the Sociedad Colombiana de Psicología [Colombian Society of Psychology] (2004); the

Recognition of Contribution in the Area of Research in Psychology, awarded by the Department of Psychology of the Universidad Nacional de Colombia [National University of Colombia] (2007); and *Honorary Community Member of the Pontifical Javeriana University* (2013), among others.

Elisa completed her basic and professional studies in a predominantly conservative and traditional environment, amid the second half of the twentieth century in Bogotá. However, she ended up pursuing her psychology career during the challenging 1960s, characterized by a significant sociocultural transformation, especially for women. As she would recall later, in the course of those years, the President of the American Psychological Association at the time (1969), George Miller, gave a speech titled “Psychology as a means of promoting human welfare,” which has since inspired her ethical and social commitment.

Elisa’s work experience began as a university teacher and researcher at the University of Pamplona (1968–1971), then continued in Bogotá, at the Universidad Católica de Colombia [Catholic University of Colombia], the Universidad Nacional de Colombia [National University of Colombia], Universidad de los Andes [Los Andes University], Universidad de la Sabana [La Sabana University], and, for a quarter of a century, at the Pontifical Javeriana University. During the 1980’s, she was assigned as visiting professor at the Universidad Francisco Gavidia [Francisco Gavidia University] in San Salvador, as well as at the Universidad Central de Venezuela [Central University of Venezuela], in Caracas. Later, she was also invited to the Universidad Católica de Uruguay [Catholic University of Uruguay], and to the Master’s and Doctoral Program in Gerontology at the Universidade Estadual de Campinas [State University of Campinas], Brazil. Her main fields of interest in education and research have been the developmental psychology of adulthood and old age, as well as social psychology.

Her investigations and publications have focused on the study of attitudes, perceptions, and beliefs concerning old age, as well as on the

transitioning periods and turning points during adulthood and old age. Her extensive publication record in academic journals, official documents, and magazines reflect her interest to reach relevant audiences to move forward her ideas in society about adulthood and old age.

Elisa has organized, participated in, and maintained contact with different study groups involving professionals of psychology and other disciplines: In those, she has emphasized the inevitably interdisciplinary nature of the study of aging regarded as a lifelong process, with the condition of old age as its final stage. She has contributed to the founding of spaces of discussion such as the Center for Gerontological Psychology – (Centro de Psicología Gerontológica, CEPsIGER) – in 1976; the Interdisciplinary Gerontology Association (Asociación Interdisciplinaria de Gerontología) in 1994; and the Work group on Aging, Old Age, and the Course of Life (Mesa de Trabajo sobre Envejecimiento, vejez y transcurso de la vida), in 2010.

She participates as a correspondent for Colombia in the Latin American Gerontology Network (Red Latinoamericana de Gerontología - RLG): a virtual network created in Uruguay (1999) and currently coordinated from Chile, which focuses on updating gerontological and social knowledge, along with improving the quality of life and recognizing the human rights of the elderly in various countries of Latin America and the Caribbean.

In addition to her academic and professional interests, she has recognized social communication as an opportunity to reach broader audiences (Cepsiger, 1985; Dulcey-Ruiz et al., 2002/2004; Dulcey-Ruiz et al., 2004). While being a professor of social psychology and the psychology of communication at Pontifical Javeriana University's Faculty of Communication in the 1980s, she decided to simultaneously course professional studies on social communication and journalism. Although she could not finish them on account of her various academic activities, her interests in the field were broadened. Her earlier appeal and enjoyment of photography also increased while at the Faculty of Communication, where she took

some courses on the subject. Incidentally, in 1982 – which is a year internationally dedicated to old age – Elisa obtained a recognition from UNESCO for two photographs of her authorship: one evoking the female aging process and the other one portraying intergenerational relationships (UNESCO, 1982).

Elisa's work draws attention to the construction of a contextualized and interdisciplinary perspective on aging and old age, considering the whole of life's course, the heterogeneity of aging, and the even greater diversity in old age. In Elisa's words, "aging is the only way to live, and, unless we die before, we will all reach old age" (Dulcey-Ruiz et al., 2018).

Her work contributes with a fundamental comprehension and a critical stance on what is to be considered "an older person"; it challenges the negative imagery that we have condoned in an absolutely passive way and at a very high loss for humanity (Dulcey-Ruiz, 1987; Parales & Dulcey-Ruiz, 2002). This is why Elisa Dulcey has also questioned certain premises of social psychology, stressing its sociological nature rather than an individual one, as well as its relation with developmental aging psychology. Therefore, she brings to light the quest for understanding life and the different ways to live it, bearing in mind the relationship between biography, context, and history (Dulcey-Ruiz, 2010). This comprises a large portion of the legacy that she passes on to present and future generations in Colombia and in Latin America: the need to contribute, individually and collectively, to the construction of inclusive societies for people of all ages and conditions.

Physiological psychology

A student of the *Ecole Normale Supérieure* (Normal Higher School) of Paris, Georges Dumas obtained the title of *agrégé* (associate) professor of philosophy (1889), which authorized him to teach the subject. In 1895, he became a doctor of medicine at the School of Medicine of the *Université de Paris* (University of Paris), presenting a thesis on the intellectual states in melancholia. Finally, in 1900 he did a degree in Languages, also at the *Université de Paris* (University of Paris). As usual for this course, he presented a main thesis in French on sadness and joy, and a complementary thesis, in Latin, which was also published in French. This degree course was advised by Théodule Ribot (1839–1916), to whom Dumas dedicated all his works.

His interest and dedication to psychology granted to Dumas in 1897 the position of head of the Psychology Laboratory at the *Clinique des maladies mentales* (Mental Disorders Clinic) of the *Faculté de Médecine de Paris* (Medicine College of Paris). In 1902 he replaced Pierre Janet (1859–1947) at the Sorbonne, where he became full professor of experimental psychology in 1912. In 1904 he founded with Pierre Janet the *Journal de psychologie normale et pathologique* (1903–1986) (Journal of normal and pathological psychology), as the official organ of the *Société française de psychologie* (French society of psychology), also created by them both in 1901. Dumas was a member of the *Académie de*

Médecine de France (Medicine Academy of France) and the *Académie des Sciences Morales et Politiques* (Moral Sciences and Policies Academy), and president of scientific societies such as the *Société médicale-psychologique de France* (Medical-psychological Society of France) in 1933 (Carroy et al., 2006).

According to Reuchlin (1999), the most original part of Dumas' work lies in his studies devoted to emotions, assisted by resources from psychophysiology. He relied on research on the sympathetic nerve centers and endocrine glands compared to psychological and psychopathological manifestations. His work was based on the postulate of fundamental identity between normal and pathological mechanisms, which became a model of doing psychology in France, known as pathological psychology (Dumas, 1915). The First World War (1914–1918) allowed him to apply the method to other psychopathological conditions, which resulted in publications on mental disorders and nervous disorders caused by emotional traumas. A summary of this work can be found in the book *Mental Disorders and Neural Disorders of the War* (Dumas, 1919). For his work with combatants Georges Dumas was awarded the title of *Chevalier de la Légion d'Honneur* in 1917.

Because of his academic and institutional positions, Dumas used to host Latin American students interested in studying psychology. Thus, he got to know the pioneers of psychology from several Latin American countries. He was on mission in Brazil, Peru, Argentina, Venezuela, Chile, and Colombia. Some of the Brazilians he met, such as Ulisses Pernambucano de Melo Sobrinho, Juliano Moreira, and Mauricio Campos de Medeiros were inspired by his experiences in France, to create experimental psychology laboratories in Brazil. Invited by Mauricio Campos de Medeiros, a Brazilian physician, Georges Dumas lectured at the *Sociedade Brasileira de Neurologia, Psiquiatria e Medicina Legal* (*Brazilian Society of Neurology, Psychiatry and Forensic Medicine*), in 1908. This trip of Dumas to Brazil is considered an important milestone in the career of the French psychologist and psychiatrist, since that was when he became the main

reference in the academic and intellectual exchange between France and the Latin America in the first half of the twentieth century, acting as a cultural ambassador.

Among his missions in Latin America, Georges Dumas' relations with Brazil have been the most studied (Bandeira de Melo & Campos, 2014; Bandeira de Melo, 2016; Consolim, 2014; Consolim, 2017). In all, he is believed to have been to Brazil 18 times, being considered by the French diplomatic circles as a core player in the expansion of the French intellectual influence in Brazil since the 1920s (Suppo, 1999). Dumas became an important reference for Brazilians, assisting the reforms of secondary and higher education. As France competed for scientific hegemony with other European countries in the interwar period, the travels of the French psychiatrist and psychologist were supported by institutions created to strengthen the relations of academic and scientific cooperation and exchange, such as the *Institut Franco-Brésilien de Haute Culture* (French-Brazil Institute of Advanced Culture), the *Groupement des Universités et des Grandes Écoles de France pour les relations avec l'Amérique latine* (Group of Universities of the Great Schools of France for the relationships with Latin America), and the *Service des Œuvres françaises à l'étranger* (Services of French Production to Overseas) (SOFE). Georges Dumas was at the head of the selection of French professors who came to Brazil to deliver lectures in several fields of knowledge, and to make up the French missions demanded by the first universities established in Brazil, such as the University of Rio de Janeiro, University of São Paulo, and University of Rio Grande do Sul.

In 1937, the French psychiatrist was granted the title of *Doctor Honoris Causa* from the University of the Federal District and the University of Rio de Janeiro, and was honored with the title of honorary citizen of Rio de Janeiro. On these occasions, Georges Dumas was described as a great friend of Brazil and, despite his contributions in the area of physiological psychology and pathological psychology, Dumas' relevance is

mainly attributed to his role in organizing numerous scientific missions between France and Brazil in several areas of knowledge. Above all, he was acknowledged for attracting French professors to the Brazilian educational institutions, and persuading leaders of the importance of investing in the creation of those institutions.

According to Falcone (2012), Georges Dumas was an honorary professor at the Faculty of Philosophy and Humanities of the University of Buenos Aires in Argentina. He visited Argentina several times, including the opportunities when he lectured at the Faculty in 1908, 1920, 1921, and 1925 (Falcone, 2012; La Nación, 1925) and his physiological psychology was widely circulated in the country as well as his work. The French author also was acknowledged by the academia, including for his contribution to the founding of the University of Paris Institute in Buenos Aires. Dumas was also an honorary member of the Society of Psychology of Buenos Aires (Klappenbach, 2002). In 1928 he was in Venezuela to the Ministry of Foreign Affairs of Venezuela to minister lectures at the university and to participate in the Foundation of the Franco-Venezuelan Institute of High Culture. The academic relations established by Dumas went beyond the scientific sphere and became part of France's diplomatic effort aimed at expanding its cultural, scientific, diplomatic, and economic influence in Latin America. On the other hand, these missions gave visibility to Latin America in France, contributing to disseminate the image of Latin America on the international scene. As a consequence of these exchanges, one could mention the creation of the *Institut des hautes études de l'Amérique latine* (Institute of advanced studies on Latin America) (IHEAL) in Paris in 1954.

Echegaray Morales, Ilsa

Born *on July 27, 1944 in Lares, Puerto Rico (PR)*

Died *on November 21, 2006 in Trujillo Alto, Puerto Rico (PR)*

Luis Raúl Sánchez-Peraza
University of Puerto Rico in Ponce, Ponce, Puerto Rico

Keywords

Physiological Psychology · Dance · Ethics

Ilsa Echegaray Morales was the first child of Luis Francisco Echegaray, a school teacher, and Ilsa Morales, a social worker. She had a brother, Luis, a year younger. Her father died when she was around 4 years, leaving her mother with two young children to take care of. Her father's burial was a memory event that impacted her forever, indirectly evident in her academic work. Since Ilsa's mother needed to work in order to provide for her children, the family became separated. Her mother moved to Río Piedras, Puerto Rico, to be near her work, and Ilsa moved to Sabana Grande to live with her maternal grandmother, a strong, educated, and nonconventional woman who encouraged Ilsa's love for reading, dancing, and the exploration of nature, particularly human nature. Her brother Luis moved with the paternal

grandmother. They reunited as a family again when her mother remarried in 1953 to Ernesto Otero. With this new marriage, her mother gave birth to two additional siblings – Elisa and Ernesto Otero. Ilsa's stepfather, an accountant, was a significant father figure, supporting and encouraging her to pursue both her artistic and academic plans.

Ilsa Echegaray Morales originally went to the public school of Sabana Grande but when she moved with her mother, she enrolled at University of Puerto Rico Elementary School. As she grew up, she attended simultaneously both University High School (UHS), a laboratory school of University of Puerto Rico's Faculty of Education, and ballet classes. At the UHS, she not only was exposed to Puerto Rico's intellectual milieu, her friends included children of intellectual figures of the University of Puerto Rico. Some stayed within her circle of friends throughout all his life. Ballet and dancing became a central metaphor in Ilsa's approach to human nature through her study of Physiological Psychology.

After completing her high school in 1960, Ilsa Echegaray Morales entered the University of Puerto Rico, Río Piedras Campus (UPR-RP) to study Psychology. Among her mentors at the Department of Psychology, Ilsa Echegaray Morales always recognized the academic work and approach to college education of Dr. Juan Nicolás Martínez, Dr. Leonardo Rodríguez, Dr. Carlos Albizu, and Dr. Abigail Díaz de Concepción. Another important professor during Ilsa Echegaray Morales' under graduate years was

Dr. Ursula von Eckardt (1925–1973) whose work on ethics and its relationship to politics were of major significance on Ilsa Echegaray Morales' exploration of human nature, neurosciences, and social responsibility.

Once Ilsa Echegaray Morales completed her BA in Psychology in 1963, she moved to University of California-Berkeley to pursue a Master's Degree in *Experimental and Comparative Psychology*. Mark R. Rosenzweig (1922–2009) and Arnold L. Leiman (born 1932), researchers, professors, and authors of important books and studies on Physiological Psychology, were among her professors and friends at Berkeley. While studying towards her masters, she met Ian Kennedy (born 1941), a British student studying for a Master's Degree in Jurisprudence, and they fell in love. Ilsa and Ian married and decided to move to London to continue doctoral studies.

From 1964 to 1984, Ilsa traveled frequently between San Juan and London, where she enrolled at University College-London to pursue a doctoral degree in Physiological Psychology. She initiated her studies in 1964, but returned to Puerto Rico in 1965 to teach undergraduate courses in Psychology at UPR-RP, especially Physiological and Experimental Psychology, and History of Psychology. She was able to continue her doctoral studies part time thanks to study grants and leaves without pay granted by the University of Puerto Rico where she had a tenured position. She graduated in 1984 with a doctoral degree in Physiological Psychology and a license to operate animals.

While at UPR-RP, Ilsa Echegaray Morales conducted research on Puerto Rican psychologists who had pioneered the evolution of Psychology in Puerto Rico. She accumulated dossiers of biographical data on these pioneers and lectured frequently on the Island about their contributions. Although she was probably one of the best lecturers the profession had at that time and talked about a wide variety of subjects, she did not like to write. Her style of writing was literature oriented and she had been corrected so many times by her London professors to stop her poetic language and write in a more direct, precise, and scientific language that she preferred not to write at all. As a result, much of the data she accumulated through

her almost 42 years of teaching and researching at the UPR-RP was lost after her premature death.

From 1965 on, Ilsa Echegaray became active in Puerto Rico's Psychology Association, where she occupied positions in their Board of Directors, including President (1976–1977) and gave presentations in their Conventions and activities.

At the University College-London, Ilsa Echegaray Morales studied *Physiological Psychology* supervised by Dr. Ian Steele-Russell (1934–2016), her doctoral dissertation mentor. Her work, titled *Cortical and Subcortical Relationships in Learning*, explored the works of *John Hughlings Jackson (1835–1911)* and his proposed hierarchical model of ascending control of functions in nervous system organization. The scope of her work was aimed at assessing the implications of Hughlings Jackson's ideas for a better understanding of the biological basis of human learning processes. After completing her doctoral degree in 1984, Steele-Russell offered Ilsa Echegaray, a position as faculty member of University College-London, and the task of translating the work of Santiago Ramón y Cajal (1852–1934) on neuroanatomy to English. As attractive as this proposal seemed, since she was fascinated with Ramón y Cajal's work, she declined it and decided to return to Puerto Rico and continue her work as a college professor at UPR-RP's Department of Psychology. Her decision was based on her determination to educate others and help pave their ways, if they, her students, decided to explore the fascinating world of human brain organization and functioning, and its implications for the understanding of human nature. Not even her co-students and friends at University College-London, David A. Oakley (born 1943?) and Henry C. Plotkin, (born 1940?) editors of a seminal book exploring the impact of Evolutionary Theory on the understanding of the human brain (*Brain, Behaviour, and Evolution*) were able to convince her. After divorcing Ian Kennedy, she moved back to Puerto Rico and returned to her tenured position as Associate Professor of Psychology at UPR-RP.

From 1984 to 2006, when she died unexpectedly of a heart attack at age 62, she devoted herself entirely to the academia. She supervised theses and dissertations and worked on personnel and

curricula committees. During the mid-1980s, she devoted a lot of her time to the revision of the Psychology Graduate Program, revision that added a doctoral degree and four specialties. From 1993 to 1996, she was Director of the Psychology Department. During the 1990s, she contributed to the organization of the Center Santa Catalina de Sienna for the Puerto Rican Health Department in Coamo, PR, to provide psychological services to families with members with cognitive impairment.

Ilsa Echegaray's research interests included the neural implications of facial asymmetry (both expressive and receptive); right hemisphere participation in the regulation of affective components of language, particularly as a result of *Parietal Neglect Syndrome*; music as a model for nervous system organization and functioning; identification and assessment of alternative ways of regulating biological components of psychological processes for recovery, among others. She advocated for an ethical approach to neuroscientific research. At the time of her death, she was developing the *Behavioral Research Approaches to Interdisciplinary Neurosciences (BRAIN)* Project, an interuniversity and international network to help students gain access to resources to do neuroscientific research. This organization included various universities from Puerto Rico and the Institute of Neurosciences of San Juan, a research center.

All her Physiological Psychology courses started with the reading of Mary Shelley's *Frankenstein or the Modern Prometheus*, and the question of the meaning of life and death (probably related to the experience of her father's burial), and a historical contextualization of Psychology as an academic and scientific discipline. A proficient and histrionic lecturer, she worked on a collection of her lectures, but refused to publish it because she was not fully satisfied with any version. She stated openly that she hated to write, although her written work showed an interdisciplinary integration of psychology, physiological psychology, history, education, and ethics. However, her ideas can be traced through her students' writings and the impact she had upon them. For her students, Ilsa Echegaray Morales was an enthusiastic dancer on the knowledge production stage.

Born *Mexico City, February 27, 1944*

Diana Pérez Pimienta
Autonomous University of Nayarit, Tepic,
Nayarit, Mexico

Keywords

Mexico · Systemic therapy · Positive psychology · Suicidology

She studied a Bachelor of Psychology at the Universidad Nacional Autónoma de México (UNAM) (National Autonomous University of Mexico) (1976–1980) at the then Escuela Nacional de Estudios Profesionales (ENEP) (National School of Professional Studies) Iztacala, today the so-called Facultad de Estudios Superiores (FES) Iztacala (Iztacala Faculty of Higher Studies).

After completing her bachelor studies, she continued with a Master's Degree in Family Therapy at the Universidad de las Américas (UDLA-CDMX) (University of the Americas) (Mexico City Campus) (1987–1989). Later, she continued with her doctoral studies in Psychological Research, at the Universidad Iberoamericana (IBERO) (Iberoamerican University) (Mexico City Campus) (1996–1999), carrying out postdoctoral studies at the Hospital de la Santa Cruz y San Pablo in Barcelona, Spain in 2003.

She also has various trainings and specialties: Specialty in Brief Therapy at the Instituto Mexicano de Terapias Breves (Mexican Institute of Brief Therapies) (1986–1988); Specialty in Ericksonian Hypnosis at the Instituto de Programación Neurolingüística de la Ciudad de Guadalajara, México (Institute of Neurolinguistic Programming of the City of Guadalajara, Mexico) (1988); Intensive Course in Systemic Therapy in Palo Alto, California, the United States of America (1988), which was organized by Dr. Carlos Sluski (Psychiatrist and Family Psychotherapist, born in Buenos Aires, Argentina, in 1933) together with the participation of systemic teachers; and Specialty in Gender Studies, in the Programa Universitario de Estudios de Género (PUEG) (UNAM) (University Program for Gender Studies) currently known as the Centro de Investigaciones y Estudios de Género (CIEG) (Center for Gender Research and Studies) (2005).

Regarding her professional area, she was head of the Psychology Career at the FES-Iztacala (UNAM) in the period from 1995 to 1999 and Coordinator of the research project “Salud y Familia” (“Health and Family”), participating from 2006 to 2010, training therapists to deal with cases of psychological emergencies and suicidal ideation, which is currently as a student

support program, titled “CREAS” (by its acronym in Spanish, named Crisis, Emergencies and Attention to Suicide). She was also the founder of the Service “Guardianes de Emergencia Psicológica” (“Guardians of Psychological Emergency”), which are owned and carried out at UNAM.

She has been a founder and member of numerous associations and programs of psychology in Mexico: Diplomado en Psicología Positiva en la FES-Iztacala (UNAM) (Diploma in Positive Psychology at FES-Iztacala) serving as founder and current academic head (since 2010), said diploma is a degree option for the bachelor's in psychology; founding professor of the Maestría en Terapia Familiar de la Universidad Autónoma de Tlaxcala (UAT) (Master in Family Therapy at the Autonomous University of Tlaxcala) (since 1995); founding member of the Colegio Mexicano de Terapeutas Familiares (Mexican College of Family Therapists), which is an organism in charge of evaluating curricula of Masters in Systemic Therapy; Member of the Asociación Mexicana de Terapia Familiar (AMTF) (Mexican Association of Family Therapy); Member of the Asociación Mexicana de Suicidología (AMS) (Mexican Association of Suicidology); and founding member and first president of the Sociedad Mexicana de Psicología Positiva (SMPP) (Mexican Society of Positive Psychology).

She has been invited to be part of various Technical Councils, among which the following stand out: Technical Council of the Universidad Iberoamericana (IBERO) (Iberoamerican University) (Mexico City Campus) (2007–2011); Academic Council of the School of Psychology of the Universidad Autónoma del Estado de Puebla (Autonomous University of the State of Puebla) (since 2015); and Technical Council of the Universidad de las Américas de Puebla (UDLAP) (Americas University of Puebla) (since 2016).

She is also an active member of the Consejo Nacional para la Enseñanza e Investigación en Psicología (CNEIP) (National Council for Teaching and Research in Psychology) in which she has contributed as an expert to CENEVAL, in the area

of Methodology and Clinical Psychology for the construction of the EGEL-PSI.

Regarding the awards and recognitions granted, in 2002, she was recognized by the Consejo Nacional de Ciencia y Tecnología (CONACYT) (National Council of Science and Technology) (CONACYT) within the Sistema Nacional de Investigadores (SNI) (National System of Researchers) with Level I, being the first person who, working with qualitative methodology and systemic theory, obtained that recognition.

In 2007, she received the Premio Mexicano de Psicología (Mexican Prize for Psychology) in the Teaching category, by the Federación Nacional de Colegios, Sociedades y Asociaciones de Psicólogos de México, A.C. (FENAPSIME) (National Federation of Colleges, Societies and Associations of Psychologists of Mexico), a body created in 1995 by various professional psychology organizations and institutions from different states of Mexico.

For her part, in 2010, the Colegio de Psicólogos del Perú (College of Psychologists of Peru) awarded her a medal and a diploma as an honorary member for her contributions to systemic therapy.

Contiguously in 2011, she received a medal and diploma as a distinguished professor for her contributions to systemic therapy by the Asociación de Terapeutas Familiares de Colombia (Association of Family Therapists of Colombia).

Likewise, she was recognized by the Colegio de Psicólogos del Estado de Jalisco, México (College of Psychologists of the State of Jalisco in Mexico) for her career as a teacher and researcher, an award awarded in 2020.

She is the author of 10 books, especially on topics related to systemic family therapy and suicidal behavior, among which are: “The Systemic Theory: Alternatives to Investigate the Family System” (UNAM-UAT) (2001); “Family Dynamics: A Systemic Psychological Approach (2003); “Family Therapy: Its Use Today” (2007); “The Dance of the Couple: Therapeutic Work with Couples” (2008); “Faced with Suicide: Its Understanding and Treatment” (2011); and “What Can We Do to Avoid Suicide” (2013).

Regarding the publication of scientific articles, she has written 86 articles for national and international indexed journals, on topics related to systemic family psychotherapy, positive psychology, and suicidal behaviors in young people.

She was an academic at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico), for 38 years, teaching classes both in the bachelor’s degree in psychology and in various diplomas and post-graduate programs: Diplomado en Psicología Positiva (Diploma in Positive Psychology), Maestría en Psicología con Residencia en Terapia Familiar Sistémica (Master’s Degree in Psychology with Residency in Systemic Family Therapy), and in the Doctorado en Psicología (Doctorate in Psychology), serving as a supervisor, professor, and tutor in these programs. He retired from teaching in 2018; however, she continues to train Diploma in Positive Psychology.

Eguiluz Romo has participated in the development of the field of psychology in Mexico, especially on issues about Systemic Family Therapy and Suicidal Behavior, in which she has become a great reference, and therefore which has been invited to participate as a professor and speaker in national and international institutions of high recognition: Universidad de Santo Tomás en Bogotá, Colombia (University of Santo Tomás in Bogotá, Colombia), the Universidad de la Sapienza en Roma, en Italia (University of Sapienza in Rome, in Italy), and in the Escuela de Terapia Familiar del Hospital San Pablo de Barcelona, en España (School of Family Therapy of the Hospital San Pablo de Barcelona, in Spain), among others.

She has also had a constant collaboration in the training of therapists, in numerous associations and academic programs over the years, giving conferences and nonprofit advice to public and private institutions, for which her altruistic work is notorious.

Ecuadorian psychiatrist, graduated as a physician (1921) and as M.D. (1923) at the *Universidad Central del Ecuador* (Central University of Ecuador, UCE). Specialized in psychiatry in Chile (1923–1924), with training stays in Argentina (University of Buenos Aires, 1935–1936) (Alarcón, 2010), where he approached the study of criminology. In 1957, he visited psychiatric and neurological clinics in the United States under the Foreign Leaders Program.

He stood out as a student in his university years, obtaining the first prize in a philosophy contest organized by the University Federation of Ecuador on the occasion of the centennial of the Battle of Pichincha (Endara, 1922).

Since 1923, professor of psychiatry and in 1943, dean of the Faculty of Medicine of his alma mater (García-Silva, 1958). Also, in the Faculty of Philosophy and Letters, where he taught clinical psychology and projective techniques since 1930, directing the School of Psychology (1965–1966). He was Vice-Rector of the UCE (1943–1947) and for a time Minister of Social Security and Labor during the government (1948–1952) of President Galo Plaza Lasso (1906–1987). He was also a deputy for the province of Pichincha and President of the *Casa de la Cultura Ecuatoriana* (House of Ecuadorian Culture, 1957–1961).

In the field of politics, he was the private secretary of the Ecuadorian president Isidro Ayora (1879–1978) (Alarcón, 2010; Landázuri-Camacho, 2008), who ruled from 1926 to 1931, and who was also a medicine doctor. Member of numerous academic institutions and scientific societies in his country and abroad (Brazil, Peru, Chile, Colombia, Spain, and of the American Psychiatric Association). He was distinguished as an honorary professor by the Universidad Nacional Mayor de San Marcos (Lima, Peru) and the Universidad de Chile.

In 1921, still as a student, he published a book on José Ingenieros (1877–1925), an Argentinian thinker whom he admired, entitled *José Ingenieros y el porvenir de la filosofía* (José Ingenieros and the future of philosophy) (Endara, 1921). Along with Belisario Quevedo Izurieta (1883–1921) and Alfredo Espinosa Tamayo (1880–1918), he was influenced by

scientific thought that developed under the influence of positivism (which was consolidated with the development of liberalism in Ecuador). Endara contributed to the development of psychiatry in Ecuador following the positivistic approach (Landázuri-Camacho, 2008). In 1944, he was one of the first psychiatrists to use electroconvulsive therapy in his country.

In 1936, he founded the *Instituto de Criminología* (Institute of Criminology) of the UCE and directed it until 1940, annexed to the Ministry of Government, Justice and Prisons and, in 1944, to the Faculty of Jurisprudence of the UCE (Universidad Central del Ecuador, 2021). He was the ad honorem director of the Institute from 1945 until the end of the 1960s.

Founder and director of the *Archivos de Criminología, Neuropsiquiatría y Disciplinas Conexas* (Archives of Criminology, NeuroPsychiatry and Related Disciplines), a journal of the Institute of Criminology (Paredes-Borja, 1963), published from 1937 to 1943, and subsequently from 1953. The journal had a wide international circulation, and at its time was the most important specialized periodical publication of the Ecuador in those areas.

He also collaborated and worked for many years as a physician and mainly as a psychiatrist at the Hospicio y Manicomio San Lázaro (also known as the Asylum of Quito) from 1925 as chief physician. In 1953, the asylum moved to a new building that was baptized with the name of the Psychiatric Hospital of Conocoto; later it changed its name to *Hospital Psiquiátrico Julio Endara* (Julio Endara Psychiatric Hospital), which is the one that remains to this day.

Endara followed the postulates of positivism to develop psychiatry in Ecuador (Landázuri-Camacho, 2008). He was a follower of the ideas of the German psychiatrist Ernst Kretschmer (1888–1964). However, since the mid-1930s, he also became interested in deep psychology and in Rorschach's Psychodiagnosis (Silveira, 1956), becoming a leading specialist in this technique. Precisely, in one of his works (Endara, 1953) with this test he shows that the intelligence and feelings of the indigenous population are normal, going against the widespread racism in Ecuador.

As a testimony of the international relevance of his work, it is worth mentioning that Endara was a collaborator for Ecuador in the renowned *Psychological Register*, third edition, edited by Carl Murchison (1887–1961). This collaboration could be considered as an associate editor, a function that in Murchison's book was fulfilled by highly recognized personalities such as Henri Pieron, Spearman, Luria, or Kurt Lewin, among others (Murchison, 1932).

Errázuriz Vidal, María del Pilar

Born *Santiago (Chile)*, 18 February 1948

Died *Santiago (Chile)*, 24 February 2018

Adriana Kaulino

Universidad Diego Portales, Santiago, Chile

Keywords

Chile · Feminism · Psychoanalysis · Gender studies · Critical psychology

Pilar Errázuriz was the first Chilean female psychologist and psychoanalyst to obtain a PhD in Woman and Gender Studies at *Universidad de Valladolid* (University of Valladolid). Her career as psychoanalyst and academic stands out due to her innovative interpretations of psychoanalytical theories and her dedication to including the gender perspective in research and in the training of academics. Errázuriz was born in Chile in 1948, and her first undergraduate studies were in journalism at *Universidad de Chile* (University of Chile) between 1965 and 1968. After completing two semesters and a half of journalism, Pilar traveled to France (1968), where she started studying psychology at *Université de Paris V* (University

of Paris V), graduating successfully in 1973. Pilar Errázuriz got a “maitrise” in four areas: differential gender psychology, general and compared psychoanalytically directed psychology, psychology and physiology studies, and economics and politics. Apart from what was related to physiology, the choices of her initial undergraduate training can be seen in her future career. As of the 1970s, Errázuriz tried to articulate, both in her researches and in her clinical practice, psychoanalysis with feminist and gender theories, always taking on a sociohistorical perspective, in which knowledge was situated within particular social, temporary, and cultural contexts. In addition, her progressive politics are revealed through the inclusion of the concept of power in the research and analyses that she conducted on building processes of female subjectivity.

In 1978, a few years after having finished her undergraduate studies, Errázuriz traveled to Costa Rica and stayed there until 1981. In those years, she carried out research in group techniques with mental health professionals who worked in a psychiatric hospital, and she also redesigned the *Programa de Inserción para Menores Infractores* (Incorporation Programme for Underage Offenders). In 1982, she moved to Madrid and joined a group of Argentinian psychoanalysts, who had been given political asylum in Spain. From that year until 2001 Pilar dedicated herself to her training as psychoanalyst, specializing in group theories and techniques. She was accepted as a member of the International Association of Group in 1986. During the 1980s and 1990s, Errázuriz went more in-depth into gender studies incorporating in her clinical practice the contributions of feminist psychotherapists such as Irene Meler, Martha Rosemberg, and Mabel Burin.

In 2001, Errázuriz returned to Chile and worked as an invited academic at the *Universidad de Chile* (University of Chile) until she joined the university as a staff teacher in 2004. From 2004 to 2009, Errázuriz carried out the PhD program in Woman and Gender studies of the *Universidad de Valladolid* (University of Valladolid), under the direction of Dr. Alicia Puleo. Her PhD thesis was published in 2012 and represents an innovative contribution to the psychoanalytical thought

from a feminist and gender perspective. Entitled, *Misoginia romántica, psicoanálisis y subjetividad femenina* (Romantic misogyny, psychoanalysis, and female subjectivity), the doctoral research looked critically into the psychoanalytical theory deconstructing its reproducing aspects of occidental patriarchy and the domination and subordination of the female, highlighting, at the same time, some elements of the Freudian and Lacanian work that would allow a progressive interpretation of psychoanalysis. In this sense, Errázuriz defended a reinterpretation of the theory and practice of psychoanalysis that, together with other social and human sciences, would contribute to a critical comprehension of the processes of subjectification of the woman and what is female. In this way, Errázuriz applied intersectional, gender, and power concepts to her analyses, as well as a social epistemology guided by theoretical feminist contributions. Thus, the main reasoning of her doctoral research refers to the influence carried out by the imaginary of European romanticism of the nineteenth century in the processes of women subjectification, with Freudian psychoanalysis as a symbolic representative of this imaginary and, at the same time, a theory that delivered elements that allowed criticism. In the words of the feminist academic Irene Meler (2015), Pilar's text is a "vast work of an attentive and thoughtful reader that helps us navigate between the different courses of thought that fertilise the territory of studies of subjectivity, feminism and gender" (p. 248).

In addition to her theoretical contributions, Errázuriz played an important role in transmitting the gender perspective. While she was at the *Universidad de Chile* (University of Chile) (2001–2018), she conducted various national and international studies and organized academic meetings on gender themes and perspectives and their transmission problems. She worked intensively together with foreign universities such as the *Universidade Federal de Santa Catarina* (Federal University of Santa Catarina -Brazil), the *Universidad de Buenos Aires* (University of Buenos Aires – Argentina), and the New York University. Among the research in which she participated stand out the following: Actors and

social subjects: a program of research, training, and transference (2008–2011), Gender equality in a sustainable culture: values and good practices for a solidary development (2011–2013), Ring project of Interdisciplinary Gender and Culture Studies together with the *Universidad de Buenos Aires* (University of Buenos Aires) and the *University of New York* (2008–2011), and the project Production and transference of a participative educational model for equal opportunities and promotion of work productivity with a gender and generational perspective, directed at women, also together with the *Universidad de Buenos Aires* (University of Buenos Aires – 2006–2008).

The importance of Errázuriz for critical Chilean psychology is unquestionable and can be seen in the different functions that she performed in the programs and academic centers of the *Facultad de Filosofía y Humanidades de Universidad de Chile* (Faculty of Philosophy and Humanities of the University of Chile). During almost 18 years that she dedicated to this university, Errázuriz was the coordinator of the research area of the Centre of Gender and Culture in Latin America (CEGECAL), and she was the director of this centre from 2009 to 2017. Furthermore, Errázuriz was member of the Academic Committee of the Master Degree in Gender and Culture of the academic staff of the Master Degree in Latin American Studies and of the Executive Committee of the feminist journal *Nomadías*.

In one of her last publications, "El caleidoscopio de la sexualidad: Crónica de una práctica anunciada" (The Kaleidoscope of sexuality: chronical of a practice foretold) (2015), Errázuriz defends the legitimacy of sexual diversity and gender, as well as the new way in which families in Chile are organized. Once again, through the criticism of the psychoanalytical clinical practice, Errázuriz revealed the positions of power and the prejudices of the psychoanalysts demonstrating their collusion with the domination and subordination of LGBTTTIQ (Lesbian, Gay, Bisexual, Transvestite, Transgender, Transsexual, Intersexual, Queer) groups. In this entry, Errázuriz again reinterpreted the Freudian theory in order to show a clinical practice that distrusts the normalization of subjectification processes functional to

the domination of the patriarchy. To this end, Errázuriz recovered some original concepts from Freud – impulse and desire – and questioned the psychoanalytical clinical practices proposing, at the same time, a psychoanalysis that, in order to be up to date, should accept “on their couches the diversities of desire without recurring to pathological or moralising categories” (2015, p. 84).

In the second semester of 2015, the law of the Civil Union Agreement came into effect. This law legally regulates the civil union of same sex people in Chile. The analyses and proposals of Pilar Errázuriz developed in the mentioned article expressed her strong commitment with social emancipation movements and their respective demands for social justice. In her own words, “All wilful control is arbitrary, and therefore, the fruit of an artifice. It will be this artifice that will have to be deconstructed, starting with feminist reflections” (Errázuriz, 2012, p. 463). Consequently, due to her written contributions and her academic and professional career, Errázuriz is, without a doubt, a pioneer of critical psychology in Chile.

Esguerra Gómez, Alfonso

Born *Bogotá (Colombia), 1 July 1897*

Died *Cali (Colombia), 28 September 1967*

Bruno Jaraba Barrios

Universidad del Valle, Cali, Colombia

Keywords

Colombia · Physiology · Psychometrics · Eugenics · Radiotherapy

Most of the narratives about the institutionalization of psychology in Colombia coincide in pointing out the decisive role played by the physician and professor of the Faculty of Medicine of the Universidad Nacional de Colombia [National University of Colombia] (UNC), Alfonso Esguerra Gómez (Ardila, 1973; Peña, 1993; Peña & Pérez, 2004; Rodríguez Valderrama, 1998; Roncancio Mora, 1956; Villar Gaviria, 1965). When Mercedes Rodrigo Bellido arrived at the University, Esguerra Gómez offered her a workspace within the Physiology Laboratory he directed, which would thus become the headquarters of the Psychotechnics Section, which in turn would become, first, the Instituto de Psicología Aplicada [Institute of Applied Psychology], and then the Faculty of Psychology. In addition,

Esguerra Gómez was also an enthusiastic sponsor of psychotechnical psychotechnics knowledge and tools offered by Mercedes Rodrigo. He tried to integrate the data from psychotechnics into his own anthropometric research program, since his interest in this new science was to consider it the necessary complement of physiology for the purpose of measuring, describing, and ultimately establishing the distinctive racial traits of the Colombian man.

The heir of a long lineage of physicians Esguerra Gómez was the eldest of the two sons of Carlos Esguerra Gaitán (1863–1941). Initially oriented toward the religious vocation, he completed his school studies and a degree in philosophy at the Gregorian University of Rome. As he later decided to attend the family vocation, he returned to Colombia to study medicine at the National University of Colombia. He graduated in 1923, the same year when he obtained diplomas of first, second, and third class in the anatomy-pathology contest of the National Academy of Medicine (Socarrás, 1992). This award gave him the chair of pathological anatomy in his own alma mater a short time after his degree (Agusti Pastor, 1982). This position was brief, however, because he was called to integrate the Colombian diplomatic mission in Paris, in 1922. This offer gave him the opportunity to enter as a researcher at the Radium Institute of the Pasteur Laboratory of the University of Paris, under the tutelage of Professor Dr. Claudius Regaud (1870–1940). There, Esguerra Gómez devoted himself to the development of new radiotherapy techniques. The outcome of this research was the invention of what he called Pasta Colombia (Esguerra et al., 1923), a contribution for which he was awarded with the Shevillon Prize in 1923 and the Grand Cross of the German Red Cross in 1936 (Socarrás, 1992). In 1927, he returned to Colombia and founded the radiology service in the public hospital San Juan de Dios. Very soon, he attended the National University of Colombia's request to fill the chair of physiology that had just become vacant. He occupied it in 1928 and his first measure was to set up a modern physiology laboratory, imported from France. The new equipment would allow experimental teaching and scientific research in

the subject for the first time in Colombia (Medina, 2000). As a result, Esguerra Gómez published, alone or in collaboration with his students, several works dedicated to pathophysiology, clinical physiology, and radiotherapy (Esguerra Gómez, 1939; Esguerra Gómez et al., 1944a, b; Esguerra Gómez et al., 1943). Also, by this time he published several works about radiology (Esguerra Gómez & Esguerra Gómez, 1930; Esguerra Gómez, 1932, 1933, 1945, 1946).

He was a member of the advisory committee of the Third Pan-American Conference of Eugenics and Hominiculture, held in Bogotá in 1938. His interest in this field was evident in a series of papers in which he used the psychometric data provided by Mercedes Rodrigo's works in addition to anatomical and physiological measurements he made (Esguerra Gómez, 1944, 1950, 1953).

Since her arrival to Colombia in 1939, until the creation of the Institute of Applied Psychology in 1947, Mercedes Rodrigo worked in the Physiology Laboratory run by Esguerra Gómez, who, in turn, became a champion of the use of psychotechnical tests, both for research purposes and for the novel institutional function of regulating access to the university by applying various tests to measure the intellectual abilities of applicants to enter the first year of university. Actually, the case of Esguerra Gómez shows how, when analyzing the appropriation of psychotechnics – or in general terms psychology – in Colombia, it is not appropriate to dissociate the scientific, technical, social, and political aims assigned to this new knowledge. A few months after Rodrigo arrived, in 1939, she and Esguerra Gómez conducted a pilot test application with a group of students of the physiology course. This experience, originally experimental, served as the main argument for the first application of psychotechnical tests as entrance examination to the National University. Esguerra Gómez was the chief of the examination board from 1940 until 1950, when the application of this kind of tests for admission purposes was abolished (Jaraba Barrios, 2014).

The application of these tests (besides physiological measurements) to a massive number of

young people from all over the country provided Esguerra Gómez with data for three anthropometric-oriented works. In *Study on Some Biological Characteristics of the Colombian University Student* (1944), together with statistical data related to morphological constitution and physiological characters, he presented “some psychic and mental characters” of the young men (no women) who rendered the admission test. This was a preliminary work aimed to “determining the biological type of the Colombian university student” (Esguerra Gómez, 1944, p. 276). This would serve two purposes: first, to define the racial constitution of the nation: “the scientific definition of the essential characteristics of a particular human group, and in our specific case, of the Colombian man” (Esguerra Gómez, 1944, p. 269), which in turn would serve to standardize clinical measurements to the national context. In 1950s *The Colombian University Student Biotype*, the descriptive extension deployed in the previous work is replaced by the mathematical condensation in the determination of the morphological type of the Colombian student. For this, only the data of age, volume, weight, and body proportions were considered. Finally, the 1953s paper, *Adolescence as a Stage of Human Life*, tried to establish the contours of normal adolescent growth within the Colombian population, through an extension of the methods tested in the 1950s study. As is easy to note, the banning of psychotechnics examination and the subsequent departure of Rodrigo left Esguerra Gomez’s studies without information about psychological traits of the subjects. Therefore, he had to restrict the scope of his research.

Esguerra Gómez was the first Colombian physician dedicated only to academic and research activities (Agusti Pastor, 1982). In 1944 he was admitted as a member of the Colombian Academy of Exact, Physical and Natural Sciences, in the Chair 22 (Medina, 2000). He died in Cali, Colombia, in 1967.

Espinosa Tamayo, Alfredo

Born *Guayaquil, 23 November 1880*

Died *Guayaquil, 1 September 1918*

Manuel Capella

Universidad de Guayaquil, Guayaquil, Ecuador

Keywords

Ecuador · Völkerpsychologie · Cultural psychology · Social psychology

Alfredo Espinosa Tamayo was born in Guayaquil, on the Ecuadorian coastal region. His mother was the sister of Luis Tamayo, who would become president of the country in later decades (1920–1924). His father – a merchant from Quito who resided in the Santa Elena peninsula – died prematurely. During this childhood, Espinosa experienced economic scarcity. Around the age of twelve, he evidenced symptoms of leper, a disease that would mark him for life (Pérez Pimentel, 1987). In 1889, he graduated from *Vicente Rocafuerte* high school, in Guayaquil. Around this time, his mother passed away, and he started to work in order to support himself and his three siblings.

During his youth, Espinosa was passionate about chemistry and human biology, although he

was also familiar with the study of cultural and historical expressions, such as ancient scripts, coins, stamps, and shields of arms (Pérez Pimentel, 1987). He studied medicine at the *Universidad de Guayaquil* (University of Guayaquil), where he was also a member of the *Asociación de Escuela* (Student's Union) from 1905 to 1907. Since 1903 – and for, approximately, 10 years – he was mainly interested in medicine, as well as public communication and education regarding health and hygiene. He conducted several medical research projects, for example, on the subject of deficits of vitamin B1, typhoid fever, syphilis, bubonic fever, and yellow fever. Many of these investigations were carried out while assuming the position of Municipal Chemist – appointed in 1908 – and that of Chief of Diagnosis Laboratory at the *Hospital General de Guayaquil* (Guayaquil's General Hospital) – appointed in 1909.

In 1912, being around 32 years of age, Espinosa Tamayo became blind as a consequence of leper, and it was impossible for him to continue his work as medical researcher (Pérez Pimentel, 1987). In years to come, publications authored by him were written with the assistance of his two sisters, who were in charge of his permanent care. In 1914, he published *Consejos a las madres* (Advice for Mothers), an effort to contribute to the reduction of child mortality; in 1915, he published *Guía para la Enseñanza de la Higiene Sexual* (Guide for Teaching Sexual Hygiene), targeted at local schools; and, years later, he translated to Spanish *Manual de Higiene Popular* (Manual of Popular Hygiene), by French author Henri Laurent (1917). Renowned Guayaquilean poet Medardo Angel Silva (1898–1919) described Espinosa as a “lonely” being, “wounded by a horrible malady” (Pérez Pimentel, 1987). Despite of this, he received visits from friends, colleagues, and disciples, at the family home where he lived.

Espinosa was the pioneer of *Völkerpsychologie* in Ecuador, even when he dedicated only the last few years of his life to such endeavor. *Völkerpsychologie* – sometimes translated as “Psychology of Peoples” – was born in Germany during the second half of the nineteenth century, under the influence of authors such as Mortiz

Lazarus (1824–1903), Hajim Steinthal (1823–1899), and Wilhelm Wundt (1832–1920). From a positivist perspective focused on the “spirit” of “peoples,” such tradition argued for the study of higher psychological processes through history, language, myth, and costume. While some authors identify it as the precursor of contemporary cultural psychology, others conceptualize it as a dated genre of anthropological research (Allolio-Näcke, 2014). Gradually, *Völkerpsychologie* became more associated with sociology and anthropology than with hegemonic psychology; the evocation of Espinosa's work in Ecuador was not the exception.

Espinosa Tamayo officially “inaugurated” *Völkerpsychologie* in Ecuador (Roig, 1977), a tradition that had already been exalted a decade before – as other psychological traditions of his time – by the Ecuadorian author Marietta de Veintemilla (1858–1907) (de Ventemilla, 1906). In 1916 – in parallel to his interest in pedagogical themes – Espinosa published *El Mecanismo Vital de la Asociación de Ideas* (The Vital Mechanism for the Association of Ideas) and *Ensayos de Psicología y Sociología del Pueblo Ecuatoriano* (Essays on the Psychology and Sociology of the Ecuadorian People). These two pieces examined cognitive, affective, behavioral, and sociocultural process of diverse social groups in Ecuador. There, Espinosa Tamayo postulated theses that were later included in the classic *Psicología y Sociología del Pueblo Ecuatoriano* (1979), published as a book in 1918, shortly after his passing, and considered his most remarkable work on such subject. As discussed by Roig (1979), Espinosa's work was influenced by European authors who also wrote about the “spirit” of their respective peoples, among them French author Alfred Fouillée (1838–1912) and Spanish authors Rafael Altamira (1866–1951) and Salvador de Madariaga (1886–1978).

Even when he is evoked mainly as the initiator of Ecuadorian sociology (Roig, 1977, 1979), Espinosa's work was immersed in the positivism inherent to his time, which seemed to be strongly represented by psychology. In fact, Ecuadorian positivism was notoriously “*biologicista*” and “*psicologista*” – prone to biological and

psychological reductionisms (Roig, 1977, 1979; Valderrama, 1986). From such perspective, and based on reviews of secondary data, Espinosa (1916, 1918) argued that individual psychological traits were imprinted in people's brains, but that these were products of environmental influences; these could – during the course of one generation – be modified, specially through imitation. Although he presented an essentialist representation of psychological traits of diverse ethnic groups, he also acknowledged the influence of colonial history in such features. He proposed there were different psychological characteristics of Ecuadorian subjects, depending on their ethnic identity. For example, so called “Indian” subjects – Indigenous people – were conceptualized as melancholic, indolent, servile, with a tendency to alcoholism and robbery, patient, and ductile; such descriptions resonate with others defended by diverse academics in postcolonial tone, decades before (Prieto, 2004).

From a contemporary gaze, some of Espinosa's ideas are impregnated – explicitly or implicitly – by the racism of his time, fueled in academia by neo-Lamarckian ideas and “social Darwinism” imported from Britain's Herbert Spencer (1820–1903) (Capella et al., 2020; Prieto, 2004; Valderrama, 1986). Moreover, some authors have hypothesized an association of the “social organicism” of such epistemological perspective, with “despotic” and “fascist” ideas and forms of government in decades to come (Roig, 1977). This should not be interpreted, precisely, from the standpoint of psychological reductionism, but through a critical consideration of the ideological context of Espinosa's historical period.

Espinosa Tamayo died from a heart attack, at age thirty-seven. It is plausible to highlight his contribution to psychology in at least four senses. First, as a representative of a historical period where local psychology had a strong positivist footprint – imported from Europe – leading to biological and psychological reductionism. Framed within such limits, Espinosa produced a scholarly analysis from the perspective of *Völkerpsychologie*, in the context of still disputed disciplinary identities. Second, Espinosa proposed an understanding of psychological traits in

both their biological and sociocultural dimensions, even if this was done under the influence of social Darwinism. Third, his work on health promotion and prevention can be underlined as being relevant to the praxis of psychologists who are presently immersed in the health field. Finally, it is possible to review his work from the standpoint of critical historiography and critical psychology, in order to analyze ideological aspects of early twentieth-century psychology *vis-à-vis* contemporary theories and practices.

Estable, Clemente

Born *Canelones (Uruguay), May 23th, 1894*

Died *Montevideo (Uruguay), October, 27th, 1976*

Jorge Chavez Bidart

Facultad de Psicología, Universidad de la República, Montevideo, Uruguay

Keywords

Uruguay · Vocational guidance · Education

Clemente Estable was born in the rural area of the province of Canelones (Santa Lucía) in southern Uruguayan territory and was the ninth of 14 children. His parents were Guiseppa Stabile and Guiseppa Fallabella, Italian immigrants born in the Province of Salerno. His family moved to Montevideo where he began elementary education and at the age of 15 years he began teacher training, graduating as a Teacher at the age of 20 years in 1914.

He served as a teacher in several schools in Montevideo and was a professor of Biological Sciences in High School, he held the chair of Natural History at the Institutos Normales (Teaching Institutes), an institution in which he was appointed as Master of Conferences in 1920. During that period, he attended courses at the Facultad de Medicina (Faculty of Medicine) as a free student and began the publishing of

pedagogical dissemination essays in the context of his affiliation to the Sociedad de Pedagogía (Pedagogy Society).

In the educational field, a controversy developed around the issue of vocations. It developed from a lecture given by Dardo Regules (1887–1961) on the emergence of vocation in children, stating that it awakens in school and that high school education has little or no influence on it. His phrasing provoked a response from the Pedagogical Society, during the sessions in June, July, and August of 1921. The person responsible for representing the Pedagogical Society was Clemente Estable.

Estable's response involved a critical and exhaustive study on the subject of vocations causing the Pedagogical Society to publish it in 1923 with the title: *El reino de las vocaciones. Fin de la enseñanza* (The kingdom of vocations: purpose of teaching). At the beginning of the work, Estable discriminated the arguments that are, on the one hand, located in metaphysics and on the other one, that of psychologists, who from their activities establish scientific laws. From this distinction, he developed the psychobiological, ethical, logical, pedagogical, and sociological foundations of vocations. Within the framework of psychobiological foundations, he highlighted the advancement of paidology and the scientific character that it gave to the study of the child's personality. The conception that the child is a singularity and that an individualized pedagogy should be exercised configures a perspective in which, according to Estable, vocational education should also be inscribed. Vocational teaching continues the thrust of the hereditary movement, stated the author, so that its action: "puts each individual in the place where he best suits the role ... and where, in turn, they can be more original, stronger and more capable" (Estable 1923, p. 18).

On the pedagogical foundations, he highlighted the mistake of adapting personalities to programs instead of doing it in the opposite way, adapting programs to individual developments and that this practice becomes a complement to collective teaching. Such conception was fundamental for subsequent deployment of his educational proposal.

The year after that controversy, at the age of 28, Clemente Estable left for Spain in usufruct of a scholarship granted by that country. This scholarship was offered to one student from each country of Latin America and the Uruguayan scholarship-holder focused his studies on the nervous system, with the help of Santiago Ramón y Cajal (1852–1934), who became his teacher: “He will also study Experimental Psychology and Pedagogy, as the study of the brain is carried out. . .” (Redacción 1922, p. 664). The relationship they established was not only limited to their academic interests, it was a friendship that was forged during the stay of the Uruguayan researcher and maintained until the end of the days of the Spanish researcher through a fairly frequent epistolary link.

Estable devoted himself to researching the architecture of the central and peripheral nervous system, making original findings on the histological organization of the cerebellum, which allowed him to publish his work in the journal edited by Ramón y Cajal himself. After three years of work along with the Spanish Nobel Prize in Medicine holder Ramón y Cajal, Estable returned to Montevideo and was appointed Head of the Laboratorio de Investigaciones Histológicas (Histological Research Laboratory) in the Instituto de Neurología (Neurology Institute). In 1927, he promoted the creation of the Laboratorio de Ciencias Biológicas (Biological Sciences Laboratory), an institution that in 1950 would be transformed into the Instituto de Ciencias Biológicas (Biological Sciences Institute), now called Clemente Estable. From the Institute he promoted research in the field of experimental biology, being gravitating at national and international level with various recognitions and financial support such as that provided by the Rockefeller Foundation. His research works were developed in the areas of cytology, histology, histopathology, and physiology, without leaving the educational field and pedagogy (Ardao 1994).

In 1928, he was the creator and first president of the Sociedad de Biología de Montevideo (Montevideo Biology Society), which edited the journal *Archivos de la Sociedad de Biología*

(Archives of the Biology Society). The abstracts of the Archives were indexed in the *Comptes Rendus de la Société de Biologie de Paris*.

In 1946, the *Enciclopedia de Educación* (Encyclopedia of Education) published a volume with the Clemente Estable’s productions on psychological and pedagogical subjects, including lectures given at the request of the Pedagogy Society in 1931 and by the Consejo Nacional de Enseñanza Primaria y Normal (Council of Elementary and Teaching Education) in 1943. The works thematized on psychological aspects of vocational and professional orientation, as well as the psycho-pedagogical developments that were the basis of their educational plan, the Estable Plan. In 1939, the Estable Plan became official in elementary education, a proposal where the psychological aspects of the student’s personality became the centrality of a pedagogical method, which at the same time was a rational and systematized work plan (Estable 1946).

At the beginning of the 1950s, Juan Carlos Carrasco (1923–2010), Jorge Galeano Muñoz (1919–1987), and Washington Risso contacted Clemente Estable, whom they went to see at his Laboratory and suggested that they become involved in the creation of a society of psychology. On December 7, 1953, the Sociedad de Psicología del Uruguay (Uruguayan Psychology Society) was constituted and Clemente Estable was its first president. Estable was distinguished as Ad Honorem Professor by the Faculty of Medicine of the Universidad de la República (University of Republic). He was a trainer of researchers, an intellectual dedicated and enthusiastic about creation, who synthesized the image of the researcher in Uruguay for a long time.

Estrada de los Ríos, Luis

Born *Lima (Peru)*, January 8, 1933

Died *Lima (Peru)*, March 26, 2008

Tomás Caycho-Rodríguez
Universidad Privada del Norte, Lima, Perú

Keywords

Peru · Rorschach · Teaching of psychology

Luis Estrada de los Ríos studied Law and Psychology at the Universidad Nacional Mayor de San Marcos (National University of San Marcos, UNMSM, Lima), which he entered in 1953, graduating as a lawyer (1961) and a Bachelor of Arts in the specialty of Psychology (1962) with a Rorschach thesis on homicides and obtained the professional title of psychologist also in 1962. Estrada de Los Ríos was one of the first psychologists trained at the UNMSM. In 1976, he obtained a doctorate in psychology always at his *alma mater* with a study on Rorschach psychodiagnosis in different occupational groups.

At his *alma mater*, where he worked for 40 years, he began his teaching career (Child and Adolescent Psychology, Projective Techniques, Forensic Psychology, and founder of the Rorschach Chair of Psychodiagnosis). He also taught at other universities, including *Universidad Enrique Guzmán y Valle* (Enrique Guzmán y Valle University, in Lima), and *Universidad Nacional*

de San Luis Gonzaga (San Luis Gonzaga University, in Ica, south of Lima).

His professional interest focused on clinical psychology, working for more than 35 years at the Hospital Edmundo Rebagliati (Edgardo Rebagliati Hospital, former *Hospital del Empleado*, Lima), one of the most important in Peru, where he became the first head of the Department of Psychology. During his tenure, the intervention of psychologists was diversified to other services, different from psychiatry, such as pediatrics, neurology, neurosurgery, cardiology, oncology, hematology, obstetrics, gastroenterology, and preventive medicine, among others. He was elected in 1980 as the first dean of the Colegio de Psicólogos del Perú (Board of Psychologists of Peru) and founder of the Psychology Unit in Social Security. In 1982, Estrada made an exhibition about the activities of the psychologist in the field of health before the Congress of the Republic, Ministry of Health, Ministry of Labor, and the Instituto Peruano de Seguridad social (Peruvian Institute of Social Security), which had as an objective to publicize the importance and reassess the profession of the psychologist (Díaz, 2010).

In 1977, the UNMSM distinguished his teaching career with the title of Emeritus Professor, and in 1990, he won the “Guillermo Kaelin de la Fuente” award from the Social Security of Peru.

Although he did not dedicate part of his time to publishing, through his teaching work at the UNMSM, he exerted a great influence on many generations of psychologists.

Ibero-American University, Mexico City, Mexico

Keywords

México · Neuropsychiatry · Psychology ·
Clinical psychiatry

Graduated from the Facultad de Medicina (Faculty of Medicine) from the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM), Falcón went abroad to specialize in neuropsychiatry, at the time when doctors had to go abroad because specializations were not yet offered in Mexico.

In the early 1930s, he studied at the Catholic University of Leuven in Brussels, Belgium, and continued his training as a neuropsychiatrist at the Hospital of *La Salpêtrière*, in Paris, France. He married Lea Brants, of Belgian nationality. He returned to Mexico City and worked as a psychiatrist at the Rafael Lavista Hospital. In 1937 he established his own clinic (Colotla & Urra, 2006).

The Clínica Neuropsiquiátrica Dr. Manuel Falcón (Dr. Manuel Falcón Neuropsychiatric Clinic) was since its foundation, until Falcon's death in

1985, one of the most prestigious and recognized private institutions for the treatment of psychiatric patients in Mexico City. It developed so much that it hosted more than 80 patients. It was an important establishment for teaching, at the bachelor's and postgraduate levels, in psychiatry, psychology and social service specialties of the most important universities, such as the Universidad Nacional Autónoma de México (National Autonomous University of Mexico), the Instituto Politécnico Nacional (National Polytechnic Institute), the Universidad Iberoamericana (Ibero-American University) (IBERO), and the Universidad La Salle (La Salle University), and of the psychiatric and psychoanalytic associations of Mexico City, such as Asociación Psicoanalítica Mexicana (Mexican Psychoanalytic Association) and the Asociación Psiquiátrica Mexicana (Mexican Psychiatric Association), among others.

The Clínica Falcón (“Falcon Clinic”), as it was widely known in the field of mental health in Mexico, has a deputy director from 1943 to 1958, Federico Pascual del Roncal (1903–1958), prominent psychiatrist part of the Spanish exile (León, 2015).

In Paris, France, in 1950, Falcón participated as the delegate from Mexico to the First World Congress of Psychiatry, which was chaired by Jean Delay (1907–1987).

In Mexico City, in 1950, the psychology career at the Universidad Iberoamericana (Ibero-American University) IBERO, was founded by professor Ramón Gómez Arias (1913–1975),

who invited Falcón Guerrero to teach together with other leading psychiatrists and psychologists, such as Manuel Guevara Oropeza (1899–1980), Francisco González Pineda (1916–1994), and Roberto Flores Villasana (1921–2000) who was director of the faculty in 1959 (Galicía, 2018).

He was President of the Sociedad Mexicana de Neurología y Psiquiatría (Mexican Society of Neurology and Psychiatry) from 1951 to 1958. This Society was founded in Mexico City in May 1937, under the leadership of Guevara Oropeza who has been director of the psychiatric hospital *La Castañeda*. The idea was to get together specialists from both the public and private sectors, in an independent professional organization. During his term as president, he strengthened the corporate organization with rules and statutes (Cabildo, & Arellano, 2017) that remain until the present moment. Similarly, he promoted the publication of the Society's journal, together with Mario Fuentes Delgado (1905–1985), which was initially named *Archivos de Neurología y Psiquiatría de México* (*Neurology and Psychiatry Archives of Mexico*) (1937–1944) and subsequently *Neurología, Neurocirugía y Psiquiatría* (*Neurology, Neurosurgery and Psychiatry*), as it is known today.

In Mexico City, on September 21, 1951, the IV Centenary of the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) was celebrated, and Falcón attended the event as a representative of the Catholic University of Leuven, Belgium. (Universidad de México, 1951).

In the same year, in Mexico City, in December 1951, the IV World Mental Health Congress was organized, by the Liga Mexicana de Salud Mental (Mexican League of Mental Health), with the participation of Falcón, Guillermo Dávila, Rogelio Díaz-Guerrero, Eduardo Krapf, Oswaldo Robles, and Werner Wolff (1904–1957). These distinguished professionals met to discuss the importance of exchanging knowledge and promoting communication between professionals in the Americas, so on December 17 of that year they founded the Sociedad Interamericana de

Psicología (Inter-American Society of Psychology) (SIP) (Gallegos, 2012a).

In Ciudad Trujillo, Dominican Republic, from December 10 to 19, 1953, the Primer Congreso Interamericano de Psicología (First Inter-American Congress of Psychology) was held. It is said that the founding members Oswaldo Robles, Werner Wolff, and Manuel Falcón chose that venue for the first congress, in order to commemorate the 450 years of the arrival of Christopher Columbus in the Dominican Republic, so it was the first bridge between the two worlds (Gallegos, 2012b). Falcón was one of the delegates from Mexico.

In Mexico City, 1954, he participated jointly with Manuel Camelo Camacho (1903–1969) in the first study to introduce chlorpromazine in Mexico.

In Paris, France, from October 20 to 22, 1955, was held the International Colloquium on Chlorpromazine and Neuroleptic Medicaments in Psychiatric Therapeutics, chaired by Jean Delay, who in 1952 discovered chlorpromazine as a neuroleptic agent, which revolutionized the treatment of psychiatric patients and began the era of psychopharmacology. Falcón Guerrero participated as the delegate from Mexico in the Colloquium with the presentation “Quelques observations cliniques sur l'emploi de la chlorpromazine” (Some clinical observations on the use of chlorpromazine); the French journal *L'Encephale* edited a special issue to publish the most relevant papers of that Colloquium (Falcón, 1956).

From the Mexican chapter of Sociedad Interamericana de Psicología (Inter-American Society of Psychology), of which he was president, he founded the Sociedad Mexicana de Psicología (Mexican Society of Psychology) (SMP) in 1957. From 1962 to 1985, he was a professor at the Colegio de Psicología of the Facultad de Filosofía y Letras of the Universidad Nacional Autónoma de México (School of Psychology, of the Faculty of Philosophy and Literature, National Autonomous University of Mexico), of the subject Abnormal and Pathological Psychology, and directed innumerable thesis and investigations. (Reidl & Echaveste, 2004; Rodríguez et al., 2008).

In Mexico City, in 1966, a group of psychiatrists began to organize and formed the Asociación Psiquiátrica Mexicana (Mexican Psychiatric Association), which was founded on March 31, 1966. Falcón participated in the Constitutive Act as one of the three representatives of the private psychiatric institutions (Ambrosio, 2009).

He was an active member in the associations as founder and pioneer, until his death. He was an honorary member of the Mexican-Texan Society of Neurology and Psychiatry. He participated in the editorial committees of their publications: *Neurología, Neurocirugía y Psiquiatría* (Neurology, Neurosurgery and Psychiatry), *Revista Interamericana de Psicología* (Inter-American Journal of Psychology), and *Actas Luso Españolas de Neurología, Psiquiatría y Ciencias Afines* (Spanish Portuguese Proceedings of Neurology, Psychiatry and Related Sciences), among others.

Falcón was founder and promoter of many important and recognized professional associations in the field of neurology, psychiatry, and psychology, thanks to the prestige he possessed, both nationally and internationally, and for the appreciation that his colleagues lavished on him. His active and enthusiastic participation in the mental health environment led him to have a prominent place in the clinic, in the teaching, and in diffusion.

Dominican Republic · Education in Psychology · Research in Psychology

Dr. Rubén Farray contributed to the development of Psychology in the Dominican Republic in the academic field as he restructured and raised the level of the offer of one of the two existing programs. In the professional aspect, he showed that it was possible to include Psychology in unsuspected areas, expanding its presence to the most diverse fields of work.

He began his studies of Psychology in Cuba in 1959, later moving to Belgium in 1961, continuing at the Catholic University of Louvain, where he received a Bachelor of Psychology, obtaining the degree of “Great Distinction.”

After completing his studies, he continued working in the Laboratory of Experimental and Social Psychology at the Catholic University of Louvain, where he carried out research on human learning, specifically, in concept formation. They were key years for his training and orientation

towards Experimental Psychology, so he had to strengthen his mastery of experimental designs, instrumentation, methodology, and statistics. All this closely related to his remarkably organized personality.

The year 1967 marked important changes in his life, he married Dr. Ana Rosa Bergés Dreyfous, whom he met during their stay at the Catholic University of Louvain, and this fact led him to the Dominican Republic, which became his homeland of adoption since his transfer in 1969. From his marriage to Dr. Bergés, he had two children: Daniel and Leonor, and six grandchildren.

Shortly after his arrival in the country, in the same 1969, he went on to direct the Department of Psychology at the Pedro Henríquez Ureña National University (UNPHU), which had been founded two years earlier. In fact, the career of Psychology had begun in the country in 1967 and was offered simultaneously at the state university Universidad Autónoma de Santo Domingo (UASD) and at UNPHU (sponsored by a foundation).

Reflecting on the significance of the incorporation of Dr. Farray to the Department of Psychology at that time, Mr. José Cruz, who was its first director, says when celebrating 30 years of the beginning of the profession in the Dominican Republic: “*During the second year of the degree, Dr. Rubén Farray was employed, who was hired full time. There is no doubt that Rubén was key in the scientific and human formation of that first class of UNPHU students*” (Cruz, 1998, p. 42). These two words properly describe Dr. Farray, scientist and humanist.

Under his direction, a transformation of the pensum began, originally with a notable philosophical and scholarly load, reinforcing the scientific orientation. Subjects such as Experimental Psychology are introduced, creating a laboratory, Animal Psychology, Psychodiagnosis, with objective and projective tests, Tests and Measurements, Psychotherapy, and others. The new curriculum promoted by Dr. Farray took the degree to five years divided into two cycles: the first of three years qualified for a title of Technician in Psychometry (with the requirement of a monograph).

The training had a strong component of research designs, psychometrics, and statistics.

The second two-year cycle, leading to the Bachelor of Psychology, which could focus on one of the three areas: Clinical, School, or Industrial (with the requirement of a degree work). The concentration included a year with a strong content of supervised professional practice.

This approach was very innovative and an extraordinary advance for the profession of Psychology in the Dominican Republic. Student enrollment grew considerably. The graduates of this program were in great demand in the limited market at the time, while at the same time they showed very good performance in the programs offered in foreign universities where they went to pursue specialized studies. In the early years, a tendency was generated among the students of Psychology of the UNPHU to study French in the French Alliance, in preparation to go to the Catholic University of Leuven, and indeed, a relatively large group, perhaps very numerous if we consider the size of our economy at that time, was formed in Leuven, which was a consequence of the positive leadership of Dr. Farray.

Despite his intense academic life, Dr. Farray continued his doctoral training at the Catholic University of Louvain, presenting his thesis in 1972, obtaining “The greatest distinction” and congratulations from the jury.

In those early years, Dr. Farray was responsible for methodological training, while stimulating his outstanding students to study at foreign universities, for which he facilitated their personal and academic relationships (among which, of course, the University Catholic of Leuven).

As of 1980, he served for two years as dean of the Faculty of Social Sciences and Humanities of the Technological Institute of Santo Domingo (INTEC), where he also taught in the career of Psychology.

In 1982, he returned to the Pedro Henríquez Ureña National University (UNPHU) as Dean of Planning, to direct a project with funds from the Inter-American Development Bank, later becoming dean of the Faculty of Education and Humanities.

In addition to his contributions to academia, Dr. Farray made contributions as a professional in

Psychology both publicly and privately, opening fields of work and perspectives to his former students.

In the public sector, his work as an advisor to the National Council for Children and Adolescents (CONANI), the National Council for Higher Education (CONES), which became the Ministry of Higher Education, Science and Technology, and the Secretary of State of Education and Culture (currently the Ministry of Education), stands out.

At a private level, he was a psychopedagogical advisor to the Colegio Nuestra Señora de la Altagracia (CONSA) for more than two decades and offered his consulting skills for research in education and social sciences and ventured into commercial research.

Since his relationship with the center began through its director, Alicia Guerra (1922–2016), who was one of his students at UNPHU, he maintained a constant collaboration, regardless of the positions he held in other institutions, each week he dedicated a few hours to the center, received students, and gave them vocational guidance, orienting parents and teachers, advising the collegiate management of the center. The psychology department is currently named after him.

As a person, Dr. Farray maintained an exquisite treatment with people, and open to all kinds of people, he had the virtue of keeping distance, being both close and empathetic. He was an excellent son, father, and husband. At a time when it was not a topic of discussion, he showed exemplary treatment towards his wife, whose career in Law stands out as a Judge of the Supreme Court of Justice, supported by striving to contribute to the professional development of both, and they both shone.

Those of us who had the privilege of being his disciples remember him with great affection, admiration, and respect. Dr. Farray is a professional, academic, and personal reference.

Fernández Bauzó, Edwin Barry

Born *on December 7, 1941, in San Juan, Puerto Rico*

Nellie J. Zambrana Ortiz
University of Puerto Rico-Río Piedras, San Juan,
Puerto Rico

Keywords

Puerto Rico · Gender · Violence · and Systemic group psychotherapy

Born and raised in Puerto Rico, Edwin Fernández Bauzó is the only son of Graciani Fernández and Dominga Bauzó who had a short but intense love relationship. Dr. Fernández Bauzó was about 3 months old when he and his mother moved to live with his maternal grandparents Celestina and Domingo Bauzó, in Canóvanas, Puerto Rico. A couple of years afterwards, his mother moved to the United States, while he stayed with his grandparents until he was 22 years old. During his childhood, he received a strong religious orientation that has been important in his life.

Dr. Fernández Bauzó completed his studies in the public system of Puerto Rico, where he graduated with honors in 1958. He was accepted to the University of Puerto Rico, Río Piedras Campus (UPR-RP), where he earned, in 1963, a Bachelor of Arts, Cum Laude, from the Faculty of Social Sciences. In 1964, he moved to Massachusetts, where he obtained a Master's degree in Education from Boston University in 1965. He returned to Puerto Rico and, at 23 years old, worked as Researcher and Faculty Member at the Department of Psychology, Faculty of Social Science,

at UPR-RP. He taught courses such as Introduction to Psychology, Personality Development, Personality Theories, Group Dynamics, and Human Sexuality at undergraduate level.

That year, 1965, Dr. Fernández Bauzó married Miriam Rodríguez. A life-changing experience came 13 years after their marriage when they decided to adopt two babies: Myrna and Eduardo. He stated that “with this experience I fulfilled two of the most important goals of my life: fatherhood and having adopted children” (E. Fernández, personal communication, 2020).

In 1974, he completed a Doctoral degree in Philosophy, in Counseling Psychology at Temple University, Philadelphia, Pennsylvania. Upon his return to Puerto Rico, he was elected President of the *Asociación de Psicología de Puerto Rico* (APPR, Puerto Rican Psychological Association). He continued his academic work at the UPR-RP, where he conducted graduate courses such as Personality Theories, Ethics, Family and Social Theory, Individual Psychotherapy, Psychotherapy Supervision, and Research Supervision. Through his career, he was the director of multiple master's thesis and doctoral dissertation committees.

Among Dr. Fernández Bauzó's achievements was the creation of three courses for the Psychology Graduate School: Group Psychotherapy, Family Psychotherapy, and The Group as Agent of Social Change. Furthermore, he developed a systematic way to carry out group psychotherapy: Interactional Systemic Group Psychotherapy. He has dedicated many years of active professional practice to find ways to manage controversial social issues such as the social roots of the divorce, anorexia in teens, violence and power, gender violence, and spiritual beliefs.

In July 1990, Dr. Fernández Bauzó and three other Puerto Rican psychologists – Edwin Cruz Díaz, Juan J. González Armendero, and Félix A. Román Tirado – founded a nonprofit organization named “Collective of Ideologies and Experiences of Genders,” to address the problem of gender violence and its manifestations in couples' relationships. One of the finest works of the Collective was to develop a new social personal perspective to work with males that are violent with their partners, with the end goal of transforming

gender violence. His knowledge on gender topics allowed him to take an important role in the evaluation and self-scrutiny of the judicial system in Puerto Rico. He was one of the 17 members of the Special Judicial Commission to investigate gender discrimination in the Courts of Puerto Rico.

At the age of 49, medical examinations and biopsy revealed the existence of a retroperitoneal cancerous tumor (cancer in the lymphatic system). He underwent chemo and radiation therapy. He experienced a healing process that encompassed medical, physiological, psychosocial, and spiritual dimensions. He engaged in a philosophy of life to transform acts of fear and violence into acts of love and gentleness towards himself and others. This philosophy changed and refocused all aspects of his life until present day.

After a fulfilled professional career, with 32 years of treasured service, he retired from the University of Puerto Rico in December 1999. He continued with the most important work of his life as a founding member of the “Collective of Ideologies and Experiences of Genders.” Throughout this work he realized the need for a group to promote spiritual development. Thus, he created the “Study Group for Personal Spiritual Development and for Humanity Spiritual Evolution.” From the Study Group emerged a monthly spiritual practice: the festivity of the Full Moon planetary experience. He authored three books: *Espiritualidad Hecha Hombre (Spirituality Turned Into Man)*, *Conectándonos con el Ruiseñor que Canta en Nuestro Interior (Connecting with The Nightingale that Sings Inside of Us)*, and *De la Convivencia Polarizada hacia la Convivencia Armoniosa (From Polarized Coexistence Towards Harmonious Coexistence)*.

At the age of 68, after living for two decades with kidney dysfunction, he was diagnosed with renal failure. Instead of receiving the diagnosis as a death sentence, he envisioned the opportunity to learn new life lessons and to consciously live in tune with his spiritual being. A few months after the diagnosis, his daughter Myrna donated to him one of her kidneys.

Dr. Fernández Bauzó has built a strong and yet sensitive personal narrative of his life. He lives in Luquillo, a colorful seashore municipality where

he feels connected with the beauty of nature. At 78 years old, facing the coronavirus pandemic, he reflects and shares:

I am deeply grateful to live manifesting the never-ending energy of love. The Coronavirus is communicating to each person that his/her priority must be to maintain the continuity of life. Coronavirus has shown us that it is imperative to nurture and protect human life and the forces that promote it. We are one with nature. (E. Fernández Bauzó, Personal communication, April, 7, 2020)

Kindling

Dr. Fernández Guardiola was born into a liberal family in Madrid's iconic Lavapiés neighborhood. His father was a graphic artist who drew with such finesse that among other activities worked for Santiago Ramón y Cajal (1852–1934) artistically reflecting the neural discoveries that the histologist made from the microscope. As a child, Augusto was fortunate enough to meet the neuroscientist (Pérez-Rincón, 2004).

After the proclamation of the Second Spanish Republic, the Civil War broke out in 1936. During this time, Augusto had his first encounter with electrical activity, joining the Alpine Battalion of the Republican Army of the Sierra de Madrid repairing the communications cables. In 1939, like thousands of republicans, the Fernández Guardiola family was forced into exile (Fernández-Mas et al., 2009).

From Spain they left for Algeria and in 1940 they arrived in Nicaragua. In Managua, Augusto joined the Pan American Public Health Service as a research assistant with Dr. Rosenfeld (1913–1990). Later, he was head of a tropical

wildlife laboratory in the City of Corinth in Nicaragua where he studied mainly malaria mosquitoes. It was in 1944 that Augusto and his family decided to emigrate to Mexico (Fernández-Mas et al., 2009).

After failing to enter the chemistry career by oversaturation, Fernández Guardiola studied the career of medicine at the Facultad de Medicina (Faculty of Medicine) of the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM) from 1946 to 1951. He specialized in neuropsychiatry at the Escuela de Posgraduados de la UNAM (UNAM Graduate School) from 1953 to 1955. He was a student of leading specialists such as Drs. Dionisio Nieto (1908–1985), Efrén Carlos Del Pozo Rangel (1907–1979), Ramón de la Fuente (1921–2006), and Arturo Rosenblueth Stearns (1900–1970) (Pérez-Rincón, 2004).

At UNAM he was part of the Instituto de Investigaciones Médicas y Biológicas (Institute of Medical and Biological Research), actually the Instituto de Investigaciones Biomédicas (Institute of Biomedical Research), and later was professor of the Colegio de Psicología (College of Psychology) of the Facultad de Filosofía y Letras (Faculty of Philosophy and Letters), actually the Facultad de Psicología (Faculty of Psychology), of which he became Professor Emeritus.

From 1958 to 1959, he studied a master's degree in physiology at the Faculté des Sciences d'Aix-Marseille Université (France), where he was also an associate researcher in the neurophysiological research group of Dr. Henri Gastaut (1915–1995) together with Dr. Robert Naquet (1923–2005). In that same school, he completed his doctorate in biological sciences (1969) with the thesis "La voie visuelle du Chat: mécanismes de contrôle et de régulation" (The study of the regulation of the visual pathway in the cat). In 1961 he made a postdoctoral stay at the University of Oregon (Portland, USA) under the tutelage of Dr. Robert S. Dow (1908–1995) (Fernández-Guardiola, 1969; Pérez-Rincón, 2004).

In 1963 he founded in Cuba the Laboratorio de Psicofisiología (Laboratory of Psychophysiology) of the Instituto de Investigaciones de la Actividad Nerviosa Superior (Institute of Research of the

Higher Nervous Activity) of the University of Havana. Later in Mexico, in 1965 and 1968, he headed the Departamento de Electrofisiología Clínica Experimental (Department of Experimental Clinical Electrophysiology) of the Instituto Nacional de Neurología y Neurocirugía (National Institute of Neurology and Neurosurgery). He founded and directed the Unidad de Investigaciones Cerebrales (Brain Research Unit) at the same center and later, in conjunction with Dr. Ramón de la Fuente (1921–2006), he was part of the Instituto Mexicano de Psiquiatría (Mexican Institute of Psychiatry), founding the División de Investigaciones en Neurociencias (Division of Research in Neurosciences) which directed from 1979 to 2002 (Fernández-Mas et al., 2009; Pérez-Rincón, 2004; Vargas Rangel, 2006).

Throughout his career, Fernández Guardiola published more than 170 articles in scientific journals, 40 outreach articles, and 3 books. His texts have been quoted in more than 1250 publications. He disseminated his research papers at around 500 scientific meetings, led more than 30 theses, and was member of various editorial committees. Thanks to his scientific contribution, he was awarded many national and international prizes, among them the “Dr. Eduardo Liceaga” award of the Academia Nacional de Medicina (National Academy of Medicine of Mexico) (ANMM) (1975), the prize of the Chinoin Fund “Alejandro Celis” of the ANMM (1977), the Research Award “Miguel Otero y Arce” of the Secretaría de Salud (Ministry of Health) (1980), the Premio Nacional de Psiquiatría “Dr. Manuel Camelo” (National Award of Psychiatry) (1987), the Premio Universidad Nacional en el área de Investigación en Ciencias Naturales (Award of the National University in the area of Research in Natural Sciences) (1992), the appointment as Researcher Emeritus by the Sistema Nacional de Investigadores (National System of Researchers) (SNI) (1993), the “Dr. Maximiliano Ruiz Castañeda” Award of the ANMM (1994), and the Premio Nacional de Ciencias y Artes (National Award for Sciences and Arts) (1999). In his quest to help the promotion of science, he was a founding

partner of the Sociedad Mexicana de Ciencias Fisiológicas (Mexican Society of Physiological Sciences), the Society for Neuroscience, and the Sociedad Mexicana de Epistemología (Mexican Society of Epistemology). In Spain (1994), thanks to the invitation of Dr. José M. Delgado García (born 1945), Fernández-Guardiola participated in the creation of the Escuela Iberoamericana de Neurociencia (Ibero-American School of Neuroscience) of the Universidad Internacional de Andalucía (International University of Andalucía) (Huelva), whose master’s and doctoral programs are currently used at the Universidad Pablo de Olavide (Pablo de Olavide University) of Seville (Delgado, 2004; Muñoz et al., 2005; Pérez-Rincón, 2004; Vargas Rangel, 2006).

Known in the guild as the father of psychophysiology in Mexico, Fernández Guardiola contributed to the study of brain physiological processes that generate mental functions. Much of his research was developed by exploiting in his experiments the “on” model (*kindling*) to explore the electrophysiology of sleep, epilepsy, and pain. His main lines of research explained the role of lattice formation in sensory information processing, epilepsy pathophysiology, the role of endogenous opioids in different brain functions, the influence of melatonin and thyroxine-releasing hormone on the brain, and the formation of consciousness (Colotla, 2016; Delgado, 2004; Fernández-Mas et al., 2009; Vargas Rangel, 2006).

Throughout his life, Fernández Guardiola was not only a scientist. In Nicaragua he was a professional soccer player, and as a follower of that sport, he was a fan of Real Madrid and the Pumas of UNAM. As a regular reader and lover of poetry, at his home in Cuernavaca he met various personalities from the intellectual, political, artistic, and cultural world. Some people claim that Gabriel García Márquez (1927–2014) wrote “One Hundred Years of Solitude” on a typewriter borrowed by Fernández Guardiola and that he inspired the character of the gypsy Melquíades in the novel that gave the Premio Nobel (Nobel Prize) to the Colombian writer (Delgado, 2004; Fernández-Mas et al., 2009; Pérez-Rincón, 2004).

 Psychodrama

Niksa Fernandez, in 1951, entered the University of Chile where she studied Pedagogy in English, finishing her studies in 1955. She began studying

psychology at the same University. During her student life, she was an activist in pacifist movements and the defense of human rights. In 1957, 2 years before finishing her studies, she married Aurelio Rodríguez (1931-). She traveled to Venezuela for the first time, as her husband held a position in Maraven, an oil company subsidiary of *Petróleos de Venezuela, S.A. (PDVSA)* (Venezuelan Petroleum). She returned to Chile to defend her thesis, entitled “The phenomena of attention and habituation,” and obtained her degree as a psychologist in 1960. She returned to Venezuela again where she finally settled, developing a long professional career.

Her first professional job was as a clinical psychologist at the *Consejo Venezolano del Niño* (Venezuelan Council for Children) in 1963. She worked at the *Ministerio de Sanidad y Asistencia Social* (Ministry of Health and Social Assistance) where she directed the *Departamento de Psicología* (Department of Psychology) at the *Centro de Salud Mental de El Peñón* (Mental Health Center of El Peñón) (1965). She became Professor of Clinical Psychology at the *Universidad Católica Andrés Bello (UCAB)* (Andrés Bello Catholic University), where she remained for more than 20 years (1971–1992).

She acquainted herself in the world’s leading psychotherapeutic approaches of the time. In the United States, she trained as a Psychodramatist at the *Psychodrama Institute* in Beacon (1972–1974), with the creator of this psychotherapeutic school, *Jacobo Levi Moreno* (1889–1974), and his wife, *Zerka Toeman Moreno* (1917–2016). Moreno nicknamed her “the Muse of Caracas.” In that same period, she specialized in Transactional Analysis, Group Dynamics, Gestalt Therapy, and Family Therapy, in addition to obtaining a Master’s Degree in Humanistic Psychology at California State University in 1982, where she received classes with *Virginia Satir* (1916–1988), creator of systemic psychotherapy and outstanding representative of the humanistic movement.

In 1974, accompanied by *José Geller* (1931-), she initiated the training program in Psychodrama in Venezuela, founded the *Instituto Venezolano*

de Psicodrama y Psicología Humanista (Venezuelan Institute of Psychodrama and Humanistic Psychotherapy), whose proposal was based on the dissemination of the model by applying continuous training strategies for adults, based on seminars and intensive marathons where attendees live together for full weekends, promoting the process of personal immersion in the Therapeutic Psychodrama. After Moreno’s death, he continued in contact with the psychodrama movement, coordinating and participating in updating events inside and outside the country.

At the end of that same decade (1979), Professor Fernández, together with a group of Venezuelan psychotherapists, founded the *Instituto Venezolano de Gestalt* (Venezuelan Institute of Gestalt) (IVG), where she developed activities as a teacher and codirector.

In 1980, she became a professor of the master’s degree in Psychology at the *Simón Bolívar University* (1984–2002). Parallel to teaching, she carried out a wide range of activities in Organizational Consulting and Professional Development. In the 1990s, when the Venezuelan Institute of Psychodrama and Humanistic Psychotherapy was dissolved, he founded the *Escuela Venezolana de Psicodrama* (Venezuelan School of Psychodrama) (EVP), based in Caracas, Maracaibo, and Barquisimeto.

This nonprofit association was born with the mission to disseminate the model in the country and train professionals as psychodrama facilitators. This training is provided at three levels: experiential, theoretical-technical training, and applied research. The institution also edited five issues of the *Cuadernos de Psicodrama* (Psychodrama Papers), which were an important pathway in psychotherapy training, and in which Niksa Fernández played a central role.

Two clinical psychologists trained in the initial groups joined the teaching team: *Henry González* (1952-) and *Edwin Muñoz* (1958-), who became members of the EVP’s management team.

As a result of the work carried out, the EVP joined the *Foro Iberoamericano de Psicodrama* (Iberoamerican Psychodrama Forum) (FIP) in 2005 and, between 2007 and 2009, coorganized

the *VII Iberoamerican Congress of Psychodrama*, held in Quito, Ecuador in 2009.

Simultaneously to her work and academic activity, Fernandez graduated as a Jungian Analyst in 1998 and became a member of the International Association for Analytical Psychology (IAAP) of Zurich and of the Sociedad Venezolana de Analistas Jungianos (Venezuelan Society of Jungian Analysts), where she was Vice-President (2003–2005) and President (2005–2007). She is currently an honorary member of the Sociedad Chilena de Psicología Analítica (Chilean Society of Analytical Psychology) (SCPA) and Supervisor of Jungian Analysts approved by the IAPP.

In 2013, she published the book *Psicodrama Arquetipal* (Archaeotypal Psychodrama), which integrates the theoretical foundations of Jungian Analytical Psychology with Moreno's psychodramatic methodology. From this theoretical proposal, she designed the "Archaeotypal Psychodrama" Training Program which she taught during 2015–2017. Since 2009, she is a guest professor at the Facultad de Teatro (Faculty of Theatre) of the Universidad de Chile (University of Chile), where she teaches Psychodrama in the Postgraduate Program of Dramatherapy. Annually, she teaches the workshop "Archaeotypal Psychodrama with Fairy Tales" as part of the Diploma of Analytical Psychology at the Pontificia Universidad Católica de Chile (Pontifical Catholic University of Chile). She continues to practice private practice, in addition to developing a line of creative research on the collective unconscious, archetypes, and intermediary objects (Fernández, 2013).

She complimented her professional activity leading and supervising organizational, community, educational, and clinical interventions and continues to maintain relevant participation in international events in psychology, psychotherapy, group psychotherapy, and psychodrama.

Fernández Pardo, Gustavo

Born in Cuba, February 11, 1935

Died in Mexico City, May 20, 1991

Dolores Mercado Corona

Graduates School, Universidad Nacional Autónoma de México, Mexico City, Mexico

Keywords

Mexico · Experimental behavior analysis · Psychometrics

He was Gustavo's Fernández Bujía (1901–1983) and Carolina's Pardo Blanco (1902–1992) oldest child. His major in psychology was done at the Universidad Nacional Autónoma de México (National Autonomous University of Mexico) (UNAM).

He obtained his philosophical degree in 1970 from the School of Education of the University of Texas at Austin with a working paper entitled "A Behavioral Analysis of Conceptual Behavior" in which he applies the behavioral analysis to concepts task in a time when cognitive psychology was just starting.

After he obtained his PhD degree in Austin, Fernández returned to Mexico and became a professor and researcher at the Departamento de Psicología General Experimental de la División de Estudios de Posgrado (Department of General Experimental Psychology of the Division of Graduate Studies) in the Facultad de Psicología (Faculty of Psychology) (FP) (UNAM). Eventually he collaborated with the Universidad de Yucatán (University of Yucatan) and with Universidad Anáhuac (Anahuac University).

He was Luis Lara Tapia's assistant at the Colegio de Psicología (Psychology College) (part of the Facultad de Filosofía y Letras [Faculty of Philosophy and Literature]) in UNAM. Later, Luis Lara Tapia influenced him to transform the Colegio de Psicología (Psychology College) into the present FP.

In the early 1960s, the young Xalapa group of psychologists (Victor Alcaraz, Antonio Gago, Emilio Ribes, Florente López, Serafín Mercado, Francisco Montes, and María Antonieta Maldonado) marked the beginning of the Experimental Behavior Analysis in Mexico. They created the Departamento de Psicología (Psychology Department) at the Facultad de Ciencias (Science Faculty), in the Universidad Veracruzana (University of Veracruz) Xalapa campus, a place where Experimental Behavior Analysis in México was born. In 1966 another important group of behavior analysts was incorporated, led by Gustavo Fernández Pardo, Javier Aguilar Villalobos, and Arturo Bouzas (Martínez 2006).

His strong background in quantitative analysis and evaluation allowed all his work to be within the most rigorous standards of the scientific methodology. The strength of his methodological work was the result of the combination of the methods of Experimental Behavior Analysis, Experimental Psychology, and Psychometrics learned at the Colegio de Psicología (Psychology College) at the UNAM, knowledge that would be widened with his doctoral studies.

With great creativity in approaching the work of research, he covered a wide range of topics, among them are complex and mediated learning (as contingency-shaped or rule-governed behavior, discovery learning, subjective probability, learning, and language usage), health psychology (risk factors for coronary diseases, primary and secondary prevention for diabetes, immune capacity on elderly people), and psychometry.

He developed the Personality Factors Guide GFP, to measure personality type A, a psychometric test in which personality type A is considered a risk factor for coronary diseases. It measures its components: hostility, temporary urgency, and perfectionism.

Fernández Pardo was against publishing to obtain incentives and meet the productivity demands without putting quality in the first place. He emphasized that the reason to publish was to have something really important to say.

Under his supervision the Escuela Activa Integral A.C. (Comprehensive Active School) was created in 1972 in Culiacan City. Its pedagogy was based on the principles of the Experimental

Behavior Analysis. As a teacher, Fernández Pardo was not satisfied by only communicating because he considered himself a formative educator. His teacher-student connections were singular. His aim was that the student discovered the knowledge so that learning was well consolidated and that this discovery was very significant and generated motivation for the continuous search for knowledge. His success criteria to know if there had been learning were that the students were able to teach and apply critically what they have learned.

Lara Tapia (1993) reminded him like this: “He was a great leader, teacher and friend who taught us how virtues of an only qualified one, can make possible a duty for which many dozen men would be required. . . he taught us that science is the correct place for psychology, without prejudice of it humanistic sense” (Urbina 1993, p. 20).

On his way through Mexican psychology, Fernández Pardo taught his students that psychological topics should be approached from a rigorous scientific perspective, a perspective of science and psychology which would allow them to take one step further from any commonplace. With great generosity he taught his students not to repeat, but to innovate.

To conclude, we like to evoke the phrase he liked to be introduced with whenever someone talked about him: “He reads Quevedo.” Francisco de Quevedo was a poet of the Spanish classical literature, whose work is a challenge for intelligence and sensibility.

Fernández-Álvarez, Héctor Manuel

Born in *Buenos Aires, Argentina, on July 27, 1944*

Claudia Bregman

Fundación Aiglé, Buenos Aires, Argentina

Keywords

Argentina · Fundación Aiglé · Psychotherapy · Psychotherapy trainer · Research · National and international organizations · Journal editor

Fernández-Álvarez was born in a family of Spanish immigrants, who faced economic hardships and promoted university education of their two children. He developed professionally and raised a family in the city of Buenos Aires.

Finishing his high school at Escuela Superior Carlos Pellegrini (High School Carlos Pellegrini) in 1961, Fernández-Álvarez began university studies in the humanities at the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities) at the Universidad de Buenos Aires (University of Buenos Aires, UBA). He soon switched to the undergraduate Psychology program at the same university and graduated with a degree in psychology in 1967. In 1995, he obtained his doctoral degree in psychology, from the Universidad Nacional de San Luis (National University of San Luis, UNSL). His doctoral dissertation analyzed the social representation of psychotherapy by medical physicians.

During the earlier years of his professional career, Fernández-Álvarez sought to achieve an expansive and eclectic clinical training. He was a graduate trainee at Hospital de Clínicas José de San Martín (Clinical Hospital José de San Martín), where traditional psychiatry coexisted with shock therapy for hospitalized patients, and a psychotherapy approach based on Binswanger existential analysis. He trained in child psychotherapy at Hospital Piñero (Piñero Hospital) and completed graduate training at the Hospital Neuropsiquiátrico Dr. J. T. Borda (Neuropsychiatric Hospital J. T. Borda) for severe conditions. He

specialized in an approach that combined Kleinian psychoanalysis with models of social psychiatry. With Cleto Santa Coloma (1946–2021), one his first supervisors, Fernández-Álvarez worked in the working class neighborhood of Isla Maciel, in Buenos Aires, through the application of Harry Stack Sullivan's Interpersonal Theory, to help patients with severe mental health illness. Fernández-Álvarez's first paid work was in a private clinic dedicated to serve children with autism.

Fernández-Álvarez began teaching at 19 years of age, as assistant to José Itzigsohn (1924–2018) in the course of General Psychology at UBA. Before graduating, he was an assistant in the program chaired by Emilia Ferreiro (1937–), a disciple of Jean Piaget (1896–1980), whose research focused on the relation between thought, cognition, and language (Colli, 2006).

At the roots of Fernández-Álvarez's professional development, there are diverse theoretical and applied perspectives, which greatly contributed to the search of an integrative approach in mental health. Fernández-Álvarez recognizes those who played a key influential role in each of the approaches: José Itzigsohn in the reflexology movement, Jorge Saurí (1932–2003) in the humanistic-existential approach, and León Ostrov (1909–1986) in psychoanalysis, among others (PSIENCIA, 2009).

Throughout his career, Fernández-Álvarez has developed a prolific educational career as educator in Argentine universities as well as in Chile, Ecuador, Spain, Guatemala, Panamá, and Uruguay. He obtained his first Chair professorship in 1968, at age 23, at Universidad de Belgrano in Buenos Aires, Argentina, where he taught for almost 50 years. He began by teaching Psychometrics, and since 1986, he led the Methods and Psychotherapeutic Techniques course, previously chaired by León Ostrov.

Fernández-Álvarez has been a key figure in the establishment of psychotherapy practice and research in Latin America. His work can be best understood in the context of the challenges in which it emerged: during the time in which a military dictatorship took hold of Argentina, and

created an oppressive climate, with thousands of citizens in exile or detained and disappeared. Fernández-Álvarez is a founding member and Honorary President at Fundación Aiglé, the place where he directs clinical services, teaching, and research. Fundación Aiglé, which means "torch" in Greek, created in 1977, under the initial name of Centro de Investigaciones Psicopatológicas (CIP) (Center for Psychopathological Research), was a response to the expulsion of many professors, from public universities, by the de facto government (Consoli et al., 2013). Fundación Aiglé was conceived, by Fernández-Álvarez and a group of colleagues from various backgrounds, as an "inner exile." It began as a refuge for freedom and tolerance, to practice and teach psychotherapy, as well as a place to foster the debate of ideas. Fundación Aiglé played an active role in creating an alternative to the dominant thought in mental health and psychotherapy of the time in the region. Today, Fundación Aiglé is an organization committed to excellence in the field of psychotherapy and promotes the values of solidarity and cooperation among participants, thus taking the institutional form of a collective production. This signature approach is also present in the Fundación Aiglé centers in Guatemala and Spain.

The organizing of the First Congress of Psychotherapy of Argentina, in 1981, at the Universidad de Belgrano, with the participation of Hans Eysenk (1916–1997) and Rubén Ardila (1942–), was a transcendental event (Consoli et al., 2013; Gómez & Esnal, 2015).

Fernández-Álvarez promoted Aiglé to have a central role in the promotion of new and valuable ideas through the organizing of activities with internationally renowned referents in the field (Fierro et al., 2018). Over 100 distinguished signatures are recorded in the visitors' book at Fundación Aiglé. Such interactions have allowed the development of relationships and cooperation agreements for joint activities. As an example of such collaborations, Fernández-Álvarez currently codirects the Master in Multidisciplinary Intervention and the Graduate Training Program in association with Universidad de Valencia

(University of Valencia), Spain. Fernández-Álvarez also participates in the Obsessive Compulsive Cognitions Working Group, directed by David Clark, at the University of New Brunswick, Canada.

In the early 1980s, Fernández-Álvarez introduced Cognitive Therapy in Argentina. His integrative vision led the way to the development of an integrative approach to psychotherapy, and the ideas were published in the 1992 book *Fundamentos de un modelo integrativo en psicoterapia* (Fundamentals of an integrated model of psychotherapy) (Fernández Álvarez, 1992). The details of the program were systematized in the book *Integración y salud mental: el proyecto Aiglé* (Integration and mental health: The Aiglé project), first edition in 2008 (Fernández-Álvarez, 2015).

The thinking of Fernández-Álvarez is widely integrative by nature and extensive in its influence and reach. It promotes a model that does not operate in a reductivist manner regarding different approaches. It rather relies on the different approaches through a theoretical understanding based on certain organizing principles:

(a) a broad information processing framework, (b) interventions focused both on the behavioral and experiential level, and (c) a psychopathological model organized around the central role of personality (Fernández-Alvarez & Fernández-Alvarez, 2017).

Fernández-Álvarez deserves recognition for his dedication to the development and training of psychotherapists. He has created and directs a graduate training program in association with national universities in Argentina and the Ackerman Institute for the Family in New York City.

Aware of the deep social and economic inequalities in the world, Fernández-Álvarez has been leading, for over 25 years, the PATER program (Spanish-language acronym for Therapeutic Care Program for People with Limited Resources). The PATER program aims to help reduce the negative health impact experienced by people who deal with the dual problem of

mental health illness and limited economic resources.

Fernández-Álvarez's interest in research is connected to his search for better outcomes in clinical practice. The research programs he directs are Practice Oriented Research (POR). The purpose of POR is to facilitate the engagement of clinicians in the creation, development, design, and implementation of projects to be carried by or with researchers.

Fernández-Álvarez studied variables traditionally neglected in empirical research, specially variables tied to the personal style of the therapist (PST). The PST was operationalized as a construct through the questionnaire of the personal style of the therapist (PST-Q). The PST-Q was translated to English and Portuguese, and utilized in various countries. There is evidence of its value as a moderating variable in psychotherapy outcomes, and of its capacity for discrimination among psychotherapists based on their tasks, theoretical orientations, and experience.

Fernández-Álvarez directs the Treatment Effectiveness Program. The purpose of this program is to evaluate treatment effectiveness for treatments designed based on the Integrative Model of Psychotherapy of Fundación Aiglé. The program assesses processes and outcomes of psychotherapy and follow-ups of completed treatments.

Leadership skills, and recognition by colleagues, brought Fernández-Álvarez to promote the creation of national associations, like AATC (Asociación Argentina de Terapia Cognitiva – Argentine Society of Cognitive Therapy), and Latin-American societies like ALAPCCO (Federación Latinoamericana de Psicoterapias Cognitivas y Conductuales – Federation of Latin American Cognitive and Behavioral Psychotherapies), a conglomerate of National Associations of Cognitive-Behavioral Psychotherapies in Latin-America, also ALAPSI (Asociación Latinoamericana de Psicoterapia Integrativa – Latin-American Association of Integrative Psychotherapy), and FLAPSI (Federación Latinoamericana de Psicoterapia – Latin-

American Federation of Psychotherapy) (Fernández-Álvarez & Bregman, 2018).

Fernández-Álvarez has served in prominent positions in scientific and professional organizations: President of the Sociedad Interamericana de Psicología (Interamerican Society of Psychology, SIP, 2003–2005), President of the Capítulo Latinoamericano de la Sociedad para la Investigación en Psicoterapia (South-American Chapter of the Society for Psychotherapy Research, SPR, 2003–2004), and Coordinator in the Education and Training Committee of the Society for the Exploration of Psychotherapy Integration, SEPI (2014–2016). Fernández-Álvarez's work has been published in 18 books of both his own and collaborative authorships, in over 100 articles in scientific journals, and in 40 book chapters.

For 27 years, Fernández-Álvarez directed the *Revista Argentina de Clínica Psicológica* (Argentine Journal of Clinical Psychology), a publication that reached international prestige given by index data bases like Clarivate, PsycInfo, and Scopus.

Fernández-Álvarez received important international and national awards. In 2016, Fernández-Álvarez received the Award for Distinguished Contributions to the International Advancement of Psychology, by the American Psychological Association (American Psychological Association, 2016). In 1999, he received the Interamerican Psychologist Award by the Interamerican Society of Psychology. In 2002, he was awarded the Sigmund Freud Award of the city of Vienna. In 2013, the Society for Psychotherapy Research recognized him with the Senior Career Award. In 2021, Fernández-Álvarez was one of the 200 graduates from University of Buenos Aires to receive a special recognition in the university's bicentennial anniversary. In 2021, the UNSL bestowed upon him an Honorary Doctoral degree in recognition for his trajectory. In 2022, the Society for the Advancement of Psychotherapy, Division 29 of the American Psychological Association, granted him the Distinguished Award for the International Advancement of Psychotherapy.

To conclude, Fernández-Álvarez is a clinician, educator, research supervisor, and mentor of various generations of therapists. He is engaged and recognized internationally. He is known for his intellectual honesty and generosity. The development of the Cognitive-Integrative Model in psychotherapy is one of his valuable contributions to the mental health field. He also has played a valuable role in the promotion of research in psychotherapy oriented by clinical practice.

In the socio-professional arena, Fernández-Álvarez continues to rally colleagues to advance the profession to its highest scientific status. Fernández-Álvarez is a tireless mental health worker who has always understood, and transmitted, that effort is a realization and not a sacrifice.

Ferreira França, Eduardo

Born *Salvador, (Bahia, Brazil), 8 June 1809*

Died *High Sea, 11 March 1857*

Nádia Maria Dourado Rocha

Universidade Federal da Bahia, Salvador, Brazil

Keywords

Brazil · Psychology of the mental faculties

A member of a prominent family in Bahia's society, Eduardo Ferreira França was probably one of the first Brazilians with the possibility of studying in another country, since, during the colonial period, those born here could only study at the University of Coimbra.

No record of his school life in the period preceding the university course has been found.

He attended the Faculty of Medicine of Paris, where he received a solid naturalist education. He finished the course in 1836, presenting the thesis *Essay on the influence of food and drink on man's morale*. According to Blake (1893), this thesis was translated and published in 1851 by Dr. João Ferreira de Bittencourt e Sá. It has not, however, been located so far. It is possible that it disappeared in the fire that, in 1911, practically destroyed the collection of the Biblioteca da Faculdade de Medicina da Bahia (Bahia's Medical School Library). It should be noted that Portugal did not allow the creation of higher education institutions in Brazil, which only occurred in 1808, when the Royal Family arrived. In Salvador, D. João, then Prince Regent, authorized the creation of the Escola de Cirurgia da Bahia (Bahia's School of Surgery), currently the Faculdade de Medicina da Bahia (Bahia's School of Medicine), at the Universidade Federal da Bahia (Federal University of Bahia).

When he returned to Salvador, in 1835 he became professor of the Seção de Ciências Acessórias (Accessory Sciences Section) and lecturer by competition of Química Médica e Princípios Elementares de Mineralogia (Medical

Chemistry and Elementary Principles of Mineralogy) at the Faculdade de Medicina da Bahia (Bahia's School of Medicine) (Oliveira, 1942). He developed works seeking to identify elements of the environment that could explain people's behavior, a concern expressed since the elaboration of his inaugural thesis.

He was director of the Gabinete de História Natural da Bahia (Natural History Cabinet of Bahia) (Paim, 1972) and deputy both in the then Assembleia Provincial da Bahia (Provincial Assembly of Bahia) (1838–1839/1840–1841) and in the Assembleia Geral do Império (General Assembly of the Empire) (1848–1854). Due to his parliamentary activity he became interested in public health issues, expressed in the works: Influence of putrid animal emanations on man (1849) and Influence of swamps on man (1850).

According to Paim (1972), it was the parliamentary activity that led him to reflect on the issue of human freedom, and to write the book entitled *Investigações de Psicologia* (Psychology Research), published in 1854 in Salvador, capital of the Province of Bahia, presented in two volumes, with 284 and 424 pages, respectively, structured as follows: (1) Phenomena of Consciousness and Faculties; (2) Modifiability (sensibility, affectivity); (3) Motivity (movements); (4) Intellectual Faculties I (internal and external perception, relations between them, of the qualities of bodies and habit); (5) Intellectual Faculties II (cerebral sensitivity, sleep and dreams, consciousness, reason, memory, imagination, abstraction, composition, generalization, judgment, faculty of the future, faculty of faith, of the idea); Instincts (physical, intellectual, social, and moral); and (6) Will. In the bibliography of this work 16 authors were referenced more than three times, the most frequent being Adolphe Garnier (1801–1864), Étienne Bonnot de Condillac (1715–1780), and Joseph Tissot (1801–1876), with 17, 11, and 10 mentions, respectively.

As for the nationality of the authors cited by Ferreira França, the absolute majority were French, with one from other countries (Germany, England, and Italy) and two from Scotland. Philosophers constitute almost all the authors, the

exception being two from the medical field. This predilection for authors from France is not surprising. Since the eighteenth century, this country had already been influencing, especially politically, the Brazilian ideology. Santos (1905), in the first Memória Histórica da Faculdade de Medicina da Bahia (Historical Memory of the Bahia's School of Medicine), referring to the year 1854, points out that it was not only usual for students to go to Europe for improvement, but there was also, in the Faculdade de Medicina da Bahia (Bahia's School of Medicine), a predominance of the doctrines of the Faculty of Medicine of Paris. Fonseca (1893), in his Memória Histórica (Historical Memory) of 1891, when dealing with the collection of the Biblioteca da Faculdade de Medicina da Bahia (Bahia's Medical School Library), informs that most of the books were by French authors, and that of the 23 periodicals available, 12 were from that nationality. In a study on the intellectual genealogy of the inaugural theses presented to the Faculdade de Medicina da Bahia (Bahia's School of Medicine), Rocha (2001) analyzed the citations of 26 of them, published from 1852 to 1900, verifying that 1224 authors from 14 countries were cited, 50% of which were French.

There is another factor to consider – Ferreira França was a student at the Faculty of Medicine of Paris and must have lived with people who were the basis of his work, such as Adolphe Garnier, (1801–1864), François Achille Longet (1811–1871), Joseph Tissot (1801–1876), Pierre Gerdy (1787–1856), and Victor Cousin (1792–1867). Gerdy was even a docent in this house.

The mentioned book contains reflections on experimental psychology, and it was his intention, which did not materialize, to write another book dedicated to what he called rational psychology.

One fact worth mentioning is that he belongs to a family that has been dedicated to university teaching since the beginning of the nineteenth century. The first two generations were engaged in training doctors, and from the third generation on, until the present day, in training lawyers.

Eduardo Ferreira França published the book *Psychology Research* in Salvador, capital of the then Province of Bahia, in 1854, and there is no record, to date, of any work on this science having been published previously in Brazil. Just to have a parameter, it was published 46 years before the *Principles of Psychology*, by the American William James (1842–1910). Without a doubt, this is his main contribution to Psychology in Brazil.

Ferreira França died on the high seas during a voyage in search of medical treatment in Europe.

Ferreiro, Emilia

Born in *Buenos Aires, Argentina, on May 5, 1937*

Ramiro Tau

Faculté de psychologie et des sciences de l'éducation, Université de Genève, Geneva, Switzerland

Keywords

Argentina · Switzerland · Mexico · School of Geneva · Genetic psychology · Development · Psycholinguistics literacy · Writing systems · Education

Emilia Ferreiro was a psychologist who graduated from the *Universidad de Buenos Aires* (University of Buenos Aires), Argentina (1962); she belonged to the first generation of psychologists in the country. At the Université de Genève (University of Geneva), Switzerland, she obtained a second degree in Psychology (1968) and then a doctorate in psychology specializing in Genetic Psychology (1970), with a dissertation on the temporal relationships in child language, directed by Jean Piaget (1896–1980), who wrote a foreword for its publication (Ferreiro, 1971).

After her studies in Argentina, the military intervention of the universities in 1966 put an end to their autonomy. The political and institutional tension in Argentina led her and her husband, the physicist and epistemologist Rolando García (1919–2012), to go into exile (González, 2019). Therefore, in 1967 she settled in Geneva, where she first worked as an assistant for Hermine Sinclair, she collaborated with Bärbel Inhelder and finally became the only Latin American with a doctoral thesis supervised by Piaget (Ferreiro, 1999). At the same time, she collaborated with courses in psycholinguistics and was in charge of a course in psychoanalysis for undergraduate psychology students at the University of Geneva. During the last two years of that stay (1969–1970), she also worked as a researcher at

the International Centre for Genetic Epistemology (UNIGE, 1968, 1970, 1972).

After concluding her doctoral studies, she returned to Argentina in 1971, only for four years, as a new military coup d'état took place in 1976. During this short period, she worked intensively. Her previous interest in psycholinguistics and children's thinking moved towards the problem of school failure, especially considering the role of literacy and written production. At a time when reading and writing were conceived as perceptual and motor control activities, she proposed new hypotheses. Through innovative interview procedures, she obtained data suggesting that small children were able to think about the writing system in unexpected ways. Also during this period, she co-founded, with Gregorio Klimovsky and Rolando García, the IPSE (Institute of Psychology and Genetic Epistemology) in 1972. Created in Buenos Aires, this organization developed training, research, and publication activities during these four years. Within this institutional framework, in 1973, she started a study and research group composed of volunteers with an initial degree in Psychology or Pedagogy. In 1974, she was appointed as Professor of Genetic Epistemology and Theory of Intelligence at the University of Buenos Aires, where she introduced a renewed view of Piagetian work (Tau, 2021). By the end of 1974, for political reasons, this university chair was closed, and its members were removed from their positions. In 1975, the social violence that preceded the 1976 coup d'état made inevitable the closure of the IPSE. Once again, Ferreiro had to go into exile in Geneva, where she gave lectures (1975–1976) and worked as a visiting professor and head of practical work at the Faculty of Psychology and Educational Sciences (1977–1979). Emilia Ferreiro could have stayed forever in Geneva, but administrative restrictions made it extremely difficult for a foreigner, even with Piaget's support, to obtain a competitive tenure position (E. Ferreiro, personal communication, August 2021). Working at a distance, and using data previously obtained in Argentina, she published, together with Ana Teberosky, *Los*

sistemas de escritura en el desarrollo del niño (Literacy before Schooling) (Ferreiro & Teberosky, 1979), later translated into English (Ferreiro & Teberosky, 1982). The book gave rise to a whole program of research on the development of writing that Ferreiro has expanded over the following four decades (Vidales & Maggi, 2006). During this period, some of the members of the small group she formed in Argentina were also forced to go into exile: Delia Lerner (Venezuela), Ana Teberosky (Spain), Liliana Tolchinsky (Israel), Ana María Kaufman (Mexico), a situation that allowed a series of comparative researches. Meanwhile, instead of remaining in Switzerland, Ferreiro decided to move back to Latin America, and since 1979 until today, she is based in Mexico, working at the CINVESTAV (Center for Research and Advanced Studies of the National Polytechnic Institute).

During her career, she has been invited to lecture and teach in Latin American and European countries, as well as in Canada, the United States, and Israel. Her work, composed of more than 20 books and a hundred articles and chapters, has been translated into several languages, and some of her publications have become classics of psychology and education, especially in Latin America, where some of her books have been reprinted more than 30 times. She was honored with many prizes and distinctions, including the Guggenheim Fellowship (1972) and seven Honoris Causa Doctorates. She is currently Emeritus Researcher of the SNI (National System of Researchers, Mexico) (2008) and Emeritus Researcher of the CINVESTAV (2010).

Figuroa-Nazuno, Jesús Guillermo

Born *Huayacocotla, Veracruz (Mexico), 30 June 1945*

Died *Mexico City, 8 March 2018*

Esther Vargas-Medina

Universidad La Salle, Ciudad de México, México

Keywords

Mexico · Human cognition · Natural semantic networks

Dr. Jesús Figuroa-Nazuno obtained his degree in Psychology from the Colegio de Psicología (College of Psychology) of the Facultad de Filosofía y Letras (Faculty of Philosophy and Literature) of the Universidad Nacional Autónoma de México, UNAM (National Autonomous University of Mexico), in Mexico City in 1971. He obtained a Doctoral Degree in Philosophy (Ph.D.) from the University of Edinburgh, Scotland, in 1979, with his dissertation “A Critique of Memory Research,” and a Doctorate of Science from the same university, in 1980.

During his studies in Great Britain, he published some articles in European journals. On his return he was seen as someone “creative and restless; recently he has explored reconstruction in memory,” as Díaz-Guerrero pointed out (1984, p. 96).

In his academic journey at UNAM, he participated in promoting the work of the recently founded laboratories in the nine campuses of the National High School as part of “the plant of young people who prepared the practice teachers in these campuses” (Lara Tapia, 1993, p. 21).

His concern for cognitive psychology was always present (cognitive paradigm of human information processing), in frank academic opposition (not personal) to those whom he placed as “behaviorists” and “psychoanalysts” (Ayala Velázquez, Héctor; 1983; Castañeda & López, 1983). He was the promoter of research groups

based on the recruitment of young students: he was always surrounded by young people, and he trained several generations of graduates, teachers, and doctors, who continued with the academic and research development in the disciplines he cultivated. He was a true formator of talented young people (see Venegas & Augusto, 2018; Reidl, L., & Echevestre, M., 2004).

One of the genuine and original developments in his research groups was the theory and technique of “natural semantic networks” (RSN, for its Spanish acronym) (Figuroa et al., 1976), an innovation for the study of meaning in groups and individuals, that is, a form of study of real knowledge in humans, which had multiple applications in education, psychology, social sciences, engineering, computers, administration, physics, and mathematics teaching, in many countries, especially in Spanish-speaking countries. He maintained this development throughout his academic life, which involved 42 years of uninterrupted work. RSN is a form of knowledge representation, which manages to maintain the relationship between the processes of acquisition and forgetting of information, as well as a powerful instrument for the study of meaning, based on a theory of human memory, whose specific foundation is the process of reconstructive memory.

The academic work carried out at the UNAM Social Psychology Laboratory between 1985 and 1992, initially led by Jorge del Valle and later by Dr. Pablo Fernández Christlieb, should be highlighted (Díaz-Guerrero, 1983). He created space for the production of new winds in the development of Mexican collective psychology, which flourished at the Universidad Autónoma Metropolitana-Iztapalapa (UAM-I) (Autonomous Metropolitan University) and which amalgamated in the Sociedad Mexicana de Psicología Social (SOMEPSO) (Mexican Society of Social Psychology) in 1985, where Dr. Figuroa collaborated from the beginning. With the expansion of the curricular influence of the Faculty of Psychology of the UNAM, in 1974 the Social Psychology career was founded at the UAM-I, where Jesús Figuroa joined in 1984 and remained until 1989. There he founded the Research Group on Basic Processes in Psychology and then the Laboratory

of Complex Systems, which was later transferred to La Salle University, when he joined the Faculty of Engineering as a researcher.

At UAM-I he developed work in the study of complex political processes, collective psychology from the approach of simulation of particles in interaction, as well as basic psychosociological processes such as the study of social representations from the cognitive approach, attribution, choice, and social cognition (e.g., research on diffuse political support, perception of political phenomena). During this period, it managed to develop and extend the application scope of the natural semantic networks and continued to multiply its influence in the educational, social, community, and psychological fields. As his style of work, he managed to integrate students of social psychology, sociology, anthropology, linguistics, economics, mathematics, engineering, and physics, as well as from various institutions such as Escuela Nacional de Estudios Profesionales (ENEP) Zaragoza (National School of Professional Studies), UAM Xochimilco, UNAM, and La Salle University.

From 1989 to 1994 at La Salle University, he directed the Complex Systems Laboratory where he developed work on neural networks, connectionist systems, artificial intelligence, and parallel processing. He participated in the opening of the institutional Doctoral Program in 1991 and in laying the foundations for the opening of what was later called the La Salle University Research Centre.

In 1994 he joined the Universidad del Valle de México campus Lomas Verdes and later collaborated in the Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM) (Institute of the Technology and Higher Education of Monterrey) Campus Estado de México and in the Faculty of Engineering of the UNAM.

From 1996 until the date of his death, he collaborated in the Computer Research Centre of the Instituto Politécnico Nacional (CIC-IPN) (National Polytechnic Institute). The lines of research he developed during his last years were complex systems, artificial intelligence, neurocomputing, parallel processing, nonlinear dynamics, social development models, prediction of complex variables, big data, natural ontologies

at the Center for Simulation and mathematical modeling, automatic learning, and prediction models.

He directed more than 300 theses at the undergraduate level, 46 at the master's level, and 26 at the doctoral level. He published 8 books on different topics such as artificial intelligence, neurocomputing, information processing, and distance education. He coauthored around 600 national and international publications and presented more than 200 papers and keynote speeches in Mexico and abroad. He was a full-time researcher at UNAM, UAM Iztapalapa, Universidad La Salle, Universidad del Valle de México (Valley of Mexico University) Lomas Verdes, ITESM Campus Estado de México, and the National Polytechnic Institute.

He used to say and was a faithful believer of this maxim: "there are only two problems to solve in science: to know the universe and to know how we know that universe"; this allowed him to base his two scientific passions: Physics and Psychology.

Argentina-Psychotechnics-Institute of Professional Guidance

After high school, Gregorio Fingermann began his training at the Instituto Nacional del Profesorado Secundario (National Institute of High School Teachers) getting his degree as a Professor of Philosophy and Pedagogy in 1913.

Since then, he started working as a professor at several high schools such as “Domingo Faustino Sarmiento,” “Bernardino Rivadavia,” and “Carlos Pellegrini Business School” (1944) teaching courses on philosophy, psychology, and logic.

He worked as Head of the Psychology Laboratory at the Instituto Nacional del Profesorado Secundario (National Institute of High School Teachers) until 1944.

Since 1934, he carried out his task as Professor of Psychology at the Escuela de Servicio Social (School of Social Service) at the Museo Social Argentino (Argentine Social Museum University).

When the Instituto de Orientación Profesional (Institute of Professional Guidance) was created in 1925 by the Minister of Justice and Public Instruction Antonio Sagarna (1874–1949),

Fingermann was appointed Associate Professor to teach the course “Organization and Practice in Professional Guidance.” He also taught a course on “Psychology applied to Professions” over there in 1925.

He became a member of the “Argentinian Social Museum” holding the position of Director due to the departure of its former Director Carlos Jesinghaus (1886–1948) (Ibarra, 2014).

Fingermann has joined several national and international scientific meetings, participating not only actively but also enthusiastically in many theoretical discussions along his life.

He presented his paper *La escuela y la orientación profesional* (School and the Professional Guidance) at the Seventh Pan American Congress which took place in Mexico in 1935.

In 1938, he lectured on *La Psicotécnica, la organización científica del personal* (Psychotechnics, the scientific organization of administrative personnel) at the First Argentinian Congress of Administrative Rationalization.

He presented his paper named *La orientación profesional del inválido* (Professional Orientation for the Disabled) at the Second Conference for the welfare of the Disabled in 1946.

He also joined the First Argentine Congress of Psychology that was held in Tucuman Province in 1954 presenting his paper *La formación de especialistas en orientación y selección profesional* (The Training of specialists in Guidance and Professional Selection).

Fingermann was also the leading organizer and main *rapporteur* of the First and Second National Conferences on Psychotechnics held respectively in Rosario city (1938) and Santa Fe city (1942), Argentina.

In 1949, he took a tour around several scientific European centers involved in experimental psychology, applied psychology, and professional guidance and selection in order to find out and learn about their concepts on psychotechnics and its development. He was extremely interested in having a glance on what was going on over there.

That is why some years later he decided to go back to Europe to pay a visit to many psychotechnics institutes located in different European cities such as London, Cambridge, Oxford, Madrid, Rome, and Geneva.

He was even appointed Honorary Member of some of those European institutions which promoted and encouraged the enhancing of exchange of ideas and information between the European centers and the one in Argentina which was under his leadership.

Fingermann was also an accomplished writer. He devoted himself to exposing his ideas on articles which were opportunely published in several journals such as *Revista de Filosofía* (Philosophy Journal), *Monitor de la Educación Común* (The Common Education Monitor), *Infancia y Juventud* (Childhood and Youth), and *Boletín del Museo Social Argentino* (The Argentinian Social Museum Bulletin).

Being an enthusiastic admirer of theatre plays, he has written plenty of theater reviews as a collaborator of the Argentine newspaper *La Nación* (*The Nation*) for many years.

Fingermann was a full member of the Instituto Argentino de Seguridad (Argentinian Institute of Safety), the Sociedad de Psicología de Buenos Aires (Buenos Aires Society of Psychology), the International Society of Psychotechnics of Berna, the National Institute of Industrial Psychology, in London, the Association Internationale de Psychotechnics, Paris, the Interamerican Society of Psychology in New York, and an Honorary Member of Associação Brasileira de Medicina do Trabalho de Rio de Janeiro and the Centro Acadêmico de Filosofia of the Universidad Porto Alegre Brasil.

He has set up the Gabinetes Psicotécnicos (Psychotechnics cabinets) for the Recruitment Office of the Ministry of War and the Comisión Nacional de Aprendizaje de Menores y de Orientación Profesional (National Commission for Juvenile Learning and Professional Orientation) in Argentina.

Since he got his degree in 1913, Fingermann committed himself to the study of the experimental determination of human aptitudes regarding professional guidance (Fingermann, 1945).

He defined psychotechnics as a branch of psychology which through proper procedures can provide means to achieve ends of a certain value.

His main goal was to articulate the measurements of human being's aptitudes with the

nonexperimental areas. That is to say their psychological processes, relating them to culture and evaluative entities (Luque, 2004).

These ones were only accessible through psychological and philosophical concepts such as consciousness, will, affectivity, among others.

The Instituto de Orientación Profesional (Professional Guidance Institute) had the purpose not only to prepare technicians for professional selection but also to make them be able to guide young people towards the most proper careers regarding their physical and mental gifts and taking into account the professional needs of the country too.

He was a strong advocate of the development and use of psychotechnics in Argentina.

He was academically trained by Otto Schultz's from Würzburg University as well as by Carlos Jesinghaus from Leipzig University, being able to learn their experimental methods (Fingermann, 1954).

This knowledge allowed him to study different kinds of treatments related to psychological problems.

Fingermann has published numerous articles and essays which have been later collected in the book named *Estudios de Psicología y Estética* (Studies of Psychology and Aesthetics).

Acknowledged as one of the pioneers in psychological research in Argentina, Hermelinda Fogliatto specialized in personality assessment, vocational guidance, and scientific research methods in psychology.

Graduated in 1943 from the Escuela de Maestras Alejandro Carbó (Alejandro Carbó School Teachers), she taught in different public schools in the province of Córdoba until 1957 (Fogliatto, 1963). That year, her career took a

decisive turn when she came into contact with Horacio Rimoldi (1913–2006) who was a Visiting Professor at the Facultad de Filosofía y Humanidades (Faculty of Philosophy and Humanities) of the Universidad Nacional de Córdoba (National University of Córdoba) (UNC) and was additionally teaching courses for Maestros Normales (Elementary School Teachers) for the Ministerio de Educación (Ministry of Education) of that province. At that time, the academic was residing in Chicago (USA) working as Professor at Loyola University where he directed the Psychometric Laboratory.

The University of Córdoba, which had recently organized its undergraduate Psychology Program, hired him as an Extraordinary Professor to teach between 50 and 60 classes of psychotechnics and professional guidance. That course, which Rimoldi focused on psychological statistics, was the opportunity to undertake collaborations with local research groups that brought fruitful results in several research projects and new academic trajectories (Piñeda, 2020). Among them, it is worth mentioning the team led by Engineer Guillermo Fuchs (1917–1999) at the Centro de Investigaciones Acústicas y Luminotécnicas (Center for Acoustic and Lighting Research) (CIAL) of the Facultad de Arquitectura (Faculty of Architecture) at the National University of Córdoba which during the 1960s undertook interdisciplinary work with teachers and students of the Psychology Program (Piñeda & Scherman, 2016).

In that framework, Fogliatto became bound to Rimoldi and gained admission to the Loyola University Graduate School to begin his graduate studies there in September 1958. After 2 years in the Department of Education, he received his Master's degree in Education in June 1960. From that time on, she carried out research in the Psychometric Laboratory directed by Rimoldi. Also under his direction, and with funding from the Corporate Research Program of the Office of Education of the US Department of Health, Education, and Welfare, Fogliatto completed her doctoral dissertation on *Individual Differences and Thought Processes*, which she presented in 1963 (Fogliatto, 1963). As a result of this work, she

contributed to the development of the technique for assessing the dynamic problem-solving process. By identifying the sequence of questions (tactics) that the subject formulates to solve, she analyzed their difficulty according to the logical relationships and the languages used to formulate them, as well as the incidence of training in the process. Thus, she contributed to strengthen Rimoldi's hypotheses and technique and became a central reference for 11 other dissertations carried out at Loyola in the 1960s (Piñeda, 2018).

Returning to Argentina in 1965, Fogliatto joined the Consejo Nacional de Investigaciones Científicas y Técnicas (National Council for Scientific and Technical Research) (CONICET), created in 1958, whose emerging policies for the promotion of social sciences were intended to promote the development of scientific psychology (Piñeda, 2020). Fogliatto also joined the professorship of the Psychology Program in Córdoba. There, she was in charge of the "Research Methods and Techniques" and "Orientation and Professional Selection" courses, with the collaboration of the Italian professor Franco Murat (Altamirano et al., 2012), who had been part of the teaching staff and of the Instituto de Investigaciones Psicopedagógicas (Psychopedagogical Research Institute) in San Luis directed by Plácido Horas (1916–1990) supervising the undergraduate thesis of Eva Mikusinski (1921–2020). Together with F. Murat, H. Fogliatto methodologically advised several research works of undergraduate students, and also many investigations of different institutions linked to psychology, including some of those developed at the CIAL, such as that of Enrique Saforcada (1934-) (Piñeda & Scherman, 2016).

Fogliatto was one of the pioneers in vocational guidance in Argentina. She is credited with about 40 publications edited by the UNC on prediction of student performance, with profiessograms of all the programs taught at that university. She collaborated with the factorial analysis of several tests and the construction of professional interests' questionnaires and developed a computer program for vocational guidance (Pérez & Passera, 2004).

It has been pointed out (Altamirano et al., 2012) that, in certain circumstances, Fogliatto's scientific

contributions were in tension with the dominant academic culture in the country's psychology program: with a professionalist, clinical, psychoanalytical bias, sometimes permeable to radicalized political discourses. Thus, Fogliatto's vocational guidance approach encountered some resistance in the Córdoba psychology program, which shared that cultural bias. In fact, the clinical psychoanalytic model of vocational guidance developed by Rodolfo Bohoslavsky (1942–1977), successor of Nuria Cortada (1921–2013) in the head of the Servicio de Orientación Vocacional (Vocational Guidance Service) at UBA, had also been eclectically incorporated there. Additionally, in the 1970s, certain ideological resistance emerged from students and teachers who, from a leftist discourse, understood that Fogliatto represented an approach to a psychology that tends to be functional to the interests of the ruling classes encompassed in the US imperialism (Ale, 2017).

However, she also achieved a good repercussion among young people she trained as researchers, some of whom later joined the Centro Interdisciplinario de Investigaciones en Psicología Matemática y Experimental (Interdisciplinary Center for Research in Mathematical and Experimental Psychology) (CIIPME), directed by Horacio Rimoldi. By the early 1980s, this community of researchers at the National University of Córdoba was systematically producing new results. Thus, in 1998 they founded Laboratorio de Evaluación Psicológica y Educativa (Laboratory of Psychological and Educational Evaluation) (LEPE), and in 2001 the first issue of the journal *Evaluar* appeared, a periodical scientific journal of the laboratory devoted to the diffusion of studies related to psychological measurement (Medrano & Pérez, 2013).

To summarize, Fogliatto and her team developed a series of studies that allowed the elaboration of a set of professional and occupational information monographs on different university programs, later used by psychologists who were devoted to vocational guidance, all over the country (Altamirano et al., 2012; Piñeda, 2012). At the same time, a promising line of research started regarding the construction of specific tests for this field. The first studies sought to adapt the Kuder test and the Differential Aptitude Test (DAT) and

allowed them to notice the limitations of these foreign tests for the local assessment of young people (Fogliatto et al., 1980). Therefore, they focused on the development of a local test that in the 1990s was embodied in the Cuestionario de Intereses Profesionales (Professional Interests Questionnaire) (CIP), designed to assess teenagers professional preferences of adolescents in the final years of high school in Argentina, which in its subsequent versions (CIP-4) was adapted to contribute to the choosing of a specialty in high school. Its latest version includes an instrument for measuring vocational interests, a self-efficacy inventory for multiple intelligences, and occupational and academic information on university programs and specialties in the High School Polimodal level. This test was first developed on paper, and then a software was built for its running, the Computerized Vocational Guidance System, called SOVI, which was a significant psychological innovation for the region.

Her disciples have highlighted her creative and enterprising spirit, and her persistent work in the field of vocational and professional guidance (Pérez & Pássera, 2004). Hermelinda Fogliatto's tenacious dedication to science was complemented by her consecration to the Claretian lay movement in which she founded a day-care center for children from impoverished families (Seglares Claretianos, 2005).

Fontán Fontán, Buenaventura

Born *in Barcelona (Spain), March 21, 1926*

Died *in Medellín (Colombia), February 2, 1993*

Ricardo Pérez-Almonacid
Universidad de Antioquia, Medellín, Colombia

Keywords

Colombia · Psychotechnics · Programmed instruction · Educational psychology

Ventura Fontán grew up with two sisters in a warm family in Barcelona. He was 10 years old when the Civil War (1936–1939) began, which

led him to pursue his studies at home on his own. Once the war ended, he continued his secondary studies at the Instituto Balmes de Enseñanza Secundaria (Balmes Institute of Secondary Education).

Fontán thought that his mother expected him to be a diplomat and attended some law courses between 1944 and 1946 at the Universidad de Barcelona (University of Barcelona). After clarifying the expectations, he decided to drop out and enroll in what he was really passionate about. Immediately after, he entered the Philosophy Section of the Facultad de Filosofía y Letras (Faculty of Philosophy and Humanities), obtaining a bachelor's degree in 1951. His exams on Descartes, Berkeley, and the temporal and spatial finitude of the universe received a “Notable” rating. In addition to philosophy courses, it is also recorded in the university that he took courses in experimental psychology and rational psychology, which were offered as psychology studies in Spain at the time (Universitat de Barcelona, 1950). The orientation of these courses was that of the neo-scholastic of Font Puig. The university has testimonies that Fontán financed his studies by giving private lessons, because his family did not have the resources to pay for them.

Between 1950 and 1951, he studied a doctorate in the same section; he took monographic courses on pedagogy, the origin of man and his culture, Kant, and one of psychiatry at the Facultad de Medicina (Faculty of Medicine). His thesis was about the psychology of laughter, and it was directed by Ramón Sarró Burbano (1900–1993), who had been a student of Freud in Vienna. After graduation, he was an associate professor of psychology between 1952 and 1953 at the institute where he had previously studied and teacher of English at the Escuela de Altos Estudios Mercantiles (School of Higher Commercial Studies).

While at the University, Fontán met Emilia García, a student in the Romance Philology Section. She obtained a scholarship to make known the Spanish folklore in Medellín, Colombia. She spent 4 months there and received a job offer to teach languages in some universities. She also met the rector of the Universidad de Antioquia (University of Antioquia), who offered a position

to Fontán. Emilia returned to Barcelona and married Fontán, and they both settled in Colombia since 1953. They had four children. They were part of the few Catalans who emigrated to Colombia between 1946 and 1958, who markedly were people with academic credentials (Hernández, 2006).

In 1953, Fontán taught psychology and philosophy at the Liceo Antioqueño (Lyceum of Antioquia), a secondary school attached to the University of Antioquia. Two years later, in 1955, he taught Latin at the Faculty of Education of the same university. He worked at both places until 1957. At that time, he was interested in the relationship between philosophy and science (Fontán, 1955), being critical of the insistence of the first to impose itself as an independent and superior knowledge.

Fontán's most notorious contribution to psychology in Medellín and Colombia was the Centro Psicotécnico (Psychotechnical Center). This was a center that he and his wife founded in 1957. Its foundation took place in a very favorable environment. The Colombian government had created six institutes of psychological studies and professional guidance in 1954 because it had evidence that many students failed to choose their careers. During the 1940s, an interest in psychological measurement had been aroused in the country, probably driven by the foundation in 1939 of the Psychotechnics Section at the Universidad Nacional de Colombia (National University of Colombia) by Mercedes Rodrigo, who emigrated to Colombia from Madrid, Spain. Psychotechnics (term used in Europe for applied psychology) had a strong presence in Madrid and Barcelona since the 1920s, specially applied to professional guidance. Thus, at the end of the 1950s, Colombian psychology was fundamentally psychometrics applied to school and industrial matters (Rodríguez, 1998).

In 1956, the national government designated Wladimiro Woyno, a Russian psychologist based in Colombia, as coordinator of the Instituto de Estudios Psicológicos y de Orientación Profesional (Institute of Psychological Studies and Professional Guidance) of the Ministry of National Education in Bogotá (González, 1977).

In 1957, the same year of the foundation by Ventura Fontán of the Centro Psicotécnico (Fontán Psychotechnical Center), these institutes changed their name to that of Centro de Psicotécnica y Orientación Profesional (Psychotechnical and Professional Guidance Center). According to Rodríguez (1998), Woyno met Fontán in Medellín. Presumably, they met on the occasion of Woyno's position as the head of the psychotechnical centers. As a result of the meeting, Woyno decided to use, for professional guidance services, a Spanish version that Fontán had developed based on the Strong Vocational Interest Blank. Rodríguez (1998) comments that there was consensus that this version of Fontán became the best available test in the country for the purpose of career orientation.

The Psychotechnical Center was the first of its kind in the city of Medellín and became a benchmark for how to apply scientific psychology to school and industrial needs. It was presented as a center for consultation and advice in industrial psychology, career guidance, and educational problems. The Psychotechnical Center became a paradigm in those areas. Fontán worked for colleges, universities, and companies of all kinds. There are several testimonies of his work: outstanding businessmen who were guided in their work thanks to the advice of Fontán; the selection of students in some faculties, whose effectiveness was proved with regression models, as in the Faculty of Dentistry of the University of Antioquia (Fontán, 1963); the measurement of intelligence of students of the Faculty of Medicine of the same university (Fontán, 1959); and the training and adaptations of tests in the Servicio Nacional de Aprendizaje, SENA [National Learning Service] (Fontán, 1965), a public entity for job training, among others.

From the first years in the Psychotechnical Center, measuring verbal and nonverbal skills, Fontán encountered something systematic: the students showed regular deficiencies. They were not learning what was expected in their schools. Psychometrics had been a useful tool to detect this, but it did not allow him to do anything to remedy it. So, his interests began to migrate toward the psychology of learning, and he wanted

to carry this out with the same scientific obstinacy with which he made his measurements. It seems (Fontán, 1965) that an article published in the newspaper *El Tiempo*, originally written by G. B. Leonard and adapted by Mejía (1962), suggested a way of working, or at least, it enhanced his interest in what would become the core of his later work: Skinner's (1968) programmed instruction.

The new interest led him to carry out a systematic empirical approach to human learning. He diagnosed the causes of educational problems: the current educational system was created for collective and oral situations, without considering the natural laws of learning and, therefore, without effective teaching instruments, dependent of external aid, and using rigidly standardizing processes without inducing curiosity or intellectual enjoyment (Fontán, 1965, 1990; Roldán & Fontán, 1991). His proposal was, then, to build and quasi-experimentally test some innovations. For example, he designed and tested courses in reading, vocabulary, and spelling learning, with the support of his wife and other family experts in linguistics (e.g., Fontán & García, 1966). There is a record of at least two of these courses published in the form of books, about 400 "textos auto-didácticos-TAUS" (self-taught texts – STTs) and 60 prototypes (Roldán & Fontán, 1991; A. Roldan, his collaborator, personal communication, October 21, 2019). All of this material followed the basic idea of Skinner's programmed instruction with some modifications. In particular, Fontán designed the logical sequence of instruction with a more narrative and dialogic form, guided by Socratic maieutic. Likewise, the presentation was more heuristic, promoting the student to induce, by means of positive and negative examples, regularities and definitions. This led him to call his system "intrinsic pedagogy," which implemented a "socratized instruction," not only a programmed instruction (Fontán, 1965).

The work of the Psychotechnical Center, since the 1970s, focused, then, on what it called the Study Clinic: a project of diagnosis and intervention of different learning difficulties using its

pedagogical system, which today is known as the Fontán System. The system supports the need to rely on research on the principles of learning. Education needs to be personalized and motivated by a true intellectual enjoyment. The achievement of learning objectives is permanently evaluated at a level of excellence, but the learner is the one who defines when they are ready. The educator works as a tutor and not as a teacher, so it emphasizes self-teaching. Likewise, it places a strong emphasis on written language at all levels and areas of knowledge, as the tool par excellence for learning (cf. Furman, 2017).

The growing demand led him to transform his Study Clinic at the Fontán School Psychotechnical Center in 1985, conceived as an experimental educational entity. Nowadays, it is known just as the Fontán School and is located in Envigado, near Medellín, Colombia. In that same year, it was recognized as the first educational innovation by the Ministry of National Education, who had published Decree 2647 the previous year, which recognized and legalized deliberate initiatives to improve the processes of the formation of the human person.

Fontán could not witness the educational impact of his ideas, since he died in 1993 in a surgical accident during the removal of a tumor. After his death, in the second half of the 1990s, his system was applied in vulnerable populations in Medellín, with the same results (Roldán, 2018); it has been recognized in Latin America as an innovation that redefines the logic of teaching and learning (Furman, 2017); a school was founded in Bogotá based on his system, with modifications, which has managed to transcend nationally and internationally (e.g., Fullan & Langworthy, 2014); and several studies have been stimulated that investigate the effectiveness of the system in different domains (e.g., Sastoque & Gallego, 2014; Gallego et al., 2016; Mendoza, 2015). All this is the result of the work of a man described as stubborn, lonely, and obsessed with the effectiveness of his work and places him as a reference for the application of psychology to educational problems.

Ítalo Américo Foradori was born on February 3, 1905, in the city of Buenos Aires, the federal capital of Argentina. When he was 16 years old, he entered the Escuela Normal Mariano Acosta (Mariano Acosta Normal School for Teachers) in 1921, which enabled people to work as teachers in the whole country under the degree of Maestro Normal (Normal Teacher). In a historical-political context biased by the end of the First World War, when the monarchies were falling and the breezes of democracy were beginning to blow, the Center of Students of this educational institution called the attention of Foradori who enthusiastically got involved in it. Foradori with his persistence and political intelligence was elected for the highest position in the Board of the Center of Students, that is, General Secretary (Bagalio, 1969). His life of intense political participation had already begun there, especially in relation to the school and academic universe (Bagalio, 1969).

In his adult life, he continued with his union activity, always concerned about the rights of the teaching profession. In 1942, he met Alfredo Bravo (1925–2003) when he joined the Confederación Argentina de Maestros y Profesores (Argentine Confederation of Teachers

and Professors), an institution that Foradori presided. At the beginning of the 1960s, the Socialist Party, in which he participated, renewed the authorities of its Executive Board, and Foradori became the Secretary of Minutes. From 1963 to 1966, he was elected to the position of councillor of the Deliberative Council of the City of Buenos Aires Capital. In the exercise of this public function, he continued to give the greatest attention to academia, as well as he strongly promoted the creation of libraries and children's and youth centers for recreation (Papini, 1978; Tortti, 2007).

Both in psychology and in education, he had an intense participation, being an outstanding and very active member since the beginning of the Sociedad de Psicología de Buenos Aires (Buenos Aires Society of Psychology), the society that Enrique Mouchet reorganized in 1930. His public life was always directly linked to his academic interests. Trained as a teacher, he taught courses in several institutions and worked as an assistant professor at the Institute of Psychology of the Facultad de Psicología y Letras de la Universidad de Buenos Aires (Faculty of Philosophy and Humanities at the University of Buenos Aires). There he established a relationship with the most outstanding academics of the local psychology field (Papini, 1978; Foradori, 1935; Ríos & Talak, 1998).

Among his publications on education issues, we would like to highlight *Contribución al estudio de la audición coloreada* (Contribution to the study of colored hearing), published in collaboration with León Jachevsky (1935) and *Psicología y Educación* (Psychology and Education) (Foradori, 1943); however, Foradori was mainly known for his contribution on the history of psychology.

Mauricio Papini (1978) in analyzing Foradori's work in the history of psychology classifies it into three areas: (1) the works on psychology in Argentina; (2) the biographies of Argentine psychologists; and (3) the works of psychology in America. Related to the first area, in 1935, he published a truly extensive and well-documented paper entitled *La Psicología en la República Argentina* (Psychology in Argentine Republic) where he revealed the intention to bring together all national production in Psychology (Foradori,

1935). Besides, it must be referenced three brief reports published in the journal of the Socialist Party (Foradori, 1939, 1940, 1941a). Considering the area of biographies, we can highlight the publications: Enrique Mouchet. *Una vida una vocación* (Enrique Mouchet. One life, one vocation) (Foradori, 1941b); and *Perfiles de Psicólogos Argentinos* (Profiles from Argentine Psychologists) (Foradori, 1944). In the third area mentioned, Foradori published a couple of reports, *La psicología en Indoamérica* (Psychology in Indo-America) (Foradori, 1938) published in the second issue of *Anales del Instituto de Psicología* (Annals of the Institute of Psychology) and *Estado actual de los estudios psicológicos en los países americanos* (Current status of psychological studies in American countries) (Foradori, 1945) published in a collective book by the Buenos Aires Psychological Society. In any case, his major work in this area was *La Psicología en América* (Psychology in America) (Foradori, 1944), in which he analyses the history and current state of the psychology of his time in countries such as Argentina, Bolivia, Chile, Colombia, Costa Rica, and Brazil (Papini, 1978).

His academic work in the field of history of psychology represented one of the most important attempts at a detailed and exhaustive exposition. It is one of the most dense and meticulous works of his time in the area. For such a reason, it became a mandatory reference work for current historians such as Gallegos (2016), Ibarra and Rossi (2013), Klappenbach and Jacó-Vilela (2016), Klappenbach and Pavesi (1994), Papini (1978), Ríos & Talak (1998), and Vezzetti (1996), among others.

In 1969, the year of his death, he received a posthumous tribute from the Joaquín V. González Institute of Culture with the words of Alfredo S. Bagalio, one of the main documents recording his youth. In these memoirs, he is remembered as a laughing and festive young man who was always generous to commit himself to the matters that required his participation. In recognition of his achievements, the Villa Lugano School number 4 in the city of Buenos Aires received in his honor the name of Italo Américo Foradori.
